'But the wreck—if wreck there be—may be anywhere between the Bullers o' Buchan and Cape Wrath, for a' we ken.'

'And, luckily, for all Philip Macdonell knows. But the surgeon gives hope that Glenira, although

he may not recover altogether, at least may be able to tell his story well enough for our purpose.'

'And if not?'

'If not, Bertrand and I purpose going north, and searching the coast yard by yard.'

'A needle in a haystack. The ship may be at the bottom of the sea. Let us see your copy again.' He unlocked a desk and took out my *Virgil*.

'I think she is in shoal water, or stranded; and I opened the book and showed him the copy.'

'Well, well! Shoal or strand or fifty fathom deep, what is to be the end o' this?' he said, after a long pause. 'It lies on my mind that I'm in a manner chargeable for your safety; maybe no' just exactly, but I have been the doer for Darehope-in-Liddisdail for years, and I am concerned at the notion o' your takin' this danger on your shoulders—concerned, sir! This comes o' meddlin' in other folks' affairs. I warned ye, sir—I warned ye.'

'You did, but I am set on it. I—I have another reason.' I felt myself colour.

'I'll wager I ken what it is,' said he, looking at my face. His smile was kind. I loved him for it. 'Mistress Charlotte?'

'I mean to marry her,' I said quietly.

'Here ye put me clear o' deeficulty. Scots law I can advise ye on—it's my weary trade—but in this business I have but one observe to make, and it is that ye'll get no advice from me, for I've never seen a client, man or woman, that at the hinder end didna gang his ain gate in a matter o' a lass—never, sir!' He went to a cupboard, produced a bottle of claret and two glasses, which he filled, and we clinked glasses.

'Have ye asked her?' he said.

'No; I am in a quandary.'

'Ay! it's a common complaint wi' lovers.'

'Mistress Charlotte is a Jacobite. She would, I verily believe, kiss the ground trodden by the Young Chevalier, and I—I cannot—oh! if it only could chime with honour!—but I cannot exchange sword for claymore.'

'She would think the less o' ye if ye did, tak' my word for it! She would that!'

I hoped devoutly that his forecast was sound, but I shook my head.

'I'm a dried auld stick, Mr Layton,' he said; 'but I mind that once I was fain to wed. The lass wouldna have me. Well, well! Better luck than mine to ye!'

So, taking the *Virgil* with me (after he had kept two careful copies in case of accident), I said good-bye to him, with a promise to keep him well advised of my movements; and giving a guinea to his clerk Wattie, which no doubt would keep him fuddled for a week, I made my way to my quarters.

At the 'White Horse' I got together my

mails, settled my score, and rode back again to The Garth in the afternoon. I kept a keen lookout, for it was by no means unlikely that I would be spied upon; but I saw nothing to disquiet me, and dismounted to find Bertrand was waiting for me in the gathering dusk.

'The place has been as peaceful as a church. I warrant we shall see no more of Cousin Philip at The Garth,' he said. 'One could almost admire his thoroughness. He has qualities—oh, but of the most complete, brains, cunning, *adresse*, and with these and his good looks, *ma foi*! he could have gone far. Given his back to the wall, he will die hard. He would have made a great actor, were playing a calling for one of gentle stock. But for once his scheme has miscarried. This time it shall be "checkmate."

We sat far into the night perfecting our plan. The *Gannet* was due at Leith with an innocent cargo of hides from the North, and the master had promised to send a message to Bertrand on his arrival. The original design had been for Charlotte and Bertrand to sail for France in her, but my discovery of the paper and the attack on The Garth had put a new and startling complexion on affairs.

'Anthony Brander is owner as well as master of the *Gannet*, and will serve us faithfully and secretly,' Bertrand told me. 'Glenira put many a guinea into his pocket in his earlier years. If the *Gannet* in the old days had ever had the ill-luck to heave-to at a shot from a king's ship, some queer passengers might have been found on board her—gentlemen whose heads are still on their shoulders instead of in the basket. Name of a pipe! If Anthony liked good pay, he never shirked a risk. Glenira will recover, the surgeon thinks. Pray God that it may be so! Then Northward Ho!'

'We may be forestalled.'

'It is possible; but I doubt it. Philip of the Left Hand knows no more than we do concerning the last berth of the *Marie des Anges*. Nor does he know that Glenira's mind is deranged. I am convinced that he and Innes stole the paper first, and intended to find out Glenira's secret room at their leisure, when you interrupted them. I believe the pair think we know the exact spot where the wreck is, and that their game will be to watch and follow us.'

In any event, we could not sail before the *Gannet* arrived in Leith Roads. Further, arrangements for the safety of Charlotte and Glenira fell to be made before we started. There was just a chance—so the surgeon said—of Glenira's mind clearing sufficiently to give us a clue to the secret of the *Marie des Anges*. Weighing the matter well, we decided to wait for two or three days.

But I was under the roof of the dark old

house of The Garth in that September for some days longer than I intended.

CHAPTER XXVI.—CHARLOTTE OF THE WHITE COCKADE.

IT is many a day since I set eyes on The Garth, but graven on my memory are the scattered woods; waves of bracken; tall formal Lombardy poplars; the spreading Beech Walk neighbouring the weather-beaten front, with its secret heavy-lidded eyes of windows; the house itself, gaunt, austere, aloof, yet (to one with the least imagination) invested with a certain air of nobility as of some lonely man, proud and broken, keeping his heart and his memories to himself, facing the spears of Fate like an old Roman. Yet, if The Garth often seemed alive with shadows, a sunbeam played through them. Hitherto I had seen Charlotte under the stress of danger stark enough to pale any man's cheek, let alone a girl's. But now there was a delicate glow on her face, her mounting spirits rose every hour, and her eyes were magic pools that sometimes, in my sanguine moments, I imagined brightened at my presence. At these times I would walk on air, to fall again (how often!) to the hard earth of realities, and moon about in the Beech Walk in a fever of tender hopes and fears.

I did not see Glenira. Charlotte and Bertrand took turns in constant attendance upon him, and the surgeon (a trustworthy Jacobite doctor from Edinburgh) gave them hopes of the recovery of his mind, but none of his eyesight. The optic nerve had been injured past cure, probably by the blow that had left the great scar on his forehead.

We kept a strict watch for prowlers around the house, relieving each other on night duty. The hours, though anxious, were tranquil after the shaking ones we had seen.

As if in consonance with them, the weather relented; and one fine morning Charlotte and I set out to ride together on the sands in a fresh wind that sent the bents a-waving and fringed the beach with foam.

We chose a bridle-path above the Spaniard's Cove that dipped gently to the sand dunes, and rode slowly, stirrup-high through the bracken, in the sweet September air. It was like riding out of a dingy world into Arcady. There are two occasions when a woman looks her best—when she is dancing and when she is well mounted. Charlotte rode like Diana.

'It seems all like a chequered dream,' she said, speaking almost as if to herself. 'My life in France! Ah! the memory of it! But it is in the North—with the great hills and the river's song in the glens—it is there I would be!' She sighed. 'And the time is coming when I shall be there again, and see Glenira—just man!—come into his own. Heart of me!—is it all

a dream?—his Highness raising the Standard at Glenfinnan; Glenira sailing for Scotland, his coming to The Garth; bloodshed and wicked men; every hour like the dusk, full of the unknown. Do you think Glenira will recover?' Her eyes looked wistfully into mine.

'He is in God's hands. But even if his mind clears, he will be blind.'

'He would rather be under the heather. The Kestrel to grope through life, his wings clipped! He who was ever a leader! Men turned to him in danger. To think of him there makes me burn. But whate'er be the outcome, his name shall be kept clean.'

'Of that I make no doubt. The truth has a way of strangling its enemies.'

'Bertrand tells me that is a way of yours. Had you not come to The Garth on that dreadful night?'—She broke off to hide a tiny tremble in her voice. 'And the day when you first came, and my servants at my orders put you under lock and key! What must you have thought of me?'

We had reined up. Our horses were close together, so near that I leaned forward and took her hand. So small and fragile! A maiden's hand in a man's great rough one, its seeming helplessness a link of steel. A wild impulse to say to her the simple, tremendous words 'I love you,' to take her in my arms, to ride away together to the rainbow's end, almost mastered me.

I bent and kissed her little hand. 'Let us forget that I was your prisoner,' I made answer.

'If you forget that I was an overbearing hoyden! Oh, the shame of it! And yet you came back, knowing there was danger!'

'I came back to The Garth,' I said, 'because I heard your voice once saying, "I trust you," and because I intended to clear the name of Layton of complicity with your enemies.'

'And because, Mr Layton, you thought I—we—might be in danger. You are a brave man.'

The ring of praise in her voice sounded sweeter than anything I had ever imagined. I felt a glow round my heart, but at her next words it fled.

'The great pity it is that you do not mount the White Cockade. Indeed it is the great pity;' and methought she sighed. 'His Highness is soon to march on London, and the King shall come to his own again.'

'It is a dream,' I said involuntarily, and instantly repented bitterly; for, holding herself very erect—her air recalling uncomfortably some moments of our interview when I was her prisoner—she repeated the words in a haughty question, 'A dream? A dream?' And then, 'Mr Layton has settled the question.'

'I—I meant—a—a splendid dream—a'—I stammered.

'D—did y—you?' She mimicked me to my face. 'How can you think it a splendid dream if you are for Hanover?'

This was scarcely flawless, or even fair, reasoning. I had been better advised to obey an instinct to hold my peace; but I must needs flounder on fatuously enough, 'I meant that there are some dreams, mistaken ones perhaps, that do credit to the heart's emotions, but'—

'But not the head's. Pray go on.'

'The Pretender'—

'There is no such person. His Royal Highness makes no "pretensions."'

'The Young Chevalier'—I made haste to correct myself—'the Young Chevalier is good to look upon.'

'*Tearlach! O! nach b'e fhein an gille!* But you have no Gaelic!' Her eyes shone. I would have changed shoes with Charles Edward.

'He makes friends. But I doubt if he has counted the cost. Yet so far—so far'—

'So far the standard has swept Scotland. "So far!" "Count the cost!" Fate may have been fickle to the Stuarts, but they are our royal race. Count the cost!' quoth she, a world of scorn in her voice. 'You might have an ell-wand at your side instead of a sword. There never was a great cause—one to make the heart beat—where the Highlanders sat over their fire-sides and counted the cost. As for danger,

*He either fears his fate too much,
Or his deserts are small.'*

This was precisely my own case, and for a moment I imagined a challenge in the vibration of her voice as she lingered over the two lines.

'There spoke the great Montrose,' I said.

'And indeed that is the true word—great and good; and was he not for the Stuarts? What though he lost his head through a treachery that is the black shame of the Macleods? He tasted triumph even on the scaffold. I am a daughter of Clan Donald. The blood is strong, and it is glad I am to think that his enemy Diarmaid could not die so well.'

I knew no better than to try to reason with a woman with whom I was in love, and who had her mind made up. So I floundered on, pointing out the possibility of there being many good, well-meaning people who were for King George, as ready to die for his cause as any of the men who carried claymores were for the Chevalier's. She listened with but little patience.

'Englishmen, and Scots who sold their country at the Union,' quoth she.

'I am an Englishman.'

'I ask your pardon,' she said, dropping a little half-penitent curtsy. 'I am only a lass, but I feel that I know that it is different with us Highland folk. I think sometimes that all people of the hills think differently from, and feel

many things deeper and see more than, people in towns and Lowland places. We are hid among great silences, shut in by the Bens and the great arms of the sea. I cannot set it out like a story, but I know we are different.'

I was to discover all this—the idealism, the swift intuitions, the hot pride, the warm hearts—all the complex contradictory mosaic that forms the baffling character, the intense individuality and imagination, of the Celt.

'But we have great hills in Cumberland and Westmorland, lonely dales with never a sound in them but the song of the wind over the wide moors, just as in your Highlands.'

She assented to this with the little nod of her head. 'I suppose so. And I suppose the Sassenach hills are loved (in a way) by Sassenachs; but we Gaels are of a different blood. Our rivers sing to us of heroes; the wind on the moors or through the proud pines, the mists on the great mountains, call to us wherever we may be. To me there is no music like the thunder of the Spey. Heart of me! how often in France—even fair France—have I longed to be beside it, and feel the soft peat-scented air; and see day by day the young heather spreading on the hill! You cannot understand the Gael. We love and hate proudly, with all our hearts. Only last month his Royal Highness landed with but seven men to claim the throne for King James, and the name of Stuart set the heather on fire.'

'You mean that the farther from the heather the colder the hearts?'

'For a Sassenach, you put it into words very well, Mr Layton.'

'Even an Englishman has a heart, and can hate and—love.'

'But he must first—what was it?—oh yes! "count the cost." "Count the cost!" That is one of our differences. Now, Mr Count-the-cost, tell me, have you a high regard for the fat Hanoverian Usurper?'

'He is my king;' and I began a thesis on the Whig doctrine of the issue transcending the individual. I thought it sage and informing.

She cut me short. 'You do not answer me. You give me a web of words. Tell me truly, does your heart beat for the Elector of Hanover and his cause?'

'I stand in no need of being reminded by heart-beats of my duty to my sovereign. It is in my blood, just as the Stuart cause is in your own.'

'While my blood sets my heart a-gallop for *Tearlach*, and yours jogs along dutifully for the fat Hanoverian. Yes, we are different.' And with that there fell a silence between us.

She moved her horse forward at a walking pace, and I followed.

Her loyal, passionate devotion to the Stuarts, like her voice and presence, radiated something rare and intense. I could not but admire its

single-heartedness, but I hated it because of its place between us.

I rode behind moodily, cursing impartially all politics under my breath.

'You are frowning,' she said. 'I can see you without turning my head. It is not becoming.'

The witch was right. I was in a black humour, and had not the knack of masking it.

'Come! A gallop in the breeze will clear your brows,' she cried; and our horses sprang forward.

The wind in our faces, the tang of the sea, the rhythm and strength in the galloping duet of our horses' feet on the good firm sands, the clear September sky above us, conspired to scatter my vapours. My spirits rose at every hoof-beat.

When we reined up, the young goddess, flushed and sparkling, turned to me with, 'That was better than quarrelling over Stuart and Hanover, was it not, Mr Layton? Your frown has vanished.'

'Quarrel is scarcely the word, is it? We did but fence, with the buttons on the foils.'

'We are friends, of course, although it is the strange thing for a daughter of my clan to call a King George's champion "friend."' She looked at me straight in the eyes. 'Would you mount the White Cockade were I to make one and give it to you?'

'I should wear it always, but not in my hat or on my sleeve.'

She said nothing, drawing her riding-crop through her hand, her face turned suddenly away. A wave of courage at the sight of her lifted me. Montrose's lines sang for a golden moment.

'You set me down an enemy to Charles Edward. True it is that I do not—may not—carry a claymore for him; but'—I began to stammer again—'one thing I do know, and it is that I shall wed a Jacobite, or—or'—

'Or?' she said, still playing with the riding-crop, her eyes on it.

'Or not at all.'

'His Royal Highness would be vastly entertained by your condescension. But consider, I pray you, would your vow not be hard on the rest of the sex were you not to wed a Jacobite?'

I wrote myself down a blundering fool to have couched my words so that she could twist them out of shape and read conceit in them.

'You must have made good use of your time in the North, Mr Layton. You only arrived a few days ago. But I forget. I think I called you "the falconer."'

'I fell in love at first sight.'

'With never a "count the cost!" So a Sassenach may have red blood after all.'

There was the faintest tremor in her voice, of amusement perhaps; but I could only catch a glimpse of her delicate profile, ending in the

firm little chin. She was very near me. 'I love you' was again trembling on my lips; but her next words sent my thoughts stampeding.

'I must say to you,' said she, her chin tilted higher, 'that I do not rate very highly any Jacobite lass that would wed a Hanoverian of her own free-will. I do not envy her heart. And I—I think it is time to go home.'

Her voice sank on the last words. I could not see her face. Next moment she had ridden forward. I followed, and not a word did we exchange until we arrived at The Garth, and I helped her to dismount.

'We do not see eye to eye, Mr Layton; but I wish you all luck in your wooing; at least all the luck you deserve,' quoth she, with a little nod, and disappeared into the house.

I saw the horses stalled, and came back to the hall, to sit moodily by the fire, my chin in my hands.

Bertrand's light foot sounded on the stair. 'Tobacco and some claret, I think, Layton.'

My humour did not chime with his. I wanted to be alone. On the pretext of writing letters, I excused myself, and contrived to escape to my room, where I moped for an hour.

When I came out Bertrand was smoking placidly in the hall. Charlotte was not there.

'I hope she is not tired or indisposed after the ride,' I ventured, after various beatings round the bush as to her absence.

'*Au contraire!* She has been doing nothing but sing like a linnet. 'Tis the first time I have heard her since I came.'

I paced my room for the greater part of that night, imagining myself—immemorial egotism of lovers!—the most unhappy youth in Christendom; and very early in the morning, after an hour between sleep and wakefulness, I rose and went downstairs.

The dawn saw me fixed to a resolve. I wrote a short letter to Bertrand, asking pardon for leaving his sister and him with so little ceremony. 'You have guessed the reason,' I wrote, 'and you will understand; but I shall not turn my back upon the dangers that beset you. I am ready to sail with you in the *Gannet*. I have no mind but to see this business straightened out; and I beg of you to send a message—or, better, to come yourself—to the White Horse Inn the moment that I can be of help.' I left the note where he could not fail to see it, and stepped out of the house into the quiet morning, leaving my heart behind me.

Riding hard, I reached Edinburgh as the chimneys began to smoke and the sun kindled the windows into countless twinkling awakened eyes. I secured the same room at the 'White Horse,' and after breakfast gathered the news of the Rising. The battle at Preston had heartened the rebels. Recruits were coming in. Jacobites who had hitherto kept their opinions cannily to themselves now declared openly for the Pre-

tender, and in many private houses there were great festivities and fathom-deep drinking of the Prince's health and cause. The ladies wore white ribands and heart-knots. Everywhere shone the gleam of the White Cockade.

The Highland army was encamped at Dud-dingston, and Charles Edward had taken up residence at Holyrood House, the home of his ancestors. There he held court, transient and glittering, but with all the circumstance of royalty. The ancient palace of the Scots

resounded with music. Fair women wearing the white rose, handsome cavaliers in the tartan, made their courtesies and bows to the Prince and trod many a gallant measure in the great Picture Gallery.

It came about that I attended one of the balls at Holyrood. I did so without an invitation; but the train of events that led me there, and how I took part in more lasting affairs than minuets or reels, I must leave to another chapter.

(Continued on page 387.)

CHEWING-GUM.

By MALCOLM NORMAN MACKENZIE.

CHICLE, the resin of the chicozapote-tree of Mexico, is the principal ingredient understood to be used in the manufacture of chewing-gum. It is also used in medicine and various kinds of sweets. The tree is found in the states of Tamaulipas and Vera Cruz (to a limited extent), Tabasco, Campeachy, Yucatan, and in the territory of Quintana Roo; it grows tall and wonderfully straight, and the wood, of a dark-brown colour, is greatly prized, when obtainable, by native cabinetmakers. The timber is, however, rarely used, the tree having a greater value as a chicle-producer.

Yucatan and Quintana Roo are the principal sources of supply, and these states are practically unknown to commerce. Yucatan produces henequen or sisal-hemp. Sisal is now an abandoned port on the Caribbean Sea. The state figures largely in the imagination as a land of mystery. As the native of Galveston frequently says, 'Galveston and the United States,' so the Yucatanero speaks of 'Yucatan and Mexico.'

Quintana Roo is famous for nothing in particular except heat, a small and vigorous population, and decided turbulence. It may be described as the Ireland of the Western Hemisphere, as the inhabitants are at peace only when engaged in war; on pretty much the same principle as a Scotsman being at home only when he is abroad, and an Englishman never content save when grumbling.

To the archæologist, Yucatan is known for its undecipherable ruins. Elsewhere in the world, antiquities are a known, open, easily read book. But the buried forest-cities of Yucatan, the sealed graveyard of unknown civilisations, the mysterious country that puzzled the Asiatics, the western terminus of the bridge that spanned two hemispheres, with perhaps the lost Atlantis between; Uxmal, with its undecipherable hieroglyphics; Chichen-en-Itza, no less beyond human interpretation, with its strange monuments to long-dead, now unworshipped gods, the dense forests behind, the drooping trees—all seem to cast a shade of melancholy, as if lamenting their

past glory. The Sphinx is not more inscrutable than the gaze of those monstrous stone and marble hewn gods.

There are no inns, and the resting-places are few and far between; water is more precious than wine, a bath a luxury. The Indians know no distance, and the tropic sun beats down with sweltering glare upon the limestone rocks. 'Just round the corner,' cheerfully volunteers the guide; and as we approach Uxmal from Mérida the trees are not high enough upon which to hang him. It is the habitat of the *chiclero*, or chicle-gatherer, buried in the depths of the cool, shady, vast forests where the gum is got.

How chicle was discovered is a secret as insoluble as the names of the priests who served the shrines of the now forgotten gods, or those of the nuns who occupied the women's chambers at Chichen-en-Itza, or of the monument-builders. Least of all cares the *chiclero*. The trees were always there, will always be there. His grandfather, and his before him, 'tapped the tree I am now tapping,' he says. A *chiclero* is a *chiclero*, the trade is hereditary, and he looks down upon the field-labourer, the charcoal-burner, the wood-cutter; they are a race apart, of a caste different, believers in nothing, except, perhaps, in Nature, the most terrible of all gods, because Nature can only be placated by death and blood. They like to get drunk, and affect gaudy raiment; and when they are married female children are a nuisance, but a male child, from ten upwards, will be useful. He is very human, is the *chiclero*, and his chief ambition is to be captain of a gang of men. Incidentally, as captain or labourer, he is always in debt. He is generous too, and will borrow money or goods from the estate-owner and lend it to his men. As they can never pay, he can never pay; but with the easy philosophy of debt, heredity, and environment, he says, 'To-morrow is another day, and who can tell what the next day may not see? Why, I may even die, and death settles all. Debts are not transmissible, you know.' Generally he is of a pacific nature; but when roused, the old Maya

fury, the dormant lust of blood, breaks out; he is a savage; he even ill-treats the dead. Learning he has none, nor wants it; but always he has a good modern rifle, with plenty of ammunition, smuggled probably from Belize; but this cannot be proved, as the Belize authorities deny it. Sometimes, to show his goodwill, he presents himself to the nearest *Jefe Politico*, and delivers a gun which might have been left there by Hernando Cortes or one of his freebooters. This proves his good faith. Very simple men are our *chiclero* and his fellow-tribesmen!

Chicle forests may belong to private owners, or may be rented for a term of years from the Federal Government; and, as the Government is far away, any tribal or communal rights the Indians possess are cheerfully ignored. The concessions are generally obtained through friends at court, who participate in anything that may be going. If the owner has sufficient capital he employs a captain and his gang, or he may purchase the debts of men belonging to another estate, thus ensuring their services. If he has not sufficient capital he borrows it from the agent of the chicle purchasing company, agreeing to sell him all the gum procured. The price will be so much, and that less than could be got by selling it to an outsider not in the game. Also, he gives a mortgage over the estate. Things being arranged, the gangs are sent into the forests, and the owner hires him to Mérida or Mexico City. Should he not require to borrow his working capital the agent contracts with him, anyhow, or gets his bankers to exercise pressure to induce him to sell the gum. The chicle must be secured, or some one else might capture the monopoly.

The gang, well supplied with simple provisions, and with rifles to kill the wild game which abounds in the forests, commence work at dawn. A stout rope, a pair of climbers, a *machete*, and a rubber sack are the tools of the *chiclero*. Generally, tapping does not begin until after the rainy season, when, loosened by the rains, the sap becomes a milky substance in the bark. An incision is made some fifty feet up, and a slowly descending spiral cut is made with the *machete*. The sap trickles down the cut into the rubber sack, held by the helper at the foot of the tree, and the *chiclero's* work on that tree is done.

An average day's work is eighteen trees, each of which yields several pounds of sap daily for about four months. The sap is carried to a central camp, and boiled in pans, just as maple-sugar is obtained, and thus crudely purified it is shaped into squares called *marquetas*. The sap-producing life of a tree is unknown, and, unless compelled by lack of money, the prudent owner taps only once every seven years; but there is always a lack of money.

The chicle is now shipped to New York, which in 1911 took one million six hundred

and seventy-seven thousand one hundred and twenty-four kilogrammes, having a consular invoice value of two million and sixty-two thousand six hundred and sixty-four dollars; about one million kilos go to Canada, and to British Honduras half that quantity. The amount shipped to Europe is negligible.

Of chicle it may be said that it is the only substance with this peculiar 'chewing' quality, as it combines adhesiveness and elasticity with the peculiar property which renders these two qualities active only in the presence of warmth and moisture. In this lies its value, and no synthetic process has been evolved. The manufacturers of chewing-gum manipulate the chicle with sugar, filler, and flavouring material, put it in gaudy coverings, and it is then ready for the jaws of the American nation. For you must know that the Americans are a nation of chewers, and when not engaged in 'chewing the rag' they must chew something else. The adult male being addicted to tobacco, the females, with the young males, follow this example by chewing gum, so that the American jaw is never at rest.

The profits of the chicle industry are such as to be coveted. Assuming that an estate produces two hundred thousand pounds of chicle during the season, and that the owner is working on his own capital, he nets 47 per cent. on his investment. The average sale price in New York for raw chicle is fifty cents gold per pound, or one thousand dollars per metric ton; the average cost of production, delivered at New York, is thirty-four cents per pound, the difference between these prices being the vendor's profit. The profits of the manufacturers are on a scale in proportion to the magnitude of the production, one firm in Chicago advertising that it sells over two and a half million chiclets daily, and another firm producing one billion of pieces yearly. There are a score of factories in the United States averaging a similar production, which means that twenty billion pieces are sold there yearly. At five cents gold per packet the sales reached in 1911 over one hundred and twenty million dollars gold. And yet the percentage of chicle in the chewing-gum of commerce works out at only 0.17 per cent. according to the amount exported from Mexico, the remaining 99.83 per cent. being sugar. These are the profits of the Chewing-Gum Trust of the United States, one of the benefits enjoyed by the Americans being to pay five cents for less than one ounce of sugar.

That the use of chewing-gum, discovered by the vanished race who inhabited the mysterious ruined forest-cities of Yucatan, the inventors of the lost art of tempering copper, who vanished from this earth so many long ages ago, should find its continuity in the most modern of the nations is one of those inexplicable things that make us wonder at the tenacity of human habits.

THE HEIR TO SUNNINGHALL.

CHAPTER III.

THE next morning, after a rather late breakfast, Mrs Guthrie rose briskly. 'Come, Greg, as soon as I've done my housekeeping and you've had your beloved morning pipe, I'm going to keep my word and show you every corner of your new domain. Will you wait for me here for about half-an-hour? Isn't it a good thing that it's raining a little, so that you won't grudge an hour indoors? You're such an open-air person, dear Greg; you have a breezy atmosphere always about you, though a little tainted with tobacco, naughty boy!' she added with her little pleasant laugh, patting his big, rough tweed-clad arm with the small white hand. He looked at her with affectionate appreciation, such a neat, fresh, dainty little lady, with her pale, smooth, scarcely wrinkled skin and nice white hair.

'All right, Aunt Lyddy, I'll be ready. And, mind, if you dislike my 'baccy say so. I'm afraid it's a bit strong. We like things strong out in South America.'

'Dear, of course I don't dislike anything that gives you pleasure. It is a wee bit strong, but you don't seem to care for cigarettes. Never mind; smoke on, as long as it's not in my quarters.—Margaret, love, if you'll take that beef-tea over to Stone's cottage I shall be grateful. Will you, though it is raining a little?'

'Of course I will, Mrs Guthrie.'

Gregory had not to wait long for his aunt. They started to visit the wing which had been added a century later than the rest of the house. 'It's the least interesting architecturally,' she said, 'but I want to show you our old playroom. Daniel has it as his laboratory and study now. In early days, when I was a happy child—oh, so long, long ago that it seems as if it could not be I—I played with brothers and a sister there, all, all gone.' She sighed deeply, and the tears were in her eyes of faded blue.

'Why go there, if it brings up sad memories, Aunt Lyddy?'

'My dear, don't I go there constantly? It's my dear husband's sanctum, and he likes to have me in and out, Greg, he is such a devoted old husband to me!'

'I'm sure, and no wonder.'

'Oh, I don't know—I don't know. I'm a silly old wife now.'

She knocked at the door, and paused till the old man's voice called, 'Who's there?'

'Only Greg and me, dear. May we come in?'

They heard his chair scrape, and the door was unlocked. He met them smiling. 'Excuse a locked inhospitable door, Gregory. I've got some rather particular specimens on the microscope, and I always dread a housemaid's whisk-

ing ruin.' He sat down again at the table in the window and set his eye to the microscope.

The room did not interest Gregory, who was not scientific. He knew nothing of the instruments, the specimen-jars with queer 'monsters,' as his aunt said, the bottles, the strange smells. Evidently this was a learned old man with hobbies to keep life interesting.

From the wing they went upstairs, and his aunt took him from room to room; each had its label, its interest for her, its association. 'I slept here when I was a girl;' 'This was my father and mother's room;' 'This was poor George's; he died of diphtheria when he was fifteen;' 'This was Susan's; she died ten years ago;' 'This was Reginald's, your grandfather's.'

One door she did not open. 'This I cannot show you; the associations are too fresh, too painful. This was Anthony's room, the last of us except poor me. Oh Greg! it is not his dying that was so sad—he was old; it is—to me—that he was so cruelly changed before he died. I cannot forget it. I had lived with him for ten years. He left everything to me; he loved me. I was entire mistress of my old home, and I was so happy. A little before his last illness Anthony said to me, "I'm leaving Sunninghall to you for life, Lydia. There's no one cares for it as you do. You can leave it to our only nephew, or to whom you will." I thanked him. I said I hoped it would be a long time before that will had to be read. Barnes (our family lawyer) came; the will was written and signed. I only tell you this, dear, to show you I had his love and confidence then. He was taken ill, and of course it was owing to a strange warp of the mind. He turned from me; he would not let me nurse him. A hired woman brought by a strange doctor took possession; a lawyer was sent for from London. I had no idea why. Can you believe it?—he would not even see me till just the last day! After death I found the former will revoked—the place left to you.'

She was crying, and turned her head away. He put his arm round her and gave her a kindly hug. 'Please, Aunt Lyddy, don't! I feel such a beast to have ousted you! But, remember—you will, won't you?—this is your home as long as you care to stay.'

She turned her head against his arm and remained a moment; then she wiped away her last tears and smiled. 'Dear, kind Greg! I'm silly—an old fool. I know Anthony was not himself. I know how good you are. Don't mind me! You see, I'm like Queen Mary—wasn't it?—with Calais. I've "Sunninghall" written on my heart. I am never happy away from it.'

'You were away, I suppose?'

'Yes, for twenty-five years. I am sixty-seven years old—forty-two years I have lived here; and—would you believe it?—though Mr Guthrie was so good to me, though I was happily married, no home but this was ever real home.'

'I wonder you did not dispute the will.'

'Oh no, I never thought of that. The lawyer said Anthony was quite sane. I suppose, in a way, he was. I was not going to make an *esclandre*. And as it has turned out, how lucky it is for me that you have inherited, you who don't want to turn out the tiresome old aunt!'

'I'll make a will and leave it to you, Aunt Lyddy,' he said impulsively, moved by her plaintive, quivering smile.

'My dear,' she said, trying to laugh, 'how absurd, when I am more than double your age! You'll live to enjoy Sunninghall long after I'm in my grave in the little churchyard over there.'

'One never can tell. When I start my motor, who knows if I may not even be tempted to fly? Anyway, it would do no harm.'

She only patted him affectionately, and said in a voice she tried to make gay, 'Wait till you get a wife!'

'A wife! I've never seriously contemplated that danger,' he returned lightly. Yet somehow a sudden vision of deep, pathetic eyes rose, and he seemed to hear a sweet, sad voice singing of beautiful far-away visions, and he was rather silent and thoughtful as they went on through the old echoing house. It seemed a place for ghosts—not horrible, but wistful ones. He asked if there were any legends.

'Oh, of course,' his aunt said, smiling; 'people will tell you of crying sounds, of brushing skirts, and so on. I never saw or heard any. I am a very unimaginative person. I am sure there's nothing dreadful in the beloved old place. For me, it is only haunted with dear memories.'

They returned, after the round of the old rambling place, to the square entrance-hall, and there his aunt left him to take some further orders to the kitchen. Gregory stood thinking. As the door closed behind her he smiled. 'It's a funny thing; here I am master (nominally), owner of all this household, and except for the man Perks and a housemaid I've seen flitting about, I've no idea at all of what it consists. Well, by all accounts, I'm saved a lot of trouble; everything seems to go as smoothly as clockwork, thanks to Aunt Lyddy. I suppose I'll have some day to go more into details.'

He looked with interest at the family portraits which hung round the hall. Out of a family of six only his aunt survived, and he was their sole descendant. There she was in a Middle-Victorian dress, with one curl on her sloping shoulders; a pretty but rather feeble portrait, with the Sunninghall garden terrace as background. There was his grandfather, whom he had never known; the two brothers and the

sister who had died in early youth; and his uncle Anthony, the old bachelor, his predecessor, with a strong face, a little severe, yet honest and kindly. He liked the look of him. He dimly remembered seeing him twenty years ago, before he left England. His uncle had been very kind to him, had tipped him liberally, and patted his head, saying he was like the Le Fevres. Indeed, he could fancy a likeness to this same uncle in himself. Aunt Lydia could not be a Le Fevre; she was too small, soft, and neat-featured.

That afternoon, as he sat reading in the library, Perks brought him a card. On it was inscribed, 'Mr Pearson, Lincoln's Inn Fields.' He recognised the name as that of the London lawyer who had drawn up the last will of Squire Anthony. He at once asked for him to be shown in. Mr Pearson proved to be a thin, dry, iron-gray man, whose close-shut lips seemed to lock in countless secrets. He bowed with supreme gravity. 'This is Mr Gregory Le Fevre, late of South America, I presume?'

'You are right, sir,' Gregory returned in his frank voice. 'Please sit down and tell me to what I am indebted for the honour of your call.'

The hearty voice and courteous manner caused a slight relaxing of the set features and an elongation of the mouth which was probably the lawyer's idea of a smile.

'I am glad to make your acquaintance, Mr Le Fevre, though I have rather an odd message I am pledged to give you.'

'A message! From whom?'

'From my late client, Mr Anthony Le Fevre. It seemed strange to Mr and Mrs Guthrie, and to—hem—to Mr Barnes, that Mr Le Fevre sent for me in his last illness; but we were not really entire strangers. My late father and Mr Le Fevre had once been friends; he had great confidence in my father, and had once or twice privately consulted him on matters connected with the property. As you know, Mr Le Fevre directed me to prepare a fresh will revoking the former one. Mrs Guthrie took it much to heart; she resented it (naturally); but what could I do? My client was perfectly rational; his speech was somewhat impeded, but what he said showed no aberration of mind. He told me that if I had any objection to following his wishes he would send for another lawyer. Everything was in order.'

'And you think my uncle was really absolutely in his right mind?'

'I did think so—when I made the will.' There was a slight hesitation, which Gregory was quick to notice.

'But not after?'

'I would not say that. In what he said to me after the will was executed there did seem eccentricity, prejudice. He ordered every one from the room; then he made me stoop down, and he said as distinctly as his malady allowed,

"I want you to see Gregory yourself when he comes to England. I want you to give him a message from me." Of course I agreed. I was anxious to soothe him, as he seemed agitated and distressed. "Tell him," he said, "not to keep the Guthries here. Warn him from me. I have my reasons. God help me! I have my reasons." As I have said, this communication made me wonder whether his mind was not considerably warped, whether he was suffering from a delusion. I promised to convey his words to you. I do so now, but with a reservation. I think it is quite possible he was unhinged in that particular direction, but I repeat that when I made the will I believed him to be of perfectly sound mind. Dr Edwards from Harley Street, who saw him several times, said the same. One knows that invalids often take extraordinary fancies. Mrs Guthrie was naturally much upset by what happened; she was very hysterical when the will was produced; but I am not surprised—she had looked upon her inheritance as certain. But on all other occasions she struck me as a very amiable and agreeable lady.

Gregory considered with a puzzled frown. He was surprised and confused by the very unexpected message from his dead uncle. He broke out at last, 'Ought I to retire in favour of my aunt? I'm afraid I've inherited unfairly.'

'My dear sir,' the lawyer said with what was almost warmth for him, 'you would be distinctly wrong. You are the natural heir to Sunninghall. Mrs Guthrie is getting old; the place needs a master; she has no one but you to whom to leave it. You are prepared to do more for her than even she could expect.'

'Of course,' Gregory said simply—'of course I mean it to be her permanent home. I don't feel I could do otherwise.'

The lawyer looked at him a little oddly. 'It is not for me to advise; but you have your uncle's last message. You don't intend to take any notice of it?'

'Not to my poor aunt's prejudice—certainly not.'

'But excuse me for interfering. I have no right; still, I am a much older man than you, and a man of the world. Do you consider it the wisest thing to make such an arrangement perpetual?'

'I don't know about that. All I know is I'm very fond of my aunt; she's been sweet to me. She's been badly treated, and I want to make it

up to her. I mean to leave her the place in the unlikely case of her outliving me.'

'And if you marry?'

Gregory shrugged his shoulders. 'My aunt suggested the same contingency. At present I've no intention of doing so. If I ever have, it will then be time enough to consider a possible change. I can't pay any serious attention to my uncle's message. I consider it only the expression of a diseased mind.'

'Well, well! then I will take my leave. I have to catch a train. I wish you good-bye, Mr Le Fevre. If ever you need my advice I shall be happy to give you the best I have.'

As Gregory opened the door to show the lawyer out his aunt was approaching it.

'Greg dear,' she said, 'the motor has come. The man who has brought it is waiting to give you your first lesson.—Oh, it is Mr Pearson. I did not for the moment recognise you.' She gave him her hand; but though she tried to smile, Gregory saw her for the first time stiff and unfriendly. He was not surprised.

Even the very self-composed lawyer showed a trace of embarrassment, and he made his adieu rather hastily.

'That man!' Mrs Guthrie said with a sudden quick flush. 'Don't blame me, Greg dear, for feeling a sort of horror of him. He is connected with such a painful time.'

'I know, Aunt Lyddy,' Gregory said soothingly. 'Don't think any more about it. Come along now, and see my new toy. I'll take you a jolly spin when I can drive.'

'My dear, I don't believe I should ever dare trust myself to you! You're such a reckless boy, and will tear over the country. That won't suit a quiet body like me.'

The flush had gradually faded, but she still showed some traces of disturbance. He took her affectionately by the arm and carried her off to the front-door. There stood the new motor, shining with paint and brilliant metal. Gregory was not satisfied till every one had inspected it; Dr Guthrie was unrooted from his study, Margaret fetched from the garden, where she was clipping roses.

Mrs Guthrie was not wrong when she called the man of thirty-two a boy. Every one of the household seemed elderly when contrasted with his gay, careless youth and bonhomie, frank, rash, trustful as a child.

THE ENGLISH NABOBS.

By W. H. R. CURTLER.

THE history of the government of India by the British—which Theodore Roosevelt described as one of the greatest political feats in the world's history—is, especially in the

eighteenth century, stained with many blots. By most Englishmen who at that time went out to India the country seems to have been regarded as an object of plunder, and its riches

were absurdly exaggerated even by men who should have known better. 'We must look to the East, not to the West,' for money, wrote Beckford to Chatham in 1766; and it was from India more than from America that the means of replenishing the empty Treasury were sought.

The chief endeavour, therefore, of Anglo-Indians was to get as much of this alleged wealth as quickly as possible, without any scruple as to the method, and return home to spend it; and after Clive had conquered Bengal, the opportunity of political was added to that of commercial aggrandisement. The power which the genius of Clive and the bravery of our soldiers had won was used for the private gain of the conquerors, without any consideration for the conquered. Men who in England were upright and honourable no sooner arrived in India than they threw aside all morality and fair dealing in their haste to make money, and became tyrannical and greedy oppressors.

Even the great victory of Plassey was sullied by a sordid scramble for spoils. Clive, says Colonel Malleson, received from Mir Jafar one million eight hundred and eighty thousand rupees, Mr Drake two hundred and eighty-nine thousand, Major Kilpatrick, Mr Watts, and Mr Beecher two hundred and forty thousand each; with further donations of three hundred thousand to Watts and one hundred thousand each to the six members of Council. Walsh, Clive's secretary, received five hundred thousand rupees, Scrafton two hundred thousand, and Major Grant, commanding the detachment of the 39th Regiment, one hundred thousand; while the army and navy divided no less than five million. And while the officials, the soldiers, and the sailors thus feathered their nests, we know that the traders and merchants were equally unscrupulous.

Yet, though we are not in the least anxious to excuse the rapacity of our countrymen in India at that date, there were many extenuating circumstances. The East, where a future poet was to say there are no ten commandments, was much farther off then than it is to-day. It took five or six months to get there, and Englishmen were infinitely more isolated and cut off from wholesome home influence than their successors of the era of steam. Many of the English in India became Oriental in their manners, and even in their appearance, from their long sojourn in the East. A contemporary account, describing the visit of an English girl to India, tells us that she found her female cousins, who had been born in India, excessively dark and altogether Indians in their persons, with an extraordinary mixture in their manners of the European and the Asiatic; while her male cousins were 'four dark young men, extremely slender in their persons, sprucely dressed in white nankeen, their hair thickly powdered, as was the fashion then, and their

manners forming a curious medley between the Asiatic and the most finished European beau.' Another picture is that of the wife of the surgeon of the station, who, though a European, had been so long in India, and so much separated from her countrywomen, that she had become more than half an Indian, had acquired a haughty indifference of manner, was devoted to finery, drank a great quantity of beer, and smoked her hookah in public.

The temptations to our exiled countrymen were great and unprecedented. The conversion of a trading company into a great territorial power, ruling over a people without much spirit to resist oppression, whose exaggerated wealth was so dazzlingly near and so easy to take, was well calculated to turn the heads of scantily paid officials and soldiers. That it did turn their heads we know, and Macaulay said that the Roman proconsuls and the Spanish viceroys of Mexico and Peru were outdone by the contemporaries of Clive in India; an opinion almost identical with that of the author of a contemporary poem called 'The Nabob,' who states that Englishmen in India 'had stained the very name and annals of our country with crimes scarce inferior to the conquerors of Mexico and Peru.'

Nor was the ethical standard of the England those men came from a high one. The eighteenth century was a grossly material one; the twentieth century reader of the novels of Fielding and Smollett is astounded at the coarseness and cruelty of the society which they portray. In the most famous of biographies we find Johnson joking with Boswell on the heads of the rebels of 'the '45' which were to be seen on Temple Bar in 1773. Conjugal fidelity, according to Rousseau, was laughed at among the upper classes. The gambling and drinking of that time have often been described. In 1773 twenty thousand people assembled at Tyburn to see a woman burnt for the murder of her husband, and it was not until 1790 that this punishment was abolished. The newspapers catered for the depraved taste and manners of the age, and courted popularity by detailing the most indelicate private scandals, and by coarse libels on public as well as on private characters. Of seven new magazines published between 1769 and 1771, two at least were obscene publications, and the others inserted a mass of scandal which would not now be tolerated for a moment. Politics were more corrupt than at any other period in our history. First the great Whig families and then the king controlled the House of Commons by shameless and open bribery; and this corruption had even extended to the management of the navy, although the dependence of Britain on her navy was by that time fully acknowledged. It was stated in 1778 that though thirty-seven thousand pounds had been voted for the repair and the stores of the *Dragon*, the ship was lying untouched and rotting at Portsmouth; and other

ships were in like condition. The country paid for more seamen than it got, and in 1777 the number returned as victualled was fifty-one thousand seven hundred and fifteen, whereas the men actually serving numbered only forty-seven thousand four hundred and seven, though at that date we were at war with the Americans. It is difficult to comprehend the cynical dishonesty which could get riches by such traitorous methods.

To this sadly degenerate society the Nabobs, as Anglo-Indians returning with fortunes were called, brought nothing that would make it purer or better. Indeed, the contrary was the case. 'They exhibited their wealth insolently, spent it extravagantly, raised the price of everything in their neighbourhood, from fresh eggs to rotten boroughs; the example of their large and ill-governed households corrupted half the servants in the country.' A writer in the *Gentleman's Magazine* of October 1787 says: 'We have the most sensible proofs of the reigning sin of the age in our modern Nabobs, who return from the Indies laden with the spoils of the poor oppressed natives;' and this sin the writer attributes to pride and the fullness of bread. They were intensely unpopular in spite of their wealth; and, according to Macaulay, the villain of many novels of the day was a savage old Nabob with an immense fortune, a tawny complexion, a bad liver, and a worse heart.

Their advent into English politics was noted first at the general election of 1761, and constituencies which had long obeyed the orders of great landowners were no longer safe. Bribery was more rampant than ever, and the Nabobs, and the new rich generally, whom industrial prosperity was beginning to throw up, bought seats as they would houses. The election of 1768 was still worse, and we are told that borough-mongers did a business in seats much as house agents did in houses. One of them laughed when Lord Chesterfield offered two thousand five hundred pounds for a seat for his son; the Nabobs, he said, had raised prices to at least three thousand pounds, and some fetched four thousand. 'Without any connections,' said Lord Chatham, 'without any natural interest in the soil, the importers of foreign gold have forced their way into Parliament by such a torrent of corruption as no private hereditary fortune could resist.'

This was perhaps the high-water mark of the Nabobs' power and influence; corrupt themselves, they flourished in what may be called the golden age of corruption, when half the members of the House of Commons were returned by eleven thousand five hundred voters, nearly all of whom were under the control of patrons of boroughs or of the Crown.

In 1774 George the Third dissolved Parliament quickly with the express object of foiling the

Nabobs, planters, and other 'volunteers,' who were not; at that moment, ready to fight the political battle; and his design was successful in that the country gentlemen, then considered the best representatives of English political opinion, were returned in predominant numbers once more.

The political and social influence of the Nabobs depended solely on their wealth; and with the reforms in the administration of India instituted by Clive and carried on by his successors the opportunities for getting rich quickly became less numerous. Further, English politics, after the overthrow of Lord North's Ministry, slowly became purer.

However, the species survived for some time. In Scott's novel of *St Ronan's Well*, written at the end of the first quarter of the nineteenth century, Meg Dods, alluding to the Nabobs, informs Tyrrel that 'the country's plagued wi' them. They have raised the price of eggs and poultry for twenty miles around. . . . They need the well, ye ken, for the clearing of their copper complexions, that need scouring as much as my saucepans.'

The most famous of the Nabobs is Lord Clive, whose story is too well known to need repetition. It is sufficient to say that, going out to India a penniless lad, at the age of thirty-four he had realised a fortune of forty thousand pounds a year, and in 1768 controlled the parliamentary representation of Shrewsbury, Bishop's Castle (two seats), Worcester, Pontefract, and Crick-lade. One of the most notorious was Paul Benfield, against whom Burke levelled such abuse 'as no person in my time,' says Wrexall, 'not excepting Hastings, ever attracted within the walls of either House of Parliament.' The son of a Cheltenham land-surveyor, he made a large fortune by lending money to the Nabob of the Carnatic, although his salary was never higher than two hundred or three hundred rupees a month, and thereby accumulated half-a-million sterling. He returned to England finally in 1793, where he bought Sir Thomas Rumbold's fine seat of Woodhall in Hertfordshire and Lord Thanet's mansion in Grosvenor Square, and launched out into a life of ostentatious extravagance. To his wife, on her wedding-day, he gave a ring worth three thousand pounds and a jointure of three thousand pounds a year, and her cerulean-blue curricule in Hyde Park was either the envy or the laughing-stock of the fashionable world. But his prosperity was short-lived. Restless and insatiable, he embarked on commercial ventures which proved disastrous, lost his fortune, and, after dragging out a few miserable years in Paris in an almost destitute condition, was buried by public subscription.

Another Nabob was Richard Barwell, famous in history for his constant support of Warren Hastings against the party led by Philip Francis. The story goes that he tried to ruin Francis by

gambling, and so get him into his debt; but he caught a Tartar, and lost instead a large sum to his intended victim. However, other ventures were more successful. He returned to England in 1784 with a large fortune, and bought Stanstead in Sussex from Lord Halifax for one hundred and two thousand five hundred pounds. On this, with the assistance of James Wyatt, the architect who ruined so many of our churches, and the ubiquitous Capability Brown, he spent so much money that 'much of his Oriental treasures were exhausted;' and shortly after his death in 1804 his newly bought estate was sold by his trustees, one of whom was Sir Elijah Impey. His rival, Philip Francis, returned to England about the same time as Barwell; but he cannot be classed among the Nabobs, since he had only saved a fortune of three thousand pounds a year out of a salary of ten thousand pounds.

Of the Nabobs of fiction the best known is our old friend Jos. Sedley, in *Vanity Fair*, who is said to have been a portrait of Richard Barwell. But this is hard to believe, since Barwell was a man of considerable ability, while the Collector of Bogley Wallah, with his cowardice, petty vanity, and guzzling habits, is one of the most contemptible creatures in fiction.

Another, though almost forgotten, is Sir Matthew Mite, in Foote's comedy of *The Nabob*, which was written in 1773. He is one of the worst specimens of his kind, and is shown us in the play learning to gamble in the fashionable way by taking lessons from his servants; to use the 'oaths and phrases most in use at the club,' of which his servant brings him a list; holding his levee, at which he bids his agent buy an estate he has set his heart on by giving four times its value, and bidding the owner turn out in a month. He is waited on by representatives of the 'Borough of Bribe' with an offer to sell the nomination of their two members. These worthies had formed themselves into a Christian Club, so called because the members were to share the price of the borough in common, 'like the primitive Christians,' and they offered their borough for five thousand pounds.

The Nabobs, indeed, are held up to ridicule and contempt by Foote as men who, having made their money by extortion, came home to corrupt whatever part of Britain they settled in. But they were not all so bad as this. Touchwood in *St Ronan's Well*, with 'his complexion burnt to a brick colour by the vicissitudes of climate, and his face seamed with a million wrinkles,' is a much better specimen of humanity than Sir Matthew Mite, and is merely a choleric Anglo-Indian of a familiar type—such, for instance, as the one described by Mrs Sherwood: 'His manners were no longer European; he spoke loudly, contradicted bluntly, swore fre-

quently, called names when he disliked any one, and fell into the most violent passions on the most unimportant occasions; seldom refraining from striking any of the natives who chanced to cross him when he was in these paroxysms; and indeed, though I believe that he was an upright man with respect to pecuniary concerns, yet such were the provocations he gave that I cannot to this day understand how he could have attained to nearly threescore years of age without having had his head broken.' And the Nabob in Maria Edgeworth's *Lame Jervis* is by no means a villain or a tyrant, but has made his fortune by his own industry and invention, and returns home to enjoy it honourably.

Though these men were so anxious to come home and cut a dash, life in India in the latter part of the eighteenth century was by no means intolerable. In Calcutta, at all events, the Englishmen had an easy and sociable existence. The young civilian, according to Bustead, went to his office during the hot weather from nine to twelve A.M., and during the cooler months from ten to one-thirty, and again from seven-thirty to nine; and the easy-going pace of the officials was adopted by the rest of the community. Chief-Justice Impey wrote to his brother: 'I take great care to spare myself, never sitting in court after one at noon.' And there was plenty of society to fill up the time that these not very strenuous hours left vacant. The early morning ride or walk was taken by most men and some ladies, as it is now. Dinner-parties were given at two o'clock, a sufficient evidence of the hardness of our forefathers, without our being told that the men often drank their three or four bottles of claret each, and even the ladies consumed a bottle of wine per day, and often indulged, like the men, in quantities of strong ale.

At sunset society woke up from its after-dinner siesta, which must have been badly needed, and went out for its airing, driving and walking round the great tank or on the ramparts of the Old Fort. Ladies of *ton* drove phaetons, 'and always make a point of having a gentleman companion, who lolls at ease, the office of managing the reins, &c., being wholly assumed by the lady; the horses finely set out with silver nets to guard their necks from insects, and the reins elegantly decorated. To finish the whole, a *kittesaw*, or kind of umbrella, is suspended not infrequently over the lady's head, which gives her the true Eastern grandeur of appearance.' Many spent their evenings on the river in private budgerows and pinnacles of considerable size and comfort, some of them carrying bands of music. Then from ten to midnight came calls, coffee, cards, and music, the gambling at times being very heavy.

There was quite a constellation of social stars in the Calcutta firmament who added much by their grace and charm to the life around them:

Lady Chambers, Lady Day, Warren Hastings's wife (whose history readers of Macaulay are familiar with), Mrs Barwell, the famous Madame Grand, and many others, any one of whom would have shone in any society.

The gambling which was prevalent in England was reproduced in Calcutta; and Philip Francis, writing to a friend in 1776, tells him that 'on one blessed day of the present year of our Lord I had won about twenty thousand pounds at whist; and his winnings at cards enabled him to leave India with a moderate fortune much earlier than he could have done if he had been dependent on his savings alone.

One would almost think that so attractive a society would have kept in India those who had made fortunes there; but the desire to 'go home,' always strong in the Englishman, and the wish to exhibit their riches on a larger stage, were too strong.

Though in many of the remoter stations life must have been lonely and dull, it was not altogether so. Mrs Sherwood describes for us a station one hundred miles from Calcutta, 'consisting of a number of houses belonging to European gentlemen, scattered over a park-like region which rose above the river to a considerable height. The bungalows were spacious and comfortable; many servants ministered to the wants of their owners; and the living was generally luxurious and abundant.'

The home of another Englishman in Bengal at this date is described as a noble house, flat-roofed, and encircled by a colonnade of pillars, standing on a large and verdant lawn on a gentle slope among the hills in a mighty sweep of the river Ganges, amid a cluster of beautiful trees. The owner of this 'noble mansion' dined in a wide hall encircled by pillars, the dinner-table being set out with rich plate and fine glass; and the rest of the house was furnished with equal luxury.

Here, we are told, the days of an English lady were spent with little variety. 'I generally rose before sunrise, and took the air on an elephant. When I returned I went to bed again and slept or dozed till eight o'clock. I then arose and was dressed, for I never used the slightest exertion to dress myself. I then crept languidly out of my room to breakfast, which was with us a public meal. My husband was deeply engaged with his hookah, and I generally found some one or other among the young civilians who frequented our table with whom to converse, and before whom to show off my fine-lady airs. We generally contrived to wear away our time till near ten o'clock with these visitors; after which I returned to my own apartments, where I found employment in reading, for we had all the new publications of a lighter kind, together with assortments of fashionable dresses twice every year from England, and in looking over and directing the

exploits of four *dirgees*, who sat in a veranda adjoining my apartments. And thus, with the help of occasional visitors and the calls of the medical man of the station, I continued to wear away the time till tiffin. At tiffin we always had some callers; and this meal being concluded, a doze on the sofa and another peep into some novel carried me on till it was time to dress for the evening airing. It was one of the pleasures of my life to see the variety of equipages, horses, and elephants which were paraded every evening in the front of our house, among which was a handsome phaeton, a *ton-jon*, an elephant with his superb howdah, a gig, or buggy, as we called it, other carriages of inferior note, and several saddle-horses. A splendid dinner was ready on our return from our airing, and we not infrequently concluded the day by playing at cards. Thus passed day after day, there being no notice by bell or book to remind us of the Sabbath.'

It is not to be wondered at that such a life as is here described should have enervated and demoralised those who led it, and quite unfitted them for existence in England. Constant communication between England and India may have its drawbacks, but at all events it has put an end to this evil.

Such were the English Nabobs, a class of men only possible under conditions now happily vanished. Our Indian officials, instead of being a byword for avarice and oppression, are the admiration of the world; and it would be a strange sight to-day to see even the most vulgar of the new rich learning oaths to use at the club, and buying rotten boroughs from a corrupt electorate.

Let those who doubt whether the world is getting better ponder the great gulf fixed between our times and those of the Nabobs.

SONG.

I FIND you in the wild unpeopled places,
Where, mile on mile, the heather-land unrolls!
You smile in simple upturned flower-faces
Which honest yellow sunlight aureoles!
The curlews crying on the windy moors,
The glad larks singing in the blue, have souls
Star-clear as yours!

I find you in the forest, where the trees
Bend, dreaming, o'er the rillet, seaward sped;
I see your graceful slenderness in these,
I feel your touch in brown leaves softly shed
On wistful golden afternoons; and turn
To see the sweet curve of your down-bent head
In grass and fern.

I find you best, I think, beside the sea;
It breathes your very spirit—fresh and clean,
Yet full of breath and light and mystery,
Deepness on deepness, hidden and unseen!
In the untrammelled tide you are expressed
So well and warmly! Sea and sky between,
I find you best!

LUCY NICHOLSON.

Chambers's Journal

SEVENTH SERIES

THE MINE-SWEEPERS.

By HENRY MACDONALD.

SIX o'clock. A cold, gray morning, with a falling barometer, a rapidly freshening breeze, and a thin, cheerless drizzle. Altogether very uninviting weather, for overhead the sky is shrouded in sombre-looking cloud masses driving sedately in from seaward on the wings of the wind; while lower down, moving rapidly across the dull gray background, are the attenuated white wisps of scud and cirrus. The latter we prefer to call by their more familiar name of 'mares' tails;' and they, as the veriest tyro in weather lore knows, betoken wind, and plenty of it.

Inside the little east coast fishing harbour, with its twin gray stone breakwaters jutting out into the bay, everything is snug and peaceful enough. The water is only disturbed into minute corrugations as a more violent gust than usual hurtles in from seaward, but the vessels snugly moored inside do not feel it. They tug and strain at their hawsers as the blasts strike them; they grind softly at their fenders, but the gentle jarring movement gives no cause for real anxiety.

Outside the sheltered haven the sea is a wild gray-and-white expanse of leaping water. To a sailor it is not really rough, for the wind has not blown long enough from its present quarter to raise a really heavy sea. There is a 'lop,' as he would call it, and the short, steep undulations rise and fall perpendicularly with little or no forward motion; they leap about and topple over in confused hummocks and in no regular cadence; while their curling tops, spirited away by the fierce squalls coming down from seaward, go flying to leeward across the surface of the water in clouds of driving spray.

The harbour is very full. First come three homely-looking topsail schooners—fat, sturdy-looking craft with patched canvas, dingy paint-work, and no pretensions to comeliness. They are built for strictly utilitarian purposes; and presently, when the gangs of labourers arrive, they will be busy unloading their cargoes of north-country coal.

Next comes an elderly coasting-steamer, a small, ungainly vessel with an absurd-looking funnel too far aft for beauty, and one stumpy yellow mast with numerous swinging derricks. Her mate, or whoever is responsible for her appearance, has an eye for colour, for her ancient

hull has been newly painted black, with a vermilion waterline; while the superstructure round about the wheelhouse and engine-room fiddley is painted a rich burnt-sienna, with graining so that it may look like oak panelling. The funnel, brilliant carmine with a black top, is a gorgeous spectacle, and somehow the venerable old craft reminds us of an elderly but coquettish matron masquerading in girlish finery. But the man responsible for the steamer's appearance realises he has a reputation to keep up. The ship rejoices in the name of *Lord Kitchener*, and everybody knows who he is.

Several fishing-craft with rich-tanned sails lying at buoys, a lighter or two, and a couple of squat, powerful-looking steam-tugs are also present; while farther on, alongside the wharf, moored in pairs, are six small single-funnelled steamers flying the White Ensign. Their shape seems familiar, and a closer inspection reveals the fact that they are ordinary steam-trawlers masquerading as men-of-war. They are painted the usual steel-gray of the British Navy, and upon the bows of each is a number in large white figures. They are mine-sweepers, whose duty it is to keep the coastwise channels free of mines dropped by the enemy, and if we could go on board we should see the apparatus with which they do it. In peace-time they are simple fishing-craft, and can be seen in their dozens on the Dogger Bank. Now, during war, these small ships have been taken over by the Admiralty, and have become part and parcel of the Royal Navy. Their skippers have been promoted to warrant-officers of the Royal Naval Reserve; their deck-hands, trimmers, and greasers have likewise been enrolled in the R.N.R., and are subject to discipline; and, instead of seeking for fish, they now seek for mines.

The mine-sweeping trawlers—and there are scores of them—are divided into groups, each of which is commanded by a commissioned officer of the Royal Navy or Royal Naval Reserve; and their work, though at times it may be dull and uninteresting, is every whit as important as that of the battleships and cruisers whose silent pressure maintains our command of the sea and keeps our trade routes open. Those who live comfortably ashore have little idea of the hazardous nature of the task undertaken by

our ex-fishermen. Steaming through a freshly sown mine-field is rather like walking through a dense wood at midnight with no lantern, except that trees do not explode on impact; and since the war started many trawlers have been blown up, with serious loss of life.

The work generally starts at about daylight, when the vessels leave harbour and steam out to the area they are going to sweep clear of mines. The senior vessel of the group, commanded by a naval officer, goes on ahead to direct the operations, and the others, working in pairs abreast of each other, follow astern of her. Between the vessels of each pair is the sweep-wire, sunk to the necessary depth in the water by means of towed 'kites,' wooden arrangements acting on the same principle as the ordinary air-kites. This wire can be regulated to travel at any depth beneath the surface.

The mines, moored to the bottom, may have been laid to float at any depth. They may be anything between twenty-five and eight feet under water, or even less, and the kites, with their connecting sweep-wire, are set at a mean depth to catch them all.

If mines are found, the sweep-wire either catches the moorings and tows mine and moorings along with it, or else breaks the mine adrift from its sinker and brings it to the surface. Sometimes the sweep-wire parts under the strain, but it is usually possible to tell when mines have been caught, and they are then dragged to one side of the channel and destroyed by rifle-fire. If the engines of destruction are broken adrift and brought to the surface, they are dealt with in the same way. If the bullets hit the detonators the mine generally explodes at once; but if, on the other hand, the buoyancy chamber is punctured and flooded, it goes to the bottom like a stone, and becomes innocuous. Either method of dealing with them is equally effective.

The mine-sweeping itself is risky work, for the trawlers themselves draw anything up to twelve feet of water, and may come into contact with mines laid at or above this depth. If a mine-sweeper is struck, and the resultant explosion occurs forward under the bows, she may be able to keep afloat, eventually to be towed into harbour by one of her consorts. If the detonation takes place amidships or in the stern, however, it is unlikely that the ship will survive it, while the men in the engine and boiler room will probably perish with the vessel. How many mine-sweeping trawlers have been lost through striking mines since the beginning of the war it is inadvisable to say, but the loss of life has been heavy enough.

Nothing seems to disturb the equanimity of the gallant North Sea fishermen who have enrolled themselves for this dangerous work. They are inured from their earliest boyhood to life at sea in small craft in all weathers. They are

used to riding out the gales on the Dogger Bank, and to them it comes as nothing to go out mine-sweeping in weather which is nothing short of poisonous. Their hardihood stands them in good stead, for they may be out for three or four days at a stretch, with little or no opportunity for sleep; but even this is nothing to what they sometimes have to do as ordinary fishermen in peace-time, when they may not see the shore for three or four weeks at a time. One would imagine that the danger and peril of their life in war-time would have some effect on their nerves. Not a bit of it. They feel, and quite rightly, that it is no use pondering over what may happen. They just take things as they come.

During the early days of the war the writer met the skipper of a trawler whose vessel had just been blown up by a newly laid German mine. She had sunk in less than two minutes, with a loss of about half-a-dozen men; and the skipper himself, who had been in the water for over half-an-hour, was badly shaken and cut about the head. No wonder, for the mine had exploded amidships, and had hurled him through the substantial roof of the wheelhouse.

'I suppose,' I remarked, shortly after he had been rescued, 'you'll be glad to get a spell ashore—what?'

'Spell!' he exclaimed rather testily. 'Lor', no! I hope you'll give me another ship at once, and let it be something with a gun in it. I want to have a smack at the blighters who laid them darned things!'

I pity any enemy he gets hold of, for he is a thick-set, sturdy-looking man, with a chest like an ox, and meant what he said. His wish, moreover, was granted, for he is now in command of 'something with a gun,' though whether or not he has met any Germans I cannot say.

At 6.15 A.M. the trawlers in the harbour are making preparations for going to sea. The men come on deck in oilskins, smoking pipes, and eyeing the weather dubiously. It looks dirty, and the wind is freshening fast; but they know well enough that they will go out however hard it may blow. Presently the respective skippers appear from their tiny cabins and clamber up on the minute bridges of their little vessels. They too are clad in oilskins over a thick layer of inner garments; but it is noticeable that every man on board wears a cork lifebelt round his waist or an inflated swimming-collar round his neck. They are fatalists perhaps, but there is no harm in taking a few simple precautions.

'Go on, No. 5!' comes a curt order through a megaphone from the senior officer's trawler.

The skipper of No. 5 waves his hand, pipes are put out, the men run to their stations in bow and stern, and presently the ends of the securing-hawsers fall into the water with a series of splashes.

'Half-speed ahead! Helm hard a-starboard!' the skipper orders the man in the wheelhouse.

The engine-room telegraph tinkles, the screw propeller begins to revolve in a wash of churned-up water, and soon, with her *White Ensign* fluttering bravely in the breeze, No. 5 is steaming straight for the opening between the breakwaters. She passes the gorgeous *Lord Kitchener* at a distance of barely twenty feet, and as she glides by a tousle-headed figure appears in the open door of the steamer's galley.

'Ullo, mates!' he shouts derisively; 'goin' fishin'!'

'Fishin', you lop-eared swab!' jocularly retorts one of the trawler's men. 'Call yourself a sailor? Come out o' that galley o' yours and do a job o' work for a change! We're a man-o'-war, we are, protectin' the likes o' you, and don't you bloomin' well forget it, me son!'

The cook is not slow at repartee, and for some moments a rapid fire of nautical but perfectly harmless abuse passes from ship to ship. But at length the trawler is out of earshot, and is steaming through the narrow entrance. Her bows lift slightly as she makes her first curtsy to the open sea, and a whiff of wind-flung spray comes rattling over her high bows, to send the man on the forecastle scurrying for shelter farther aft.

Ten minutes later the pioneer has been joined by the other units of her flotilla; and, moving along in single line, man-o'-war fashion, the whole six are soon punching their way out to sea towards the scene of their labours. The small gray ships, dingy and weather-beaten, are in absolute keeping with the sombre gray of the sky and the gray-green expanse of sea. They

seem eminently suitable for the work they have to do; but presently they have all disappeared from view behind a misty white rain-squall driving in from seaward.

The harbour, somehow, seems deserted without them, and not even the *Lord Kitchener's* brilliant colouring can quite make up for the aspect of emptiness caused by their absence. To-night, perhaps, when the dusk is falling, those six small gray ships will return with salt-encrusted funnels and a fearsome tale of many mines caught in their sweeps and destroyed. They may have a blank day, and catch no mines at all. If they are unlucky, some of them may never come back, and a laconic paragraph in the newspapers will state that H.M. *Trawler No.* — was blown up and sunk by a German mine in the North Sea, and that — men are missing. But this is an eventuality that the trawlers' men themselves never consider. They are accustomed to taking risks, and they carry on their hazardous tasks with the same dogged perseverance and the same indomitable pluck that have ever been the prerogatives of British fishermen. Gallant fellows! No weather can deter them. In rain, hail, or snow, flat calm, blinding gale, or dense fog, they are always at sea doing their share in keeping the flag flying. It is no small share either. They have none of the excitement of battle. They have little to gain, except perhaps a medal at the end of the war; and we, who benefit by their labours, should be the first to acknowledge our indebtedness to the splendid fishermen who form the crews of His Majesty's mine-sweeping trawlers.

THE BRIGHT EYES OF DANGER.

CHAPTER XXVII.—THE UNINVITED GUEST.

A FAREWELL message had been left for me at the 'White Horse' by Walter Irving. He had got another horse, and had ridden back to the Border, and left me his regrets and adieux. I missed his company, wondering how his love-affair had prospered, and if ever I should see him again.

My wardrobe required attention; for, although my clothes were good, they were for the road only, and had suffered somewhat during my adventures. I made my way to Filly the tailor's, and from a bewildering array of satins and velvets and what not I was lucky to be suited with what his bill set forth to be a 'superfine claret-coloured coat, with dove knee-breeches, and a hat trimmed with silver.' These, with two or three pairs of stockings and buckled shoes, and a small sword, cost me ten guineas. They were not cheap, but I felt that I could ruffle it now with the best of the young bloods in the town. When I fitted them on I wondered whether Mistress Charlotte would ever see me in them.

The hours followed one another as tediously as water over a mill-wheel. The streets, that used to be crowded and throbbing with life, were now dull and empty. I scanned the passers-by in vain on the chance of seeing Mistress Charlotte or Bertrand. Foolish pride had made me leave The Garth, and to go back to it unbidden was beyond my courage or my vanity. The thought that in all likelihood I had closed the door of The Garth on myself was torture. I wandered about alone with my thoughts. Sometimes I went to the Prince's camp at Duddingston, oftener to the high path above the Lang Dikes, where I could get a sight of the sea and the fringe of the Lothian beside it that held my place of enchantment.

I had returned to the 'White Horse' from one of these sentimental excursions in the afternoon of the third day after my leaving The Garth, and there I found a letter from Bertrand. My fingers trembled so much that I could scarcely break the seal; but the con-

tents wrought a magic on my spirits. 'Figure to yourself,' wrote he, 'my surprise at your—what shall I call it?—desertion. But we can, if it calls for it, discuss this when we meet. Meantime you are forgiven, if indeed there is any need for forgiveness. We have need of you—urgent need of you. I have great news, and would have come in person were it not that Glenira had been worse. He is better at this moment; but I shall not leave him, for his memory shows signs of returning. I am gathering the threads of his story, and spy adventures for us in the North. My sister (who is looking over my shoulder as I write this) goes to-night to the Prince's ball at Holyrood, under the wing of a Jacobite duenna. She joins me in this summons to you. I am sending this by a trusty hand. Pray send an answer by him, saying that we shall see you either to-night or early to-morrow morning.'

There was no doubt of the genuineness of the missive. It came like a sudden shaft of sunlight into the room. 'We have need of you!' Charlotte as well as her brother had sent the message. The thought was music. I wrote a message to Bertrand that I would present myself at The Garth early next morning, and, giving the messenger a shilling and a dram, sped him on his return journey, and fell a-thinking.

Charlotte was going to a ball at Holyrood! The thought kindled a spark of disquiet in me, of envy of every one who would be there, for they would see her, some of them would speak to her, touch her hand, dance with her; and there were Jacobite gallants galore, brave of heart and good to look upon, men after her own heart; among them, I made no doubt, many used to courts and equipped with graces that I had none of. And she would be the most beautiful woman there. The picture pleased me little. I would have given much to be at the Prince's ball, but the entry to Holyrood was barred. I was a stranger and a Hanoverian, although a swordless one. I could not go without the necessary formalities of being vouched for and invited, and I knew no one whom I could approach to secure an invitation. Yet chance often comes the way of those who know what they want.

I had gone out to the yard of the inn to look to my mare's comfort, and there I saw the landlord talking to a decent-looking fellow with a merry eye. The lad stared hard at me, and, with a touch of his hat, came forward with 'Tis young Mr Layton, surely!'

I knew him at once when he spoke. He was one Jim Caldwell, son of a yeoman in Annerdale, with whom I had wrestled more than once in Westmorland. Jim was a rolling stone, nothing worse; a lad of many parts, but prone to tire soon of the exercise of them.

'Why, Jim!' I cried, 'what dost tha' so far north, lad? It does my heart good to see tha.'

'And mine too, sir, to hear good Westmorland

again, I can tell tha'. What news fra th' Dale?'

I gave him such gossip of his home-country as I thought would interest him—the births, deaths, and marriages; the crops, sport, who had won the champion belt at wrestling, and so forth; and, taking him into the inn, called for a couple of tankards.

'And what of you, Jim? Is it the old story?'

'T'hist said it. T'owd story o' wanderin'. I'll wander till I die. I ha' been school-masterin', strollin', play-actin', fore-th'-mast, an' Lord knows what; and now I'm fiddlin'.'

'Fiddling?'

'Ay, fiddlin'! I am second fiddle in Halley's Edinburgh band! I was never one to quarrel wi' late hours or company. 'Tis th' grand times I'm havin'. Th' comin' o' th' Yoong Chevalier, as they call him, we thowt 'ud make trade dull; but 'tis an ill wind that blows nobody good, for now we play nearly every night down at Holyrood.'

'Holyrood! Are you playing there to-night?'

'Yes; and, by the same token, I'll need to put in some practice, for we are due in an hour.'

An impulse seized me. Straightway I told him that I wanted to see a ball at Holyrood. 'Jim, frankly, there is a lady in the case,' I said. 'You understand. There are difficulties.'

'Mr Edmund, 'tis your father's son that has only to ask. If 'tis only a sight o' th' ball, why not come wi' us?'

'You think it could be managed?'

'As easy as a kiss tha' hand. My master, Halley—as good a fiddler as ever fell off his chair—loves a guinea as well as he does whisky. Keep tha' mind easy. Get ready, Mr Layton, an' I'll bring him here in half-an-hour.'

He hurried away, and I ran up to my room, mightily pleased with my luck. There I changed into my new finery, and waited in a fever of anxiety lest the good Jim had been too sanguine. My fears were groundless, for in half-an-hour he appeared, along with a smiling, little, red-faced man, who gave me a dancing-master's bow and scrape, and said he was at my service.

When I told him of my desire to see the ball, 'We maun ca' canny, sir,' said he. 'Can ye play any instrument?'

'Nothing except a post-horn, and only two calls on that!'

'Preserve us!' quoth he; 'a post-horn!' in a cackle of laughter. 'We'll gi'e ye the handlin' o' a viola, on strict condection that ye bring no sound out o't. We'll seat ye at the back o' the band. Ye'll do no harm if ye use the back o' the bow. Keep time with your elbuck, an' ye'll see the ball, an' naebody, gentle or semple, need be a grain the wiser.'

He looked over my new finery, and shook his head. 'Ye're braw, sir—braw! Beau Forrester himsel'. Ye're ower braw! Ye'll look like a

kingfisher among craws wi' they claes on among us fiddlers.'

This was plain to be seen, and a dark overcoat over my tell-tale plumage got over the difficulty. I paid the little man well for his trouble, and gave him something extra to wet the band's whistle. The viola, in a green cloth bag, was given to me, and out stepped the three of us into the darkening, I in the rear, with the clumsy bag under my arm, feeling more like a fool than I ever remembered.

At Holyrood House we entered by a side-door, where a Highland sentry admitted us as a matter of course. We made our way up a narrow stair to the musicians' gallery, which, in spite of its grand name, was little better than a stuffy kennel. We were early, and I had time to look around the long Picture Gallery where the ball was to be given.

Some gentlemen-in-waiting flitted about, and officers chatted and laughed in groups. At each door a couple of stalwart Highland soldiers had their places, in full bravery, shining Lochaber axes on their shoulders. The orchestra began to tune up, and I took my place, with the viola, at the back. Presently I heard the sound of the pipes, and a great number of the Chevalier's officers from the camp at Duddingston entered.

From the opposite doors the stream of guests began to flow, a gay tide of colour, jewels twinkling in it as in the current of a sun-kissed river; brilliant dresses; white roses; rich uniforms; gold brocade and lace; and the contrast and harmonies of the tartans; the weft of it all filling the ballroom with a splendour of colour and movement. I scanned the gathering crowd of guests with a beating heart for a sign of Charlotte; but from where I sat, even by craning my neck, I could only see half-way down the ballroom. Soon even this glimpse was denied me, for the little bandmaster whispered that the ball was about to begin. I had to sit back clasping my viola ready for my bogus part. The orchestra struck up a minuet, and in an instant the formless throng was translated by the magic of the music into a picture of rhythm and grace.

When the dance was finished Charles Edward entered, a royal, charming figure, in his person external grace and distinction, the heritage of the Stuarts. He was not far from me. I recall the flush of pleasure on the handsome oval face; the straight, goodly figure; the fair head and the dark eyes, with more than a hint of sadness in them. He was in English Court dress, wearing the Ribbon, Star, and Order of the Garter. He went slowly up to the top of the room, and there the Chevalier held a miniature levée. I was watching the ebb and flow of it, when I saw a slight girlish figure curtsy and kiss hands. The rainbow hues of the assembly faded beside the radiance of her. The room held for me one presence only—Mistress

Charlotte's. For the next hour I tasted the Waters of Marah. The Chevalier led her out to a measure, the only dance he took part in that evening, except one with Lady Betty Wemyss. Scores of admiring gallants surrounded her. My eyes followed her at quadrille, minuet, and reel, and there was I cooped up in the stuffy kennel, masquerading with a viola in my arm, my elbow jiggling in time with the others, the lilt of the fiddles mocking me. Raving impotently to myself, I could have trodden my accursed instrument under foot.

At the end of a dance she came with a cavalier to an alcove on my right, quite near me. His back was towards me, and to my fancy her eyes were ever and again straying over the ballroom as if searching it. I stood up and leaned over the little gallery recklessly, and her eyes met mine. For an instant I read astonishment in them. The colour left her face, and, with a swift glance of alarm round the room, she said something to her escort, who bowed and left her. A moment later, and she had taken the white rose from her girdle, and held it out as if casually; but she lifted her eyes to mine as she did so. 'Twas but for an instant, but it was meant to be a signal. Next moment her partner reappeared, and they mingled with the crowd. Another dance was beginning. As for me, back in my dark corner, I slipped off my shabby cloak, went boldly down the stairs into the ballroom, and sauntered along with what composure I could muster.

No one, as I thought, beyond a casual glance or two, took the slightest notice of me. I was well dressed. Except for the absence of the White Cockade, I was just like scores of the men there. I found Charlotte sitting beside an old lady near the top of the room, and going straight up to her, I made my bow. She was very pale, but greeted me with a smile, and presented me to her duenna, Lady Jean Hewat, with 'This is Mr Edmund Layton, a friend of Bertrand's and of mine.'

The lady was wary and inquisitive, and looked at me narrowly over her snuff-box. 'Layton? The name is not familiar. Layton of—of'—

I gave her my standing in Westmorland. She thawed visibly at the mention of my father's title, and started off on a dissertation concerning the intermarriage of some of her ancestors with leading families over the Border. I contrived a great show of interest, and in a lull of the old lady's discourse craved her permission for the honour of a dance with her ward.

'Is she no' a bonny lass?' said she with startling suddenness, plainly enjoying my embarrassment.

'I think she is the most beautiful woman present,' I stammered in a low voice, for Charlotte was on the other side of her.

'Ye'll be glad to learn that ye are the'—here she corrected or pretended to correct her arith-

metic—'the seventeenth young gentleman that has told me that to-night. Gude kens how many more have said it to her face.' Then, I suppose, seeing my face fall, 'Awa' wi' her, and bring her back to me.'

For a delicious moment we floated together

in the soft sea of music, when Charlotte in a whisper said, 'I must see you. I have something urgent to say.'

'The night is fine. Let us look at it,' I ventured.

(Continued on page 404.)

FUNGI AS FOOD.

By Mrs F. A. DOUGLAS.

HUNTING for mushrooms is a summer pastime, yet fungi-lovers know that autumn and winter are the seasons when this interesting and curious family of plants may be had in the best condition. In the autumnal decay and autumnal moisture fungi breed to perfection, and the winter woodland is brightened by their rich and gorgeous colouring.

Here in Britain we think the mushroom is the only fungus we can eat, but in Italy it is believed there is only one fungus that is not good for food; and in Rome our mushroom is forbidden, because it closely resembles a poisonous variety there. The champignon, or milk-mushroom, is rightly adjudged in Italy, as in France, a delicacy to be highly esteemed. Near Milan a fungus called *russula* is a treasure-trove. So the poorer visitors go to the woods and gather it, make fires, roast it in the embers, and eat it with a little salt. Why do we not have mushroom picnics in Britain? Only those who have eaten mushrooms freshly picked and grilled know how delicious they are. As the fungi are best gathered with the morning dew on them, mushroom breakfasts would be a new and pleasing form of entertainment.

The Hungarians have a fungus called *Boletus*, which they esteem highly, and when dried in strings it is used in making soups. This fungus is believed to be the *suillus*, so highly praised by the Romans. The Austrians stew this variety in milk, and then grill it. The *chanterelle*, another fungus highly appreciated on the Continent, has a flavour resembling the apricot, and is of a rich golden colour like that delectable fruit. Curiously enough, the only occasion in England when the *chanterelle* is served is at the Freemasons' Hall on state occasions; and an admirer has said, 'Not only never did it do any harm, but it might even restore the dead.' A marvellous edible indeed!

The truffle, of course, is the fungus *par excellence*, and, as every one knows, it is a subterranean growth. Pigs and dogs are trained to nose it out. There are three truffles, the black, the white, and the red; but the black ones are the best. Périgord truffles are famous, but all French truffles are good. There is another subterranean truffle found on the Neilgherries, five thousand feet above sea-level, called 'man's little bread,'

because it is so nutritious, and it is much used by the natives. The 'buckaboe' is a curious American fungus, unique in being so rich in pectic acid that it is used in making jelly.

In Britain every one is mortally afraid of eating fungi lest they should be poisonous varieties. A little more knowledge would open up a very interesting source of food, for the mushroom is by no means our only edible fungus, and the tests for detecting injurious fungi are really very simple. As a general rule, mushrooms growing under trees should be avoided, as they breed from decay. If a silver spoon thrust amongst cooking-mushrooms turns black, it is a sure sign that a wrong mushroom has crept in among them. When mushrooms are *réchauffé* they should not be used, as they cause violent indigestion; nor should spirits be drunk when mushrooms are eaten, as the two things do not agree.

The best known with us are the common mushroom, the tufted mushroom, and the horse-mushroom. The tufted mushroom grows in tufts or clusters; hence its name. The horse-mushroom is as yet somewhat despised, but it is really very good; the flesh does not turn brown when broken, and the gills remain brown when old. There is a delightful early spring variety which is ready about St George's Day, and is called St George's mushroom. So little is this fungus esteemed here that much of it is dried and sent abroad, where it fetches about fifteen shillings a pound. In Italy basketfuls of it are presented to doctors and lawyers instead of fees. There is a mushroom grown in Epping Forest to which the *Daily Chronicle* has been calling attention lately. It is the *Helvella crispa*, and only a very few people seem to know and appreciate its delicate flavour. It is one of the morels.

There is a very curious English fungus called the 'vegetable beefsteak,' which grows on trees, and sometimes weighs between two and three pounds. Cut across, its flesh appears like steak, and its exterior is moist, clammy, and sticky. Its botanical name is *Fistulina hepatica*. Some consider it an excellent substitute for beef; others believe its chief use to be the foundation of a good sauce for beef. Broiled along with a steak, it adds to its savour, and it has a slight acidity, which judiciously tempers the richness of the beef. In Vienna it is sliced down thin

in a salad. As an ingredient in soup it has much merit, and greatly enriches the flavour.

Very quaint in shape is the 'horn of plenty,' found in both the New and Epping Forests. It is like an inverted cone or trumpet, about three inches high, the thin end next the ground. All fungi, it may be noted, suffer from 'swelled head.' The top curves like a trumpet. It needs to be very carefully washed, as its shape readily permits sand and dirt to gather about it. Stewed in stock with pepper, salt, and parsley, it is delicious. Its correct name is *Craterellus cornucopioides*.

The 'puff-ball' is an urban mushroom, for it will grow on building land and in London suburbs. Of old it was considered poisonous, and was used—so dry and powdery was it—in lighting fires. An old rhyme runs:

The aged puff-balls shall help us to cheat
The dainty bees of their luscious meat;

While others shall turn to give us light,
And scare from our dell the dreary night.

The 'puff-ball' is often large and loaf-like in appearance. An appreciative American calls it the 'South Down of mushrooms,' and considers it more delicious than any omelet.

Nature study has become more popular in late years, and we note with pleasure that some teachers now take their children for nature walks, and when near a suitable spot send them on fungi forays. This is helping them to acquire knowledge suitable for both boys and girls, and embryo cooks would do well to study the properties of these and other curious foods.

In the woods round London—Wimbledon Common and Epping Forest—we find the winter fungi in their glory. It is one of the compensations of nature that the useless fungi are the more decorative. A bank of moss with red and gold and brown fungi in it makes a unique decoration.

THE HEIR TO SUNNINGHALL.

CHAPTER IV.

GREGORY LE FEVRE was reclining in a hammock-chair one sultry afternoon, smoking as usual. He now habitually smoked much more than he had been accustomed to—more, his aunt told him, than was good for him. Perhaps this accounted to some extent for a noticeable change in the almost remarkably healthy look he had carried with him to England. But he was reluctant to knock off this solace of what he sometimes secretly found rather tedious hours. Something, he knew not what, was vaguely oppressing him; the climate, soft, warm, and relaxing, tried his appetite and vigour; he felt, as he expressed it, 'off colour,' and his usual zest for life was perceptibly lessened. His open forehead was slightly contracted with thought; there was a certain perplexity in his boyish look—something of the expression of a clever child trying to puzzle out the problems of its life. He turned his head to see Margaret Emerson coming slowly up the terrace-steps laden with a mass of long-stemmed roses. She looked cool and handsome in her white linen dress, open slightly at the smooth, creamy throat; but there was something grave, and troubled too, in her look which responded to his, though that brightened at her approach till a gleam of its usual sunny cordiality greeted her. 'Come here; come and sit by me. I want to talk to you,' he said, putting his hand on the garden seat beside him. 'I am tired of my own thoughts.'

She took the seat at once, and let the roses lie between them. 'And I want to talk to you too,' she said, not looking at him, but at the ground before her. She spoke in a low, resolute voice that seemed to be an effort.

'Well, talk,' he said, lazily stretching his

arms behind his head and watching her. 'I had rather listen to you.'

'Ah, but I want to ask questions. You will have to answer, and answer quite truly.'

'Don't I always speak the truth?'

'I don't know. Sometimes I think *not*. You are too afraid of hurting people. Mr Le Fevre, you are too kind.'

'Dear me! I did not know you thought so well or so ill of me. Give instances.'

'I will. Were you speaking the exact truth this morning at breakfast when you told Aunt Lyddy you were perfectly satisfied with things as they are? You know, when something was said about the servants. Mr Le Fevre, you know perfectly well that this state of things ought not to go on.'

'What do you mean? What state of things?'

'You know,' she returned, frowning and plucking at the trimming of her dress. 'I don't want to tell you, yet I feel I must. Mrs Guthrie has been very good to me; she saved me from poverty, and she is good and generous to many people. I ought not to say what I am obliged to. Mr Le Fevre, make a stand. Sunninghall is yours in law; it is not yours in fact. Let them—let us all go, and take possession yourself.'

He stared at her in surprise. She was very pale, and her lips, her whole body, trembled. She had wound herself up with a great effort to say this.

'Let you all go?' he repeated.

'Yes, yes. I said I would ask you questions, and that you must answer them truly. Indeed you must. Mr Le Fevre, are you content with being as you are, no master, no real owner, put

quietly on one side, sacrificed to an uncontrollable passion.'

'Margaret!' In his shaken and disturbed mood her Christian name escaped him. 'Margaret, what can you mean? "An uncontrollable passion." Whose?'

'Can't you guess?' she said in a slow whisper, her head dropping lower. 'Whom can I mean?'

'My aunt Lyddy's?'

'Yes. If ever woman had a passion, an obsession, she has. Are you so little observant? Has she entirely blinded you? Haven't you found out yet that Sunninghall is the dearest thing in life to her, dearer than her husband, as dear as the child might be that she never had? Do you *really* believe that your aunt is the characterless, sweet, yielding woman you thought her at first? I have lived with her ten years, and I know her. You force me to speak; you force me to a seeming ingratitude; but I see you letting your life be spoilt. You are not well, not contented. I say again, for your own sake, and—yes, for *hers*, for everybody's—let us all go!'

She spoke with concentrated but subdued passion; then, as if she dared say no more, she rose abruptly.

He caught her hand and held it with more force than he knew. 'Margaret, you are saying this against your will. I see that. Why?'

She did not answer; she struggled to release her hand, but his grip was too strong.

He repeated, 'Why? Because—because you like me? You are my friend? Reserved as you have been, I have felt you my friend. Is it so?'

She tried to laugh. 'Now *you* are asking questions, and that was what I came to do!'

'But answer mine, and I will answer yours. You *are* my friend?'

'Yes, Mr Le Fevre, I am,' she said under her breath. 'And now *my* questions. You are *not* satisfied with things as they are going?'

'Well, perhaps I feel a little sometimes as if I wanted more freedom to live my own life, as if a cobweb of gentle coercion surrounded me; but I blame no one.'

'*Do something!*' she said vehemently. 'Assert yourself! Don't delay.' Then, almost angrily, she tore her fingers from his grasp, gathered up her flowers, and hurried to the house.

He sat thinking, puzzling over her words and looks. It plagued his direct mind, simple as regards plots and motives, to have any problem to digest. What was the matter? Why did Margaret do violence to her own inclinations, to her own feelings of gratitude, to warn him? Ay, and he had been warned before; that was the odd part of it. What had that lawyer fellow told him as he repeated his dead uncle's message? 'Tell him not to keep the Guthries here. Warn him from me. I have my reasons. God help me! I

have my reasons.' No doubt it was the delusion of a man whose mind was changed by illness, by age. But was Margaret also deluded? Did she not seem the very incarnation of clear, unprejudiced sense? Had it not been a strong motive that had torn that warning from her? Was she not sad indeed to have to give it? 'But what can I do?' he said, half-aloud in his perplexity. 'Aunt Lyddy has been sweet to me. I own she has taken the reins completely, but that is my fault. I have just let things drift, and she is too old to change. She cares very much for my comfort; she is always kindness and consideration itself. I *can't* be brutal to her! Hasn't she always said it would break her heart to leave Sunninghall? Shall I go? Shall I travel, and leave her in possession? Margaret would scorn that as a weakness; and I don't want to leave Margaret, that's the truth.' He moved restlessly about. His ease and comfort of mind and body were disturbed; he could decide on nothing. The cobweb held him; he felt curiously powerless. 'At any rate, I need do nothing in a hurry. I'll think it over. Meantime I'll get the motor and have a spin. The wind may blow the fog out of my brain.'

He went into the house, and in the hall found his aunt arranging some of Margaret's roses. She looked up at him and smiled just as she always did, the little, sweet, mechanical smile.

'Well, Greg dear, where are you off to?'

'I'm going in the motor. Will you come, Aunt Lyddy?'

'No, thank you, dear. I'm not so *very* fond of it, you know, and I've things to do. Going across the park or out the other way?'

'Through the park and Sunninghall village, I think. Can I do anything for you?'

'No, thank you, Greg.'

'Will Miss Emerson go? She is indoors, isn't she? I'll ask her.'

For the first time he heard the soft voice raised almost, it seemed, in anger, almost vehemently, 'No, I don't wish it. I am old-fashioned. I don't wish Margaret Emerson to be careering about the country alone with you.'

He stared at her in surprise; then, turning, said rather coldly, 'All right, Aunt Lyddy. It seemed perfectly simple to me. I'm used to life abroad and free and easy ways.'

His aunt laid a stroking hand on his arm. 'Don't be vexed, dear. I did not mean to be cross. Do you know, I believe we have all had a touch of that nasty influenza that poor Daniel had. I feel irritable and tired, and you don't look really well. I shall have to take care of you. Your uncle or Dr Bastin will have to prescribe for you.'

'Well, don't let it be Dr Bastin at any rate,' he said, reverting to his usual manner. 'I believe I haven't unbounded faith in him. Meanwhile I'll try what fresh air and a good spin will do for me.'

'Now, don't go your reckless speed. Be careful, Greg.'

He laughed, a gay, careless laugh. 'But I like speed, auntie; and if I'm smashed, remember it's your gain.'

'My gain! Greg, how can you talk so?'

'Well, your material gain. I did make that will, you know.'

'Greg, don't!'

'There, there, little Aunt Lyddy! don't be shocked; I'm not going to be smashed. Good-bye till dinner-time.'

He buttoned on his dust-coat, nodded to her, and left the small frail figure standing on the top step of the circular stone sweep that led to the great nail-studded oak door. As he caught the rather curious pinched expression it crossed his mind unwillingly that perhaps there was something in what Margaret said. Aunt Lyddy did not always look quite the meek, gentle soul he had esteemed her.

He went a rather wildly rapid spin, enjoying the rush of the air, the sensation of speed, the liberty. As he came through the small park (which hardly deserved so stately a name) he very nearly had the accident he had spoken of so lightly. The car suddenly, at top speed, jarred against an impediment, and, swerving, threw him on to the bank—fortunately a mossy bank—and his head just escaped the stem of a fir-tree. A large bough had fallen across the track. This was odd, as there was no wind. It must have been rotten, and had chosen the moment to fall when it might have meant disaster. Naturally, he was bruised and considerably jarred and shaken; but soon he was sure that there was no serious damage either to himself or the car. 'There must be a sweet little cherub up aloft,' he said to himself, 'to look after my safety. It's a marvel I'm not smashed. 'Tisn't the first time I've had a narrow squeak. Aunt Lyddy will say, "That dreadful car!" and scold me for overdriving her. Well, a miss is as good as a mile. I've got off with an infernal headache and a tidy lot of bruises; but Aunt Lyddy has lost her chance this time.'

He saw some one coming running towards him from the house, a figure in white, hatless, with a white face and wild eyes. It was Margaret. As he reached her he halted, and, jumping out, caught her as she almost fell.

'Margaret, has anything happened? What's the matter?'

She broke out into sobs, 'You're safe! you're safe! Nothing's happened.'

'My dear, my dear, don't cry. What's frightened you? You see I'm safe. Why did you suppose I was not? Did you guess? Have you the second sight?'

'Guess! Then there *was* something. Tell me quick, are you hurt?'

'Hush! Be quiet, darling!' He was holding

her against him. They were quite unconscious what they were doing or saying. 'I'm all right; believe me, I am. There was a slight accident; it might have been a bad one; but, on my solemn oath, there's nothing to fret about. Bless you for caring! The car bumped up against a fallen bough, and I was thrown out; but it did me no harm, thank God! There, there now, don't sob; don't shake so. Tell me what made you think I had had a spill.'

'I don't know; I can't tell you. Something came over me. Oh, let me go, Mr Le Fevre! I am all right now. I was foolish. I am not often upset.'

'Don't let us frighten my aunt. Is she at home?'

'No; she took the pony-carriage and drove out an hour ago. She said she had to see the vicar's wife.'

'Get into the car, for you are still all shaking.'

She turned, however, with a movement of her head. 'No; go on round to the garage. I am going up to my room. I can't get over my fright just all at once.' Indeed, her whole expression and manner was entirely changed. Her reserved, almost cold, exterior seemed broken down by vehement emotion. There was at once terror and tenderness about her.

Gregory was moved to his very soul, as no woman had moved him yet. Margaret cared for him. That conviction seized upon and held him, and he would never rest till she was his own. Her elusive womanhood, reserved, yet with a hidden fire, guessed at, not betrayed, allured him while it half-resisted. He longed for the time when nothing in her, soul or body, should resist him.

He did not see his aunt for an hour. When she returned, and had evidently been told of his escape, she came hurrying in, her whole fragile little person quivering, white as death, a strange expression in her eyes which half-frightened him. Everybody seemed behaving strangely. What did that look in her eyes mean? After all, he was perfectly sound; he had escaped. What was there to call for that extraordinary agitation?

'You—you had an accident, Greg?' Her voice was strained and stammering, its usual soft note harshened. 'Say, are you—are you sure you are not hurt? What happened?'

'Well, nothing really, Aunt Lyddy,' he answered with even exaggerated coolness to counteract her foolish emotion. 'A bough had broken off and fallen across the road. The car was thrown on her side, and I was jerked out, but fortunately neither she nor I was hurt.'

'She?'

'The car. Don't you know they are always female? I suppose it is because they run us into danger. By the bye, if you drove that way it was lucky you had not a jar, though old Robin's pretty safe.'

'It—it wasn't down when I passed.'

'No? Well, it's all perfectly right now.'

She sat down suddenly, as if the trembling of her limbs forbade her standing; but he could see she was making immense efforts to resume her usual gentle calm. She passed her small, smooth, but wrinkled hands over her face, closed her eyes a moment, then forced a smile. 'Ah, naughty boy! You and your car have made my heart go. So it all ended in nothing. Well, well! you have much to be thankful for. And how are you, dear? Has it shaken you too?'

He laughed. 'Well, Aunt Lyddy, it takes more than that to shake an old campaigner. I'm perfectly all right.'

She shook her head. 'You don't look it. You have had "flu" you know, and it has pulled you down. I must give you some of my special tonic. Uncle will make it up, since my bad boy has taken a prejudice against poor Dr Bastin.' She got up slowly, smiling, though it still seemed a forced smile, and she remained white and shaky, passed her hand down his arm, patted his hand, and went out.

'I wish,' he said, with a sudden distaste he was really ashamed of—'I wish Aunt Lyddy was not so fond of patting and stroking; it's rather a tiresome habit. One is not always in the humour to be pawed.'

Just before dinner she brought him a glass of her 'tonic.' He protested he did not want it, but at her soft, persistent persuasion he was raising it to his lips, when, turning at Margaret's entrance, he was surprised to see her, behind Mrs Guthrie's back, violently shake her head, her lips forming a 'No.' He put the glass down, and some instinct made him, as he did so, spill the contents. His aunt was busy at the sideboard, and did not see him.

It was a curiously silent meal, or, rather, it was a monologue on the part of Dr Guthrie, who kept up a monotonous dissertation on some new scientific discovery which entirely failed to interest the three others, though his wife threw in occasional soft and not very appropriate comments. Margaret pretended to eat, but Gregory noticed that her plate was carried away full. His aunt had always the smallest capacity for food. He often wondered how even so slight a frame could be supported by such meagre sustenance. Altogether it was a curious meal.

Mrs Guthrie suddenly pushed back her chair and declared there must be thunder in the air; she always felt it strangely. Indeed, she was very pale and tremulous.

'You want a change, Aunt Lyddy,' he said half-carelessly, half with intention.

'Change!' she echoed, for her almost fiercely. 'I never want change from Sunninghall.' She tried to laugh. 'It's you, Greg, I suspect, who want a change from your tiresome old aunt. Is that it?'

'I'm quite happy, if you are,' he returned, and poured himself out a glass of wine. His eyes fell on the reflection of the table in the sideboard opposite, and he had a strange shock. He saw, or seemed to see, so wild and sinister a look on Mrs Guthrie's small, neat-featured face—a look, it appeared to him in that startling moment, of some other soul looking through the calm, kind, familiar visage, which at that curious moment struck him as no real face, but a mask. But the next impression was of the normal once more. She said some little thing in her gentle, ordinary way, and her eyes met his with their usual smile.

(Continued on page 410.)

ONE OF NAPOLEON'S SPIES.

By A. HILLIARD ATTERIDGE.

SINCE the war began we have heard a good deal about German spies in Britain and in France; and there seems to be in Germany another crop of stories current about the doings of British, French, and Russian secret agents. There is no doubt a great deal of exaggeration about these accounts of espionage, and some of the narratives that have been published in the Press contain more fiction than fact. But all Governments make use more or less of this means of obtaining information. It is so in the present, as it was in the past. One of the interesting bypaths of military history has for its somewhat fragmentary materials the records of espionage in the wars of other days. Fragmentary these records necessarily are, because the real spy during his lifetime seldom gives away his employers by telling his story, and

the truth about what he has done dies with him.

Here and there, however, one is able to reconstruct the life-story of a spy. In the mass of material that has been published about the campaigns of the great Napoleon one finds some interesting details as to one of his chief secret agents, one of the most successful spies that ever lived. As is the way with spies, he went by many names. He was known at various times as Captain Charles, Monsieur de Charles, Monsieur de Meinau, Sulmestra, and Schulmeister. This last was his real name. He was a native of the borderland of France and Germany, near Strasburg; a French subject, but, like most of the Alsations, German in his native language. He was the grandson of a Hungarian, who, apparently for political reasons,

left his native country about 1730, and settled in Baden. He opened a school near Strasburg, dropped his Hungarian name, and took the German name of Schulmeister from his new occupation. His son was a Lutheran pastor of a village near Strasburg, where, on 5th August 1770, Charles Schulmeister, Napoleon's master-spy, was born.

The register of the Lutheran church at Markirch shows that at the age of twenty-two he married a girl of eighteen named Unger. He was described in the register as an iron-monger in the village. Five years later he moved into Strasburg, where he opened a shop as a grocer and tobacconist. In the years that followed Schulmeister was evidently making money, ostensibly from his shop, really from a more profitable business, for which the grocery and tobacco shop served as a mask. He was one of the chiefs in an extensive system of smuggling carried on across the Rhine frontier between France and south Germany. The secret relations he thus formed with unscrupulous and adventurous men in the border districts of both countries were of the utmost use to him in later years, when he became a spy.

It appears that he had made some first experiments in this new business the year before he moved to Strasburg. A French army under General Rapp was operating in 1796 near Schulmeister's village, and he was able to obtain some useful information for the Republican General by means of the agents who were already working for him in his contraband trade. Through Rapp he was put in touch with Moreau, and thus he became known to the French War Office as a useful secret agent. He seems to have been one of the spies who kept watch on the luckless young Duc d'Enghien, and thus one of the minor accomplices in the tragedy that ended in the ditch at Vincennes.

In 1805, the year of the great campaign of Ulm and Austerlitz, he was in the pay of Napoleon. The Grand Army had been encamped for more than a year about Boulogne, waiting for the opportunity to invade England. When, in 1805, Napoleon received the news that his admirals had failed to secure a safe passage across the Channel, and Austria and Russia were on the point of declaring war against him, the Grand Army was rapidly moved to the Rhine, and its first exploit was the destruction of the Austrian army under General Mack, which had moved forward to Ulm. Napoleon's plan of campaign was to lead Mack to believe that the French were advancing across the Upper Rhine and through the Black Forest, as they had done in earlier campaigns. But while a mere screen of cavalry was pushed forward in this direction, the Grand Army had swept round to the north of Ulm, crossed the Danube below it, and thus cut off Mack from Vienna, and compelled his surrender. Schulmeister had obtained for Napoleon very complete

information as to the numbers and movements of the Austrians. But he was apparently playing a double game, for during this campaign of Ulm he was receiving pay both from Mack and from the French Emperor. Mack, however, had no idea that the German-speaking agent who came and went from his headquarters was in Napoleon's pay; but the Emperor was perfectly well aware that Schulmeister was in touch with the Austrians, and had in fact himself suggested the arrangement. Schulmeister's business was to give the unfortunate Austrian General just enough true information to gain his confidence, and then to mislead him with false reports prepared by Savary, the chief of Napoleon's secret service—the soldier of whom it was said that, though he was described as a General, he was really a detective.

Schulmeister, at Mack's headquarters in Ulm, was thus deluding the General with reports that would confirm him in his idea that the French were coming through Baden and the Black Forest, and with false news as to the situation in France. He produced for Mack what looked like authenticated information that a British army was landing in the north of France, and that revolutionary disorders had broken out in Paris. In fact, he persuaded the Austrian that Napoleon was in a desperate situation, and the French invasion of Germany on the point of collapse. But Schulmeister knew better than to wait in Ulm until the position of Mack became hopeless. When the Archduke Ferdinand marched out to the north-east with part of the army, Schulmeister accompanied him, taking with him a letter from Mack, in which he was described as his faithful 'confidential agent.' A few days after Mack was a prisoner, while Schulmeister was at the Austrian headquarters, whence he sent to Napoleon information as to all the movements of the Austrian and Russian armies. He obtained this largely from a staff officer, whom he had known at an earlier date in south Germany, and whom he was able to pay handsomely out of the money placed at his disposal by Savary. 'He was the more open with me,' wrote Schulmeister to Savary, 'because your generosity to me made it possible for me to be open-handed with him.'

Schulmeister's reports showed a wonderful grasp of the situation, and both military and political insight. He had many other agents in his pay besides the staff officer. He was carrying his life in his hands, because at any moment one of these might have betrayed him. There is a story, indeed, that he was discovered and arrested, but made his escape. This, however, fits in neither with what we know of his career nor with the events of the campaign. He kept with the Russo-Austrian headquarters up to the eve of Austerlitz; then, on the pretext of a journey to secure information, he

slipped away, and appeared at Vienna, where Savary employed him at the headquarters of the French police of the captured Austrian capital.

The French evacuated Vienna on the conclusion of peace, and Schulmeister paid a visit to Paris. Then, in a moment of rashness, and for what purpose we know not, he went to Vienna. Perhaps he hoped to renew his relations with the Austrian staff with a view to future betrayals. But on 31st March 1806 he was arrested with one of his agents, the Austrian army surgeon Rippmann. They were tried for treason in communicating information from Mack's headquarters to Napoleon the year before. Schulmeister boldly urged as his defence that he had done so by Mack's orders to mislead the enemy. Mack denied this, and the two spies were found guilty and condemned to death. The French Embassy secured life and liberty for Schulmeister, pleading that he was not an Austrian, but a French subject, and that, though he might have been hanged as a spy if arrested during the war, he should not have been arrested and put on trial when it was all over. Schulmeister returned to France. Rippmann was hanged.

Schulmeister bought the estate of Le Meinau, near Strasburg, out of his ill-gotten gains, built a splendid château, and posed as one of the local notabilities. He was with Savary in the autumn in the Jena campaign, figuring as 'Captain Charles,' one of his staff officers. Schulmeister's business was in the intelligence department. He was now a director of the Emperor's spies. At Friedland he was in action, and a bullet tore across his forehead. The wound was not serious, but it left a scar of which he was proud.

He was at Napoleon's headquarters once more in the campaign of Wagram. After the victory he and Savary had a narrow escape in the suburbs of Vienna. They were attacked by a mob of some hundreds. Savary reported to Napoleon that he owed his life to the determined action of his aide-de-camp, who blew out the brains of one of the mob leaders.

After the war Schulmeister bought another château, near Paris, once the home of Marshal Saxe. He had amassed a fortune, and had a large official income as one of the secret police of the Empire. But at last the evil days of 1814 arrived. His two châteaux were plundered by the Allies in their march on Paris, and with the fall of the Empire he had to live upon his savings for a while. During the Restoration he was involved in an abortive conspiracy against the Bourbons, and escaped arrest by a timely flight. When Napoleon returned from Elba he was back in Paris, hoping that the old, busy, prosperous days had come again. But Waterloo ended that dream, and he found himself a prisoner in Prussian hands, locked up in the fortress of Wesel. But many of his old friends

had made their peace with the new régime, and by their good offices he regained his liberty.

He survived till May 1853. Of his later life we know little. It is very likely that he was a party to some of the Bonapartist conspiracies, for he used to go away from home on mysterious journeys under assumed names. He had to sell his château near Paris in 1818; and, after some unlucky speculations, Le Meinau was sold a few years later. His fortune melted away, and at last he found himself so impoverished that he was glad to be licensed to open a tobacconist's shop in Strasburg. The wheel had turned full circle, and he was back behind the counter, where he had started on his career. He was over eighty when Napoleon the Third restored the Empire. Perhaps the old spy had lost the enterprising spirit of his earlier days. When friends suggested that he should go to Paris to worship the new risen sun, he replied that he would not force himself on the great Emperor's nephew. 'He knows I live in Strasburg,' he said. 'If he wants me, he can send for me.' But no message came from the Tuileries; and five months after the proclamation of the Second Empire Charles Schulmeister died in his house over the tobacco-shop, and was buried beside his wife in the cemetery of Saint Urbain.

If in those dull years at Strasburg, when he was weighing out ounces of tobacco and selling stamps at the 'Bureau de Tabac,' he had written his story, he might have made another fortune. But he was a secret, silent man, and never even talked of the days when he played his hidden part in world-famous wars. Amongst the furniture sold after his death was a curious bureau, with secret drawers and sliding panels all over it. But there were no papers left in the hidden recesses. Schulmeister's secrets died with him. We know only some episodes of his career. Other stories there are of his exploits which are obvious fictions—tales of his having travelled about Germany disguised as a pedlar; of his being arrested and ordered for execution, but escaping by drugging his escort; and melodramatic legends of the same type. This we know, Schulmeister was a man of iron nerve, polished address, with a soldier's knowledge of war and a practised politician's grasp of current affairs. He played the spy in the guise of a staff officer who could impress Austrian Generals like Mack and Kienmayer and the old Russian Kutusoff with his knowledge and judgment, and make them eager to listen to his fairy-tales, while he was quietly collecting the information he wanted, and using his old experiences as a successful organiser of smuggling on the Rhine border to get his reports to Savary and Napoleon.

He had no patriotism and no scruples. He worked for Napoleon because he had insight enough to see that the Emperor was the man who would win, and whose pay was the most liberal and the most secure. One can respect

a spy who risks his life for his country's cause. Schulmeister, a man of the debatable borderland along the Rhine, belonged to no country, and held, like the old mercenary soldiers, that 'the best of causes is the best of pay.' There was a just retribution in his downfall. One is

not sorry that, though he escaped hanging at Vienna, the grocer and tobacconist of 1797, after being the master of Le Meinau and the fine château outside Paris, ended his years as the old tobacconist of a little shop in a Strasburg lane.

SLANEY'S NIGHT OF GLORY.

By WILLIAM FREEMAN.

CORPORAL SLANEY sat under a furze-bush rubbing a bruised ankle. In the valley below lay the camp he was leaving; an isolated light, winking from the window of a white-washed building which until half-an-hour ago had been his abiding-place, marked the guard-house.

Corporal Slaney had been in the army five years; and the second-lieutenant, who had called him an unmannerly hog, had held his commission rather less than four months. The fault had been the lieutenant's, and Corporal Slaney had a temper. There had been a certain amount of plain and personal language. The face of the lieutenant changed from pink to purple, and he had reported the matter to the colonel. Slaney, for the first time in his career, found himself a prisoner, sentence postponed for consideration.

That it would involve the loss of his stripes he had no doubt whatever. His wrath smouldered fiercely. The guard was being changed, and the Fates ordained that only M'Vane, standing sentry in the doorway, should be in sight. M'Vane and Slaney had terminated a long friendship with a quarrel, and M'Vane had commented freely on his prisoner's prospects. Corporal Slaney, deciding that he might as well be hanged for a sheep as a lamb, had knocked M'Vane's helmet over his head with one terrific punch, and, realising that the British army was no longer the place for a man of proper spirit, stepped over his plunging body into darkness and freedom.

He had no plan. He was as much the sport of Chance and Destiny as any swaggering soldier of fortune of ten generations earlier. Of the country around he was profoundly ignorant. He knew that he would have various sentries to evade, and that after evading them he might come into contact with an enemy that had hitherto proved singularly chary of attack. All of which should have made him pause. But he was too grimly exasperated to pause at all.

He continued his journey, at right angles to the camp, under a moon hidden by rolling banks of cloud. The country looked vaguely spacious, and beyond the lines of tents utterly deserted. The gentle hill-slope he was climbing might lead to anywhere. It was as though a benevolent Providence had placed the whole continent of Europe at his disposal.

He passed, in all, five sentries, only one of

whom gave him any real anxiety. There were bushes here and there behind which a slight, khaki-clad figure crouching on all-fours was practically invisible. His thoughts were chiefly on the guardhouse and the time it would take for M'Vane to give the alarm.

He reached the crest of the hill, found that the ground on the farther side rose and fell in a succession of smaller hillocks, and pushed on. He had gone a mile in the profoundest silence and solitude, when he noticed two lights on his left. They shone like the eyes of some big animal. Since the General commanding does not confide his more intimate plans to his corporals, Slaney had no idea as to whether the lights belonged to an advanced outpost of the Allies or to the Germans. With excessive caution, he edged near enough to see that the lights came from the high windows of a dilapidated shed. He could not look in, but he could hear the mutter of voices. Acute and consuming curiosity possessed him. He had crawled round three sides of the shed in search of a door, and had begun the fourth, when something hit him an excruciating blow on the temple, and he dropped backwards into black unconsciousness.

From this he emerged slowly, to discover that he had been carried or dragged into the shed, and was now lying propped with his back against the wall.

At a table in the centre three men were seated, talking in undertones. A lamp with a tin reservoir stood in the centre, revealing the remains of a hasty meal, together with various scattered plans and documents. The rest of the place was in comparative darkness. None of the men took the slightest notice of Slaney. His head still swam. Investigating gingerly, he found a large and contused wound over his right eye.

A fattish man, vaguely suggestive of Mr Pickwick, got up from the table and came forward. 'Better?' he inquired.

'Still groggy,' said Corporal Slaney. 'Fell down a bloomin' well, didn't I?'

The fattish man laughed. 'On the contrary, you came into contact with a brass knuckleduster wielded by myself. It is a pity that so useful a weapon should have gone out of fashion. We are an intimate party which does not desire uninvited guests.'

Corporal Slaney's gaze wandered dully to the

others. One was a tall officer, with an upstanding gray moustache and fierce eyes; the other a young man of about thirty, with a thin, pale face, a retreating chin, and an air of intense impatience. All three were in uniform. Corporal Slaney realised that he had fallen into the hands of the enemy. It seemed a tame and stupid ending to the night of enterprise and glory which had begun so promisingly.

The Pickwick-like person spoke again. His accent left nothing to be desired. 'You come from the English lines?'

'That's so, sir.'

'And being a spy'—

'Spy?' Slaney's indignation was too immense to be anything but genuine. 'Not me! Silly blighter of an officer got me shoved into the guardroom, and I 'looked it, same as you'd 'a done.'

'Doubtless. You have been for some time in the army?'

'Five years.'

'Then you may be useful to us. There are certain particulars which'—

'Meanin' that I'm to turn traitor?'

'My good imbecile'—it was the elderly officer who spoke, and his voice had a flat, metallic note which jarred on Slaney's nerves and made him shiver—'believe me, you will either tell us the things we wish to know this evening, or you will be given no opportunities of telling anything at all.'

The young man with the retreating chin intervened. He addressed the others in German, waving his hands imperiously. He made Slaney feel that he was accustomed to be obeyed implicitly, and in a hurry.

'So!' apologised the fattish man when the young man ceased. He turned to the prisoner again. 'You are still dazed—ill. I forgot.' He took a flask from his pocket, uncorked it, and pushed it into Slaney's hands.

Slaney swallowed a generous mouthful. It was heady stuff, that stung his throat and brought tears into his eyes; but it made him his own man again. 'Thanks!' he said, returning the flask.

'You are hungry?'

'I could do with a bit,' said Slaney graciously.

The fattish man glanced at the pale young man, who nodded. 'Come to the table, then, and eat.'

'And when you come'—the voice of the gray-moustached officer cut like a whiplash—'salute. You understand? *Salute!*'

Slaney stumbled stiffly to his feet, and crossed to the table. He saluted and sat down on the packing-case that the fattish man dragged forward. The other pushed a plate, bread, and the remains of some sort of pasty towards him. Slaney settled down to an excellent meal. He did not hurry. He wanted to think the position over as well as the buzzing in his head would let him.

Also, he was hungry. The others watched him with rising impatience.

'And now,' said the fattish man, 'you will tell us the things we desire to know.'

'Right-o!' said Slaney.

The man with the gray moustache—his name appeared to be Colonel von Blum—began a series of questions. They dealt with nothing that could not have been gleaned from the first stray prisoner or a decent ordnance-map, and it was plain to Slaney that they merely wished to discover how much he knew, and whether he were lying. His answers were conscientious and exact. Glances of approval flashed from the pale-faced young man to the colonel.

'To continue'—said the fattish man.

Slaney wiped his mouth with the back of his hand.

'Talkin's dry work, gents.'

'You forget your position!' began Von Blum angrily.

The pale-faced young man leapt to his feet. 'Give the fool enough wine to flood Paris; it will loosen his tongue!' he said impatiently.

From a wicker basket at his feet the fattish man took two square stoneware bottles.

'Let us,' commanded the pale young man, 'drink to the eternal confusion of the enemies of Europe!' He filled four glasses.

'Ear! 'ear!' said Corporal Slaney. But his hand shook, and a good deal of the wine found its way to the floor.

'To the day when her fleets may be a legend, her army the laughing-stock of the world!'

'Ear! 'ear!' said Corporal Slaney.

Again they all drank heartily, all but Slaney. 'To the day when the half-fed, white-faced rabble she breeds may be swept back to their hovels!'

'Ah,' said Slaney, 'now you're talkin'! I'm rabble, right enough; a bloomin' conscript.' The memory of his wrongs burned in his eyes.

'Let him speak,' said the young man. 'Let him tell us from the beginning—the very beginning.'

The gray-moustached colonel growled objections. He was silenced with a gesture. Corporal Slaney found himself with a flushed, attentive audience.

'It's this way,' he said confidently. 'In the blighted 'ole of a country I come from things ain't nothing like what they're made out to be. Kitchener says, "I want men—three million of 'em;" but what 'e *don't* explain is that if the men don't come of their own free-will 'e'll make 'em. Consequently'—Slaney sawed the air to give his words emphasis—'when the response ain't up to expectations, there's armed parties go out of a dark night, and when mornin' comes the barracks is full, and 'ole streets of 'ouses is empty.'

The pale young man glanced at the others with bright, eager eyes.

'I am not surprised. Go on.'

'Bout a mile off Margit,' pursued Slaney, warming to his work, 'you'll see a row o' penny steamers, same as used to potter up an' down the Thames before you fellows sowed it with mines an' 'ung up navigation. In them steamers is the recruits, guarded by a Japanese contingent. They daren't trust white men, for fear they'd—they'd'—

'Fraternise?' suggested the fattish man.

'Fratterise is the word, sir, with the prisoners as 'ave been carried off from their 'omes to learn their drill. When they know enough to avoid killin' one another, they're transhipped in what merchantmen we can rake together.'

'I understand,' said the young man. 'It is plain—quite plain—why we have been able to advance so far with so little opposition. And now'—

'Concerning the range of those field-guns on your right?' said the colonel.

But Corporal Slaney did not appear to hear him. His eyes had grown dreamy and reminiscent.

'There was me, makin' two quid a week, drivin' a motor-bus'—

'But—but you said you had been in the army five years.'

'Beg pardon, sir. Territorial called up for service.' Slaney thanked Heaven that the colonel did not look at his shoulder-strap, and went on quickly, 'Now we're 'arf-starved, 'arf-clothed, an' knocked about by drunken swines that ain't fit to take a bullock-wagon into action. Lor', the things I could tell you!' He nodded his head with the solemnity of one anxious to prove that he was entirely sober.

'Give him more wine,' said the pale young man. His voice was high and eager. 'This—this scum interests me. I suspected a good deal, but not so much as this.'

Slaney, his glass refilled, rose to his feet. The movement showed him that both the elder men carried revolvers. The pale-faced young man had only a sword.

'Ere's luck!' said Slaney; 'best o' luck! Grand German army; may it get all the vict'ries it deserves!'

Again they all drank solemnly, all except Corporal Slaney.

'Now for the guns!' said Von Blum.

'Explanations concernin' artillery,' Slaney said sententiously, 'is like matrimony, not to be entered upon lightly. If you've pencil an' paper'—

They gave him both. Three heads bent forward. Slaney put his hand on the nearest stoneware bottle.

'This,' he said, 'stands for the main German army; this'—he took up the second bottle—'for a mobile strikin' force.'

Of the three, the pale young man was the only one who had anything like a clear impression of what followed. Even that was momentary.

He saw the bottles rise and fall with two lightning-like blows, one fairly upon the skull of the fattish man, the other upon Von Blum. The fattish man dropped with a faint grunt; Von Blum flung up a protecting arm, and received a second blow on the temple which sent him headlong, and smashed the bottle off short at the neck. Then the pale young man perceived the figure of this mad English corporal leaping at him panther-fashion, and prudently ducked. The table and everything upon it shot over sideways, the lamp providentially went out, and Slaney landed awkwardly on his hands and knees. The only consolation—from the Slaney point of view—was that the pale-faced young man was underneath.

'If you shout,' said Slaney—for his prisoner was making strange, strangled noises—'I'll bash your silly face inside out, so that the tip of your nose'll tickle your tongue. Get up!'

The pale young man, feeling his way uncertainly in the darkness, got up.

'Put up your hands.'

He put them up, and Slaney, gripping him by the collar, steered him outside to where an uncertain moon was climbing above the clouds. There he removed his prisoner's sword and belt—his own belt was in the guardroom—jerked down the rigid arms, and with great efficiency and thoroughness bound the wrists of the pale young man behind him.

'Wait 'ere!' he commanded.

He plunged into the building, and emerged with a handful of papers.

'All quiet and peaceable,' he reported, and secured the door with a convenient iron staple. The papers he bestowed in an inner pocket. The prisoner watched him dazedly.

'Now then,' said Corporal Slaney, 'by the right; quick mar-r-r-ch!'

The words galvanised the other into speech. 'I—I will not go.'

'There,' said Slaney, 'we bloomin' well differ. I've met your 'igh-spirited kind before. Gen'rally they ends with blubberin'.'

'Let me free, I tell you!'

Slaney took a pace forward; the pale young man gave a shout, and tried to run. Five seconds later he was lying breathless, and his head was being systematically and steadily bumped up and down on the sun-baked earth.

'Say when,' said Corporal Slaney invitingly. His arms were beginning to ache.

'I—I die!'

'Not yet! Get up, an' be'ave decent, an' we'll push on. It's a long way to Tipperary.'

He helped the prisoner to his feet. For some moments they walked in silence, Slaney a trifle in the rear. Suddenly the pale-faced young man came to a halt again.

'What will you take to let me go?'

'Alsace, and any old colonies you've got left over,' said the flippant Slaney.

'Tchtt, you are childish! I will give ten thousand marks.'

'An' that's more than I ever got at school!'

'Twenty thousand, and a safe conduct to your own lines!'

'That there fizzy stuff,' said Slaney severely, 'as been an' got into your alleged brain. You'll be offerin' a million next, with a seat in the 'Ouse o' Lords thrown in. An' then I shall lose my temper, an' there'll be an accident.'

'But—but do you know who I am?'

'Not me. Nor don't want to. We're all *incog.* 'ere. Chase yourself—*quick!*'

So they journeyed by stages that seemed endless to where the first of the khaki-clad sentries faced the coming dawn—a lonely little figure on the hill-crest. At the sharp challenge the torpor which had fallen on the prisoner vanished, and he plunged violently and broke away. He and Slaney came to the ground together. The sentry challenged a second time, and then fired. Luckily for the pair of them, the shot went wide.

'Old 'ard!' shouted the exasperated Slaney. 'It's only me an' a young-fool I've been dinin' wiv.—Come up, unless you want me to sit on your 'ead!'

Five minutes later they stood, desperately dusty and dishevelled, in the presence of the sergeant. He listened to Slaney's story with obvious disbelief, and marched the pair of them to the captain, who could speak German with an Oxford accent. The captain gave most of his attention to the pale-faced young man, and fetched the colonel. This, to Slaney, was manifestly absurd. A prisoner was merely a prisoner all the world over. Immediately afterwards the pale-faced young man's wrists were unfastened, and he was escorted to a separate tent. He did not even glance at Slaney as he passed.

'As for you,' said the colonel, blinking at the backslider, 'I gather that you broke out of the guardroom to commit this—this escapade. Taking the full facts of the case into consideration, it had not been my intention to punish you further. Even now, if you were to apologise'—

Slaney fidgeted with his feet and avoided the colonel's eye. He was back among his own people again; already his night of glory had begun to seem a dream, an incredible dream. Indubitably he had behaved like a fool. The second-lieutenant was newly joined and raw. It was the duty of old soldiers to teach the young ones manners.

'I'm sorry, sir.'

'Very good. You will be glad to hear that Private M'Vane is none the worse for his—er—fall. I shall consider the matter closed. Go to your tent, and get what sleep you can.'

Slaney fumbled with his tunic. 'The papers, sir.'

'Ah, thanks. Good-night!'

'Good-night, sir.'

Thereafter for three hours Corporal Slaney slept the sleep of one who has squared accounts with his fellow-men, and whose conscience is clear. He saw nothing more of his prisoner. For two days the machinery of camp life ran as usual.

Then, late in the afternoon, his sergeant appeared. 'You're wanted, Slaney.'

Slaney reluctantly abandoned his tea and stood up. 'Who by?'

'Gen'ral-commandin'. Brush them crumbs off your coat, and look slippy.'

Corporal Slaney looked slippy. He was ushered, somewhat breathless, into the presence of a short, sturdily built, gray-haired man, who regarded him with twinkling eyes.

'So this is the redoubtable corporal? Dear me, but some people are born lucky! Ever occurred to you to qualify for a seat at the sergeants' mess, Slaney?'

'N—no, sir—yessir!' The turf seemed rising and falling under Slaney's feet.

'Because I've asked Colonel Hipwhite to see to the matter. I think you deserve a place there. And that's all.'

Slaney saluted and reeled out into the sunlight again, drunk with unanalysable emotions.

M'Vane overtook him. 'Ere,' said M'Vane, who bore no malice, 'this is something that might int'rest you.'

It was an advance copy of the official news-sheet which circulated among the troops. M'Vane, who had been a compositor, had a hand in its production.

'His Imperial and Royal Highness Prince Albrecht Fritz of Prussia,' read Slaney, 'was, on the 5th instant, making a midnight reconnaissance in company with two members of his staff, when he encountered an unofficial patrol of the Allies. He is at present a prisoner in the British lines.'

The paper slipped from his nerveless fingers. 'Golly!' said Corporal Slaney.

COWSLIP DAYS.

FRESH, in the gorse-filled space, the mountain wind
Blew over fields of daisies. In the shade
Of olden thorn-boughs wild dog-violets laid
Their deep-blue cheeks against the stitchwort. Lined
Were all the dikes with foxglove; and to bind
The whole together, wild herb-robert made
A tangled shelter, and the wild-bees paid
Reverence to that flower-court with music kind.

But, fresher, fairer than the mass, enshrined
In cottage-gardens all the cowslip crew—
Some white, some red, some white and deeply blue—
Wafted their tender incense; and behind
Came trooping children gazing at the sight,
And 'Cowslips! cowslips!' burst in accents light.

Chambers's Journal

SEVENTH SERIES

THE HEART OF THINGS.

By HENRY LEACH.

LONDON, Yesterday.

COME the middle of June, and a hundred years will have gone since the star of the great Napoleon fell. What circumstances for such a centenary as this! We remember that a year ago, when pondering upon its coming approach, we had a great apprehension as to how we of Britain might display our enduring thankfulness for the great deliverance of 1815, and at the same time leave uninjured the susceptibilities and proud sentiments of our good friends the French, who at Waterloo were in arms against us. It was a delicate and difficult problem in tact, the solution to which was not quite clear twelve months from now. Kaiser Wilhelm has solved it for us. The main part of the celebrations of the centenary of Waterloo will not consist in the decoration of the Wellington statue at Hyde Park Corner with wreaths of laurel and other emblems of a tremendous conquest. The grand feature will be the crashing of French and British guns along one line of the best of friends, allies in the cause of civilisation, the cause of happiness and the good of the world, the salvation of mankind.

* * *

In a hundred years the historical perspective should come to a full maturity. Napoleon and Waterloo must have reached that stage now. In the main it is to be gathered that time is showing a tendency to be kind to Bonaparte. He was not merely a genius, but a man of towering strength, with some amazing weaknesses. Magnificent in his ambitions, superb in his executions, yet a littleness, which was but a human littleness after all, showed itself upon his surface from time to time, and exerted its influence upon his conduct. It was the littleness of Ajaccio in blunt contrast with the vastness of imperial France. Yet I think it is that littleness, the human quality of it, that has helped Napoleon in later days to a kinder situation in the hearts of those who think upon him and what he did than he occupied during the period when those who directly suffered by him were still living. After all, he had some good human qualities. He was no mere murderous machine. The most appalling crime that was laid against him—and it was a ghastly thing—was the assassination of the Duc d'Enghien; but what was that to the

No. 235.—VOL. V.

massacres of the women and children of Belgium that the Germans have committed and their chieftains have condoned? On the whole, Napoleon was humane. He was no assassin. He regarded the rules of war. Those who were not combatants against him did not unduly suffer. He respected women. He had love for little children. To his friends he was generous without limit; and he was always chivalrous.

* * *

Recently I have found it a most agreeable diversion and study to go back to the beginning again, and see what was written and thought about Napoleon, and what stories were told of him, at the time that he was engaged upon his tremendous work, when he was a living man of Europe, admired and feared, hated, maligned, but wondered at always. We have heard much of what the philosophers have had to do with the present war. Let us look, at the beginning, at some of Napoleon's reflections upon the philosophers. These quotations are taken from the German gazettes of 1807. When Napoleon was in Leipzig in that year, Dr Erhard, the Rector of the University, called upon him, prepared for what he imagined would be a brusque reception, and primed with flattering speeches. But the conqueror was all affability, and proceeded to a keen discussion of educational and philosophical questions. Erhard presented to him Prasse, the Professor Extraordinary of Mathematics, remarking that he was one of the best pupils of Professor Kindeburg. Napoleon immediately entered upon the nature and advantages of Kindeburg's mode of calculation, and appeared much pleased with the manner in which Prasse spoke of it and the freedom with which he answered some of his objections. Then, addressing himself personally to Erhard, he observed that the University of Leipzig enjoyed the honour of having produced the immortal Leibnitz, of whom he spoke with a warmth that suggested to the Rector that he placed him above Newton. Then he asked, 'Does Kant's philosophy reign also at your university?' 'Sire,' answered Erhard, 'we have never granted an exclusive privilege to any sect of philosophy.' 'But,' rejoined Napoleon, 'Kant is already out of fashion. Who is predominant at present?' Erhard answered, 'He has had

[All Rights Reserved.]

MAY 29, 1915.

several successors who have tried to supplant him, and perhaps the newest system or the newest philosophy is on the point of falling. As for us, we conceive that it is our duty to frame young men for the service of humanity and the State rather than to make them dreamers and simpletons. The sublime mind rises to speculation of itself, and not by poring over the systems of professors who wish to make themselves remarkable. All our efforts are directed against the tyranny of the sectarian spirit.' 'In this,' remarked Napoleon, 'you are very right. I am of the same opinion.' Napoleon then spoke of Gall, and made what seemed to Erhard to be some very just and acute remarks upon his system. 'I question,' he said, 'whether Nature in her works operates so rudely that Gall can be able to penetrate her intentions. I have not been satisfied with his explanations relative to the motion of the brain. I esteem the spirit of observation, but I am not in favour of ambulatory courses of lectures which are incompatible with the dignity of science.' He then discussed the foundation of the university, and praised the system that obtained in the country of converting monasteries into scientific institutions, which, he said, must often produce great men. He was astonished at the great number of German universities and the smallness of their resources. 'I love,' said he, 'grand establishments, which at the same time are grand in their effects. I admire those of Paris, of Bologna, and of Milan, where the muses inhabit palaces into which we enter with emotions of respect. Governments ought publicly to testify their esteem for sciences in order to render them respectable to the people.' Erhard observed that the number of students had been diminished during the war. 'They have been frightened,' Napoleon replied. 'We must restore their confidence.'

* * *

To such a glimpse of a statesman let us add for a quick change a characteristic story of the General with his soldiers as it came from the military headquarters in 1805. A few days after the battle of Austerlitz, Napoleon reviewed the division of Von Damme, and ordered Soult to inform them that he was satisfied at seeing them so numerous and in such good condition after the great fight, as they had there acquired so much glory and essentially contributed to the success of the day. When he came to the first regiment of the line, who had commenced the battle and lost their standard, the Emperor said, 'Soldiers, what have you done with the Eagle I gave you? You swore it should serve you as a rallying-point, and that you would defend it at the peril of your lives. Why have you not fulfilled your promise?' The major answered that the ensign was killed in a charge when the battle was at its hottest, and that in the midst of the smoke no one noticed the loss;

that a movement was subsequently made to the right; and that it was not until some time after this that the loss of the Eagle was discovered. The officer added that it was proof that the division had stood firm, and not been broken, that very soon after this they overthrew two Russian battalions and took two stands of colours, with which they meant to do homage to the Emperor, hoping by that means to merit another Eagle. The Emperor, after a short pause, said, 'Officers and soldiers! swear that none of you were witnesses to the loss of your Eagle; and that if you had seen it you would have precipitated yourselves upon the enemy and retaken it, or would have perished on the spot; for a soldier who loses his colours loses everything!' Instantly a thousand arms were lifted up. 'We swear it; and we swear also to defend the Eagle you will give us with the same intrepidity with which we captured the enemy's colours which we now present to you.' 'In this case,' said the Emperor, smiling, 'I shall return you your Eagle.' And this is another story of the great Commander-in-Chief, taken from the French papers of 1806. At the beginning of May of that year Napoleon received at St Cloud, on the presentation of the Minister of Marine, Captains Lucas and Infernet, who had recently arrived from England, where they had been taken prisoners after the battle of Trafalgar, in which they had been engaged. Lucas had commanded the *Formidable*, and gave an account of the part his ship had taken in the battle. Addressing the officers at the close of the interview, Napoleon remarked, 'Had all my ships behaved like yours the victory would not have been doubtful. I know there are several who did not follow your example. I have ordered inquiries to be made into their behaviour; but as for you, I have no need of information. I have nominated you captains in the Legion of Honour. Those captains who, instead of boarding the enemy's vessels, kept themselves aloof and out of cannon-shot shall be prosecuted, and if convicted a signal example shall be made of them.' A few days later there were also presented to him the captains of the *Bucentaur* and the *Swiftsure*, to whom he said, 'You are among the number of those who fought valiantly. You shall take your revenge one day.'

* * *

One finds in the French newspapers of 1806 and 1807 many curious and interesting anecdotes of Napoleon when in Poland. Soon after his arrival at Posen, in December 1806, in the course of his advance against the Russians, he received many Polish deputations, to all of whom he made affable replies. To the deputation of the senate he said, 'Illustrious lords, show yourselves worthy of your ancestors. They commanded the princes of Brandenburg. Moscow was in their power. They conquered Widdin, and by that exploit liberated the

Christian world from the yoke of the Turks. I am perfectly satisfied with everything I have seen of you, as well as with the reports of my Generals. I shall proclaim your independence at Warsaw.' Then, when Napoleon was travelling back from Poland to France in 1807, he stayed for a while at Dresden, where the people fawned upon him in the most abjectly servile manner. He was invited to the opera for a performance organised specially in his honour, and duly attended. Before the opera a prologue was given, the scene of which represented a temple beset with altars on which the names of Alexander, Cæsar, Miltiades, Marcellus, Philip, Marius, Achilles, Fabius, Pericles, and Scipio could be read. In the background was a larger altar without a name, and before it stood a genius clothed in a starry robe who wrote with a stylus in front of the altar the name of Napoleon. Then in an instant a transparent sun appeared with a white star in the middle, and all the names of the ancient heroes were extinguished. The people applauded, and then the genius came forward and sang in Italian, 'What compared with thee are Cæsar and Philip's unconquered son? Like drops of dew compared with the waters of the ocean!' Napoleon was very attentive to this prologue. But when the first act of the opera was over, and the curtain dropped, he suddenly rose, and bowing to the royal pair beside him, went away. They, however, and the whole of the Court followed him.

* * *

And mention of Alexander and Cæsar leads one to quote from the papers of 1814 a story of which there are some variations, as to one of which you will remember that Napoleon once said to Bourrienne, 'Well, Bourrienne, you too will be immortal.' 'Why, General?' 'Are you not my secretary?' To which question Bourrienne answered, 'Tell me the name of Alexander's!' But Bourrienne, through printer's ink, has done better than the secretary of Alexander. This other story to which I refer has it that on one occasion Napoleon went with his close friend, the witty Fontanes, to the Théâtre Français to see Talma play. The Emperor considered himself a very good judge of stage matters, and on this occasion he professed himself delighted with the actor, and applauded him warmly. Every time that he did so Fontanes repeated, 'Ah, sire, but if you had seen Le Kain!' At last Napoleon impatiently replied to this observation, 'Why do you esteem him thus? You are ever wasting your regrets on the greatness that is past!' Fontanes was equal to the occasion. 'Your Majesty never hears me regret Alexander or Cæsar!' he said suavely, and the Emperor rose and bowed. In another story it is told that nobody ever enjoyed greater freedom of speech with Napoleon than this lively Fontanes, poet and politician. He

was his intimate and most candid friend. At one time the Emperor was very anxious to know what Fontanes thought of the killing of the Duc d'Enghien, and tried to find out indirectly in various ways, but without success. Consequently, at last he put the question bluntly to him. 'Well, Fontanes,' he said, 'what have you to say of this act?' 'What can I say,' was the reply, 'save that your Majesty, being the strongest, used the argument of the weakest?' Napoleon did not appear displeased with the answer. In these delvings one finds some other good specimens of the witty or otherwise pointed answer. When Napoleon visited Holland he addressed a certain Admiral K., who did not speak French. The Emperor became very much irritated, and exclaimed, 'I suppose you can speak English!' The Admiral again pleaded ignorance. This second admission somewhat pacified him, and he asked the Admiral why he did not learn French. 'The French language is not taught at sea!' was the reply, and Napoleon was vexed again. General Monnet, governor of Walcheren, once applied to be relieved from the command of the place, saying that the climate was so bad that unless he was removed his life would be in danger. Napoleon refused his request in these laconic terms, '*Mon Général, on mourt partout!*' There is no doubt, says the writer of another note, that Napoleon was very deeply affected by the abdication of his brother Louis from the throne of Holland. 'This wretched man,' he said, 'has gone out of his way to justify the public, who look upon my brothers as kinglings.'

* * *

As is known to everybody, Napoleon had a way with women. Often he was a fine gallant; he could be fascinating, but he could be very much otherwise; and one of his principles in his dealings with the enticing sex is that best expressed in the common sentence that he would never allow pleasure to interfere with business. His harsh treatment of the beautiful Queen of Prussia is well remembered. Yet at times, despite the imperiousness that he exerted, he tried to be gracious to Her Majesty, who carried a quiet disdain to its utmost length. Seated at the dinner-table, he begged her to take a rose from him—which she refused. Again he appealed, but she declined again; and thereupon Napoleon came near to losing his temper, and demanded, 'Take it, madame; it is I, Napoleon, who offer it to you.' The Queen then had no option but to accept the flower. Thereupon Napoleon, who would make amends and restore harmony, begged that Her Majesty would make some request of him, to which he would be quick to accede. Once more the Queen was reluctant, declaring that she wished for nothing from the Emperor. He insisted as before; and at last she said that for herself she wished nothing, but would beg for Magdeburg for her

son. Napoleon was quiet for a moment, and then answered, 'You are a very beautiful queen, but Magdeburg is worth a hundred queens!' Now listen to this. When in Milan, in the summer of 1800, Napoleon was one evening dining in the presence of a large company of Italian ladies, and one of them ventured to ask him what he designed to do with Italy. He made no reply. Again the lady asked him the same question, but still he remained silent. Importunately she repeated it a third time; whereupon Napoleon called to one of the attendants to bring him a lemon. When it was brought to him he cut it in two pieces, and, taking one of them, he squeezed the juice from it and threw it away. Then he took the other half, squeezed the juice from that also, and threw it away. Thus was the lady answered. Milan had already been compelled to furnish the French Republic with one million two hundred thousand gold sequins, besides immense quantities of military stores.

* * *

We have been assured that the Kaiser, in the exercise of such sanity as he may possess, considers the world of affairs to have treated him somewhat improperly in not seating him on the throne of Britain, to which position he feels he is by lineage entitled. Now I do not recall in any history or other work dealing with Napoleon any account of a pretty idea or scheme that he had also for becoming crowned at Westminster. It was told by one of the Paris correspondents late in 1807, and is worth repeating now. Upon the death of Cardinal York in 1807, so it is said, an extraordinary and circumstantial story was circulated in Paris of a Napoleonic intrigue which had for its object the acquisition of some other title to the throne of England than that of the meditated future conquest, or one which would at all events support the Emperor's authority when he arrived at Westminster. York, who

had suffered heavily by the Revolution, and had sacrificed all the family jewels, including a priceless ruby which was said to be the most perfect in the world, in order to assist Pius the Sixth in making up the sum required by Bonaparte in 1796, was the brother of the Young Pretender and his next-of-kin. On one occasion he had medals struck with his head upon them, and the legend 'Henricus Nonus, Anglicæ Rex,' his name being Henry. The story was that when, in June 1806, this Cardinal York was very ill, and reported to have no chance of recovery, Napoleon's uncle, Cardinal Fesch, called on him and exhorted him to transfer his right to the throne of Great Britain to Napoleon himself, who in return would provide for all his friends and relatives, with the exception of a certain revolutionary count whose fanaticism he declared himself unable to forgive. Cardinal York consented, and a will in these terms was made and signed, with Cardinals Pamphili, Consalvi, and Fesch as witnesses. When this Pretender died in the following year the will was looked for in vain, but another was found bearing a subsequent date in which the rights to the British throne were transferred to his Sardinian Majesty. When this was made known to Napoleon he became furious, and forbade the masses prepared for the repose of the Cardinal's soul. I should like to continue with these Napoleonic tales, and repeat some more from a selected number that in themselves would make a little history of the amazing man who, one hundred years from now, was forcing Europe through the most thrilling and consequent hundred days it had ever known, at the end of which he lost the tremendous game he played; but my space is gone. Let us remember that there are still good things in the world that Napoleon made, and on the 18th of June we salute our friends the French, who made him great.

THE BRIGHT EYES OF DANGER.

CHAPTER XXVIII.—AFTER THE BALL.

THE courtyard was quiet and cool after the ballroom, the only movement the shadows of the dancers passing and repassing on the windows, and two or three couples, their buckles twinkling in the moonlight, pacing to and fro outside, rippling the silence with a tinkle of laughter.

'You left us!' said Mistress Charlotte.

'I ran away because you told me that you would never wed a man who was not a Jacobite.'

'I said so, and I added, I think, "of my own free-will." But there is no time for—for talk. I beg of you to be careful.' She looked round nervously. 'I saw Philip Macdonell come into the ballroom. The instant he saw us—we were dancing—he disappeared; and I am afraid! I shall make excuses to Lady Hewat, and do

you then meet me at the south door. I shall order the chaise to be ready. You must come back to The Garth. Quick! there is not a moment to be lost. We must separate now until you join me. I fear—I know not what. Should any danger overtake you'—

'Give me a talisman,' I said. 'This!' I pointed to a White Cockade she wore.

'Will you wear it?' she asked eagerly, and handed it to me. 'It may save you from harm here among Jacobites.'

'I shall wear it here,' I said, and pinned it over my heart under my coat.

'Do not, I beg of you, lose any time. We must get away from here. The south door, then, as soon as you may!'

She tripped swiftly back to the ballroom, and I made for the musicians' gallery. I was within half-a-dozen yards of it, when two Highland officers turned suddenly and faced me. I recognised the elder one. He was the officer whom I had met in the High Street with Walter Irving.

'I am addressing Mr Edmund Layton?' he said with gravity. Both men were armed.

'At your service,' I answered, and bowed.

'What I have to say is of importance. Do me the favour of coming with me.' His voice was pitched low, but its tone savoured of authority, and I did not relish it. I held my head high, and I think he saw this, for his next words were, 'Ye will understand when I say that I am carrying out his Royal Highness's order. To be plain with ye, a certain report has reached the Prince.' He looked keenly at me.

'Concerning myself?' I asked him, in surprise.

'Yes.'

'I am mystified,' I said.

'Mr Layton! Least said, soonest mended! His Highness leaves for Duddingston soon, and wishes your attendance. Ye'll be good enough to follow me.' He led the way, and I passed out, with his subaltern behind me. We went through a side-door, across a courtyard. The guards at a door saluted, we passed through, and I found myself face to face with Charles Edward. He was seated at a table, two or three officers standing behind him in attendance. I bowed.

The Chevalier was terse but courtly, and I have never heard a more pleasant voice.

'I sent for you, Mr Layton. I believe in seeing friends or foes with my own eyes. I wish certain information. You are aware, of course, of our Proclamation at the Cross of Edinburgh. It is suspected that you came north from England on secret service. It is known that you have visited a certain Whig lawyer; that your family fought for Hanover in the "Fifteen;" but you have been frequently around our camp at Duddingston, and to-night you gained admittance to our Assembly by a subterfuge.'

There was a pause.

'Your Highness, is the accusation that I am a Hanoverian spy?'

'It is. You have been watched.'

'The Laytons have carried swords, it is true, for hundreds of years; but they fought in the open. They do not breed spies.'

I might have answered more humbly, and with worse effect. Charles Edward looked at me, and his eyes were softer.

'Those who frame the rules of war lay no dishonour at a spy's door. Indeed, he is necessary, but his is a dangerous trade. Martial law has but one sentence for him. You know it.'

I had nothing to say.

'Come, Mr Layton, you are young. You

may have had generous enthusiasms, mistaken conceptions of duty that lead young blood into—shall we say?—indiscretions.'

'Your Highness, I claim no favour on the score of youthful indiscretions or on any score. I seek fair-play. It is in all people's mouths that you are just and considerate. I ask a private audience with your Highness. There is such an ingenious mixture of black, deliberate falsehood and truth in these charges that I suspect more than zeal for your Highness's cause and person has brought about my arrest.'

He turned without hesitation to the officers in attendance. 'I shall interview Mr Layton alone;' and in a trice we had the room to ourselves.

I told Charles Edward my story, except my relations with the house of The Garth. I kept these to myself, for they did not concern the charge of espionage, and they touched the private affairs and honour of others. 'I have no information, secret or otherwise, that the whole countryside does not possess. I have broken no law, military or civil—I am not bearing arms. I crave your Highness's pardon for the indiscretion of attending here without an invitation. I plead guilty to this, and to nothing more.'

'You speak frankly enough,' said the Chevalier.

His smile must have won many a recruit.

'You say that you suspect that the charge was made not so much through interest in our cause as for some other reason. What reason?'

'I know not. I can only suspect.'

I hesitated. I dared not tell him of Glenira and the French money. Philip Macdonell, backed up by Innes, would be crafty enough, in that case, to accuse Glenira of dishonesty; and there was always the chance that, in the last resort, he might secretly denounce his hiding-place to the Hanoverians.

'I believe, your Highness, if I say that there are weighty reasons touching the honour and private affairs of others, reasons that have nothing to do with loyalty or disloyalty to you, or with politics in any shape or form, and that I cannot give you those reasons, that you will not press me.'

'Why are you here, and by a—what shall I say?—a ruse unworthy of your name and standing?'

'I have asked your Highness's pardon for this breach of the conventions. Indeed—indeed, your Highness might overlook it were the reason told you.'

'I shall understand it to be in confidence, provided you are innocent of the charge of espionage. You say your family does not wear the White Cockade.' He had risen and was pacing the room. I could not see his face.

'That is true, but'—

He turned suddenly, and came close to me, a smile in his eye. 'Why, sir, do you wear one?' He pulled aside the lapel of my

coat, and there was the little White Cockade pinned over my heart. My courage mounted.

'I got this from the hands of one of the fairest of your supporters. Her name is Mistress Charlotte Macdonell. Your Highness will understand.'

'I do, I think. You have better taste in affairs of the heart than in politics.'

He went to the door, summoned an officer, and said a few words to him in a low tone.

'Who can vouch for you in Edinburgh, Mr Layton?'

'I know no one except my lawyer, whom I came north to see. He is a Whig, but a worthy and kind-hearted man. Through him I met Mr Allan Ramsay, the poet. I know no one, other than these two, in the city.'

Charles Edward looked at me. 'Mr Allan Ramsay! If you are speaking the truth, then you are a very fortunate young man. Do you wait here a moment or two.' He went into the anteroom. Through the closed door I heard voices, and then the Chevalier came back, followed, greatly to my surprise, by Allan Ramsay himself, looking very self-conscious. 'This is the gentleman you met, then?' said the Chevalier to him, after we had exchanged greetings.

'The same, your Highness! And if I may make bold to say so, he is of good stock and'—

'His stock may be like yours, Mr Ramsay, of the best'—the little man beamed—'but it was his errand in Edinburgh we were concerned about.—Mr Layton, Mr Allan Ramsay's information to me—I put weight on his judgment—would have gone far to clear you; but'—he listened to footsteps on the stair—'yes! I have another of your friends here.'

There was a knock at the door. Allan Ramsay, standing near, opened it, and Charlotte, pale but self-possessed, entered. She gave me a quick glance, after her curtsy to the Chevalier.

'There is no time for speeches and why or wherefores,' said he, as she bent over his hand. 'We are due at Duddingston ere this; but I hope we shall all three meet again. I invite you, Mr Layton, to finish your interrupted dancing. Mistress Charlotte Macdonell is so fair a cause that I forgive your little ruse. The band, perhaps, can spare your services.' He turned to Charlotte with a bow—'And perhaps, Mistress Charlotte, by the next time I meet Mr Layton you may have persuaded him to wear the Cockade a trifle less secretly.'

He was standing, smiling, one hand on the anteroom door, and, before I could stammer a word of thanks, he pushed it open and withdrew.

I presented Allan Ramsay to Charlotte; whereupon they had much to say concerning the Chevalier and his cause. The little poet was as

garrulous as a starling; but I read disquiet in Charlotte's eyes, and I contrived to cut short the flow of talk.

'I'll no' be goin' to the ballroom wi' ye,' said Allan; 'I'm no' bidden; but my business here is—ye understand!—between oursel's, ye needna come ower it that ye ever saw me at Holyrood.'

He gave Charlotte a ceremonious farewell, with many kind words. He would have dearly loved, I am sure, to make pointed allusion to 'my mistress wi' her tartan screen,' but I signalled him with a frown. Luckily he desisted, and took his departure, with another whispered injunction to me not to mention his presence with the Chevalier. A 'canny man,' in the phrase of the North, and one who had to look for his living to both 'Whigs' and 'Jacks.'

We came to a stop in the courtyard.

'I had just made my excuses to Lady Hewat when an officer came with the Prince's commands,' said Charlotte. 'He wished to see me. Tell me, what has happened?'

I told her of my meeting with the Chevalier.

'Let us hasten back to The Garth. Behind all the light and the music here there may be danger. Bertrand and Glenira are alone. I risk nothing when Philip Left-Hand is about.'

'I should like to see him, above all things. Let us go back to the ballroom.'

'He has disappeared. The hired chaise is ready waiting for me; but you must not be seen. Take the short cut you know by the fields to the turnpike road. I shall delay starting for half-an-hour, and overtake you. The Prince has gone to Duddingston, and no one will remark your absence. Keep to the main road after you strike it.' And with 'Adieu! Heaven guard you!' she had gone back to the ballroom.

I went by the side-door up the dark stair to the music-gallery, where I borrowed the old cloak, and in a couple of minutes I was out in the moonlight and putting the road behind me at a round pace. I took the short cut from the Lang Dikes, striking the turnpike road in half-an-hour. Allowing time for Charlotte's pre-arranged delay, I was well ahead of her; so I slackened my pace. The sooner the chaise overtook me the longer I should be with her. The night was one of moonlight. I could count the trees' branches in its clear presentment. The air was windless; and I soon heard the rumble of wheels break the silence in the distance. A chaise and pair came round a bend of the road. It drew level, and on my signal stopped. The window framed the fairest picture—Charlotte's face. In a trice I was inside, 'All's well!' on my lips, and a great happiness in my heart.

(Continued on page 422.)

BOLTS FROM THE BLUE.

By Sir LUDOVIC J. GRANT, Bart.

AS Sir Henry Maine has pointed out in an interesting passage in one of the lectures which, as Whewell Professor of International Law, he delivered before the University of Cambridge in 1887, one of the most remarkable features in the history of armament is the regularity with which the appearance of any new engine of destruction has been followed in certain quarters by an outburst of indignation, and by a strenuous effort to ban its employment. When medieval ingenuity devised that highly scientific weapon the cross-bow, the Church was horror-struck, and the Lateran Council in 1139 put an anathema upon *artem illam mortiferam et Deo odibilem*. In a later age the musket was received with scarcely less odium, wrathful commanders seeking to drive it out of use by denying quarter to the soldiers who carried the monstrous machine. Maine recalls how the Chevalier Bayard thanked God that he had caused all musketeers who fell into his hands to be slain without mercy. Similar sanctions were put into operation for the suppression of the rifle and the bayonet when they first came into use; and it seems that the men of our Rifle Brigade were actually clad in green uniforms that they might be less easily seen amidst the olive-trees of Spain and Portugal, and less likely, therefore, to fall into the merciless clutches of the foe.

The uniformity characterising the reception of new warlike weapons to which Maine calls attention has once again been exemplified in the case of aircraft. No sooner was it realised that vessels which navigate the air might be used not only for purposes of observation and communication, but also for the discharge of bolts from the blue, than the attempt was made to have aerial bombardment proclaimed illegal. Even the scouting services of balloons, it should be remarked by the way, have not passed unchallenged. In the Franco-German war (1870) Bismarck was disposed to take a leaf out of the Chevalier Bayard's book in dealing with persons who crossed over the German lines in balloons; and though in the end captured balloonists were never executed, they were treated with great rigour and severity. The opposition, however, to the employment of aircraft as bomb-throwers assumed a much more pronounced form than the opposition to their use as scouts. Indeed, the action of the Lateran Council in anathematising the cross-bow finds its modern counterpart in the attempts of The Hague Conferences to place under a ban the discharge of projectiles from balloons and other aircraft, and these early efforts to interdict aerial warfare by international agreement are deserving of consideration.

Some months before the first Peace Conference

met at The Hague in the summer of 1899, Count Mouravieff, on behalf of the Czar of Russia, who had been the prime mover in convoking the conference, issued a circular summarising the proposals which were to be submitted for discussion, and the third item in the list was in the following terms: 'To restrict the use in military warfare of the formidable explosives already existing, and to prohibit the throwing of projectiles or explosives of any kind from balloons or by any similar means.'

The proposal found plenty of supporters at The Hague, who in the course of the discussions harped strongly on the humanitarian string and on the 'frightfulness' of aerial war. 'Would it not be going beyond all bounds,' asked one of the Dutch delegates, General den Beer Portugael, 'to authorise the use of infernal machines which appear to fall from the sky?' And the gallant soldier proceeded to argue that by the progress of chemical science projectiles might be filled with deleterious or soporific gases, so that if dropped from balloons in the midst of troops they would at once put them out of action—a proceeding which he hinted would approximate closely to perfidy. Others thought that the means of injuring the enemy actually in use were sufficient; but perhaps the argument which carried most weight was that urged by an American delegate, Captain Crozier, who declared that in the existing state of aeronautics it was impossible to tell where projectiles cast from balloons might land, that innocent civilians might be injured equally with combatants, and that a church would be just as liable to destruction as a battery.

It is interesting to note that one of the German delegates pointed out that the words 'or by any similar means' in the Russian proposal might be held to strike at the use of mortars or other cannon which shoot high into the air, and he recommended that it should be made quite clear that the prohibition only related to *new* methods of a nature similar to the use of balloons.

While opinion at the conference was in favour of the prohibition proposed by Russia, there was at the same time a distinct feeling in some quarters that the prohibition should only be for a limited term of years. It was recognised that nothing whatever was known about aerial warfare, and that it was not impossible that by improvements in aeronautics balloons might in time be so brought under control as to be of effective use in war. Accordingly, out of deference to these views, the Declaration which was embodied in the Final Act of the conference was drawn up as follows: 'The contracting Powers agree to prohibit for a term of five years the launching of projectiles and explosives from balloons, or by

other new methods of a similar nature. The present Declaration is only binding on the contracting Powers in case of war between two or more of them. It shall cease to be binding from the time when, in a war between the contracting Powers, one of the belligerents is joined by a non-contracting Power.' This Declaration was subsequently accepted and signed by all the twenty-six Powers who had sent delegates to the conference, with the single exception of Great Britain.

When the second Peace Conference met at The Hague in 1907 the prohibition against bomb-throwing from balloons had been dead for several years; but the programme drawn up by the Russian Government made provision for reconsideration of the matter, and the renewal of the former Declaration for a further term was proposed by the Belgian delegates. In the interval since 1899 no very material improvements had been effected in aircraft, yet the belief in the future of aviation in connection with war exhibited itself much more markedly at the later than at the earlier congress. True, the bulk of the delegates were in sympathy with the view expressed by Lord Reay when he asked, 'Is it not enough to have two elements in which the nations may give free scope to their animosities and settle their quarrels without adding a third?' and they supported the Belgian resolution. But a considerable minority were not opposed to aerial warfare *in principle*, provided it could be regulated, and, as we shall see later, regulations were laid down at the conference.

In the end a majority of the delegates voted for the renewal of the Declaration; but, on the suggestion of a British representative, instead of the former definite time-limit of five years, a more elastic period was substituted—namely, 'to the close of the next Peace Conference.' As finally adjusted, then, in 1907, the Declaration ran: 'The contracting Powers agree to prohibit for a period extending to the close of the third Peace Conference the discharge of projectiles and explosives from balloons or by other new methods of a similar nature;' and then follow two paragraphs in precisely the same terms as the two concluding paragraphs of the 1899 Declaration.

The third Peace Conference has never yet been held; and, therefore, if this Declaration had ever become settled and accepted law, all the air raids in the present war, those directed against naval and military works equally with those against churches and hospitals, would have to be pronounced illegal operations. But it must be clearly understood that the Declaration is not, and never has been, part of authoritative international law. The second Peace Conference tried to interdict aerial war; but its action remained a mere attempt, for no less than seventeen States, including some of the most important, failed to sign the Declaration within

the prescribed period—that is, up to 30th June 1908. As the Declaration expressly provides that it is only binding in the case of a war between States which are signatories, clearly it is wholly inapplicable to the present war; for, while Austria-Hungary, Belgium, Great Britain (a non-signatory in 1899), and Turkey have signed the Declaration, France, Germany, Japan, Montenegro, Russia (the proposer of the 1899 prohibition), and Serbia have not signed.

Such, then, were the attempts to suppress aerial war; and now it may, perhaps, be instructive to compare with the attitude of The Hague Conferences the proceedings of the Institute of International Law in connection with the same matter. Since the beginning of the present century the Institute—which includes all the foremost international lawyers of the day—has on several occasions discussed very fully not only the legality of aerial war, but also the whole question of the nature and extent of the 'atmospheric rights' of States, and of the rules by which the navigation of the air, whether in time of peace or of war, should be regulated. To show the thoroughness with which these topics have been handled, it may be mentioned that several members of the Institute have been at pains to draft for the consideration of their colleagues complete codes of air law, which share this common fault that they are too elaborate and detailed for present requirements. The last occasion on which the Institute applied itself to the consideration of the *Régime Juridique des Aerostats* was in 1911, at the Madrid meeting. By that time remarkable progress had been accomplished in the science of flight, and there was good reason to believe that effective use could at last be made of aerial artillery. Nevertheless, so inveterate is prejudice, a threefold division of opinion on the subject of air warfare manifested itself at the discussions. A small section of jurists took up an extreme position, and were of opinion that no war operations of any kind should be permitted in the air. They were for interdicting observation and the maintenance of communications equally with the launching of projectiles. Indeed, some of them openly deplored the scientific progress which was bidding fair to make a conquest of the air. A second party steered a middle course. Aircraft, in their view, might unquestionably engage in scouting and the like; but in general they should not be used as means of destruction and combat. On the other hand, it was recognised that rival air-scouts could not be prevented from attacking each other, and also that if airmen are liable to be fired upon from the ground, they must have the right to retaliate. Accordingly, the supporters of the second view qualified the general prohibition of aerial warfare by allowing aircraft to use firearms and throw projectiles in self-defence, and in certain other exceptional circumstances. The third view, which found

its chief advocate in M. Fauchille, who from the first has made a special study of the problems relating to the air, was that aerial warfare should be permitted under the restrictions which, as we shall see immediately, had already been approved at The Hague in 1907. The adherents of this view rightly perceived that the true test of the legitimacy of any instrument of warfare is its effectiveness. If it is a really potent engine of destruction, it is mere waste of time to try to interdict its use. Cross-bow, musket, rifle, and bayonet, all became recognised weapons of warfare despite anathemas and threats, just because they satisfied the test indicated; on the other hand, expanding and exploding bullets were successfully banned because they were felt not to be of prime military importance. The third view ultimately gained the majority of the votes, and became the finding of the Institute; but unfortunately the form in which it was finally expressed is vague and unsatisfactory in the extreme. The article adopted by the Institute was in these terms: 'Aerial war is allowed, but only on the condition that it does not present for the persons or property of the pacific population greater danger than land or sea warfare.'

The first clause of the Institute's article is a correct statement of the present position. As international law now stands, bolts may be launched from the blue save in a war between two States which have signed the still extant Declaration of 1907. It remains, then, briefly to explain the law by which aerial warfare is regulated. While, as we have seen, a strong effort was made at the second Peace Conference to procure the prohibition of bomb-throwing by aircraft altogether, the delegates at the same time did not lose sight of the importance of laying down rules for this method of warfare, lest the total prohibition should come to nothing. True, there is only one provision in The Hague legislation of 1907 which directly and unmistakably refers to operations by aircraft; but as aerial bombardment cannot be regarded as a *tertium quid* wholly distinct from bombardment by troops or naval forces, it is clear that the codes drawn up at The Hague for bombardment in land and sea warfare must also have been intended to govern aerial bombardment in so far as they admit of application to the latter.

The direct reference to aircraft is contained in Art. XXV. of the Regulations annexed to Convention No. IV., respecting the Laws and Customs of War on Land, which is in these terms: 'The attack or bombardment, *by any means whatever*, of towns, villages, habitations, or buildings which are not defended is forbidden.' The words 'by any means whatever' were introduced at the instance of the Russian delegates, who, while opposed to the renewal of the Declaration prohibiting the launching of projectiles from balloons, urged that aircraft should

be prohibited from bombarding undefended towns, and the words are meant to cover attacks not only by siege-guns, howitzers, and the like, but also by all kinds of aircraft. By a curious oversight these words 'by any means whatever' are not repeated in The Hague code for bombardment by naval forces (which is contained in Convention No. IX.); but there is no reason whatever to suppose that The Hague Conference intended to legalise the aerial bombardment of undefended towns in sea warfare, while prohibiting it in land warfare. The first great principle, then, regulative of aerial bombardment is that it must not be directed against undefended towns. It is, however, important to realise that an undefended town is not the same thing as an unfortified town. A town may be defended though it is unfortified. Mr Spaight is probably quite right when he suggests in his admirable little volume, *Aircraft in War*, that a town is only to be regarded as undefended 'if it is not occupied by troops or otherwise in a position to offer armed resistance.'

The other Hague rules which, though they do not directly refer to aircraft, may be taken as governing aerial bombardment are contained in the code for naval bombardment, which is somewhat fuller than the code for bombardment by land forces. The relevant provisions may be adapted to aerial war as follows: 'Though it is not permissible for aircraft to raid undefended towns, it is permissible for them to destroy "military works, military or naval establishments, depots of arms or war material, workshops or plant available for the needs of the hostile fleet or army" which happen to be situated in an undefended town; and it is also permissible to destroy ships of war in the harbour. In all cases of bombardment aircraft must do their utmost to spare sacred edifices, buildings used for artistic, scientific, or charitable purposes, historic monuments, hospitals, and places where the sick and wounded are collected, provided they are not used for military purposes.'

One other rule requires to be mentioned which does not occur in any of The Hague conventions, but which is a necessary deduction from existing customary law. It may be unhesitatingly affirmed that it is just as illegal for aircraft to drop bombs on merchantmen at sea as it is for submarines to destroy such vessels by torpedoes.

The present war has furnished striking object-lessons in the matter of obedience and disobedience to the law of aerial bombardment. The raids by the aircraft of the Allies have all been for strictly military ends. Zeppelin sheds and factories, naval stations, submarines and submarine bases, batteries, gun positions, and military headquarters, these have been the targets of the law-abiding French and British airmen. To these examples of correct procedure the escapades of the German airmen present a

painful contrast. It may be that the towns which have been favoured by their attentions are technically defended towns; but no one who has read the story of their raids can have

the faintest doubt that their main desire and purpose have been to attack those very buildings which, even when situated in defended towns, the law seeks to clothe with inviolability.

THE HEIR TO SUNNINGHALL

CHAPTER V.

THE night was hot and oppressive; probably there was thunder in the air, and Gregory Le Fevre found it impossible to sleep. He did not even attempt it. The bed seemed hot and uninviting; so he paced about the room to tire himself, or sat by the open window smoking. A curious sense of unrest, of disaster, almost of fear, was upon him. Had the threatened accident unnerved him, or what was it that caught at his nerves and made them quiver? What was going wrong with his little, calm, new world? Why was Margaret so mysteriously terrified? Why did his aunt suddenly seem changed? Was the old house really haunted with ancient fears, sins, or evils? Was the dense atmosphere charged with an invisible terror? He suspected that the idle, purposeless course of these do-nothing, drifting days was to blame for nervous fears and ridiculous imaginings.

'I must go; I must get away. I want my mind braced, if not my body. This Sunninghall air is relaxing me. But I'm a fool! I can't make up my mind to leave Margaret. If I go, she must come with me.'

He took another restless turn. Really the air seemed to press on him with a tangible weight, and it was still and brooding, as if some indefinite terror were behind it. The clock had struck two. Except for an occasional scurry of mice and the mournful hoot of an owl in the trees near the old house, it was perfectly still. Sunninghall seemed to sleep profoundly. Ah, only *seemed*; some one beside himself was waiting for the passing of these dark hours. A low and hurried knock sounded on the thick panels of his locked door.

'Aunt Lyddy's ill!' was his first thought. 'That would account for her curious look and bearing.' But when he opened the door and found Margaret standing there her first words disabused him of the idea, while they utterly surprised him. She was trembling from head to foot; her eyes pierced him with their agonised appeal. She was clay-white.

'Let me in,' she said in so strange a voice that, without seeing her, he would not have recognised it; 'and quickly. It is my only chance of speaking to you before the day comes; and one day's delay might be too much. Don't mind appearances; let me come in.'

Without a word he opened his door wide, and let her sink, as if her limbs failed her, into an arm-chair. As he began composedly to say or

ask something she put up her hand to silence him.

'Let me speak. Unless I do so at once I may not have courage; for, Mr Le Fevre, I have a dreadful thing to say to you, and it seems to me a traitorous thing, for she has been good to me.'

'She?'

'Yes. Need I say whom I mean? You know. What you don't realise yet is that she is, on one subject, a lunatic, and dangerous. Do you remember that she said herself that if she died "Sunninghall" would be found written on her heart? She has one passion, and one only. For the keeping of Sunninghall *as her own* she would sacrifice her husband even, though to a certain limited degree she loves him, as he is part of her. How much more you and me! I see you do not believe me; you are saying to yourself I am exaggerating, if not inventing; you are calling me hysterical, excited. You may well call me ungrateful. But I cannot—oh, I *cannot*—see you walking blindfolded to a possible doom! Before God, Gregory Le Fevre, I am telling you the truth. *Your life is not safe a day in Sunninghall.*'

'Margaret, are you beside yourself? My life not safe—*my life*!'

'I am perfectly sane. I know. Your uncle found it out before he died. Did he warn you anyhow?'

Gregory started, aghast at the sudden remembrance of certain words, 'Tell him not to keep the Guthries here. I have my reasons. God help me! I have my reasons.' He had put these words out of his mind with easy nonchalance as the ravings of a clouded reason, where disease caused a warped vision of those about him.

'Yes,' he answered through his teeth, 'he did. He left me a message. But he was ill; he was not himself.'

'The lawyer who made his will did not say so, nor the doctor he called in. The lawyer and the doctor here are Mrs Guthrie's sworn allies, her tools. Dr Bastin took her word exactly in his treatment of your uncle; she gave her advice as from her husband, of whom Dr Bastin has a great opinion. Dr Edwards, I know, entirely altered the treatment; but he was called in too late. But listen—it is horrible to me to tell you all this, but I must—that bough that your car stumbled over was not blown down. Mrs Guthrie threw it there.'

'Margaret!'

'It is true. After you had started she ordered the pony-carriage. I offered to go with her, but she would not have me; and she would not take the boy; she would drive herself, though she does not often do that. I was watching her very closely. I will tell you why directly. There was something in her face—she did not know any one saw it—which brought out all the terrors that were hidden in me, terrors I hardly knew were there. You could not believe how that mild mask of a face can change! Something told me I must follow her. I slipped along amongst the trees by the side of the road through the park. She never looked round, but drove slowly, so that I could keep her in sight. Suddenly she stopped the pony—you know how quietly he stands—and she stood up on the seat under the boughs of that great beech that hangs down. She reached up and pulled at a bough, and it must have been loose, for at last it came down. She threw it across the road behind her, and drove on. She must have made the round to the back of the house, for I watched a long time, and she did not come back. Then I ventured out, and drew the bough away. But—her voice sank into a terrified panting whisper—'she must have left *another* behind her, for I had not saved you from an accident! Oh my God! what I suffered!' She moaned and put out her hands blindly.

He caught and held them.

'Is it possible? Is it true? Margaret, how can I believe even you when you tell me such a horror?'

'Stop!' she gasped; 'there's more. Do you remember she said you looked pale, and that you wanted some of her "*tonic*"? *Her tonic*! I could not bear to let her out of my sight. Last night I could not find her; she was not in her room, the drawing-room, the library. I went to Dr Guthrie's laboratory. I opened the door very softly—the baize door, you know—and the one within was open. She had her back to me; she was filling a bottle which she had taken from the shelf. She did not hear me, and I went away; but afterwards, when she and Dr Guthrie were out, I found the place where the bottle was, and it contained cyanide of potassium! No, I know you cannot believe me. I could not believe my own eyes if I were not sure it is madness, the great desire of her soul working secretly that has driven out reason and affection and every natural feeling.'

'Margaret! Margaret!' he said helplessly, still clinging to her hands as if he were the weaker of the two, 'tell me, what can I do—what can I do?'

She bent towards him, and the horror of her face slowly grew transfigured to sad but tender motherhood, the best love for lasting, the best good women feel when their men suffer and need help.

'Listen, dear,' she said gently; 'you must face it, terrible as it is; and you must harden your heart. You must run no more risks. To-morrow, if she asks you to take anything, you must make it plain to her that you *know*, and that she must go. You must never be with her any more.'

'And you? You will stay; you won't leave me, Margaret? Margaret, I love you—I love you. I need you.'

'How can I stay? I shall have to go somewhere to cover my head. I can never be with her any more.'

'You must stay for ever. Darling, you must be my wife.'

'Oh!' she cried, almost fiercely drawing her hand from his, 'is this a time for love-making? Let me go!—let me go! I have done what seems a dreadful thing—for your sake! Let me go now.'

'But not for always; you are part of my life now. Haven't you saved it?'

She shuddered. 'Oh, death seems just now nearer than life! Gregory, I cannot think—it may be that we shall be free and happy some day; but now, this dreadful night, I cannot think of that.'

He tried to hold her, to kiss her, but she slipped out of his grasp, and the next moment he was alone in a whirl of frightful thoughts. He did not attempt to go to bed; he sat stricken, trying to shape into definite ideas the new and terrible vision of the woman he had trusted and loved. Could it indeed be true that while welcoming him with soft caressing voice and little gentle phrases she was deliberately planning his death—she, an old woman, or nearly old, whose tenure on life and on the house she loved so exclusively was short at best? Surely, surely it was not so hideous as that. He must believe her mad or alter his whole outlook on human nature, his frank, boyish trust in the kindness and faith of friends. Hark! was that a footfall in the passage? Was Margaret returning to tell him some new horror, or was it—*Who was it?* For it sounded again. He opened his door, and stood aghast; for Mrs Guthrie, in her dressing-gown and slippers, was walking quietly along. Her pale eyes were wide open, but she was evidently walking in her sleep. She looked past him, unseeing, and words came in her usual soft, even tones, 'You don't need to show me a light, my dear; don't I know every turn, every step, every plank? Dear home; dear, dear home, you shall be mine—mine—mine!'

As he stood, as if turned to stone, uncertain what to do, Dr Guthrie came swiftly after her and took her by the arm. He looked terrified as he caught Gregory's stony stare. 'She does this at times,' he said in a hurried, nervous voice, 'after she has been upset. She wasn't well to-night. Don't trouble, Greg. I'll see to her. It will be all right.' And, Dr Guthrie gently propelling her onward, the two strange figures

turned the corner and went to their own room. Gregory slept no moment through the rest of the long and fearful night.

CHAPTER VI.

IT was a terrible ordeal for Gregory Le Fevre to face the household in the morning. They were all there when he came in, Mrs Guthrie at her post at the head of the table, very white, but otherwise seeming and speaking much as usual. Dr Guthrie, buried in some medical treatise, barely looked up, and only grunted out an unintelligible greeting; but his wife spoke with no apparent effort. Margaret was quiet, ghastly pale, watchful.

Mrs Guthrie babbled on, breaking the tense silence with little inconsequent remarks. 'You're not yourself, Greg; you're eating nothing. I'm afraid yesterday has upset us all. You must let me dose you. You must take my tonic after breakfast.'

The farce of a meal—farce or tragedy—over, they rose. Mrs Guthrie bustled out of the room, still with the resolute cheerfulness which defied and mocked the strange silence of the others, which she must have felt. She returned with a bottle of transparent liquid and a measuring-glass. Dr Guthrie had left the room, casting uneasy glances around him.

'Here, my dear,' she said, in the strained, feverish way in which she had spoken before; and suddenly, as he met her eyes, Gregory saw plainly in them the wild greed of insanity. 'I must measure it, for all good tonics have a touch of poison in them, you know; but I will be careful. You must take only a little after every meal.'

She approached him smiling. The sudden strength which a great energy brings to men who have lived through dangers took the shrinking fear away from Gregory's soul. He took the glass in one hand and fixed his eyes steadily on his aunt. Still holding it, with his other hand he grasped her arm. 'I think I will not take this, Aunt Lyddy,' he said, 'nor anything else from your hand till I am sure of its being harmless. I have something to say. I do not want to put into words the thing I know. Aunt Lyddy, Sunninghall will not hold us both any longer. I *know*.'

She gave a strange shriek, and her arm twisted

to escape him. All the gentleness, the strange soft subdued manner, was gone in a flash. She stood revealed in the nakedness of her mad desire.

'You know—you know—you wretch! How dare you? You know *what*?'

Her screaming voice brought her husband. He gave one strange, dour look of hatred at Gregory, then took hold of his wife, speaking soothingly, 'My dear, my dear, you're not yourself. I told you you should have kept quiet. You are overwrought. He has been plaguing you. Come away with me—come away; you need a change. We will leave this place—together. I'll take care of you.'

'Leave!' she screamed, struggling in his hold. 'Leave my home—my own home—Sunninghall! I won't! I won't! Didn't my cruel brother cheat me of it? After his promise, haven't I the right to it, not this—this'—she pointed wildly at Gregory—'this interloper standing in my way, keeping me from my own—my own—I say, *my own*?'

Her voice rose shriller and fiercer. Her husband, in a frenzy of fear and distress, put his hand before her mouth. He spoke over his shoulder to Gregory. 'Go. I'll manage her. She has had these attacks before—epileptiform. I can manage. I know what to do. You need not fear that we shall stay. I will take her away to-day. We shall return no more.'

Gregory obeyed him in silence. Why should he prolong the hateful scene?

He never saw his aunt again. Dr Guthrie spirited her away that same day without a word of confession or excuse. Whether he was a party to her intentions or merely shielding her with silence Gregory never knew. A year after, when Margaret had been his wife some months, and the horrible memory of that last night and day was fading from his mind in the sunshine of a happy love, a black-edged envelope lay on his table. It contained a card also heavily edged with black. It had these words printed on it: 'In everlasting memory of my beloved wife, Lydia Janet Guthrie, who left me 1st August 19—. At Rest.'

So, mad or sane, but saved from the crime of murder, the hungry heart of Lydia Guthrie was still. Her nephew had no hatred for the woman he had once loved.

THE END.

THE MONTH: SCIENCE AND ARTS.

HANDY WALLET FOR SOLDIERS AND SAILORS.

A SUPPLY of writing materials is one of the urgent needs of soldiers on active service. Pencil, paper, and envelopes appear to be a small and insignificant addition to the kit, but they

are frequently omitted. In order to provide this need an ingenious wallet has been introduced, which is designed for the use of officers as well as the rank and file, and is suitable for both services. It contains a small pad of thin and tough note-paper, a supply of envelopes, a calendar,

a pencil, and a tablet for the inscription of the owner's regimental number and the unit or ship to which he is attached ; the whole being enclosed in a stout cover of waterproof material. The wallet is inexpensive, so that it is within the means of every man. The style prepared for officers' use has a cover of waterproofed suedette, the general appearance and finish of the article being superior to the cheaper one. A wallet, which is made up in a similar manner, containing about one hundred sheets of thin, strong paper for shaving purposes, will also be appreciated. The difficulty of keeping a razor clean and in perfect condition while a soldier is on active service is extreme, and he appreciates a shave when he is able to snatch a few minutes for the purpose. These wallets have been tested under service conditions, and are highly appreciated by the users.

CONCRETE HOUSES.

One of the economical problems to which Edison has devoted his energies is the construction of houses in concrete. The process has been perfected, and is now being exploited commercially, especially in Australia, where the opportunities for such a process are appreciated, owing to the difficulty of securing brick and other permanent constructional material, and the shortage of labour. The process might also be adopted in other colonies very profitably, inasmuch as erection is simple and speedy ; and, further, it has the advantage of being cheaper than the use of either brick or wood in construction. The chimneys and walls are monolithic—that is, they are in one piece ; while the floors, roofs, and intermediate partitions are of strong concrete construction, reinforced with steel bars and steel wire-netting if desired. The moulds are made of wood faced with iron, and are carried to the full height of the wall. The concrete is prepared in a dry state upon the ground, and then lifted to the top of the building, where it is combined with water to the required consistency, and run into the moulds. Then the moulds are removed, and the internal surface of the walls is raked with a steel comb to provide a key or hold for the skin of plaster which is subsequently applied to facilitate the internal scheme of decoration. The external surface may be similarly raked if desired, so as to take on a finishing in rough-cast, or it may be left in the raw condition. A six-roomed house built in this manner can be completed in ten days. The sections of the moulds are standardised, so that they may be used over and over again, and for any type of building. The acquisition of the moulds constitutes the heaviest outlay ; but the fact that they are virtually indestructible is a compensation. Houses built upon this system are not only waterproof and fireproof, but are also hygienic. They are immune against the attacks of such pests as

rats and mice, and in tropical climates they defy the white ant.

MANUFACTURING RADIUM IN SCOTLAND.

Hitherto the production of radium has been largely an Austrian monopoly. The Government mines are at Joachimsthal ; while large quantities of crude uranium ore were purchased from England, the bulk coming from the dump-heaps of the Cornish tin-mines. The final reduction, however, was carried out both in Germany and France as well as in Austria. Some time ago Great Britain embarked upon the industry, and has refined a certain quantity of the precious mineral. The war has virtually cut off supplies of foreign radium from this country, and we are now dependent on our own resources. The Scottish venture is due to the enterprise and energy of a Glasgow metallurgical chemist, Mr John S. MacArthur, who has established his factory within easy reach of Loch Lomond. The founder of this latest industry, who has familiarised himself with the problems of his task, has been carrying out experiments with a small plant, and has trained a small staff of men for the work. The extraction and refining of radium from the crude ore is a prolonged and delicate operation, the material having to pass through about fifty processes. The proportion of radium per ton of the finest ore is about ten milligrammes, so that the yield cannot be described as heavy ; but as the world's annual production of this rare radioactive agent is only about thirty grammes, it will be seen that there are great possibilities for the new industry. It is anticipated that the Scottish plant will be able to turn out about six grammes per year. It is also intended to work upon the production of radium fertiliser as well as the by-products, uranium and vanadium, since these articles are in demand, the last-named more especially, as the market for vanadium steel, of which vanadium forms a component, is increasing rapidly.

THE COMPLETION OF A GREAT UNDERTAKING.

The demarcation of the Alaskan-Canadian boundary line along the one hundred and forty-first meridian has now been brought to a successful conclusion. This task was commenced in 1907. The period of working in the field, however, has been somewhat restricted, inasmuch as movement in that country during the winter is almost impossible. The boundary runs along a great mountain chain, the slopes of which are covered with dense forests and scarred by glaciers, snow-slides, rock-slides, tumbling torrents, and steep precipices. The work is remarkable for the fact that it is the first of its kind to be carried out in such a high latitude, and few boundaries in the world are so straight, swamps, forests, glaciers, and mountains being traversed by the boundary irrespective of the obstacles they offered. Where the line runs through the

dense forests a swathe twenty feet in width has been cut and cleared, and down this cleavage monuments have been planted at an average distance of from three to four miles. The monuments themselves are somewhat formidable, each comprising a bronze aluminium shaft five feet in height, and weighing three hundred pounds, planted in a solid block of concrete weighing one ton. In the course of a few years the luxuriant undergrowth will obliterate the trail which has been cut if it is not periodically cleared—which is not likely, unless settlement takes place; but the monuments are imperishable, and will always be easy to discover. The boundary line decided in this manner is about six hundred miles in length, and is indicated by about two hundred of the monuments described.

GERMANY'S MACHINE-GUN ARMY.

This is an artillery war, as we have been told time after time. At first the Germans made powerful use of their heavy artillery, ranging up to the fearsome forty-two centimetre, or sixteen-and-a-half inch, howitzer, and for a time held sway until the Allies were able to bring up guns which ensured the artillery ascendancy. But the mammoth gun is only one feature of the operations. At the other end of the scale is the machine-gun—the David of the artillery world. Here, as in the opposite extreme, the Germans held a superiority, owing to the confidence they placed in this gun, which was so complete that it was decided as a golden rule to give each company of one hundred men two weapons of this type. Recently it has been said that the machine-gun force of the Teuton army numbers no less than fifty thousand weapons. This practice in German military circles affords a fairly reliable index to the strength of the German army at the outbreak of war—two and a half million men. Allowing for a certain proportion as a reserve, it may be safely asserted that Germany, when she commenced hostilities, had a force numbering two million soldiers. The Germans have contrived an ingenious mounting which forms a sledge or stretcher-carriage to be hauled along the ground or to be carried by two men, according to conditions. It is this stretcher-mounting which prompted the story that under the disguise of ambulance-stretchers the German infantry approached and secured strong machine-gun positions. However, as events have proved, nothing was farther from the truth. The Germans adopted the stretcher type of carriage merely because it offered to them the best means of rendering the gun mobile. The machine-gun has achieved such a large measure of success in the forces of our enemy simply because it was appraised at its true military worth. It is a killing instrument *par excellence*. Machine-gun fire has wrought more havoc than any other unit of artillery. Assuming an average of five hundred shots per

gun per minute, it is evident that on the sector attacked by the British forces at Neuve Chapelle, where the stationing of machine-guns in the German trenches was one gun every fifty feet, no fewer than seven thousand five hundred shots per minute were poured into the advancing British ranks over a distance of two hundred and fifty yards. The menace of the machine-gun has, more than any other factor, been responsible for the adoption of the open formation by our troops. In the German advances in massed formation, which were so characteristic of the early days of the war, and which are practised upon the eastern frontier to this moment, it is stated that the direction of machine-gun fire was revealed by open swathes through the dense ranks of men, who were simply mown down in the manner of a scythe cutting hay. The heavy shell has been responsible for the digging-in tactics which are now practised by the protagonists; the machine-gun has caused the development of a natural hesitancy to attack in force in close formation upon a strongly entrenched position.

A PROTECTOR AGAINST GUN-DEAFNESS.

In these days of high-velocity projectiles, heavy powder pressures, and quick-firing weapons, troubles of the ear are to be expected. The change of air-pressure on the drum of the ear is so enormous and rapid, owing to the tremendous vibrations of the air that are set up, that injury to such a delicate organ as the ear is to be expected. In the old days of the muzzle-loader a cotton-wool plug in the ears, or the placing of the hands over the ears at the moment of discharge, proved an adequate protection; but nowadays these expedients are insufficient. The percentage of men working our guns, both on land and sea, who are thus affected is high, and many are permanently deaf owing to the destruction of the tympanic membrane. But gun-deafness can be prevented by using the ear-defender devised by Messrs A. Mallock, F.R.S., and Armstrong. The defender comprises a small apparatus made of highly finished ebonite, with gold-plated and non-corrodible metallic protection gauzes. A defender three-quarters of an inch in length is placed in each ear. The inner or smaller end is bulbous in shape, the tip of the bulb being pushed gently into the ear with a slight rotary movement for about half-an-inch, so that the tender part of the ear is not touched, while the enlarged base containing the protective 'drum' prevents the protector being driven too far into the ear, no matter how severe the explosion and resultant concussion may be. When the defender is adjusted properly the outer gauze lies approximately flush with the ear, and is scarcely visible from the front. Although the defender ensures protection against injury to the drum of the ear by gun-fire, it does not interfere with normal listening or the using of a telephone,

and conversation may be easily and distinctly followed. Owing to the materials used, and the principle of construction, the defender is proof against damage by water. The device, together with a cleaner, is packed in a small pocket-case which does not occupy appreciable space.

THE INFLUENCE OF WAR ON FORESTRY.

There is one effect of the war which has escaped general observation—the destruction of forests. It will be observed that the most sanguinary and strenuous engagements are taking place in the most thickly timbered stretches of country, particularly on the western battle-front, such as the Vosges and the Ardennes. In modern military strategy the occupation of thickly timbered territory is a frequent occurrence. The reason is obvious. Densely wooded country offers the greatest obstruction to an enemy. The roads and trails are few, and may be easily blocked. When these highways are rendered impassable artillery cannot be moved quickly and strategically. If highways have to be blazed and cleared to permit the movement of troops and guns time is lost, as such work is necessarily slow. At the same time forests offer excellent cover and an ideal protection, as is natural. In the Vosges and the Ardennes the destruction of timber has attained alarming proportions. Large stretches of magnificent timber are being sacrificed to the exigencies of war—the construction of barricades, the erection of temporary trestles, defensive positions, ‘corduroying’ of roads, and so forth. The trees are of paramount value to the surrounding country, because of their influence on the rainfall and the deposit of moisture. Consequently, on the conclusion of the war some interesting problems will arise. Unless this wastage is made good by a liberal policy of afforestation the agricultural land in the vicinity will become sterile.

RE STOCKING OF THE NORTH SEA.

For many years past the depletion of the fishing-grounds of the North Sea has been a matter of great importance. The multiplicity of fishing-vessels and the widespread use of the steam-trawler have tended to exhaust the fisheries of the North Sea, the fishermen of to-day being compelled to go much farther afield to secure remunerative catches. Now that this expanse of salt water is virtually closed to peaceful pursuits, the fish have the opportunity to multiply; and one may rest assured that Nature will take full advantage of the lull in the work—so far as she is concerned—of destruction as represented by fishing activity. Sufficient evidences of this are already forthcoming. The herring-run has been one of unprecedented magnitude, but it has proceeded practically unmolested. The mackerel-run will share a similar experience. As what might be termed

the annual or migratory fish-runs escape decimation, it is only natural to assume that the ground fish, such as the plaice, sole, &c., will profit from a spell of trawling inactivity. Should the war be of long duration, and the North Sea consequently be a prohibited area for two or three seasons, it is obvious that the present exhaustion which is so manifest will be made good. While men are seeking to destroy their kind, Nature will seize the chance to restock a zone which has been threatened with denudation. On the conclusion of the war, it is believed in circles competent to judge that the North Sea will be a richer fishing-ground than before.

DEVICE FOR SINKING SUBMARINE MINES.

The following comes as an addition to the information already given in the article on ‘Submarine Mines’ in our May part, and in that on ‘The Mine-Sweepers’ in this issue: When laying submarine mines over an uneven sea-bottom it would take far too long to measure the depth of water for each one, and to adjust its cable to suit; consequently apparatus is used which automatically lengthens or shortens the wire rope between the mine and its sinker. The last-named contains the cable wound on a reel, and beneath it is a supplementary sinker, also with a reel of wire measuring exactly ten feet or whatever depth below the surface the mine is intended to remain. One end of this wire is fixed to a spring trigger which locks the main cable reel. When the mine is launched the supplementary reel unwinds until all its wire is paid out and the weight of the sinker pulls the trigger off the main cable reel. The result is that the main sinker comes down, paying out cable on the way, until the supplementary sinker touches the bottom, when the trigger, relieved of any weight, is pulled back by its spring and again locks the cable. We now have the mine on the surface and the main sinker ten feet above the bottom. Through a small hole the main sinker gradually fills with water and pulls down the mine to the correct depth.

COLLECTING ROCK HONEY.

A writer in *New India* mentions that amongst the various items of minor forest products collected in the Satyamangalam Hills, Madras Presidency, by no means the least important are honey and wax. Rock honey is produced by very large bees, and found in holes and under ledges of rocks. This honey is coarse and dark, and the wax very dark-coloured. The first season’s products are collected in August, when the rocks are dry, and the products of the second season as soon as the hot dry weather sets in, and there is less chance of slipping. It is very dangerous work, involving risk to life. In the Satyamangalam Hills the collection is done only by Kurumbars. A party of

fourteen to fifteen starts on the expedition in the proper season. Of these, only two (Kurumbars) are collectors; the rest are employed to carry goods and chattels, erect sheds, light fires, and to do odd jobs for the two collecting Kurumbars. The two Kurumbars, who alone climb up the rocks and collect the honey, are invariably brothers-in-law—that is to say, each man's wife is the sister of the other man—and each is responsible for the life and safety of the other. For instance, if the rope were not held firmly, or were allowed to slip, the man on the ladder would be dashed to pieces against the rock, and his wife would become a widow, to the lasting shame of her brother, who was the cause of the catastrophe. The expedition always starts on a Monday, which these hill-tribes regard as a very auspicious day. When starting off, the party take with them coconuts, plantains, camphor, and other offerings to their family deity; also their implements of collection, which consist of a long ladder made of *koracha* fibre, with a stout rope of the same material attached to it; a bowl made of basket-work smeared over with clay, with a long handle, in shape much resembling a soup-ladle; a sharp-pointed stick; and a bundle of torches composed of green and dry grass mixed. The rope attached to the ladder is fastened firmly to a tree, and the ladder is thrown off the top of the rock. One of the Kurumbars holds on to it while the other climbs down the ladder until he finds himself on a level with the honeycombs which are on the slippery sides of the rocks. Arrived there, he plants his right foot firmly on one rung of the ladder and leans his left knee on the rung above. Being firmly fixed, he swings himself backward and forward, having in one hand a burning torch and in the other the pointed stick; and as he swings in towards the rock he applies the torch to the combs, and drives away the bees and collects the comb. At the end of each day's work the Kurumbar climbs up to the top of the rock. The operations go on for several days. On the last

day, when all the honey and wax has been collected, the rope is untied and the ladder dropped down to the bottom.

To Correspondents who wish fuller information regarding new inventions mentioned here, addresses will be furnished, when possible, provided a stamped and addressed envelope or post-card be sent to the Editor, 339 High Street, Edinburgh.

FOREVERMORE.

WHEN summer all the landscape fills,
And sunset flames along the hills,
I see thy face before me rise,
And add fresh beauty to the skies.

When west winds blow from ocean's rim,
And Nature chants her evening hymn,
I hear thee singing in the breeze
The songs of the Hesperides.

When Mars, the warrior star, shines red,
And slow the Bear wheels overhead,
Thy luminous eyes look from above,
In their clear depths an infinite love.

When, white and green along the strand,
The waves run in and churn the sand,
Thy hair, like brown seaweed unrolled,
Glistens with streaks of tawny gold.

Flame, sunset, through thy golden bars!
Blow softly, winds! shine out, fair stars!
Beat gently, billows, on the shore!
My Love is mine forevermore.

J. SCOTT.

*. TO CONTRIBUTORS.

- 1st. All communications should be addressed 'To the Editor, 339 High Street, Edinburgh.'
- 2nd. For its return in case of ineligibility, postage-stamps should accompany every manuscript.
- 3rd. To secure their safe return if ineligible. ALL MANUSCRIPTS, whether accompanied by a letter of advice or otherwise, should have the *writer's Name and Address written upon them IN FULL.*
- 4th. Poetical contributions should invariably be accompanied by a stamped and directed envelope.

In the JULY issue of CHAMBERS'S JOURNAL will appear the first instalments of a New Novel, entitled—

BETTY GRIER,

By JOSEPH LAING WAUGH.

In his 'Robbie Doo' and 'Cracks wi' Robbie Doo,' Mr Waugh has already proved himself a keen and sympathetic observer, and a gifted recorder of Lowland Scots country life. In 'Betty Grier' he takes us back to Thornhill, the little Dumfriesshire village whose homely characters and winsome scenery his pen delights to depict. Here in a beautiful setting he unfolds a romantic love story, and reproduces, often in the simple, pithy Doric, of which he has so sure a command, a series of scenes full of humour, and deep, true, and tender pathos. Betty Grier and her husband, Nathan Hebron, are fine types, finely portrayed, whom the reader, be he Scots or not, cannot fail to take to his heart for good.

Chambers's Journal

SEVENTH SERIES

BETTY GRIER.

By JOSEPH LAING WAUGH,

Author of *Robbie Doo*, *Cracks wi' Robbie Doo*, *Thornhill and its Worthies*, &c.

CHAPTER I.

WHEN I look round my little bedroom and note the various familiar items that make up its furnishings, when my eye lights on much that I associate with the days o' Auld Langsyne, I am conscious of a feeling of homeliness, a sense of chumship with my surroundings, and I can scarcely realise that fourteen years have come and gone since last I laid my head on the pillow of this small truckle-bed.

So far as I can recall the arrangement of its old-fashioned, ordinary-looking plenishings, everything remains exactly as I left it. My trout and salmon rods, all tied together—each cased in its own particular-coloured canvas—stand there in the corner beside an old out-of-date gaff and a capacious landing-net which that king of fishers, Clogger Eskdale, gifted to me when the 'rheumatics' prevented his ever again participating in his favourite sport. My worn leather school-bag, filled with the last batch of books I used, is still suspended from a four-inch nail driven into a 'dook' at the cheek of the mantelpiece. It is a long time ago, but it seems only yesterday since I stood in the middle of this room, unstrapping that bag from my shoulders for the last time. My school-days were over; with eager, anxious feet I was standing on the threshold of a new life, and to satchel and lesson-book I was bidding farewell.

I well remember Deacon Webster, at my mother's request, inserting that dook and driving home that nail; and he laughed unfeelingly when she explained to him the purpose it was to serve. The deacon could not understand the sentiment which prompted her to assign the bag a place upon the wall; and when, after the nail was secure, he made to hang my 'boy's burden' upon it in much the same callous spirit in which he would screw the last nail in a coffin-lid, my mother stepped forward.

'One moment, Webster,' she said. 'Allow me.' With her own hands she placed the bag where it hangs now. My old nurse, Betty Grier, straightened it and wiped it with her duster; and the deacon took a pinch of snuff, blew his nose in a big spotted handkerchief, and muttered *sotto voce*, as his nostrils quivered, 'Well, I'm d——!'

No. 236.—Vol. V.

[All Rights Reserved.]

JUNE 5, 1915.

Against the back wall, in the centre, between the door and the corner, stands the old black oak chest of drawers which for sixteen years held the whole outfit of my boyhood's days; while the mahogany looking-glass, with the grooved square standards and the swivel mirror, monopolises still, as it always has done, the whole top shelf thereof.

To the left is a framed photograph of my father and mother, and to the right a rosewood-framed sampler, worked long ago by my grandmother, on which, in faded green, against a dull drab background, are still decipherable the words of Our Lord's Prayer. And there, between the fireplace and the window, is my book-rack, and from its shelves old friends look down upon me. The gilt titles are tarnished and worn, but I know each book by the place it occupies, and I feel that, even after the long, long years that have separated us, *Tom Brown*, *Robinson Crusoe*, and *David Copperfield* will speak to me again, laugh with me, cry with me, as they did in days of yore.

Often has Betty, I know, swept and tidied this little room. Every article has been lifted, dusted, and carefully returned to its place. I know with what feelings of reverence the dear old soul has fingered every ornament. I am conscious of the loving care she has exercised on all my old belongings, and somehow I feel consoled and comforted, my physical weakness depresses me less, my mother's presence seems nearer me, and unbidden tears of thankfulness come to my eyes and trickle from my cheek to my pillow.

This has been to me a day of great events. I have travelled by rail from Edinburgh to Elvanfoot, thence by horse-carriage to Thornhill, during the last stage driven by Charlie Walker (the 'bus Jehu I envied in my schoolboy years) and tended by my fail-me-never Betty. To her also this has been a memorable day, for when we were driving down the Dalveen Pass she told me that never before had she seen a Caledonian train, and that her last memory of Traloss dated back to a Sabbath-school trip about the year 1868. Such a long ride in a well-sprung, well-upholstered carriage was also a novelty to her,

a new experience which only with great difficulty I could persuade her to enjoy to the full. She insisted on sitting forward on the extreme edge of the seat, and it was only after I told her that her uncomfortable-looking position made me uneasy and unhappy that she sat well back, till her shoulders rested on the cushion behind.

Contrary to my expectations, I am suffering neither pain nor inconvenience from my long journey; and as I lie here in my little bed, looking through the curtained window to the long, low range of the Lowther Hills, and listening to the familiar sounds in the village street below, a blissful peace which I cannot express in words possesses me, my physical and my mental organisation seem to have undergone a change, my experience of city life is blotted out and forgotten, and, strangely enough, I feel myself, as of old, a unit of the village community. Queerer still, this placid acceptance of altered circumstances, this dovetailing into a different condition of life and living, seems to me so natural as to be hardly worth noting; and without a pang of regret I leave behind me urban pleasures and duties, and contemplate with equanimity retirement to this rural retreat, a twelvemonth's sojourn midst scenes to me for ever dear.

Nor does the fact that this rustication is compulsory distress or annoy me. My physical weakness has reduced me to a state of indifference towards former pursuits. A long illness, following a deplorable accident, has impaired my appetite for social joys; so much so, indeed, that when my doctors—rather apologetically, I thought—informed me that if ever I wished to be well again I must give up my profession and town residence for twelve months at least, and live quietly somewhere in the country, I hailed their verdict with delight, and my yearning heart at once went out to my native village and the home of my old nurse, Betty Grier.

Dear old Betty! To whom else could I turn? She is all—of the human element at least—I have left to me of my home life of long ago. My memories of my father are vague and hazy. I was only five when he died; and, through the misty veil of long-gone years, two pictures only of him are impressed upon my mind. In one I see him standing in the narrow whitewashed pantry, his head 'screeving' the ceiling, and his broad shoulders almost excluding the waning western light that glimmered through the small four-paned window. Betty, white-capped and white-aproned, is there also, with a large ashet in her hands, on which lies a long, thick silver fish—a salmon, as I afterwards learned—one of the many he lured from the depths of Mattha's Pool. My mother's arm is lovingly linked in his, and there is a pleased and happy expression on her face, which somehow is transmitted to me, because, with her, I feel proud of the great big man I call my daddy, who has battled so

successfully with the strong-looking monster now lying so quiet, with gaping mouth, on Betty's ashet.

Then there is a long, dark blank before the next picture appears, and I see him sitting in a big arm-chair at the dining-room fire. His back is cushioned, and a shepherd-tartan plaid is round his shoulders, the ends folded across his knees. My mother is writing letters to his dictation on a small bureau, which has been placed near his chair. I am playing with a Noah's Ark, marshalling the animals in pairs on the rug; and when my mother goes out of the room to the little office adjoining, I leave my toys and stand at his knee, looking up to a face which to me seems very white and pinched. A long thin hand is placed on my curly head, and with difficulty he bends down and kisses me. I wonder who has been unkind to him, for I see a tear trickling down his cheek, and it falls unheeded on his plaid.

I cannot focus him in my mind's eye in any subsequent event, though I remember perfectly the old doctor with the foxskin cap and the clattering clogs, and the smell of 'Kendal brown' he always left behind. Then a day came when the window-blinds were pulled down and all the rooms were darkened; when Betty's voice was, even to my childish ears, low and husky; when my mother cuddled me in a tight embrace, and a wet, wet cheek was laid against mine. Oh, how she trembled and sobbed! I felt bewildered and unhappy, and I remember putting my wee, helpless arms round her neck and asking her why she was crying. She told me that daddy had gone away—away to heaven; and when I asked if he wouldn't come back to us again, she said, 'No, no,' and her embrace tightened, and she wept afresh. In a short time the door was hesitatingly opened, and Betty came noiselessly in with a book in her hand which I had often seen her read. She stood behind my mother's chair with her tear-stained face turned away, and her red hand on my mother's shoulder; but she didn't speak. Then she came round, and, 'hunkering' down beside us, opened her book and in a low voice began to read.

I often think it is strange how indelibly imprinted on some childish minds are little incidents of long ago—little glimpses of landscape, snatches of songs, details here and there of passing events. Not that I consider the foregoing a little incident. To me it was at the time of outstanding moment, and even yet in my retrospect of life it looms large and prominent; but, though I have often endeavoured to recall Betty's ministrations on this occasion, all I can remember is that when she came to the verse, 'I will not leave you comfortless: I will come to you,' she spoke the words without referring to her Bible, and she repeated them, the while looking with big, hopeful eyes up to my mother's face. And my mother smiled through her tears; and, stroking Betty's

strong brown hair, she called her 'Betty the Comforter.'

A time came in the short after years when she was, by the same dear lips, again called 'Betty the Comforter.' It was when my saintly mother was passing into the spiritland, and, without fear or trepidation, lay calmly awaiting her call. But of this I cannot speak; it is a subject sacred to Betty and to me.

To-night, when I had undressed and was settling myself down for the night, Betty came upstairs, carrying that self-same Bible in her hand. She stood on the threshold for a minute, wiping its covers with the corners of her apron, though well she knew that from frequent use the Book required no dusting.

'Maister Weelum,' she began, 'eh!—I'—

"William," Betty, please, without the "Mister," I said smilingly.

'Yes! yes! so be it—imphm! Eh, this type is clear and big; and I was thinking that maybe ye might want to read a verse or twae. I'll lay it doon here;' and she reverently placed the precious volume on the top of the chest of drawers.

'Are ye a' richt noo? Ye said ye wanted to speak to me when ye got settled doon. Is there ocht else I can do for ye?'

'I'm feeling fine, Betty,' I said cheerily, 'and not a bit the worse for my long journey, not too tired to have a quiet chat with you. So sit down, please, in the basket chair there, and give me ten minutes of your valuable time.'

'Ten meenits! Certie, hear him noo! Ten meenits, an' the soo's no' suppered yet, an' I've the morn's broth to prepare, an' wi' me bein' oot o' the hoose a' day there's a hunner an' ten things starin' me in the face to be dune. But what want ye to speak aboot? I daursay the soo, puir thing, will ha'e to wait, noo that you're here. Daylight, too, is haudin' lang, an' I'll sune mak' up the ten meenits. What want ye noo?' And she sat down, with a query in her eye, into the basket chair.

'Well, Betty,' I began, 'you and I have gone over all the old times pretty thoroughly since we met to-day, and we've taken a peep into the future as well; but there's one subject we haven't touched upon, and before I go to sleep to-night I wish to come to some understanding with you regarding my board and lodgings.'

'Board an' lodgings?' Betty queried. 'Board an'— What d'ye mean, Maister Weelum?' and her lip trembled.

'Well, Betty, by board and lodgings I mean the price of my food and the rent of my room here, and whatever sum you'—

'Weelum, stop at once noo; I'll no' ha'e that mentioned;' and she rose excitedly to her feet. 'I'll no' hear o't! The very idea o' speakin' to me—to me, abune a' fouk—o' board an' lodgings! A bonny-like subject that to discuss atween us! Dod, man, yin wad think that ye were a Moniaive mason workin' journeyman in Thornhill. Megstie

me! Lovanenty! heard ye ever the like?—imphm! Mair than that, whae's the owner o' this hoose? Whae has refused rent for it a' these years, eh?'

'Betty, Betty,' I feebly protested, 'that's not fair, and you know it. Did you and I not settle that matter long, long ago, and agree that it would never be referred to again?'

Betty had suddenly assumed both the defensive and the aggressive. She had pulled her black-beaded muffettes up over her wrists, and flung her mutch-strings over her shoulders. I knew of old what these actions meant. She came up to my bedside, and in the fading light I saw a tear coursing down her cheek. 'Maister Weelum,' she said earnestly, 'I'm safe in sayin' that ye canna look back on a single phase o' your early life in which I didna tak' a pairt. Lang before this world was only reality to ye, I nursed ye, fed ye, an' clad ye. In thae early days the greatest pleasure to me on earth was to cuddle an' care for ye. But I needna to tell ye o' that, ye ken yoursel'. Ye mind hoo much my presence meant to you; that I'm sure o'. As for your mother—well, I never had any ither mistress. She took me, a young lass, oot o' a most unhappy hame. It was a pleasure—ay, a privilege—to serve her. Weel, on that day that she was ta'en frae you an' me, she said in your hearin' an' mine, "Betty, this has been the only home you ever knew—never leave it. Promise me you'll accept it.—Willie, my son, you agree?" An' we baith knelt doon at her bedside, an' she went hame happy, kennin' I was provided for. I didna forget that on the nicht o' the funeral day you an' me talked it ower, that I promised to stay here, that it was arranged between us that rent wad never be spoken o', an' that my occupancy wad never be referred to. An', Maister Weelum, it wadna ha'e been noo, had you yoursel' no' talked to me aboot board an' lodgings. My he'rt will break, that will it, if ye persiat'—

For a time we were both silent, both busy with many sacred thoughts and memories. Then Betty, without looking into my face, 'stapped' the sheets round my shoulders and well round my sides. 'There, noo,' she said at length, 'you're weel happit an' comfortable-lookin', an' sairly, I'm thinkin', in need o' the sleep an' rest which I trust this nicht will be yours. Guid-nicht noo;' and she patted me on the shoulder, as she used to do in the old days when she had put me to bed and was taking my candle away.

'One moment, Betty,' I said promptly. 'Sit down here on the bed beside me, like the good soul you are, and listen to me. Yes, you may raise my pillow a little. There now, that's better. Are you listening now?'

She nodded and reseated herself, as I had requested.

'I admit all you say, Betty, about your tenancy

of the house, and I am sorry if what I have said has reopened a question which was settled so long ago to our mutual satisfaction. When this rest-cure was prescribed—when I was told that it was absolutely necessary I should take up my abode in the country—it was to you and to this room that my thoughts were at once directed. I wrote you I was coming—didn't even say by your leave—and planted myself, as it were, down on you, without inquiring whether or not it was agreeable and convenient to you. Now, believe me, Betty, I acted thus without a thought of your free tenancy of this my old home.'

'I ken that fine, Weelum,' she quickly said, and she looked thoughtfully towards me.

'Well, you see, Betty, if you won't allow me to contribute to my living here, you give me reason to assume that you consider you are in your own way working off an obligation; else why should I live on your—forgive the word, Betty—on your charity?'

'But then, Maister Weelum, you forget that I'm sittin' here rent free.'

'Now, Betty, there you go again. Was not that my mother's request?'

'Yes.'

'Well, she imposed no obligation on you?'

'No.'

'Then, Betty, none exists between us; and, in that case, if I remain here I must be allowed to contribute to the family expenses. Besides, Betty, it is not as if I were a poor man. Thank goodness! I can well afford it; for, between you and me and that bedpost against which you are leaning, I've made over a thousand pounds a year for these last four years.'

'Lovanenty, Weelum, a—a thoosan' pounds!' and she held up her hands in astonishment. 'Bless my life, is that possible? I hope ye made it honestly, my boy?'

'I certainly did,' I said glibly. 'I assure you, Betty, I made it honestly.'

'Imphm, and you a lawyer!' said she dryly. She smiled, and after some reflection began to laugh heartily.

'Oh, come now, Betty, don't round on an old friend like that.' But Betty heard me not, for she was holding her sides and hotching with convulsive laughter.

'Oh, Weelum! oh, my boy!' she said, between her kinks, 'it's no' you—it's no' you I'm lauchin' at. It's something that happened at the weekly prayer-meetin' in Mrs Shankland's last Wednesday night. D' ye mind o' Dauvid Tamson the draper?'

I nodded in the affirmative.

'Weel, as ye dootless ken, Dauvid has been a' his days a conceited, fussy, arguin' man, aye desperate honest and well-meanin', but terr'ble unreasonable and heidstrong, and he's never dune takin' to the law or consultin' his agent, as he ca's it. Weel, he was at the prayer-meetin' last Wednesday night, and, as it happened, it was

his turn to officiate. After we had sung a psalm and engaged in a word o' prayer, he began to read the last pairt o' the fifth chapter o' Mattha, and when he cam' to the fortieth verse: "And if any man will sue thee at the law, and take away thy coat, let him have thy cloak also," Dauvid hovered a blink. Then he re-read it very slowly, and says he, "Freens, I've aye prided mysel' in my knowledge o' the Bible; but I'm forced to admit that this is the first time I ever noticed that there was evidence in Scripture o' oor Saviour havin' been ployin' wi' litigations and in the lawyers' hauna. I dinna ken hoo far He carrit His case, but if my experience was His, He need not have said *let him have thy cloak*, for the hungry deevils wad ha'e ta'en it whether or no'."

I wonder, did Betty imagine that the recital of that story would divert my mind from the subject of our conversation and the purpose I had in view? Somehow I think, as an inspiration, the means to this end had suddenly occurred to her; but, if such was her aim, the hastily conceived plot failed.

By a good deal of argument and a modicum of cajolery, I gained my point. What the terms are which we have arranged is Betty's concern and mine only. All I may say here is that the weekly amount has to be paid to Nathan, of whom more anon, and that the subject of pounds, shillings, and pence has never to be broached in her hearing again.

She said 'Good-night' to me an hour ago. The impatient sounds of remonstrance from the soo-cruive at the head of the garden subsided shortly after she left me, from which I argued that the inner wants of the occupant had been attended to. The chop-chopping of vegetables on the kitchen table below ceased half-an-hour ago, and I know that a little at least of tomorrow's dinner has ceased to trouble Betty's anxious mind.

The shades of night are gathering round me. A soft breeze stirs the branches of the lime-trees, and through my open window it fans my face where I lie. Somewhere away Rashbrigward, I hear the quivering yammer of a startled whaup, and the crooning lullaby of the whispering Nith falls like music on my ear. In the ryegrass field at the top of the Gallowsflat a wandering land-rail, elusive and challenging, craiks his homeward way; while from Cample Strath or Closeburn Heights is fitfully wafted to me the warning bark of a farmer's dog. The clamp-clamp of a tired-out cadger's horse and the rattle of an empty cart sound loud and long in the deserted street. Hurrying footsteps echo and re-echo, and gradually die away into silence. Then evening's wings are folded o'er me, a blissful peace and a quiet contentment fill my heart, and under the glamour and spell of nature's benediction I turn my head on my grateful pillow.

(Continued on page 428.)

BILLOWS IN THE BAY.

By Mrs EVA WILLIAMSON.

THE Bay can be compared to a woman—winsome and smiling, or petulant and wayward. She showed a smiling, dimpled face when we crossed her in the *Moultan*, going east. She put on her darkest frown and vented her temper on us as we returned in the *Ceylon*. True, the seasons were against us. We went out in April, and returned in November. The ship was what is termed an intermediate, and only took a limited number of passengers. But we were the gayest, happiest crowd a captain ever brought to England's shores. In the warm, sunny seas we laughed and played and sang the whole day through. At each port of call we made up parties and went on land; then in the evening, over dinner, told each other our experiences. Between ports the officers off duty or the ship's doctor would amuse us with anecdotes, and we knew nothing of rough weather until we reached the Bay. Our first experience came when a steward rapped on our cabin doors and hurriedly entered. 'Shut your port,' he said, and closed both the outer and inner one. At breakfast the 'fiddles' were on the tables, and the captain was drinking tea out of a tall glass set in a strong wooden base.

'Why have you a glass? Where's your teapot?' I asked.

'It's cooler this way,' he said with a smile, and ordered me the same. I almost countermanded the order, but just as I was about to do so a cry from the doctor's table made me look across. A man was holding a cup in his hand, and looking sadly at his shirt-front and waistcoat, which were deluged with tea. Everybody laughed, and asked for tall glasses, and dispensed with teapots. Drinking became a fine art. You took a drink when the ship gave a toss; if you tried when she pitched you got a bath instead.

'Isn't it a little rough?' I asked.

'Rough?' growled the chief officer. 'The sea is like a mill-pond.'

'Yes, so smooth that we are going to get out and skate,' said a man.

We found the morning slow, as we could not have our usual games on deck. The men retired to the smoke-room; the ladies tried to sew, but stuck the needles into their fingers, so they chatted instead.

'I don't mind the pitch and toss, but I object to a corkscrew,' said a man at tiffin.

'What is a corkscrew?' asked a young lady.

Then we all gave a shout, as with a bound the water-bottle shot from the stand and careered madly down the table and landed upside-down on the captain's knees.

'That's a corkscrew, young lady,' answered the man when our laughter had subsided.

'The doors will be closed this afternoon, and no one will be allowed on deck,' said the captain as he left the table. Just as he got to the companion a heavy sea splashed on the deck, and the water came tumbling down the steps.

'You were born to be drowned, captain; you will never be hanged,' said a lanky youth.

'True, my friend; we shall not meet on the gallows,' was the witty reply.

We amused ourselves that afternoon by trying who could cross the saloon without upsetting our equilibrium. We commenced by propping ourselves against the back of a chair; then, when the vessel paused in her mad career, we went jauntily forward, to find ourselves the next minute embracing a pillar closer than a brother.

At dinner the wise refrained from soup, the foolish took it—generally in their laps or down their backs. A steward came across the saloon with a plate of mulligatawny in one hand, and mutton broth in the other, and a sweet smile on his face, implying, 'See how clever I am!' Another moment it had vanished, for soup and steward found a resting-place on the carpet.

'No more soup at present,' said the captain.

'No, sir,' answered the chief officer.

Two nights we were in the Bay, and they were long ones, though full of excitement. Lights were, of course, out in our cabins, but we got gleams from the saloon or 'sallyway,' as a passenger called the port side where the ladies' cabins were. Every time the ship gave a very heavy lurch there would come the cry of a woman or a shout from a man as she or he landed on the floor of a cabin. No top berth was allowed to be occupied. I was fortunate in having a cabin to myself, as my companion had left the ship at Marseilles, so I purloined the pillows belonging to the vacant berth and wedged myself in safely. The next morning, when I took my place at the breakfast-table, I found only the captain and chief officer.

'Good!' said the captain, and turned my chair for me.

'Lost!' growled the officer.

I looked from one to the other.

'I bet the captain a half-crown you would not put in an appearance this morning. You are a plucky little woman,' said the officer, as he rolled the coin across to his superior. I looked round the saloon. I was the only woman, and several men's places were vacant.

'I tumbled out of my berth during the night,' said the captain.

'I never tumbled into mine,' said the chief officer sadly.

'Why not have your mattress on deck?' I asked the captain.

'Good idea! I will to-night,' said he as he rose.

'Any going outside?' asked a man, coming up to the chief officer. Before he could answer there came a crash and a shout, and we all scrambled up the companion to find that the piano had waltzed out of the music-room, and three sailors were marching it back again.

Little Peggy Green (aged three), in an unguarded moment, followed a sailor on deck. The ship pitched, Peggy gave a shrill cry, and the sailor had just time to seize her frock as a wave dashed her down and carried her like a cork to the taffrail. Poor little Peggy was brought back, with streaming eyes and clothes, a sadder and a wiser maiden. I foolishly tried to cross the saloon without dodging from pillar to chair, when the ship took a mean advantage of me, and gave an extra corkscrew. I swung round and round like a teetotum, and was flung against a cabin door. Luckily the door was locked, and I escaped with only a few bruises. The second and last night was the most thrilling; it was as if the Bay knew she would soon lose us, so she put forth all her power to give us a royal farewell. We went to our cabins early, as there was nothing to sit up for; we could not play games or dance, and singing was out of the question; so we went to bed, the first time during the whole journey a little tired of each other. It was a battle-royal between the good ship and the elements. Like a live thing, she shivered and trembled as she sank in the trough of the sea. Then, as though she cried, 'I will not be beaten!' she rose majestically on a wave, to be the next minute plunged into the depths

again. I heard every bell go, and stealthy footsteps all night long on the deck above me. I sank into a doze about 4 A.M., feeling sorry for the anxious ones on the bridge watching over our safety. How long I slept I cannot say, but I was awakened by a deafening crash of water and a great shout. Then we seemed to be going down, down, down, and every light went out. The ship shook and trembled like some sentient being, flung herself forward, then pitched back, then rose once more on the crest of a wave. I raised myself on my elbow to listen if the engines were going, and lay back reassured when I heard their familiar throbbing. But it was an hour before the lights came on again. We heard next morning that the sea had come right over the vessel and penetrated the engine-room, putting all the lights out. But we laughed at breakfast as usual, and recounted to each other the incidents of the night. The officers still declared there was scarcely a swell on, and told us we were safer at sea than in crossing Piccadilly.

The captain looked ruefully at me. He had taken my advice, and when the sea broke over the vessel he was drenched, and his sea-boots were filled with salt water.

'Teach you not to take cheap advice another time, sir,' said the chief officer, with a twinkle in his eye at me. He professed that I had been the means of his losing the only half-crown he had saved to take home to his wife and bairns.

The chief engineer had not been seen for two days; but he came in to dinner that evening, and promised us a good night.

We were out of the Bay of Biscay.

THE BRIGHT EYES OF DANGER.

By JOHN FOSTER, Author of *On Old Speyside*, *The Bernardine*, *The Ship of Shadows*, &c.

CHAPTER XXVIII.—continued.

NOTHING had happened at Holyrood, she told me. Cousin Philip had not shown face again. She had danced for half-an-hour, had then made excuses to Lady Jean Hewat, and had come away quietly, without adieux. So, for a little, we talked, and all the time her gentle, innocent neighbourhood laid its spell on me. She was rallying me on my shabby bandsman's cloak, and I had taken it off, nothing loath to appear in my fine feathers, when the chaise suddenly pulled up. I heard the coachman tell some one on the road, 'Ye are far fra' hame. It's the best pairt o' a mile'—and he pointed with his whip behind him—'straucht in front o' ye.' I slipped out, and went round behind the chaise. The coachman was gathering up his reins, the man standing with his back towards me.

I was in no mood for waiting, and was at his back before he was aware.

'This is an untimely hour to stop a carriage. What do you want?'

He spun round and backed away from me warily. The movement set my suspicions in a blaze.

'What do you want?' I repeated.

'Your honour's pardon! I was wondering if your honour's coachman would do me the kindness. I am walking to Haddington. It is a long way, and a seat on the box would be welcome. I am footsore.'

Something in the voice drew me swiftly nearer.

'Let me see you.'

Off his guard, 'It is the Englishman!' burst from him. He backed a yard and I saw his face.

He was the man who had run from The Garth the first day I had been there, and who had tried to knife me.

I closed with him on the instant, but I was in ballroom finery, and had no weapon.

He gave his arm a wrench and got free, but not before I got my left heavily on the point of his jaw. I was at the right distance for it. He went down like a bullock at the shambles.

A cry of terror came from the chaise. I ran back, sick with apprehension. A tall figure stood by the open door, his grasp on the girl's wrist. The moon rode clear of a scarf of clouds at the moment, and sight of the man's face struck me like a blow. It was Walter Irving! Walter Irving without his smile, without his rough Borderer's clothes, in the dress of a gentleman! His looks were satanic, and in a flash I knew that Walter Irving was a masquerader and worse, and that Philip Macdonell at last was about to face me.

'Come,' I heard him say; and Charlotte's despairing cry, 'Edmund!' I threw myself on him. He turned swiftly, for a moment surprised out of his readiness, but only for a moment. One hand grasped my lace cravat, and kept me from closing with him. I struggled hard, using every device I knew of to come to grips, but to no purpose. Once I made a sudden feint, but he was on the alert.

'No, Layton,' came grimly through his teeth; 'not this time! I'll do anything but wrestle with you.' He shot the words out suddenly, released his grip, and sprang back as quick as a cat. I should have fallen, and this tale come to a bloody end then and there, had not Charlotte caught my arm.

He came on again, but I was ready, and for a minute we circled round each other, husbanding our strength.

'Layton, I wish no quarrel with you,' he said, but without stopping his wary movements.

'Unfortunately I have a few scores to settle with you, Walter Irving or Philip Macdonell, or whatever name you blacken by using.'

'Macdonell is my name, a better one than yours,' he said hotly.

'You take little pains to keep it clean. The Laytons have never been within an inch of the rope!'

'The rope!' His voice was suddenly hoarse and old.

'The hangman!' Watching him, I played a bold stroke. 'Forgery, theft, and attempted murder! How sounds the indictment?'

'Fool, you babble! I hold his Highness's commission in the secret service.'

'And use it for your own black ends. Glenira has told us the whole vile story.'

Never did a random shaft find its mark more swiftly.

'You lie!' he snarled. But the words stuck in his throat, and the moonlight showed me his livid face. 'I warned you—curse you!—to go home to England.'

'And I asked him to remain,' said Charlotte, coming to my side.

He backed a step, and gave her a quick glance. 'So that's the way of it!' he said softly, breathing hard, looking from her to me. 'Ye made a short courtship, cousin;' and he threw up his hands in a light gesture. The movement put me off my guard.

'The knife! See!' cried Charlotte.

The warning came an instant too late. The crafty devil sprang and crouched as I closed with him. I saw Charlotte throw my cloak at him as he stooped. Something like a hot cinder seared my side. I fell.

THE PASSING OF GERMANY'S COLONIES IN THE PACIFIC.

SAMOA AND NEW GUINEA.

By NEVILLE BOSWORTH.

THE German possessions in the Pacific included German New Guinea, German Samoa, the Bismarck Archipelago, the Marshall Islands, and the Caroline Islands. Of these, the Caroline Islands are probably the most desirable from a commercial point of view; but, from the viewpoint of British interests, German New Guinea (which lies near to the Australian coast and adjoins British New Guinea) and German Samoa (which is on the route from Australia to Panamá) have a strategical importance which rendered their possession almost indispensable to the safety of this portion of the British Empire.

Soon after the outbreak of war an expeditionary force of fifteen hundred men, escorted

by British cruisers, sailed from New Zealand under sealed orders. Nothing further was heard of them until their arrival at Nouméa, in the French colony of New Caledonia, where they were received with great rejoicings. New Zealanders and French fraternised, and the flags of both nations floated from public edifices and private buildings. After a brief stay, the expedition sailed from Nouméa, still under sealed orders; but it was rightly conjectured that the object was to attack some of the German colonies in the Pacific. In a few days all doubts were set at rest by the official announcement that German Samoa had been captured by the New Zealand force without resistance. It was an event

of historic importance, and presaged the conquest of all German possessions within Australasian waters.

The surrender of the Germans without bloodshed goes to show that the German Government did not anticipate a rupture with the British Empire. It is an amazing fact that of the three great European Powers which have interests in these seas, not one was prepared to take the offensive. The German colonies are young, and there are not many Germans in any part of the Pacific; but the German authorities do not appear to have taken any measures for the defence of their oversea possessions. Nor can it be said that the French were in a better position.

The success of the British descent upon Samoa was not due to Imperial prevision, but to the policy of compulsory military training adopted by the Dominion of New Zealand. The departure of the Dominion expedition was followed shortly afterwards by that of an Australian expedition of one thousand men, under the escort of the Australian fleet. The object, it is said, was to capture coaling stations in the Pacific. The expedition called at the Bismarck Archipelago, and the forces afterwards captured German New Guinea.

There are nine islands in the Samoan group, and of these the large islands of Savaii and Upolu were under the German flag. Savaii, the largest of the group, is about forty miles in length by twenty in breadth, with an area of over seven hundred square miles. Upolu has an area of nearly six hundred square miles. On the northern shore of Upolu are situated the harbour and settlement of Apia, the centre of the political and social life of Samoa. The island of Tutuila, with the fine harbour of Pango Pango, is under the American flag. In addition to the two large islands, several small islands, of no great importance, were within the German sphere of influence.

The Samoan natives, of whom there are a considerable number, are a fine race, and akin to the Maoris of New Zealand. The Samoans, after a little desultory fighting in the early days of German occupation, seem to have settled down contentedly under German rule, and appear to have been well treated by the authorities.

The staple product of Samoa, as of other Pacific Islands, is the coco-nut, in the form of copra, an industry which is yearly becoming more profitable. As well as fostering the cultivation of the coco-nut, the Germans were very successful in establishing plantations for the production of cocoa. The islands, in fact, are exceedingly fertile; all tropical products grow to perfection, and their productive power, added to their position on the highway to Panamá, makes them a very desirable possession.

The Samoan Islands, formerly known as the Navigator Islands, are situated to the north-east of Fiji, which since 1874 has been in British occupa-

tion. Captain Cook called at the Samoan group. The great French navigator, La Pérouse, also called at the islands for water; but the natives, who had appeared to be friendly, attacked the party, killed Commander L'Angle and twelve of his men, and wounded many others.

German relations with Samoa antedate the Franco-German war of 1870; and fifty years ago a German mercantile firm, Godeffroy & Company, acquired land in the islands, with the object of encouraging German immigration. In the year 1877 the native chiefs petitioned Britain to establish a protectorate over the islands; but the petition was disregarded. In 1879 Germany made a treaty with the natives to secure certain privileges, and similar treaties were entered into by Great Britain and the United States. In the 'eighties New Zealand suggested the annexation of the islands; but Lord Derby, unwilling to create friction with Germany, refused to sanction annexation. Thereafter there was trouble in the islands, where the authority of King Malietoa was disputed by the great chief Mataafa, the former being supported by the British and the Americans, and the latter by the Germans. Feeling ran very high between the rival parties, and British, American, and German warships arrived on the scene to watch over national interests. It was at this time that a dreadful hurricane burst over the harbour of Apia. It was quite unexpected, and H.M.S. *Calliope*, burning Westport coal, and steaming slowly out to the safety of the open sea, was the only vessel to escape disaster—a memorable feat of British seamanship. The German and American gunboats, lashed by the fury of the storm, were driven ashore and totally wrecked. After this event a tripartite arrangement was entered into, which guaranteed the independence of the islands. But, finally, in the year 1899, when Britain was at war with the Boers, Lord Salisbury, who was anxious to propitiate Germany, agreed to the withdrawal of British claims in Samoa, and the islands were divided between Germany and the United States. Since then their history has been uneventful.

Samoa is endeared to British memory by the fact that it was the last home and final resting-place of the great Scotsman, Robert Louis Stevenson, whose mastery of English prose has delighted so many readers. In his home, Vailima, on the hills behind Apia, beloved of the Samoans, Stevenson passed his last days; and his bones lie buried in that sunny southern land over which the flag of his country now flies.

The Dutch have held a portion of New Guinea for many years, but the larger part remained in the hands of the natives until a comparatively recent date. It is strange that so large an area of fertile and well-watered country, lying so close to the northern shores of Australia, should have escaped attention for

so long; but it is only within the last thirty years that the possibilities of the unannexed portion of the great island received the serious consideration of European Powers. It was in the 'eighties that the Government of Queensland, whose northernmost point lies quite close to New Guinea, alarmed at German activity in the Pacific, annexed the whole of the island not in Dutch occupation. The British Government, however, anxious not to offend Germany, refused to confirm the annexation. But the abortive action of Queensland, and the keen interest manifested by the people of Australia, had aroused public attention. It was felt that something definite should be done, and finally the independent portion of the island was divided between Great Britain and Germany. Lying under the tropics, and subject to malaria, it was not a desirable place of residence for white men; but under the wise administration of Sir William MacGregor the British territory began to make progress, and the discovery of gold at Woodlark Island and other places, followed by the advent of hardy miners, gave further assurance of prosperous development. The history of the settlement was uneventful; and after the federation of the Australian states the British Government handed the territory over to the Commonwealth, and British New Guinea became an Australian dependency. The work of development proceeded, settlers began to take up land, the bush was cleared and planted by means of native labour, and preparation was made for permanent settlement. The natives have not given serious trouble, and it may be noted that the relations with German settlers have always been amicable.

In their part of the island the Germans also made fair progress in the development of the territory. There may have been less enterprise in mining matters, but the work of settlement proceeded apace. Friedrich Wilhelmshafen and Eitape are important stations. At the latter place, gardens, with limes, pawpaws, bananas, pine-apples, shrubs, and flowers, flourish where the bush has been cleared; and there are acres of sago and tapioca, sugar-cane, and coconuts cultivated for commercial purposes. A fresh-water creek winds through the cultivations, the air is redolent with the perfume of many flowers, beautiful butterflies flit from flower to flower, and everywhere landscape and seascape

are rich with the gorgeous colour of the tropics. But there are abominations as well as beauty; for insect pests abound, and sandflies and mosquitoes torment the white man almost beyond endurance.

New Guinea, German and British, is a land of great promise. It is a well-watered country, where drought is unknown. The Kaiserin Augusta River, in German New Guinea, navigable for nearly two hundred miles, is one of the finest rivers in Australasia; but there are many fine rivers and creeks in New Guinea. It is a beautiful country, a fertile land, a land of hill and valley, of heat and moisture and spontaneous growth. The white man may supervise, but coloured labour must carry out the work of development. Already the native supply of labour has been almost absorbed; for it is the policy of the administration not to make slaves of the natives, and not to take too many of the able-bodied men away from their own villages and food plantations. The New Guinean native is often a cannibal, and blood-thirsty in his ways; but he is tractable and amenable to discipline, and it is hoped that he will gradually adapt himself to the conditions of civilised life.

The German possessions in the Pacific have fallen almost without a struggle. It was at first reported that a strong German force was posted on the Kaiserin Augusta River, in German New Guinea, a hundred miles from the coast; but investigation proved that the rumour was without foundation. If it had been true it might have delayed the conquest of the territory, for a small, well-equipped force, entrenched in the dense jungle, could have held the invaders at bay for months. These possessions, it should be understood, have not been annexed; they are merely in military occupation until the close of the war, when their disposal will be decided upon.

The capture of German New Guinea by the Australian forces will go far towards allaying in the Australian mind the uneasiness produced by the proximity of a possession held by a powerful Empire, and with a base within easy striking distance of the Commonwealth. The last of the German possessions in the Pacific has fallen, and for the time being, at least, the menace of European aggression is removed from Australasian waters.

EL CHATO INTERVENES.

By H. ROBERT BUCHAN.

PART I.

IT had been a day of intense heat, unusual even for Mexico, and a three days' ride over rough mountain trails, beneath the blistering rays of a tropical sun, had utterly wearied me. It may

have been the proximity of the camp I was approaching in a leisurely manner, probably it was also the dejection associated with an unsuccessful mission, that caused me to relax the

customary vigilance so essential in that lawless district; but I rode with a slack rein, and permitted the mule to pick its way at will over the narrow and precipitous track.

Whee—oo! whistled a bullet so uncomfortably close to my head that it made me hastily abandon the animal I was astride, take cover behind a friendly boulder on the mountain-side, and, rifle in hand, await further developments. My servant Juan, who was riding some paces in the rear, immediately hurried forward, and hailed the unseen marksman with a curiously prolonged note, evidently some form of signal. 'Tis well, *señor*; 'tis but El Chato!' he ejaculated in a relieved tone, as a similar cry echoed along the rocky defile in response to his hail; and a few minutes later a veritable giant of a man, Winchester rifle in hand, rounded an angle of the trail in front, and came toward us.

Nobody likes to be made a target of, accidentally or otherwise; therefore, as no explanation appeared to be forthcoming from the new arrival, I at once angrily demanded the reasons for his shot. He was, of course, profuse in his apologies, and swore by all the saints in the Mexican calendar that he was innocent of all evil intentions; that he had merely been hunting a deer in the mountains, and was quite unaware of our proximity.

'*Soy un arriero pobre, señor*' ('I am but a poor muleteer, sir'), 'and I would never have forgiven myself if even one single hair of the head of your excellency had been injured by my carelessness!' he expostulated in a rapid fire of Spanish, with all the extravagant gestures he deemed appropriate to the occasion. It was obvious that the man was lying; but to have asked him to exercise more care in future would have been merely to appeal to his mistaken sense of humour, so I contented myself with a scathing remark about his very inferior marksmanship, and rode on toward the camp, leaving him to follow in company with Juan.

Such was the form of my introduction to El Chato, or Pug Nose, as I afterwards came to know him; and this incident, as well as several unexplained absences on his part during the subsequent period of our association, confirmed my opinion that the rascal was a bandit, although ostensibly he followed the more prosaic occupation of an *arriero*, or muleteer. Ramon Quevedo, I learned, had been the name conferred on him in his infancy by the silver-haired little padre of the old mission church at Guadalupe de los Reyes; but one glance at his whimsically ugly countenance was sufficient to convince me of the aptness of the shorter and more descriptive cognomen of Chato applied to him by his countrymen. A magnificent figure of a man—such as one seldom sees in Mexico, where the men are usually of stunted growth—he stood six feet six inches in his rawhide sandals, had a tremendous spread of shoulders, and appeared to possess the strength

and activity of one of his own mules. A huge black beard obscured the lower half of his swarthy features, and a scarcely healed scar crossing nose and cheek seemed to indicate a recent controversy, in which some opponent had driven home his point in the approved Mexican fashion with a knife. Inquiry failed to elicit the fate of the other party to the argument, for Chato evinced a strong disinclination to discuss the matter, and dismissed the whole affair with the terse remark that 'a closed mouth catches no flies.' An immense, silver-embroidered, gray felt sombrero, which at one time must have cost many *pesos*, surmounted his shaggy head; but the rest of his costume, including a much-faded and tattered red blanket, could probably have been purchased for a few *centavos*.

'Glad to see you again, old scout!' was my partner's greeting as I dismounted at the old familiar camp. 'What luck up in God's country? Raise any more dough for the mine?'

'Sorry, old man,' I replied, 'but I might as well have remained here for all the good I was able to accomplish. However, I did manage to raise a few *pesos*, enough to carry us on for a month or two longer; but when that is gone we have come to the end of our rope.'

'Well, I guessed you were up against a tough proposition,' said Jim. 'We all know that those guys back east are a lot of tight-wads; but every man in New York who can sport a clean shirt, and has the price of a drink in his jeans, has also a mining scheme in Mexico that he wants to palm off on some easy mark. The old town simply overflows with the get-rich-quick stuff, and the fellows who handle the long green must be getting a bit wise by now.'

At that time we were toiling laboriously by day, and dreaming roseate dreams by night, in connection with an old silver-mine in the Sierra Madre Mountains of Durango, from which, as soon as the vein that had been lost many years previously was relocated, we fondly hoped to extract untold wealth. Our mining instincts convinced us that the vein was there, and only wanted uncovering to make us both rich men. Of late we had been having rather a rough time of it, for funds were low; and, situated as we were in a most inaccessible part of the country, our commissariat was of the most meagre description. My partner Jim, who was an American, was as a rule the cheeriest of companions; but a prolonged diet of dried beef and beans had been fast converting him into a confirmed pessimist.

'By the Great Horn Spoon!' he would growl; '*carne seca* and *frijoles* again! 'Pon my soul, I would swop the whole shebang—the mine and all—for the chance of sinking my grinders into a good juicy porter-house steak once more!' Then, to our servant Juan, 'Can't you rustle around, you coffee-coloured dub, and dig up something fit for a white man to eat, instead of

resurrecting this blamed mummified cow and parboiled beans every blessed day in the week !'

The inoffensive Juan, to whom the latter part of this tirade would be addressed in English, would understand not a word of it ; but he would grin happily and mutter, '*Si, señor !*' in a non-committal tone, and Jim would subside with a grunt.

Seated in front of our quarters one evening some weeks after my return, we smoked our pipes in silence and gazed out at the wonderful panorama unfolded before us. Their harsh outlines mellowed by the soft radiance of a brilliant tropical moon, the lofty mountain-peaks imperceptibly faded away toward the far-distant shores of the Pacific. Cleaving the rocky slopes at intervals were deep patches of sombre darkness—the yawning cañons into whose depths no rays of sun or moon ever penetrated ; and beneath all, in the misty shadows of the valley below, gleamed the cooking-fires of our tiny village on the banks of the *arroyo*. It was such a scene as may only be found in those glorious Southern lands where Nature gives most bounteously of her store, and the exquisite beauty of it all had gradually lulled me into a drowsy content, in which I idly watched a figure slowly ascending the trail toward us from the village below, when Jim's voice broke rudely into my reverie.

'Looks like your ugly friend Chato come to stick us up,' said he with a laugh. 'There's nobody else around this camp looms up quite so large as that guy down there.'

Slowly the visitor disappeared behind the tail of the dump, and shortly afterwards our night watchman came to announce that a man wished to see *el doctor*. This title, I may mention, had been gratuitously conferred on me by the natives on account of sundry simple remedies administered to them in times of sickness out of our own small store ; and a sublime faith in the virtues of the white man's *medicina* had in some cases effected such marvellous cures that it had been the means of earning for me an undeserved reputation as a healer ; which, especially when attending the somewhat confiding female patients, very often proved a source of considerable embarrassment.

'Two strong cathartics, with a stiff tot of engine-oil as a chaser, will be about his ticket, I guess !' scoffed my unsympathetic partner as I went off to interview the prospective patient, who proved to be the gigantic Chato, with an ugly-looking bullet-hole in his shoulder. Fortunately the bullet had passed clean through, and the wound only required the usual cleansing and dressing ; but, strive as I might, I could glean no details from the sufferer himself as to the cause of it.

'Tis but a mere scratch, *señor*,' he vaguely muttered ; 'an accident with my own rifle. That is all.'

'Accidents appear to be a habit with that gun

of yours,' I retorted, remembering my own recent experience at his hands.

'*Si, señor*, I fear the trigger-spring has become a trifle loose,' was the unabashed response.

'Well, that wing of yours is badly enough crippled to restrain your energies for some time to come at any rate ;' and I dismissed him with a caution not to use the injured arm.

News travels slowly in the mountains, and it was not until the wounded man had completely recovered that the report filtered through to us of the successful robbery of a distant *hacienda* at Cienfuegos. It appeared that the *rurales*, who are the mounted police of Mexico, had been despatched on the trail of the bandits ; and, the band having been overtaken before they reached the mountains, a fierce fight had ensued between the troopers and the robbers, in which several men on both sides had been severely wounded. This, of course, explained the origin of our friend Chato's wound, and we immediately cross-questioned that individual on the matter.

'How should I know aught of the affair, *señores !*' he questioned. 'I am but a poor muleteer, and mingle not in the concerns of others. Besides, it is known that I was on a visit to my betrothed at the time you mention.'

'Your what ?' roared Jim. 'For the love of Mike, listen to him, Doc ! Can you imagine any sweet young thing wanting to kiss a dial like that ?'

'Why laugh, *señor* ?' remonstrated the indignant Chato. 'I speak but the truth ; and, like others, some day I hope to wed.' This was the first intimation we had received of any woman in the case, and the idea of the ugly ruffian making love was so ludicrous that we both chaffed him unmercifully.

It was too much for Jim to swallow without a protest, however ; and, much to Chato's disgust, with an elaborate gesture he said, 'I take my hat off to you, you villain. When it comes to lying, you are in a class by yourself ; but, in spite of your accomplishment, you will get your neck stretched by a rope one of these days.'

The rascal strenuously denied all knowledge of the robbery, but he did condescend so far as to admit that he thought it was justified. His was a curious code of morality ; and, strangely enough, it was quite obvious that he was absolutely sincere in his belief.

'It is no sin to rob the rich, *señor*,' he would say, 'for they have more than they can possibly use. With the poor man it is another matter ; when you rob him you take his all ! But Don Felix of Cienfuegos has many *pesos* ; his cattle also are numbered by the thousands ; and he has numbers of *peons* to do his work for him. He is a hard man and an unjust one, and poor people love not his haughty ways.'

It was very evident that Chato was a bad egg ; but as he was worth four ordinary men on our work we continued to employ him ; and, from

some obscure sense of gratitude, I suppose, he constituted himself my personal follower and right-hand man. It was an open secret that he robbed us in many petty ways, for he considered all white men to be the legitimate prey of his countrymen. We, however, appeared to be regarded as his own particular spoil, and all other aspirants were warned off by him accordingly. It is better to be robbed by one man knowingly than to be robbed by half-a-dozen or more in secret, so we submitted cheerfully enough to his impositions and absurd airs of importance. Altogether, the man was a queer mixture. He could neither read nor write, but in one way or another he had picked up a useful knowledge of English during his somewhat chequered career, and both spoke and understood the language fairly well.

Jim, however, was never very enthusiastic about him. 'Better keep an eye on that pugnosed joker,' he would repeat on several occasions. 'I know the breed well, and he will do us dirt some day if he ever gets the chance.'

Jim was in charge of operations underground, while I looked after the crushing and washing process at our little mill on the *arroyo*; but one day he burst into the mill, seized me round the waist, and forcibly waltzed me round the crusher-platform, to the imminent danger of both our lives, accompanying the idiotic performance with a series of shrill whoops and yells.

'Let up, you bally lunatic!' I gasped, hastily despatching a man for our medicine-chest, preparatory to administering a stiff dose of bromide to my suddenly demented partner, and signalling to Chato to help me to restrain the struggling man. The speedy arrival of the medicine-chest in the hands of a wondering native seemed to have the desired effect.

'Oh, feed your poisonous dope to the crusher, Doc,' said the now sobered man. 'Hurroo, Jude; we've found the vein!' he yelled. 'Found the lost vein, do you hear? She's a bird, Doc! Shake, old pal; we've got the goods at last!'

Solemnly we shook hands over the announcement, and then adjourned to our quarters to broach a bottle of champagne that for many weary months had been saved for just such an occasion.

The discovery was, of course, the cause of general rejoicings in camp, for we had been on the eve of a shut-down for lack of capital; in fact, we had reached the end of our resources, and could not have held on for many days longer. The imperturbable Chato, however, appeared quite unconcerned at our good fortune, and went about his duties in his usual leisurely manner. These he continued to perform faithfully for the

next two or three months, until one morning it was discovered that he had disappeared without warning during the night, no one knew where. Without hesitation we decided that mischief was brewing somewhere, and that he was somehow concerned in it; for our experience of the man had shown us that a restless spirit, which caused him to chafe at restraint in any form, completely dominated him.

That same evening a party of *rurales*, in their picturesque gray-and-silver uniforms, rode into our camp, and the mystery of Chato's sudden disappearance was explained. Our hopes that he was gradually being converted into a law-abiding member of society had almost been realised; but from some source unknown to us he must have received warning of the vicinity of the police, and he had again taken to the hills. As was the custom of the country, we invited the troopers to dismount and put up for the night, an invitation which they gladly accepted; and during a talk with them that evening we learned for the first time the details of the robbery at Cienfuegos, and the subsequent fight with the bandits. In this it appeared that Chato, on account of his unusual height, had been a marked man, and they had ultimately succeeded in tracing him to our distant camp in the mountains.

'He is one of the worst rascals in the country,' declared the spokesman of the party of *rurales*. 'For many months we have hunted the dog, and when we catch him'— A significant gesture completed the sentence.

These *rurales* were, we knew, recruited from the most desperate class of men in Mexico; indeed, many of them had at some conveniently forgotten period of their careers been bandits themselves, so that the fate of the fugitive, if ever he fell into their blood-stained hands, was a foregone conclusion. They openly boasted that several of the bandits had already been captured; and I, innocently enough, inquired when and where the trial would take place.

'There will be no trial, *señor*,' said one of the party with an eloquent shrug of his shoulders. 'They foolishly attempted to escape, and were shot. What would you have? It is the easiest solution of the matter, and avoids all expense.'

'Bad lookout for the big chap if they nail him,' said Jim to me at this point. 'I guess they will also give him a run for his money!'

However, apart from the fact that the man had worked for us, we could offer these picturesque ruffians no further information; and the following morning they took their departure, much to the relief of the inhabitants of the village, who were bandit sympathisers to a man.

(Continued on page 448).

A JOURNEY FROM BASSORAH TO BAGHDAD.

By J. NIVEN.

SO strong is the current of the Tigris, as it comes sweeping down from the distant hills, that the journey up-river from Bassorah (Basreh) to Baghdad takes from five to seven days, whereas the return journey can usually be made in three. Two companies, a British and a Turkish, have steamers which run once a week to and from Baghdad. The European traveller invariably, and the better-class native usually, travel by the British steamers, and the merchant who wishes his goods to arrive at their destination within reasonable time despatches them by the British line. These steamers are of the shallow-draught type, covered in with thick awnings, and each has one or two barges alongside, on which are piled great heaps of cargo. The captain and officers are British, but the crew consists mainly of Tal-Kefis, a race of sailors who take their name from a town situated on the bank of the Tigris above Baghdad, are the descendants of the ancient Chaldeans, and have been Christians from very early times. They are a comparatively fair-skinned race, of great size; but they incline to an unwieldy stoutness as they reach middle age. The Turks do not allow them to carry arms, so that they are by no means a warlike people.

The best time to make the journey to Baghdad is in early spring or late autumn, for the cold of winter or the tropical heat of summer has given place to a genial warmth, which makes it possible to sit on deck for hours, and enjoy the vivid brightness of sky and water, the clearness of the atmosphere, and the slow, steady motion of the boat. We travelled once to Baghdad in June, and are not likely ever to forget the torrid heat of the sun, which made it impossible for us to leave our cabin until evening, and which turned all the metal-work into an almost molten condition, and raised great blisters on the varnish of the wood-work. The shade temperature rose to one hundred and thirty degrees Fahrenheit, and walls and curtains were covered with thousands of small flying cockroaches and crawling insects. And yet, in spite of such heat, the officers seem to be quite as healthy as the residents on shore—if not more so—who can to a certain extent protect themselves from the appalling heat of the five hottest summer months.

For some hours before starting-time the river at Basreh presents a scene of vivid colour, of swarming life, and of discordant noises. The steamer lies in mid-stream, and *bellums* filled with crowds of excited passengers arrive in a seemingly endless procession. Five or six different nationalities are represented—Arabs in flowing cloaks and picturesque headgear, Jews in long straight robes, Chaldeans in blue

cotton tunics, Persians in tight-fitting *kaftans* and brimless felt hats, Turks in European suits and the red fez, Armenians, Greeks, Levantines—and all push and jostle one another in their eager haste to get on board and secure the space on deck allotted to them for the period of the journey. Even the wealthier natives travel, as a rule, on deck, preferring the simplicity and freedom of this open-air existence to the closed-in quarters below. They bring their servants and their belongings, and resign themselves with Oriental stoicism to bear the discomforts entailed by a journey of five or six days spent in a very cramped space, and without anything to vary the monotony save sleeping, eating, or story-telling.

For about half-an-hour after the boat gets under way there is a scene of wild confusion; boxes, bales, beds, and bedding are all dumped down in motley heaps, while every man runs around shouting and gesticulating in search of a sheltered corner in which to make his temporary home. However, it is wonderful how quickly peace is restored and order brought out of chaos, as the ship's officer walks round and allots a certain amount of space to each party; and before the Europeans have arranged their belongings in their respective cabins the excited crowds on deck have formed themselves into little family groups, have so placed their boxes and bedding that they form a sort of rampart round their temporary homes, and have made curtains of their shawls and carpets to ensure privacy to the women of the party. Each man has brought his charcoal-brazier, his cooking-utensils, his water-bottle, his food, and his bedding, and attends to his own wants while he is on board. The wealthier travellers show great kindness to the poorer ones, sharing with them their daintier meals, and giving them presents of fruit or spices.

As the anchor is lifted we take our deck-chairs to the after-deck, which is kept free for the use of cabin passengers. Slowly the ship, with its heavy-laden barge, steams up past the outlying houses, the barracks, the entrance to Basreh creek, and the custom-house, and for five or six miles the right bank is rich in vegetation and clothed with palms and a thick tangle of undergrowth. As we near the end of the cultivated land a little village comes into view. Here is a dry dock belonging to the Euphrates and Tigris Steam Navigation Company; and, where one of the steamers is laid up for repairs, there is a crowd of busy workmen in their blue cotton tunics clustered on the shore. At one time the British consul lived here, and the ruins of a fine house still stand in

a luxuriant, tangled garden, in which the writer spent many happy hours.

A little farther on we reach the outskirts of the vilayet of Basreh, and on both banks a vast expanse of desert stretches out in an unbroken plain reaching to the far horizon. Sailing-vessels, with brown or white sails wide-spread to catch the breeze, and great carved wooden bows towering high out of the water, come sweeping past on the swelling current, the steersman in Arab cloak and floating head-dress silhouetted against the blue of the sky, which is fast paling into a soft amethyst in the fading light of the afternoon. On we sail, until, about thirty miles above Basreh, we reach the junction of the Tigris and the Euphrates, and the yellowish soil of the desert gives place to the bright green of fertile gardens.

In the early spring, when the snows melt on the distant hills, both rivers become broad and overflow the land. The rich soil absorbs the moisture, and the desert becomes a verdant plain. At the apex of the triangle formed by the junction of the two great rivers lies a little town called Kurnah, on which the British flag was planted not many weeks ago. It is the fabled site of the Garden of Eden. The Biblical description of it as the place where four rivers meet points to a time in the long-distant past, for two of the rivers now flow underground and are no longer to be seen. The town itself has little save an historic interest, for it consists of only a few reed huts and mud-brick houses, but it is situated at the most fertile part of the delta formed by the Tigris and Euphrates. This great triangle of waving trees and verdant undergrowth is in strong contrast to the arid plain which stretches out to meet the horizon on the opposite bank, and may have suggested to the mind of the ancient Hebrew poet all the delights of a perfect Eden, where God's precious gifts were poured in prodigal abundance at the feet of man.

Mesopotamia, 'the land between the rivers,' stretches from here far beyond Baghdad. It is the very cradle of the Jewish race, and everywhere are to be found landmarks of their ancient history. Far away on the right bank lie the ruins of Babylonia, where one civilisation after another has had its day and ceased to be. Its cities have fallen to ruin and been buried deep in the sands of the desert, and over them have been built by later generations new cities which were governed by a later dynasty. The excavators have found the palace of Nebuchadnezzar far below the desert soil, and deeper yet are traces of a still older city. Remains are still to be found of the old canals which irrigated the land in the days of Babylon's prosperity, and which explain the ancient splendour and beauty of that city of the plains. It is essentially a land of the dead—of dead glory, of dead kings, of dead memories, of a dead and arid soil. But the

power of man can bring new life to it all, can make its desert places 'rejoice and blossom as the rose,' can rouse its people to activity and to hope, and bring its ancient glory to life again. With a new prosperity it would lose much of its present charm. The vast solitudes of the desert, the silence of wide spaces, the absence of the unrest and ambition, of the pushing, hurrying struggle for existence, would all become things of the past. The great rivers which flow in majestic dignity under the cloudless blue of an unsullied ether, bearing on their bosom great Viking ships, would lose their mystery if they became merely the highways of commerce, and the indefinable charm of this land of the Arabs would be but a memory and an inspiration.

We make but a short stay at Kurnah, and as night creeps on we sit on deck and watch the stars come out in the cloudless sky. So clear is the atmosphere that the starlight shines with a brilliance which reminds us of moonlight at home. A stillness seems to fall on all nature, and every sound reaches us softened and harmonised by the atmosphere of peace around. The soft wash of the waves as they sweep along the banks mingles with the musical cry of the boatmen as they take soundings and call out the depth of the water on either side of the steamer. The voices and laughter of the deck-passengers come in softened cadence through the silence of the night, and we feel lulled into a restfulness of mind and body which is seldom attained amid the turmoil and bustle of Western life. Things seem to assume new proportions. The vast solitudes around; the vast canopy above, with its myriads of worlds, and suns and moons; the mysterious silence of the desert, where we seem to hear only 'the great heart of Nature beat,' all recall the words of the Psalmist, which found utterance as he stood, a lonely shepherd, among just such scenes as these: 'When I consider Thy heavens, the work of Thy fingers, the moon and the stars, which Thou hast ordained, what is man that Thou art mindful of him? and the son of man, that Thou visitest him?' For the moment the weariness, the fever, and the fret are blotted out of existence, and a great peace falls on soul and body alike.

When we rise to go below we are confronted by a wonderful picture in chiaroscuro as we look along the deck. The little families of passengers are grouped round their charcoal-braziers, now burning with a deep crimson glow which lights up here a swarthy face with piercing black eyes, there a bright turban gleaming scarlet and golden in the lurid light, or falls upon the dark-veiled figure of some Persian woman, of whom only the great brown eyes are visible. Bursts of laughter come from the groups where a professional storyteller amuses some wealthy Arab trader; the monotonous wail of a native violin rises from a distant corner; and down below on the barge

some Beluchis are dancing to the clapping of hands of an admiring audience.

Once or twice in the night we are abruptly awakened and nearly thrown out of bed by a sudden shock which makes the ship quiver from stem to stern. The shifting sand of the river-bed has piled itself into a bank in mid-stream, and we have run right into it. There is a great deal of shouting, taking of soundings, and reversing of machinery, and then we have found the passage again, and move steadily on our way.

The next morning we find that the river has become much narrower than in the lower reaches, and it seems as if we might almost jump on to the bank on either side. Everywhere stretches the desert, its monotony broken every now and again by Arab encampments. These consist of groups of square black tents made of camel-hair. They are quite watertight, and afford great protection from the sun. Here the Bedouins live with their families and flocks, moving on from time to time in search of pasture, or towards the larger towns, where they trade in cattle and horses. They are a stalwart and happy race, these wandering Arabs, simple as children in many ways, easily amused, and ready to see the humorous side of things. Their women lead a much freer and happier life than the townswomen, who are cooped up in stuffy rooms all day long, and are so entirely enveloped in cloaks and veils when they do go out that no breath of pure air can reach them. As the steamer passes, crowds of Arab children, mostly naked, and all the picture of health and vitality, come running along the bank. Oranges, bread, and coins are thrown to them, and they all rush amid eager shouts and in wild confusion to seize the spoil.

Our next stopping-place is Amara, a pretty town on the left bank of the river. Reed huts and flat-roofed houses, painted in bright blues and greens and yellows, gleam among the palms and acacias; and a fleet of fishing-boats with sails set ready for departure are dotted on the river. No Europeans live here, though the town is visited at times by French Roman Catholic priests, and we determine to explore it. A crowd of excited natives gathers to watch us, and as we go along the rough unmade streets of the town this crowd assumes such proportions that we begin to realise to some extent the excitement of a royal progress. Soon the crowd becomes so great and the people press upon us so threateningly, shouting and gesticulating vehemently the while, that we can scarcely walk. Our servant explains that it is the sight of a European woman unveiled and walking with men in open day which has aroused this indignation, and he advises us to go back to the ship as quickly as possible. As we had once before been stoned by just such a crowd, we decide that discretion is certainly the better part of valour; so we beat a hasty retreat to the shelter of the steamer, and soon after we are once more under way.

That afternoon, as we sit idly on deck, we amuse ourselves by watching a Persian boy of twelve at his midday meal. With great gusto he devours three or four raw cucumbers, then helps himself to several handfuls of boiled rice from the common bowl, which he washes down with copious draughts of water. And now he settles himself to the enjoyment of the *pièce de résistance*. Choosing a cosy corner amongst the rolled-up bedding of his party, he produces a very large water-melon, which he cuts into wedges and eats with every sign of unimpaired appetite. Having finished the last morsel, he rises with a sigh, goes down on to the barge, throws the rind overboard, draws some water from the river and washes his hands; after which he returns to his corner and settles himself to sleep. We could not imagine a more indigestible meal, and yet he seems to suffer no inconvenience from it.

Our next stopping-place is on the right bank of the river; and as we approach it most of the Jewish passengers begin to pack up their belongings and prepare to land; for it is Ezra's tomb, and a place of pilgrimage for the Jews. The tomb is a large square building rather like a mosque in shape, with a rounded dome on top. The legend tells that Ezra the Scribe was returning to his native land after visiting Jerusalem, and, feeling that death was near, he gave orders that after he died his body should be tied on the back of a camel, and buried at whatever spot the animal should choose as a resting-place. We can picture the camel carrying its holy burden over the long desert tracks, never halting till it reached the river, with its promise of pasture and of water.

On the third day's journey up-river the long line of desert is broken by a range of high hills, which become visible on the far horizon. These are the famous Persian Bakhtiari Hills, which breed the fine race of Highlanders among whom Layard lived for so many years, and of whom he speaks so highly. They seem to have escaped the decadence of the other Persian peoples; and they are to a great extent independent of Persian State control. These hills are distant many days' journey, and yet we see them clearly in the smokeless atmosphere. Every day we have had cloudless blue skies overhead, and have been blown upon by the 'winds austere and pure' which sweep over the wide spaces of the earth, bringing with them the very joy of life, of its vastness and its promise.

As we sail on we pass one or two small fishing-villages and innumerable encampments, but see nothing of outstanding interest till we are within a day's journey of Baghdad. Then, as we turn one of the numerous bends of the river, which twists here so much that we are inevitably reminded of the Links of Forth, a great mass of masonry looms into view, apparently on the right bank of the stream. It seems to be quite

near, and yet it takes five hours of twisting and turning with the course of the river before we reach it, when we find that it is really on the left bank. It is the famous Arch of Ctesiphon, the only remains of Ctesiphon, the town built by Alexander the Great on his conquering march from Babylon. It is probably the roof of the large banqueting-hall of a great palace, and has withstood the ravages of time and weather through all the centuries, when the rest of the building has fallen to pieces. Eight years ago this arch was still quite perfect, but since then a part of it has fallen away.

Not far from Ctesiphon, and on the same bank of the river, is a spot dear to the hearts of the Mohammedans, to which they make frequent pilgrimages—the tombs of the chief barber and gardener of Mohammed. They are dome-shaped, enclosed by thick walls, and surrounded by palm-groves. On our last day's journey we hear the creaking of water-wheels, and see the patient oxen or horses, as they go back and forward drawing up or letting down the buckets which bring the water used to irrigate the land. Signs of cultivation appear, and here and there in the early morning we see the ploughman on his way to the fields, carrying a primitive ploughshare over his shoulder, with which he is going to cut up the dry but fertile soil. Date-palms fringe the river-banks, and these become date-groves as we near Baghdad. The gray-green fronds quiver in the hot air, and all the luxuriant undergrowth of vines, cucumbers, melons, pomegranates, and fig-trees makes a veritable fairyland of tender green, through which the golden rays of the tropic sun shed a softened and life-giving heat. Here and there are orange-groves which fill the air with fragrance in the spring, and present a picture of vivid colour in the autumn, when the golden fruit burns through the brilliant green of the leaves.

At last, on turning a bend of the river, Baghdad, the ancient City of the Caliphs, the home of Eastern legend and romance, rises suddenly into view. It is in the early evening that we first see it, and the golden domes and minarets flash and gleam as they catch the slanting rays of the setting sun. It is a city of the plains, and stretches out far on either side of the river, to stop abruptly on the empty spaces of the desert. Its flat roofs seem almost to meet, so closely are the houses built; and above them tower palms and olives, cupolas and minarets, with a blue stretch of cloudless heaven overarching all. The town is built on both banks of the river, and the two parts are connected by the famous bridge of boats, which gives with the current and so withstands the overwhelming force of the river when in spate. On the left bank is the more modern part of the town. A quarter of a mile below the city itself we pass the British Residency, an imposing building, which was built some nine years

ago; it is fireproof throughout, and has a little village of official buildings in the compound. Farther on we come to the military barracks, the military hospital, the custom-house, and large municipal storehouses. The river-bank is protected by brickwork, which forms a high wall; but at intervals the line of the wall is broken, and paths or *sherias* lead down to the water's edge. Down these come an almost constant procession of *bheesties*, who drive their donkeys to the river to replenish the greasy goatskins in which they carry water to those inhabitants of the town who are too far from the river to go for it themselves. *Dhobies*, or washermen, stand ankle-deep in the water, beating the clothes against wooden planks or hammering them with huge stones; and women drag their trailing skirts in the river as they stoop to fill their water-pitchers. As the steamer casts anchor it is at once surrounded by a swarm of *gouffahs* or coracles, the native boats, which are still built to the pattern of the 'basket' in which Moses was laid when hidden among the bulrushes. They are circular in shape, and are made of closely woven reeds, plastered inside and out with bitumen. The *gouffahgee* propels his boat by means of a short, broad oar, with which he hastily sculls now on one side of the boat, now on the other, as the current tends to make it spin round. The natives crowd into these *gouffahs* in such numbers that it is not an uncommon thing to see one overturned and the passengers sent spinning into the water. However, they can all swim like fish, and either clamber back into the *gouffah* or swim ashore, seeming none the worse for their experience, and do not lose their temper over it.

Gradually the passengers disperse, the shouting dies away, and as night falls the winches cease to whirl, and only the distant sounds of the city are heard. The smoke of hundreds of fires has risen to heaven, and the acrid smell lingers on the air. The bark of a pariah dog, the distant yelp of a wandering jackal, the shout of a night-watchman, these are the only sounds which break the stillness as night draws her gray curtain, and the city becomes a city of sleep.

THE KINGFISHERS.

THAT sudden cry I know. Oh, moment rare!
 Swift as a fancy in a gorgeous dream
 Two azure-emerald arrows skim the stream,
 This way and that threading the sunlit air.
 I hold my breath as if a prince had passed.
 'Tis well, 'tis well, in democratic days,
 To see earth's old nobility ablaze,
 By not a breath of envy overcast.
 Here with your splendour shy and princely dress,
 Your crystal larder and your silvery food,
 Your green pavilions high where none intrude,
 Your whispering groves with sedgy pennons gay,
 Long may ye reign, ye halcyons, and possess
 All that from human kings hath passed away.

Chambers's Journal

SEVENTH SERIES

TAHITI.

IN view of the prominence which this island in the far Pacific has obtained through the shelling of its capital, Papeete, by the German cruisers *Gneisenau* and *Scharnhorst*, a few first-hand impressions from one who knows and loves this exquisite jewel of the South Seas may be of interest to those who have not had the good fortune to see for themselves.

France is the fortunate possessor of the Society Islands, of which Tahiti is the principal island, and it would be impossible to find in all the wide South Seas anything more charming, or having a greater wealth of wondrous beauty, than this 'pearl of the Pacific.' The town of Papeete lies nestling in thick woods of luxuriant scarlet-flowered trees, like a vision from fairyland, and, seen from the sea, it is a picture not soon to be forgotten. Opposite the town, perched on a small island, is the quaintest little lazaretto which the world has to show, so beautiful as to appear unreal, with its white walls gleaming in the tropical sunlight, enshrouded by palms, and all around the blue Pacific breaking with a low, long-drawn-out murmur which only the coral isles of the South Seas can give forth. One forgets for a while, in gazing upon such a scene, that one is an inhabitant of this terrestrial sphere, and it is only on getting back to earth that one asks one's self what a paradise like this wants a lazaretto for, because one thing is certain—it is rarely used in such a capacity. The climate is good, and though the temperature is high, it is pleasant on account of its equability, and people live to considerably beyond the allotted span; but here, as in most countries, longevity depends largely on temperate living.

The hottest month of the year is January, when the maximum day temperature in the shade seldom touches ninety degrees; and the coolest month is June, when eighty degrees is about what one may expect. It is a fact that Europeans are quite immune from the diseases which afflict them in other tropical lands, which is a feather in the climatic cap of Tahiti. Although there is no regular rainy season, the island does not suffer from droughts; but experience proves that December and January are the wettest months. Night temperature varies between sixty and eighty degrees approximately, according to the season.

The island is of distinctly volcanic formation,

No. 237.—VOL. V.

enclosed by a beautiful coral reef of some thirty miles in circumference; in which connection it is interesting to know that passages through the reef are made by the many small fresh-water streams which prevent the coral insect from building. Darting in and out from under the reef one can see swarms of curious fish, many of the most startlingly vivid hues, among which is to be seen that maritime curiosity the ribbon-fish, for all the world like a yard of gaudy-coloured ribbon waving in the clear water.

Inland, the island is mountainous and grandly impressive, the double-peaked Orohena, the highest of the range, nearly eight thousand feet, being so precipitous that no one has yet succeeded in scaling it. Nature produces a superabundance of tropical fruits and products; among the latter vanilla holds first place, and there are some fine plantations to be seen in the neighbourhood of Papeete. The Sunday morning market at Papeete is an interesting scene, and the early riser is well repaid in what he sees there; for the natives are so happy, and laugh, sing, and talk in their sweet Tahitian tongue while selling and buying goes on apace, so different from our Western ways! The stalls groan under their loads of fruit, flowers, fish, meat, &c., and the hot pancakes wrapped in great green leaves and the joints of bamboo filled with native sauces find ready and appreciative purchasers. The market-place is the axis around which Papeetean life revolves, and after sunset all sorts and conditions of men and women—Tahitians, French, British, Americans, Chinese—are to be seen walking and talking in the stillness of the tropical evening.

Papeete itself, as is to be expected, presents decided contrasts, although the French character predominates, and it might well be called the Paris of the Pacific, with its well-kept and pretty boulevards and other distinctive French features. The natives are a most interesting race, and up to the present are less spoiled by contact with civilised life than those of other Pacific islands; although it is to be feared that, as Tahiti has become an important calling-place in the direct route between Australasia and western America, the Tahitians will deteriorate to the extent of losing some of their charm, as experience has shown that the brown-skinned peoples of the islands do not improve when the ways and manners of Western civilisation are thrust upon them.

[All Rights Reserved.]

JUNE 12, 1915.

It seems to be conclusively proved that Tahiti in far-back ages formed part of what is now a submerged continent, and proof is given of this in the fact that the derivation of the word Tahiti, in the Maori language, is literally 'transplanted from the East,' and one is able to deduce from this that the Tahitians had their origin there, the general opinion being that Malaysia was probably the part from which they came.

The Tahitians, like the majority of South Sea Islanders, are sweet singers, and their singing-parties—or *himenes*, as they term them—amply repay the listener in the treat they afford. An experience which should not be missed is a visit to the forenoon service in the little white church on the outskirts of Papeete, built as near to the

beach as safety permits. There one can listen to the sweet harmonious singing of the natives; and at the same time the break of the sea on the reef, and the continuous rustling and soothing effect of the waving palms, lend an atmosphere which seems not of this earth. The windows and doors of the church are all wide open, and the worshipper's eyes can wander at sweet will from the preacher, or the wonderfully picturesque, brown-skinned, large-eyed, and handsome Tahitians in the pews—all dressed in white, the girls with scarlet flowers in their dark hair—to the far stretch of blue sea. Above is the eternal vault of heaven (so blue in fair Tahiti), and, all around, the wondrous tropical vegetation. It is a picture, once seen, never forgotten.

THE BRIGHT EYES OF DANGER.

CHAPTER XXIX.—CAPTAIN ANTHONY BRANDER.

MACDONELL bent over me. 'This comes of meddling, Layton!' he said, and deliberately wiped his blade on the grass. 'I liked ye, in a way, though ye could never see an inch beyond your nose; but ye stood in my way, and would take no warning. There was only one end to it!—And now, my dear cousin, it is time we took the road. Our last *tête-à-tête* was cut short. But I fancy Mr Layton's meddling days are done.'

Unable to speak or move, I felt Charlotte's hand clasp mine. It was roughly snatched away; there was a stifled cry, and I was alone, in the blackest moment of my life. A merciful oblivion shut out the sky. This was the end, I thought, until I awoke to find—the miracle of it!—my Charlotte's wet cheek close to mine, her arms around me, and her voice saying over and over again between her tearing sobs, 'You shall not die, Edmund!'

In the imminence of death, never had life been half so sweet. I had much to say, and little time, as I thought, to say it in. I summoned all my strength, and told her, 'I love you, my dear.'

'And I you, my Edmund! You shall not die. Philip has gone. Come! Can you stand? We have a chance!'

She helped me to stagger to my feet. The chaise was half off the road; the driver nowhere to be seen; the horses cropping the grass contentedly. Leaning on her, I made a great effort, reached the chaise, and half clambered, half fell forward on to the box. Next moment Charlotte was beside me, the reins in her hands, lashing the startled horses into a gallop on the moonlit road to The Garth. . . .

Bertrand met us at the door of the house. 'Dieu!' said he, as he looked at the steaming horses. 'You travel hastily. What has happened?'

'Charlotte is safe. . . . I am knifed.' I contrived to get the words out, reeling where I stood. I remember nothing more until I came to myself in bed, Bertrand standing beside me.

'A near shave! I have a greater regard for *Virgil* than ever! See!'

He held up the book toward me. The edge of the leaves and the cover of the book were crimson. The knife had gone clean through the book. I had slipped it into my pocket when I set out for Holyrood; and but for its honest binding I should have been lying stark on the highway, and Charlotte kidnapped. The thought chilled me.

'She is safe?' I asked, in a very thin and far-away voice.

'Safe and sound, Edmund. She has told me.' He took my hand.

'I love her.'

'And she loves you.'

'It is wonderful!'

He laughed. 'Just what she said. You lovers have not much of originality. But you must not speak, and when you have slept I shall tell you my great news. I think we have Cousin Philip in a cleft stick. You must lie still. I shall send to the "White Horse" for your belongings. Your only clothes are these.' He pointed to my finery that lay on a couch in a horribly suggestive blood-stained huddle. 'You will ruffle it no more in that plumage.'

Indeed, I must have lost enough blood for two men, for I was scarce able to lift a hand from the coverlet.

What had happened after Philip had knifed me, I learned, was this. He made no concealment from Charlotte that he intended to carry her off; but his plans must have miscarried, for the fellow whom I had knocked senseless had no sooner recovered than he and Philip had a hurried whispered exchange of a few words, and

the two made off without a look behind them, and dived into the wood. The thing puzzled me, and it was long before I discovered the cause of their alarm and sudden flight.

Bertrand's news was that he had high hopes of getting from Glenira a clue to the *cache* of the French money. His mind was so darkened that he rarely uttered a word; but, sitting beside him one night, Bertrand heard the blind man talk in his sleep. 'The money is his Majesty's,' he called in a loud, clear voice; 'if a man moves a yard I'll shoot him like a dog! Take my last word on it. The ship must be sailed, too, or you follow the master.'

Bertrand listened breathlessly; but after repeating that the money was his Majesty's, Glenira awoke. Bertrand spoke to him, and, to his great joy, the blind man appeared to recognise his voice, called to him by name, and when he took his hand, stroked it as he would a child's, and ran his hands over his face.

'Bertrand, it is dark—dark. Where am I?' and he fell into a passion of tears, dreadful to see in one who was once a great, strong, resolute man. When the fit was over Bertrand tried to make him understand his situation, but failed.

'He listened, pacing the room and repeating my words after me, though without understanding; but his mind is stirring. He walks up and down the room constantly, and his look and carriage improve. The surgeon was here in the afternoon, and saw a marvellous change; and just before you arrived he said in a clear, deliberate voice, "Morven—the Fountain Reef—above high-water."'

I pulled my *Virgil* from under the pillow, and looked at my writing. 'Some words of the secret paper,' I said. 'I must hasten to get well, and help you to square accounts with Philip of the Left Hand.'

My recovery was slower than I had hoped. I had lost too much blood, and lay for days. When I was able, though weak and dizzy, to crawl out into the blessed sunlight, the October days were shortening. Charlotte nursed me back to life. I see you now, my dear, as I write; hear your voice across the leagues of land and sea; feel your little hand in mine as in those hours under the beeches, where together we dreamed young dreams.

Now I come to an evening that made many dark things clear, and sent Bertrand and myself to the North Sea.

It was near the end of October. He and I had been walking on the sands, and on our return Charlotte met us, two bright spots of colour in her cheeks, her eyes glowing. She had been sitting with Glenira, she told us, when he suddenly sat up and said, 'Charlotte! It is you!' She had tried to soothe him, but he was puzzled. 'I remember—I remember—the wreck, and then—darkness!' he said.

'Tell me the story of the wreck,' she had

asked him, as one would coax a child. 'What happened after Stonehaven?' He showed a sudden interest, and Charlotte had written down as much as she could of what he said. It was easy, for he repeated himself, and spoke slowly and with long pauses. What she had written down was but a few words, but they were of tremendous importance to us:

'After Stonehaven we made for the Moray Firth. There the master tried to lay hands on his Majesty's money. Therefore I shot him, and afterwards quelled some of the others, and compelled them to sail the ship where I wanted. But a great storm came. The ship was driven into shoal water at high tide, and I alone was saved. I came ashore on some wreckage, at night. Next day the wreck was left by the tide near the Fountain Reef, and I went out to her, and hid his Majesty's money in the sand near her.' More he would not, or rather could not, say; but what he had said was enough to hasten our plans.

Bertrand was daily expecting a message from Captain Brander of the *Gannet*. Once the little smuggler came anywhere near Leith Roads we were to board her with all speed, for her cargo would be contraband, and although her master knew 'the ropes,' manifestly he could not run risks through hanging about indefinitely.

There remained the problem of the safety of Charlotte and Glenira. But for her duty and her love for the blind man, I believe my brave-hearted girl would have insisted on going north with us. I thought at first of sending them to my empty house of Darehope among the quiet hills, where they would be safe and assured of loyal service from my excellent steward, but the journey presented difficulties.

Matters hung in the wind for a day, and weighed on me intolerably. To leave her—and for unknown dangers—was bad enough; but to leave her and Glenira at The Garth alone was a thing not to be considered. Heaven bless all good friends! The matter was straightened out in an hour by the aid of Lady Jean Hewat, the outspoken dowager of the snuff-box, whom I had met at the ball at Holyrood House. Charlotte went to her, and made her a confidante, telling her the whole story. Lady Jean was a fierce old Jacobite, under her brusque speech and redoubtable visage concealing a lode of human kindness. She had known Glenira long ago, and I am sure that our strange and stormy courtship kindled her old heart. 'True love,' quoth she to my Charlotte, 'disna run smooth, so they say; but ye've had enough o' rough roads, my dear! Poor Glenira and you shall come to me till this ploy i' the North is over, for well or ill!'

So it came about that in the early gloaming of a November day Glenira and Charlotte, escorted by a kinsman and some retainers of Lady Jean, drove off to her house near the Leader Water, and for the first time I tasted

the bitterness of a good-bye. Few words passed between my betrothed and myself; speech was impossible. I rode a part of the way beside her. 'You must go, Edmund; I would not have it otherwise,' she said at our last farewell. So we parted, and I rode back in the darkening, sorrowful, but with her words of duty and courage in my heart, and resolved for what the future might hold.

We closed The Garth; and Bertrand and I, dressed in plain rough clothes, put up at the Baltic Inn on Leith Shore, where we saw many men of the sea and heard strange tongues. The inn was an exchange for the frequenters of the port; and we were not a day there when Bertrand, who had been down among the ships, came back, much to my joy, with Anthony Brander himself, the master of the *Gannet*.

The three of us went to my room. The captain was a man of forty-five or near it, his face and hands, after thirty years of wind, sun, and rain, of the colour of peat. He was short and broad, and had lost an eye long ago in a brush with the preventive men on the south coast. The remaining one was as alert as a bird's.

'As I was saying to monsher, the business is as easy as kiss-my-hand,' said he. 'I'm a Morayshire man; I went as ship's boy out o' Garmouth langsyne, and I ken the Firth better than my Catechism.' He took a greasy chart from his pocket and unrolled it. 'I've run more "crops" o' brandy atween France and the nor'-east than any man alive.' He peered over the chart and put a big index-finger on it. 'There's west o' the Firth, and there's Morven, and Morven I tak' to be the cone on your bit paper. As for a Fountain Reef, I've never heard o't. Looks like a made-up name. But about here'—again the big brown finger stabbed the chart—'I reckon we'll get news o', if we dinna find, your wreck. I can come close inshore at high-water. There's ten feet o' water there. I've run some stuff no' twa mile awa' on this very coast. It's plain sailing; barring revenue cutters and nor'-easters, we'll be in Spey Bay in three days.'

'The sooner the better, captain,' said Bertrand, his eyes alight. 'Now, *les affaires sont les affaires*. About what profit do you hope for out of this run?'

'Giff-gaff mak's guid friends! I've got a good cargo o' brandy and lace. I've a quarter share

o' profits and a matter o' twenty pounds for the hire o' the buckkar. I'll make seventy, maybe eighty, pounds this trip, if all goes well.'

'We add fifty guineas to that, and if we find what we are looking for you shall have a couple of hundred to yourself.'

He looked up, his head moving from side to side, his eye like a gimlet veering from Bertrand to me and back again. 'A couple o' hunder! I'm your man. But, sirs, what name can I put to this business?'

'Smuggling, if you like. You smuggle stuff into Scotland. Every one to his own fancy. Ours is to smuggle something out. Captain Brander, when the time comes you shall be told, and be free to land us and cut sail or wait and help us, as you please. What weighs on us, man, is that others may be before us. Haste, haste, and still haste is the very heart of the affair. 'Tis a race, and I know that the *Gannet* can sail like a witch. Is it not so?'

Bertrand struck the exact chord in Anthony's heart, the one that appeals to every man who knows his work; his professional pride was touched, for he was a fine seaman.

'The *Gannet* can show heels to any craft of her size—ay, and a guid mony more.'

He rolled up the chart, and the table got a resounding smack from his big fist.

'If it is a race,' he said, his eye alight, 'I'm your man! Fifty guineas, and a couple o' hunder if you win!'

He shook hands with us on the bargain. I called for rum and a bottle of claret, and in a few minutes everything was arranged.

The *Gannet*, with her contraband, was in hiding in a creek in the Firth, and Anthony told us, with a wink, that the preventive officers on shore duty were 'decent men and friends o' mine.'

We were to meet him near Gullane in East Lothian by six o'clock next morning, ready to start. 'I maun hasten back. I have a sail-boat waiting for me, and I'll be off, for I maun see—no' that it's likely—that the crew are a' sober, an' everything shipshape for the morn.'

He drained his glass of raw rum without a blink, and the three of us went out into the dusk to the head of Quality Street, where he left us to find his boat at the harbour.

THE SNAKES OF NATAL

By R. T. PATERSON.

IT is to be presumed that had St Patrick been able to include Natal in the scheme of his itinerary, the chapter on the snakes of that member of the South African Union would have rivalled in brevity the famous one dealing with Eden's curse as affecting the 'distressful country.'

To show that the garden of the subcontinent is not so blessed is the object of these few lines. There, in the lush tropical growth, the reptile order flourishes abundantly, and the widely branched snake family is represented by at least seven species.

Where all are deadly it is not easy to apportion pride of place, but it is generally conceded that this baleful prominence belongs to the black mamba. This terrible snake, which often attains a length of over six feet, shares with the hamadryad of British Guiana the reputation of chasing man, even although quite unprovoked. It is on record that, on one occasion at least, a horseman at full gallop was pursued for a considerable distance by a large reptile of this species. Death from its bite usually takes place in about twenty minutes, and the virulence of its poison may be realised when it is stated that an English officer, while walking through the bush in Zululand, was bitten right through his puttees by a black mamba, and died in dreadful agony, despite all efforts to save him.

The green mamba, or boom-slang, adopts different tactics, as indeed its Dutch name suggests. This species frequents trees, and, suspended from the branches, strikes at the passer-by. Its bite is almost as fatal as that of the black variety. It has an uncomfortable habit of taking up its abode among the rafters of a house; but so long as it confines its attentions to rats and mice its presence is not considered of much consequence.

The yellow cobra does not reach the size of the foregoing, three or four feet being its limit, but it is quite as venomous; and it is characteristic that it will attack with astonishing ferocity any one coming between it and its hole. This species endeavours, whenever possible, to render its opponents *hors de combat* by spitting venom into the eyes, thus producing at least temporary blindness, accompanied by maddening pain.

Perhaps the most loathsome of the snakes of Natal is the dreaded puff-adder. This bloated, greenish-brown creature is seldom longer than three and a half feet, but makes up for that in girth, being often as thick as a man's wrist. Death from its bite is terribly swift, as it has been known to supervene in a quarter of an hour. When angered, and before it strikes, the puff-adder emits a loud *puff-f-f*!—hence its name. A peculiarity of this snake is that it is most dangerous if approached from the rear, as it can throw itself violently backward upon its victim, and strike with its long fangs as it alights. One, to the writer's knowledge, when overtaken on the road, threw itself clear over the off-wheel of a dog-cart in an endeavour to strike at the driver!

The partiality—almost amounting to a passion—of snakes for milk is well known, and the facts concerning the following case in point are vouched for. The output of a cow in South Africa is appraised at the number of quart bottles it can fill per day, and the animal is referred to as a twelve-bottle or sixteen-bottle yielder, and so on, as the case may be. A farmer in the Transvaal had a specially prolific milker in his herd; and, being very proud of it, he zealously noted its performances. Suddenly, although to all appearance in its usual fine condition, this

cow began to show a marked falling off in its yield of milk, and for some time perplexity obsessed the farmer's mind. One night, when the moon was shining as only the African moon can shine, it occurred to him to go out and see if his disappointing favourite was grazing properly. The mystery was quickly solved. Pulling himself up in time, what was his horror to observe the cow, chewing the cud, it is true, but otherwise rigidly immovable, while round one of its hind-legs was coiled a huge puff-adder busily gorging itself direct from the udder! There was nothing for it but to wait until his snakeship was satisfied; but if, in the subsequent proceedings, that puff-adder had time to see stars, it was certainly another kind of Milky Way.

The night-adder, as its name implies, is most in evidence after sundown, and woe to the pedestrian who tramples on what seems a branch of a tree stretched across the path! Sharp fangs will swiftly be embedded in shin or ankle, and unless help is as efficient as it is speedy there is little hope of recovery.

The ring-hals, a blackish snake, whose neck is adorned with one or two white rings, is generally found near water, preying on the frogs that it keeps so lively that they have no time for preying of any kind! This is another species which invades houses on occasion; and while recovery from its bite is possible if taken in time, drastic measures are certainly wise treatment.

The schaap-sticker—so called from the belief that it attacks sheep—is a short, silvery snake about the thickness of a man's finger, and is beautifully marked. That it is venomous is an accepted opinion; but, as compared with the others mentioned, it occupies a humble position in this respect.

The hoop and whip snakes are the most attenuated of their order; and, while the origin of the latter's name is obvious, as regards the former one must accept with the proverbial 'grain' the statement that it is so named from its habit of taking its tail in its mouth and trundling downhill!

The pythons—which of course are not venomous, but depend for sustenance and defence on their great constricting powers—are to be found in the rocky fastnesses bordering the rivers, where specimens measuring over twenty feet have been discovered. Their gentle methods are analogous to those of the boa-constrictor of other lands, and once they have obtained a purchase with their tails round tree-stump or root their pressing attentions are something to be avoided—if possible!

It will be admitted that, for a tropical country, Natal has at least her share of the alleged lineal descendant of the primal curse. Nevertheless, one records with satisfaction that the annual death-roll from snake-bite compares very favourably with the grim distinction of the land of the cobra da capello and the krait.

BETTY GRIER.

CHAPTER II.

NATHAN HEBRON is Betty Grier's husband ; or, rather, I should say, Betty Grier is Nathan Hebron's wife. This may possibly be considered a distinction without a difference ; but when you have been introduced into the inner courts of these two worthies' acquaintance, you will somehow feel that the latter assertion is the more correct and appropriate.

Nathan is a tall, loosely built man, with a fresh, healthy complexion, two mild blue eyes, and a slightly hanging under-lip. For some considerable time he has been employed on what is locally known as 'the Duke's wark,' but in what particular capacity I cannot very well say. When first I knew him he was one of Archie Maxwell's employés in the nursery, and when our garden required professional attention it was always Nathan who was sent to do the necessary digging and titivating.

Three or maybe four times a year he spent a few days at a stretch among our vegetables and fruit-trees ; and I remember with what eager interest I used to anticipate his visits, for, though he was a man of few words, and from a story-telling standpoint had little to commend him to a boy, he carried a quiet, companionable atmosphere with him, and, as a more dominating recommendation, he was the possessor of one of the sharpest and most formidable-looking 'gullies' I had ever seen.

How I envied him at pruning-time, when, with his easy, indifferent gait, he moved about among our rose-bushes with his keen hooked blade, and in one deft cut lopped off twigs and branches as if they were potato-suckers. Sometimes at my request he would lay his long gleaming weapon in the palm of my little hand, but he usually retained possession of it by a slight finger-and-thumb grip ; and I always heaved a sigh of satisfaction, not unmixed with relief, when he lifted it, closed the blade with a click, and returned it to his sleeved-vest pocket.

When Nathan was thus employed in our garden he always had dinner with Betty in the kitchen. Betty's forte in the culinary department was broth-making, and my mother used to say, with a smile, that when Nathan was her guest Betty always put her best foot foremost. Betty, with a blushing cheek, mildly repudiated the charge ; and once, when in my presence my mother told Nathan of this, he blushed too, and to hide his confusion bent his head and tightened the trousers-straps under his knees.

Broth, with boiled beef and potatoes to follow, as a rule constituted Betty's menu on these occasions, and there was always a 'word' between them when the beef was served, as Nathan insisted on retaining his soup-plate

from which to eat it, and to this Betty strenuously objected. She declared 'it wasna the thing ;' but he retorted that 'that was possible, but it was aye ae plate less to wash, and he liked the broth brae wi' the barley piles in it, as it moistened the tatties.'

Immediately after his repast he retired to the stick-house ; and there, seated on the chopping-log, he smoked his pipe in silence and meditation till the Auld Kirk clock chimed the hour of one.

Betty was no vocalist ; but on those days when Nathan worked in our garden she indulged much in what, out of gallantry towards her, I may call sweet sounds. She had only one song—it is her sole musical possession still—and during the years I spent far from the friends and scenes of my boyhood, as often as I heard the familiar strains of 'The Farmer's Boy,' Betty's timmer rendering came homely-like to my ear, and I saw a print-gowned, pensive-faced young woman subjecting newly washed delf to a vigorous rubbing, and watching through the kitchen window a big eident gardener turning over with gleaming spade the rich loamy garden soil.

My mind harks back on these little scraps of memory as I sit here in my bedroom listening to Betty's ceaseless prattle and Nathan's monosyllabic responses. He is the same gaunt, silent Nathan, only much grayer, and his short beard, fringe-like, now covers a chin which once was clean-shaven and ruddy. He still wears leather straps on his work-a-day trousers ; and, though I haven't seen it, I am confident the keen-bladed gully is somewhere about the recesses of his ample pockets. And he is Betty's 'man,' and Betty is his busy, careful wife, and as such they sit together in that kitchen taking their meals off that self-same table, and looking out on that same garden which long ago was the scene of his periodical labours.

Sometimes of a morning I waken about five o'clock, and even thus early I hear Betty downstairs making preparations for Nathan's breakfast. I know full well from the different sounds how she is employed ; and, in rotation, I note the 'ripein' oot' of the previous evening's fire, the filling of the kettle from the kitchen tap, the opening and closing of the corner cupboard door, and the clatter of cups, plates, and cutlery. Then the merry song of the boiling kettle, the clink of the frying-pan on the crooks, the sizzling of frying ham, the splutter of gravy-steeped eggs, and the drawing forward of white, well-scrubbed kitchen chairs.

I know, too, when Nathan has finished his meal, as he always puts his empty cup and saucer with a 'clank' into his bread-plate, gives

a hard throat 'hoast,' backs his chair away from the table, and says 'Imphm! just so!' very contentedly and cheerily. Soon the appetising aroma of fried ham and eggs, which has been all the time in my nostrils, gives place to the more pungent smell of strong brown twist smoked through a clean clay pipe. This, however, is merely a whiff in passing, because Nathan 'stands not upon the order of his going,' and in clean-smelling corduroys and a cloud of fragrant pipe-reek he goes out into the early morning sunshine, closing the door with a lingering, hesitating turn of the handle which, though gentle, seems loud and grating in the hush of the dawning day.

How I wish I could walk with him these beautiful fresh sunny mornings along the Carronbrig road! I follow him, alas! in imagination only; and as he leaves the empty echoing street and passes under the leafy canopy of the Cundy Wood I feel the pure caller air on my brow, I listen to the hum of the bees in the limes, the sportive chatter of the sparrows in the bushes, the rich, full-throated melody of the blackbird and mavis from the wooded recesses of the Gillfoot—each feathered minstrel piping his own song in his own way, and all in unison singing their pæans of praise in their leafy, sun-kissed bowers. Gossamer-webs, silvered with countless pearls of dew, stretch their glistening threads from leaf to leaf, and cover the shady side of the hawthorn hedgerows as with a gray-meshed silken veil. From rank, dewy grass humble blue-bells raise their heads, and nod good-morning to white and blue-red stately foxgloves standing sentinel o'er scarred red-earth banks and tangled bramble thickets. Lowing cows, knee-deep in meadow grass and buttercups, with swishing tails and pawing forelegs, impatiently await the opening gate. And over all, on field and wood and hill and dale, lie the glorious rays of God's own sunshine, diffusing warmth and gladness, and filling nature anew with pulsing life.

The road lies broad and white before me, and I see Nathan's tall, gaunt figure passing Longmire Mains, and I know the smell of the sweet American gean is in his nostrils, and his gardener's eye is on the fronded hart's-tongue ferns which here and there peep from the crevices of the lichen-covered dike; past Meadow Bank, where the purple bloom still crowns the spiked leaf branch of the rhododendron; on between the hollies and silver birches at Dabton; through the sleepy village of Carronbrig, where he is joined by moleskin-clad fellow-workers.

Staff in hand and pipe in mouth, at that regulation pace which is well known as 'the Duke's step,' each wends his way through the green turf holm, across the Nith by the stepping-stones, under the shadow of the ruin-crowned Tibbers mound. As they near the scene of their daily darg, tobacco 'dottles' are paper-padded and made secure, pipes are deposited

in sleeved-vest pockets, and where the white iron wicket clicks and admits them to the low-lying stretch of fairy garden plots and multi-coloured perfumed bowers I take my leave of them. God grant I may soon be able to see with the living eye, and feel with the nature-loving heart, the beauties and joys which now in imagination only are mine!

By degrees, and at rare intervals, Betty has relieved her mind to me regarding Nathan. When I say 'relieved her mind,' I do not imply that there is anything in Nathan's conduct or any remissness in his mode of living which burdens Betty's thoughts. Far from it. Nathan is the best of husbands—appreciative, kind, steady, and considerate. His wages—to the uttermost farthing—are regularly given up to Betty's safe keeping. All his spare hours are devoted to the large garden, whose produce from January till December makes Betty's daily dinner of the bienest. Her slightest wish is a command which he obeys with cheerfulness and alacrity, and the quiet and composure of his presence is, I know, her secret pride and mainstay. Yet she seems to be ever apologising for his being about, and in speaking of him to me she invariably refers to him as 'Nathan, puir falla,' with just the slightest suggestion of commiseration in her tone.

I wonder why this should be, and it is beginning to dawn upon me that Betty somehow imagines—wrongly, needless to say—that I look upon him as an intruder, something foreign to the element of our home-life of long ago; and, stranger still, I am conscious of that feeling in Nathan also. Though I have been resident here for over two weeks, and though he has cried upstairs to me every evening, he has only twice been in my room; and on both occasions he stood awkwardly at the door, holding on by the handle, and answering my questions with his head turned toward the landing. During the past week I have managed to limp my way downstairs, and on passing through the kitchen have stayed my steps to ca' the crack with him. But 'Yes, sir,' 'No, sir,' 'Ay, ay; imphm!' have so far been the sum-total of his contribution to the conversation. Some day, however, I know Nathan will thaw; some day soon they will both know the high esteem in which I hold him. In due season he will rid himself of his backwardness and shyness, and I shall be glad, for his honest blue eye and his pleasing serenity appeal to me, and I feel I want a friend like Nathan Hebron.

To-night, after she had cleared away the remains of my homely supper, Betty sat down with her knitting at my little attic window. I have two pots of flowering musk and a lovely pelargonium in full bloom on my sill, and under pretence of procuring Nathan's advice as to their culture and well-being I inquired of Betty if she would ask him to come upstairs.

'Most certainly, Maister Weelum,' said she, with a pleasant nod; and she went out, returning a minute later with Nathan in her wake. I know he had been sitting in his easy-chair smoking in silence, with his stem-bonnet on and his shirt-sleeves rolled up, inactive, yet alert and ready to fulfil any of Betty's little behests; but at Betty's summons he had hastily donned a coat, and his head was bare.

After leisurely examining my plants and drawing out a few disjointed directions, he turned to go downstairs; but I motioned him to a seat, and, rather reluctantly, I thought, he sat down. I urged him to join me in a smoke, and offered him a fill of my Edinburgh mixture; but he declined my pouch; and, taking out a deerskin spleuchan, he nipped a full inch of brown twist, teased it, rolled it in the palm of his rough, horny hand, and meditatively filled the bowl of his clay cutty.

Betty noticed my little act of civility; but she plied her needles in silence till Nathan had struck a light and begun smoking.

'Ay, Maister Weelum,' she said, as Nathan fitted the glowing bowl of his pipe with a perforated metal cover, 'thae fancy ready-cut tobaccos are no' much in the line o' oor Nathan, puir falla.'

'Is that so? Well, every man to his own taste; but, Betty, excuse my asking so personal a question, why do you always refer to your good-man here as "Nathan, puir falla"?'

Nathan looked surprisedly from me to Betty, and, after fumbling with his match-box, struck another light when there was no necessity to do so; while Betty laid out her knitting on the table and thoughtfully pressed it out lengthwise with the palm of her open hand.

'When ye mention it, noo, I daursay I div say "puir falla,"' she answered; 'but, though I say that, I dinna mean it in any temporal sense, Maister Weelum. So far as this world is concerned, I've got the very best man that ever lived; but'—and she looked at Nathan as if in doubt how to proceed.

Nathan blew pipe-reek most vigorously; then he turned round to me with a faint smile on his sober face, and he actually winked. 'She's—she's sterted again, Maister Weelum,' he said with a side-nod toward Betty.

'Started what, Nathan?'

'Oh, the auld subject—imphm!'

'Ay,' chimed in Betty, now sure of her opening, 'it's an auld subject, but it's ever a new yin, a' the same. "'Tis old, yet ever new," as the hymn-book has it. Ay, an' that *is* true. As I said before, Maister Weelum, I've nae concern regairdin' Nathan's welfare in this world. We're promised only bread an' water, an' look hoo often he gets tea an' chops, an' on what we ha'e saved there's every chance o' that diet bein' continued as lang as he has teeth to chew wi'. But what o' the next world? As Tammas

Fraser since said when he was takin' the Book, "Ah, that's where the rub comes in!"' and she shook her head dolefully as much as to say, 'Nathan, you're a gone corbie!'

I looked from husband to wife in blank astonishment, not knowing what to say. I had always looked upon Betty as a deeply religious woman, a true disciple of the Great Master, but partaking more of the loving John than the assertive Peter; and, often as I had heard her say a word in season, I could not remember having listened to her expressing so pointedly her fears and convictions.

She interpreted my thoughts aright; and after Nathan had, without necessity, sparked another match, and almost succeeded in turning toward us the full length and breadth of his long tankard back, she resumed.

'Your mother was a guid woman, Maister Weelum, an' I ken that often, often, you were the burden o' her prayers. I never talked much on this subject to you, kennin' that you were her ain particular chairge, an' that her prayers, without my interference, wad be answered. But it's different in the case o' Nathan here. He belongs to me, an' me to him. My calling an' election's sure, an' I juist canna bide the thocht o' us bein' separated at the lang hinner-en'. It's no' that he's a bad man—far from it. Or it's no' that he's careless. I gi'e him credit for bein' concerned in his ain wey; but he juist saunters on through life, trustin' that things will somewey work oot a' richt, an' lettin' the want, if there's ony, come in at the wab's end. Ay, an' for a man like him, that's sae fond o' flo'ers an' dogs an' ither folks' weans, it simply passes my comprehension hoo it is that he's sae indifferent to the greatest o' a' love an' the things that so closely concern his immortal soul's salvation. Nae wonder I say, "Nathan, puir falla."'

Notwithstanding the gravity of the charge she had laid at Nathan's door, I felt relieved to know that my surmises regarding the cause of his attitude toward me were unfounded; and, with a note of encouragement in my voice, I hinted to Betty that, after all, it was possible she was unnecessarily worrying herself, as with two advocates like her and my mother it would surely be well with both Nathan and me.

'Ah, Maister Weelum,' she said impressively, 'I ken fine that the prayers o' the just availeth much; but aye bear in mind—Nathan, are ye listenin'?—Ay—weel, bear in mind that every herrin' maun hing by its ain heid. Mind that, the twae o' ye noo.'

This direct personal appeal rather discomposed me, and I didn't know what to say. As for Nathan, he rose slowly from his chair, and, turning round, he solemnly winked to me again. That wink somehow sealed a compact between us. It placed us on a common platform, and established a feeling of camaraderie which it would be hard for me to define.

'Ay, Betty,' he said, as he raised himself to his full height, 'you're a wonderfu' woman—a wonderfu' woman!' and he yawned audibly; 'an' when it comes to gab wark on sic a subject as ye've ta'en in haun', John Clerk the colporteur canna haud a cannel to ye. When ye stert on me like this I aye gi'e ye plenty o' rope, an' I never gi'e it a tug; but ye've gi'en me a gey tatterin' afore Maister Weelum here, an' I wad just like to put in my yelp noo.'

Betty gave him a surprised look, and I nodded and smiled encouragingly toward him.

'I don't misdoot,' he continued, after he had loosened his cravat at his throat, 'that there's some truth in a few o' your remarks; but, dod, lass, dinna forget that I'm tryin' my best.'

'In what wey, Nathan?' she promptly asked.

'Well, let me consider noo. Ay, I don't think I ha'e missed a day at the kirk since we were mairret. That's ae thing, onywey. Then we tak' the Beuk regularly; an' forby that, Betty,' he said impressively, 'I was five times at the prayer-meetin's wi' ye last year, and'—

'Prayer-meetin's!' said Betty; 'prayer-meetin's!' and she raised her voice. 'Nathan Hebron, I'm astonished ye ha'e the audacity to mention prayer-meetin's to me!'

'Hoo that, Betty?' he gravely asked.

'Hoo that? As if ye didna ken! My word, but that's yin an' a half!—Do you know this, Maister Weelum; I had to stop takin' him to the prayer-meetin's, for he aye fell asleep. The last yin I took him to was at Mrs Kennedy's. Not only did he sleep, but he snored wi' his heid lyin' back an' his face to the ceilin'; an' when he waukened it was in the middle o' a silent prayer, an' he glimmered an' blinked at the gaslicht, an' said he, wi' his een half-shut, "Betty, that's rank wastery burnin' the gas when we're in oor sleeping bed." Ashamed? I was black affronted, Maister Weelum, an' among sae mony earnest folk, too.'

Goodness knows, I hold no brief for Nathan, but I ventured to say on his behalf that, as he had been working in the open all day, and the room was quiet and warm, he was, in a way, to be excused if he unconsciously dovered.

'Ay, that's a' very weel; but I notice he never dovers, as ye ca' it, at an Oddfellows' soiree.'

Nathan had quietly slipped downstairs before

she reached the end of her story, and in his absence she became confidential and communicative.

'I somewey think he means weel, but the road to hell is paved wi' guid intentions. He's maybe the best specimen of the natural man that I ken o'; but, wae's me, that's no' sufficient. The seeds o' carelessness were sown lang before I kenned him; an' tho' I maun alloo he has improved on my haun', I see wee bit touches noo an' than o' the he'rt at enmity which sometimes mak' me despair. For instance, the ither Sabbath-day nae faurer gane, he sat doon after his denner wi' a book, an' he looked neither to left nor richt, but read on and on. "Nathan," says I, "what's the book you're sae intent on?" "Oh, Betty," says he glibly, weel kennin' that I dinna gi'e in wi' orra readin' on the Lord's Day, "I've faun in wi' a splendid book the day. It's caed Baxter's—eh—Baxter's *Saunts' Everlastin' Rest*, an' it's the kind o' readin' I like." "Ay," says I, weel pleased wi' the soond o' the title, "read on at that, Nathan. Baxter's fu' o' rich refreshin' truths. Read slow noo, Nathan, an' tak' it a' in." Weel, he never put it oot o' his haun' till bedtime, except when he was at his tea, an' then he slipped it in his coat-pocket; an' the next day, when he was away at his wark, I cam' on it stappit doon behin' the cushion o' his easy-chair; an' what think ye it was, Maister Weelum? Guess noo what it was.'

'Baxter's *Saunts' Everlasting Rest*, of course,' I said.

'Weel,' said Betty, 'that was printed on the loose covers that had aince been the boards o' the holy volume o' that name; but the paper-covered book that was inside was *The Experiences o' an Edinburgh Detective*, by James MacGovan; an', d'ye ken this, Maister Weelum, I juist sat doon in the middle o' my wark an' grat my he'rt-fill.'

Poor, dear Betty, she wept anew at the remembrance of Nathan's lapse, then rolled her knitting into her apron, and went downstairs into the kitchen. Ten minutes later, when I was having my last pipe for the night, I heard her voice raised in the Beuk, and she was reading, with a point and emphasis which I am sure Nathan could not misunderstand, the story from the Acts of Ananias and his wife Sapphira.

(Continued on page 452.)

THE HUNS AND THE MAN OF GOLD.

By Rev. JOHN ROSS, D.D.

WHEN first China had a separate national existence, the Huns, or their ancestors under one of their various names, crowded her west and northern borders. The Chinese historians concluded that the heaven-given nature of the Huns was that of fighting. They deserved

the title. From the earliest dawn of history the Huns were nomads, occupying great spaces where they could find water and grass, dwelling in tents, and remaining in one locality while water flowed or grass grew for their flocks. Their horses were always famous for size, strength, and

speed. These were constantly used in their inter-tribal wars, or on plundering expeditions against the diligent Chinese farmer. The Emperor Chin, whose kingdom had grown up among them, by agricultural habits gradually acquired a predominating superiority, and finally compelled them to retire westward and northward, and then built the Long Wall for protection against them. When he died, the Han dynasty, whose hands were full in the work of establishing their authority over China, were overwhelmed by the hordes which recrossed the Yellow River and repossessed themselves of the lands in Shensi which their forefathers had occupied from unknown ages. After suffering for scores of years from the brutal incursions of armies which burnt and plundered and murdered, the Emperor Wu, whose reign was long and warlike, was able again to drive them across the river and north of the Wall. These battles were fought on the plains and among the mountains of Shensi and Kansu. In 122 B.C. a large army pursued the Huns into the west of Kansu. That region was then under two Hun princes, both of whom meditated secretly on the advantages of revolt to Han. One slew the other and revolted to Han with the combined army. In his land was seized the man of gold, which had long been an object of worship by the Huns.

The ancestors of the Huns had from time immemorial dwelt among the mountains and in the valleys of rich grass in the provinces now called Shensi and Kansu. There they had always worshipped heaven. In the time of the Chow dynasty they had adopted the worship of

a personified Earth and of their ancestors from the Chinese. They congregated in three great assemblies in the year, when the numerous tribes gathered together at a meeting-place called Lung Cheng, or Dragon City. They worshipped the Lung, or dragon god, as representing heaven. Their chief assembly was in the autumn, when their horses were fat. Then they indulged in ceremonial worship, in feasts, and games. The place for this gathering was in the boundless forests of Dai-lin, in the depths of the Lung Mountains, so called to this day. When worshipping heaven they produced a man of gold which was used to represent heaven. When this image was made history saith not. It was centuries before Buddhism was heard of. The Chin had ultimately succeeded in amalgamating their nomadic neighbours to a considerable extent. Those who insisted on following their old customs and habits were driven farther west. These took with them their man of gold. Six-score years before the Christian era the Han emperor defeated them in their new home, and seized and brought back the man of gold to its former sanctuary, which continued a centre for the worship of heaven. Several centuries thereafter Buddhism entered China, and found a domicile in the capital Changan, now Si-an-fu. It is stated in later books that the gold man became the model after whose fashion Buddhist images were made. From the unsatisfactory description of this gold man it appears to have been the full figure of a man. Buddha is always represented in an attitude of meditation, seated on a lotus flower. The flower is of Indian extraction.

EL CHATO INTERVENES.

PART II.

SOME weeks later we were again seated in front of our dwelling, and on this occasion were discussing the advisability of sending a consignment of silver to the coast.

'Better not delay too long,' said Jim. 'True, we haven't got a great wad of it on hand; but I don't like the idea of that silver being on the premises. Your pug-nosed friend may come down on us any day with his pals, and relieve us of the whole blessed lot.'

'Oh, time enough yet,' I replied. 'Besides, we have nothing to fear from him now; he is straight enough with us, however crooked he may be otherwise.'

'Straight, is it? Yes, he's just about as straight as a dog's hindleg! I tell you I wouldn't trust that ugly joker as far as I could throw a bull by the tail. Look at that Cienfuegos business! We can't have him hanging around here after that. Not only is the man a real bad egg himself, but he will get us into bad odour with the authorities if we keep him too near us.'

'Well, we won't quarrel about the beggar,' I answered with a yawn. 'Come on, old man, it's time we went to roost. I will confess, however, that I should sleep sounder if those confounded bars of silver were safe in the strong-room at the Banco Nacional.'

We both rose, and were about to enter the house, when, 'Hullo!' exclaimed Jim; 'talk about the devil! Here comes one of his chief angels, or I'm badly mistaken.'

Hurrying up the trail in the darkness we could dimly discern the hulking figure of the late fugitive from justice, and in a few minutes Chato himself stood before us, and doffed his sombrero with a polite, '*Buenas-noches, señores!*' as if he had parted from us no later than yesterday.

'What devilment are you up to now?' inquired Jim severely. 'Don't you know that the police are on your track, and that your name is M.U.D. if you are found around these diggings?'

'*Sí, señor,*' replied the big fellow, with an expansive grin. 'They have an ill-will against

me, those dogs, for what reason I know not; but I fear them not, for they cannot catch El Chato. Even now they are carousing at a village inn not five leagues distant from here.'

He seemed to be well informed as to their movements, so we let it go at that.

'But, *señores*,' he continued, 'I have ridden far this day to impart to you news of grave importance. It appears that during my absence these sons of she-asses in the village have been permitting their heads to rattle, and it is said on the other side of the mountains that there is much silver stored in this house. There are many men of evil character in these mountains, and I have learned—no matter by what means—that some of them have planned to attack and rob your camp.'

This was serious indeed; and, although we had always expected that something of the sort would happen sooner or later, the suddenness of the announcement came as rather a shock.

Eagerly we awaited further details, but these were not forthcoming; instead, with the usual '*Con su permiso, señores*,' our visitor lighted the inevitable cigarette and puffed thoughtfully for a few moments.

'Now,' he announced suddenly, rising to his feet, 'we must act, and not talk; for we have to make preparations to receive these rascals in such a manner that they will be glad to seek their holes once more. The *señores* will understand, of course, that I am with them in this affair, for I have eaten of their salt, and must always aid their cause to the death.'

Here, indeed, was a refutation of all Jim's suspicions against him, unmitigated rascal though he was; and I saw that Jim had the grace to appear thoroughly ashamed of his former insinuations. But it was no time for regrets, and we hurriedly proceeded to make preparations for defence. The single door of our adobe dwelling was closed and barricaded, and the open windows piled breast-high with packing-cases filled with loose rock from the mine-dump close at hand; rifles and ammunition were placed in readiness on the floor; and we were prepared for the attack. The watchman of the mill, a man in whom we reposed every confidence, was summoned to keep a lookout, and given strict instructions to rouse us at the first sign of any one approaching the buildings during the night. Jim and I then lay down on our cots to snatch a hurried sleep; but Chato announced his intention of remaining outside, and, wrapped in his tattered old blanket, was soon curled up in a corner of the veranda.

I awoke with a dreadful choking sensation, to find myself struggling in the grasp of two armed men, who had evidently entered over the top of the breastwork at one of the windows; and a tremendous uproar from Jim's corner of the room informed me that he was in a similar predicament.

In my struggles the ruffians had dragged me to the floor, and one evil-smelling brute had a strangle-hold on my throat with both hands, while his companion eagerly sought an opening between our struggling bodies in order to thrust a knife between my ribs. I am not a small man, but they had so nearly succeeded in strangling me before I awoke to a realisation of their attack that my efforts at resistance were practically unavailing.

'Quick, Pedro; despatch the swine with thy knife!' gasped the villain who had me by the throat; and I once more renewed my struggles to interpose his body between the threatening blade and myself. The place seemed filled with armed men; but shooting in such a confined space was out of the question, and my partner and I were gradually being overcome by weight of numbers alone, when a huge figure leaped through a window, and with the deep-throated bellow of an enraged bull charged into the struggling mass of men. Chato—for it was he—had seized a spare piston-rod of our mill-engine lying in a corner of the veranda—a huge steel rod, weighing at least forty pounds—and with this terrible weapon he dealt smashing blows right and left in the press of bodies.

'By Santiago!' he roared; 'begone to your dens, you wolves! To your kennels, you dogs!' and he punctuated each pause with a tremendous sweep of the murderous bar of steel. 'You dare to snarl at El Chato, you whelps!' he menaced, the heavy rod a mere plaything in his powerful hands, and death and destruction in his path. 'Ha! there will be souls in purgatory this night!' he mocked in a terrible voice, as with sickening thuds his weapon descended on the heads of two of the marauders in rapid succession, crumpling in their skulls like egg-shells.

No mortal man could withstand such an onslaught, and the remainder of the villains, utterly panic-stricken at the unexpected attack of this evil spirit of the darkness, and terrified at the destruction wrought by his strange weapon, fled in a disordered rout.

'Hurt anywhere, Jim?' I inquired with anxiety, as we sat up and surveyed the wreck around us.

'Glory be! I saw a good fight before I died!' groaned that irrepressible individual. 'But it's slow music and flowers for me, sure enough. Put a rose in my hand when I breathe my last, friend of my youth!'

'In the meantime the *señor* had better take this in his hand,' spoke up the more practical Chato, as he thrust forward a loaded rifle. 'Those whipped dogs have not yet learned manners, and may require a second lesson.'

The bandits, however, were unwilling to come to grips with us again, and contented themselves with taking up positions amongst the rocks on the hillside, within close range of the house, so that even the appearance of a head at one of our

windows was the signal for a regular fusillade from their rifles.

'With your permission, *señores*, this carrion will feed the buzzards at dawn,' continued Chato, contemptuously indicating the bodies of the two men who had met death at his hands; and, in spite of our protests at thus needlessly exposing himself, he deliberately removed the barricade from the door, carried out the two bodies one at a time, and hurled them down into the *arroyo* below. We covered his progress as well as we could with our rifles. Nevertheless, his appearance in the open was greeted with a hail of bullets; and, although in the darkness the shooting was somewhat inaccurate, the big fellow was twice hit. He made light of his wounds, however, as he joined us, and immediately took up a position at one of the windows.

'Looks as if we were up against it, sure enough,' said Jim, as he took a careful sighting-shot at a puff of smoke on the hillside. 'It's pretty near daylight now, and I guess we can keep those devils off through the day; but they will be sure to rush us to-morrow night in the darkness, and then three of us won't stand much show against that crowd. What licks me,' he continued, 'is how those skunks managed to slip up on us so quietly.'

'That is easily explained, *señor*,' replied Chato. 'That dog of a watchman was a confederate of these men, and towards morning, when he thought I slept, I saw him steal away in the direction of the village. I suspected there was evil afoot, and followed. During my absence those sons of thieves must have come down from the hill above; but it was my good fortune to return in time to be of some assistance, and I think they will remember El Chato.'

'But what happened to the watchman? Where did he go?' we both inquired at this point.

'He is now in hell, *señores*!' was the terse reply; and, in imagination, we could picture his fate at the hands of this giant, utterly merciless because the man had betrayed a trust.

Our rescuer had indeed arrived at an opportune moment; and that we were alive to be sufficiently grateful for our deliverance was due to him alone, as otherwise we should both undoubtedly have been murdered.

'Chato,' said Jim, going up to him with outstretched hand, 'if you will shake hands with

me I shall be proud to take the hand of a real man! I'll stick by you now through thick and thin; and whatever you want, by Ginger! you've only got to ask for it.'

It was evident that the big fellow was painfully embarrassed by our thanks; and, as he would not hear another word on the subject, we determined to await a more favourable opportunity to prove our gratitude in a more tangible form.

Soon afterwards the dawn came stealing over the mountain-tops, miraculously dispersing the bandits, who suddenly abandoned their positions and disappeared into the mountains; and, while Jim and I were endeavouring to restore some semblance of order to our scattered possessions, Chato also mysteriously vanished into space.

'Gee whiz! Goliath has scooted again!' exclaimed Jim, who was the first to notice his absence. 'Must be dodging the vote of thanks business, I guess.'

However, the reason for this double disappearance was soon made apparent by the reappearance of the party of *rurales* on the scene. They explained that they had learned of our plight during the night while at a neighbouring village, and had hastily ridden to the rescue. Had it not been for Chato they would have arrived too late; but, as we had no desire to reveal that individual's whereabouts to these men, who would have shot him on sight, we made no mention of his participation in the affair, and instead led them to believe that we had successfully resisted the attack quite unaided. Fortunately we were enabled to avail ourselves of their services in another direction, and despatched the consignment of silver, the cause of all the trouble, under their escort to the coast.

'What gets my goat,' inelegantly remarked Jim, as we were discussing the whole thing next day, 'is why that big devil took a hand in the deal at all. Those bandits must have been pals of his own, and he could easily have stood out of the game altogether; yet he butts in and plays our hand like a white man. The first time you encountered him he undoubtedly tried to plug you from ambush, and he also knows that I never had very much use for him; still, he risks his own life against big odds to save ours. Never again will I say that I know the breed! They are a strange race, and the longer you mix with 'em the less you understand 'em!'

THE END.

A LOST CONTINENT—ATLANTIS.

MANY people will imagine that in modern times anything in the nature of a lost continent or an unnavigable sea would be the merest fiction originating in the fertile brain of some inventive author worthy of the laurels of Jules Verne. In the latter case, that it is not imagina-

tion, but an indisputable fact, has been fully proved in connection with the treacherous Sargasso Sea, where Columbus and his ships were first held unwilling prisoners for nearly three weeks. A great many other incidents since that time have been forthcoming, almost the latest of which is the case

of the steamer *Thistledor*, plying between the United States and Rio, which was caught by the weed-fields, and was unable to free itself for more than a week. Regarding the former case, there is no absolute proof of the one-time existence of Atlantis, the supposed submerged land in the Atlantic Ocean. It has frequently been adopted by novelists as the scene of submarine exploration and adventure, in which there are the usual search for and discovery of treasure. Dealing as these tales do with a topic little known to the general public, it is regrettable that few writers trouble to give adequate information regarding the continent, and (although perhaps mythical) its position and history. They generally content themselves with describing an ingenious submarine vessel by which their heroes reach the theatre of operations; and, having brought them there after many thrilling adventures, they depict in glowing terms the superb architecture of the buildings that have been met with.

Atlantis is first mentioned by Plato, the great Greek philosopher, in his dialogue *Timæus*, in which he dissertates on the construction of the universe. In this book Atlantis is reputed to be a huge island continent, equal in extent to the Libyan Desert of Africa and Asia Minor combined. Its geographical position was described as somewhere beyond the Pillars of Hercules—that is, Gibraltar and Ceuta—and it is supposed to have included the Azores, Madeira, and the Canaries. The Phœnicians were recorded as having carried on a great trade with it; and when at the zenith of its power Atlantis is stated to have been overwhelmed by a tremendous volcanic disturbance, and completely engulfed in the sea.

Not even the most learned professors of archaeological subjects can, however, vouch for the truth of the report; whilst many are of the opinion that the Phœnicians were in reality driven across the Atlantic to the shores of the New World. Should this be the case, the discovery by Columbus would seem to have been forestalled. The scientific 'dragging' that has been carried on in recent times in the Atlantic Ocean serves to strengthen this theory, for the deep-sea life and vegetation that have been obtained appear to have originated in ages far earlier than those of ancient Greece. Further, we are told by scientists that the British Isles were in prehistoric periods a part of northern Europe, and that land stretched farther westward than the present west coast of Ireland.

There is yet another aspect which has many supporters. It is the belief that the whole idea of a lost continent is legendary. Plato is stated to be unequalled in the fabrication of a 'noble lie,' and the story he relates may quite possibly be the result of his imagination. Perhaps in the future, when the hoped-for Utopian state of affairs prevails, and the sword is fashioned into a ploughshare, some resourceful inventor will direct his genius to a less warlike purpose, and construct a submarine whose efficiency will not consist of torpedo-tubes and collapsible machine-guns, but an outside shell strong enough to withstand successfully the tremendous strain which would be entailed by deep-sea exploration. Then may the truth of the tale be ascertained. Man has achieved many wonderful things. He has conquered the seemingly impregnable air; therefore, why should success not await him in this direction?

BARHAM'S BOW.

By Captain VERE D. SHORTT, Author of *Lost Sheep*.

ON a September evening, in an upper room of his great house in Antwerp town, old Richard Barham lay dying. Propped up on a pile of pillows, he lay on his great bed, and round it stood his sons and their sons. Farther back stood the womenkind of the household, and behind them again the servants of the house—almost a score of them, for in that year of 1465 there was no richer merchant in Antwerp (where all the merchants were rich) than Richard Barham the Englishman. Now he was going where his wealth could not follow him, and so before the time came to say farewell to it he had busied himself in seeing that it was fairly and equably divided among his family. All was disposed of. The rich stuffs from Genoa, the jewels, the gold, and the ships at sea, all had been fairly and justly apportioned, and old Richard Barham

leaned back on his pillows well content, and ready to start on his last journey.

On the foot of the bed was lying a pile of rich stuffs, the robes of a merchant prince of Antwerp; and lying on these were other objects which looked oddly incongruous in the bed-chamber of a peaceful burgess—a dented steel cap, a worn brigandine, and on top of these a great black yew bow.

The old man was very near his end; but for all his eighty years and the approach of death, his eyes were still bright and his clean-shaven jaw firmly set. Merchants of Antwerp then, as now, attended to their business and let the tumult of a stormy age pass them by; but an observant man watching Richard Barham on his deathbed would perhaps have thought that this was not the first time that he had looked death in the face, and that now, when at long last he

found the cold hand on his throat, he was taking it as a man does who at one time or another has felt it touch his flesh before.

The old man turned his head and spoke to his eldest son, a grave and bearded man, who stood beside his pillows; and Richard Barham the younger picked up the great bow and handed it to his father.

It almost seemed as if the touch of the wood gave new life to the dying man. He held it out for a moment at the full stretch of his left arm, and for that one moment the old arm seemed to grow stiff and strong again. But only for a moment. It wavered and shook, and the old man drew it back and placed the bow in front of him on the bed, and, with the interest of the dying in inanimate things, patted and stroked it.

Then old Richard Barham spoke again. 'Listen, all of you,' he said. 'I have divided the goods and gear, and none of you will be poor; but *this*'—and he half-lifted the black bow—'this is what brought the wealth which I have made, and which you are going to enjoy.'

'You—my sons and their sons—have always known me as Richard Barham the merchant of Antwerp, as I have been these fifty years past; for fifty years it is since I marched through the west gate of Canterbury town with *this* on my back'—and again he patted the bow—'in the train of Sir Thomas Brockman, when the king—*my* king—Harry the Fifth, went across to Normandy. Since I left the quayside at Hythe never a foot have I set on English ground, and never an eye have I laid on Barham Village—Barham Village, under Barham Down, in Kent. No word have I to say against the folk of this country, never a one; they have treated me fairly, and like one of themselves—me, Dick Barham, King Harry's old bowman; but there's many a time I've been fain to hear the sound of Kentish speech, and to feel the Kentish chalk and flint under my feet. I hoped that some day—— But I'm past hoping now.'

'Well, we crossed the sea, thirty thousand of us, and took Harfleur; and then came the October rains, and with them the sickness. King Harry was as brave a king as ever wore basinet; but he knew, and we knew too, that unless we could get back to England we were no better than dead men. Out of our host of thirty thousand the French swords and the sickness had left us half, and it was an army of less than fifteen thousand sick and starving men that started on the march to Calais and England.'

'I was at the crossing of the Somme River when for two days and nights we searched for a ford, and crossed it breast-deep when at last we found one; and even now I remember as if it were not a day gone that night of rain and wind when we saw the camp-fires of the French host on the ridge of Agincourt, in Picardy.'

'That was a battle!' The old man's eyes flashed for a moment. 'Fifteen thousand half-starved English against a hundred thousand French! I remember how the bows twanged as the French knights rode down on us, and how the long shafts bit through mail and flesh and bone, and piled the Frenchmen and their horses in heaps and swaths there in front of us! It was after we had broken our line and charged down on the French that I saw the king. He was there in the thick of the press, with his golden crown on his basinet, and his handsome face bare under it, fighting at hand-strokes with three Frenchmen. Near beaten from the saddle by their maces he was, but his sword was up, and he was giving blow for blow, as a king should. Twice I bent my bow, and twice a Frenchier went down with a shaft through the jointing of his harness; and then a mace fell on my head, and I was down on my face in the bloody mud.'

'But King Harry was no king to take help from a man, even one of his archers, and then leave him. Off his horse he got, they told me afterwards, into the thick of the press, and carried me out of it across his own saddle. Ha! he was a king worth fighting and dying for! We get no kings like him now!'

'With the army I went in a litter to Calais, and there they left me for my head to heal. But King Harry did not forget me. Across the sea by a sure hand he sent me—Richard Barham the archer—a thousand golden nobles as "ransom" for his life. Ah, well, King Harry's dead these forty years, and I'm dying to-night.'

'North to the Flemish country I came when my head was well healed, and there I met my wife, your mother, my sons. Her father was a burgher of Antwerp, and under his direction I put out King Harry's ransom to profit.'

The old man's voice was growing very weak, and he stopped for a moment, and then continued:

'And now, this I lay on you as a charge. While a Barham lives, let the bow which gave me my fortune be kept and guarded by him as it has been kept and cared for by me. They say the dying can see the future. Fifty years ago it saved a king, and I say that one day it will save something worth more to a Barham than fifty kings—his life and his honour.'

Richard Barham ceased, and turned his eyes to the window as if he would look across the Scheldt mud-flats and the gray waves of the North Sea toward England. He had been speaking Flemish, but now he said very slowly and distinctly in the broad speech of his native Kent, almost as if he could see what he spoke of: 'Barham Down, and the sun setting over Stone Street.' Then he spoke no more for ever.

On a September evening, four hundred and

fifty years afterwards, in the year 1914, Richard van Baarm, of Thulin, in Belgium, was standing in his garden with his young wife. The evening was fine and clear; but away to the south and west was a continuous heavy mutter like distant thunder, punctuated now and again by a deeper and louder sound. It was the second day of the battle, and the sound came from the German cannon where the Kaiser's army was at death-grips with the Allies. The road outside the garden railings was full of people of all ages and sexes moving in one direction and with one common thought: to put as great a distance as possible between themselves and the oncoming Germans. Uhlans had been seen that afternoon not five miles away; therefore hurry, *hurry* anywhere out of the reach of those brute beasts of the Kaiser. The stories of what had happened at Aershot, at Termonde, and half-a-score of other places were fresh in men's and women's minds that evening, and their only thought was flight—flight *anywhere*, so long as it was away from the *Bosches*. Houses? Property? Let them look after themselves. All that he has of gold and gear a man will give for his bare life or the honour of his womenkind; and, with the dreaded Uhlans last seen only five miles away, every moment might show a flat-topped *schapka* and a black-and-white pennon appearing round the corner of the narrow street. Therefore, leave all that until this evening has made life worth living, and *hurry, hurry!*

Richard van Baarm turned to his wife. 'Marie,' he said in his slow way, 'we ought to be going too; this will be no place for women in an hour or two's time.'

Marie van Baarm gulped. 'You best know, *mon mari*,' she said; 'but, oh, our house! our little house! Not three months married, and to leave it all to these savages!'

Richard nodded gravely. 'Better lose the house than our lives,' he said. 'Come; we must go. They may ride in at any moment.' And he turned toward the house, walking slowly and heavily, and with his broad shoulders bowed like an old man's. And he had cause for his heaviness of heart. Richard van Baarm's folk were not rich, and had strained their resources to give him a good education. After his course at the University of Louvain—now a heap of smoking ruins which hid things which were better hidden for the sake of humanity—he had taken his degree, and had started as an *avocat* in the little town of Thulin. He had prospered in a modest way, and three months ago had married Marie Gontier, the daughter of a Brussels doctor.

Life had seemed very pleasant to Richard, and had seemingly stretched out before his wife and himself in a long, pleasant vista of peaceful work and quiet, dignified ease. Then had come rumours from the south and east, especially from the east. If these rumours were to be believed,

Frenchmen and Germans were going to put their old quarrel to the arbitrament of fire and steel again. Richard van Baarm took very little notice of them. The papers were a little more interesting to read than usual, that was all; but the frenzied haste with which the rest of Europe was rushing to arms passed Thulin by.

There was no danger of war coming to Belgium. Was not its neutrality guaranteed by the solemn word of the very Powers which were crouching for the dash at each other's throat? No, the days were past when Belgium had been the battleground where nations repaired to settle their quarrels; and if the two great nations to the south and east chose to swim in blood, at least there would be law and peace in Belgium.

Then events had begun to move. First of all had come the insolent demand from Germany to Belgium that she should stand aside and let the German troops march through her land to the sack of France, and the Belgians' answer flung into the Kaiser's face at Liège.

Now for three days and nights the folk of Thulin had listened to the growl and mutter of the guns growing louder and louder, and on this September evening it was time for men with womenfolk to take them away, for already the Uhlans were in the country around.

Richard van Baarm went to his desk and took out a roll of notes, which he placed in his breast-pocket. If he had to begin life again, better do so with a full pocket than an empty one.

Marie was making up a bundle of clothing. She looked up helplessly. 'Richard,' she said, 'I have got some clothes here, but I have nothing to tie them with. What shall I do?'

Richard stepped over to a drawer, and, taking out a length of cord bought two days ago for the venetian blinds, handed it to her. 'That will do to tie them with,' he said; 'but, *ma mie*, don't take more than we can carry comfortably. We may have far to walk to-night.'

Marie tied the cord round the bundle, and Richard passed his arm through it and stood up. Then he went into the dining-room, and returned in a moment carrying what appeared to be a stout staff, and a leather case, black and wrinkled with age, with a bristle of coloured feathers protruding from it.

Marie looked at him, and raised her eyebrows.

Richard answered the unspoken question. 'It is the old bow,' he said—'the old bow that my father left me. He said that it had brought luck to our family, and would bring luck again. Who knows?' and he laughed mirthlessly. 'We have need of luck these days, and at least it will help you to walk. Now we must go; *they* may be here at any moment.'

He handed the old bow to his wife, and, heaving the untidy bundle on to his shoulder, turned towards the door without a glance behind at the home he was leaving; and Marie followed.

The road outside was clear. The Van Baarms were the last to leave Thulin, and they turned their faces westward, Marie using the great bow as a staff, and Richard carrying the bundle. For an hour or so they walked steadily, with few words exchanged. Folk who have left their home and the life to which they have been used behind them are apt to be too occupied with their own thoughts for conversation.

Then from the direction in which they had come rose a rhythmic clatter and jingle which, once heard, can never be mistaken—the sound of cavalry on the march—and Richard groaned.

'The Uhlans!' he whispered to Marie. 'We ought to have got away before. Ah, there they are;' and he pointed away over the fields to the left. In the moonlight they could see the glitter of bit and scabbard, and could make out the long lances and flat-topped helmets; and Richard gripped Marie by the arm and hurried her along, both of them bent almost double.

Then came a shout, and half-a-dozen horsemen detached themselves from the main body, and came over the fields toward the road at a smart trot.

Marie van Baarm gave a little whimpering cry, and tried to run, but collapsed. She had twisted her ankle on one of the smoothly polished cobblestones of the *chaussée*. Richard looked up at the sky, and his lips moved. Well he knew what to expect: for himself, a bullet or lance-thrust; for Marie—well, that did not bear thinking about.

Then quite suddenly Richard van Baarm's face changed to that of another man. The jaw came forward and outward, and the eyes seemed to retreat under the brows and to become narrow and very keen. He stooped and picked up the bow from where Marie had dropped it. Then, without haste, but still swiftly, he took the thick cord from the bundle, measured it against the bow in his hand, and tied two loops in it. Then he slipped one loop into its nock, and, placing the great bow against his foot, with one swift easy movement bent it, and slipped the other end of the cord over it.

The old bow stood the strain nobly. For all its five hundred years it had been oiled and cared for by generations of Van Baarms, and was still as stiff and sound as when the knife of Wat Denton the Canterbury armourer had lopped it from the old yew-tree in Barham churchyard.

Richard emptied the quiver. Six arrows there were in it—three-foot shafts with vicious steel-pointed heads. Then, with the same ordered swiftness as if he were doing something to which he was well accustomed, he stuck them in the ground close to his right hand, and peered forward.

The Uhlans were not more than a hundred and fifty yards off—six of them. The rest of the squadron had passed away over the fields, and were already out of sight.

The six men came on at a trot, laughing together. One man and a woman to deal with! Very good. They would have some fun with both of them—especially with the woman—before they rejoined their troop. They had their captain's orders: 'Let those swine of Belgians see what it means to resist the Kaiser's soldiers,' and they were going to obey them.

The Uhlans were not more than a hundred yards away now, and Richard van Baarm raised the old bow at the full extent of his left arm. As a boy he had indulged in the national sport of shooting at the popinjay, but he had never stood beneath the pole with the bird on top as he stood now. His left arm was stiff as a bar of iron, and his feet set wide apart for the utmost amount of purchase, and he was muttering to himself. Richard van Baarm spoke no word of any but his native language, yet the words he was using were not French. As he took an arrow from the ground beside him the words grew more distinct. They were the old orders of the master-bowmen of the English archers: 'Draw your arrow, nock your arrow, draw your bow—loose!'

At the last word the bow twanged, and that sound was the last one ever heard by the foremost of the Uhlans. The shaft took him full in the face, and he went backward off his horse with a rattle of lance and accoutrements.

Down came five lances with their black-and-white pennons to the 'engage,' and five tired horses were kicked into a gallop.

Twang! twang! twang! Three men were rolling on the ground. *Twang!* a shaft was through another one; and the sixth Uhlan swung his horse round and rode for his life from the silent flying death which had stricken his comrades down.

Richard van Baarm watched him go, with a set smile on his lips but none in his eyes. Then slowly the old bow went up, creaking to the strain on it, and the last shaft sped. In the back of the neck it struck the flying man, and he plunged forward, leaving his horse to gallop on alone.

There was a clatter of hoofs on the *chaussée* behind, and Richard van Baarm spun round. The road was full of mounted men, but one glance at their yellowish uniform and peaked caps showed him that they were not Germans.

The squadron commander rode forward and spoke in English. 'I say,' he said, 'we saw the whole affair. I must congratulate you, sir, on a very smart piece of work. Six men with a bow—a bit medieval—what? Never mind; great point is that you've scuppered them.'

But Richard van Baarm did not hear him. He was down on his knees beside his wife on the ground. The old bow lay beside him. Richard Barham's bow had sped its last shaft, and had saved a Barham's life and honour, as its first owner had foretold that long-past evening in Antwerp town.

Chambers's Journal

SEVENTH SERIES

FROM THE TRENCHES.

By NIMROD.

WELL may the present war be characterised as the greatest the world has ever seen, not only from the extent of the area over which it is raging, but also from the number and variety of the engines of destruction which the ingenuity of modern science has evolved to deal out death and devastation on a vast scale. It is from its aspect of trench warfare, and the unique position obtaining on the western front, that it commands the greatest interest.

The writer has endeavoured in the course of this article to present to the reader some account of this war of the trenches, as the French have aptly styled it, the notes in question having been written in the firing-line during last May.

In order to appreciate the nature and extent of the struggle now in progress on the western front, one must picture a fortified line five hundred and ninety miles in length, a solid line of trenches extending from the Channel to the Swiss frontier. In rear of the main or fire trench are others for supports and reserves, all connected by communication trenches. At intervals along the main fire trench, and leading off therefrom, are dug-outs and bomb-proof shelters, protected by layers of earth and sand-bags against the high-explosive shells which are in constant evidence. Linking up this network of field fortifications are telephone wires concealed in the ground so that the component parts of the force acting over this immense battlefield are in touch with one another. Here and there are observation points in special bomb-proof shelters from which the artillery can be switched on to any given spot, and shot and shell poured in from batteries secreted away somewhere in rear of the fighting-line itself.

Separated by a distance varying from one to four hundred yards is another line of trenches, a similar labyrinth, where the Hun has taken up his position, where he has literally dug himself in, and from which it is assumed he will only be evicted after desperate fighting. The outstanding feature of this line of trenches is the fact that it extends for close on six hundred miles, and that for a period of several months forces totalling possibly three million men have been facing each other without either side having as yet been able to attain decisive advantages.

All along the front of both the opposing forces obstacles of various kinds have been brought into play, prominent amongst them being the barbed wire. This displays its sinister lines in front of parapet and breastwork to trap the attacker and bring him under the deadly fire of machine-gun and rifle, aided at close quarters by that latest instrument of death, the hand grenade and bomb. Months of practice have rendered both sides expert shots, and a man has but to show himself for an instant above the parapet for a dozen bullets to whistle around as if to remind him that death is lurking ever ready to claim its victim.

All work at improving existing trenches and fortifications has to be carried out at night, for nothing could live under the hail of fire which would be brought to bear during the hours of daylight. It is a task demanding the greatest care and circumspection; the ground is swept by rifle-fire, the enemy plays upon one with his machine-guns, whilst the continual boom of artillery and the responsive crashes from the German lines fill the night with a roll of thunder. As soon as darkness has fallen and the prevailing gloom has partially hidden the hostile front, the working-party quits the cover of its own trenches and moves out into the zone between the British and German lines. It is no light task this, for one must wend one's way through barbed-wire entanglements, avoid deep holes which have been ploughed by high-explosive projectiles, and gain the place where work is to be done without noise and without detection by an uncommonly vigilant foe. At intervals brilliant flares shoot forth from the German lines, travelling well into the skies and illuminating the countryside with their glare, the signal for all to lie low, to prostrate themselves motionless on the sodden earth until the light has died away and the rattle of the machine-guns has ceased to harass the silent workers. Above and around is the ping of bullets; from the line of trenches less than two hundred yards away a stream of fire proceeds, spitting death in our direction; whilst all through the night the flares and rockets never cease, ever on the lookout for a tell-tale figure or movement which will reveal a target to be taken full advantage of. The task of the working-party accom-

plished, there is the friendly shelter of one's own lines to be regained through the hail of lead which the ubiquitous blue flares direct on to them. The coming of spring, with its warmth of sunshine, has hastened the growth of crops and grass, and in parts of the hostile zone the ground is covered with a waving green carpet concealing numbers of German dead which have been lying out there many weeks exposed to the elements, with resultant effects which are best left to the imagination. They dot the ground at intervals, silent witnesses to the horrors of war. Hard by the German parapet on the glacis of a disused trench is the body of a German 'Jäger' crouching on hands and knees half-way up the slope, with the head slightly forward, in the act of scaling the crest. Expert opinion says he was probably killed by the concussion of a bursting shell, and the absence of any apparent wound goes far to support this theory.

Every night the rattle of rifle and machine-gun continues, the main object on either side being to prevent work going on and positions being improved. Should fire from the British front cease or be slackened off, the Hun immediately becomes suspicious and assumes that work is in full swing, with the result that the line is swept by fire, a searching sheet of lead which seems to hunt out every nook and corner. It is, therefore, often essential to maintain a certain amount of fire from one's own trenches to dissipate this idea and give the Huns the impression that work is in abeyance.

In the matter of machine-guns the Germans have been very successful in the war. They possess a marked preponderance of these weapons, and have placed them so as to command every line of approach to their positions. The value of these guns cannot be overestimated, for each is capable of a stream of bullets per minute equal in volume to forty rifles. The German gunner has recognised to the full that the machine-gun is a weapon of opportunity, and he certainly allows very few chances to escape him. He uses it largely for sniping, the gun being trained on a part of our parapet where movements have been detected in the daytime, and then at night a burst of fire will be opened at intervals on the spot marked down. During the day a sniper will watch patiently with field-glasses, the gun already trained, and the instant a figure is spotted he presses the button. It is no easy task to locate these guns, for their position is being constantly changed in order to reduce the risk of detection, and consequent shelling by the British artillery, to a minimum. A few days ago the writer's company was harassed by a more than usually persistent gunner, and careful observation through powerful telescopic binoculars showed it to be within the shelter of a ruined house forming part of the German line. The spot was duly marked down, and in the after-

noon three lyddite shells were sent crashing into the house, the second of which set it on fire, and the third completely demolished it, with the result that peace and quiet were secured. Exasperated at the turn affairs had taken, the Germans retaliated by shelling a house in rear of our line, presumably under the impression that it had been used as an observation point. Their marksmanship in this instance was uncommonly good, for they placed three out of five shells clean through a broken front window of the upper storey of the house.

As has been remarked, the greatest activity is at night, when both sides take advantage of the darkness to consolidate and still further strengthen their positions. Dawn breaks at last, and finds each standing to arms; and as the sun rises higher in the heavens the opposing lines are dotted with little clouds of smoke from the many fires where are prepared the frugal meals available to the garrison of the trenches. During the day there is usually a lull, as if both were wearied with the night's exertions, and tired nature to some extent asserts itself. But it is by no means a period of uninterrupted quiet. Every now and again a wailing scream is heard overhead as a high-explosive shell flies past on its deadly mission. Should it have proved a good shot, this can sometimes be told, for there will be a sudden and vicious outburst from that most deadly of all the German guns, known to the Britisher as a 'whiz-bang.' The special feature of this weapon is its high velocity, which must be something almost incredible. Unlike other shells, its coming cannot be detected; all one hears is a terrific 'whiz' and an instantaneous 'bang' calculated to rouse even the mummies of ancient Egypt. The projectile apparently weighs about fifteen pounds, and is composed of the highest explosive.

As the day wanes and night comes on apace, so does the activity on each side increase, and by dusk rifles and machine-guns have assumed their rôle again, each parapet belches fire anew, and thus the grim jest goes on until the dawn of another day shall bring a short period of rest and repose to the combatants.

With the advent of spring the country has to a large extent dried up, and the mud, which during the winter months clogged the trenches and made all movement a matter of the utmost difficulty, has now been cleared away, and the roads are becoming passable for the large amount of motor transport which forms so integral a part of modern armies. The morning of the 1st of May broke clear in a cloudless sky, such a morn as one associates with the garlands and the village green. For some reason known only to themselves, the Germans seemed to have been under the impression that the British were about to attack, and with a view to forestalling them opened a violent bombardment at half-past four, a cannonade which lasted an hour and a quarter.

It is impossible in mere words to convey an adequate idea of what a bombardment by modern artillery really means. The air was filled with the roar and shriek of huge shells, bursting shrapnel, and deadly lyddite. Six-inch guns from concealed pits in rear of the British lines, 'nine-point two's' with their three hundred and eighty pound shells joined in the thunder, until it seemed as if hell had been let loose. A shell from a German battery strikes a tree, blowing it to atoms, a large part of the trunk being sent flying into the air. Huge gaping holes are torn in the ground; a house, partially wrecked, standing a hundred yards behind the line, is hit by a shell and collapses like a house of cards. The trenches have been manned by a living wall armed to the teeth, extra ammunition has been served out, and preparations completed to combat the asphyxiating gases which our enemy now employs in defiance of all the laws of humanity and the provisions of the Hague Convention. An hour of this din and duelling seems to convince the Germans that they have aroused a sleeping lion, for the British artillery in its turn is concentrating a deadly fire on the Hun lines, and so they gradually slacken until only an occasional shot is exchanged, a muffled roar, a whiz, and a crash in the opposing lines.

The saddest part of the conflict is the appalling desolation and ruin that war has brought in its wake. Here was a land of peace and plenty but a few short months ago, a land of green fields, of quaint thatched cottages, quiet farms nestling within orchards of apple and pear, and avenues of waving trees. The ravages of war have brought a sweeping change in the aspect of this erstwhile Garden of Eden. Villages have been wrecked, farms are naught but heaps of ruins, whilst gaping holes in the roads indicate where shells have exploded. Even the churches are wrecked; and in the village of —, just in rear of our lines, the old Norman tower has fallen in, whilst the very tombstones have been torn up, and one reads fragments of inscriptions carved in marble and stone lying scattered about the hallowed acre. The church at another village is but a mere shell, and the inhabitants tell one that it suffered heavily in the bombardment which marked the German arrival some months ago. They also tell one that when the British forces appeared on the scene, and the enemy were driven out, an English colonel, reputed to be both rich and generous, comforted the villagers to some extent for the loss of their ancient place of worship, dating back to the middle ages, by a promise that should he come

safe and sound through the war he would restore their church at his own expense. Let us hope the pious vow may be redeemed. Whilst on this subject, a somewhat unusually interesting event is worthy of mention. In the village of —, which was recently subjected to a terrific bombardment by both British and German artillery, and has for some weeks past been a constant target for the guns of the Germans, stands a model of the Cross of Calvary erected in the front of the village in full view of the hostile lines. Despite the rain of shot and shell which has fallen around, above, and below it, the crucifix remains untouched, although every house and building in the village has been smashed to atoms.

Life in the trenches cannot be characterised as dull, for there is always something to occupy the attention, albeit the constant strain exerts adverse effects in some cases, more particularly under the stress of the violent bombardments with all their accompaniments of howitzer and shrapnel shell, of hand grenades and bombs, of burning liquid and asphyxiating gases. That latest addition to the art of modern war, the aeroplane, passes overhead from time to time seeking out the hostile lines, endeavouring to locate his batteries and detect any movements which may indicate the offensive. Both sides possess anti-aircraft guns, and it is a fascinating sight to watch aeroplanes coming up in the distance. The advent of the British airmen over the German lines is always heralded by a wild fusillade of rifles and machine-guns all along the line, whilst the sky in the vicinity of the daring fliers is soon dotted with puffs of white smoke from the bursting air-gun shells. A British monoplane which passed over the German lines whilst these notes were being written had no less than eighty shells fired at it in addition to a tornado of bullets, but happily suffered no injury. This bold exponent of the art of flying may truly be said to have been under fire!

In conclusion, reference may be made to the splendid spirit—the *élan*, as the French term it—pervading the British forces. The writer recently watched some battalions of London Territorials *en route* for the trenches. Despite the fact that they had been in the field since last November and had experienced warfare under the worst possible climatic conditions, their cheeriness was amazing, their whole air and bearing such as could not fail to impress the most phlegmatic. Relentless though this war is, and heavy as are the sacrifices yet to be made, with such a spirit prevailing there can be no doubt as to the ultimate issue.

BETTY GRIER.

CHAPTER III.

I AM as yet only on the threshold of my stay in Thornhill, and I am beginning my long vacation as I intend to end it. Dr Balfour's orders were short and to the point; and, in bidding a temporary farewell to professional work and preparing for a long holiday, I know I am following his instructions and furthering my own interests and future well-being. Time was when this enforced inaction would have been irksome indeed. I have always been alert mentally and physically; but since my accident I have been incapable of any prolonged mental effort, and I have welcomed the languor of this quiet retreat, which has possessed me and claimed me as its own. Betty's ministrations I feel I stand in need of; and Nathan's company, unresponsive and grudging though it be, is all I desire. Betty has no patience with useless, idling folks, for she is herself a hustler, and she talks contemptuously of the hangers-on who daily and nightly support our village corners. Once she told me they were troubled with a complaint called the 'guyfaul.' I had never heard the queer word before, and asked its meaning. 'An inclination for meat, but nane for wark,' she promptly replied; and as I lie abed these beautiful sunny forenoons I wonder if Betty considers that I also am afflicted with the 'guyfaul.'

Correspondence of an official character is tabooed; but a day or two ago I received a long newsey letter from my partner, Murray Monteith, not one line of which had any reference to business. This morning I had a further communication, almost equally free from 'shop;' but in a footnote he remarks as follows: 'We had a call yesterday from our client the Hon. Mrs Stuart, and in course of conversation she informed me that she had leased a house in the vicinity of Thornhill, and that her niece, the late General Stuart's daughter, was staying with her over the autumn. I was strongly tempted to tell her you were at present resident in that village, but refrained, knowing it would be unwise of you in the present circumstances to occupy yourself with her affairs. Our inability to find a will or to trace the record of the General's marriage troubles her very much.'

This postscript set me a-thinking, and I lay long pondering obscure points in a case which had worried and perplexed every one concerned. Not only was the good name of the Stuart family involved; but, in the absence of proof, the General's daughter must be—well, nameless, and the estate must pass to another branch of the family.

So absorbed was I in my train of reflection that I failed to note Betty's entrance with my breakfast-tray. A short cough and the clatter

of china recalled my wandering thoughts, and I began a rather disjointed apology. Holding up my firm's letter with the familiar light-blue envelope, I laughingly said, 'Blame this, Betty, and forgive my inattention.'

'Hoots, ay,' said Betty, 'it's a' richt; but ye maunna pucker your broo an' worry your brain. Deil tak' thae lang blue letters, onywey! Nane o' them that ever I got spelt weel to me; an' when Milligan the postman handed this yin in this mornin', an' when I thoct o' taxes an' sic fash, I was sairly tempted to back the fire wi' it. Imphm! that's so, noo. Eh! by the by, the doctor's Mary looked in on the bygaun, an' she tells me Dr Grierson will likely be doon to see ye the day. He has had a letter frae a Dr Balfour o' Edinbro, tellin' him a' aboot ye, an' askin' him to keep his eye on ye. Imphm! Ay, an' Maister Weelum, ye didna tell me that ye lay a week in the infirmary insensible.'

'No, Betty,' I said, 'I dare say I didn't; but—well, the fact is I didn't wish to worry you with details or'—

'Ay, an' naether did ye tell me it was to save your wee dog's life ye gaed back into the burnin' hoose,' she said in the same inquisitive tone. I stirred my coffee vigorously, but said nothing. 'An' is it the case that the stair fell in when ye were on the middle o't, an' that the wee dog was foun' deid in your airms?'

'That is so, Betty,' I said sadly.

Betty was silent for a minute, and she fumbled aimlessly with the corner of her apron. 'Lovan,' she said at length, 'it has been a mair terrible affair than I had ony thoct o'. The heid an' the spine are kittle to get hurt, but it's a guid's blessin' ye werena burnt beyond recognition. Efter siccan an experience it's a wonder ye didna relieve your mind to me regairdin' it lang ere noo. Naeboddy in this world wad ha'e been mair interested or sympathetic. What wey did ye no'?'

Her concern and loving interest were unmistakable; but from the tone of her questionings I opined she was smarting under the sense of a slight, real or imagined, and I hastened to reassure her. 'My dear Betty,' I said, 'believe me I had no motive in withholding such news, other than that of saving your feelings. At one time I was minded to tell you all about it; but when you met me at Elvanfoot I noted at a glance the pained, surprised look on your face, and I at once decided not to say more than was absolutely necessary. Besides, Betty, everything happened so quickly that I can scarcely remember the details.' In a few words I described what had taken place. 'And now, Betty,' I concluded, 'let us change the

subject. Even now the recollection of my experience is like a nightmare, and I would rather not speak of it.'

'Imphm!' said Betty abstractedly; 'that I daursay is not to be wondered at. I'm sorry if my curiosity has been the means o' bringin' it a' back again; but, oh man, Maister Weelum, it gaed sair against the grain to hear o' a' this frae fremit lips. The doctor's Mary has a' the particulars at her tongue-tap, an' she gaed through it this mornin' like A B C. I could see she was under the impression that I kened a' aboot it, an' I didna seek to disabuse her mind on that, but juist said, "Imphm! that is so, Mary—what ye say is true;" and she left my doorstep thinkin' I was farer ben in your confidences than I am. But that's a' richt, Maister Weelum. I respect your motives, an' I understaun exactly hoo ye were placed. But, oh, my boy! in ocht that may in the future distress ye dinna leave Betty oot, an' dinna forget that her he'rt is big enouch to haud your sorrows as weel as her ain. Wheesht! Is that the ooter door openin'? It is; an', dod, that's Dr Grierson's cheepin' buits on the lobby-flaer, an' me no' snodit yet. He's an awfu' dingle-doozie in the mornin', is the doctor.'

Moistening the tips of her fingers on her lip and keeking into my little oval looking-glass, she deftly arranged a stray lock of gray-black hair under the neatly goffered border of her white morning-mutch. 'Juist a word wi' ye, Maister Weelum, before I gang doon. Are ye quite agreeable that Dr Grierson should veesit ye? He's an auld freen o' your Edinbro doctor, an' that's hoo he cam' to be written to, so the doctor's Mary tells me.'

'Oh, I'm quite agreeable, Betty—delighted, indeed,' I replied.

'Eh—ay—imphm! An' ye've nae feelin' on that point?'

'Most assuredly not,' I said. 'But why do you ask?'

She tiptoed across the floor and half-closed the door.

'That's him rappin' wi' his stick on the kitchen flaer,' she said in a whisper. 'An' tell me this; did the mistress—your mother, I mean—ever say ocht to ye aboot the doctor an'—an' ony o' her ain folks?'

'Not that I remember of.'

'Ay, aweel, that's a' richt. When he comes up, dinna refer to my speirin' ye this;' and she hurriedly left me and went downstairs.

Thornhill has never been without its Gideon Gray. Had Dr John Brown been acquainted with its record in this particular respect he could have added to that remarkable chapter of his *Horæ Subsecivæ* the names of not a few medical benefactors, the memory of whose services is yet fragrant in our midst. Scattered here and there in many a quiet country kirkyard are the graves of heroes of science who in their day

ungrudgingly gave of their very best, faithfully ministering to the wants of the poor and needy without thought of fee or reward, men of ability, intellect, tact, and courage of heart, whose life-work lay in the sequestered bypaths, and whose names were unknown outside the glen they called their home. Of such was Dr Grierson; and, as he stood by my bedside, the thought momentarily flashed through my mind, would that he had been limned by Scott or by the creator of Rab and Ailie!

A little over medium height; wiry, spare, and alert; broad shoulders slightly stooped; long dark hair streaked with gray, without a parting, brushed straight back from his forehead and hanging in clustering locks above his stock; his face serious almost, yet not void of humour, and lit up by two kindly, blue, thoughtful eyes; a presence cheering and reassuring, and a bearing which bespoke the scholar and the gentleman. His clothes were of rough gray homespun, badly fitted and carelessly worn. A thin shepherd-tartan plaid, arranged herdwise, hung from his shoulder, and he held in his hand a round soft hat, gray-green from exposure to summer sun and winter rains. Such was the man who stood by my bedside—a Gideon Gray indeed—strong of purpose, keenly observant; shy, yet not suspicious; revelling in his power of doing good; inured to cold and privation; buoyant and hopeful in the face of difficulties; daily in close and loving communion with all nature around him; and girt about with truthfulness and integrity as with a cloak. Though I had never before been in his presence, I hailed him within my heart as a true and honoured friend.

He shook hands without saying good-morning, and seated himself on a chair at the foot of my bed. Betty, who had preceded him upstairs, and announced him, walked across the room, took up a position at the gable window, and feigned an interest in our grocer neighbour's backyard. He looked at me pointedly and earnestly, the while stroking his long straggling beard, and then, half-turning his head toward Betty, he said with a low, little laugh, and with a pronounced yet euphonious 'burr,' 'Our young friend, Betty, is more of a Kennedy than a Russell.'

'Ay, doctor, that he is,' said Betty, without taking her eyes from the window. 'He aye took after his mither's folk. When he was a bairn o' three he was the very spit o' his Aunt Marget. Not that I ha'e ony recollection o' her, but that's what I mind the mistress used to say.'

'He's like her yet,' the doctor promptly added.—'And in saying so, I can pay no higher compliment to you, my young man.'

'I've heard it said, doctor, that ye kened the Kennedies aince on a time,' said Betty, and she changed the position of a pot of musk on the window-sill.

He looked quickly and questioningly at Betty; but she was busying herself with the flowers,

the while humming, timmer-tuned as usual, the opening lines of 'The Farmer's Boy.'

Then he looked from her to me, slowly and deliberately crossed his legs, and, putting his long thin hands lengthwise on his knee, he said, more to himself than to Betty, 'Yes, yes, I, as you say, once knew them well.'

'Ye wad ken Miss Marget, then?' asked Betty after a pause.

To me Betty's questioning was an enigma; but I wasn't slow to notice it was distinctly disconcerting to the doctor, who quickly changed his position and sat with his back to the light.

'Miss Marget and I were very, very dear friends,' he said, 'very dear friends, a long, long time ago;' and he abstractedly traced with the tip of his finger an irregular circle round the brim of his old soft hat.

Betty with a fleck of her apron removed imaginary dust from the window-sill, and then, coming up to the doctor, she laid her hand on the back of his chair. 'In that case, then, doctor,' she earnestly said, 'for her sake, for Miss Marget's sake, ye'll do your best for her nephew, for it breaks my he'rt to see him lyin' there amaist as helpless as a bairn.' And she hurriedly left the room, and I don't know for certain, but I think she was crying.

The doctor rose, quietly closed the door, and resumed his seat.

'Betty has undoubtedly your welfare at heart, Mr Russell,' he said. 'Unconsciously, or maybe consciously, she has awakened many memories of the long ago—memories of times and people that are with me now only in dreams. Ay, ay;' and he passed his hand slowly adown his face. 'But this is not getting on with my work,' he said, after a pause.

Putting his hand in his coat pocket, he brought out, not a handkerchief, as he had intended or as I expected, but a rather sickly-looking hart's-tongue fern, the root of which was carefully wrapped in a piece of newspaper and tied with a bootlace.

'Well, well!' he said reproachfully, turning it over in his hand, 'that is indeed stupid of me. I ought to have planted this immediately on my arrival this morning; but fortunately I was careful to take sufficient soil with it, and maybe it is not yet too late.'

'Have you been from home, doctor?' I asked.

'Oh, only for twelve hours,' he said, returning the plant to his pocket. 'I was on the point of going to bed last night, when the Benthead shepherd called me out to attend his wife. He was driving an old nag I knew well, a Mitchell-slacks pensioner—willing enough, you may be sure, or he wouldn't have been owned by a Harkness, but long past his best; so, in order to be as soon as possible beside my patient, I quickly saddled my own mare, and was trotting down the Gashouse Brae when the kirk clock was striking eleven. I passed the equine relic near Laught; but unfortunately at Camplemill

Daisy cast a shoe; so, rather than command the smith's services at such an untimely hour, I put her into his stable, the door of which was unlocked, waited the upcoming of the shepherd, and drove the rest of the journey with him in his spring-cart. After sitting for an hour or two at a smoky peat fire, reading by the aid of a guttering tallow-candle a back-number of the *Agricultural Gazette*, I was called to work, and very soon added another arrow—the tenth—to the shepherd's quiver. When everything was "a' bye," as we say locally, Benthead kindly offered to drive me down to the mill; but, as the early morning was so delightfully fine, and nature outside so pleading and inviting, I took to the moor on "Shanks' naigie." Ah, the delight of that moorland walk! the exhilarating air of the uplands! Why, man, it was like quaffing wine, and the cobwebs—warp and woof of the sleepless hours—were charmed away as if by magic. The sun was just peeping over the crest of Bellybucht, and his rays were lying lovingly athwart the budding heather and the silver mist-wreathed bents. Bracken and juniper, blaeberry and crowberry, dewdrops here, dewdrops there, sparkling and shimmering, tiny springs of crystal water oozing out from whinstone chinks, gurgling and trickling down pebbled ruts, seen awhile, then unseen, lost in spongy moss and tangled seggs. Overhead the morning song of the gladsome lark; to my right the *whEEP* of the snipe and the quack of a startled duck; to my left the *yittering* of the curlew and the *chirrup* of the fitting, restless cheeper; and over all the spirit of the wild which isolates and draws within her mantlefolds all those who cuddle close to Nature's breast. Ah, what a morning! what a scene! Hat in hand I walked, with my head bared to the throbbing air and the glorious sunshine. "Surely, surely," I said to myself, "it is good for me to be here;" and with a sense of thankfulness in my heart, and turning my face to the shadowy Lowthers, I sang with the Psalmist, "I to the hills will lift mine eyes."

'I struck the Crichtope about six o'clock; wandered leisurely down the linn; pulled this hart's-tongue fern, and a few more which I must have lost; picked up this fossil—part of a frog, I think—which will make a welcome addition to my collection.' He hesitated for a moment, with half-closed eyes and his chin resting on his folded stock. Then he suddenly looked toward me and asked, 'Have you ever walked down Crichtope alone?'

'No, not alone,' I replied.

'Then Crichtope has never spoken to you. You have never heard its message. To me, this morning, it was the mouthpiece of the Creator—the great Architect; for *I was alone*. With those who love and admire His handiwork He is ever in communion, and He speaks in the rustle of the leaf, the tinkle of the stream, the whisper of the grass, and the echo of the linn. But you

must be alone, humble, reverent, stripped to the pelt, as it were, of everything sordid, boastful, and vainglorious; and then that old ravine will be a sanctuary where in its solitude you will find solace, comfort in its caverns, food for reflection in its story and traditions.'

Again he paused, and I lay with eager eyes fixed on his animated face. Betty's cat, with arched back and long tail, brushed slowly past his knee. With an ingratiating 'Pussy, puss,' he stroked her fur.

'About half-past seven,' he continued, 'I reached the smithy, had a cup of tea with Smith Martin and his wife, got Daisy's shoe made siccar, and was mounting for home, when news was brought from Dresserland that a farm-worker had fallen from his cart and broken his leg. Off Daisy and I trotted up the brae. But, tut! tut! why should I waste my precious time, and weary and fatigue you to boot, by detailing all my morning round?'

'Oh, doctor, don't stop!' I pleaded. 'I know and love that whole countryside, and a talk with you is like a walk in the open. Indeed, my limbs twitched as you strode along, and I felt as if I were keeping step with you.'

'Ay, your limbs twitched, did they? That's a good sign.'

'A sign of my appreciation of your love of nature and poetry of language, doctor?' I asked.

'No, no; something far more important than appreciation. But this is not business. I know you will be anxious to learn in how far Dr Balfour and I agree, so let me have a look at that damaged spine of yours.'

Betty tells me that she's 'feart the doctor's a careless, godless man, for he never enters a kirk door.' I could have told her that he had attended church that morning, and that he had had communion with God and a glimpse of heaven which would have been an unknown experience and an unfamiliar sight to many who occupy a church pew every Sunday; but Betty wouldn't have understood—nay, wouldn't have believed me—and I was silent.

His visit has cheered and encouraged me, and his conversation has made me proud of his acquaintance. He is to call on me again in a few days; and meanwhile I have to take more exercise, so with the aid of a friendly hazel I shall have a daily 'daunder' and an opportunity of renewing my acquaintance with Douglas the barber in his wee back-room, John Sterling the shoemaker at his souter's stool, and Deacon Webster at his tool-laden bench.

(Continued on page 467.)

THE GERMAN CHARACTER.

A RETROSPECT.

By Professor E. H. PARKER.

PART I.

IN my early youth I knew a German cotton-broker who had married, and seemed submissive to, a pretty English wife; and I also often met a fat German cotton-importer who smoked cigars from morning to night, even when at work. Neither of these two by overt act disclosed any aggressive or 'hate' proclivities. My first real German experiences were fifty years ago, when I used to pass week-ends with a Beckenham family living close to the great Charles Darwin's house. My friend's mother was a charming English blonde, who was married a second time to a Bremen or Hamburg merchant. They had no children. He was a tall, dark, handsome man, with a slightly Jewish cast of countenance, and apparently allowed, or had to allow, his wife and stepson a completely free hand. Both the latter had money, and the former had evidently dropped into a good thing, and had made himself quite tame and snug in England. A typical guzzling German office-clerk occasionally came down from town to join the week-end or Christmas parties. I remember one occasion on which the unimpassioned German husband unexpectedly flared up at table on some one suggesting that 'no Englishman cared in the least what people thought of him.' He

reddened with anger, and asserted that in his opinion the English were the most conceited and self-complacent people in the world. His wife apologised, and said, 'He is a German, you know.' The clerk also on one occasion made some contemptuous remarks about English *Gefühlsduselei*, and the singing in the London streets that year of 'We've got no work to do' by the out o' works.

In the summer of 1867 my brother and I had to take a relative to a lady's school in Bremen. We went by German steamer from Blackwall to Bremerhaven, and our fellow-passenger was a second young German office-clerk going home for his summer holiday. The chief topics of conversation between this clerk, the German captain, and ourselves were the shortcomings of England in general, and London in particular: the evils of drink, want of organised work and household economy, absence of education (then not compulsory), toleration of strikes, drunken females, barefooted children, and so on. Bremerhaven (Hotel Twietmeyer) and Bremen were at that time both insignificant places compared with what they are now; in no way Prussian, not yet even in the Zollverein. The school-mistress's father was a snuffy, bespectacled, and

bealippered professor or 'doctor' of the usual type, as caricatured; and we were obsequiously received, as coming from rich and powerful England, much as wealthy uncles are welcomed by impecunious relations. However, we were struck with the neatness and order of town arrangements as compared with home. At the same time, these early experiences left upon me the impression that Germans were an envious and jealous people.

Passing on *viâ* Minden to Cologne, we inspected the cathedral, town-hall, and ramparts. Even Cologne was a comparatively somnolent place of perhaps fifty thousand inhabitants in those days; the site of the present Hotel Dom was then occupied by a white-plastered and rather low-built structure bearing the same name; near it were a few eau-de-Cologne shops and a spacious countrified market square. If my recollection be not at fault, a minute or two's stroll brought you at once into semi-country lanes. All men of the 'lower orders,' even when at work building, ditching, or cultivating, seemed to have long china pipes dangling from the mouth from morning to night; they looked stupid and depressed, lifeless and unenterprising. Those were the days of the 'seven stenchies of Cologne,' and certainly it was an unsavoury place that lived well up to that reputation, especially with regard to street conveniences and accommodations. The trains were all dreadfully slow; the gruff officials were apparently mostly soldiers, and passengers were kept herded in waiting-rooms; but I remarked no hostile feeling against foreigners, not to say Englishmen; only a sort of grinning envy at our luck in being English. At Bonn, then but a small market-town, we stayed at the 'Schwann,' which hostelry has now either entirely disappeared or has sunk to the status of cabaret or pot-house; and so on (as Pepys would say) down the Rhine to Mainz (then newly Prussianised), and by rail to Strasburg, then in French occupation. So far as I remember, we either walked or drove to Strasburg across the dusty bridge from Kehl, the last village on the German side. The French officials, then imperial, seemed to assume rather a high and superior tone with the Germans, whose general bearing appeared subdued, discontented, and a trifle sullen. I well recollect a German conversation between a French soldier and an Alsatian maid in the train, and his saying how *bequem* it was to know both languages.

The next Germans I came across in those early days (Baron Stein, &c.) were passengers in steamers between Hong-kong and north China; in each case they left the sense of a censorious, bragging, unfair, and mendacious temperament behind them, above all rather contemptuous of American and English shortcomings and purple-pride. Baron Stein related as personal experiences some old 'chestnuts' on American ways which we all remembered to have read in some

pocket *Joe Miller*. Germany had then (1869) no influence whatever in China, and no shipping beyond a few sailing-vessels on the coasts. With the courteous assistance of the French, the Prussians had succeeded in getting their treaty through in 1862. According to Chinese historical accounts, it had had to be explained to incredulous China that Prussia was really quite recognised by France as an 'equal' state; and now the twenty-two Deutsch countries—that is, the Bund or Zollverein—were to be represented in China by Prussia; but Li Hung-chang kept the envoy at Shanghai, and Prussia was not allowed to send a Minister to reside in Peking until 1867. When I arrived there in 1869, the Prussian staff was still housed in an obscure hole-and-corner sort of courtyard, the whole of which was two years afterwards made an extension of the adjoining British Legation stables. Their best man was a really good fellow, an ex-photographer and a good Chinese speaker, named Bismarck (no relation). Of course Prussia had no men-of-war out there in the China seas; but Prussia, Japan, and many other countries had plenty of midshipmen both there and all over the world in the British navy, a practice now discarded. German traders in British colonies were as privileged as British traders; in short, the British treatment of everybody in the Far East was, as it still is, disinterested and open-handed in the extreme. In fact, the great Bismarck's general instructions were to follow the British lead in all matters, and where there were no German consuls the British consul acted in German interests. Fifteen years after this date, I myself received Prince Bismarck's special thanks for having 'acted' officially without even being asked to do so by my own superiors, not to mention by Germany. I dined several times at the Peking French hotel with the celebrated Baron F. von Richthofen—rather aggressive—who was then travelling gentleman for the British Chamber of Commerce, and on his best behaviour. Prince Alfred (the Duke of Edinburgh and Saxe-Coburg) came to Peking that year (1870).

After the war with France in 1870-71, the Prussian Minister became 'Deutsch' Minister; Germany, under this new Chinese name, built herself fine legations, consulates, &c., in a few places; but still, for many years, she followed the lead of, and could always depend upon the kindness of, Britain. She sent out a very able and pushing Minister named Von Brandt in 1875, and from this date the touting or 'bag-man' commercial policy in China began. British officials had never touted, though, of course, they 'protected' trade when assailed, perhaps not always as energetically as traders would have liked, but according to standing instructions and to the honourable traditional practices generally approved at home. During the eighteen years of Von Brandt's *gérance*, however, active touting for orders gradually became the rule rather than

the exception with several legations, and the idea inevitably spread to the officials of other Powers, if only as an attempt at self-protection. In those early days of German trade, people used to sneer a little at its 'muck and truck' quality, and at the 'snivey' German dodges. ('Snivey' is a China coast word corresponding to the Cape Dutch 'slim.') At one port, long after that (1890), a British consul requested his own Minister to hand in his (the consul's) immediate resignation as German consul, as he did not consider German ways fair. At the same port an English merchant, who had trained up and been 'done' by a German, to his dying day absolutely refused either to speak to or to meet at hospitalities the German in question. I saw him die.

In 1876 I saw a good deal of Germany, including Heligoland, then a quiet, charming place under the calm and dignified British rule—everything was *Königlich Englisch*. The garrison under Governor Maxse consisted of fewer than a dozen jack-tars, who during the summer season received steamer-loads of noisy beer-swilling Germans only too glad to breathe the air of perfect freedom. We had already then definitely decided that fortifications were wasted money, and that command of the sea alone could perpetuate its value as a base. (Some fourteen years later—see *Punch*—Lord Salisbury 'threw it in with a pound of tea' to the ambitious young *Reichsmehrer*.) The old Emperor being at the autumn manœuvres, I had an opportunity later on, in 1876, of going through all his private apartments and learning most of the details of his simple life from a faithful old flunkey of his. The Kaiser did not live in the huge Schloss, but in a modest palace, still called the *Kaiserpalais*, opposite the University. There was his little iron bed, and there the corner of the bookcase where he took his coffee and roll every morning; there also were the little knick-knacks and keepsakes from relatives and fellow-rulers. The next evening (15th September) I happened to take the night-train for Leipzig just at the instant when the royal train steamed in from that direction. Out stepped the *greise Kaiser*, the (afterwards so-called) *weise Kaiser* Frederick, Bismarck, and Moltke, walking in that order. I never quite understood how it came to pass that in a land where it is said 'most things are *verboten*' I happened to be left absolutely alone there. I saluted the Emperor, who bowed politely and saluted in return, the others keeping their eyes straight ahead, with a slight kink in my direction to the left. Not a word was spoken; no officials were visible; but two landaus, dimly discernible at the wicket, having been beckoned to, whisked the party off in silence. Germany, especially Hamburg, had gone ahead considerably since 1867, but Berlin newspapers were still asking *Wann soll Berlin Weltstadt werden?* I noticed

no hostility or even ungraciousness towards Englishmen at that time; in fact, we were not on particularly good terms with either France or Russia, so that it was comfortable in any case for Germans to be friendly. Germany's voracious 'appetite' was scarcely yet roused, though Russia and Britain had, a year or two before that, successfully 'warned' Bismarck not to be too aggressive towards France. Meanwhile, in the Far East, Germany was beginning to 'act' on her own, and on one occasion even precipitately landed marines to take possession of contested property; but this immature obtrusion of the 'mailed fist' was at once sensibly repudiated by Bismarck, whose ideas of colonies rather lay in feints to draw away French attention from Europe. German traders began, however, to establish clubs of their own in the Far East, and to grow 'cliquy' and exclusive; they did not like to forgo billiards on Sunday just because Englishmen wanted—at least as a matter of principle or 'old custom'—to go to church. Yet, on the whole, all foreigners, being fellow-Christians (of a sort) *in partibus*, have always associated together on fairly companionable terms in China and the British colonies of the Far East; and this apart from the fact that the home-bullied Germans have a sneaking love for British liberty and liberality, as compared with the ways of their own stiff, meddling, priggish officers.

In 1880 Prince Henry visited Canton, and I had the pleasure of meeting him, by personal invitation, at lunch in the German Consulate (8th May). He was then a modest, gentlemanly young man, no doubt owing to the fact that his illustrious mother was still 'in charge,' and that his traditions were based on those of the British navy, which are as far removed as possible from those of the Prussian *Mensur* and 'military honour' type. In the same way the Duke of Albany (now fighting against us) was a nice, modest lad until he underwent the typical Prussian stiffening on acceding to the dukedom of Saxe-Coburg. I went through his Gotha palace eight years ago.

In 1882–83 I had considerable further experiences of Germany, including Schleswig, German Austria, Bohemia, Courland, Luxembourg, Switzerland, &c., and found things had gone ahead considerably in the Fatherland as concerns railways, development of towns, commerce, industry, and so on. Austria was, and is, nowhere by comparison. Hamburg had been, Vienna and Frankfort were being, rebuilt and vastly extended; but Nürnberg and Munich had not yet assumed anything like their present startling dimensions. Money was circulating; tourists were on the war-path; Germans no longer made toothpicks of their forks or supped peas and gravy from their knives, and were beginning to dress and to some extent to behave 'as gentlemen;' long china pipes were at a decided

discount in the streets; and the minds of even the great unwashed (especially in democratic Saxony) seemed to be 'lustling considerable,' as our American cousins would say. Certainly I never saw anywhere the slightest hostility towards or *unreasonable* envy—that is, jealousy—of Britain, though I think our *Gefühlshuselei* still qualified us for the status of 'canting humbugs.' In the Far East Von Brandt was meanwhile forging ahead; the old ramshackle legation staff of Baron Rephues in 1870 had proved insufficient. There was a wayward Prussian named Paulus von Moellendorff in the Imperial Chinese Customs employ. He had long been a great friend of mine; in fact, he taught me correct German in exchange for (I hope) correct English. An aggressive brother, named Otto, of the Prussian *Mensur* type, with the orthodox slashed nose (who had gained a doctorship by his immortal 'thesis' on the *Beetles of Bosnia*), had come out in 1872 to join the legation, and Paulus therefore soon threw over the Customs in favour of the Tientsin Consulate, where, knowing Chinese, he became friendly with Li Hung-chang and rival of an American confidant named Pethick. Paulus (taken over by Holleben during Brandt's temporary absence) had already seen too much of British liberty to stomach the Von Brandt discipline for long, especially as his Chinese knowledge threatened to keep him 'down' as an interpreter; so he soon 'chucked,' without even asking permission to resign, and snapped his fingers at 'demnition' Germany altogether. Li Hung-chang sent him, nominally as Chief Commissioner of Customs, to Corea (1882–83), but really to 'keep an eye open,' and to correct the suspicious attitude of the weak king and the intriguing Powers. Meanwhile Von Brandt did nothing, as no doubt he hoped to jump in and claim a share in the profits if Paulus succeeded. The energetic Paulus soon practically 'chucked' Li Hung-chang too, and had the imprudence to set up in 1884 as a sort of super-minister (literally a super-'dreadnought' was he), wearing Corean dress, going about in a one-wheeled sedan, practically dictator over both king and country. I found him thus when I went there as a junior officer in 1885, and after lunch played a game of lawn-tennis with him in his extemporised 'palace.' The Prime Minister, Kim, happened to call in 'on urgent matters of the king's affairs' during our game, and I offered to retire; but Von Moellendorff (still wearing his baggy Corean white trousers, but stripped otherwise to a foreign singlet) actually kept his Excellency standing on the lawn watching us, with a sickly smile on his ministerial face, until we had finished our score. Moellendorff had *de facto* possession of the Customs at the Corean ports, and had raked together quite a little 'jumble' staff of British, German, French, Italian, and even Japanese officials of all kinds.

Of course, diplomatically he was an 'enemy' of all foreign officials, including his own and my self; but in the Far East, as Kipling says, 'the best are like the worst,' and friends, enemies, police, and criminals all have the fellowship of Christianity and a common 'thirst.' I well remember writing to him *before* I went to Corea: 'All right, blaze away; but beware of treading on *British* toes!' Moellendorff, in the end, overdid the business; his custom-house at Chemulpho was burnt down, and he had to go. His faithful gang, or bodyguard, of shady toadying Germans at Seoul (the capital) did not even see him off to the port and the steamer, and he took his last Corean meal in my house; afterwards, for a living, quietly and manfully rejoining the foreign Customs in a comparatively subordinate capacity under the magnanimous leadership of his old chief, Sir Robert Hart. Von Brandt left his post for good in 1893, and Von Moellendorff served as Commissioner of Customs at Ningpo from 1898 to his death in 1901, corresponding with me to the last. I must add that he was a truthful, honest, and just man by inclination (or possibly through his numerous long British friendships), and there was nothing whatever despicable about him, even when 'Dictator.' He neither bullied when up nor whined when down; he had no *feigherzige* 'Kaiser-Kultur.'

I had another run through Germany in 1895, things having in the interval gone ahead marvellously, and many large cities been transmogrified so as to be scarcely recognisable. Express trains were everywhere now the rule rather than the exception; Krupp had become a monster; steamer companies had developed extraordinarily; and I never saw a single china pipe being smoked, at least in the large towns. But Bismarck's successors had not been so successful as himself; the master-hand was then sulking in impotence; he himself had in his re-insurance disclosures exposed, or was about to expose, the low cunning of Prussian policy, of which it seems the sturdy but slow-minded old Kaiser had momentarily been heartily ashamed. Yet he also was but a Prussian, and in the end he had meanly yielded, thus playing false to his nephew the Czar. The Japanese war with China had now taken place. China had discovered foreigners' weakness for orders (decorations); and Li Hung-chang, on his visit to toadying Germany in 1896, found that, besides these, orders of another kind were what the Germans really wanted—orders for guns, ammunition, and ships. Germany had from the first engineered the Three Power interference with Japan; France and Russia had duly received their reward; but China up to then had hardly yet credited Germany with a first-class status, or with the capacity to hit her hard. The young Kaiser, at an interview with the young Czar (who already had with China treaty rights, or at least options, over Kiao-chow), seems to have deceived

the latter at a personal interview in some bamboozling three-card-trick way. At all events, Germany seized the first available opportunity, as Prince Henry voiced it, to 'preach at Kiao-chow the gospel of your Majesty's sacred person,' and incontinently to apply the 'mailed fist' to the seizure of that region (1897); since which her policy in the Far East has apparently been to dodge Britain, to sow discord, to disintegrate; in short, to be restlessly aggressive. The murder of her envoy, Von Kettler, in 1900 gave her the right—especially as Great Britain's hands were full with the Boer war—to a certain pre-eminence in the rôle of the avenging Hun—the Kaiser's own word; and since then her underground borings have been steadily and unscrupulously

conducted with the object of stirring up mud and fishing in the cloudy waters, of disintegrating China as she has disintegrated Turkey, and of ousting British influence. But I left China for good in 1894; *ergo, ne sutor supra crepidam*—most people say *ultra*, but *supra*, I am told, is what Pliny says. I may remark that, however the war ends, Japan will never tolerate a German military foothold again either in Kiao-chow or elsewhere in China; the Allies may be certain of this.

This brings me round indirectly to the question of Kuno Meyer, whom I have known fairly intimately for twenty years. But that is another story, and the Editor says I must reserve it for Part II.

(Continued on page 470.)

THE BRIGHT EYES OF DANGER.

CHAPTER XXX.—ON BOARD THE 'GANNET.'

WE got our seagoing rig-out—sea-boots and such like—at a chandler's, and Bertrand and I rode home to The Garth in the darkening, to get together the other necessities for our venture. We took as little as possible: warm clothing for November in the Moray Firth, pistols and ammunition, three spades, and a number of odds and ends. We had four hours' sleep, and very early in the dark morning we tumbled our belongings into a cart and drove off, our teeth clicking in our heads in the raw air. We met not a soul, and on the stroke of six pulled up at the door of a little inn. We were expected, for the door opened instantly. Anthony was finishing his breakfast, his eye agleam in the candlelight.

'All's well,' quoth he, 'a fair wind, and my men ready.'

The landlord helping us, we carried our belongings for about half a mile, the captain picking his way in front with a lanthorn. Soon we came through a little wood, when I smelled the sea. A small boat, her nose in the ooze, waited us, some 'lingtowmen' whom Anthony had engaged on board her. We loaded her with speed, got in, and the men bent to the muffled oars, Anthony, lanthorn in hand, peering over the bows and giving directions in a hoarse whisper. Soon the water plowtered noisily round the bows, and the boat began to rock, at first gently, then with lurches that made me feel the pit of my stomach. We were for about half-an-hour in the thin sea-fog, when a light blinked suddenly once, twice, and vanished. Anthony waved the lanthorn in answering signal, and something like a huge gray moth flickered ahead of us. It was the *Gannet*, tossing uneasily at her anchor, her spars and sails showing above the surface mist. We ran alongside, and in a trice we had scrambled on board, our gear was bundled in after us, and the lugger got under way.

I remember a beacon light, a guide to mariners, burning on the Isle of May, but with a strong wind, and the *Gannet* running free before it, it soon dwindled to a pin-point and disappeared. The morning light came slowly in little dabs of red, until the sun, bursting the morning banks of cloud, discovered a sky of steel-blue, with here and there a paling star over the great gray wheel of the North Sea.

As I had never set foot on shipboard before, the novelty and the sense of sheer isolation of it engaged me like a play. The voices of the streets, men and their doings, politics, things that the landsman comes to regard as necessary as daylight, dwindled to naught in the midst of the sea that had heaved unchanging since the beginning of time. The mysterious orders shouted by the master, the nimble sailors at the ropes, their tanned visages, their rough yet buoyant voices; the sight of them—every man knowing that the contraband in the hold might mean, in the master's phrase, 'swinging for it,' yet toiling away at their rude duties with cheerfulness and alacrity, often with a song—filled me with curiosity and admiration. I had been in some dangers, and had emerged so far (as I told myself) with some credit; and there were more adventures ahead of me. But the spectacle of these men knocked something of complacency out of me. Granted that they were smugglers, yet every day saw them facing toil and peril of the sea, with the risk, on land, of a shameful death, or at the best banishment to the 'plantations.' Yet there they were, hauling away at this and that as if a ransom instead of a pittance awaited them at the end of the cruise. Something primeval in the blood of these adventurers challenged me. Man for man, I asked myself, had they much to learn from me?—and I have not answered the question yet.

The master had scarcely exaggerated when

he boasted about the *Gannet's* sailing qualities.

'I havena made a smarter run since the year I outailed the revenue cutter off the Goodwins, and that is no' yesterday. I mind'—

We were sitting down to breakfast, and he broke off his story of cheating the revenue to 'ask a blessing' on the meal.

'Can we make the Firth by to-morrow?' asked Bertrand.

'With this wind we may; but, fair wind or none, I'll get every inch out o' her. And now, sirs, a word o' advice. Ye can tak' it or leave it. Whatever you have in hand, ower much thinking on it will help ye little. Ye didna sleep last night, did ye?'

This was true, for neither of us was used to cramped quarters and the hundred voices on shipboard.

'Mphm! I thought no', he continued, as he saw us glance at each other. 'Ye're both lookin' like speldrins, an' ye've picked at the breakfast like mice. Tak' a turn wi' the crew! Keep movin' an' workin'! Cast this ploy o' yours out o' your mind, an' ye'll be different men an' fitter for your job. I have carried passengers to France, some o' them with a price on their heads, and the farther from Scotland they got the better pleased they looked. Wi' you twa gentlemen it's the other way roun'. Your faces are mair drawn the nearer to port we get. Talkin' o' prices on passengers' heads, I mind—Lord! it's an auld story now—at the "Fifteen" carryin' Glenira.'

'Glenira!' we both exclaimed.

'Ay! I was a hand on board the brig the *James and Mary* o' Garmouth. Glenira was a fine, upstandin' young gentleman. But ye ken the name, surely?'

'I am his kinsman,' said Bertrand. 'This voyage concerns him.'

'I'm a Speyside man, gentlemen, and my mother was one o' Glenira's people. Many's the time I dreamed in my wanderin's o' the glen, and rued leavin' it.' He looked at us earnestly. 'Ye could have had the *Gannet* for nothing if I had kent this. Glenira!'

There was a new ring in his voice; the clansman in him, hidden for years under his smuggler's oilskins, survived. Drums and bugles could not have stirred him more than the single word 'Glenira.' My heart warmed to him.

'Is he alive?' he asked.

'We left him alive, captain; and it is to keep his honour unstained that we are here.'

There was a moment's silence.

'Ye'll tell me the story now,' said he; and at a word from Bertrand I gave him a summary of the whole affair, down to Glenira's statement. He rose and shook hands with us.

'I'll see ye through it, sirs; and proud I am to offer ye my services. I ken every yard o' the coast, and I'll gang wi' ye blithely on shore or at sea.'

'And do you think, Anthony Brander, that I would have sailed with any skipper other than yourself?' said Bertrand. 'Your name is known among the Scots in France.'

'That's handsomely said, and pleasant hearing to an auld tarry fair-trader. How long a start d'ye think Master Left Hand has from us?'

'We are not certain whether he has started or not.'

'Deed, it matters little. We maun just push on wi' all the speed we can make.'

He rose, took his greasy chart from his locker, unrolled it, and peered over it closely. Then he read my copy of Glenira's paper, and peered over it again. We were on tenter-hooks, but the captain sat silent, with corrugated brow, staring at the paper, his single eye burning.

Suddenly he smote the table a blow with a leg-of-mutton fist, making the breakfast-dishes dance.

'Dolt! Gomerall!' he cried. 'A bonny sailor-man I am! The thing is fairly starin' me atween the een! See!' He pointed to the cone in the drawing. 'I told ye I thought that this was meant for Morven, the hill in Caithness across the Firth. It's a kent landfall. Glenira has ta'en it as a guide.' He drew a line on his own chart at right angles from a point on the Caithness coast.

'The wreck, I'll wager, is well up the Firth, but the plan is a bit agee. Glenira made it for his own guidance belike, an' it's no' to lippen to. He made a landsman's job o't. Look ye!'

We leaned over the chart and paper in great excitement, and the captain pointed out that if Glenira had taken Morven as a landmark there was a manifest error in the chart, for the words 'Here is high water' on the sketch would indicate a place so far west as to exclude the seaboard.

'Glenira wouldna have a compass. Like enough, the slant o' the coast deceived him, for it's a kittle business guessin' at your bearin's. But it's plain that Morven across the Firth looked to him to be on his right, and the Fountain Reef in a line wi' it, on his left.'

'But if we get the Fountain Reef it ought to be plain sailing,' I ventured.

'True! But the Fountain Reef beats me. I never heard o't, an' it's no' on any chart I ever saw. The name, as I said to ye, looks to me to be made up. But we are on the track. The wreck is well up the Firth, on the Moray or Nairn coast, like enough.' He rolled up the chart, with 'Now fall to your breakfast, an' I'll try to get another half-knot out the yard;' and went on deck, leaving us wonderfully elated.

Even if the two scoundrels had the advantage of the start, it was unlikely that they could locate the wreck before us; and, even granting them the luck of the start, it was still almost impossible that they would hit on the clue of the number '15' on the sketch, and find the French money. Yet chance plays strange tricks with life's cards,

and when the wind fell we were both consumed with anxiety. A day's delay—nay, an hour's—might wreck our hopes. To Philip Macdonell honour was a meaningless phrase, an empty shibboleth; but he was clever and cunning. The thought of the treacherous, ruthless coward on the track of the *Marie des Anges* fairly haunted us.

Bertrand suggested the offer of a reward to the crew. 'As ye like, monsher!' said Anthony. 'They'll spend it on rum, of course; but they're as fine seamen as ever I shipped. Your siller might be waur wared, though! I maun spin them a yarn. It's ane o' them lies that doesna coont!'

He called the crew aft.

'My lads,' quoth he, 'there's another ship comin' through the Pentlands, an' we are racin' her to Spey Bay. She's fast, and she's weel handled; but I have just been tellin' these gentlemen about the time when we left the revenue cutter standin' still. To get to Spey Bay afore her means something to these gentlemen, an' if we do ye'll have leave ashore an' something handsome in your hand.'

The pleased grins on their hard-bitten faces spoke volumes.

'The notion o' the other ship will set them on their mettle as much as the bawbees, or I'm a Dutchman,' he said, as the men went forward again.

He was right. They worked as though they knew the ins and outs of our story. Every order was done 'on the run,' the *Gannet* sailing like a bird. The wind, that had threatened to fall, held all day, and freshened. 'Himself'—as the crew called the skipper among themselves—was at the tiller. I knew little or nothing of seamanship; but the veriest ignoramus must have noticed and admired the master-hand and the lugger's answer as she heeled to the wind.

'Steering's a gift,' said the captain, after a remark by Bertrand, 'like playin' the fiddle; if it's no' in a man's bones he'll never learn, and for one man that can coax a ship, though I'm sayin' it myself, there's a hunder that scunner her. She's fairly flyin', the sweet lass.'

We took the captain's advice, and worked with a will among the crew, sweating, drenched

with spray, tasting hard physical labour. Great seas, green in their depths, topped with foam of dazzling white that broke glittering in the sun into jewels, chased each other unceasingly round the little craft. To me, at sea for the first time, the sight of them, their crunch on our bows, the screaming seagulls lurching round us in the wind, the tang of the keen salt air, brought an exhilaration, a sense of speed and freedom and expectancy as the *Gannet* raced along, every curtsey of her bowsprit bringing us nearer the Moray Firth and (if we could only find it) the last berth of the *Marie des Anges*.

Bertrand and I spoke little about our venture, and nothing at all of the events that had lately befallen us. These had done our nerves no good. Tacit avoidance of them was best; wherefore we toiled on, sweating and pulling mightily; punctual at meals; lying down at night with tired muscles in a grateful oblivion of sleep. The rough physical toil held a tonic quality; and by the time we rounded Kinnaird's Head, and the *Gannet* spread her wings for the Firth, I felt as strong as I was before my wound, and Bertrand was clear-eyed and alert.

We entered the great sea-arm running free before a north-easter. The glass had fallen. It was blowing hard; and the *Gannet*, getting what Anthony called 'the rug o' the tide,' fairly raced along. The captain's eye scoured the Firth warily for the revenue cutter; but the only sail we saw was a bluff-bowed old carrick, showing the Dutch flag, that lumbered past us, her timbers groaning in the heavy sea.

We held a council of three that afternoon. The skipper thought we would make Spey Bay by nightfall. There he would sink his 'crop' of brandy if the signals were clear. Bertrand and I were to go ashore in a boat the receivers would bring alongside the lugger to take off the lace. The *Gannet* would 'stand off' until morning, when the 'crop' would have been sunk, and would then come into the port of Garmouth at the mouth of the Spey. There the captain would join us at the 'Norway Lass,' an inn which he commended to us heartily.

'I'm a kent man there,' he said, 'and I'll warrant I'll get some news o' the wreck for ye!'

AN OCEAN TRAGEDY.

A REMINISCENCE OF CAPTAIN A. PHILLPOTTS, R.N., A SURVIVOR.

By PERCY CROSS STANDING.

IF it be a first condition of high tragedy that it should bear upon it the impress of its reality to truth and life, then the present writer has listened to few more thrilling stories than that unfolded to him by Captain Arthur Phillpotts, R.N., almost the last survivor of a notable but long-forgotten ocean tragedy of the 'sixties.

It is merely a plain, unvarnished tale of the heroism, devotion, and unconquerable discipline displayed by British seamen when confronted by a peril which was rendered all the deadlier by reason of its utter unexpectedness.

It was on a fine December morning in 1864, on a bright and beautiful sea, that H.M.S.

Bombay left her anchorage off Monte Video under easy sail. She was the flagship of Rear-Admiral C. G. Elliot, commanding on the South American station, though he was not on board at the time. Her commander was Captain Colin Campbell, and she carried sixty-four guns and a crew of six hundred and fifty all told. The *Bombay* was built of teak, and had originally been an eighty-four-gun ship, but was at a subsequent date lengthened and fitted with steam-power.

She was still leisurely cruising off the mouth of the Rio de la Plata—in fact, the ship had lately been engaged in a harmless, necessary target-practice at ‘general quarters’—when suddenly the dread alarm of ‘Fire!’ rang out on the warm, still air. ‘I was then a sub-lieutenant,’ Captain Phillpotts told me, ‘and my station was that of mate of the main-deck. At the conclusion of the general exercise, after seeing my deck cleared up, I went below to the gun-room, but had hardly got there when I heard the fire-bell calling all hands to their stations.’

Although the fire had only been discovered a few moments previously, the old teak-built man-of-war was already beginning to be a mass of roaring, crackling flames. Great quantities of water were used as soon as the pumps could be manned, but it was all of no avail. The thick black smoke grew denser and yet more dense, the lurid flames shot up higher and higher, but the heroic crew stuck to their posts in face of the direst peril. The old *Bombay* was doomed! It was now that Lieutenant Phillpotts received instructions to see ‘all hands off the main-deck.’ Whilst carrying out this order he found a gallant youngster named Stephenson, a naval cadet, busily engaged in throwing overboard the thirty-two-pounder live shells which were stowed between the beams overhead. He said he had been told that if the ship ever caught fire it was ‘the proper thing to do.’

‘I sent this plucky youngster up on deck’—again I quote the veteran Captain Phillpotts’s own words—‘and I am happy to say that he was amongst those who escaped. When the main-deck was clear I went up the fore-hatchway, where I met Smallhorn, our assistant-surgeon. He had been attending to the sick, who were passed into the first boats that were lowered. If he had gone on deck with them he might have been saved, but he evidently remained by the sick bay, and died a hero’s death. Anyway, I never saw him again.’

The boats were now hoisted out. As Phillpotts had no station on deck, he went up independently, and had just reached the fore-yard when he heard a loud roaring, and saw a column of smoke and flame coming up the main hatchway and spreading rapidly along the gangways. The tragedy was almost consummated. Many men were already in the sea. A petty-officer in the stern-sheets of the launch was

caught by the flames and burnt to death. Those on the fore-castle were now cut off completely from the after-part of the vessel.

Unfortunately many of the poor bluejackets struggling in the waves were unable to swim, a circumstance which sadly swelled the heavy death-roll. The boats picked up as many as possible. Lieutenant Phillpotts eventually jumped overboard, and was in the water for a considerable time—about three-quarters of an hour—before being rescued. He vividly recollects seeing one of the ship’s petty officers swimming near him, and, hailing the man, Phillpotts asked how he was getting on. ‘Pretty well, sir,’ cheerfully replied that dauntless hero. ‘I think I can keep afloat for another ten minutes!’ Happily this brave fellow was among the rescued.

Eventually young Phillpotts was himself picked up by the *Bombay’s* gig, of which he promptly took command and proceeded with the work of rescue. It was a risky enough business, as well as a fearsome sight—the dying still struggling between fire above and water below; shells bursting ‘tween-decks as the conflagration neared the magazine; men drowning, burning, or being killed by the ponderous anchors falling upon them as the anchor-ropes burnt through; and over and above all

The bubbling cry
Of some strong swimmer in his agony.

It is noteworthy that the doomed vessel did not blow up until several hours after she first took fire, this being attributable to the care with which the gunner and his mates had flooded the magazines. There were many individual acts of coolness, heroism, and self-surrender. As the foremast fell over the side the grim remark came from a seaman, ‘Well, she’s out of commission at last!’

But the end was not until after eight o’clock at night, when the *Bombay* blew up with a terrific detonation and a blaze of flame like a thousand rockets going off—a beautiful but withal a terrible sight. By this time the sea was getting up, and the wind increasing.

None too quickly did various vessels that had been in the offing at the time of the calamity come up and take the lost ship’s boats in tow. These rescuers included the United States pilot-boat *West Point*, the mail-steamer *Rio de la Plata*, the brig *Water Lily*, the German brig *Anna*, and a French cruiser, the *Fénélon*. Many of the rescued mariners were nearly naked. Mr Phillpotts’s attire consisted of a shirt and a pair of socks, and the shirt he sacrificed to make bandages, receiving an old coat in exchange. In common with others, he had discarded most of his clothing when he was forced to take to the water.

Mustering the ship’s company was a doleful and depressing function. In all, six officers and one hundred and seventeen men failed to answer the roll-call; though a few of these, it turned out;

had been saved by two boats which took a longer time than the others to reach Monte Video.

On the following day H.M.S. *Triton* and *Spider* arrived, bringing these two boats in tow, together with four officers and twenty-nine men, leaving the total number of those who had perished at ninety-two. Captain Phillpotts was good enough to diarise for me, in nautical fashion, the course of the tragedy as follows :

3.35 P.M.—Fire broke out in the after-hold.

3.52 P.M.—Fire gaining. Quarter-boats ordered to be lowered, and sick passed in.

3.55 P.M.—Men forced from below by smoke and flames.

4 P.M.—All boats out except second launch. Fire coming up after-hatchways, burning awnings and sails, and forcing all hands over the side, many getting into the boats, which pushed off as they were filled ; others clinging to the sides.

4.15 P.M.—Mainmast went over the side, falling on the starboard quarter.

4.40 P.M.—Mizzenmast similarly fell over the side. Boats picking up and taking off men from the blazing ship.

5.5 P.M.—Foremast fell over the side, the ship a mass of flames fore and aft.

8.25 P.M.—After-magazine exploded and ship went down.

Naturally a very Happy Christmas could not be spent ; but Captain Phillpotts pays a warm tribute to the kindness received by the survivors of all ranks. This was especially marked in the case of the French Admiral Chagneau and his officers and the crews of the cruisers *Fénélon* and *Astrée*, which, after 'standing by,' took off nearly two hundred of the men and officers who were endeavouring to save themselves. Later the remaining crew of the ill-fated *Bombay* reached Old England in a specially chartered steamship.

The usual court of inquiry was held, taking place on board the old *Victory* at Portsmouth, when the captain, officers, and crew of the lost man-of-war were formally exonerated from all blame.

I may add, as a point of interest, that another of the dwindling band of survivors of the *Bombay* disaster is Admiral H. J. Carr, who in the 'sixties was, like Captain Phillpotts, a young lieutenant. The latter passes the autumn of his life in the delightful quietude of a South Devon watering-place.

R A M P U R.

By G. ROBERTSON-GLASGOW.

THERE is a little native state in Rohilkhand under the United Provinces of India, partially enclosed in a bamboo hedge seven miles long, and so thick and strong that it can defy a cavalry charge. Doubtless the hedge in its time has often been a first line of defence to the state and its rulers. But the little state is now drowsily content to remain the background of a passing pageant of splendour, whilst rulers have come and gone, and men and manners have changed, and even India itself is not quite the India of its younger days ! Very likely Rampur is still charming, and is becoming more modern with every passing year ; but when I first saw it it was very interesting, and well worth the few days I spent there.

The Nawab was a young man, the rather decadent descendant of a fierce and warlike ancestry, one of whom rendered important services to the British during the Mutiny ; and the chief interest of his life seemed to centre in his jewels, more especially in the emeralds and pearls which he showed us with fingers literally trembling with eagerness. He had portmanteaux of pearls all set in Paris, an epaulet of emeralds, a sash of pearls terminating on the hip in tassels of pearls, and splendid necklaces and pendants, from which hung pear-shaped emeralds the size of chandelier-drops. He really knew the value of the jewels, and had bought several himself at tremendous prices. I

believe he paid a lac of rupees for five pearls ; and an ill-timed jest about the key of the strong-room made him stammer with horror and dismay. With these rare and beautiful stones there were a silver tea-set for twelve persons, a gold tea-set for six, and also enormous chests full of gold *mohurs*, for his revenue was paid in gold coins on his birthday—and he had two birthdays in the year. Apparently no money was invested, and no bank was trusted ; but the rivers of gold flowed into those capacious chests, and when they ran low the timely birthdays refilled them.

At dinner he wore the uniform of an officer of the Royal Artillery, with a star of diamonds blazing on his breast ; and when he was tired of sitting at the table with his guests he retired into a sort of crystal sentry-box in a corner of the dining-room, with crimson velvet curtains as a background, and one very bright electric light falling from its dazzling roof on to his rather saturnine face and wonderful star.

The table was a beautiful sight, with its old cut-glass reflecting the lights everywhere ; and amongst the sixty guests was a young French girl, in wonderful garments, the wife of one of the Nawab's uncles. She was his third European wife, and when he tired of them he just cast them adrift light-heartedly, and 'married' again. There was something so tragic in this girl's looks that it was not difficult to guess that another

crisis was impending, and another 'marriage' on the *tapis*; and yet, if girls—with no knowledge of the laws which rule the native marriages, and no safeguards proposed or assured—are allowed to marry Mohammedans, this is almost certain to be the end. With a Mohammedan woman a large dowry is paid; and, though her husband may divorce her at any time for the most trifling reason, he cannot send her away without paying back her dowry in full; so that, whatever happens, she is not, and cannot be, destitute. But these unfortunate European girls have generally no money at all, or, if they have, it is given to the husband unconditionally as a gift, not as a *dot*, with the result that when he tires of them they go out from his harem absolutely hopeless and penniless.

The prison was undergoing a process of transformation at the hands of a capable and very energetic English Commissioner of Police! He found the jail a luxurious hotbed of vice and a nest of intrigue. Once every week the gardens were thronged with palanquins, from which emerged veiled wives and mothers and sweethearts, who sat with the prisoners in the cool shadows, and spent a light-hearted and happy holiday, coming and going as they pleased. One man who had, I think, been in jail for seven years boasted that he had never eaten a prison meal. And it must be remembered that many of these men were murderers, and wore the scarlet uniform of the 'lifers.' Amongst them were the convicted murderers of General Azim-din, who were certainly not entitled to the amenities and privileges of a merely nominal punishment. So it was not long before there was a great change in the discipline of the place, and the light-hearted Thursday holiday departed with the palanquins, whilst the prisoners returned to the usual monotonous employment of the jails—the making of carpets and a certain rough unglazed blue pottery of picturesque designs.

The Zoo was really worth more than a hasty visit; but during our whole stay we had the doubtful pleasure of being awakened every morning by the yawning of the tigers, who lived the simple life outside their cages, chained to little wooden bedsteads, which they could move with apparently great ease and in a rather alarming manner. I refused a pressing invitation to be photographed as 'the Lady and the Tiger,' sitting on the charpoy between the two terrible wild beasts; but a more valiant countrywoman volunteered in my place. Unfortunately the film was so blurred that only the tigers came out and not the lady—which was painfully suggestive.

The keeper of the animals let out the black puma once by accident, and if there is one animal more unsuitable than another for roaming about at large in an inhabited district, it is a black puma! It killed several people, and

pursued three unfortunate coolies to the roof of a house, where it was bravely captured by the keeper, who received an adequate reward from the Nawab. After that, however, the puma made a tiresome habit of escaping and eating somebody whenever funds were low with the guardian of the Zoo, until the Nawab grew suspicious, and ordered that whenever an animal escaped the keeper should be hung up by his thumbs until it was recaptured, and announced that no further rewards would be paid. The puma did not escape again, and all was peace.

The last place of interest we saw was the library, full of precious books and coloured prints, evidently the pride and joy of their guardian, who was delighted to show them and exhibit their beauties. And they were beautiful, folded in their numerous little brocade wrappers of oriental colouring, and tied with delicate gold tissue. The most precious of all were two small copies of the Koran, one transcribed by Baba, and one by Akbar's own royal hands; not unworthy offerings from those who scorned to offer to Allah of that which cost them nothing!

So we come again, by a circuitous route, to the entrance of the little state and its enclosing bamboo hedge. The deep-blue mist is travelling slowly across the Maidan outside, and creeping about the old walls and narrow roadways, making it look like a beautiful enchanted city of which some fairy prince has found the key.

A FORGOTTEN SHRINE.

THE sun was slowly setting when I found
The church wherein lay all my father's line,
And as a stranger came I to the land—
A pilgrim to a shrine.

The soft September twilight was a veil,
Half-fallen from the iv'ry bar of night;
The scattered leaves were incense; in the west
There glowed a holy light.

It seemed a shrine unvisited by man—
Long lost, forgotten in the busy day—
And yet I felt a priest still lingered there
Lest one should come to pray.

A wilderness of grass and sweet wild flowers
Across the broken tombstones waved and met,
Crude monuments of love in mem'ry raised
To those whose suns are set.

And yet not set; for the eternal sun
Seems lost when it has vanished from our eyes,
But in the west we only watch it sink
To dawn in other skies.

And so with those o'er whom we watched and wept,
In that dread even when we heard their breath
Grow faint and fainter: they have but passed hence—
For, lo! there is no death.

MADGE M. ELDER.

Chambers's Journal

SEVENTH SERIES

THE HEART OF THINGS.

By HENRY LEACH.

LONDON, Yesterday.

WE read this in a German newspaper: 'They call us barbarians; let them.' Then, at the time that the great *Lusitania* sank, the leading journal of Cologne, speaking for Germany as authoritatively as any other, murmured: 'The English, of course, will make a terrible cry about this so-called barbarous method of warfare by the Germans.' There is nothing surprising in these sentences; but, properly considered, they may lead to some sound thought and wise conclusions. You will perceive that the grossness of the Germans is not so thick that they are not fully conscious of its own existence. The common reptile and the wild boar are not conscious of evil that they do, and are not blameworthy. But the Germans are a new product of a world that has somehow gone astray, for they combine as never before the capacity and the desire for inflicting the most inhuman barbarities and sufferings upon their fellow-creatures, while at the same time they possess a very high and keen intelligence which renders them entirely and completely conscious of the harm they do and the suffering they cause. In this they differ from any other race that has ever aspired to conquest or dominion. Previous barbarians have had no such complete understanding and appreciation of their own inhumanity. The Germans have considered their own case for forty years; they have calculated and decided; they have adopted barbarianism with deliberation, precision, and system, because they regard it as a sound military expedient for the futherance of their political designs. In one thing the Germans are sincere; they look upon their own form of civilisation, their own system of life and advancement, as being the best; and they therefore consider they are justified, for the good of the world, in imposing it on the rest of humanity. It is a peculiar obsession, for which the world, is paying the most appalling price; but there it is. They destroy happy Belgium; they slay women and children; finding their shot and shell not sufficiently effectual, they use asphyxiating gases with which to poison their enemy to the death; and they send to the bottom of the sea, with its innocent human freight, the finest emblem of the conquest of man over the difficulties set him by Nature for the test of his

capacity, the magnificent *Lusitania*, which sailed the ocean as a sign of the will of man to work and achieve by the most peaceful means. She was a shuttle that in this ocean frame was constantly weaving the close texture of understanding. The Germans sank her.

* * *

Twice I crossed the Atlantic Sea on the *Lusitania* that is lost; and all who know anything of travelling between the Old World and the New feel with me a peculiar sense of the immense pathos of this disaster in the matter of the ship herself, and with no reference in this particular thought to the enormous sadness of the human tragedy involved. There was nothing like her. She was such a happy ship! Perhaps when leaving England for the other side of the sea the sentiments we associated with the *Lusitania* were not by any means so keenly felt. When one is at home interest in the ship that is to carry one away is comparatively small. Unless there is business, and it is urgent, you may be indifferent, indeed, as to whether she is fast or slow. Almost any ship will do for this emigration. But when one is coming home—returning home, you understand—it is another matter. That sense of coming home across the Atlantic is a tremendous thing; the feelings of love of land and kindred well up hotly in the heart, one yearns for the oncoming happiness, and a beautiful and happy ship is in consonance with the spirit of the returning voyager as nothing else could be. These feelings may only infrequently have been discovered in themselves by Atlantic passengers; but I know that they exist in the hearts of nearly all of them. When in New York nothing but such a ship as this, or her sister, would ever satisfy me for the home-coming. For us of England she would give her heels to Nantucket and Fire Island, and away, with happiness aboard, she would speed for the green slopes of the south of Ireland, the next to be seen. You would make friends with the *Lusitania* soon; quickly she passed the mere acquaintance stage of being simply a ship. Having once been with her for five days and nights, you would to others of equal knowledge and friendship always call her 'Lucy' afterwards. It is an Atlantic way. Her sister, *Mauretania*, is called 'Maury,' and the difference

of names of itself nearly suggests the only one that there is in the ships save that they were reared in different docks. Does not the *Lusitania* of itself suggest the light, a certain delicacy, a feminine softness, a sweet lady? And so was the *Lusitania* that the Germans sank. Indeed, she was a lady among the ships, a queen of all. In the name of the *Mauretania* there is a somewhat more sombre touch, a trifle less of delicacy perhaps. Like the ship that now lies at the bottom of the sea near to the Head of old Kinsale, the *Mauretania* is fine and very beautiful, and the difference between her and her departed sister is that her appointments are of a darker kind, the brown of wood on walls, oak and mahogany, rich and warm. The *Lusitania* was all lightness, white in the saloons, with pale blues and delicate pinks and gentle flowery upholstery, all daintiness. She was the blonde, and her sister the brunette.

* * *

A number of remembrances rise now in a ship-lover's mind. We hear many things of the luxury of the *Lusitania*, of the 'palace,' the 'floating hotel,' and the like; but while it is good to be clean and comfortable, and have the satisfaction of cultivated life around, it was not mere luxury in the sense in which that term is generally used that made this vessel so much beloved by voyagers. It was just the supreme comfort that she afforded, the fine sense of home. I remember, when sailing homewards on the ship rather more than a year ago, I made one day a great exploration with the officers of every nook and cranny in her, and what a wonder-ship she was! We calculated that perhaps she lost a yard or two of her proper mileage for the hour because one who writes with ink must needs try a mightier job among the furnaces and cast a shovelful of coal not half far enough to the back of the roaring flames. But with ink a landsman could still make good, and upon a night he gave poor Mc'Cubbin—drowned with the others—half a rest, and produced for the next morning the *Cunard Daily Bulletin*, which is printed daily on the ship at sea. Of the many interesting experiences that fall into every writer's life, this was one of the most novel, and perhaps exhilarating, when, with our sailing town asleep for the night, and the ship as silent as she could ever be, lights in the halls and corridors low, the news was flung out to us by wireless from the American side or from Poldhu in Cornwall, telling all that was happening from the landed world—news direct from London, Paris, Rome, and many other places, and also from Berlin. As she slipped along the water to meet the rising sun, we, editorially, would have some newspaper kind of talk, in an old-fashioned way, with our old ally the printer; and as the first streak of light spread before the bows would steal with our moist copy of the morning's paper along the street with the crimson

carpet to our own home at the end, with a quaint, artificial sense of duty done while the people slept. Poor printer who fixed up the headlines with me then! He too was drowned! And there is remembrance how on that voyage they took me once into the clammy chamber aft and low where the tremendous rods of steel reached out into the water and turned the screws at the end of them. In the whole of a ship that is the most impressive place.

* * *

But there is another recollection of a very different but equally vivid kind of a voyage on this ship a year before. We were a happy party who were given seats at the captain's table; but there was one dark spot, and it was made by a young German man of business who had all the worst characteristics of his people, and not a shred of intelligence or good taste to prompt him to hide or suppress them on such an occasion as this. Rather did he, like most other modern travelling Germans, aggressively assert his vulgarities, his unreadiness to conform to the social ways of civilised Europe. That has certainly been characteristic of these rough, arrogant apostles of 'Kultur.' Any world they ruled would surely have a very piggy, dirty look. Well do we remember how the Germans behaved when first they determined, in their copying of the English travelling ways, to begin to winter on the French Riviera. I was there, at Nice and Cannes and Monte Carlo, when the first Germans came, and the season afterwards when there were more of them, and in the third season when they were everywhere; and some of the hotel proprietors, with too much and too stupid cupidity, changed the titles of their establishments to Kaiserhof and the like. If there is a place in the world where nice manners and ways count for more than they do elsewhere, it is here in the sunlight of winter on this strip of the Mediterranean shore, where nearly all the visitors have some real cultivation of mind and thought and feeling, and in a proper way of unselfishness would please each other for the good and happiness of the community that is established hereabouts for some weeks. But the coarse Germans who went there delighted boorishly to trample on this excellent social system. It pleased them to walk into drawing-rooms in the evening with dirty brown boots and stained clothing that reeked of wear in Hamburg and Munich, and to wear their hats and smoke their cigars as though there were nothing living to which need ever be extended any gallantry or consideration. At the dinner-tables it was the same—dirty hands, dirty linen, ugly manners. One thing was certain, that if there had been no war the season of southern France in the winter-time was ruined for ever by reason of the German incursions. Why, it became notorious that most of the sly thefts that were made from the tables in the casino at Monte Carlo were made by these Ger-

man raiders. This was the German in times of peace when he went abroad to spend his marks among the people of 'inferior' civilisation to his own! Of this type was the young German who got for himself, by some means which were mysterious to us, at the beginning a seat at the captain's table, and in a highly Germanic way made the most of it. For the first two days he contented himself with coming to the table in deepening stages of sartorial neglect, and in the matter of conversation with contradicting most things that were politely said to him by others. Then, when fearing to be avoided, he indelicately raised questions of the superiority of Germany and particularly of her quality in arms, the burden of his argument being that Germany did not wish for any war, but that if she went into one it was woe to the rest of the world! This on the *Lusitania*! You may almost imagine the rest. It was not to be tolerated on a British ship, and in a good English gentlemanly way the fellow had this idea properly conveyed to him, with the consequence of his subsequent silence. One day early in the voyage, when he was ingenuously revealing on deck some of his own bad manners and ways, we asked him how he came by his seat at the best table in the ship, and he answered that he had come aboard many hours before sailing, and bribed a servant to mark him for it, the mistake being afterwards

overlooked. If this was a bad specimen of the German in some ways, yet in his simple candour he was better than his brethren in many others, and for a little while on the open sea he was taught humility, for which he hated us.

* * *

The British people, on the whole, bore the murder of the *Lusitania* with a splendid dignity. It could not have been better. There was weeping for the slain, and a show of strong feeling which took the form of rioting in some places. By this time we understand, and we know that the Germans know we do. One does not accuse the wild boar of being a beast. The man does not talk to the maddened beast, or regard him in any other way than contemptuously and as a pest to be destroyed. If need be we and our allied friends will do this world's work with no other assistance. We are strong in heart and cause, and not yet shall we call to the unwilling for help. It is a good thing in these days to take a walk through Trafalgar Square. Nelson's Monument, they say, is poor stuff in art, but it is tremendous in meaning and inspiration. But it is of Landseer's lions that I think, and not the column, when I say it does one good to walk at present through Trafalgar Square. Here is dignity! Nothing better has ever been modelled. Here are strength and mighty simplicity! This is the British lion, silent, stern, and purposeful. Remember that.

BETTY GRIER.

CHAPTER IV.

TOM JARDINE the grocer—Betty's next-door neighbour—will be thirty-four years old on the 23rd of January next. He is to a day exactly four years my senior. I remember it was when his mother and Betty were putting out clothes together in the back-green that I, a boy of five, heard for the first time that we had a birthday in common.

To me the fact vested Tom with a special interest. I looked upon him in more than a mere neighbourly spirit. Though we were rarely associated in our boys' games, we often casually met about the doors or had disjointed conversations through the garden hedge; and on these occasions the desire was always strong within me to talk of our birthday, and to ask if he wasn't wearying for the 23rd to come round. And when that auspicious date was ushered in, and my birthday-cake, in all its white-iced glory, was ceremoniously placed before me at table, I used to wonder if Tom had one also, and if he, like me, had the honour of cutting and distributing it.

On looking back, I cannot remember when the Jardines were not our neighbours. Long ago Robert Jardine, Tom's father, was a tenant of ours, and twice a year, at the Martinmas and

Whitsunday terms, he called upon us; and when the rent had been paid and sundry repairs and alterations agreed upon, he and my father drank a glass of wine together. It had, however, long been the height of Robert's ambition to be the owner of his own roof-tree. Times then being good, he soon saved the amount necessary to effect a purchase; and after many calls and conferences, terms were ultimately arranged to the satisfaction of both vendor and buyer.

Tom was the youngest of a large family, the other members of which had all emigrated; and when Robert Jardine died—his wife had predeceased him by a few years—there was no one else to look after affairs. Tom at once gave up a responsible position in a wholesale grocery establishment in Glasgow, came south with a wife and three young children, and took over what I now understand every Thornhill villager believed to be a dying, if not an altogether dead, concern.

All these changes had taken place in my absence during these past fourteen years; but it was nevertheless pleasing to me to know from Betty, shortly after my return, that as neighbours the family was still represented, the more so as the representative in question was none other than my old friend Tom.

In describing my attic room I omitted to say that it has a little round gable window through which, from my fireside chair, I can look down upon the Jardines' back-yard. Long ago I used to sit here and watch old Robert grooming his horse, cleaning his harness, and packing his long-bodied spring-cart with bags of flour or meal, and grocery parcels of tea and sugar, for distribution on his long cadger rounds.

During the past few weeks my interest has often been centred on his son similarly employed. Tom sings and whistles cheery tunes as he works, and his iron-shod clogs make a merry clatter on the stone-paved court. His wife and the two eldest children—blue-eyed, curly-haired bairns they are—give him willing help, and standing in his cart or on a chair placed beside the wheel, he cheerily receives and checks off in a weather-beaten note-book the various articles for his country clients.

Like Nathan, Tom is no lie-abed in the morning. Of necessity he must be up betimes, for his journeys are often long and his days are always too short. When Betty is preparing the early breakfast I hear Tom's ringing footstep outside, the turning of the key in the stable-door lock, and the anticipating whinny of the gray mare. Then a horse-pail is filled from the tap at the stable door; a minute later it is returned empty and deposited outside; the lid of the corn-bin, which has been poised on its creaky hinges, descends with a bang, and I know that his faithful dappled friend has her nose buried in countless piles of sweet-smelling corn.

Betty is not an inquisitive woman, nor does she interest herself in a meddling way in her neighbours' concerns; yet her big kindly heart and her never-failing sympathetic nature invite many confidences, and she is therefore more fully versed in what I might call the inward life of those around her than many of a more zealously prying and news-vending disposition.

We were talking one day about the Jardines of a past generation, and our conversation naturally turned to Tom. I commended him for his industry, for his sobriety, and for the undivided attention he gave to his business, and finished up by asking if he was a successful man. Betty made no reply; but she shook her head doubtfully, from which I argued that it was not all sunshine and whistling and singing with our young grocer neighbour; and as she showed no desire to continue the conversation I allowed the matter to drop.

After tea, however, she reverted to the subject, and reopened our chat by asking if it was usual in business for a son to take over his dead father's debts.

In my short professional career I remembered one such case, in which I was interested, but only one, and I told her of it. I didn't go into details, but gave her the bald outstanding points; and after I had finished she said,

'Ay, and that's the only case ye ever heard o'.'

'Yes, that is so, Betty,' I replied.

She was standing at the round gable window, vacantly looking down into our neighbour's garden. Then I saw her eyebrows begin to pucker, and I knew there was something on her mind.

'Maister Weelum,' she said at length, 'I've nae concern in the ongauns o' the folks aboot me, an' I never talk aboot them. But ye asked me regairdin' Tom Jardine, an' I'm no betrayin' my confidences when I tell ye that young Tom took ower his dead faither's debts, so that will be twae cases ye ken o'.'

'Tom Jardine!' I said with surprise. 'Surely Robert Jardine wasn't in debt when he died?'

'That he was, Mr Weelum—the mair's the pity. Ye see, for a lang time—I micht say for at least five years afore he died—he wasna able to gang his roons; in fact, he was barely able to stand ahint the coonter. Younger an' mair active competitors took up the same gr'und; an' what wi' failin' trade, increasin' competition, cuttin' prices, there wasna a livin' in it. Then his wife had a lang, lingerin' illness, an' when she slippit awa' he kind o' lost heart. I was often wae for him, puir man, an' I did a' I could for him in my ain sma' way. Except to yin or twae he keepit a smilin' face, though, aye wrote cheerily to Tom, an' gaed to kirk an' market as lang as he was able wi' his heid in the air; but, losh me! when his time cam' it was nae surprise to me an' yin or twae mair that the whole affair—shop, hoose, an' business—didna show much mair than ten shillin's in the pound. Tom—him that's doon there noo—was in a guid way o' doin' in Glasgow, an' nothing wad ser' him but he bood come hame an' tak' things in haun'. He was strongly advised to have nothing to do wi' it, an' to let the creditors handle what was left as best it was likely to pay them. But Tom said, "No." All he asked frae the creditors was time an' secrecy as far as was possible as to how things stood, an' frae the Almighty health an' strength, an', given these, he promised to clear his dead faither's name an' see every yin get his ain. That's three years ago past the May term, an', honour an' praise to the puir laddie, he's nearly succeeded. But it has been a terrible struggle for him; an' had it no' been for his determination, his sobriety, his pride in his faither's guid name, an' abune a' the help o' a lovin' wife wha's a perfect mother in Israel, he wad ha'e gien it up lang or noo as an impossible, thankless job. Nathan an' me lent his faither sixty pounds. We had nae writin' to speak o', only his signed name. I showed the paper to Tom shortly after he had settled doon here, an' instead o' questionin' it he thanked us for our kindness an' promised to pay it back in the same proportion as the ithers. Up to noo we've got back thirty pounds. I

was in his shop the ither day, an' he said he thocht he wad be able to gie's anither ten pounds at the November term. What think ye o' that noo, Maister Weelum?'

'I think your neighbour is a splendid fellow, Betty, and I would like to shake hands with him. Have you the paper beside you on which his father's name appears for sixty pounds?'

'Ay, that I have,' said Betty. She went downstairs, and returned a minute later with a sheet of notepaper.

I glanced at the unstamped promise, and smiled. 'Betty,' I said seriously, 'are you aware this is not worth the paper it is written on?'

'Ay, perfectly,' she said with unconcern.

'How did you find that out?' I inquired.

'Oh, when I showed it to Tom Jardine he used exactly the same words as you did; but, said he, "My faither signed that. I have every confidence in you an' Nathan. My faither an' mither thocht the world o' ye, an' wi' my assurance that ye'll be paid back, I tender you my best thanks for your kindness in time o' need."'

Betty folded up her worthless document and put it in the breast of her gown. 'An honest man like Tom Jardine makes up for a lot o' worthless yins, Maister Weelum,' she said as she lifted her tea-tray; and I looked through the wee round window to Tom's back-yard with an increased appreciation of the coatless and hatless grocer, who was sitting down there on an empty soap-box with a long needle and a roset-end, mending his old gray mare's collar.

It has rained continuously for three days, and according to Nathan something has gone very far wrong, as St Swithin's Day from early morn to dewy eve was cloudless and fair, and accordingly we had every right to anticipate forty days of dry, fine weather.

Harvest is early with us this year. The corn, which was waving green when Betty and I drove south from Elvanfoot, is already studding the fields in regular rows of yellow stooks, and but for this break in the weather it would even now be on its way to the stackyard in groaning, creaking carts. The Newton pippins on the apple-tree at the foot of the garden are showing a bright red cheek, and the phloxes and gladioli in the plot at the kitchen window are crowned with a mass of bloom so rich and luxuriant that every one of Betty's cooking utensils reflects their colourings and appears to be blushing rosy-red. During these past three days I have missed Tom's cheery song, and I am beginning to wonder if the gloomy weather has chilled his lightsome heart and silenced the chords of his tuneful throat.

Time was when I loved to be abroad on a rainy day, whether as an unprotected boy fishing away up Capel Linns and Cample Cleugh, with the rain dribbling down the neckband of my shirt and oozing through the lace-holes of my

boots, or as a man with waterproof and hazel staff, breasting the scarred side of Caerkettan or the grassy slopes of Allermuir, with the pelting, pitiless raindrops blinding my eyes and stinging my cheek, and the vivid fire of heaven lighting up Halkerside and momentarily showing the short zigzag course of that 'nameless trickle' whose rippling music the Wizard of Swanston loved.

How I enjoyed these Pentland rambles, alone in the rain and the souging winds! Underfoot, the dank, sodden grass and the broken fern; overhead, the sombre sky, the scurrying clouds, and the drifting mist; on every side the grassy mounds of the Dumpy Knowes, with their shivering birks tossing to windward, and a rain-soaked hogg beneath every sheltering crag. Alone, yet not alone; for a Presence was with me, guiding me on, showing me through the gathering gloom the sun-bathed crown of Allermuir, bringing to my ear from out the rage of the storm the wail of the curlew, and summoning to my side the plaided shepherd 'Honest John' and his gray rough-coated collie Swag.

Ah, these are memories only! memories only! for Cample Cleugh and Capel Linn are lost to me with my boyhood. No more am I the strong, able-bodied lover of the open, moving with firm, sure step among scenes which a master's touch has made immortal; but a poor, crippled, pain-racked invalid, as parochial in feeling as in outlook, sitting in an easy-chair by an attic fire, watching through a rain-washed window-pane a scene which fills me with forebodings and touches my heart to the very quick.

Down there in the courtyard, where the water in the imperfect pavement is lying in muddy pools, Tom Jardine, hatless, coatless, and regardless of the splashing rain, is walking to and fro like a lion in his cage. His face is set and white, his finger-tips clenched in the palm of his hand, and there is an anxious, troubled expression in his eye which recalls memories of unfortunate, harassed clients. For a moment he stands with feet apart and eyes dolefully fixed on the wet, sloppy flagstones. A door quietly opens, a tiny, smiling-faced figure darts through the rain, and in an instant two round, bare, chubby arms are encircling his knee and a fair, curly head is nestling against his thigh. But there is no fatherly response to the loving embrace, no reply to the childish prattle. With a jerky wrench Tom frees himself from the wee, cuddling arms, and two wide-opened, surprised blue eyes follow him as again, in thoughtful measured tread, he walks up and down and up and down. Then red dimpled knuckles are pressed into these two blue eyes, a sob breaks from a wounded little heart, and Tom comes to a sudden halt. In an instant his clouded face is wreathed in smiles and beams with loving solicitude. Bending down, he lifts

the sobbing morsel ; and as he disappears through the kitchen doorway with the precious burden in his strong arms and his hungry lips pressed against a soft red cheek, I say to myself, with

a heavy, welling heart, 'Tom, you surely have your troubles, but as surely you have the antidote.'

(Continued on page 490).

THE GERMAN CHARACTER.

PART II.

AS I said at the end of Part I, 'this brings me round to the question of Kuno Meyer.' In fact, so soon as the present war broke out in August last I wrote to him from Russia: 'I wonder what you think of this. It seems to me the divine William has gone stark-mad.' This was on an open post-card addressed (very slightly disguised) to Berlin; but, after long wanderings, it seems to have duly reached him many months later in America. His present condition of mind may be imagined from the fact that he thinks (February) that Liverpool is in danger; that the *Blücher* affair was a 'little skirmish'; that we persist in concealing the loss at the same moment of a cruiser and three destroyers; that newspapers giving us true news are unfortunately kept out of England by the wily Government or the censor; and so on. He adds: '*Das muss sich schwer rächen.*' All this was in answer to a reply post-card saying that his (Kuno's) name stinks in the nostrils of Liverpool people, and that 'I hope we shall soon put the divine William in a strait-waistcoat.' Thus matters stand between us; he does not seem to see the least baseness in his own conduct. Kuno Meyer is well known in many Liverpool circles, and equally well known in Wales and Ireland in connection with his Celtic studies, in which he seems to be *facile princeps*. For many years he was at first Lecturer in and then Professor of German at the Victoria University; but, as English students are usually 'muddled oafs,' and correspondingly perfunctory, no doubt Meyer felt that it was 'cutting up a chicken with a beef-cleaver' to waste his time over stupid and lukewarm beginners. At all events, in later years he got junior German assistants of a much less polished type than himself to do the 'dirty' work, and thus found more time for his *magnum opus* on Celtic; until at last Berlin saw its way to buying a ready-made Celt cheap, possibly even then (1911) with a view to making a renegade of him: nothing seems too dirty for the Kaiser and his myrmidons. I remember Kuno's once showing disgust at so much attention being given by the foolish Victoria University to beggarly Chinese, whilst honest Irish was being left out in the cold amongst other deserving subjects for endowment. He was well known in 'county' circles too, as well as in Lancashire. He never pretended to admire English ways—it is only justice to him to say so—and his special aversion among the English

great was the late Duke of Devonshire, with his casual, 'unlearned,' and devil-may-care style: I suspect Meyer must have thought himself snubbed by his Grace one day. Our local Press (I fancy he rarely saw London papers) he considered contemptible; and as for our local Orange processions, excessive drinking, want of economy, football crowds, public-houses, riverside loafers, barefooted children, Sunday-go-to-meeting ways, university management, and so on, his views were often bitter in the extreme. I must confess I did then and I do now agree with him that our social organisation needs the sweetness and light of Matthew Arnold and the *Sittlichkeit* of Lord Haldane in many respects. He was frankly rancorous and jealous; nor do I censure him for that. I only censure him for being a tactless, shabby, and ungrateful sneak. I do not grudge his patriotism (if genuine), but I now suspect he would at any time sell it for a price. He used for some years frequently to come and sit with me in the evenings, and very excellent company he was. He would say, 'What an extraordinary thing it is! Here are you fellows, a small island, who have grabbed the greater part of the world without any particular qualifications or real military power; you are lacking in science, in education, in everything, and yet you calmly impose yourselves on every other country.' I used to reply, 'Well, we have fought our way up; and, anyhow, all foreigners get every right we ourselves acquire. You forget equally that every "Britisher" is a free man, and used to feuding for himself. I admit that we have drifted into being a *Weltmacht*. We need no Government to teach us what to do. Our pioneers go out, and peg away. If they succeed, the Government comes in and supports them; if not, it lets them rip. The secret of our success is that we let things alone; we apply the brake rather than the whip. I sat successfully, with two captains as assessors, at twenty-four, as a consular judge in a big collision case (1873), without any legal training whatever except what my own constable ("usher" that day) "put me up to;" and I was supported on the appeal. Your painstaking and learned people make splendid colonists for us, but it is a remarkable thing that they are apt to fight shy of your own colonies; they appreciate British liberty, and I admit they now improve upon and develop many of our specialities; but they rarely clear

a new way for themselves; there is an apparent timidity about them, and they only show boldness *en masse*, or when backed up by their officials; the very voice of a German has a timid tremor unless he feels he has power behind him. Probably Bismarck felt it when he said: "Bravery in individuals cannot be rewarded very well. Thank God it is the common heritage of the German soldiers." Those Liverpool loafers you speak of are all handy men with their fists, equal before the law, and an English duke would promptly get his head punched in the streets if he unduly interfered with any one of them; and so on, and so on. (As a matter of fact, these very 'loafers' are at this moment bowling 'my Bavarians' over in the trenches.) In 1877, 1883, and 1894 I had opportunity of studying Germans in America (including their chief haunts, Milwaukee, Chicago, &c.), in Mexico, the West Indies, Australia, New Zealand, &c. Suffice it to say that the *Kultur* madness had not yet caught on, and in each case the *Boches* seemed only too glad to be away from Fatherland hectoring.

In 1903, 1906, 1907, 1912, 1913, I had a good overhaul of the whole of Germany, visiting perhaps a hundred towns, including nearly all I had seen before, and inspecting the new fortifications of Heligoland, Cuxhaven, Metz, &c. The chief feature of novelty in all cities was an unconscionable number of rival statues (1) erected by or at the instance of the municipalities and people in honour of their true idol, Bismarck, and (2) erected under the auspices of the Kaiser to his much-belauded 'Wilhelm der Grosse,' whose spook, if it looks down, must disapprove of the exaggerated puffing so persistently undertaken on his behalf by his theatrical grandson, the *retire* Kaiser. Many of these monuments are aggressive and boastful in conception; scarcely a city or village is without one or two; and the most remarkable thing of all is that there is little or nothing anywhere—I only saw one bust, and I also saw Queen Victoria and the Empress Frederick unveil it in 1895 (26th April)—to recall the memory of the Emperor Frederick, under whose English-inspired rule, had he lived, Germany's development would at this moment probably have been a blessing instead of a curse to humanity. Berlin is now a *Weltstadt* of the first order, Munich and Breslau are almost as far advanced, and of course Dresden and Leipzig have proportionally developed; but there is a touch of vulgar display about Berlin's magnificence—as, for instance, in the Siegesallee, in honour of coarse and obscure Electors; in the kulturistic display at Potsdam of the astronomical instruments stolen from Peking; in the magnificent palace near the Schloss dedicated to the Kaiser's horses, which walk up slopes from floor to floor; and the magnificent house-fronts in new Berlin concealing overpacked, miserable, insanitary, and uncomfortable tenements behind their flashy walls. Despite the Song of Hate of to-day, I must

confess, however, that I never discerned the least unfriendliness towards Englishmen—at all events, towards myself and my invariable companion—anywhere in Germany. I should have been clapped into prison as a spy had I done in 1914 (when, however, I only passed through the Kiel Canal) a tithe of what I did quite innocently at Cuxhaven, Heligoland, and Kiel in 1907. The present *Kultur* outburst seems to be an hysterical emotion quite newly generated under the prospects, excitements, and disappointments of war. This is probably the first time in human history that a whole nation has practically gone mad with rage. The curious part of it is that it is not a natural impulse, but one generated under the hypnotic influence of a self-centred half-English monarch, or, as M. Clemenceau puts it, *un souverain odieux et infâme*; and the most remarkable thing of all is that the nation thus demented is the most learned and philosophical in the world, whilst the hypnotiser is both physically and intellectually quite a commonplace man, endowed with an insatiable lust for posing. When the Kaiser was making strange speeches nearly twelve years ago about Khammûrabi of Babylonia, the endless chain of revelation, the final manifestation of divinity in the shape of Wilhelm der Grosse—*Wilhelm der Kleine*, of course, *in petto*—and so on, I happened to be spending an evening with the Meyer family. Kuno's mother, the late Mrs Meyer, was present; a charming, benevolent old lady whose whole stock of 'spite' would not injure a British fly. I remarked, 'Surely it is not possible that sensible Germans can believe this twaddle?' She replied, 'Yes; but, Herr Parker, he is the Kaiser, you know—*er ist der Kaiser!*' Kuno sat silent and smiling sadly. I went on, 'Well, it seems to me that his friends or his Ministers ought to restrain him from uttering such nonsense; it places the whole German people in a ridiculous position. The Kaiser's opinion on history and literature is of no more value than that of any other man, unless he can give adequate reasons and cite authorities for what he says.' As a matter of fact, not so very long after that Prince Bülow did 'strike' at these imperial imprudences a little, and for some time the abashed Kaiser quietly submitted to the muzzle. My impression up to the date of the above conversation (say 1903) was that Kuno Meyer himself (who did not seem particularly well informed in general politics) scarcely took the Kaiser seriously, and, in fact, felt rather ashamed of him. On one occasion ('Boxer' war, 1900) I had remarked, 'It is the Kaiser alone who has started the break-up of China.' He seemed intensely interested, and said, 'No! Do you really think so? Tell me!' He was evidently much in the dark about the Kiao-chow business and the gospel of the sacred person. As an illustration of what Kuno Meyer's historical sentiments were fifteen years ago, I may cite the opening words of his 'sensational' speech

beginning, 'I think *all* history is *horrible*!' This was in connection with other speeches just delivered by Sir Herbert Stephen, Sir Martin Conway, Sir (then Mr) Alfred Jones, and others upon the matter of a lecture I had just delivered about the 'Boxer' war. What Kuno Meyer meant was that all history was a record of national follies, chiefly caused by royal piques and vanity; in short, history was 'war and rebellion,' not 'popular development,' as it ought to be. Is it still his opinion that the history of 1914-15 is horrible? Does he remember that within the past sixty years many of the now abjectly kulturistic and bullied German states have fought against snarling Prussia? As the *Times* of 2nd April suggests: 'What will happen when the plight of Germany can be hidden no more from the population is very difficult to foresee; but when the Government, in spite of its marvellously organised grip on the Press, is no longer able to hide the unfavourable news, the worst side of German character will appear. Then all the hatred against the enemies will be turned against their own leaders, their own Press, for having deceived them, and a collapse will almost certainly follow.'

By the way, Kuno Meyer speaks and writes English perfectly, and has not the harsh voice, ungainly attitudes, and overbearing manner associated with the characteristic Prussian; the 'drawing-room civilisation' which the Kaiser has recently compared unfavourably with *Kultur* had made him agreeable even to ladies. His own brother, the distinguished archaeological oriental historian and successor to Mommsen (this brother Edward came twice to Liverpool), is not quite so 'civilised,' though possibly more primed with *Kultur*; yet I doubt if Edward (who, I believe, is married to an Alsatian lady) would stoop to imitate or even tacitly to approve in spirit his brother's meanness. How Kuno himself has become a 'sneak' is probably explained by the fact that for some years past he has changed the free atmosphere of Liverpool for the bullying priggism and dishonourable intriguing of Berlin military surroundings. But even in the Prussian army I have met fine old gentlemen, many of whom must loathe the ways of the Kaiser, the Crown Prince, the Förstner cliques, and all the dastardly anti-*Wacke* horde. I have also experienced great courtesy by letter. For instance, only last year I required certain specific information on a little-known German family point, and wrote direct to an unknown colonel (whose name had been given to me) at the Headquarters Staff, Berlin. I received a painstaking holograph reply direct—which I still have by me—couched in a style reminiscent of the Duke of Wellington, when ingenious collectors foraged for his autographs, although I was a perfect stranger, and—from a Bernhardi point of view—even belonged to an 'enemy' country. What a contrast between

these old-style officers and the civilian-despising automatons of the Zabern barber-slashing type, whose forced conversation and interminable saluting antics we often used to watch in the hotels of Metz and other large garrison towns!

During my later visits to Germany (1906-7) I thrice saw the Kaiser—once rushing through the Berlin streets in his well-known tootling motor, once with Prince Eitel Fritz at the Hanover races, and once motoring in solitary pose from the castle to the station at Hanover (29th August). Of course it would be indecent to reproach the poor man for not being an Adonis or an Antinous of statuesque perfection; but, apart from that, it is manifest that he is thinking of himself every instant quite as much as of Germany. Rigged up in expansive cape and military trappings to combine *suppressio* with *suggestio*, he can look the ideal war-lord; but he is a man of no size, shapeliness, or figure, and does not take to pieces well. He never appears quite the gentleman in mufti. Besides (so far as can be judged by individuals who cannot approach near to the sacred person), he seems to have a harsh voice, the usual pointed 'Hun' head, and rather a coarse, uneasy, gum-showing, and self-conscious laugh when he chooses to be graciously jocular. What a contrast between an *Allerhöchst* of this type and the old Kaiser; or, say, the gentlemanly and distinguished old Swedish King Oscar the Second, whom I met chatting in a democratic way with a mason on his own staircase one day! On another occasion (20th July 1907) we stumbled upon the King of Saxony and his two sons in the crack Bremen restaurant; they were on the way to Sylt (or some such island) for a summer 'blow.' We had the pleasure of studying this equally commonplace-looking man for nearly an hour. He represents a reactionary Catholic dynasty (under Austrian patronage) over a Protestant and democratic people, who make fun of both King and Kaiser. On a third occasion (not long before his death) I was able to study Marschal von Bieberstein close at hand for at least two hours: this was in Turkey. He was supposed to be *en habit civil* for the great occasion; but his 'fair round belly' was aggressively wreathed in a shabby brown or yellow cardigan; and had this been exchanged for a white apron he would have made an ideal knight of the spigot or a *maitre de charcuterie*. Of his diplomatic *Kultur* there can be no question, but his manners struck me as being too free and *goguenard* (he was not a Prussian). I saw Prince Henry again at Brooklands in 1911; he still retained much of his 'figure,' and a good deal of the restraint and gentlemanly bearing of the average English naval officer entrusted with command. When he appeared in China to propagate the new gospel in 1898, I am informed (for I was not there) he still retained 'navy manners,' and was quite ready to be 'toasted'

about his megalomaniac brother's antics. Presumably he, like others in attendance on the war-god, has to sit very tight at home, but he evidently possesses (that rare German quality) tact, and it is inconceivable that he can possibly approve the cowardly naval tactics and prisoner-bullying of Kaiser, Tirpitz, & Co.

Bismarck himself declared the German disposition to be envious and rancorous, so these natural qualities are evidently with justice the bottom rock of the impressions left sporadically upon me fifty years ago. The Germans were originally, if we are to believe Tacitus and other writers, free men like ourselves, but they have 'taken' a lot of bullying at the hands of Swedes, Russians, Frenchmen, Spaniards, and others for a thousand years or more, and this usually 'lying down.' Bismarck once said: 'I know hardly another word of which more misuse is made than the word "free." My experience is that every one understands by freedom his own individual freedom, and not the freedom of others.' These bullying experiences seem to have given a craven, if not a cruel, turn to Prussian minds. A century ago they had to beat up for means to circumvent repression; and a universal conscription, veiled in its progressive detail, thus at last enabled Bismarck and Moltke to smash in turn Austria and France. No one can blame them for having asserted their freedom from foreign bullying at least. But there are no greater bullies than men who have been bullied; consequently Prussian bullies have had no difficulty in keeping down the rest of Germany—mostly bullied still, in a civil as in a military sense. From a civil point of view, the Prussians themselves are more bullied by their own *Junkers* and soldiers than is any other German state; but military organisation has developed the 'intensive' organisation generally, and so universal has been this chemical mastery over units, human or otherwise, that some years ago Fili and his Catalinic boon-companions seem to have imagined a convenient kulturistic or military way of getting rid even of the incubus of women. *A propos*, one of the things that astounded me in the arcades of Unter den Linden was the open sale of books which would not have been tolerated

even in imperial Paris or in old Holywell Street, Strand. Hand-in-hand with all this, however, British trade ideas and municipal ideas were wisely developed, and the all-embracing bullying machine here did really good work, for it encouraged in its own interests the original old burgher and Hanse instincts of the people. Municipal government, cleanliness of towns, chemistry, telegraphs, telephones, cab arrangements, education of course, sanitation of markets, control of supplies, certain good points in police effectiveness, suppression of noises, certain good points in railway management—all these have been marvellously developed in the interests alike of rulers and people. In short, as I often said to Meyer, we have much to learn from German organisation, and Germany is in many senses the *best-governed country in the world*. But a prison or a harem might be still better governed; the chief joy of a eunuch is to secure his lord's favour and to gloat over new arrivals of eunuchs. The Germans are governed so well that every one feels 'safe,' always on the understanding that there is obedience. Hence the dazzling prospect of being able to reduce other countries to subjection under the one *Kultur*, not to mention the still more dazzling prospect of robbing the whole world and feeding like superogres upon the liberties and labours of crushed humanity. None but cowards' hearts could conceive the baseness of such a triumph; and if we or any other country submit to such craven slavery without fighting till our last gasp, we or that country deserve our fate. Our only course is to smash the cowards. No one enjoys British or American liberty more than a German; no one is greedier or more clamorous for the 'rights' obtainable under liberty. What galls him is the reflection that whilst Russia, Persia, China, Turkey, the squabbling South American States, &c., have all insisted on more or less 'liberty,' and dashed the ideal of war-godism and despotism to the ground, Germany alone has not had the pluck to stand up for freedom; Germany alone is too craven to be free, and is willing to be the slave of military prigs and dastards, so long (but only so long) as all other men can be forced into that slavery too. Hence these tears.

THE BRIGHT EYES OF DANGER.

CHAPTER XXXI.—ON THE MORAY SEABOARD.

LATE in the afternoon the *Gannet* shortened sail, the captain spying the coastline, where a long curve of sand fringed by the tide's creaming edge caught the thin winter sun. Darkness came, and the little lugger crept closer inshore. A solitary moving pin-point of light showed for an instant, to be as quickly obscured. This was repeated half-a-dozen times. 'Good lads!' came

from the captain at the tiller; 'all's well!' Soon an innocent-looking flat-bottomed salmon-coble appeared alongside, as if by magic. Bertrand and I followed our belongings on board. The bundles of lace and some silk were covered up in the stern, and in half-an-hour we were standing on the sands of Spey Bay, a mile east of Garmouth. The contraband was taken out. Whether we

aided or abetted its landing concerns not this tale. Doubtless many a decent Morayshire dame rustled into the kirk in its panoply, soothed by the consciousness that she was better-dressed than her neighbours.

One of the crew guided us to the mouth of the Spey, where we waited, shivering in the dark, till the coble came for us, when we crossed the river, now brimming with the tide, to the little port of Garmouth. At the sign of the 'Norway Lass' we got supper, warmth, and comfortable beds, and slept the sweet sleep begot by hard physical toil and the open air.

The little place proved to be a weather-beaten cluster of houses, a warren of quaint, narrow, crooked streets. Here the Spey joined the Moray Firth. East and west of the meeting of sea and river, rescuing the coastline from the commonplace, ran for miles a magnificent arc of gleaming sand, where tireless long rollers—the aftermath of the north-easter—heaved and broke and crumbled in a smother of powdery white spray hovering like smoke over the long zigzag line of their assault.

The *Gannet* had hung about till dawn, and was now in harbour.

There were a great many masts in the little port, and a number of unwieldy-looking rafts made of felled trees roped together crouched like uncouth monsters along both banks of the river. They came from far forests in Strathspey, floated down the river, to be used in shipbuilding.

Anthony's mahogany countenance beamed in high good humour when he met us. Every cask had been sunk safely, the lingtownmen could carry them inland at their leisure, and there was nothing for him to do but interview his merchants.

'A good run—as good as I've made for months,' said the captain, as the three of us were breakfasting excellently well on sea-trout at the 'Norway Lass.' Anthony, as he had told us, was well known in the place. Skippers of coasters, floaters, shaggy-looking giants from up Spey, the very fishwives, made an exchange of cheery greetings with him.

'I'll no' broach the wreck to ony o' them yet,' said he; 'your frien' Master Left Hand may have spies about. We'll be canny; but I'll no' let the business hang in the wind langer than I can help. Ye'll come wi' me till I get a keek at the bay as lang as the tide is at the ebb.'

We went out of the village, and, after an irksome trudge over a wide belt of shingle, came to a ridge of bent-covered sand-dunes, below us the great sands stretching westward. The captain mounted the highest dune, and put a spyglass to his eye.

'There's a wreck at the Bear's Head, but I ken her. That's the *Veronica*. She's been lying there for five year. I lost twa o' my crew in the same gale,' he said, scanning the coast. 'Nuh! there's nothin' there.'

Bertrand and I took a look. The tide was out, and from the rim of the sea to the dunes the sand and foreshore lay clear as a picture. There were no signs of wreckage except the old hulk at the Bear's Head, a poor skeleton, ribs and spine picked clean by the hungry sea.

'It's clear to me, unless the wreck has drifted or been broken to pieces, that she's farther west,' said Anthony, and shut the spyglass. 'There's Morven,' pointing to the cone-shaped hill on the Caithness side of the Firth. 'That's Glenira's landmark in his pictur'. The Fountain Reef is my deeficulty. Where the deil that is fairly founders me; and if I'm foundered by it, there's no' a man on the coast kens it.'

It would have been beyond ordinary chances to tumble over the wreck at our first survey of the coast; but we were silent and uneasy. Every passing hour might mean an advantage to our adversaries. The image of them was constantly in my mind's eye, and the lonely coastline before us, empty, a silent desert but for the boom of the sea and the screaming sea-fowl, gave me an irksome sense of impotence, almost a premonition of disaster.

'Let us get out of this!' Bertrand exclaimed, and turned back without another word. We followed him until the captain, deep in thought, called a halt.

'Do you twa keep out o' sight in the "Norway Lass" when we get back, and I'll take a turn roun' the place. If there's news o' ony wreck this year hereabout, Anthony Brander will get it. If no', then there's only one thing to be done, and that is to tramp every yard o' the coast west until we find what we are seekin'.'

But we learned the whereabouts of the wreck in another and unwelcome way.

Anthony left us at the 'Norway Lass' to forage cautiously for information from his acquaintances among the longshoremen and others of the port. Bertrand and I had talked ourselves to an end regarding our chances, and, to while away the idle hour of waiting for the captain's return, borrowed a greasy pack of cards from the landlady, and sat down to a game of *lansquenet*.

We had scarcely played a quarter of an hour, when the captain passed the window, along with a tall man. He came in alone, closed the door behind him, and shook his head.

'Black news! I misdoot we are forestalled. I got speech with the very man I sought for as soon as I reached the harbour. I told him nothing beyond that you are anxious for news o' a wreck that carried a friend. I'll bring him in, an' you can hear what he says.'

We had risen to our feet in dismay at the word 'forestalled,' and stood unable to speak when the man came in.

'These are the twa gentlemen, Jamie, that I spoke about.'

The captain's friend, a decent-looking, elderly

man in tarpaulins, stood fumbling with his cap. His was a plain statement, truth on its face.

'I own a ship,' he told us, 'and trade atween the westerly ports o' the Firth, Garmouth, Inverness, across to the Black Isle, and sic-like. I mind on the gale in August last. I was oot in it wi' the ship, but I put her back to the port o' Findhorn, and thankfu' I was, for it would have blawn the sticks oot o' her. Next day I heard o' a wreck. She was a French brig. I passed her the day after. Her spars were broken, showin' just abune low water. She was lyin' then two or three mile, or maybe fower or five, east o' Findhorn. One man was washed ashore alive, and I hear that he got a passage fra' Findhorn southward.'

'And her crew?' I asked.

'She'll be the same ship that the gentlemen were speirin' after yesterday?'

'Very likely,' I said, with a dry throat.

'A Dutchman hove-to outside the harbour yesterday mornin', and landed two gentlemen in their small boat. They werena sooner on shore than they were seekin' word o' a wreck, like yersels, sir, and sair ta'en up ower the safety o' a friend on board; so I was sent for. They were neither to haud nor to bin' until I'd gi'e them my story; and when I did, I'se warran' they didna let the grass grow under their feet. They sent the small boat back, and the Dutchman sailed without them.'

'And then?' asked Bertrand eagerly.

'Syne they took the sands east to Lossie just before the darkenin', and that's the last I saw o' them.'

'What were they like?'

'Gentry. Ane o' them a by-ordinar' tall man, and the other an abloch o' a cratur'; but the baith o' them weel-dressed, and rale ceevil-spoken.'

This was the summary of his information. It was disquieting enough, in all conscience; and when he had gone, which he did after marking the wreck on Anthony's chart as exactly as he could, three crestfallen men stared gloomily at each other. However, bitter as our disappointment was, we understood the key to the hiding-place of the *louis d'ors*, and Philip had only guesswork to go on. It was improbable, cunning as he was, that he could have discovered the secret in the short time that had elapsed since he had learned the wreck's bearings. He had little more than a day's start of us in the race. But we had no time to lose.

Unluckily the wind had fallen to a dead-calm. Not a cat's-paw skimmed the ocean.

'We might make Findhorn by the evenin', but I doubt it,' was Anthony's verdict.

To wait until the wind rose meant further delay, a thing not to be considered. We determined to go overland. For a guinea, and dear at the price, the captain borrowed a horse and cart from the 'Norway Lass.' The cart was a clumsy, primitive wheeled box, the extremity of

discomfort, going at a snail's pace; but it was necessary for the carriage of the spades, crowbars, and tackle. These we laid in the bottom of the cart, covered with tarpaulin, and jolted out of the village on the worst road I ever saw. The sands made a welcome change. They were for the greater part hard and dry. But for that deplorable vehicle, which broke down twice, we might have made good progress.

At length, after a long three hours, we reached the town of Elgin, a poor, long, straggling street, and put up, dead-tired, at the sign of the 'Three Mullets.' There we slept soundly till early morning. Anthony Brander was first awake. Indeed, the noise of his trying to waken the landlord awoke me. The hammering at his door might have roused the seven sleepers. Even when he got up he seemed more asleep than awake, but briskened marvellously at my offer of a guinea for a decent post-horse and a guide. Another half-hour was wasted, but at long last we got a guide, a better horse than our Garmouth Rosinante, and panniers with it. We left the horse and cart, with a fee for their return to the 'Norway Lass,' loaded our gear in the panniers, and set out through the long, dark, narrow street, shivering with cold, for the morning air was like a knife.

Nobody was astir except a decrepit old night-watchman, near the west port, calling the hour—'Four o'clock, an' a snell mornin'!' A forest of oaks neighboured the town, the road running through the thick of it. Fortunately the guide knew every step of the way, for the trees made a black arch over us, shutting out the stars. Beyond the orange eye of his lanthorn the darkness was of the Pit. The guide's presence was a check on speech. We trudged slowly enough (nothing is so leisurely as a walking horse), the silence broken only by the man's voice urging his beast forward and the melancholy calls of the owls answering each other from the dark heart of the forest. The open country after it, and a sky glittering with stars, were welcome sights. The road now began to slope downhill, where the guide told us we should be able to 'come mair speed.'

For an hour or more we made a quicker progress, until the road narrowed suddenly to a track. Here the horse was stopped, and the guide suddenly asked us, 'Whaur d'ye want to gang?'

'To the sea. Push on!' said I.

'Na,' quoth he; 'the road is ower coorse for a man in the dark, let alane for a horse;' and, to our disgust, nothing—cajoling, not even bribery—would make him budge. Bertrand and I plied him with blandishments, and, I am afraid, a full measure of curses; but he point-blank refused to go another yard, and relapsed into a sulky silence. The captain held up his lanthorn and came in front of us.

'Look ye hers, my man!' He levelled his

pistol at the lout's head. 'I'll waste neither time nor breath on ye. If ye're no' movin' an' in front o' us before I count ten, I'll splash your brains out where ye stan'!'

The man's teeth rattled in his head as the captain began to count.

'Guid sakes, sirs! I've a wife and bairns.'

'Fower—five.' The pistol clicked.

'Put it doon. I'll gang,' said the guide with a gulp.

'It's as weel,' quoth Anthony grimly, with a swift wink to me. 'If ye hadna'—— He shook the pistol within an inch of the man's white jowl. 'Get for'ard!'

The man took the bridle, got his trembling knees together, and went forward for a minute or two, Anthony close behind him. Then he hesitated and stopped dead again.

'I'm no' fell sure o' the road,' he said.

I held my lanthorn full in his face, and saw that he was sweating with terror, his eyes staring like a man demented.

'Come, my man! You shall arrive at no harm;' and I put a hand on his shoulder. It was shaking. The captain's pistol alone never made this great strong man a lump of cold terror. There was something behind.

'What the devil is the matter with the man?' asked Bertrand.

'Are ye—are ye on a fair trader's ploy?' he asked.

'We are, and have not a moment to lose.'

'I can tak' ye to the sea, then, by anither road. But no' this way.' He crossed himself. 'The warlock of Gordonstown rides here.'

'The what?'

He told us, with many a glance round in the darkness, some old wives' story of ghosts and a soul sold to the devil.

Brander cut him short. 'How far are we from the sea from here?'

'Three mile.'

'Then get hame. I ken where we are.'

The dolt needed no second order. He turned and fled, and I am afraid a lusty kick from the captain sped him on his way.

We left the horse browsing where it stood, and pushed on, each taking a share of its load. The path soon lost itself in a wilderness of whins. Soon we were stumbling through a dense covert of them that clutched and tore at us woefully. I fell half-a-dozen times in as many minutes. Struggling on, smarting with innumerable scratches, we did our best; but the network of whins and undergrowth was as thick, and in some places as high, as a hedge. I saw Bertrand's lanthorn make a wild arc as he crashed into a hole. 'Let us call a halt. 'Tis a useless business this. If Providence, as some folk have it, made the land for the people, of a surety, in His wisdom, He reserved some for the beasts!'

We had not made more than a furlong, and it

was more by good luck than good guidance that we had broken no bones. There was nothing for it but to go back to the fork of the track and explore it toward the west. Here we fared no better, if indeed as well; and, turning our backs on the accursed wilderness, we groped our way to a stone dike, clambered over it, and under its lee Bertrand and I crouched for a moment or two's respite from the biting cold of the morning. Anthony had gone forward, and came back to report that there was a better shelter in front. It proved to be a great dovecot of solid masonry with a pointed roof. The door was barred, but a crow-bar soon opened it. A loud whir of wings greeted us as our lanthorns lit up the interior. It was rude and dirty, but its thick walls kept the wind at bay, and to us wayfarers, tired, bruised, out of temper, and stiff with cold, it was a hospice. We made ourselves as comfortable as might be, and in two minutes my head was nodding.

I remember Bertrand saying, 'I am a living pin-cushion,' picking the thorns gingerly out of his legs; the lanthorns circling round and round, and jerking back to their places; a murmur of my companions' voices very far away, the wind whining at the keyhole; and when I woke with a guilty start I found that both Bertrand and the captain had surrendered to nature, and were sound asleep. It would have been unkind to wake them. I closed my eyes again.

When we awoke the thin gray shafts of the morning were struggling through the cracks in the door. A far-off cockcrow reached us, and the pigeons roosting above us were on the move. We delayed not an instant, but set out, finishing the oatcakes and cheese as we went. Outside, the land lay white and ghostly, a haar blotting out its contour, the trees and bushes vague and amorphous in the half-light.

'The place looks evil, peopled with uneasy ghosts,' said Bertrand, shivering. 'I feel I know not what—a sense of defeat, almost! Bah! begone!' He snapped his fingers at the wreaths of fog, and began to trol out a verse of a song.

The gay lilt of it rang out bravely in the loneliness, but, though I joined in it lustily, I confess that my nerves were on edge, and when a covey of partridges rose with a whir at our feet, the three of us had our pistols up like one man. The sleepy November dawn began to put out the stars, and the landscape to harden into definition. In front of us was the wilderness of whins, a jungle to be fought yard by yard. Great was our relief when we came out on a stretch of moss-land carpeted with springy turf.

'Hark!' said the captain suddenly.

We stopped to listen. The sea! The sound of it was unmistakable, and in that solitary place its voice heartened us like music. The steady break of the great waters on a sounding beach, its great

relentless mechanism inevitable as Fate, always held a fascination for me, but never has its voice sounded more welcome than on that November morning.

We hurried forward, near our journey's end, for the sea-fog had parted like a torn valance, showing us the November sun opening a blood-shot eye over the North Sea.

The moorland ran down in undulations to the edge of a cliff, at its base a rampart of rock bordered by shingle, beyond the shingle a stretch of sand, a tawny zigzag of seaweed at high-water mark. The tide was at the flow, and the hollow voice of its advance sweeping the reverberant sounding-board of the cliffs filled the morning. The sound of it was like a great steady furnace.

Our eyes swept the sands. Here and there were half-tide rocks, a lump of drift-wood flung far up by the storm, the tips of a stake-net; but there was nothing to arrest the eye, not a hint of what we were searching for. The *Marie des Anges* was not there.

'She canna be far away,' said Anthony. 'We are between the Lossie and the Findhorn Rivers, but we are a bit far east, I'm thinkin', accordin' to the Garmouth man's story. She may be covered by the tide; but we'll haud west, and keep a gleg owerlook o' the sands. It's this cursed Fountain Reef that wanders me.'

A little riband of a track curled along the top of the cliffs, and along it we set out westward, scared seafowl circling and screaming below us along the cliff's face. The banks of mist cleared as the sun mounted. Across the Firth the cone of Morven stood out. A ship beating up the Firth caught the sun's eye, to become for the moment a thing of splendour. The Ross and Sutherland bens heaved mighty shoulders above the sea breaking on the beach beneath us into creamy dissolution, a sheer delight in the brightness of the morning.

Anthony was leading, stopping now and again to clap the spyglass to his eye and scan the sands. The line of the cliffs became broken, dipping down to sandhills, rising again beyond them to a higher cliff that thrust its great knuckle into the sea, about a mile west from where we were. Suddenly the captain stopped.

'Down!' he whispered, and the three of us crouched on the instant. 'Something movin' on the sands. They're a lang way off. We'll get forward here and have a look at our leisure.'

We wriggled forward through the bents behind a dune, and, crawling up, lay flat on our faces. Anthony parted the bents cautiously and peered through the spyglass.

'Three men,' he said; 'and, by heavens! by the cut o' the jib o' the first o' them, he might be your man.' He handed Bertrand the spy-glass.

'It is my beloved cousin; with him, if I mistake not, the rat Innes, and a third figure,

judging by the company he is in, the Devil, but I know him not.'

Shaking with excitement, I took the glass. The thing was beyond doubt. The two scoundrels leaped into view, Philip Macdonell and Innes walking slowly in front, and the third man behind. In the direction they were taking a quarter of an hour would bring them close beside us. We held a rapid council of war, and resolved, with good sense, I think, not to challenge them, nor let ourselves be seen.

'Master Left Hand is looking round him most carefully. He is coming straight at us,' Bertrand said, his eye at the glass. 'We'll look to the priming of our pistols.'

Suddenly the two men in front stopped, and the third man came up to them. They stood close together, and always Macdonell's eyes kept coasting round and round the sand and the line of the seaboard. He pointed towards the cliff, and in a little they turned their backs on us and went to the foot of the cliff about a hundred yards from the point where they had first appeared. The third man went first, and the three started to climb up the face of the rock.

'They may see us from the top. I am all for watching them without being seen,' I whispered.

'We'll clear out o' this,' said Anthony. 'I ken the very place for us. Leave the spades where they are.' He rolled down the slope of the hillock, and, crouching, ran from hillock to hillock, we after him as fast as our legs could carry us, until he dived into a clump of junipers, and lay down panting.

We got our breath back, crawled to the edge, and peered out. The neck of the promontory joined the main line of cliffs just in front of us, the lie of the ground sloping gently down to it, giving us a clear view of a V-shaped cliff-top narrowing to the sea. We were in time, but only just in time. We had barely got into hiding when a head appeared above the right edge of the cliff. It was the unknown man. He clambered up, lent a hand to the two others, and the three looked around them. They could not have been more than two hundred yards from us.

I had the spyglass. I saw Philip motion the third man forward, the three of them picking their way along the rough scalp of the rock, the third man in front. Next moment I stifled a cry, for Left Hand took two stealthy steps close behind the unknown man. His hand rose and fell swiftly. The man dropped like a log, and Left Hand bent over him. There was a horrid scream, cut short. It haunts me yet. Macdonell straightened himself, and looked about him with great deliberation. Innes stood stock-still, a cringing figure, his neck craning at something on the ground.

(Continued on page 486.)

THE MONTH: SCIENCE AND ARTS.

A WEIGHTS AND MEASURES 'COMPUTER.'

AN ingenious device which should be appreciated by commercial and export houses is the weights and measures computer which has been placed on the market recently. The scope of this contrivance is the accurate conversion by the mere turning of a handle of the value in currency and the measures of the goods of one country into the correlative equivalent of the coinage and measures of another country. We will suppose, for instance, that a French house has sent an order to a British firm for a certain commodity or commodities. Naturally the order is given in metric measurements and the value of the same set forth in francs and centimes per kilogramme, mètre, or litre, as the case may be. Under normal conditions the order is converted by mental effort into British currency, and into pounds, feet, or gallons respectively, which involves considerable possibility of errors being made. But by means of this computer the task is performed mechanically and almost instantaneously. The instrument resembles the familiar indicator in appearance, and is virtually as easy and as simple to operate. By the mere movement of one of two handles the cost in British currency and the measurements may be accurately read off. Seeing that the machine is automatic in its action, the possibility of the slightest error creeping in is entirely eliminated. The range of the instrument, which is designed for use by those whose calculations have to be based on British coinage, is from one farthing to ten shillings per pound, gallon, or foot. The system is extremely flexible, while all values are taken to the fifth place of decimals. The computer is one of the most ingenious and effective time-savers which have yet been evolved for mitigating the worries of business.

TINNED CHEESE.

Preserved comestibles, classed commercially as canned or tinned food-stuffs, are indispensable to this hustling age. During the past few years the science of packing even the most sensitive edibles has made vast strides. Some interesting experiments have been carried out by the food experts of the United States Government Department of Agriculture with a view to the perfection of a commercially practical process for the canning of cheese, which so far has not been placed on the market in this manner. The tinning of cheese presented many difficulties. Several years have been expended on the task, and it is only recently that the process has been perfected. The cheese is pressed into small discs by means of hoops. It is then cut into pieces of the most convenient selling weights—half-pound, pound, and two-pound chunks, for

instance—and packed into the tins, which are then sealed. It has been ascertained that no chemical action takes place between the metal and the constituents of the cheese. The great advantage of the process is cleanliness, the preservation of the essential qualities of the article, absence of loss in weight due to evaporation, and elimination of waste in cutting, as the pieces can be placed directly upon the table. Another point has been discovered. There is no rind, and this represents a distinct economic gain. The cost of putting up the article in this manner is estimated at three-halfpence per tin for labour and packing vessel.

PRIZES FOR INVENTIONS FOR DENATURING SPIRITS.

Cassier's Engineering Monthly draws attention to the fact that the Russian Ministry of Finance is arranging to offer prizes for methods and systems for denaturing spirits, and rendering them more acceptable for commercial purposes. The first series of prizes are of a value of three thousand pounds, fifteen hundred pounds, and five hundred pounds. These competitions are for finding out new denaturing substances or for the improving of existing methods. The substances or improvements should both ensure a general use of the spirit and remove any possibility of using it as a beverage. It is provided that the primary substances from which the denaturing agents are prepared must be obtainable in Russia in suitable quantities. Another competition, with prizes of six thousand pounds, three thousand pounds, and one thousand pounds, is for finding out new ways of applying spirit or its derivatives as fuel for lighting, heating, and producing motive-power for industrial and household purposes. There are four other competitions for invented improvements relating to apparatus for utilising spirit for feeding internal-combustion engines, for utilising spirit as fuel, and for the invention of apparatus for applying spirit to lighting purposes. The competitions are understood to be international in scope, and particulars may be obtained of H.M. Consul, Mr A. W. Woodhouse, in Petrograd.

PAPER CARTRIDGE-CASES.

What is described as a wonderful invention has been perfected by a Swiss engineer. This is a process for depositing metals upon a foreign base by a sprinkling action, a specially designed 'pistol' being used for the purpose. The invention is being exploited both in the land of its origin and in the United States, and it is being submitted to an interesting application at the present moment. This is in connection with cartridge-cases. These are made of compressed paper and are of great strength. The

surface of the cases is then given a brass or copper coating by the spraying method. The metal is first liquefied and then crushed by means of compressed air, finally being inflated into extremely fine particles by any known method. The result is that the metal is distributed in the form of a fine spray upon the substance to be coated. The deposit is of uniform thickness, and can be varied as desired. In the case of cartridge-cases the coating is only a few thousandths of a millimetre in thickness. The advantage of the system is the great saving in metal, the simplicity of application, and the lighter weight of the cartridge, although none of its strength is sacrificed.

AN ELECTRIC SIGN.

Demonstrations with a new type of electric sign have been held in London, and have aroused considerable interest. It differs materially from the prevailing signs of this character which display words and phrases, for the reason that it can be made to show any desired message within the capacity of its letters virtually at a moment's notice; moreover, the message may be read either by day or by night. The elements are of special design, consisting of an array of white circular members, each of which is fitted with two metallic covers resembling eyelids. These are rotated by means of an electric motor in such a way as to uncover the discs. Behind each of these is placed an electric light for illuminating purposes at night. In the sign with which the demonstrations were carried out there are nearly two thousand elements, and these are coupled to a single keyboard which is selectively placed in relation with each monogram. By means of this keyboard the legend of the sign can be changed once a minute; consequently the idea is extremely useful for the flashing of news. The versatility of the sign is its most salient feature, and in its application to recruiting operations it has proved extremely effective.

AN ELECTRIC BELL.

It is somewhat strange that the familiar electric bell which is now virtually indispensable to every house and office has undergone practically no improvement since its introduction. The batteries are still placed away from the bell, necessitating intricate wiring between the battery, bell, and push-button. Now, however, an entirely new type of bell is being used in France, the simplicity of which cannot be overestimated. In this instance the electro-magnet which actuates the hammer of the bell, and which is normally placed in the bell-box, is placed beneath the gong. As by this arrangement the box is left empty, the inventor has utilised the space for housing dry batteries. These are sufficiently powerful for a life of several years under normal conditions. The batteries are small, so that

there is no occasion to increase the size of the bell-box. Wiring is simplified, inasmuch as the two wires are taken direct from the bell-push to the battery within the bell-box, the wires being permanently connected to the electro-magnet by a simple coupling. The bell is thus self-contained and compact.

LARGE AQUEDUCT.

One of the largest aqueducts ever built has recently been completed for an irrigation scheme in Alberta, Canada. The actual trough carrying the water is twenty feet wide by about nine feet deep, and is made of concrete strengthened by iron bars embedded therein. One very interesting feature is the shape of the trough, which is of special form designed to give an equal strain all round. This form is that taken by a canvas trough supported along the edges, and free to alter its shape to suit the weight of the water. The aqueduct is over two miles in length, and the trough is supported by ferro-concrete trestles at every twenty feet. In some parts the height above the ground is over fifty feet; but, unfortunately, where the Canadian Pacific Railway has to be crossed the ground is higher and leaves insufficient headroom for the aqueduct to pass over the track. This difficulty has been overcome by an enormous siphon which dives down under the railway and comes up on the other side. Ferro-concrete is again used for this pipe, which measures on the inside nearly ten feet across. Nine hundred cubic feet of water per second, or fifty-four thousand cubic feet a minute, is carried by this aqueduct, which forms only part of a complete scheme for irrigating some four hundred and fifty thousand acres. During the construction, according to *Engineering*, six hundred and eighty thousand cubic feet of concrete were used, together with nearly two thousand tons of steel bars. The complete irrigation scheme includes an artificial lake nine miles long by four miles broad, over thirty miles of canal, and a dam across the Bow River, which forms the source of supply.

THE TRUTH ABOUT VEGETARIANISM.

In order to obtain some comparative scientific data concerning vegetarianism as opposed to meat-eating, a prolonged series of investigations has been carried out by two well-known scientists, the sum of which is somewhat interesting. For the purposes of the tests twenty-two men and women who are staunch advocates of the vegetable diet were opposed to an equal number of men and women who are meat-eaters. The first experiment was to determine the relative quantities of carbon dioxide produced and the volume of oxygen consumed when the body was in a state of complete repose, twelve hours after the meal had been eaten. The experiments were continued over long periods of consecutive days,

and a special and delicate apparatus was used for obtaining absolutely correct results. When these were compared they were found to be almost exactly identical. The second test was to prove the contention or otherwise that meat-eaters have less powers of endurance than those who subsist on a vegetable diet. The reason given for this assertion is that the minimum amount of protein is eaten, the contention being that protein overstimulates the process of digestion and assimilation. The claim is also advanced that those who depend largely upon carbohydrates are able to store up in their system a greater quantity of glycogen, which is converted into energy during periods of muscular activity. There again, however, the assertions of vegetarians failed to be supported as a result of scientific research, the sum of which showed that vegetable-eaters had no advantage whatever in this respect over meat-eaters.

HOW TO AVOID GUN-DEAFNESS.

In a recent issue we referred to the prevalence of gun-deafness among those fighting at the front, the affliction being attributable to the tremendous din incidental to modern warfare. It has been found, however, that the plastic preparation which is normally sold as a kind of clay medium for modelling by children can be so treated as to render it a perfect panacea against gun-deafness. The material is packed in a strong box which can be carried in the pocket. Small plugs are made from this substance, and slipped into the ears. The nerve-shattering concussions are effectively deadened by these plugs, owing no doubt to the resiliency of the material, while at the same time the faculty of hearing is not impaired. The plastic material is prepared specially, is antiseptic, and is perfectly safe to use.

A NOVEL APPLICATION OF ELECTRIC POWER.

A novel idea which should appeal to those possessing country estates and residences has been exploited at a rural house in the north of England. This is a means of opening and closing the entrance-gates by electric energy without leaving the vehicle. In the instance under description a small motor geared through a clutch is placed in a small recess beneath the gates. The requisite energy is supplied from the installation within the house. The switch is placed in the garage. One movement opens, while the reverse action of the lever closes, the gate. Before the vehicle leaves the garage the gate is opened, and after the gates have been passed a signal is given by the motor-horn. The person in the garage or in the house then reverses the switch and the gate closes. Upon returning, a signal from the motor-horn intimates that the opening of the gate is desired. The switch is moved, the gate swings open, and is closed by another movement of the switch. If desired, a

gate can be opened and closed in this manner by automatic control, or the desired ends may be compassed by the motor itself or any other vehicle through the installation of a means of completing the electrical circuit at a point near the gate. The cost of operating a gate in this manner is trivial, one pennyworth of electrical energy being sufficient to open and close the gate some five hundred times. The idea can be adapted to any desired application, and it would even be possible to control the movements from the hall of the house itself, and in such a manner as to render it impossible to manipulate the gate without the persons in the house being apprised of the fact or controlling the actual operation.

THE PRESENT CONDITION OF NORFOLK ISLAND.

Mr Atlee Hunt has furnished the Commonwealth of Australia with an interesting memorandum upon Norfolk Island, in which he says the population is now seven hundred and forty-six. The island lies in the Pacific, eight hundred miles off the New South Wales coast, and four hundred miles from New Zealand, and is now annexed to the Commonwealth. Norfolk Island is about five miles long and three broad, and is described as embracing wide areas of well-grassed land, long avenues and small woods of the stately Norfolk Island pine, broken hills, and fertile valleys, with the long Pacific swell breaking everlastingly on the bases of the cliffs surrounding it. The climate is salubrious, with a mean temperature of sixty-eight degrees, and Mr Atlee Hunt prophesies that it may one day become the Madeira of the Pacific. An area of eight thousand five hundred acres is at present either utilised as pasture or dotted with weeds, having gone out of cultivation since the time when gangs of convicts ploughed and hoed all the cleared land. The soil is now only casually cultivated, and offers openings for the cultivation of coffee, fruit, and timber to new settlers there. To the ordinary farmer or labourer there is as yet no opening, but there might be for a limited number of men with a little money and sufficient energy and enterprise to develop its resources.

To Correspondents who wish fuller information regarding new inventions mentioned here, addresses will be furnished, when possible, provided a stamped and addressed envelope or post-card be sent to the Editor, 339 High Street, Edinburgh.

. TO CONTRIBUTORS.

- 1st. All communications should be addressed 'To the Editor, 339 High Street, Edinburgh.'
- 2nd. For its return in case of ineligibility, postage-stamps should accompany every manuscript.
- 3rd. To secure their safe return if ineligible. *ALL MANUSCRIPTS, whether accompanied by a letter of advice or otherwise, should have the writer's Name and Address written upon them IN FULL.*
- 4th. Poetical contributions should invariably be accompanied by a stamped and directed envelope.

SEVENTH SERIES

A MAN OF PEACE.

By H. HALYBURTON ROSS, Author of *The White Feather*, &c.

PART I.

'I AM a man of peace,' said the minister, Robert Meikle. He repeated the sentence laconically a moment later, as no notice was taken of it by the only other occupant of the room, a brown-haired damsel, whose clear-cut, somewhat disdainful profile was obstinately turned to him from her corner of the fireplace. But there was a twinkle in his eyes despite the dryness in his tone. 'I am a man of peace,' he said for the third time.

At this the girl, half-buried in the great leather chair, rose and took an impetuous few paces to the window. 'And I'm for the warriors at a time like this,' she exclaimed in a tone of heart-felt conviction, though without turning round. 'If only I were a man, instead of a woman having to sit at home!' she continued vehemently.

'Yes, the warriors are having their turn,' he agreed sententiously.

At his words the girl at the window came back slowly, deliberately, to the fireplace, picking up her discarded knitting. For some moments she plied her needles in silence. 'I see from the morning papers that seven ministers in the Lothians have enlisted in the new army,' she said at last in a tone of studied irrelevance, bending to count her stitches.

Her companion crossed his arms. 'I too saw that very interesting piece of information,' he conceded. 'All credit to them.'

'They'll be none the worse ministers when the war is over,' she remarked, still intent on her counting.

'Those that come back,' he interpolated.

'And if they don't—if they die out there—what more glorious end could they have?' she flamed, dropping her knitting and raising her eyes suddenly to his face.

'Glorious indeed!' he echoed, meeting her glance imperturbably.

She turned her shoulder on him with a jerky movement.

His shaven lips twitched into a smile. 'It's a grand thing to have the fighting spirit when the cause is a just one,' he began in a low, contemplative tone a moment later, as if addressing an unseen audience. 'But if you haven't got it you'd better leave the fighting to those who

have, and remain at home, as I am doing—as I intend to do.' The hint of inflexibility in the last words was unmistakable.

But the girl appeared oblivious of it. 'Parish work at a time like this must be rather trying to a real man,' she offered a moment later, with a hardly disguised accent of commiseration. 'Perhaps it is as well that there are some content to carry it on; but I should have thought women were quite capable of undertaking it.'

The minister uttered a short laugh. 'Will you preach my sermon for me to-morrow, Miss Kate?' he challenged.

'If it is on recruiting,' was her instant retort.

His lips tightened. 'I don't make use of the pulpit for secular appeals.'

'No,' her eyebrows arched; 'and it would be difficult for you'—She broke off. The significance of the unfinished sentence could not be misunderstood.

But the victim of the satire met it with a smile. 'Or for you, when you come to think of it. After all, your sex debars you from practising what you preach as effectually as my—my cowardice does me.' He rose as he said the last words, holding out his hand.

A wave of crimson had dyed her face at the allegation. 'A coward you are not, I am sure,' she said in a low, intense voice, though with a little ring of shame in it.

He shook his head. 'We do not know till we are tested. I am a "man of peace" shall we say instead, at risk of being reiterative?' And, still smiling, he turned and made his way down the long, firelit room to the door.

The girl remained standing on the hearthrug where he had left her. Already compunction for her uncalled-for attack on her visitor assailed her. True, he had accepted her taunts with the utmost good nature; but his characteristic imperturbability made it difficult to gauge his real feelings. It was just this quality that, since the outset of their acquaintance, had baffled, while it piqued her curiosity. Deep down in her heart she knew that her personality possessed for him an importance second to none in the district. But though their friendship had endured now for eighteen months, he had never been tempted to a display of deeper feeling.

In any other environment she would not have allowed her interest to quicken in a man of his calling, she assured herself by way of exoneration. But men were so scarce in that out-of-the-way Highland parish, and even a minister was better than nobody at all! If only he had been a soldier, like her father! Instinctively her eyes travelled to the oil-painting above the fireplace of a young Highland officer in full regimentals, with many medals on his breast. He had died when she was quite a child, her mother following him to the grave a few months later; and since then she had been brought up by his sisters, the two Misses Thriepland, in their remote east coast home. But it was his blood in her veins that made her so impatient of shirkers at this time, when the greatest war of all history was being waged on the Continent, and the Old Country was in need of every one of her sons.

The entrance of her aunt at this moment put an end to her cogitations.

Miss Thriepland was fully dressed, and carried a laden bag over her arm. 'So Robert Meikle has gone!' she said, glancing round the empty room. 'I hurried to get down in time to see him.'

'It's a pity, for his sake, you didn't manage it,' was her niece's half-laughing, half-defiant comment.

'What! another tussle? My dear child, I don't know how he takes it from you,' smiled the elder woman.

'Nor do I,' said Kate indifferently. 'But I am late;' and she glanced at the clock. 'I sha'n't be a moment dressing.' And she fled from the room.

Miss Thriepland stooped to pick up the unfinished sock that had fallen neglected to the hearthrug, thrusting it into her bag. They were due at a work-party at the doctor's house in a few minutes, patriotically ordained for the making of comforts for the troops. But Miss Thriepland's thoughts were very far from the trenches. A deeper motive for the minister's frequent visits to Greywalls than mere friendliness was apparent to her shrewd, far-seeing eyes, and she was perplexed as to what her attitude should be towards the eventuality. True, the Thrieplands were an old and proud race; but dwindling fortunes had brought its last representatives very near poverty, and the most she and her sister could hope to bequeath to their niece was a sadly diminished patrimony. Living as they did, also, in that out-of-the-way village, there was small prospect of the girl meeting other suitors. Might not marriage with the minister conduce to her greater happiness than a solitary old-maidhood? It wasn't as if the young man was without prospect of success. A suggestion of dogged ambition beneath his quiet exterior made itself felt unconsciously, and there was no doubt as to his intellectual abilities.

By a curious coincidence, Robert Meikle formed the topic of conversation as they entered the crowded work-party a few moments later.

'We were just speculating as to whether Mr Meikle would enlist, as some of the younger ministers are doing,' explained Mrs Anderson, the doctor's wife, as she welcomed the new arrivals. 'I hope not, for all our sakes.' From the young man's first coming to Portknockie she had been one of his staunchest champions.

'You needn't alarm yourself,' snapped Miss Goldie, the old maid of the parish, whose hopes of release from spinsterhood were buried in the late minister's grave, and who consequently had not a good word for his successor. 'Robert Meikle is one of your soft kind. If I were a younger woman I should taunt him into it;' and she gave a vindictive side-glance at Kate Thriepland.

The girl's disdainful young face coloured hotly at the suggestion. It was one thing to deride the minister herself; quite another to hear him depreciated by this sour, vinegary old maid.

But her aunt's quiet voice interposing prevented the necessity for replying. 'Surely it is every man's own business whether he enlists or not,' she said gravely, taking a bundle of flannel from the table as she spoke and retiring into a corner, where her niece followed her.

The quietly uttered defence had the effect of checking the censorious tongues for the time being, and the conversation turned on more impersonal matters connected with the war.

'I hear the flashes have been seen again from the East Cliff,' said Miss Goldie, always to the fore with information, as she was with criticism. 'I don't know what the police are about, not to catch the wretches.'

The spy question had possessed a sinister interest for the Portknockie folk since the foreign depredators had made use of the east coast for illicit practices. Was not their closest link with the war the presence of the great unseen flotilla whose units could be glimpsed at times flashing over the horizon on their endless patrol, and whose safety was so dangerously threatened by the machinations of the unknown foe?

Kate Thriepland listened silently while the tide of hearsay, once set in motion, swelled and mounted. In reality her thoughts were elsewhere, envisaging again the minister's smile as he spoke of his own cowardice a few moments before. How was it he always managed to put her in the wrong? she wondered. She had never really got the better of him in any of their encounters.

Meanwhile the object of her thoughts was striding homeward through the shortening light of the winter afternoon. Half a mile of solitary country divided the house of Greywalls from the little township, at the farther end of which the manse was situated. But a series of short cuts through cobbled wynds and closes soon brought the minister to his destination.

A reflection of his late interview still lingered in his eyes as he closed the study door behind him—half resentful, half grimly humorous.

Certainly he would have tolerated such plain speaking from no one in the world but Miss Kate Thriepland, and why particularly he should have submitted to that young lady's sarcasm he could not determine. Perhaps it was because, to such a keen psychologist as he, the very fact of her heat over the matter of his supposed declension betrayed a degree of interest in him that she assuredly did not feel for any other of the male inhabitants of Portknockie; perhaps because in his heart he understood and valued the warm, brave spirit that inspired the girl.

At any rate, he was not offended, if by offence was meant any lessening of regard for his traducer. But, on the other hand, neither had her contempt succeeded in shaming him into a desire to emulate the patriotic lead of his brothers of the cloth. Stranger still, he experienced no consequent lessening of self-respect. 'To follow your own star' had ever been the essence of his creed, and it was this iron streak of individuality that had made university professors indulge in prophetic utterances as to the future success of the young divinity student in his college days. Yet, with it all, he could not resist a faint smouldering of regret for converse possibilities. How pleasant it would be to earn her commendation, to see her eyes flash with enthusiasm for his deeds!

He was seated at his kneehole desk before the study fire when the temptation assailed him, and to combat the weakness he hastily drew the scattered notes of the morrow's sermon towards him. They awaited only co-ordinating. But as sure as he reached a certain passage an alluring vision of Kate Thriepland in gown and bands, with her proud young face aglow, and her clear, impassioned voice echoing among the rafters of the church, rose up to distract him.

At last, with an impatient sigh, he pushed away the disjointed manuscript and rested his head on his hand. A moment later he was startled from his reverie by a knock at the door. In answer to his summons, his housekeeper, Tibbie Erskine, appeared. Her wrinkled face glowed, as usual, from too frequent applications of soap and water. Cleanliness came perilously near to superseding godliness in the old woman's estimation, and the manse shone from garret to cellar with the evidence of her cherished fetish.

'There's that woman near deein' again,' she announced with the familiarity of address that Robert Meikle had never found any cause to rebuke. 'Wee Geordie was here to ask ye to gang up by an' see her afore she draws her last breath.'

The accent of scepticism in the last words brought an involuntary smile to the hearer's lips. No need to inquire the identity of the sufferer. One alone among his parishioners had power to call forth that intolerant scorn from his housekeeper—Janet Hamish, a poor, moribund creature who dwelt alone among the Quarries, a group of disused sand-pits on the confines of the parish,

and whose periodic resuscitations were the source of much ill-timed wit in the neighbourhood.

The minister had risen, pushing back his chair. 'Well, I fear the congregation to-morrow will be the sufferers,' he remarked whimsically, gathering up his discarded notes into a heap before him. 'Now, Tibbie, if you were only letter-wise you could put my sermon together for me while I am gone.'

He smiled again as he spoke. Strange that within a few hours he should have supplicated two such different women as Kate Thriepland and his housekeeper to undertake that sacred and particular duty! There seemed almost something fateful in the coincidence.

'I'd gladly, minister, if I could,' was the old woman's answer. 'And the suner that woman mak's up her mind whether she's tae dee or live, an' does either quickly, the better,' she added in a malevolent undertone as she whisked out of the room.

Robert Meikle knew every yard of the winding, sandy roads, with their low stone dikes, that traversed the bleak hinterland stretching between Portknockie and his destination; but to-night, as he bicycled along, this loneliness struck him afresh. Perhaps it was the brooding silence of the night that was responsible, perhaps the cloudy darkness that hung like a pall over the country.

At the summit of a steeper ridge he dismounted, turning to catch a glimpse of the village lights and the wide sweep of the bay beneath him. A dull sound rose up to where he stood, the ceaseless drumming of the sea on the wet sands, and a longer, more drawn-out plaint as the breakers sucked their way into the caves of the rocky foreshore to the left of the harbour.

The road he had been following had brought him out almost on the top of the cliffs; thence it turned inland, leading to the Quarries. He was striving almost automatically to pierce the surrounding gloom and locate the various landmarks before him. That dark, shapeless mass jutting into the sea was Skegness Head. There was a ruined dwelling on its summit, he knew, but the darkness rendered it invisible to-night.

What was that? With a startled cry he recoiled, passing his hand hastily across his eyes. An optical illusion of course, the result of strain on the vision! Imagination, bred of rumours that had lately filled the air! No; there it was again, a distinct double flash from the point on which his gaze was fixed, darting in and out of the darkness, and followed by a quick succession of winks. Somebody was attempting to signal messages from the headland out across the silent sea beyond; messages that could have only one object, and that the most sinister; messages that might lead to tragedy and disaster for some of the brave defenders of our shore, that might materially affect the course of history, that might'—

SLEEP AND SLEEPLESSNESS.

By BERNARD HOLLANDER, M.D.

THE problem of sleep has been for ages the object of poetic wonderment and of philosophic speculation, and since the advent of scientific methods the object of research; yet its fundamental nature and origin still remain obscure. The primary cause of sleep is probably a need for rest on the part of the brain cells from the exercise of their functions. Waste products accumulate during the day, and a rehabilitation period is necessary to restore the brain to its normal condition. During sleep the brain has a diminished blood-supply, and if from any cause the circulation increases in activity wakefulness is the result.

The brain cells during sleep are at rest. If any of them remain active, dreams are the result. We can dream more in a minute than we can relate in an hour, and it is because of the great rapidity of thought in sleep that we cannot always recollect our dreams. The dreams we remember are mostly those which occur during the period when we are just awaking, and that is why our dreams are usually unfinished. Dreams are related mainly to suppressed or dormant hopes and fears and past experiences, and originate chiefly in the subconscious mental life. The troubled and horrid dreams which occur during sickness are probably due to the torturing of the brain by the toxins with which the blood is loaded; and so-called 'nightmares' may be caused by an overloaded stomach, but more often by great mental anxiety.

Sleep, besides being disturbed by dreams, may be defective in other respects; it may be too short, it may be too prolonged, it may not be deep enough, and it may be unrefreshing. The most common complaint is insufficiency of sleep—that is, sleeplessness. As in everything else, the widest differences may be observed between one person and another in regard to the amount of sleep required. There are men who never sleep more than five hours; others must have seven hours regularly, which is the average for vigorous adults; and there are some who sleep nine hours, and even more. Much depends on the nature of the occupation and on habit, and there are in this matter good and bad habits. The habit of sleeping too little is less frequent than that of sleeping too much. Persons of weak intellect sleep more than hard brain-workers, who can do with very little, and yet enjoy good health if they otherwise live correctly. Sleep also varies with the age of the person. Babies sleep the greater part of their time; as they grow older, gradually less sleep is required, until adult life is reached. With the onset of old age more sleep is again needed. The amount

of sleep required varies, too, with the quality, profound and continuous sleep being much more refreshing than superficial and broken sleep.

There are a large number of people who sleep badly, but their insomnia appears under very different forms. There are people who get to sleep with difficulty; others fall asleep easily, but they wake up at the end of a few hours, and cannot get to sleep again; others sleep but with agitated sleep, disturbed by dreams and nightmares, of which they may preserve no memory, but they are conscious of having had an interrupted and disturbed sleep by their state of feeling in the morning. Again, some describe their sleep at night as abnormally profound, but complain that they are so little refreshed by it that they remain drowsy and lethargic during the day, unable to attend to their work. Some people are hypersensitive, so that they are disturbed even by slight noises, such as the ticking of a watch or clock; some are kept awake by discomforts or pain, due to some bodily disorder or disease; others, in perfect health, suffer from sleeplessness due to psychical causes, such as overwork, mental anxiety, grief, and shock. In mental overwork the cerebral cells, being in constant use, are apt to remain active after work has been abandoned, and while this is the case sleep is prevented. Work and worry unfortunately often go together, and the feeling of anxiety keeps the man who worries awake, or so blends with his dreams that sleep is disturbed. At the present day, owing to the general rush of life, and to newspapers, telephones, telegraphs, motor-cars, and the increase of noises, the nervous system is constantly kept at the point of tension, and it is not to be wondered at that sleeplessness is so common a trouble.

Sleeplessness may arise in persons in health from keeping irregular hours. A rule that should be followed by every one is to practise going to bed at a definite hour every night, and to get up at a definite time every morning; moreover, to get up immediately on waking. Our eyelids grow heavy at the time when we habitually go to bed, and by training ourselves to definite time for sleeping, and avoiding all exciting causes prior to going to bed, sleep is almost sure to come. Another rule is to train one's self to fall asleep without delay immediately after retiring. We cannot sleep if we continue to think; we should have done with all serious thoughts before entering our bedroom. If this cannot be accomplished, an attempt should be made to turn the thoughts into different channels. This may be achieved by a dose of light literature, which, however, must not be so interesting that one keeps awake to read. Another plan

is to think of something definite, something pleasant and attractive, calm and reposeful. The subject is bound to vary according to each person's individuality. To the romantic will appeal the moonlight on a quiet sea; to the more material, the contemplation of the good things to enjoy 'when the ship comes home.'

Some people retire to bed with the expectation that because they did not sleep on former nights they will have another bad night. To try hard to go to sleep is often the surest way to keep awake. When one does not sleep, and is impatient because of it, and keeps turning over and over, and growing more and more vexed, one creates an agitation which hinders sleep. It is necessary for the sleepless to lose all fear of insomnia and approach the night with a perfect indifference; for sleep is like a pigeon—it comes to one if one has not the appearance of looking for it, and it flies away when one tries to catch it.

The one procedure which most universally disposes to sound sleep is getting well tired. Often people fail to sleep at night because they take too much rest by day. For them, active exercise in the open air is to be recommended. Unfortunately exercise for the mere sake of exercise is so uninteresting a procedure that few people will follow it out. An element of interest must be introduced, and this is furnished by the various outdoor sports which are now open to both men and women.

Needless to say that in order to sleep well one must be thoroughly comfortable in bed. The bedroom should be spacious, not encumbered with furniture and draperies, and well ventilated, without exposing the sleeper to draughts. Some people sleep well when they have a change of room, and others when they have a change of air. Those who seek complete rest from work should remember that the disturbances of sleep most often come from within, and that the occupation of the vacation must be such as will displace their morbid mental activities by healthy ones. If a man has nothing at all to think about, he will be sure to think of his troubles.

Many people believe that their chance of a good night is enhanced if they take a little spirits-and-water before going to bed; with others it has a contrary effect. Some people take a glass of beer before retiring; its action is due to the hypnotic principle contained in hops. Of course, not everybody can drink beer or spirits, and it would not do to keep up the habit. Most people find that a moderate amount of food promotes slumber. Anyhow, it is difficult to get to sleep on an 'empty stomach,' or at least when the stomach has been empty so long that

gnawing and hunger are felt; on the other hand, an overloaded stomach is not conducive to refreshing sleep, although that condition makes one drowsy.

Considering the misery of a sleepless night and its incapacitating effects the next day, it is not surprising that specifics for its relief should be so eagerly sought after. Though permissible in skilled hands, the self-administration of sleep-compelling drugs is dangerous, for they are all poisons, and a drug habit is easily formed. Moreover, they do not remove the cause which gave rise to the sleeplessness. Often the sleeplessness is a symptom of bodily trouble: of digestive derangements, disturbances of the heart or circulation, asthma, gout, and other diseases, which require the attention of the physician.

In the case of those who suffer from nervous irritability or mental excitement, sleep is sometimes secured by taking a hot bath before going to bed, at a temperature of ninety-nine or one hundred degrees Fahrenheit—that is to say, a little above the temperature of the body—and staying in it for fifteen or twenty minutes. In the case of those suffering from nervous exhaustion I have found the application of mild currents of electricity (galvanism) beneficial. Properly applied, they not only induce a sleep that is pleasant in character, but the patient derives general benefit from their influence. Sometimes the result is immediate, at other times a prolonged course of treatment is required, and in nearly all cases the effects are permanent.

When the insomnia is of psychic origin, psychic treatment is the best. In such cases it is our first duty to ascertain the disturbing element in the patient's mental constitution. It may be that ungratified desires and aspirations, which do not trouble the person consciously, but are buried in his subconsciousness, affect him just when he is on the point of going to sleep; it may be that the fundamental difficulty is a derangement of the moral perspective, that trifles occupy too large a share of his daily attention; it may be that he has got into a mental groove from which he cannot extricate himself; it may be that he has become introspective and watches himself overmuch; or it may be that he is given to worry with or without adequate cause. In all these cases we must apply psychotherapy. The method will vary according to the cause of the sleeplessness and the individuality of the patient; but, whatever method is applied, the aim is the same—namely, to teach the patient mental discipline and auto-suggestion, and to increase his will-power and self-control. Not only does the patient get cured of his sleeplessness, but he acquires powers which will serve him well in his daily work and intercourse with his fellow-men.

THE BRIGHT EYES OF DANGER.

By JOHN FOSTER, Author of *On Old Speyside*, *The Bernardine*, *The Ship of Shadows*, &c.

CHAPTER XXXII.—THE 'MARIE DES ANGES.'

MY first impulse was to rush out, pistol in hand; but the captain laid a strong hand on my wrist. Their next movement took me aback. They came quickly toward us, neither of them casting so much as a look behind them. We held our breaths, our pistols ready, while they came up the slope. Philip stooped and wiped the butt of a pistol on a tussock of grass. 'An accident,' we heard him say, 'a sad accident, and the tide is nearly full.' He laughed softly, and took Innes's arm in his. 'Come, Kenny! you are mortal white about the gills. But you and I are nearly through with this business, man.'

'Be damned, man! I didna like it. . . . Gi'e me a drink.'

They stopped not ten yards from us, and sucked at a flask. There were great beads of sweat on Innes's white face.

'Ye're looking dooms gash, man!' said Philip, frowning. 'I whiles think ye would be better oot o' the business. Wha got the heels o' Foudelle de Boux and the Englishman?'

'It was you,' said Innes.

'And found the paper; and—but ye ken the rest! Wha was it? I ask ye, Kenny.'

'Yourself, and no one else,' said the other. 'But I helpit ye.'

'Ye helpit me,' mimicked Philip. 'Of course ye did, and that's the reason ye'll help me further. If ye keep even the sheep's heart ye have, I think I see in the future a couple of Highland gentlemen, resembling you and myself, with money, *money*, Kenny, in their sporrans forevermore, high up at King James's Court when he comes to his ain.' He took Innes's arm, with a sidelong look at him, and the two passed along the path within a few yards of us. We watched until they disappeared in the distance; and then we ran along the great wedge of rock to the place where the man had been struck down; but, to our astonishment, he was not there.

'The crevasse!' called Bertrand, who was a little way in front. 'See!'

There was a little pool of blood on the ground, two or three feet only from the edge of a fissure that rent the promontory, narrowing to a point half-way across, the sea rumbling hoarsely as it ran up and down the floor far below us. We bent down and peered over the edge. There was nothing to be seen but swirling foam-flecked waters, but the same thought showed in our eyes as we stood up and looked at each other.

'Murder!' said Bertrand. 'The man has been knocked senseless and then shoved over. Innes

shall have Cousin Philip's company when he swings!'

There was no room for doubt. Whoever the man was, the sea had him. It was murder, calculated, cold-blooded. But to linger would serve no purpose, for we had the main business on hand. We turned our backs on the crevice and once more began our hunt westward. A mile or more of shingle below us bordered a crescent of sand that swung round to a little promontory, the western point of the dent in the coastline between the horns of the crescent—cliffs, shingle, sand, and sea forming an amphitheatre.

Anthony was in front. Suddenly he stopped and stared into the distance. 'Gowk! Gomeral that I am! Look! I've racked my brains ower the Fountain Reef, and, by the Lord, there it is starin' me i' the face! "The Spout," they call it. I've seen it a hunder times.' He pointed to the farthest point of the little bay. I could see nothing for a minute or two, until, a little way out to sea, a white sparkling column of water suddenly rose, hovered in the wind for a moment, and collapsed as swiftly as it came. It was about twenty feet high, a beautiful pillar of green and white. The effect was as sudden as a cannon's shot hitting the water. Another couple of minutes and up it reared again, to dissolve in a glittering rain of diamonds.

'The Fountain Reef!' Bertrand exclaimed; and as we watched it rise and fall, Glenira's choice of a name for it was justified. The spray feathered from its crest exactly like a fountain.

'Sailormen and the folk here call it "The Spout," but Glenira wasna to ken that. My word on't, the wreck is here somewhere. "The Spout" only blows at high-water and in a northerly wind, when the reef is covered.' Anthony spied all round with the glass carefully. 'Nobody about! We'll bide here till the ebb, and see—what we'll see.'

We lay down in the bents. Too excited and anxious to talk, exchanging a few monosyllables only, we kept our eyes glued to the column of spray. The sea retreated with a maddening slowness. It seemed hours before the fountain dwindled to a rabble of breaking waves, to show through them a lurking black streak, the spine of the reef. Farther out, a white shoulder of a wave rose and broke on something. Another and another followed as the ebb ran out.

The captain, staring intently at the place, the blue spark of his eye alight, called, '*There she is!*' and at the words a spar pierced the surface, a broken bowsprit, plainly to be seen, black and distinct against the foam of the retreating wave. The smoke of a stream of spray trailed for an

instant above a pencilling on the surface water. It might have been driftwood. I held my breath, next moment to give a gasp of relief. The top of a white figurehead was catching the sun! We rose to our feet at the sight, and watched the ebb slowly uncover the dead ship.

In half-an-hour her lines were clear. She lay nearly head on to us, with a heavy list seaward, stern well down, her back broken, the water streaming through her amidships. The masts were as depicted in Glenira's rough sketch, mere stumps snapped off a few feet from the deck. The sight of her wrought in me a sense of tragedy. To have come so far, a brave live thing, only to lie down beaten on this obscure and lonely shore until the North Sea wore her, inch by inch, to her slow ultimate obliteration, held something pitiful and irrational in it. If ever I own a wrecked ship, I pray that I may never see her last berth.

The curvature of the coastline hid her from eyes from the land except any on the cliffs' tops; and there we stood silently watching her.

At last I spoke the thought of us all. 'Are we in time?'

Bertrand had been pacing up and down like a caged tiger. 'Let us put an end to this. "Are we in time?" has haunted me long enough,' he exclaimed.

The ship was barely five hundred yards from the shingle below us. Her bows, high on a sandbank, were now nearly dry. We clambered down the rocks, through the shingle, and waited impatiently, chafing at the pace of the leisurely ebb. Bertrand, knee-deep in the water, was the first to reach her, the captain and I close behind him. Soon we were in her bows, watching the water sucking through the rent amidships.

It was plain that other hands than the sea's had been at work, for the *Marie des Anges* was as bare as a bone. The country-people and fishermen had stripped her of everything that could be turned into money or used for firewood. The very bolts, the poop and railings, had been taken away. The marks of axes showed everywhere.

We went down the broken companion, twisting suddenly to the entrance of the doorless cabin. Inside there was nothing but a tangle of imprisoned seaweed. The woodwork had been stripped to the ribs, and the sand left by recurring tides lay in wet patches on the battered floor. Everywhere we found the same emptiness. There was nothing in the hold except stones. The brig had sailed with ballast.

When the rearguard of the ebb gave her a farewell spiteful splash, the sands dried quickly, so that we could walk round her. On her stern, slanting down, half-buried in sand, we read:

*Marie des Anges,
Harfleur.*

Keeping out of sight on her port in case of inquisitive eyes on the cliff, we watched in a

curious constrained silence the widening sand. The minutes crawled past. The strip of sand widened from half-a-dozen paces to ten, fifteen, twenty.

'Now,' said Bertrand, 'as the captain said, "we shall see what we shall see."' His words and his air were nonchalant, but there was a faint tremor in his voice.

We were going toward the rim of the sea, when we stopped like one man and looked at each other with sinking hearts. Fifteen paces from the *Marie des Anges'* stern was a grave-shaped hole in the sand, nearly full of water.

We stood, shaken out of speech, staring at it. Every fibre in me told me beyond argument that we were too late. Left Hand had beaten us.

Anthony bent down and picked up something from the sand, wiped it on his sleeve, and held it up between finger and thumb. The light caught it. It was a *louis d'or*! 'Luck's against us!' said he, peering into the water. 'This hole isna a day old.'

His voice reflected our dreary thoughts.

'The money is gone. Much staring at each other will not bring it back,' said Bertrand ruefully.

'Yet it canna be far away. Better come out o' sight,' suggested the captain; and in the shadow of the wreck we paced up and down, striving to steady our thoughts.

The blow was a staggering one; but there were two chances left to us. Either the hole in the sand was an unsuccessful attempt to strike the *cache*, and the money was still undiscovered, or the two thieves had found it and were in possession of it.

'Look ye, sirs,' said Anthony, 'if ony o' the money is still buried hereaboot, then as sure as death my twa gentry 'll come back to dig for it, unless they get an inklin' that we are here. If they have lifted the money—and I think they have—then, tak' my word, they 'll be for up anchor and awa'. They maun be near at hand, and they dinna ken me. If I tak' a turn around the place, see the ships and my friends at Findhorn ower there, and maybe get a cargo, what 'll hinder me to keep my een and ears open for news o' them? There's nobody at the port would connect me wi' the wreck, or wi' anything but Anthon' Brander comin' to bespeak a charter and turn an honest shillin'. Let me gang to Findhorn.'

This plan was agreed upon. We arranged to watch the wreck from a hollow in the sand-hills, Anthony to meet us there with all speed after his visit to Findhorn. He came with us to the rendezvous, and then went off at a great pace westward. The place was out of the wind, and we made shift to be as comfortable as we could, one watching the sands and the remains of the brig, while the other slept.

SOLDIER NURSES.

By JOSIAH OLDFIELD.

WHEN a soldier goes to war he starts out with a certain glamour of romance and a halo of excitement which often overshadows the deep-down gnawing of the heart of those to whom his life is so precious and his comradeship so dear. This has always been so. The going forth to war is a pageant which has come down to us from the earliest ages; and whether it was the individual whose armour was buckled on by his loving spouse, or whether it was the regiment marching away with the beating of drums and the blare of music, there was always something which captivated the heart and made the blood pulse more quickly, and attracted even the laziest laggard to join. When the day of the passing was over, those who remained behind had many a sad presentiment, and the one gay morning was often followed by a succession of sorrowing evenings.

So long as health and strength remain, there is always a sense of security and a capacity to fend, each man for himself, under all conditions of service; but when wounds are suffered and sickness falls, the history of all wars has its chapters written in a minor key and with a pathos which exists to this day; and even with regard to those wars that were waged centuries ago, there is a perennial sadness for the reader about the incidence of failing strength and ravaging disease. Schoolboys construing their *Virgil* still sorrow over the wounds and deaths of the heroes, and the longing for the *dulces Argos* is echoed to-day, as it ever will be wherever men fight and fall sick away from home.

Mothers and daughters, wives and sweethearts, are prepared to bear news of death with the same fortitude that they ever bear the inevitable; but what gives them sleepless nights and days of anxiety is the gnawing thought that when their beloved one is helpless with sickness or wounds he will lie neglected and uncared for in the stress of military needs, and that in his loneliness and suffering there will be none to tend him and none to ease his pain. This is the impression which many have of what war means, because it is what has occurred time after time in the past.

To-day, however, the care of the sick is as important a matter as the equipment of the sound. The wise General has learnt that he cannot conquer with a sick army, and that movements of speed and accuracy become more and more impossible the more hampered he is with those who are incapable of marching. The modern General, therefore, has learnt that one of the essential needs of a successful campaign is to deal promptly and efficiently with every one of his sick and wounded. He needs every man

in his fighting-line, and he cannot afford to have chronic invalids. He needs the services of every man on his military duties, and cannot have his soldiers occupied in caring for and tending the increasing number of those who are incapacitated.

From the point of view of strategy, and apart from all humanitarian ideals, it is the duty of every good commander to keep every soldier in sound health, to get every soldier who is sick or wounded as quickly as possible well and fit again, and to transmit every seriously wounded or dangerously ill soldier back from his command at the earliest possible moment, so that he may always have his army fit, ready, and untrammelled to carry out the urgent military duties which may have to be done at any time, and which demand the utmost energy and intelligence of every one of his men.

When it is considered in this light, we recognise that the department for dealing with the sick and wounded is not a mere by-part of army organisation, or one which may be neglected or badly managed. It is so essential and integral a part of success in the field that the very highest organisation, science, and skill are applied to it.

Upon general grounds, therefore, it may be accepted even by the most timorous that, so far as is possible, every sick soldier will be as well cared for in war as he is in time of peace, and that all the resources of anæsthetics, medicines, surgery, and nursing will be placed at his service during a campaign even more insistently than they were when he was a civilian. This is a consoling thought to soldiers who are already enlisted, and to those who are anxious to become protectors of the Empire; and still more so to all the loving hearts who are remaining at home and bearing their share of the work that is to be done in a crisis like this.

Passing on from the general principles which underlie the treatment of the sick and wounded in war, let me deal in detail for a moment with the class of men to whom are entrusted these most important duties.

In the first place, in the medical organisation of the army there are the physicians and surgeons. These are selected with great care from the best type of civil practitioners, and they are given commissions which make them soldiers of the king, and which take them away from all other duties in life, and enable them to devote their utmost skill, thought, and heart to the welfare of the army. In addition to the great number of these well-qualified men, it is sufficient to read the names of the great consulting surgeons and physicians who have been attached to the military medical services to be assured that

what is best will be done, and that there is no niggardliness with regard to the provision of the highest skill that the twentieth century possesses. Just as a great hospital is staffed with its consulting physicians and surgeons, visiting physicians and surgeons, house physicians and surgeons, clerks and dressers, matrons, sisters, nurses, and probationers, so in the same way the military organisation is staffed with as complete a personal staff as is any civil hospital, only on a gigantic scale. The supervision is so complete that every man in the great machine is under the observation of a superior, and his responsibility to the superior under whom he works is constant.

Let me take as an illustration what happens to a soldier sick or wounded at the front; and then let me take, as another illustration, the course of training of one particular bit of the organisation through which he passes.

A man gets a bullet through his arm when he is in the trenches by day. There will be somewhere not far away one of the trained stretcher-bearers of his battalion, or a regimental medical officer of his battalion, or both. A man has always sewn into his uniform a first field-dressing, so that within quite a short time of getting his wound he will have it carefully dressed and bandaged up. He will probably have to wait in the trenches until night; but on the first opportunity he will either walk or be carried back to the nearest dressing-station or the point to which the field ambulances come up to collect the wounded. Here he will meet others who are being brought in, in the same way, until a sufficient number are collected. The first ambulance-wagon that comes will at once be filled, and our wounded soldier will be transported as rapidly as possible back to a Casualty Clearing Station, and there he will get further skilled medical attention, or he will be put on a train and carried right back to a hospital in the rear. At the Casualty Clearing Station there will be surgeons and trained soldier nurses, and on the train there will be a similar staff; and when he gets back to the stationary hospital he will receive the same complete attention as in any hospital at home.

It will be seen from this that a man comes under skilled nursing and medical attendance almost from the moment he is wounded right to the time that he is placed in the bed at a hospital of rest far in the rear.

In earlier days, horse ambulances, country wagons, cattle-trucks, and slow trains and many stoppages, made the journey from the front to the hospital at the rear a time of great suffering; but now motor-ambulances, rubber tyres, good springs, fast corridor and heated trains, slung cots, travelling kitchens, and travelling hospitals reduce to a minimum the weariness of this journey. A man may be wounded in the trenches on a Monday evening, and before

Tuesday is past he may be tucked in a clean bed, with the operation finished and every skill and care surrounding him!

Now let me turn to the training of the men whom I have called 'soldier nurses,' and let me take as an example a field ambulance. A field ambulance consists of some two hundred and nineteen men and ten officers, of whom nine must be medical men. Just as hospital nurses are attracted from a class of women to whom this branch of work especially appeals, owing to their temperament and disposition, so in the same way the nursing side of the army appeals to a class of men of a different type, generally speaking, from those who form the fighting branch of the service.

In the ranks of the R.A.M.C. you will find clergy of various denominations, artists, humanitarians, and members of that large class who are not themselves afraid to die, but who have a horror of killing others. It is easy to face danger when your blood is up and the animal passion is hot within you; but it requires bravery of a very high type to go quietly on your mission of healing and tending the wounded when shot and shell are falling thickly, and when at any minute a rush of troops and of cold steel will trample you and overwhelm you in your defenceless condition.

The R.A.M.C., therefore, essentially attracts to itself a class of man who is at his best when soldiers are helpless and wounded, and are longing for home and all the comradeship and comforts of their kith and kin. When the men are enlisted they are at once set to school—to daily teaching in anatomy, physiology, nursing, first-aid, bandaging, hygiene, and sanitation. Where opportunity occurs, when they have passed through their courses in theory, they are sent to local hospitals, where they have opportunities of learning in the ward and the operating theatre how to apply principles to practice. They learn there, too, all those little touches which trained women-nurses can teach, and which make all the difference between comfort and discomfort to a sick man in bed. A selected number get a training in cooking under skilled teaching, because a field ambulance has to be prepared to cook for and feed all the sick that come under its care. In addition to theory, the men are daily trained in physical exercises, marching, stretcher-bearing, loading the wounded into wagons and trains, and unloading them, so that by constant practice at home they become handy and adept in the art of carrying, moving, and transporting the sick and wounded abroad. Coming daily into contact in their training with their officers who are medical men, it is not surprising that, as the result of this intense application and devotion of the greater part of all their days to learning their duties, at the end of six months the majority of them are quite fit and capable of being put in charge of

broken-down troops, with the consciousness that they know how to handle them, and how to carry out hospital routine; and that they understand those methods by which men can be

restored to health as speedily as possible, the means by which pain can be reduced, and the appliances by which comfort and well-being can be secured.

BETTY GRIER.

By JOSEPH LAING WAUGH,

Author of *Robbie Doo*, *Cracks wi' Robbie Doo*, *Thornhill and its Worthies*, &c.

CHAPTER V.

OF late I have noticed that Betty, in the course of our frequent cracks, has with considerable tact and adroitness turned the topic of our conversation into channels matrimonial and domestic. I know full well that my state of celibacy is to her a subject of wonderment and speculation; but, though other cases similar to my own have been commented upon—threshed to chaff, I may say—she has never, until to-day, come to close quarters, and vested the matter with any direct personal application. How she manœuvred and worked her way round was distinctly characteristic, but not worth detailing; and I shall not readily forget the surprise, and, I might say, incredulity, with which she received my assertion that I had never married for the very simple reason that I had never been in love.

With her head thoughtfully to one side, she plied her needles assiduously. 'Ye're—let me see noo, ye'll be'—

'Thirty next birthday, Betty,' I promptly answered.

'Ay, imphm! Ye're quite richt; ye're juist exactly that, an' nae mair. Lovan me, imphm!' and she laughed and looked toward me. 'And, eh! d'ye mean to tell me—seriously noo—that ye're here at this time o' day witheot havin' met ony young leddy ye could mak' your wife?'

She was probing very near the quick, and I puffed vigorously at my pipe. 'Seriously and truthfully, Betty, I haven't yet met the woman I could marry.'

'Gosh me! that's maist extraorinar', Maister Weelum, an' you within a cat's jump o' thirty. It's almost inconceivable! It strikes me ye havena been lookin' aboot ye very eidently, for it's no' as if there was a scarcity o' women-folk. There's aye routh to pick an' choose frae; at least, if there's no' in Edinbro, there's plenty in Thornhill. It may happen, though, that ye're ower parteecular, or it may be ye're lookin' oot for yin wi' a towsy tocher. Ministers an' lawyers, they tell me, ha'e a wonderfu' penetration in sniffin' oot siller, an' the faculty o' placin' their he'rt where the handy lies.'

'That may be, Betty; but I must be an exception to this rule among lawyers, for I can assure you monetary considerations would never influence me. More than that, Betty, I don't

consider my case altogether hopeless, although I am nearly thirty. There's luck in leisure, and you mustn't forget that you can't command love. It has to come of its own free-will—unasked, as it were; and when it comes, rest assured it won't be a case of pounds, shillings, and pence with me. The fact is, Betty, I'm waiting.'

'Faith, ye're richt there; an' let me tell ye this, Maister Weelum, if ye wait much langer ye'll be gray-headed.'

'Yes, yes, Betty; but I mean I'm waiting for a particular young lady.'

'Oh, I see! Then ye ken o' yin?'

'Well, yes'—

'An' ye're waitin' on her growin' up, watchin' her as ye wad watch a Newton pippin ripenin'!'

'No, no! Betty, you misunderstand me. I know of a young lady; but—well, the truth is, I haven't met her yet—at least not in the flesh. Now, now, Betty, don't laugh at me till I explain.'

'Oh, Maister Weelum! I'll no' laugh. It strikes me it's mair a matter o' greetin'. But never mind; ca' your gird.'

'Well, Betty, to make a long story short, a few years ago I had a dream, and in that dream I saw a face and heard a voice—a woman's face and a woman's voice. I was very much impressed at the time, and that face has haunted me ever since. Among my friends I am not considered, in the generally accepted sense of the term, a woman's man. Strenuous work, facing hard matter-of-fact events, glimpses into the matrimonial tragedies of not a few lives, and the toll in time and thought which a growing business exacts have to an extent blighted the growth of the sentimentality which usually creeps into a man's heart between twenty and thirty. Somehow I have allowed matters to drift—to shape their own ends, or, as you would say, to work out their own salvation—in the full assurance, however, and with the hope strong within me, that some day the lady of my dream will come into my life, that I will again see that face and hear that voice. So far I have waited in vain; but I am not discouraged, for I feel my fate lies in my dream, and, as I say, I am waiting still.'

Betty resumed her knitting, for her needles had been idle while I was speaking.

'Imphm!' she said at length; 'an' that's hoo the land lies! Fancy that noo, a great, big,

wiselike man like you hankerin' after the face o' a woman ye had seen when ye were sleepin', an' a' the time without a doot lettin' chances slip by ye o' catchin' what ye micht ha'e gruppit. Hoots! hoots! Maister Weelum, that's surely a senseless ploy. Mair than that, I've nae brew o' dreams, although I confess that there's much in Scripture hinges on them. They were the makin' o' Joseph, a loupin'-on-stane to Daniel, an' a godsend to the prophets on mair than ae occasion. There's nae gettin' away frae it; but for a' that, as I say, I've nae brew o' them. I mind since o' dreamin' that I was sittin' doon to my tea, an' that I was eatin' the best bit o' boiled ham that ever I tasted in a' my life; an' the next mornin'—the very next mornin', Maister Weelum—my soo dee'd. Anither time—it was on a Setterday nicht, I mind—I dreamed that the kitchen lum was on fire; an' on the Sunday mornin', when I keekit up to see that it was a' richt, a young doo tummelt doon an' nearly frightened the life oot o' me. An' there was Peggy Rae—Mrs Wallace, ye ken—a real, nice, God-fearin' woman she is, an' a regular attender o' the prayer meetin's—weel, three times in ae nicht she dreamed that an auld auntie o' hers had come hame frae Ameriky an' gi'en her the present o' three hunner pounds; an' what think ye, Maister Weelum, she wasna weel through wi' her breakfast when her mither-in-law—an' auld, Godless, totterin' heathen she was—was brocht to her door in a cairt, took to her bed in Peggy's wee back-room, an' was the plague o' her life for weel on for a dizen years. Na, na, Maister Weelum; dreams are queer, contrary, unchancy things to sweer by. Tak' my advice, forget a' about your dream-leddy, as ye ca' her; cuist your e'e about on what ye can see an' grup, an' losh me! a faceable-lookin' man like you needna grapple lang. But I'm daft, sittin' clatterin' here an' the tatties at the sypein'. Tak' tent o' what I say, though, Maister Weelum, for ye're nearin' that time o' life when an unmarried man stammers into a rut that he's no' easy got oot o'.

Betty's warning gave me food for reflection for long after she left me—so much so, indeed, that as I quietly strolled along the Cundy road an hour or two afterwards, in the early afternoon, every chaffinch sang not to me but at me, and the burden of his song seemed to be, 'Tak' tent, tak' tent, and mind, do mind, the rut, rut, rut.'

In the sunshine too, amid nature in all its reality and activity, dreams and visions seemed strangely far away and unimportant. In my little room, with all its haunting associations, the story of my dream-lady had a becoming setting and an uncommonly substantial foundation. But here, with the breeze playing among the shimmering leaves of the gnarled poplars, the merry song of the birds in the plantation, and the sunshine lying on the white parallel-tracked road, it seemed more of an illusion,

something very unreal and fanciful, and I actually blushed that I, a solid, stolid man of thirty, should have narrated such a story with so much gravity, and pinned to it a significance so personal and material.

Absorbed in thought, I ambled along, heedless alike of time or distance, until at length, with surprise at my strength and staying-power, I noted that I had walked almost to the Nithbank Wood. I felt neither tired nor inconvenienced; and when I considered that I had been only a month or two under Dr Grierson's care, I felt I had accomplished a very wonderful feat indeed. True, I had rested all the forenoon, and even now I was heavily supporting myself on two stout hazel staffs; yet never since my accident had I walked so far without fatigue, and I felt relieved and elated beyond words.

I halted for a little in the grateful shade of a spreading lime, feasting my eyes on scenery dear and familiar to me since boyhood—the little round wood at the Cundy foot, every tree in which I had climbed in quest of young squirrels; the clump of geans at Holmhill, whose wild purple-brown fruit was sweeter far than any coddled garden cherries; the sweep of the Nith at the Ellers, where I had so often 'dooked' and fished; and the mossy, wild-thyme carpeted 'howmes'—our playground of long ago. The murmuring Nith recalled to me the Auld Gillfit, with its gray-blue pebbled beach and its banks of upstanding raspberry-bushes and twisting, prickly brambles, and with extraordinary intensity the desire sprang up within me to view its charms once more.

Buoyed up by pleasurable anticipations, forgetful of my weakness and the uneven, rutted slope, I opened the little wicket, and, without misgiving, entered the wood.

Through the green, quivering foliage I caught glimpses here and there of rippling, dancing wavelets, nodding brown-headed segg grasses, and patches of shimmering, sunlit sands. With eyes strained to catch each well-known feature, I stumbingly descended the rugged bank, and very soon, more by luck than careful guidance, I reached my goal. A hedge of waving willows screened from me the Cundy stream; but its joyous rhythmic ripple, as it washed its sandy, pebbled bed, sounded in my ear like the crooning song my mother used to sing when I lay on her knee as a child.

This was the dear old spot, the bank where we lay after our 'dook,' baking our naked bodies in the warm sun's rays; here the little sandy isle where we played at pirates and castaways, cooking a guddled yellow trout over a 'smeeky' green-wood fire, and washing it down with luke-warm water from the stream; there, through the arches' span, the Doctor's Tarn, where the grayling used to lie; and away beyond, the quiet grassy uplands of the Keir and the gray-green hills of Glencairn fading into the horizon.

Seating myself on the sun-browned turf, I lit my pipe. How long I sat I cannot say, for I was lost in reverie, and, truth to tell, just a little fatigued by my unusual exertions. Suddenly, however, it came to me that I wasn't alone. This fact was first proclaimed by a curling wreath of smoke on the other side of the willows. Then the aroma of a well-seasoned havana greeted my nostrils, and I rose to my feet to reconnoitre.

Walking a little up-stream, I came to an opening in the willow-hedge, and there, on a sand-knoll at the foot of the bank, sat a man—a clergyman, judging by his dress; while a little in front of him, and almost on the water's edge, was a tall young lady standing before an easel. I saw the man in profile—elderly and gray-bearded he was; but the lady's back was turned to me, and she was much engrossed with her canvas.

I must have walked very noiselessly, as neither of them seemed aware of my presence; and this I counted strange, since I had made no attempt at stealthiness, and they were so near me that I could almost have touched them. I stood for a minute silent and undecided whether or not to make my presence known.

Before I could make up my mind, the artist ceased work, and, stepping a few feet to her left, studied the effect from the altered standpoint. This gave me the much-desired opportunity of seeing the picture, and I noted with peculiar pleasure that it was part of the view in which I had just been revelling. And the subject, difficult and ideal though it was, had been touched by no unworthy, amateurish hand. The old red-sandstone bridge, mellowed in a soft western light, was a centre round which much broad, skilful, loving work was evidenced. Oil was her medium—rather an unusual one, I thought, for a lady; and in the brief glance I got I noticed she had imparted to her canvas the true atmosphere, and that it contained in colour, drawing, and composition the essentials of really good work.

Her clergyman companion closed his book, relit his cigar, and consulted his watch. 'Much as I expect of this picture as a big draw at my bazaar, and anxious as I am to take it back with me to-morrow to Laurieston, I'm afraid I must call you to a halt. It's almost five o'clock.'

'Just one wee, wee minute,' the artist pleaded in a singularly sweet voice, which seemed to me far away, yet strangely familiar.

A few deft, bold touches, the while her small head critically swayed from one side to the other.

'Finis! finis!' she called at length; 'and I'm sorry to part with it, as I love this subject.'

With a face flushed with success, she turned to her companion. Then her eyes met mine, and I stood breathless and transfixed, for I had heard the voice, and was looking into the face, of my dream-lady!

The fact that I was in the presence of one who had mysteriously influenced me for the last ten years, one whom I had seen in my dreams

but never met, thrilled me through and through, and I felt bewildered and benumbed. Had I been in normal health, doubtless I should have boldly faced a situation so psychologically strange and alluring; but in my present enfeebled condition I had no craving for the occult and romantic, and when I was freed from the spell of my dream-lady's eyes my first impulse was to retrace my steps and immediately regain the highroad.

I turned at once, in my haste struck my heel against one of my staffs, and fell heavily on the sloping pathway. My tweed hat fell from my head and rolled away down the bank, but I made no effort to recover it. With extreme difficulty I rose to my feet, and, gripping my two staffs in a strong grasp, started again to reach the crest of the wooded brow.

One of the peculiar effects of my accident is that I cannot raise my body on my toes. When going upstairs I have to turn sideways, and in an awkward, laboured fashion lift one foot over the other; and in negotiating this ascent, in which the same muscles were called into action, I had to take a zigzag course which demanded great caution and care, as there was no pathway, and the surface was treacherous and uneven.

I stood for a moment before I entered on my arduous undertaking, irresolute and hesitating, swayed by two conflicting impulses. Here was the fulfilment of my dream. Down there, a little beyond the hedge of willows, stood one, the memory of whose sweet, pensive face had haunted me for years; whose living presence I had prayed for, yearned for; and whose influence, unconsciously exerted, had dominated my being and kept me unscathed in the midst of many temptations. It was the culmination of ten years' expectancy and waiting. A series of remarkable coincidences and strange providential workings had matured, and here was I spurning a friendly interposition of the Fates, and fleeing away as if I were a cowardly, shamefaced culprit. Why should I act so? Why should I not face the situation and await this flow in the tide of my affairs?

Then in thought I traversed the long, dreary road which during the past years I had walked alone. Hastily I reviewed the picture I had often conjured up of what our meeting would be, the contemplation of which had yielded me so much sacred, secret pleasure. Strange, I had always painted her as I had seen her a minute ago, even to the detail of pose and attitude. She—well, she was just my dream-lady, faithful in every respect to my imaginings; and in this picture, in response to her inviting smile of recognition, I was by her side, strong in body, resolute of will, sure of having at last met my affinity.

Strong in body! Resolute of will! Was I? Ah, the humiliation of the truth! Why, as I stood there, I was tottering on my feet like an octogenarian, convulsively clutching two hazel staffs for support, and so irresolute that I could

scarce form an idea of what my next move would be. What a metamorphosis! what a pitiful spectacle!—an object surely for sympathy, but not likely to inspire love or admiration. No, no, she must not see me thus; and, quickly disposing of all other considerations, I turned my back upon fate and commenced the ascent.

Painfully I dragged myself along. Never once did I look backward, for I soon found that I had essayed a task requiring all my concentrated attention. Urged on by a consuming desire to get away, I at first made wonderful progress. But as the minutes passed, and the ascent became steeper, I felt my will-power diminishing, my strength gradually growing less, and my knack of happily negotiating ruts and obstacles deserting me at every step. Once I lost my balance and slipped down the slope; but I clutched the dried tufted grass with a frenzied hand, and crawled up on my knees to where my hazel had dropped. Again I started, and again I fell, this time losing grip of both my staffs and also any confidence in myself that was left. Flushed and breathless, I rose to my knees, and with feverish energy began to crawl uphill. But my haste was my undoing, for with it my caution disappeared. Twice the wisps of grass by which I hauled myself broke in my hand, and I slipped down, each time losing any little headway I had made. Again I slipped. Then despair took hold of me, and, with limbs exhausted and relaxed, and eyes moistened by thoughts of weakness and acknowledged defeat, I sank to the ground.

For a few minutes I lay oblivious to everything around me. Then the sound of approaching footsteps and snatches of faintly audible conversation recalled me; and wearily and painfully I raised myself to a half-reclining, half-sitting position, with my back turned to the direction whence the sounds proceeded.

'Yes, it's a very decent hat,' said a voice which I recognised as that of the clergyman; 'a very decent, serviceable hat indeed; and I dare say it may as well be restored to its owner, though the drunken scamp deserves little consideration.'

'Oh, surely he's not drunk, Mr Edmondstone?'

'Most assuredly he is,' replied the cleric. 'While you were busy on your canvas he was doubtless lying somewhere hereabouts, sleeping off the effects. Believe me, no man would stagger about a braeface as he did unless he were under the influence of drink.'

'Dearie me, Mr Edmondstone! dearie me! are you not forgetting? Faith, Hope, Charity; and the greatest of these is Charity. Charity of judgment is beautiful, Mr Edmondstone. You are—or at least you should be—preaching that every Sunday. But in this case, whatever you presume, I, at all events, will maintain it was no drunken look he gave me. I admit his movements were suspicious; but—well, we'll soon find out. Please hand me his hat.'

'What! You surely don't mean to tell me you are going to speak to him?'

'Certainly. Why shouldn't I? Either you or I shall have to give him his hat, and—sh! sh! I'm afraid he's hearing all we are saying.'

My dream-lady was quite right. I hadn't missed a single word that had passed; and—passive, but with the hot blood mounting my neck and cheek—I had without protest allowed the charge of drunkenness to be made against me. I felt too weak and humiliated to make any defence. What mattered it to me, after all, what they thought, so long as they kept at a distance from me and left me to my own resources? They might have passed me, and I would have made no sign that I was aware of their presence; but when I heard my dream-lady's decision to be the bearer of my old tweed hat I started violently and looked keenly toward her. With my chin resting on my tired, lacerated hands, I watched her carefully picking her steps along the tangled incline. The fact that there was no escaping an interview was borne home to me so forcibly that it led to speedy resignation, which not only relieved my pent-up feelings, but also enabled me to observe her dispassionately, and study, without bias, her face and form. What my estimate was I cannot tell, or, rather, I will not tell; but when she reached me, with a flushed face, a half-frightened, half-defiant look in her eye, and my old tweed hat in her hand, I felt she had been aware of my critical scrutiny and resented it, although my opinion, favourable or otherwise, was to her of no consequence whatever.

'Thank you very much for bringing my hat to me,' I said awkwardly; 'and thank you still more for your belief in my sobriety.'

She looked at me for a minute, the while all evidence of fear or distrust vanished from her face. Then she smiled—smiled a true smile, with parted lips that disclosed two rows of pearly teeth, and soft fringed eyes that showed in their depths trust in humanity and joy of life.

'Oh, please don't thank me for either,' she said, in a low, sweet-toned voice. 'Your hat is too good to lose. It is no trouble to return it; and as for the other—eh!—matter—well'—and she looked round about her on the russet woods, the peaceful fields, and away to the west where the faint sunset glow was suffused along the Glencairn hills—'I could not bring my mind to associate such glories as these with any state so mean and degrading; and I'm glad—yes, I'm glad—that I was right.'

I bowed in silent gratitude.

'I don't want to appear inquisitive, she continued; 'but would you mind telling me why you acted so peculiarly in zigzagging up this incline instead of taking the path by the boundary beech-hedge? And, oh dear, dear! your hands are bleeding! Have you no handkerchief? See,

here is one;' and she pleadingly held out a dainty piece of lace cambric which I could easily have put inside my watch-case.

Refusing her kind offer with thanks, I produced a sonsy specimen of Betty's laundry-work, which I rolled round my right-hand thumb. 'It is more than kind of you to interest yourself in a stranger,' I said, without looking up. 'The fact is, I haven't been feeling very fit lately. The effects of a nasty accident have kept me too much indoors; but to-day, feeling a little stronger than usual, I extended my walk, and very foolishly determined to visit a particular spot here which, through boyish associations, is very dear to me. As it happened, I found you occupying it; and not wishing to disturb you in your work, and eager to regain the highway, I over-exerted myself, lost my footing, my patience, courage, and my two sticks, and—and here I am! But I've got my second wind now. I'll rest here just a little longer, and everything will be all right.'

'Dearie me,' she said, and she caught a straying tress of dark hair and tucked it securely underneath her tam-o'-shanter, 'how very easily one may be deceived by appearances! Mr Edmondstone thought you were—well, you know; and I thought you had seen a ghost. I'm very sorry to know of your illness, and it is lucky, after all, that we were about. If you feel sufficiently rested, my friend and I will assist you up to the wicket.'

She offered her good services with such an ingratiating, confident air, anticipating neither denial nor protest, that I was downright sorry to say her nay.

'No, no,' I said nervously, and I am afraid ungraciously; 'I shall manage all right by myself. Thank you all the same. But there is one kind action you might do on my behalf. Down there, below that little knoll, and somewhere in the long grass, are my two hazels. I—I lost grip of them somehow. They rolled down, and I couldn't very well reach them again. Once I have them in my hands I'll feel myself again. Would you mind getting them for me?'

'Certainly,' she said with alacrity; and, slipping down the few yards of irregular turf, she soon returned with my hazels. 'Are you quite

sure now I can be of no further service to you?' she asked, as she handed them to me.

God knows there was much she could do for me, and I yearned to tell her so; but I felt her presence beginning to dominate me; and as I was strangely out of humour with myself, and utterly incapable of acting the part I had in my day-dreams anticipated, I made haste to call up what remnant of will-power I had left.

'You have been exceedingly kind to me, a stranger,' I stammered. 'Believe me, I appreciate what you have done, and—good-afternoon.' And in confusion I raised my hat.

She looked inquiringly at me for a moment, and I saw speech trembling on her lip; but with a little effort she checked it. Then, with a smile and a slight inclination of her head, she walked slowly, and I imagined thoughtfully, toward her companion. I heard the wicket opening on its creaking hinges, and clicking as it closed in its iron fastening. Voices in animated conversation became fainter and fainter, rhythmic sounds of footsteps died away into silence, and I lay back on the bank among the brown wispy grass and the red autumn leaves with a joy and thankfulness in my heart I had never experienced before. And my joy was not born of the knowledge that my dream-lady was a reality. Somehow, I had never doubted that. Rather was it that I had convinced myself that she possessed all the virtues and qualities with which I had vested her; and that, short as our interview had been, and commonplace as our conversation had proved, there was pervading it all the feeling, peculiar and indefinable, that what had taken place was merely a prelude to something more satisfying, a foretaste of greater happiness in store. What mattered it that I didn't know her name or where she had gone? Sufficient to me to know I was being guided aright, that the Fates were with me, and that by degrees the curtain would be drawn aside and my way made clear.

The birds trilled sweetly the last lingering notes of their lullaby, the Cundy stream crooned lovingly a song I had never heard before, and the glamour of the gloaming took possession of my soul.

BEN BECULA.

By M. A. MACLEAN.

From the lone shieling on the misty island
Mountains divide us, and the waste of seas;
Yet still the blood is strong, the heart is Highland,
And we in dreams behold the Hebrides.

THE above lines, sometimes said to be the translation of a Gaelic poem written by an exile from Uist, may not inappropriately, perhaps, introduce my readers to an island in Scotland

whose name, to English ears, is suggestive of the South Pacific. It is one of the group known as the Outer Hebrides, a land round which much ancient and interesting history clusters, and which has a charm and a glamour all its own, casting its spell over every one who has seen the joyous radiance of its summer or the moonlit nights when the call of the

curlew and the sandpiper comes across the sea. Here Nature reigns supreme, and her varied sounds tell of the silent shores, the moors, and the reedy places that form part of this fascinating island.

That group of the Outer Hebrides known respectively as North Uist, Benbecula, South Uist, and Barra form what is called the Long Island. The first three are, when the tide recedes, virtually one island, as for the time being the wet sands become the king's highway, over which His Majesty's mails and all other traffic go, at considerable risk of damage and loss of life, for, added to the danger of its sea-water streams, there are quicksands whose exact position cannot be determined.

From shore to shore, the North Ford, separating Benbecula from North Uist, covers a distance of about five miles, while its one end opens into the wide Atlantic and the other into the Minch, that deep channel, full of currents, dividing the Long Island from the Inner Hebrides. In the old clan days this North Ford was bridged over by a stone causeway, parts of which still remain, linking up the small islands in the ford, and giving the community a thoroughfare which made them independent of tide and free from its risks. The South Ford, separating Benbecula from South Uist, is about one mile across, and not dangerous, comparatively speaking.

The Atlantic Ocean, gentle and caressing for four or five months of the year, washes the shores of the island on the west, lapping in summer and thundering in winter over the miles of beautiful pale sand of the beach. Within the past forty or fifty years the Atlantic surge has washed up the sand from the ocean-bed, so that the island has benefited by an increased area of about five hundred acres of prairie-like land known as *machairs*. A broad belt of bent-grass close to the shore binds this *machair* land together and keeps the fierce gales of winter from blowing away the light sand composing it; while farther inland the ground is utilised for grazing, and for growing potatoes, corn, and barley. In summer the grazing portions of the *machairs* are masses of bloom, dog-violets and pink-and-white clover predominating, and the honey scent of these flowers, mingled with the perfume of all kinds of herbs, is wafted on the light summer breeze, so that the warm exhilarating atmosphere is indeed 'scented air.' On this side of the island one looks out on the broad expanse of the Atlantic, the only land visible being the little isle of Heisker, with St Kilda a dim rock about forty miles away; while straight out, somewhere in the vast distance, lies the continent of America. In summer the sky, like the half of a ball above our heads, is virtually 'heaven's dome,' from which the sun shines in light and tempered heat from 2 A.M. till 10 P.M. In the month of June there is practically almost no night, there being a gloaming lasting a few hours,

and once more the sun, in all his summer splendour, rises out of the ocean.

The east side of the island, mainly pasture-land and bounded by the stormy Minch, presents quite a different aspect, and, in place of the flat coastline, the sandy beach, and *machair* of the west, there is wildness and grandeur of rocks, inlets, and bays, and innumerable islands, forming here and there archipelagoes of unsurpassed loveliness. To sail round these islands, picnic, fish, or shoot seals are favourite pastimes; and so enchanting are these sunlit isles and blue waters, the slumberous stillness broken only by the bleat of a sheep, the dip of an oar, or the distant whistle of a herd-boy, that one can but describe it all as paradise.

In these days of improved transit, the Outer Hebrides, with their atmosphere of remoteness and peace, are not so much 'on the other side of the world' as one might suppose from a glance at the map of Scotland. Not so in other days, when within so recent a time as twenty-five years ago the only communication with the mainland was by means of a schooner which deposited mails and passengers at Lochmaddy, the northern port of Uist; and thence passengers, even those *en route* for Barra, seventy miles distant, had to find their way. Before the days of the schooner—or 'mail packet,' as she was called—the people used to convey their merchandise to Glasgow in open sailing-boats, so small that they were limited to a carrying capacity of from two to three tons. The time spent on this journey varied from ten to twenty-five days, according to weather. On one occasion one of these boats was enveloped in fog, and wandered about helplessly for three or four days, until picked up near the coast of Ireland by a merchant sailing-vessel, whose captain took it to within its proper course. Some idea of the resource, seamanship, and hardihood of the race may be gathered from the fact that these men set forth to cross the dangerous seas without chart or compass, the sky above them their only guide.

This is the ideal land of the crofter; and Benbecula, with an area of five miles square, is broken up into homesteads, the working of which forms an outlet for the energy of a particularly industrious people. Some of these crofters possess from fifteen to twenty head of cattle, a few sheep, and two to four horses; and when the harvest is gathered one may see several stackyards containing twenty large stacks of corn, while some of the people are sufficiently prosperous to send their children to be educated in the secondary schools of the mainland. Half of the inhabitants are of the Protestant and the other half of the Roman Catholic Church; but in the schools there is no difficulty with religious instruction, and on so amicable a footing are matters in this respect that Mr Balfour made special reference to these isles when the English Education Bill came before the country a few years ago.

This, too, is the land of young people, if not the *Tir nan Og* ('Land of the Ever Young') of the poets; but perhaps in a sense it is that also, for most men in these isles look very much younger than their contemporaries in other countries and districts.

Militarism appeals strongly to the Benbecula man, and practically every house gives its representative to the Lovat Scouts or the Third Battalion Cameron Highlanders (Special Reserve). So much does this military spirit pervade the men that almost every boy, on leaving school (aged probably fourteen), presents himself for enlistment; but, to his chagrin and disappointment, he is told to go home until he is a little older!

In summer, after the peats are cut and 'lifted,' the young men are free to go away to camp, and it is a fine sight to see the vigorous and stalwart fellows as, with shouts and laughter, they gallop on their Uist-bred ponies, trying races over the sands of the ford, on their way to the meeting-place of the Lovat Scouts; or to see the Cameron Highlanders, with swaying kilt and martial tread, to the strains of 'Lochiel's away to France' played by the regimental pipers, set off for their twenty-one mile tramp to Lochmaddy or Lochboisdale, where they embark *en route* for camp.

The island is of considerable antiquarian interest, there being relics showing a close intercourse with Iona in the days of Saint Columba, an underground temple, the remains of lake-dwellings and Pictish brochs, and also prehistoric remains of 2000 B.C. Here was the home of the great Clan Ranald, famous in song and story, and, like nearly all the rest of the Highlanders, ardent supporters of Bonny Prince Charlie, as their rich garland of Gaelic Jacobite songs alone would prove, apart from the romantic history of Flora Macdonald, that spirited and heroic gentlewoman of the clan. The Clan Ranald obtained possession of the Long Island through marriage with the MacRuairis, who had held it for centuries.

What particularly appeals to the stranger, especially if he comes from a busy city, is the atmosphere of kindness and freedom, the latter perhaps enhanced by the limitless expanse of sea and sky, and the unbroken line of the horizon. There is a great amount of bird-life, especially wildfowl, some of them very uncommon, so that to ornithologists and sportsmen the place has much interest. The island is literally honeycombed with lochs almost all containing trout, which, with those in the sea-pools, afford good sport.

As the visitor looks down from the only hill, whose description in Gaelic—*Ben beag maola* (Ben-bec-u-la)—gives the island its name, the formation of the land, like an inverted saucer, conveys the impression that one big wave from the Atlantic would sweep people, cattle, crops, houses, and all into the sea. The land being so flat, there are no rivers, and the whole physical

features of the island are totally different from those of any other part of Scotland, the only familiar prominences being the high hills of North and South Uist, 'MacLeod's Tables,' in Skye, and the jagged peaks of Rhum, blue or snow-capped, across the Minch.

Round the shores of the island circulates the Gulf Stream, accounting for the equable temperature, and for the depositing during the winter storms of the valuable sea-tangle, so wealth-producing an asset to the islander, for from it he makes kelp (used in the manufacture of iodine), often in early spring working day and night to secure the precious weed cast up by the tide.

Agriculture occupies the entire population, augmented by the kelp industry for the men and the manufacture of the beautiful and artistic tweeds or 'homespun' by the women; and in connection with the latter much of ancient custom, song, story, and dance still occupy an important place in the social life of the people. When singing, they use great liberty with the melody, the majority of old and young possessing the rare gift of giving infinite variety to an air—which, however, in the chorus will always retain a particular form—till the listener, in bewilderment, wonders which of the various styles best pleases his musical taste. The music of the Celt has often an illusive character and charm, and all over the Hebrides generally are to be found ancient vocal melodies elsewhere forgotten, and more imbued with all the magic quality of the Celtic spirit than exists in the songs of any other part of Scotland.

DREAMS.

THERE'S a little city in the fire,
Deep down in the red, red glow;
There's a castle with shining battlements
That tower o'er the rocks below.

There's a golden sea that softly flows
Along that silent strand;
And, on the shore, a lone dream-child
Waving his little hand.

There's a harbour deep in the sheltered bay;
And, out o'er the far sea-tide,
A hundred ships are sailing away,
With gleaming sails spread wide.

And up and down to that city's street
I see in the red, red glow,
By winding pathway and rugged lane,
The strange dream-people go.

And over the shadow of the hill
I see a church spire fair.
Tell me, little dream-child on the shore,
Is the church bell ringing there?

Whom do you wave to over the tide
Of that soundless, shining sea?
Look up to the world, oh little dream-child!
And wave your hand to me.

Chambers's Journal

SEVENTH SERIES

THE ANGLO-SAXON SPIRIT IN THE WAR.

By C. EDWARDES.

A FEW years ago M. Edmond Demolins, an able Frenchman, wrote a book (*A quoi tient la supériorité des Anglo-Saxons*) which proved convincingly to himself and his Anglo-Saxon readers that we of this island owe our important rank on the earth to our exceptional determination and ability to assert ourselves as individuals. We are pre-eminently a people à *formation particulariste*—that is to say, of self-reliant integers, in contrast with other European peoples of the *formation communautaire*, who live, as it were, arm-in-arm. Neither our kings nor our own parents may hope to dragoon us in opposition to the very sound instincts of personal enterprise and strength with which centuries of inspiring Anglo-Saxon achievement have endowed us as a birthright. Kings who attempt the game lose their heads, are deposed, or fettered more tightly with constitutional restraints. The Anglo-Saxon father who pits his will against his grown-up son's will is left briefly gasping at the temerity of his offspring, who says, 'All right, sir. I've had enough of this. Good-bye,' and turns his back upon the comforts of the domestic nest in order to fight the world single-handed in his own way, on behalf of his own particular aspirations—just as his briefly gasping sire in the like circumstances would have done a generation ago. *Ignotum est pro magnifico* to the Anglo-Saxon on either side of the Atlantic in the young prime of his powers, but rather *horrifico* to the young of other, communistic, peoples. Our sea-girt situation helps us to a far-and-wide special intimacy with the two elements of water and land, so that from childhood onwards we have an imagination-kindling more to the horizons of our ambitions than our Continental fellow-men have to theirs. Pride in this stimulating heritage makes us soon contemptuous of apron-strings, and healthily critical of those in authority over us. In the main, of course, we rule our rulers. In short, we are the one glorious stock which dares assert its divine right to live and move and breathe at ease as and where it pleases. Fortunately, even according to the recent testimony of our arch-enemy of the moment, we are the most civilised of all stocks, as well as so exceptionally strong-willed and independent. The Anglo-Saxon

supremacy on the earth has consequently for the last hundred years been a blessing rather than otherwise to our neighbours and ourselves.

On these grounds, and remembering the parentage of the Most High Kaiser Wilhelm II. of Germany, our arch-enemy just mentioned, we may largely understand the fury and deadliness of his present struggle in Europe. He is quite half as much an Anglo-Saxon as the most thoroughbred of ourselves, and has, moreover, that inherited barbaric Prussian faith in bayonets and guns as the best means of national aggrandisement with which it has been his life's aim to indoctrinate the German people. 'He wants to do everything himself, and fancies that he can,' Bismarck said of him twenty-five years ago. Earlier still he himself said, 'If I am the last man upon the field of battle, nothing that we have conquered shall be lost.' Ere he had reigned three years he had mystified, amused, impressed, excited, and confounded Europe by the loud trumpeting of his Ego. Even then he acknowledged no equal upon earth, and but One elsewhere. Bismarck was scarcely too venomous for truth when he said of his own successors around the throne, 'They all crawl on their bellies before him, in order to attract one gracious look upon themselves.' Although at that time still almost dog-loyal to the monarchy which he had so heavily wreathed with laurels (conquered territory), the dismissed Chancellor already had misgivings about Germany's future under so Oriental-minded a young emperor. From 1848 he had deemed it his duty to work for the strengthening of the power of the Crown. Now he declared that it was Parliament itself that required to be strengthened against the Crown's encroachments on its liberties. But it was too late. The Pilot was not allowed to change the course of the ship of State. He was dropped; and the young Kaiser smilingly accepted our *Punch's* famous cartoon on the subject as a useful admission of the potter's right to smash his own pots at his own discretion. The monstrous miracle of an epoch has followed: this same Kaiser's progressive inoculation of an otherwise intelligent people with his own megalomania, and the devotion of scores of millions of human beings to the attempt to realise his imperial

ambitions, regardless of scruple, honour, and humanity.

In Bismarck's time his countrymen were not such docile sheep as the Kaiser has trained them to be. 'Wherever there are three Germans there are four opinions,' he tells us; with the significant addition for us others of 1915 that it was 'just as well Providence has infected the Germans with such a passion for contrariety, seeing that if united in all things such fellows as they are would lift the whole world off its hinges.' The drama of a Germany united in aggression is now before us. The world's hinges still hold, but they have certainly creaked ominously more than once since last August. In the Book of the Wisdom of the great Chancellor we may, however, if we need it, obtain a singularly refreshing hope from a record of his falling asleep one day in 1872 while meditating about the continuance of the national unity which he more than any one had consummated at Versailles the previous year. He dreamed that a map of Germany was in his hands which slowly grew more and more rotten, 'until finally it crumbled away like tinder and vanished in shreds.' If he could see the Europe of to-day, even the iron-hearted man who said,

'If I have an enemy in my power I must destroy him,' but who also said, 'What a gentleman has engaged to do is already as good as done,' and said further, 'Whoever has looked into the breaking eye of a dying soldier on the battlefield will pause ere he begins a war,' would probably at once declare that the empire upon the building of which he had spent his life was already crumbling, and was deservedly doomed to disintegrate.

But the end is not yet, nor can any one foresee the date of it. The one truth which it behoves us to grasp and keep ever before our eyes for the continuous stiffening of our backs is that the fight in so far as we and the Kaiser are concerned is between two forces of similar Anglo-Saxon bulldog pride and stubbornness. The miracle by which the German Emperor has brought his people into firm line with himself clamours for full recognition from us, and even respect of a sort. It will not, of course, be a war to the last man and last horse on either side, but it is inconceivable that a man of the Kaiser's temperament and self-training can survive to sit dishonoured on a broken throne among a cursing and humiliated people. For him at least it must be a war to the death.

THE BRIGHT EYES OF DANGER.

CHAPTER XXXIII.—WHEN THIEVES FALL OUT.

THE afternoon wore on slowly. I was on duty, Bertrand asleep curled up in his cloak among the bents, when I heard a distant soft whistle, and saw Anthony's sturdy frame coming toward us. I wakened Bertrand, and we waited in a fever of speculation and anxiety. He dropped down beside us, panting.

'You have news!' I said. I read it in his eye.

'News! I've had the luck o' the deil! I got across to the port, and went straucht to a skipper, Colin Bisset, an old shipmate I ken. We blethered ower the rum about old times, and so forth. He's to get a cargo for me fra' Forres, if he can; but that's neither here nor there. We were at the "Crown and Anchor," when in comes your twa cut-throats.'

He lit his pipe with maddening deliberation.

'They took a look at me, but I was a plain tarry sailorman talking about the chances o' a cargo and what not. They greeted us, were free with their siller, and as pleasant-spoken as ye could want.

'Had I come far?' the tall man speired.

"Fra' Inverness to Garmouth, where I left my ship and am seeking a cargo," says I, for that was my story.

"Can I have a word wi' ye?" says the tall man to my frien' Bisset.—"Bide there!" he orders the man Innes ower his shoulder, as if he was

telling a dog to lie down. He and Bisset went out, leaving Innes and me. The cratur sat at the fire and never said a word, his een jumpin' atween the door and the window; and when he took up his tumbler his hand shook so much that he wasted the half o' the dram on the floor. He has the fear o' death on him, or I never saw it.

'Back comes my gentleman. "Bisset here tells me ye'll be sailing soon, and that ye are an honest man. Have ye room for myself and my friend there?" says he. "Twenty guineas if ye land us in Holland."

I pretended to consider, making a lang face ower the business, but I could ha' laughed aloud.

"Come!" says he, "if ye're in doots I may as well tell ye that it is a bit matter of politica."

"I told him that I had no great concern in either James or George, and in the end I agreed to tak' them.

"When can ye start?"

"Are ye pressed for time?"

"We are."

"To-morrow night here, then," says I. "I'm just settlin' aboot a cargo. I can bring the lugger roond th' night and load her th' morn."

"I suppose we'll be the only passengers?"

"Deed," says I, "I havens room for more."

"Here's half the money," says my lord, large

as life, and throws down ten guineas. "Ye'll ask for Mr Mortimer at the 'Crown and Anchor,' and I'll look for ye to sail by to-morrow night's tide."

'So here I am, and I think that I have struck a guid bargain wi' "Mr Mortimer." What say ye, sirs?' He jingled the guineas in his pocket, a grim grin on his mahogany face.

This was great news. Our spirits mounted like mercury. Fata, that we had railed so bitterly against, had been spinning for us to some purpose. We were radiant, and tried to thank the skipper, but he cut us short.

'Thank me when we've finished the job! Ye'll observe that they may not bring anything on board wi' them. They may have hidden the French money.'

'They will show us the spot. If not— Oh, I think we shall persuade them!' said Bertrand.

Anthony had brought a couple of good-sized peats with him, and (a most welcome supplement to our bread and cheese) some kippered salmon and oaten cakes; and on these, with a drop of rum and water, we fared excellently well, for the air was keen, with an edge of frost to it, and we were sharp-set.

To have gone now in broad daylight to the *Marie des Anges* to dig for the French money would have been to run the gauntlet of any prying eyes. When night fell and the tide had ebbed past the wreck, we were to venture out to her, and then dig until the dawn. None of us expected to find a single piece. The finding of the hole in the sand and the single *louis* was a thing alive with plain meaning; but, though the nest had in all likelihood been harried, we determined to leave nothing to chance.

There was scarcely a breath of wind stirring the bents. The November sun was beginning to dip; across the Firth the far Highland mountains of Ross and Sutherland were gradually being dislimned. Where we lay on the cliff's top, the cold clutched us miserably, and a suggestion by the captain to go down to the beach and shelter in a 'Fair Traders' Parlour'—so he called it—that he knew of among the rocks was welcomed. This proved to be a snug enough little cave, well above high-water mark, and dry as a bone. A salmon-coble, moored to a big stone, lay high and dry on the sands near us.

The captain built a fire with some sticks and the peats, and round it we ranged ourselves, after casting lots for the first watch. We had to make an early start, hard work was in front of us, and sleep was a necessity. Bertrand lost the draw, and with loaded pistol mounted guard at the entrance. The evening closed round the coastline as the captain and I made pillows of our boots and jackets, and lay down, feet to the fire. I began to say my prayers, but I am sorry to record that I fell asleep in the middle of them in less time than it takes me to write it. I lay

like a log until Bertrand aroused me to take my spell of the watch.

'All's well, not a soul,' he reported, 'and a wondrous night of moon and stars.'

The air outside caught my breath as I slipped into the cold of it. The night was one to be remembered for the pure beauty of it—not a fleck on a sky of indigo except the tremulous sparkle of a myriad stars; a clear moon riding high, the sea's great silver basin brimming with the tide. Its rumour filled the night, and now and again a wave far out, its cresses touched by the moonlight, arose and vanished, beautiful, white, ghostly. The *Marie des Anges*, the Fountain Reef, the slant of the cliff to the sea, were picked out as clearly as on a sheet of white paper. In its quiet, its purity, and serenity, the night was one to lay a cool hand on tired eyes, stilling uneven heart-beats. I sat me down on a little rock, bathing my senses in the balm of it all. Man's wickedness seemed a thing monstrous and remote.

The tide was filling. Already it had reached the *Marie des Anges*, and was creeping round her. The Fountain Reef was covered, a little boiling of white showing where the column of spray would rise when the tide gathered weight and strength.

I was looking westward, where the cliff was thrust like a mace into the sea, when I was aroused into alertness, and dropped behind the rock in an instant, for the bows of a boat appeared round the point. It swung into view, heading slowly for the wreck. It had no sail up, for scarcely a cat's-paw of wind ruffled the silver floor of the sea. Against the clean background its lines were picked out in detail, a small rowing-boat with a white strip below the gunwale, two men tugging leisurely at the oars.

I crouched, ran quickly to the little cave, and roused Bertrand and the captain. They hastened into their boots, and the three of us, with the wariness of Red Indians, crept along among the strewn boulders. The moonlight was as clear as day, and the night so still that we could hear the complaint of the oars on the thole-pins as the boat crept along.

Anthony, well under cover, spied her carefully. 'Twa men, but ower far to make them out. I wonder what the deil they are after? Fishermen, maybe; but makin' for the wreck, I think. They're in no hurry, and the tide's against them.'

Twenty minutes or more passed. The sea crept steadily up the counter of the wreck. A spurt of spray at the Reef, the first play of its fountain, shot into the air and fell with a hollow sound in the stillness. The boat crawled along like some black insect on the clean surface. It reached the wreck, disappeared round the stern, and after a minute or two the figures of the two men showed on the deck. From the list

of the wreck to port we could only catch a glimpse of their heads now and then. One of them stood in the bows motionless as a sentry for a long time; and when at last he vanished the tide was half-way up the *Marie des Anges* and spilling through the breach amidship.

'Whoever they are, they choose a strange time to set about their business,' I whispered.

'I like it as little as you do,' said Bertrand. 'But if they are Left Hand and Innes, what in the devil's name can they be doing there, when the tide is flowing?—What say you, Anthony?'

Anthony, spyglass at eye, pointed to the wreck without taking his eye from it. The boat was coming round the stern.

'Are they carrying anything away?' I asked him. The seconds between question and answer seemed interminable.

'N—no, there's nothing that I can see;' and then, suddenly, 'By God!' came from him as he lowered the glass and looked at us.

'What is it?'

'Nothing is being carried awa', but there's something left behind. There's only one man in the boat.'

I picked up the glass. Sure enough, a man was alone in it, at both oars, rowing hard. I turned the glass on the wreck, but there were no signs of life on her.

'The other man! Where is he?' said Bertrand, and Anthony jerked his head seaward.

'Out there—somewhere. If he is in the wreck— Look at the tide. It is ower her stern.' He pointed to the boat. The man was rowing with all the speed he could muster. Through the flow of tide the boat had a much shorter distance to cover to get round the point, and was now within a few minutes of it.

'Quick! The coble! She's nearly afloat. By the time we get her out the boat will be round the point.'

The coble, a clumsy, flat-bottomed thing, now lay in about a foot of water. Anthony cut the rope that moored her to the stone. We heaved at her till we felt her bows float, and got in, poling her off into deeper water with the oars.

The captain took the oars, for neither Bertrand nor I had learned to row. The coble ran through the broken water where the tide joined a little channel in the sand, and was headed for the wreck, I giving the directions by hand. The other boat had disappeared round the point. The tide was almost flush with the deck when we drew near the wreck.

'*Mon Dieu!* what is that?' asked Bertrand.

'That' was a cry, faint but unmistakable. I involuntarily clutched Bertrand's arm, for the voice was human and in extremity. It came again, long-drawn, more of terror in it than of pain, and the sound of it, dying, trailing into a silence that could only mean despair or worse, made my hair stir on my scalp.

The captain bent over the oars. We were a

couple of lengths from the wreck, when the cry came again, just as we swung round the bows and came alongside. Between each wave, at a small breach in the ship's counter a hand clutched and tore impotently at the woodwork. The sea by this time was lapping the deck.

The captain stepped on deck and made fast the painter. We followed him in a fever of expectancy.

A huge stone covered a hatchway. Anthony bent over it. 'What devil's trap is this? Lend a hand, quick.'

We rolled the heavy stone away. From under the hatchway came a pitiful sound, a shaking appeal for mercy, I conceived it, scarcely articulate, a word here and there, but for the most part mere animal whimperings, except one sentence, 'Let me out, Philip. Don't leave me. You shall have the whole of it.'

Anthony lifted the hatchway.

The moonlight fell on a man's face, chin-deep in the water. It was Kenneth Innes, and no sooner did he set eyes on us than he collapsed. Anthony clutched him, and dragged his limp, dripping frame out on deck. He took so long to come round that I feared he was to die; and when at last he did open his eyes he was unable to speak, blinking at us in silent terror. By this time the wash of the tide was ankle-deep. We lowered him into the coble, and the captain pulled off.

I wrapped my cloak round the shaking wretch, for his clothes were dripping. He was wet to the skin, and sat between Bertrand and myself shuddering dreadfully, his head in his hands, until I lent him my cloak, when he broke into dry, tearing sobs, not from grief, I was sure, but in a reaction from the agony of watching slow death creep toward him. His nails were torn and bleeding from the frantic efforts he had made to force a way out from the trap of the fore-hold. Whatever his sins were—and I could name some of them—the wretch had come to the end of his tether, and I do not doubt, when he saw who had rescued him from one death, that a vision of sure retribution in the shape of another and more shameful one stared him in the face. A despicable rat of a creature, with a rat's face and body, without a rat's courage, my gorge rose at the sight of him and the sound of his whimperings. Let me be honest, pity I had none, for I remembered his share in the affairs of The Garth.

The moonlight showed smooth water between the white patches that marked the rocks at the entrance to the little channel. We made the passage easily and swiftly, and beached the coble. No one had seen us. There was not a speck on the sea other than the tip of the *Marie des Anges'* figurehead; no sound but the sibilations of the tide in the shallows of the rocks, and the dull report like a minute-gun where the apparition of the Fountain rose and vanished.

We lifted Innes out. At first he was scarcely able to walk; but by the time we reached the cave he revived somewhat, and a gulp of raw rum put a measure of life into him. We briskened the fire, and he thawed himself at the blaze, steam rising from his drenched clothes.

All this time there had been little or nothing said, for he had been light-headed, beyond coherent speech, but now he suddenly sat up.

'Did ye see him? Where is he?' he asked.

'Whom?' said Bertrand.

'Philip Macdonell. He was—out there. He is not here, is he?' He started to his feet, his voice almost a scream as he peered round the shadows beyond the fire.

'You are safe so far—at least, safe from him. As for your life, that depends on your answers to us. Tell us how you came to be in the forehold; and, remember,' added Bertrand, 'your life depends on your telling the truth.'

He gave a dry gulp, and the tail of his eye took us in in turn.

'Gentlemen, ye have saved my life. I'll tell ye the truth, all I know of it.' He had found his voice, but his eye was furtive. He began with some rambling protestations that it was an ill day when he first had to do with Macdonell, and so forth, until I cut him short.

'Go to the root of the matter at once,' I said. 'Your other adventures can keep. Where is the French money that you helped to steal?'

'The—the money,' he stammered. 'I'll keep back nothing. I never laid a finger on it, I swear.'

'Where is it?'

'Macdonell has it at Findhorn. We got the chest in the sand. Never a *louis* did I touch; and as for where it is now, beyond that it is in his clutches, as God is my judge, ye might as lief ask the wind as myself.'

'You lie, you dog!' said Bertrand. 'It is hidden, and you and he know where. If not, why did you call out that he should have the whole of it if he let you out of the forehold?'

'If that's the way of it, then ye know more than I do, gentlemen,' he said, with an attempt at composure; but he could not conceal the fear in his eyes.

'We know more than you are aware of. We know that you stood by and saw a fellow-man murdered.'

Never a word did he say this time, but went white to the lips.

'What have you to say?' I asked.

'I had no hand in it,' he managed to gasp.

'That will be the business of a judge and jury to determine, and I fancy that the three of us here may have something to say that shall help them to a verdict. We saw you. Come, man! Time presses. Out with it!'

Impotent venom was plain to be seen on

Innes's face. He stood watching us like a trapped animal.

'Macdonell has just tried to drown me,' he at last ventured. 'Think ye that I would lift a finger to help him to the money?'

'I do not. He tried to murder you because you know where the money is, and because he wants the whole of it for himself. You have five minutes longer to make up your mind.'

'And then'—

'Then you die, unless you confess the whole bloody business, and tell us where the money is.'

'If I die, what better pass will you be in? Macdonell has the money'—

'And is to sail under the name of Mr Mortimer wi' me, and I dinna doot he'll have the siller wi' him,' struck in Anthony; and at the words Innes recognised the skipper. I think that he then realised that the game was up, that there was no chance of saving his life and keeping a share of the money as well.

'Macdonell knows where it is, not I; and if I am to die, so be it,' he said sullenly, after a pause.

'If that is your last word, you can begin your prayers. You need them all,' said Bertrand.

Innes burst into a torrent of imprecations and appeals. Bertrand and I looked at the priming of our pistols.

'You have two minutes left. Stand over in that corner.'

He did as he was bid, and I went to blindfold him, but no sooner was the handkerchief tied than he literally grovelled.

'Spare me, spare me, and I'll take ye to the place,' he whimpered, and collapsed in a dead faint.

'*Mon Dieu!* A sorry villain!' said Bertrand; 'but we must keep him alive, although 'tis more than he deserves.'

The captain poured some rum over his throat, but he took such a long time to come round that again I feared he was dead. So near were we to the threshold of success that the thought of his taking his secret with him into the unknown filled me with consternation. At long last he revived, and we propped him against the rock wall, a thoroughly cowed and abject spectacle.

We had no time to lose. Philip of the Left Hand expected to sail with the *Gannet*, and doubtless counted upon carrying the money with him. Although this would have played into our hands, the thought of stealing a decisive march and emptying his *cache* before him was like meat and drink to us, and it was the safer plan. All depended on where the chest had been hidden.

Innes had the fear of death on him, one thought only in his craven soul—to hold on to his miserable life. Eager to save his neck, with an uneasy eye on the pistols he gave us the information on the spot.

'It is below the cliff on the east. The one—the one'——

'The one where Macdonell killed the man?'

He nodded.

'Who was he?'

'A fisherman. He helped us to hide it, and was the only one besides ourselves who knew. I had no hand in it. Macdonell is a masterful man. If I show you the place, will ye keep me skaithless concerning this?'

There was no use wasting breath on the poltroon.

'We make no promises, except one, and it is that if you do not take us straight to the place, without swerving, we shoot you on the spot. March!'

We put him between Anthony and myself, and the four of us stepped out of the cave into the innocent moonlight.

(Continued on page 515.)

SOME MEMORIES OF THE GERMAN AT HOME.

By LEWIS MELVILLE.

I HAVE known Germany during a long period.

A quarter of a century has elapsed since I went there for the first time, to remain for two years to learn the language; my last visit was paid three years ago, when I made a brief tour in the neighbourhood of Hanover and the Hartz. Between my first and last visits many changes had taken place. Everywhere in the larger towns I noticed signs of growing prosperity and affluence, and of a higher standard of comfort. Extravagance, too, I observed, was on the increase. Hotels were more luxurious, and prices were higher in the cafés and the theatres. Spirits, scarcely known there when I was a lad, were more commonly drunk, and champagne was apparently becoming a favourite beverage. The shops were larger, and offered a better selection of goods. In one thing, however, I noted no change. The tailors still labelled their ill-cut clothes of fearful hue 'Englisch made,' and the hosiers still lauded their wares as 'Englisch fashion.' In most cases this was obviously nothing more than a trick of the trade, for—at least, to the British eye—the things shrieked aloud their Teutonic origin. If further proof of this were needed, it has been forthcoming in the announcements made after war broke out by many German retail houses which had specialised in these alleged English goods that the patriotic need not hesitate to purchase these things, since, as a matter of fact, in spite of the labels, they had always been made in Germany. This matter is trifling in itself, so trifling as to be negligible, for many shops in other countries indulge in dodges of this or some other kind; but it is interesting as showing that the deception practised was based upon the fact that, even if the Germans hated the Englishman, at least they delighted in some directions to ape him.

That the Germans have long hated the English every one who has lived in that country can testify. That this hatred comes from envy the Germans have scarcely ever troubled to deny, and during the last few months they have certainly made no secret of it. It has here been propounded that the war is the doing of the Kaiser and of the highest military authorities.

I do not propose to discuss again the well-worn theme of how the war came about; but I am convinced that, once there was war with Britain, it was popular with the nation at large, and especially welcomed in north and middle Germany. It was not only in the military messes that the toast of 'The Day' was drunk; it was drunk as enthusiastically, though with less of ceremony perhaps, in commercial circles throughout the Empire.

It was not only an objection to Britain's prosperity which prevailed; it was not only annoyance that Britain occupied most of the 'places in the sun'; it was largely a personal dislike of the individual Englishman. Tell an Englishman that he gives himself airs when he is abroad, and he will look even more bewildered than hurt. When he has sufficiently recovered from his astonishment to find his voice, he will assure you that neither at home nor abroad does he ever brag. Up to a point he is quite correct in his statement. You will never hear him remark what a fine fellow is an Englishman, or what a great country is that to which he belongs. He says simply, 'I am an Englishman;' but, however much he tries to hide his pride, he leaves you in no doubt whatever that he is convinced that the statement must conjure up all sorts of flattering sentiments. To see an Englishman and a German discussing international questions is a joy to any one gifted with a sense of humour. The German talks of the greatness of his country, of its invincible army, of its great wealth and power; the Englishman listens and agrees, but very much as an adult listens and agrees with a child who vaunts his toys. There is a club so select that to belong to it is a very high distinction; no member ever inserts it in *Who's Who* in the list of clubs to which he belongs. This is on all-fours with the Englishman's attitude abroad. He believes with all his heart and soul that to praise England to members of a nation which he regards as inferior would be in the worst possible taste. It would also, he is sure, be supererogatory. Can there be any nation with soul so dead as to question his superiority? The idea never enters into his head. His ineffable self-

complacency must be maddening to the inhabitants of other countries. 'They don't go in for cricket,' he says, and for him that settles the question of British supremacy. Perhaps he is right, too, for cricket has at least taught us to play the game. 'If I were an Englishman,' that observant American the late Price Collier wrote, and every English heart went out to him for expressing the sentiment, 'I would pray God that my countrymen might never play less so long as they play the game.'

We schoolboys had the feeling as strongly, perhaps more strongly, than our elders, and we were even less adepts at concealing it. Indeed, I fear we paraded it unduly. We laughed at the German boy's clothes and habits and manners; we laughed at the masters; we criticised their method of teaching; we objected to the enormous amount of home-work set every day, and did not do it; we were amused at the enormous enthusiasm with which they worked in a covered gymnasium, which strenuous exercise took with them the place of our sports. We lured them on to cricket, and put on a fast bowler; we coaxed them on to the football fields, from which they retired more breathless than hurt; but we soon gave that up, because we could not make them learn that the ball and not our shins was the objective. We, with our Dutch allies, challenged the school to snowball matches; we were outnumbered ten to one, which seemed to us about the odds. We were there to acquire the language, and so we English boys herded together, played together, talked together, went about together, nary a word of German did we speak if we could help it, and I well remember the headmaster's final report on my progress. 'Your son,' he said to my distressed parent, 'has learnt German—in spite of himself.'

We chafed the martial-looking policemen—they seemed to us so quaint that they wore swords instead of carrying truncheons; we laughed in the face of the corseted officers, and would not step into the road to give place to them, as the German ladies did. How shamefully we behaved when we were made to take part with the rest of the school in a torchlight procession in honour of the Kaiser, who was paying a flying visit to the city! Our manners were solemnly impeached the next day by the headmaster before a full muster of the school. What cared we! But how we lined up—voluntarily—and cheered lustily when the Prince of Wales (afterwards King Edward the Seventh) drove over from Homburg to lunch with the British Consul-General! How proud we were thus openly to proclaim ourselves members of that Empire upon which the sun never sets!

We English schoolboys were not popular in the city of Frankfort-on-the-Main. Yet really we were easy to manage when we were trusted. One master, who had spent several years in

England, knew this, and we were lambs in his hands. 'I want you boys to do so-and-so,' he would say, and it was odds on that he had his way. 'I order you to do this,' or 'It is my command that you do that,' was the usual formula, which with us was almost invariably a prelude to disobedience. The one man would sometimes stop and chat to us on the asphalted playing-ground—how we longed for grass!—the others would pass by, watching only to see that they were duly saluted. The majority of masters behaved to us as the officers did to their men—as if we were beings of a different and vastly lower order. They would as soon have thought of flying—it was before the days of Zeppelins—as of taking part in our games. Their dignity was not in themselves, but in their office.

We hear a great deal about the superiority of German over English education, and that it is more solid there can be no question. We hear, however, much less of its drawbacks. It produces sound scholars, but unsound men. The pace is too hot. From eight o'clock to twelve, from two till five, and then, for the conscientious lad, a solid two or three hours' preparation for the next day's labours. All work and very little time for play makes Johann a dull boy. The middle-class schoolboy cannot shirk—too much depends upon his working—for if he passes a certain standard he need only undergo one year's military training instead of three. This is all-important to his future in the profession or business which he selects. Many break down under the strain; the majority are bespectacled before they are fifteen. As a body, they are steady plodders, and painstaking rather than brilliant. The learning they acquire is of little use, for few can generalise. They cannot see the larger issues for the details.

England is the most self-disciplined nation in the world. Germany is the most strenuously disciplined nation in the world. Therein lies the difference. The Englishman has achieved discipline in the pursuit of his sports, he has learnt to play for his side; the German has had discipline thrust upon him. The one knows what to do; the other is told what to do. The one can shift for himself; the other has to be led. Evidence of this is to hand everywhere, and especially in the lands which the Germans have tried to colonise, and in every country to which they have migrated. The Englishman abroad is *plus royaliste que le roi*. He mixes with his countrymen, he goes to hotels which he knows they frequent, he insists whenever possible in talking his own language and playing his own games, and loud and deep are his curses when he has temporarily to abandon the customs of home. He drinks whisky in tropical climates, plays cricket (of a sort) on the high seas, and indulges in football just behind the firing-line. The German, when he leaves the Fatherland, becomes denationalised more quickly than the

inhabitant of any other country. 'It has been a problem to prevent their becoming Poles where the State has settled Germans for the distinct purpose of ousting the Poles,' an acute observer has noted. 'In China, in South America, and even in Sumatra, I have heard German officials tell with indignation of how their compatriots rapidly take the local colour, and lose their German habits and customs and point of view. One of the half-dozen best-known bankers in Berlin has lamented to me that he must change his people in America every few years, as they soon go to pieces there.' This may argue much for the amiability and adaptability of individuals, but it is a damning indictment of a nation.

As the German requires leading, the Government takes him in hand and directs him from the cradle to the grave. The entire population is spoon-fed, with the result that when there is no rule there is consternation first, and then confusion. The most familiar signs are '*Verboten*' ('Forbidden') and '*Nicht gestattet*' ('Not allowed'); and in such places as Homburg many of the directions are kindly painted also in English. The German is told that when he is alighting from a tram-car he must put his left hand on the left-hand rail. Everywhere there are notices to 'Keep to the right.' At the pillar-box is a warning, 'Do not forget to stamp and address your envelope.' The author of a recent book on Germany states that a little while ago a new edict concerning street-traffic was promulgated, by which it has been decreed that 'people may not walk more than three abreast; they may not swing their canes and umbrellas as they walk; they may not drag their garments in the street; they may not sing, whistle, or talk loudly in the street; nor congregate for conversation.' If you kiss your wife in a public place you may be hauled off to the police-station and fined. What happens if the lady is not your wife I do not know; perhaps the official imagination cannot conceive such a situation.

A nation that requires so many directions requires numerous directors, and a kindly Government provides them generously, so far as numbers are concerned, and parsimoniously so far as salaries are in question. Germany has suffered from, and is suffering from, the curse of bureaucracy. The army rules Germany; indeed, it seems as if Germany exists for the army, instead of the army for Germany. It is everywhere, and all the time, a case of the army first and the rest nowhere. In all places, and in all circumstances, it is given the *pas*; and the officer, being instructed by authority that he is a privileged being, inclines naturally enough to regard the civilian as the dust beneath his feet. If you laugh at him, or are rude to him, he is permitted—nay, encouraged—to regard it as an insult, not to himself as an individual, but as an insult to his uniform, and he may draw

his sword and cut you down then and there. As he is never out of uniform, it behoves you to walk warily with him. If he enters a café, all the privates who are there jump up and salute like fury until he has passed the tables at which they are seated. The English officer would find that embarrassing; the German officer regards it as a natural tribute to himself as a creature of a superior caste, and revels in it. The respect paid to the military uniform has produced throughout the country a lust for uniforms. All callings cry aloud for them, and all sorts and conditions of people are permitted to wear them, just as innumerable people have official titles, and just as these titles extend to the wives. There is Mrs Minister-of-Justice A., Mrs General B., Mrs Doctor C., Mrs Upper-Postman D., Mrs Captain E., Mrs Court-Apothecary F., Mrs Municipal-Theatre-Box-Office-Keeper G., and so on. Those who study the laws of precedence in Germany burn midnight oil.

This is all very pretty and childlike; but then the German is still merely a child, a precocious child, it is true, but certainly not an adult. He places himself in the hands of his Government, and the Government in peace-times gives him a restricted press, and in war-times suppresses any news which might give him a sleepless night. And if there is no freedom of the press, there is little freedom of speech. I well remember at a dinner-party an English-woman beginning to discuss the Kaiser, and her hostess begging her to desist, anyhow until the servants had left the room. 'We have to be very careful,' she explained afterwards. 'They might report it.' *Lèse-majesté* is an offence very seriously punished. The divine right of princes—except, perhaps, of such as have been mediatized—holds throughout the length and breadth of the Empire.

A change has been taking place. Germans are slowly developing a spirit of initiative, the lack of which among soldiers Von Bernhardt deploras. The Social Democrat movement has grown to such proportions as to give a rude shock to the powers that be, and from time to time the Reichstag shows its fangs. But the greater part of the population leaves politics to its rulers; and though there are parties sometimes strong enough to give trouble, the Kaiser is the effective, and not merely the constitutional, head of the Government—which, of course, makes for the greater and more direct influence of the ruler. The feminist movement, in spite of the opposition of the Kaiser, is also making headway. In some parts of Germany one may still see women dragging carts about the streets, working in the beet-fields, and doing other manual labour, the man looking on complacently, and regarding it as a matter of course. In that country the man does not regard the woman as his equal. *Küche, Kinder, und Kirche* ('cooking,

children, and church') is the lot that is assigned to her by common consent, from the sovereign to the peasant. It is only necessary to see the sexes together to realise that the Oriental idea of the place and function of woman still flourishes in the Fatherland. There it is the man of the middle-classes who takes care of his hands, and carries a pocket-comb and looking-glass, which, unashamed, he will produce and use in public. The men do not perform the common courtesies; the women, never having been used to them, do not miss them, and therefore do not resent the omission. There are signs, however, that the German women are beginning to realise that they

can be something more than household drudges. They have begun to take an interest in other things than the kitchen and the nursery and the church. Their education is progressing on a broader basis. They are actually taking an interest in sport; the doves of Cassel were sorely fluttered three years ago when a girls' rowing club was founded there. Girls are beginning to realise that while marriage is a most excellent thing, marriage for the sake of being married is not quite so good an institution as one might assume from hearing a girl of three or four and twenty spoken of slightly as an old maid.

A MAN OF PEACE.

PART II.

AS the full significance of what he was witnessing came home to Robert Meikle's mind an impulse of panic seized him, followed the next moment by a sudden clearing of his faculties and hardening of his resolve. To such a man as he the conviction of his own responsibility was incentive enough. But what step to take?

The nearest coastguard station was ten miles up the shore. By the time he had given the alarm and returned to the scene irreparable harm might have been done. To ride back to the town and rouse the police would be almost as long an undertaking. No; upon his individual action depended the interruption of the criminal attempt. Ten minutes' hard riding would bring him to the headland. Thenceforward he must be guided by events.

Scarcely had he arrived at the decision, when he was on his bicycle again, pedalling at full speed in the direction of the cliff.

A dark mass at the side of the road made him swerve obliquely, coming off his machine. Hastily turning his lamp on the obstruction, he saw that it was a small but powerful motor-car, with lights extinguished, in the lee of the dike—the instrument of escape for the foreign depredators, no doubt. But he would have a word to say to that. Without a second's hesitation he whipped out his pocket-knife, and thrusting the blade deep into one of the swollen tires, ripped it up. A sharp, hissing noise followed him as he remounted his machine and rode away, bringing a grim smile to his face. Really, for 'a man of peace' he was developing unusually vindictive qualities.

Now he had reached a point at which he must desert the road and take to the shingly turf that covered this part of the cliffs. Laying his bicycle on the ground, he started forward noiselessly in the direction of the headland. Fortunately there had been no repetition of the flashes, so that, as far as he knew, he would yet

be in time to prevent further mischief. Doubtless the operators were waiting for an answer from out the dark void before them, or some stated interval was ordained to elapse between the signals.

He was making involuntarily for the ruined dwelling that he had formerly sought so vainly to distinguish, but whose ragged gables could now be seen looming through the darkness ahead of him. It was more than probable that the building had been adapted by the spies for their machinations. How many of them were there? he wondered, a faint suggestion of his own peril obtruding itself on him for the first time since he had embarked on the adventure. But, strange to say, it brought with it no fear. The odds against his safety weighed nothing with him as compared with the chances of failure. He was obsessed with the one idea—to prevent any repetition of those hellish signals. Crouching lower and lower as he neared his objective, he advanced with a noiseless stealth that would have done credit to any professional cracksmen. The ground was littered now with little heaps of flints marking the boundary of what had once been the garden of the ruin. Its back premises were a mass of crumbling bricks and mortar. The middle wall alone stood almost unimpaired by the destruction that had overtaken the remainder; and, moving in its shelter, the minister soon found himself at the right angle of the building. As he reached it he was greeted by a low clicking noise that evidently proceeded from the other side of the wall. He paused to listen. At the same moment two figures suddenly emerged from the front part of the house, bearing a curious tripod-like stand, which they deposited on the open ground about twenty yards from the edge of the headland.

The minister breathlessly watched the muffled forms bending over it, while snatches of deep, low conversation drifted back to his ears. The moment for action had almost arrived. Plainly

another signal was to be launched forth through the encircling night. But what could one helpless man do against two desperate adventurers, armed as they doubtless were, and prepared to defend themselves to the last? Just for an instant the weakness lasted. Then a strange thing happened. An impulse of rage against the dastardly plotters such as he had never before experienced shook the man of peace to his foundations.

A louder click, a dazzling flash that for one brief second lighted up the cliff-top with an unholy brilliance, then a sudden hurtling presence from out the darkness that sent the instrument of damnation to the ground, and, flinging itself on the nearer of the muffled figures, bore him downward.

Just for an instant the minister had the advantage, being on the top of his man, with his hands grappling the miscreant's throat in approved melodramatic fashion. But the second spy had by this time recovered from the surprise of the attack, and, whipping out his revolver, took point-blank aim at the uppermost of the struggling figures. There was a sigh, a sudden relaxing of the minister's hold; and, extricating himself from beneath the now inert and senseless form, his opponent staggered to his feet. A moment later two scurrying forms could be seen making their way back across the cliff-top in the direction from which Robert Meikle had advanced on his daring mission but a short while before.

Clang! clang! clang! The harsh, untuneful summons, filtering through the sea-fog that had crept landward during the night, reached the house of Greywalls only in muffled snatches on this Sabbath morning.

Kate Thriepland, in her quaint oak-beamed chamber, put the finishing touches to her toilet. A dashing scarlet was the hue of her new gown, chosen out of compliment to the prevailing military taste, and certainly no colour could have better suited the clear pallor of the skin beneath the drooping black hat. But, somehow, she did not feel the anticipated pleasure in her appearance. A sense of futility, of impotence almost, possessed her, mingled with a weak and unprofitable haunting of remorse. Miss Goldie's taunt had gone deeper than she allowed. If the minister really valued her opinion, surely he would have been stung to anger by her gibes and flings of yesterday. But they seemed rather to afford him amusement, rolling harmlessly off his back. 'A man of peace!' How she abhorred the term, at a time like this especially, when it was incumbent on every male being worthy of the name to justify himself!

Her aunts remarked her unusual silence on the way to church, but wisely made no comment on it.

A group of excited figures beneath the lych-gate greeted them on their arrival.

The dominie, hatless, and with his hair standing up more brush-like than usual round his pallid face, detached himself to address them.

'A most mysterious thing had happened. The minister, who had been sent for to see a sick parishioner the preceding evening, had not yet returned. They were momentarily expecting a messenger from the manse with later news; and—ah, here he is!' as an awkward youth in Sabbath blacks came shambling down the road toward them.

'No; no word yet of the absentee,' was the report. 'His housekeeper, Tibbie Erskine, was just putting on her things to come up to the church and consult them.'

A curious sinking of the heart assailed Kate Thriepland as she listened silently to the various solutions that sprang to the tongues of the group during the interval of waiting.

'Lost his way in the fog;' 'Detained by the serious condition of the patient;' 'A bicycle accident.'

Somehow she believed in none of them, yet her certainty of disaster was overwhelming.

At this juncture Tibbie's arrival created a diversion. The old woman's cherry-coloured bonnet was awry, showing the heedless haste with which she had dressed, but her wrinkled face shone polished as ever. She scornfully repudiated every suggestion that had been put forward. 'A serious harm's come to him, that's a' I ken, or he'd ha'e been here this minute,' she asseverated with vehement certitude; 'an' the surer some of you great strappin' fellows get aff an' luik for him the better,' casting a fiery glance from right to left.

Strange to say, this definite confirmation of her own worst fears came almost with a sense of relief to Kate Thriepland. A longing for action had been surging within her since she first heard the news, and the next best thing to starting off herself was to see the search-party detailed for the purpose.

A large crowd had now gathered, and it was Miss Thriepland's suggestion that the remainder of the congregation should go quietly into the church to await events, a proposal warmly seconded by the dominie. Accordingly, to give their humbler brethren a lead, the three ladies from Greywalls calmly and composedly entered their pew and took their seats as if there was nothing to hinder the service from commencing at its usual hour.

That first fifteen minutes seemed like an eternity to Kate Thriepland. Her thoughts were far away, scouring the lonely, winding tracks of the bleak hinterland that held the secret of the minister's fate. Anything might happen to a man in those solitary wilds. Her clairvoyant sense groped dimly to some unprecedented happening, discarding, as formerly, all ordinary solutions.

Now the midday hour boomed from the clock

on the tower, and with a scraping of feet the male members of the congregation, whose custom it was to linger among the graves until the last moment, filed in and took their places.

Silence!

The dominie had leant forward to consult with the precentor. A moment later he turned to the congregation and gave out the hymn, 'O God! our Help in Ages Past.'

With a shuffle of relief those present rose to their feet, and the grand old tune droned and echoed among the rafters of the church.

A longer, more accentuated silence followed the singing.

Miss Thriepland gave a covert glance at the tiny watch-face on her wrist, exchanging looks with her sister. Then a sudden commotion outside the church drew all ears. Hasty footsteps could be heard on the flagged central pathway of the graveyard.

The dominie rose just in time to confront the white-faced messenger, who hesitated in the porch.

Instinctively every one present had craned forward to catch a glimpse of what was going on.

Kate Thriepland's hands were clasped in her muff; her vision was blocked by the half-turned, startled profile of her elder aunt. Was it possible that she had only now realised the looming catastrophe? the girl wondered half-unconsciously. How much longer would that altercation in the doorway continue? Now the dominie had broken away from the bearer of ill tidings, and was striding back down the aisle, his expression set, a hand thrust into the front of his tightly buttoned frock-coat. At the harmonium he paused, throwing back his head still farther, and facing the expectant worshippers.

'Brethren,' he began in broken, husky accents, and those near him could see his fingers clenching and unclenching by his side, 'I have bad news for you. Our minister has been found on Skegness Cliff wounded and unconscious. Yes, wounded through the breast by the cowardly bullet of an assassin'—he paused as if to give full weight to the assertion—'an assassin whose wicked machinations he had plainly tried to prevent, single-handed and unarmed as he was; for beside him where he lay was found a shattered instrument designed for signalling purposes. Brethren, our minister has played a part in the defence of his country as great and noble as any of those in the trenches. May God spare him to us for our future pride and gratitude!' He broke off, his head falling forward on his chest as a low echo of sympathy went round the church.

'A man of peace!' 'A man of peace!' How mockingly the sentence danced through Kate Thriepland's brain as she passed out among the agitated throng a few moments later into the fog-bound silence of the Sabbath morning!

'As I have said before very often, I am a man of peace,' said the minister in his languid, invalid tones. 'One of your warriors would have been much more efficacious in the emergency.'

It was his first public appearance since his recovery from his wound, this visit to Greywalls, and the remark had been addressed pointedly to the girl seated across the hearth from him, though it was her aunt that had called it forth by her congratulations on his prowess.

Kate Thriepland's eyes were fixed obstinately on the fire. 'I don't think any one could have done more,' she said in a low, steady voice, 'if he had been ten times a soldier.'

'But the fellows escaped.' The minister's tone was expostulatory.

'Despite a punctured tire,' put in Miss Thriepland slyly.

A smile flickered across the visitor's wan face. Six weeks had elapsed since that tragic Sabbath of fog and mischance, but he still carried the signs of his encounter. 'Ah, that was a nasty trick!' he ejaculated.

'When is the doctor going to send you away?' was Miss Thriepland's next remark, abruptly irrelevant. 'Change of air is what you want.'

'He says I may travel in another week,' conceded Robert Meikle. 'I am to have a month's holiday.'

His eyes were fixed deliberately on the down-cast face across the hearth as he spoke, but a faint twitching of the girl's lips was all that signified her cognisance of the statement.

'I'll just run up and tell Ann that you're here.' Miss Thriepland had started up from her chair as if suddenly mindful of her sister's existence, and was at the door before the two who were left had time to realise her intention.

A silence broken only by the crackling of the red embers fell in the room.

It was the minister who interrupted it. 'You rather failed in your obligations that day, you know, Miss Kate,' he began in his low, tired tones; 'such an opportunity lost, an empty pulpit, a starving congregation!'

The girl raised her head suddenly. 'My courage is only theoretical, I fear,' she said with a half-smile. 'Besides, that morning I was thinking of other things;' and she lowered her head as suddenly again.

'If I might hazard a guess,' he offered, 'you were thinking of'—

'Well?' Her eyes met his again defiantly almost as he broke off.

'No; I give it up,' he retorted.

'I was thinking of you, of the most unlikely thing that could have happened to you,' came the audacious confession.

He laughed. 'Then I presume you foresaw what did occur. After all, what more unlikely thing than "a fight" to happen to a "man of

peace," and a coward to boot!' The last words were spoken in a lower tone.

'Hush!' She had started to her feet at the sound of them, her face crimsoning. 'It is cruel, unmanly, to keep up such a thing—when you know—you know'—

The minister had risen too, and taken a few slow paces toward her. 'Know what!' he demanded.

They were standing opposite each other on the hearthrug now, but his height gave him the advantage.

'Know what!' he repeated, as she gave no sign of having heard the question, his gray eyes scrutinising her down-bent face.

'Oh, nothing,' came the lame sequel. But, from the sound of the laugh that greeted the admission, the minister was not disappointed with it.

'It is wonderful what pleasure negative information gives at times,' he remarked. 'Shall I tell you what I do know?' he added, a deeper note appearing suddenly in his voice.

A faint inclination of the head was her only answer.

'I know several things,' he went on. 'I know

that fate is an irresistible force. I know that friction begets fire. I know that antagonism is the finest preliminary for attraction; that when destiny means two people to come together, little differences of opinion about such matters as the possession of the fighting quality are powerless to keep them apart. I know,' his voice deepening still more, 'that I, Robert Meikle, love you, Kate Thriepland, in the only way a man ever does love when he wants a woman for his own; and, moreover, I know that I have it in my power to make you as happy and blessed a wife as if you were married to a General and his whole staff.' He broke off. 'Now it is your turn,' he added a moment later.

At his words she raised her shy yet glowing eyes to his face. 'The thing I don't know is whether I have it in my power to make you as happy as you deserve,' she admitted very faintly.

But his answer was to take her in his arms. 'We'll discuss that on the anniversary of our marriage,' he said. 'Only, don't keep me waiting, Kate.'

THE END.

NEEDLESS WASTE.

FIRE PREVENTION AN ECONOMIC NECESSITY.

By HAROLD G. HOLT, A.R.I.B.A.

BURNING, starving Belgium! What a picture of needless, wicked waste and frenzied brutality combined is presented by the spectacle of a brave country under a cruel, arrogant oppressor, who with scientific 'frightfulness' recognises the important economic fact, frequently overlooked even by otherwise wide-awake business men, that losses by fire are radical losses, and as such infinitely damaging to national prosperity. Therein lies the true inwardness of the burning of villages, and more especially factories and manufacturing concerns, and in a still greater degree national institutions—the desire to damage radically. To compare the modern Nero-Wilhelm with his prototype would leave the little there is to choose between them to the discredit of the former. To compare the burning of Belgium with the burning of Rome is to compare the bite of a mad dog with that of a flea.

The burning of Rome marked the first serious efforts at fire extinction, and the lesson derived showed that the Romans fully grasped the essential fact in connection with a fire—namely, that its sole result is ash. The intestines of an ox were first used as a bag to carry water to a fire, and by pressure to force out the water in a jet. This may be said to constitute the first fire-extinguisher. The use of some form of hose to convey water to the scene of a fire was first suggested by the architect Apollodorus.

Tentative efforts at fire prevention are apparent throughout the ages since the Roman period, and show that the fatal effects of fire on prosperity were realised. The order for the ringing of the curfew bell was but one of many precautions designed to lessen the likelihood of the outbreak of fire at night, the most dangerous time. The gradual realisation of the necessity for the construction of buildings which should in themselves be of a non-inflammable character was forced on the people of the Middle Ages. To the burning down of numerous churches, abbeys, and cathedrals, and the efforts to prevent this by the substitution of stone for timber, we owe to a large extent the beautiful stone-vaulted ceilings of the ecclesiastical and domestic buildings of the Gothic period which have been handed down to us.

Briefly consider for a moment some of the outstanding conflagrations of the past and present, and think of the enormous losses sustained in life, property, buildings, ancient monuments, art treasures, and libraries.

Let us commence with, say, the Great Fire of London, which in 1666 burnt out old London town, including the cathedral, numerous public buildings, and over thirteen thousand houses, and cost many lives. Soon after, in 1679, occurred the first great fire of Boston, in America; and that city, in 1872, suffered from another

great conflagration, the estimated loss in property amounting to seventy-five million dollars. Constantinople has been the scene of at least six great fires at various dates from 1729 to 1831. Five great fires have occurred in Moscow; and in 1570 over two hundred thousand people perished in a conflagration caused by the Tartars setting fire to the city.

The greatest fires of modern times have occurred in America, whole towns and cities having been wiped out so frequently that the saying, 'No American town becomes a city until it has been burned down three times,' is true of at least several of the larger cities. There is nothing clever in this. The utter folly of rebuilding a burnt-out city the same in design and materials as the former one, and therefore subject to a similar disaster, is only equalled by the marvellous energy displayed in accomplishing the feat in the shortest possible time.

In 1835 thirty million dollars worth of damage was done in New York City, and ten years later another eight million dollar loss was sustained. San Francisco suffered from fire in 1851 to the tune of ten million dollars, and the damage caused by fire after the great earthquake in 1906 amounted to no less than three hundred and fifty million dollars, or over seventy millions sterling. The great fire of Chicago in 1871 resulted in losses of property amounting to one hundred and sixty-five million dollars! The losses sustained by fire in property alone in the five years which included the great Baltimore and San Francisco fires cost the United States no less than twelve hundred and fifty-seven million seven hundred and sixteen thousand dollars, or, roughly speaking, over fifty million pounds sterling per year on the average.

It may be thoughtlessly answered that this loss would be covered by insurance to a very great extent. Even if it were true that the fire insurance companies paid up all claims on losses, there is no reckoning taken of the stupendous losses due to the interruption of business, losses in wages, losses of business connections, &c. But what do we find? At least 10 per cent. of the property destroyed was uninsured, and of the insured portion only 80 per cent. was paid out in claims by the insurance companies on account of the San Francisco fire, and 90 per cent. on account of the Baltimore fire; whilst but 50 per cent. was paid on insured property in the Chicago disaster. The fact that so much as 80 per cent. was paid in the case of the San Francisco fires is due to the fact that several British companies were large underwriters of the losses sustained, and these paid up, many American companies being ruined.

But the principle of fire insurance, though a beneficent one in itself, is merely an amplification of the principle of the severe loss of one or several individuals being met by many. In other words, the people who are insured against fire,

but who do not suffer from it, pay the losses sustained by the losers who are insured. Not only so, but people who are not insured also pay. They pay in a fairly direct way toward the upkeep of fire brigades, and the cost of building fire-stations, installing fire-alarms, and the laying of fire-mains. Indirectly they pay much more. By the amount of food that is damaged annually by fire, and by the amount of cotton, wool, clothing, and goods of all descriptions so destroyed annually in all countries, the whole world is so much the poorer, and the whole world pays. There is less food available for distribution; therefore its cost is increased, it may be by an infinitesimal fraction when spread over the number of consumers, but the increase is there. As it is with the people of the world at large, so is it with nations. The principle of insurance does not abolish the devastating influence of fire and conflagration, but merely mitigates the disastrous effects by spreading the loss over a large number of individuals.

When all is said and done, however, the greatest loss sustained through fire is the loss of human life, which too frequently accompanies its sudden outbreak. In many cases this grave loss of life is due to panic caused by the fire. How often have we heard of people being trampled to death in a mad, panic-stricken rush from a theatre fire; of children's bodies heaped in an awful mass, having fallen one over another in some dark, narrow stairway while endeavouring to escape from a picture palace or Christmas bazaar; of working-girls panic-stricken and unable to descend the crazy *fire-escape* of a factory on fire!

What is the lesson of all this? So long as human carelessness and ignorance exist, it would seem that the danger of the accidental outbreak of fire will exist. To meet this it is necessary to prevent the likelihood of such a calamity spreading in dangerous situations. Buildings must be designed, and can be designed and constructed, in which the amount of inflammable material used is reduced to a minimum. In buildings of an admittedly dangerous type—that is, buildings in which dangerous occupations with regard to fire-risk are carried on, or in which quantities of combustible material are stored—the necessity for adequate precautions is very apparent. It is not equally apparent in all cases, however, and this is where the danger lies. It is now fully recognised that office buildings, for instance, of the huge size which they now frequently attain, and other extremely high buildings, are dangerous fire-risks. It may be said that in the direct ratio of the size and cubical extent of a building is the fire-risk attached to it, since fires gather intensity and force from accumulative burning of material in a quickly increasing ratio, and are correspondingly difficult to deal with successfully.

The advent of modern systems of fire-resisting building construction during the last decade, and the increased usage of reinforced concrete, have led to a vast improvement in the state of affairs, and place many materials and methods in the hands of the architect and builder. There is now not the slightest excuse for neglect of reasonable precautions in guarding against the possibility of fire breaking out, and in adopting a system of 'cut-offs,' so that fires may be more easily split up and readily controlled. Even in buildings constructed on proper fire-resisting principles, in which all inflammable material is eliminated, and in which all materials liable to be influenced deleteriously by fire, such as steel, are protected by others which will resist the action of fire for a considerable time, there is still the possibility of a fire attaining such dimensions that neither fire-extinguishers, sprinkler installations, nor fire-brigade efforts are sufficient to subdue it, and the whole of the contents of the building may be destroyed, with severe loss, whilst the building itself remains intact. Moreover, valuable lives may be lost through the inadequate provision of easily accessible means of escape which shall be free from smoke and flame. Sufficient stress has not been laid upon the fact that all inflammable contents in a building may be destroyed by fire in the most perfect fire-resisting building ever erected; and this emphasises the importance of eliminating all combustible material not only from the constructional portions of a building, but from the actual fittings and furniture. In American office buildings nowadays

many of the desks, shelves, cupboards, and fittings are of steel.

We can erect buildings to-day which need not contain sufficient timber to make a box of matches, even the doors acting as efficient fire-stops from one room to another! When our cities are erected on broad streets, with fine buildings incapable of combustion, protected against the outbreak of fire within and without, and adequately equipped with extinguishing apparatus, we shall have eliminated one of the greatest of scourges, and conserved to the nation and individuals all the hitherto lost wealth in property, food, and material of all kinds, as well as the human life hitherto sacrificed in flames and repented in ashes.

It is perhaps rather too much to expect that at the present moment much attention will be paid to the ever-increasing need for fire protection in our cities; but it should not be lost sight of that in the rebuilding of the destroyed portions of Belgium—which, sooner or later, will certainly commence—a fine opportunity, perhaps never before equalled, presents itself to the architects, engineers, and builders who will be entrusted with the duty of raising new Belgian towns and cities, of erecting not only houses, factories, and workshops to carry on the processes of life, but buildings of a more public character which shall be at once dignified architecturally and rendered as fire-resisting as possible, so that they may endure as an everlasting monument to the glory of one of the most heroic nations of all ages.

BETTY GRIER.

CHAPTER VI.

FOR the past three days I have been confined to my bedroom, indeed I may say to my bed; for, with the exception of a short half-hour to-day—when Betty exchanged blankets for sheets—I have been reluctantly compelled to restrict my range of vision to the interior of my room, with my head on my pillow. The doctor has been to see me morning and night, and Betty has been in and out and out and in, and her anxiety regarding me has been too evident to be ignored.

This morning, when she had accompanied the doctor downstairs, I heard her ask what he thought of me. I didn't hear what he said in reply, because his voice is very low-pitched and his articulation not distinct; but Betty's rejoinder was, 'Imphm! I juist expected something o' the kind. Dod, doctor, was it no' a stupid ploy—sic thochtless stravaigin'—five 'oors oot o' the hoose in snell weather like this, an' him as shaky on his legs as a footrule? A wean o' ten years auld wad ha'e haen mair sense.'

No reproaches have been made to my face, however, and of this I am glad, as I am sure I should be sorely exercised in mind to find a suitable excuse for my truancy.

I am not very clear about the details of my journey homeward from the Nithbank Wood. Betty and Nathan were both out when I returned, doubtless making search for me; and as I was too fatigued to walk upstairs, I sat down in Nathan's easy-chair in the kitchen and fell asleep. I have no recollection of what followed, and considering the state of Betty's pent-up feelings, it would, I feel, be rather imprudent of me to ask.

I have been feeling rather low in spirits these last two days. I cannot blame the weather, for the October sun, though waning in strength, is showing his face for long-continued spells, the air is brisk and invigorating, and the sparrows are chirping and sporting in the eaves above my little window as if it were the merry month of May. I am loath to attribute this depression to

physical weakness; yet were I to make such acknowledgment to Dr Grierson, I know he would frankly and at once confirm it. That I have received a set-back is evident, and when I call to mind my exertions in the plantation I need not be surprised. Still, everything considered, if I had that afternoon to live over again I should do just exactly as I did then. I am truly sorry if what Betty calls my 'thochtless stravaigin' has undone the doctor's work, sorry if Betty's loving care has been lavished in vain. But Time, with healing in his wings, will surely make everything right again. And then I must not forget that, but for this 'thochtless stravaigin,' I should not have met my dream-lady face to face. Ah! this is the one consoling fact, a rich reward, though the penalty I pay may be great. It is the only bright spot in a drab, dreary outlook, and I shall nurse this secret joy in my heart and count myself favoured indeed.

Betty, who has a jealous eye where I am concerned, has noticed my depression. Yesterday and to-day she has given me much of her company, and in our cracks she has done her utmost to divert my mind into agreeable channels. She talked much of a younger brother of Nathan's—Joe, a member of the Hebron family I had not heard of before. Joe, it turns out, is an old soldier, and on a slender pension, eked out by the proceeds of odd jobbing, he keeps up a modest one-roomed establishment somewhere in the purlieus of the Cuddy Lane. On the expiry of his army service he came to Thornhill—accompanied by a Cockney wife of whom Betty and Nathan had no previous knowledge—with a view to settling down among the scenes of his boyhood, which had haunted his dreams in far-away lands. But the quiet village life had no charms for Mrs Joseph, and after a month of protesting, in which rural life was damned, and pleading, in which London's charms were extravagantly extolled, she went away south on a holiday, from which she never returned. Thanks to his army training, which had perfected him in the art of looking after number one, Joe took to house-keeping on his own as a duck takes to water, and settled down to a state of grass-widowerhood with astonishing equanimity. Regularly, however, during August, September, and part of October, he disappears from the village; and Betty thinks, but is not quite sure (as Joe, like Nathan, is very reticent), that Mrs Joe runs a small boarding-house down south somewhere, and that Joe goes to give her a hand during the busy months. Betty is expecting his return any day now, and I shall be glad to meet him, as his history has interested me. With such gossip news, interspersed with naïve by-remarks, Betty has done her level best to drive dull care away.

This afternoon, when she left me to make ready Nathan's supper, she promised to come back again with her knitting after the meal was

over; but, finding her duties didn't permit of her immediately fulfilling her promise, she deputed Nathan to act the cheery host.

By very slow degrees Nathan is ridding himself of his reticence. When we meet he has more to say than formerly, and his long-drawn sighs instead of words are less frequent; but he has not yet ventured upstairs of his own free-will or without a message or excuse.

'There noo, Nathan,' I heard Betty say, after he had 'hoasted' satisfaction with his meal and scried his chair away from the table—'there noo, Nathan, gang awa' up like a man. Juist walk strecht into the room as if the hoose was your ain, an' for ony sake dinna gant an' sit quiet. The laddie's dull an' wearyin', so keep the crack cheery.'

Nathan's appearance is not calculated to inspire gaiety. He is too long and 'boss-looking,' his whiskers are too straight and wispy, and his blue eyes too vacant and far-away. But, as I have admitted, there is a 'composure' about him which is satisfying; and as he pushed my door ajar and came in, as it were bit by bit, I gladly laid aside my book and turned down my lamp.

I presumed he would be dying for his after-supper smoke, so I persuaded him to sit down in the basket chair at the foot of my bed, and 'fire his pipe,' as he terms it.

For a time he smoked in silence; then, suddenly remembering Betty's injunction, and looking through the uncurtained window and taking a long survey of the scudding clouda, he said, 'Imphm! the wind's changin', Maister Weelum, to the nor'-east. That means a bla' doon your lum, I'm thinkin', an' it's a maist by-ordinar' dirty, choky thing, is back reek.' Then breaking away at a tangent, and fixing his blue eyes on me, he said, 'Ay, man, an' ye're no' lookin' sae weel the nicht as I've seen ye.'

'Maybe not, Nathan,' I said. 'I haven't been up to the mark yesterday and to-day.'

'So Betty was tellin' me; but—eh—ye're lookin' waur than I expectit.'

'I'm sorry, Nathan,' and I laughed uneasily; 'but, you know, I cannot help my appearance.'

'No, Maister Weelum, that's true—that *is* true,' and he deliberately, and with unerring aim, spat in the fire. 'Nae man can—eh, loosh, d'ye see that?' he hastily ejaculated, as a cloud of smoke spued from the fireplace, swirled up the wall, and spread along the ceiling. 'I tell't ye the wind was shiftin' its airt, an' that ye wad ha'e a bla' doon. If there's onything in this world I hate, it's back smoke. Man, it seeps into your lungs doon through your thrapple, an' there's nae hoastin' o' it up. Phew!—dash it! I wonder when that lum was last soopit. Talkin' o' lums, did ye ken that auld Brushie the sweep was buried the day?'

Not having had the pleasure of Brushie's acquaintance, I replied in the negative with unconcern.

'Ay,' continued Nathan, determined to obey Betty and keep the crack going—'ay, there's a lot o' folk slippin' awa' the noo; changeable weather gethers them in. It's a kittle time o' the year for them that are no' very strong—imphm!'

I was, unfortunately, in a more than usually susceptible state of mind, and the morbid strain of Nathan's conversation was affecting me in spite of myself. 'Yes, Nathan,' I said, expecting to bring a smile to his long, serious face, 'people are dying just now who never died before.'

'True, Maister Weelum; ye're richt there. Imphm! ye're perfectly richt,' he solemnly said without relaxing a muscle. He crossed his long legs very deliberately and stroked his beard as he looked round my little room. 'Man, Maister Weelum, dootless ye think ye're as snug up here as a flea in a blanket, but wad ye no' be better doon the stairs in the big bedroom to the sooth, an'—an'—'

'And what, Nathan?'

'Oh, weel, it's no' for the likes o' me to dictate to you. Ye ken your ain ken best, but wad ye no' be mair comfortable-like sleepin' in the sooth room an' sittin' your odd time in the dinin'-room? Betty or me never put a foot in it except to air or fire it, an' it wad save ye the trouble an' inconvenience o' comin' up an' doon the stairs.'

I thought for a moment before replying to this unexpected and most sensible suggestion.

'Is this idea off your own bat, Nathan?' I asked.

'Off my ain what, Maister Weelum?'

'I mean, did you think out this arrangement yourself, or is it Betty's idea and yours?'

'Oh, I see. Weel—umphm-m—we were talkin' it ower atween us last nicht, an' Betty thinks ye wad be better doon the stairs; but she doesna like to say that to ye for fear ye micht think that ye were a bother to her, or that she considered hersel' ill hauden takin' your meat up to ye, an'—an' things like that—ye see.'

'I understand,' I said thoughtfully; 'and do you know, Nathan, the idea is worth considering, and'—

'No' to interrupt ye, Maister Weelum,' he interposed, 'ye ken as weel as I do that ye're far frae bein' strong—at least, as strong as ye should be. Ye're nocht the better o' that lang walk ye had the ither day, an' the doctor's no' sae pleased wi' ye as he was.'

'Oh, indeed, Nathan! I'm sorry to know that; but, with care and a few days' rest, I trust to be all right very soon.'

'Oh, dod, sir, we a' hope that—imphm!—but, a' the same, if I were you I wad shift my quarters. Ye'll ha'e mair convenience, a sooth exposure, langer sunshine, nae back smoke, an' then, man, ye'll be nearer Betty should ye need her service. I've aye considered this a

wee, poky place, onywey; an' as for the stair up to't, it's the warst-planned yin I ever saw. It's far ower narra, the turn's ower sherp, an' it wad be a perfect deevil o' a job to get a kist doon there.'

'A what, Nathan?' I asked.

'A kist—a coffin, I mean.'

'But, goodness me, my good man, who wants to take a coffin down there?'

'Oh Lord! naebody that I ken o', Maister Weelum—no, no, naebody I ken o'. But yin's never sure. As Betty often says, "oor days are as gress"—imphm! We drap awa' like the leaves in the back-end, Maister Weelum—ay, juist like leaves nipit wi' the frost. An', speakin' o' leaves, I was workin' amang leaf-mould the day; an', dod, sir, it's a queer thing, but, d'ye ken, whenever I handle that stuff I begin to think about kirkyairda. Isn't that a queer thing noo, Maister Weelum?' and he puffed at his pipe without drawing smoke.

My lamp was burning low. Rain was pattering on the darkened window-panes, and the souging wind at irregular intervals drove clouds of smoke down my chimney. Shadows from the lime-tree outside danced on the whitewashed walls, taking to themselves grotesque, fantastic shapes; and Nathan—gaunt, wispy-bearded, spectral Nathan—puffed, and sighed, and spat in the semi-darkness. From the kitchen downstairs came to me at times sounds of a conversation carried on in a dull monotone, and interspersed with half-suppressed distressing sobs. A queer, creepy sensation began to take hold of me. I drew my blankets tighter round me and settled my pillow a little higher.

(Continued on page 519.)

FOR THEE AND ME ALONE.

I KNOW a land where wild-ducks fly
Into the moon-disc, silver there;
Below, the silent forests lie
Of fragrant green in perfumed air.

Within a dell, afar from all
The trails of man, the night-bird sings;
I know the music of his call,
I know the whisper of his wings.

I'd lead thee there, oh love of mine!
Amid the music in the trees,
That all these beauties should be thine,
And thine should be far more than these.

To rest? Ah no! not on the earth,
Amid the sweet-scent summer fair;
Such dreams as love has given birth
Should rest on clouds more light than air;

More swiftly than the wild-ducks flight
Should pass, and when that flight is flown,
Return through star-fields of the night
To thee and me alone.

Chambers's Journal

SEVENTH SERIES

TABLE MOUNTAIN.

By ANNA WOODWARD.

FOR some two hundred and fifty years Table Mountain, in the Cape Province, has been climbed by Europeans. About eighty ways to the summit—some hazardous enough to satisfy the most adventurous—are known to the expert climbers of the Mountain Club. For the ordinary pedestrian there are three principal routes—by the Platteklip Gorge up the face of the Rock, by the Kasteel Poort on the western side, and by a third path that attacks the great fortress from the rear. By any of these ways you have merely to walk up, and they must therefore be described as easy. But the trails, such as they are, prove amazingly rough, and in places exhaustingly steep. It takes from two to three hours, or even four, of steady climbing to reach the summit, three thousand five hundred and eighty-two feet above the level of the sea. The descent is equally arduous, because you can hardly take a step without choosing your foothold; and though youthful members of the Mountain Club may pass you running and jumping from rock to rock, wisdom still restrains you to a leisurely performance. Then there is the heat of the African sun to be considered.

To look up at the precipitous face of Table Mountain from Capetown is to decide, naturally enough, that there is no way up except for the practised rock-climber. In certain lights the imposing front, rising from the wooded slopes behind the town, appears a sheer wall of granite. At other times you see immense projecting buttresses, rounded, with encircling palisades of rock resting on green slopes, cliff and rough lawn alternating, and deep ravines and overhanging rocks. Still, the exploring eye discovers no way of safe ascent.

The mountain guards the secret of the path-way to the summit from almost every aspect; but, concealed by the projections of one of the largest of these gigantic buttresses, there is a hidden gorge leading to a hidden gap in the upmost ramparts. It is the Platteklip.

From the Gardens of Capetown the ascent begins easily enough by a steep but well-made path shaded by eucalyptus-trees and pines. The plantations which cover the lower slopes of the mountain end at the road that has been cut along the entire face of the Rock, making a winding red scar that is the boundary between the

ascending woodlands and the upper world of precipices. In places, however, the plantations still push upward, and, especially in the gorges, fair-sized trees find a foothold among the dense scrub.

The inviting path ends at this crossing road. You cease to walk comfortably, and begin to clamber, pointed fragments of loose red rock affording no easy foothold; but after the first determined effort comes unexpected reward. You reach a mountain torrent, with banks of moss and fern and snowy arum lilies, where, among rocks, the cold water lies in tempting pools. For a short space, too, the path ceases to ascend, and, well made again, goes sideways through an avenue of young Australian gum-trees. Thus you are allured; but almost immediately you come out again into the glare of the sunshine, and before you rises the precipitous, rough-hewn trail up the gorge.

It was on the level pathway bordered by the scented eucalyptus that we nearly trod on a cobra rather more than five feet long. It lay coiled in a patch of sunlight, and, with head raised defiantly, seemed to dispute our right to pass; but after a few minutes, in which we exchanged mutually antagonistic glances, it unwound its splendid body and vanished among the rocks.

The way became steep. Now and then a great stone gave beneath the foot, and rolled clattering downward in a cloud of gold-red dust. The path of great boulders ended sometimes at solid rock which had to be surmounted. The sun beat down mercilessly upon us from the deep-blue sky; but a reviving breeze blew across the mountain. There was the scent of pines in the air, and the perfume of aromatic scrub. About the path were bushes covered with round golden blossoms that looked like orange-trees laden with fruit. We made our way through heath in flower as high as a man's shoulder. There were heaths of a hundred kinds, and the mountain-side was gay with flowers—the great blossoms of the wild geranium, scarlet lilies standing high in the rough grass, the bright blue agapanthus, flowers red, blue, purple, yellow, and white growing daringly among the rocks or in splendid clusters amidst the dense scrub of the gorge. Above us were the frowning precipices, below the brilliant blue of Table Bay.

Amidst all this beauty we plodded upward,

hot and thirsty. Far toward the summit we heard the tinkle of water; a stream trickles over a rocky ledge high overhead, but is caught by the breeze and blown into spray. We stood in the ardent sun and looked up at that tantalising torrent; but we were to find quite close to us, among flowers, a tiny vase in a slab of sheer rock holding the ice-cold water that we craved. We rested there to eat from the basket of fruit that we carried. We could now see quite clearly the concealed gap which made a deep indentation in the jagged horizontal front of the flat-topped mountain, the gateway by which the summit of the lofty tableland was to be won. The way, however, became more arduous. The frowning heights still seemed to tower inaccessible above us, supporting the cobalt sky.

At last we entered through the forbidding portal to the sunlit uplands. You come out on an immense plateau, where scrub and flowers lie between causeways of flat rock—rocks that enclose miniature lakes and pools of water with a reddish hue. It is not unlike a moorland scene. On all sides appeared the dazzling blue sea. Peering northward over the edge of the tableland, we could see Capetown among its trees, gleaming at the edge of the curving sands of Table Bay. To the east, linking the peninsula to the mainland, lay the green-golden semi-desert of the Cape Flats merging in the vast jagged range of the mainland mountains. To the south the Flats end in white sand-dunes that press back the snowy breakers of False Bay, divided from the Atlantic by the range of mountains that stretches from Table Mountain itself to the headland which is called Good Hope.

The flat summit from which we surveyed this glowing panorama, when the wind blows from the south-east, is the resting-place of the level cloud that is named the 'Tablecloth.' It rests there, but seems to pour over the precipice in an immense foaming cataract which streams some way down the cliff, and stops suddenly on meeting the warm ascending air. No one can foretell the hour when the cloud will form and imperil those on the summit who do not know the secrets of the mountain. Many lives have been lost in this flower-strewn upland garden; but in the sunshine it is a place of enchantment. Nor is it enough to explore this highest level to have seen the top of Table Mountain. A second plateau extends below, 'a miniature continent, the surface diversified by river and hill, and producing a flora to be found nowhere else.'

The wide ledge on which we stood dropped steeply to a little valley that we crossed to climb a rocky rampart, down the face of which we scrambled to this second plateau. Here, among pine-trees, lay two blue lakes, the mountain reservoirs that quench the thirst of Capetown. A stone bungalow belonging to the Government stands on the shore of one of these lakes. The gateway to the garden bears the

grim sign: 'No refreshments supplied.' We had expected none; yet the effect of this sign was to awaken dormant appetites.

The bungalow and the hut are not the only buildings on the mountain-top. There is a little cluster of houses built of corrugated iron, in which a few coloured people live. It was not like one of those picturesque villages which are perched on the mountains of Italy—merely a double row of dilapidated sheds standing in the midst of the expanse of scrub; but in a land of sunshine, in semi-arid surroundings, these buildings of iron blend better than might be supposed with their environment, the iron gleaming in the sun having almost the appearance of silver. One or two natives stood at the doors of their little houses, a score of chickens ran about the single 'street,' and all around lay the moorland gay with flowers.

From a sign-post by the lake we learned that we had the choice of two ways by which to descend. We could go down the southern face of the mountain into the beautiful Constantia Valley, with its groves of silver trees, its vineyards, and old Dutch homesteads; or by the Kasteel Poort, down the western side, between two of the fretted peaks, called the Twelve Apostles, which overlook the blue Atlantic. We chose the latter path. It leaves the plateau at a spot where the flowers seem to grow in greater profusion than anywhere else. We looked back at a mass of scarlet and gold waving against the dazzling sky. There is a stream which crosses the path, the water yellow with iron, but cold and delicious to drink.

The path presents no difficulties; yet how rough it is, and slippery, and easy enough to lose, so that you find yourself wandering in the rocky gorge and compelled to toil upward again!

Far below you see the curving sands of the little hamlet of Camps Bay, surely one of the most exquisite seaside resorts in the world. It is near to Capetown, and yet remains unspoiled. Not more than a dozen people—mere black specks in the distance—did we discover that day by the sea that looked so tempting, while we walked and burned in the glare of the sun.

Now and then a bird crossed our path—a lark, a canary, a sugar-bird with its long bill and graceful flowing tail; we could hear the wood-pigeons calling. But we began to think only of our weariness. We had been walking nearly nine hours when at last the steep trail ended. It ended at a path cut along under the Twelve Apostles at the same level as the mountain road above Capetown. This path is partly shaded by trees, and follows the curves of the slopes. The ocean lies on your left, and in front of you rises the Lion's Head, joined to Table Mountain by the curving saddle of the Kloof Nek, to which the path leads, and whence a splendid carriage-road winding through groves of oak and pine takes you back to the sunlit

city by the bay. You come to a world of shaded streets and white walls and pretty bungalows; and in the gardens the purple of bougainvillea, the vivid scarlet of hibiscus, the pink-and-white of oleander. You see these colours against the violet wall of the overshadowing mountain.

It is the hour of sunset. The 'cloth,' perfectly level, as level as the mountain-top it covers, lies white under the greening blue of the sky. The snowy mist pours down the face of the mountain, and leaps like a torrent into the air over the western precipice. The sun, sinking in the sea, sends its last rays upward, throwing a broad shaft of golden light slantways across the western corner of the mountain, and dyes the falling clouds a vivid rose—mysterious violet, solid gold, and pouring pink.

In the great V formed by the Kloof Nek, between the mountain and the rocky pyramid of the Lion's Head, is a mass of colour worthy of an African sunset. Ten thousand tiny clouds have formed like a storm of ostrich feathers, and each of these tiny clouds is deep scarlet below and purple above, the feathery clouds spread out toward the zenith losing something of their brilliancy; overhead they are blush-rose backed by a pale and delicate blue contrasting with the deep blue of the sky that shows through the clouds. Broad bands of colour light the eastern sky, where across the bay it rests on the castellated mountain-ranges of the mainland.

The pageant of colour ends suddenly. Table Mountain becomes gray against the deep black-blue of the sky, in which the stars look silver at their first appearing. The sky has the appearance of solidity; it is the solid mass of rock which looks ethereal. And then the full moon comes up. Precipice and gorge, stern buttress and wooded slope, stand out once more as clearly as by day, and the brilliant silver light falls full upon the 'Tablecloth,' upon that vast volume of vapour in which imagination sees an avalanche about to overwhelm the white town below, an avalanche in swift and awful movement which never approaches; by day a foaming sea of water, by night an avalanche of

snow or a great glacier set in sudden motion. Then, first seen through the filmy mist above, slowly rising above the level summit of the long shining cloud, swing into view the five stars of the Southern Cross. When the 'cloth' is spread on the great flat-topped mountain, when the moonlight falls full upon it and the stars are shining from a clear sky, so exquisite is the scene, so impressive and full of grandeur, that all the glowing colouring of the sunset hour seems surpassed in beauty; and so you think until at dawn the colouring once more begins. There are, again, the rosy hues, the pale blues, the purple and gold. A glowing mist hangs over the lower slopes where cattle are grazing among the rocks and under the groves of the great umbrella-pines with bare red stems that look like palms. As the sun rises the mountain looks very green; vast stretches of green appear among the violet rocks, that turn to lilac and to gray as the sun falls full upon them. You see all the grotesque and wondrous carving of buttress and wall and pinnacle. A mere rim of cloud lies upon the summit under the shining blue of the sky, and presently this blueness seems to fall like a curtain in front of the mountain; it takes on the appearance of a solid wall of precipice, and you can hardly believe in the reality of its flower-filled gorges, the torrents dashing down among ferns and lilies.

Sometimes the wind blows a spray from the cloud, so that you walk in rain through the Gardens of Capetown with a brilliant sky overhead. It may be that in the late afternoon, because of this moisture in the air, a perfect and brilliant rainbow is thrown upon the background of blue sky, one end of the stupendous arch resting, most gorgeous, on the sides of the Devil's Peak, the other on the snowy sand-dunes across the sapphire bay.

In certain aspects, especially from the sea, Table Mountain looks grim and arid; but nature has selected it for the scene of effects hauntingly beautiful, and has hidden among its sun-baked rocks the most marvellous collection of wild flowers in the world.

THE BRIGHT EYES OF DANGER.

CHAPTER XXXIV.—THE MONEY.

THE eastern horn of the little bay might have been a couple of miles away. I grudged the time spent on the walk, for we were obliged to stop often, on account of our prisoner. He could not trail his legs farther than a couple of hundred yards without breaking down. Macdonell must have been able to dominate him completely, and had chosen him because of his defects. Once in his power, Innes was as putty in the other's hands. Character counts even among wolves.

We were lynx-eyed in our observation of the sand-dunes on our right and the beach below us, but not so much as a rabbit stirred in the moonlight. Innes took us past the clump of junipers where we had lain and watched Macdonell and him, and led the way down a crow-stepped slant of rocks to the beach on the eastern side of the headland.

Here was a stretch of shingle, broken by pools of sea-water, and scattered rocks, casting grotesque ink-blots of shadows. He took

us behind a rock and pointed to a large stone in the sand.

'There,' he said; 'underneath.'

My pulses were galloping. For a moment the dire thought touched me that Innes might be playing some deep game, and that there would be nothing there. He might swear (and it might be true) that Philip had again forestalled us.

Anthony began to heave at the stone. It moved a couple of inches. Bertrand and I bent to it. It rolled over. The captain scraped the loose sand away with his foot, and the clink of metal sounded, an iron ring on the lid of an iron-clamped chest. Quickly we began to clear the sand away from it. Again and again, with feverish energy, we tried to wrest it from the stubborn sand, but in vain, until the captain seized a crowbar. The lid cracked at the first few wrenches of his powerful arms. For an unforgettable minute we watched, in tense silence, his broad back heave below us. The lid was wrenched off, and in the chest, in orderly rows, lay a number of canvas bags, their necks tied carefully, and sealed.

Bertrand lifted one of them. '*Ma foi!* it is not light! Gold, I wager!'

He handed it to me. I picked up the captain's knife, ripped open the canvas, and with a catch at my breath saw a little yellow stream spill out and jingle on the stone. They were *louis d'ors*. The French money was at our feet. Elation loosened our taut nerves. Bertrand seized my hand, his eyes shining. I paced up and down, breathing a new air, like one suddenly coming to the surface from a depth. Anthony lit his pipe and sat pulling stolidly at it, his face creased with smiles, his head moving like a bird's as his one eye veered between the box and us.

We counted the coins in the bag I had slit open. There were exactly two thousand *louis* in it. In the chest were other ten bags of equal weight, a few loose *louis*, and a smaller bag with English guineas. In all, the whole came approximately to twenty-two thousand odd *louis* and six hundred guineas.

There was no time to be lost, for Philip might at that moment be on his way to clear his *cache*. The problem of removing the money had to be solved promptly. Bertrand watched Innes, while Anthony and I took as many of the bags as we could carry at a time, and hid them most carefully in a cunning place in the wilderness of whins at the top of the ridge. When the chest was empty, Bertrand laid one of his gloves in the bottom and placed a sixpence in its open palm.

'There!' he said, and stepped back to look at his jest. 'Twill be a joyous sight for Cousin Philip. I should love to see his face.'

The chest, empty save for the sixpence, was closed and replaced, the sand smoothed over it, and the stone rolled on top. In great elation, we turned our backs on the place, and, making a cautious *détour* landward, struck across country

toward the little port of Findhorn, where our adventure promised to reach its zenith.

We found a rough road through the Laich of Moray, the rich flat belt of country that runs east and west along the Firth. I have seen it since, in spring and summer, with green and gold, blue of sea and gleam of sand, a land like a fair woman in her prime, a place to rest the eyes on and never to forget. But on this night it showed no restful outlines. The stars shone with a tremulous, hard brilliance; fields and woods lay dark and threadbare, heralding winter, colourless yet trenchant, the whole a cold picture in black-and-white in the moonlight. The clearness of the night favoured our scheme of reaching the port of Findhorn quickly, before the folks were astir. Bertrand followed us with Innes, out of earshot, for we had things of moment to discuss.

'The *Gannet* will soon be outside the bar, to wait for the next tide,' said Anthony. 'If I can get "Mr Mortimer," as he calls himself, on board, the rest is easy. It's up sail an' awa' wi' him.'

'I am all for giving him a chance of crossing swords with me,' I said; 'but once he discovers that the French money is gone and the bottom knocked out of his scheme to get away with it, he'll never set foot on the *Gannet*.'

'Unless I send him there by some palaver,' Anthony said. 'But it will be none so easy, for he's as wary as a tod.'

'By heaven! I do not go south without him, unless I see him dead.'

'Indeed, an inch or twa o' cold iron would be the handiest way o't. He never was ower partec'lar himsel' about bluid-lettin'.'

In the end we decided that Anthony should try to keep the *Gannet* outside the bar, and get Left Hand on board her by some ruse or other. If he failed, then the bold course was for us to face him; and, truth to tell, both Bertrand and I were like greyhounds in the slips for a chance to square accounts.

We were nearing the estuary of the Findhorn, a glittering shield of smooth water. A score or so of riding lights in the channel were curtsying to the moon, a thick cluster of masts and a network of rigging marking the little port.

Innes was strictly warned, Bertrand's pistol being shaken within a inch of his nose, that the slightest suspicion of treachery would mean death.

Our footsteps sounded like a regiment's in the quiet. The port was a dark, straggling line of houses lying so near the water that a turn in its sleep, so to speak, might have tumbled it into the estuary. The moonlight flooded it, picking out for us every detail. Not a chimney smoked. There were no lights, save the ships', and one from a house in the distance, a solitary eye, red and unblinking. We were tiptoeing along a little street that cork-screwed down to the harbour, when I heard a footfall. It was the faintest sound, but with infinite stealth in it.

The captain had heard it also. He whispered to us, 'Dinna stop! Keep straight ahead.'

It came again, a soft pit-pat following us. I know of no more disquieting feeling than that of being dogged; and it was much to my relief when the captain turned the corner of the street and pointed to an archway in a pool of shadows, with a 'Quick! In here!' We had just time to reach it, when the footsteps turned the corner and came to a dead halt a yard or two from where we were hiding. I could hear the man breathing. He was wary, and stood still listening. Then came a peculiar low whistle. To my astonishment, Anthony answered it note for note, and stepped out into the street.

'It's the mate!' said he; and, sure enough, it was the mate of the *Gannet*, Hugh Scott, muffled to the eyes in thick sea garments.

'I watched ye, but I couldna make ye out, so I lay low and waited. A word wi' ye, captain.'

Anthony and he stepped aside. I heard a muttered curse, and the captain returned almost immediately.

'Middlin' news,' he said, frowning. 'Hugh, here, got my message at Garmouth to bring the *Gannet* round to Findhorn; but a lubberly son of a gun fouled her coming into her berth, and smashed her rudder. I ken the clumsy eediot. He couldna handle a canal barge, let alone a ship.' If the erring skipper's ears did not tingle it was none of Anthony's fault, for he cursed him fluently and heartily.

'How long do you reckon it will be afore she's shipshape?' he asked the mate.

'A couple o' days. I got the carpenters on to her.'

This unexpected delay killed our scheme of getting Philip on board the *Gannet* before he went back to his *cache*.

'We must draw the badger now. If he discovers that the French money is gone, Philip will show us a clean pair of heels, and I have no notion of losing sight of him,' said Bertrand; and he spoke for us all. We turned toward the harbour.

Bertrand and I had pistols and our swords, the captain a pistol. The mate had a cutlass, and him we told off to look after Innes and cut him down if he tried to escape. The big man's nod of understanding was a grim one.

We slipped out of the archway into the silent street, the moon still riding clear, the air piercingly cold. Anthony knew the lie of the houses and the surroundings of the 'Crown and Anchor,' where our quarry lay, and he led us along a path skirting the water until we came within fifty yards of the inn. There was a light burning in it, the solitary one we had seen when we reconnoitred the port. The inn, a low, one-storeyed house, was as quiet as death, the only sound in the night the sucking of the tide round the wharves below it. A courtyard with massive pillars flanking an open gate fronted it. Anthony, Scott, and the prisoner Innes, in case of an attempt to escape by that way, hid themselves near the back entrance, and Bertrand and I tiptoed into the courtyard. The light was from a small diamond-paned window, a thin red curtain drawn across it. We crouched below the window-sill, our eyes at the foot of the pane, where the curtain did not reach. A log fire was burning, and stretched in an arm-chair beside it was Macdonell, his eyes closed, sound asleep, limbs relaxed, one arm hanging over the arm of the chair. He was facing the window. Two candles in sconces on the chimneypiece threw their light full on the handsome oval lines of his face. I could not but marvel at its serenity and repose. The head thrown carelessly back, lips slightly parted, a flicker of a smile on them, he might have been—God knows, perhaps he was!—in some happy dream, for sleep's alchemy had wrought its magic, erasing the tell-tale lines, clearing the dross, leaving the best. Come and gone in a strange and sad flash of remembrance, I recalled the summer nights we shared together on our ride from the Border. It was as though I looked at some one else, and not the man I knew.

(Continued on page 530.)

THE HALF-CROWN GOURMET.

A WANDERER'S MEALS IN MANY LANDS.

THERE are two things which a true wanderer can always procure in a new country, even though he be very slightly acquainted with the language. These are a ticket and a good meal. All else he can, at a pinch, do without, or acquire by means of signs. A bed? He can find it in a waiting-room, in a train, in a café; and, if he is an old hand, he will sleep there like a top, and cheaply at that. A collar? He is a master in the art of dumb-show, and that important article comes in the first exercise—after a drink. Yet no amount of ingenious gesticulation will

produce a good meal with any certainty as to the size of the bill. Your true wanderer in time develops an instinct for unearthing the right restaurant; he has a nose for good food, as your true journalist has a nose for good news. But, as with the journalist, his school is a hard one, and many are the disillusiones, many and unpleasantly surprising the mistakes, before he has grown that nose. I have wandered into the filthiest of dens and been served with the ghastliest of concoctions, and into the smartest of restaurants and had my pockets cleared to a

cent. The wanderer of whom I am speaking is, of course, not the individual who takes the *train de luxe*, attended by five suit-cases and a valet, and goes to the biggest hotel he can find, where he can rely upon excellent and thoroughly English meals in a setting of palms, glass, and red-garbed orchestrians. That man is as far removed from the real roving brotherhood as he who never leaves his own back-yard, an unfortunate modern plutocrat who might just as well stay at home, seeing that in all his travels he carries with him the same artificial atmosphere. Everywhere he has only to know two words: *The Best*. I, too, have always aimed at the best, the best to be got for about half-a-crown—if possible, less; and now I flatter myself I can find it in any new city within half-an-hour of my arriving. But it was not always so.

I remember a little place in Barcelona where, for about half that sum, one could get a substantial meal in an interesting circle of coachmen. Macaroni one started with, baked brown in a large red earthenware pot, and sprinkled with grated cheese. This one washed down with red wine made of anything but grapes (rumour had it that it was powder), and one closed the occasion with delightful coffee and aniseed liqueur. There is another little place more respectable by far, just off the Plaza de Cataluna. It is underground, and the tablecloths are clean. One had a very Spanish dish, a sort of curried mess—rice, pepper, macaroni, salad, and more pepper, and here and there a delicious mussel. I have a strong prejudice against all shellfish, an ineffaceable relic of my respectable middle-class upbringing; but there, down below the blazing street, where the sweet Castilian tongue was cut sharply by the short, gross, ugly speech of the Catalans, and faced by a bottle of clear, rose-tinted wine—the ordinary 'white' wine of the country—prejudice melted, and I ate ravenously of the mussel mess, and asked for more. So much for Spain.

In contrast I see a café-restaurant on the Lower Rhine, where the waiters all speak English and the air is sour with stringy *Sauerkraut*, and one wonders dimly if there is any colour of the spectrum not represented among the kaleidoscopic sausages. There is *Leberwurst*, greenish-gray; the dark red-brown of *Blutwurst*; slices of white-and-brown check matching the tail-coats affected by the diners; sausages, again, with a decided pink tinge—cold, hot, simmering in gravy, large, small, medium—sausages all, accompanied by steaming *Sauerkraut* and mashed potatoes. Our plutocrat who has put up—with his five suit-cases and one valet—at the Hotel Bristol, Berlin, will laugh at this description. 'The German sausage,' he will say, 'is a myth. I never saw a sausage in Germany.' And I must admit that before I went and saw for myself I had an idea that the German sausage was rather in the nature of an exaggeration. But the curi-

ous fact is that the sausage *is* the staple food of the German, and the French *do* eat frogs and snails.

Nowhere better than in Germany can one study the etiquette of the café-restaurant. Half-way through one's pink sausage one notices that one's neighbour is paying his bill. It comes, one sees, to a couple of marks, and the customer solemnly leaves a paltry five *pfennig* tip on the table. (Such people *do* exist.) The waiter looks at the coin in silence. One notices that he is rapidly becoming the hue of *Blutwurst*, but one is not quite prepared for what follows. He picks up the little-nickel piece from the table, suppresses a temptation to spit thereon, but passionately flings it upon the floor. Then he turns and walks stiffly back to the kitchen with the discomfited diner's plates in his hand. The coin is still lying there, under a table, when one returns at night to dine.

Pink and blue sausages and mussel curry may be interesting novelties, but it is not until you come to your first meal on board a steamer bound for Scandinavia that you really receive a shock. There, down in the cosy saloon, you feel as though the earth had sprung away from beneath your feet. (It has, of course.) Here is revolution, chaotic revolution, in all your ideas of how a meal should be taken. You make the acquaintance of the northern *sexta*. The meal consists chiefly of *hors d'œuvres*, which are spread out in profusion on a large table in the centre of the saloon. You do not understand, and you sit down at one of the tables and wait patiently for ten minutes, expecting the steward to serve you. Your eye follows him about wistfully, but still you fail to realise the truth. Then suddenly it dawns on you: there is no service; it is each for himself, and the devil take the hindmost. You rise and approach the centre table. You take a plate and a fork from the pile, and make a tour, daintily picking a little of each delicacy. Salt prevails: salt herring, salt salmon, salt meat, anchovies, also sardines, potatoes in their skins, ham, salad, and reindeer-flesh. Having heaped your plate to the toppling-point, you retire to your place and demolish the edifice of jumbled viands.

Later, when you are living in Sweden or Finland, you have learnt to return and build up another pile, as much as you like, for two kroner, or two marks, as the case may be; there is no control! Then the joint of the day is brought in, cut into slices, and surrounded with vegetables, and again you return to the *sexta* table and help yourself. No tip to the waiter!

On board you probably drink Copenhagen beer, and outside Germany you will not find better; but in Finland itself you will have the choice between sweet and sour milk. You will almost certainly take the sour first, and splutter and grimace will follow; after which you find that gourmet's nose a centimètre longer. It is on such mishaps that it thrives.

I repeat, in Scandinavia you may take as much as you like for your two kroner; therefore it is safe to say that in the northern countries the best and cheapest meals can be found. Russia, of course, is a northern country, but it is out of the *sexta* region, and the rouble is its standard coin; whence beware! You will not eat for less than one and a half roubles in Petrograd, and as you must not tip in copper, and the lowest silver coin is equal to twopence halfpenny, even the most mediocre of meals will cost over three shillings. It is best, unless you know the language, to dine at foreign restaurants. Everybody does. There are few good Russian restaurants in the capital, and in the foreign ones you can get the chief national dishes—the inevitable cutlet of minced meat and that delightful summer drink *kvas*. In Russia, too, the wanderer will probably learn to put jam in his tea, but perhaps not in a restaurant.

In German Switzerland, high up above Walensee, which you can see from one end of Lake Zurich, there is a small wooden hotel surrounded by three baby lakes. Our plutocrat would never attempt the necessary climb—and there is no funicular to carry him. He might hire a mule, the same which I fed on cigars. That animal adored cigars, and would chew and swallow one after another, with a little cheese-rind to flavour them, and ask for more.

At that little *Gasthaus* we took our meals on a raised wooden platform in the open air, and those days form one of the choicest gastronomic recollections of my travels. The food was simple—‘somewhat primitive,’ as a disdainful German once remarked, screwing up his nose. (He

nearly got lynched for it.) Every day meat and gravy, no vegetables, but large quantities of stewed bilberries and red currants, eaten with the meat; new bread, and butter which you took in quarter-pound chunks at a time and spread centimètres thick on your bread; sweet Emmantaler cheese; and to drink, boiled milk. A heavenly diet it was.

Of the art of eating in France, and especially in Paris, a whole book might be written. The restaurants of Paris are marvellously adaptable to any income, any size of pocket, any time of the month. The first day of the month will find the sophisticated banqueting on three francs at the Café de Paris or on the Boulevards; during the second week they will eat soberly and respectfully for a couple of francs at Durand's (an institution as bewilderingly omnipresent as Slater's); the third week they are to be found at the Restaurant du Gaz and similar places, paying one franc fifty per meal; and the lunch-hours of the last week they will spend *chez* Chartier (whose establishments are as amazingly numerous as Lockhart's). There they will make a franc go an astonishingly long way. And, being wise, they will eat many omelets. How the wise man dines on the 31st, on his last fifty centimes, I will not divulge. It is a secret all loyal members of the Brotherhood of Wanderers should keep locked up tight in their breasts. A knowledge of it might be sadly abused. There exist individuals—who does not know them?—with incomes far too large for them, who will swoop down like vultures upon a place where they can dine for half-a-franc. May they long remain in blessed ignorance!

BETTY GRIER.

CHAPTER VII.

NATHAN noted my movements. ‘Can I help ye, Maister Weelum, or is there ocht I can do to mak’ ye comfortable? Betty ’ll no’ be lang till she’s wi’ ye. She’s busy the noo, an’ she sent me up to keep ye cheery till her wark was dune.’

I looked at him and saw he was quite serious, so I concluded that, decent, well-meaning man though he was, he was no humorist.

‘Ay, Nathan,’ I said, after I had thought over the situation, ‘I have no doubt your intentions are all right. Invalids ought to be kept cheery, as you call it; but’—

‘Ye admit, then, that ye *are* an invalid, Maister Weelum?’

‘Well, Nathan, I’m afraid I must admit that.’

‘Ay, man—imphm! so far, so guid. Ye ken, sir, there *are* some fouk that ’ll no’ gi’e in when ocht ails them. There was Cairneyheid, for instance. Did ye ken him? No—imphm! it doesna maitter. Weel, Cairnie, as we ca’d

him for short, had farmed on the Alton rig a’ his days. The rig lies high, an’ there’s aye plenty o’ guid fresh air up yonder, and Cairnie never in his life had had even a sair heid. But, dod, sir, ae day, after his denner, he quately slippit to the flaer, an’ couldna get up again. Weel, he sat there till aboot hauf six without sayin’ a single damn, an’ if ye kenned Cairnie an’ his weys ye could understaun’ that that gied his women-fouk a glauff. Weel, suddenly he lookit up an’ asked for a gless o’ whisky, an’ they thocht frae that that he was better. He did kind o’ revive after his dram, an’ wi’ nae sma’ trauchle they got him to his bed. Next mornin’ he was dreich o’ risin’, an’ when he got to his breakfast he couldna eat, an’ still he didna sweer, so they sent awa’ doon for the doctor. Weel, whenever the doctor cam’ an’ saw him he ordered him at aince to be put in his bed. “Bed!” said Cairnie. “Bed in the guid daylight! I think I see mysel’! I never in a’

my life gaed to my bed except at nicht an' to sleep, an' I'm no' gaun the noo;" an' he got up oot o' his chair in spite o' them. "I'm away up to the high field to see hoo they're gettin' on wi' the turnip-shawin'," he said; an' withoot dog or stick he oot o' the hoose. Hooever he got the length o' the field guidness only kens, but there he got. "Hurry on, men," he said; "dinna be feart to bend your backs in guid shawin' weather like this. The pits'll a' be ready afore ye're ready for them;" an' he lifted a knife to gi'e them a haun. He pu'd a turnip, an' was juist gaun to whang off the shaw, when doon he drappit in the middle o' the drill as deid as Abel.'

Nathan relit his pipe, which had gone out during the narrative. 'Ay,' he continued, as he puffed audibly, 'it was a very big funeral, was Cairnie's. He was buried in Dalgarnock—a damp, douth place to lie in, in my estimation. No' that it maitters muckle, I daur say; but still'—

'Whae's this ye're on, Nathan?' said Betty, who had entered the room unobserved.

'Oh, naeboddy parteeclar, Betty. I'm juist ca'in' the crack as ye telt me, an' keepin' Maister Weelum here cheery till ye come up;' and he rose, with a sigh of relief, from his chair, sidled toward the door, and went cautiously downstairs.

When I heard him safely round the 'sherp' turn on the staircase I looked at the sonsie, kindly face of my old nurse. 'Oh my dear Betty, I am glad to see you,' I said with fervour.

'Hoo's that, noo, Maister Weelum!' and she gave a wee bit pleased laugh. 'Ha'e ye been missin' me? Has Nathan no' been ca'in' the crack?'

'Yes, Betty, I have been missing you, and Nathan *has* been ca'in' the crack; but, Betty'—and I lowered my voice—'he's been in kirk-yards all the time.'

'Ah, is that so?' she sympathetically asked. 'I'm sorry, noo, to ken that. He must ha'e been workin' among leaf-mould the day.'

'He was, Betty; he told me so.'

'That accoonts for it, Maister Weelum. Nathan's awfu' queer that way; but, puir falla, he canna help it; an' then ye ken he means sae terribly weel. I'm awfu' sorry, though, if his crack has depressed ye. Ye're juist a wee bittie doon i' the mooth the noo, an' ye'll be easily putten aboot; but keep your pecker up, like a guid laddie, an' ye'll soon be better in health an' better in spirits. After a', an' when a's considered, ye've a lot to be thankfu' for. Mony a yin wad gladly change places wi' ye. It's a gey hard, stepmotherly kind o' world this for some folk; but you—weel, I wad say ye've your fu' share o' blessin's.'

I looked keenly toward her while she was speaking. 'You are perfectly right, my dear Betty,' I said. 'I have my full share of blessings, and every reason to be thankful and grateful. Why, Betty, when I think of it, it

is a downright sin in me to allow myself to become depressed. It would be much more to the purpose were I to bestir myself and do all I can to, help others, whose share of the good things is less, and whose burdens are greater. By the way, Betty, were you crying downstairs about half-an-hour ago?'

'No, Maister Weelum, I was not cryin'.'

'Strange,' I said; 'I was sure I heard some one sobbing.'

Betty stooped down and poked the smoking coals into glowing flame. Then she pulled down my window-blind and drew the curtains together. 'Oh, you're quite richt; you dootless did hear greetin', but it wasna me;' and she sat down again and unrolled her knitting, but she didn't ply her needles.

'D'ye mind,' she continued after a long pause, 'you an' me speakin' aboot Tom Jardine the grocer, oor next-door neebor, ye ken?'

'Perfectly, Betty,' I replied; and at mention of his name I saw in my mind's eye a rain-sodden courtyard, a haggard, worried face, and a golden-haired bairn. Intuitively I saw more—troubles, big mental troubles which crush the heart and soul out of a man. Oh! I hadn't forgotten.

'Weel,' she continued, a tremor in her voice, 'it was Tom Jardine's wife that was greetin' in the kitchen, and I'm juist dyin' to speak to you, for what she has telt me is lyin' at my he'rt like a stane. Are ye weel enough, think ye, to be bothered listenin'?'

'My dear Betty, where two old friends like you and Tom Jardine are concerned, nothing is, or can be, a bother; so proceed, if you please.'

She began to knit, then stopped and counted her stitches, while I filled and lit my pipe.

'Little mair than a week bygane,' she began, 'I was in Tom's shop for some odds and ends, and when he was servin' me, says he, "Mrs Hebron, I fully expected to be able to clear off ten pounds of that auld balance this back-end term; but I'm beginning to be feart that 'll no' be possible." The balance he referred to, Maister Weelum, was thirty pounds—half o' the sixty Nathan an' me loaned his faither. Ye mind I telt ye aboot that?'

I nodded.

'"Weel, Tom," says I,' she continued, '"that's a' richt. Don't fash your mind aboot that." "But, Mrs Hebron," says he, "I canna help worryin' aboot it. I'm very sorry indeed, an' I trust my no' payin' ye the noo will no' put ye aboot?" "Not in the slichtest, Tom," says I; "mak' your time my time. I ken what ye've set your face to do, an' I couldna wish ye better luck in your endeavour if ye were my ain bairn." His he'rt filled, puir laddie, an' he thanked me, an' he began to tell me what a bother he had in gettin' in his money. He showed me twae accoonts, yin for fifty pounds and anither for sixty-five, that have been lyin' oot for mair than a year. It seems that when he was in that big

warehouse in Glesca' he had some experience in the seed line, an', havin' a guid connection wi' groceries among the farmers round about here, it struck him he could, wi' little mair expense, work the twae very profitably thegither. Weel, he started to do this, an' in the last twal'months he has sell't an awfu' lot. But it appears that seed rins to money quickly, an' the twae accoonts ootlyin', an' aboot which he was so anxious, are, as it were, in this department. The want o' this money has keepit him very ticht, an' he's been aff baith his meat an' his sleep ower the heid o't. Weel, to mak' a lang story short, the farmers ha'e baith failed. Tom got word yesterday, an', as it's thocht they're gey bad failures, an' very little ootcome expected, he's nearly demented. He has gane ower his books, an' he sees he can pay twenty shillin's in the pound; but, to do that, it means handin' ower his stock, furniture, an' hoose, an' he'll come oot o't wi' nocht but the claes on his back. His wife, pur lassie, was in the nicht tellin' me a' aboot it. It was her ye heard greetin'. She has keepit a stoot he'r't an' a smilin' face to Tom; but whenever I put my haun kindly an' mitherly-like on her shooder she broke doon an' grat as if her he'r't was breakin', so I juist took the wee bundle o' spunk an' dejection in my airms, an' she had it a' oot there. Tom's gaun up to the lawyer the morn to hand everything ower to him, an' Mrs Jardine and the bairns are leavin' Thornhill on Friday to stay wi' her mither till Tom gets wark somewhere. Noo, Maister Weelum, I want your advice, an' if ye charge me sax an' eightpence for it, I'll—I'll juist no' pay't; and a tear-drop broke from her eye as she smiled. She rose from her chair, laid aside her knitting, and coming over to my bedside, she put her hand on my arm. 'I've still got the hunder pounds in the bank which your mother left to me, Maister Weelum,' she said. 'Nathan an' me ha'e saved fifty mair. I never had a bairn o' my ain, an' thae three wee curly-heided angels o' Tom's ha'e worked their way into my he'r't, an' I juist canna let them away. D'ye think

the mistress—your mother, I mean—wad ha'e me gi'ein' the money in this way?'

I thought for a moment, and Betty watched me keenly. 'Am I to understand, Betty, that you are willing to step into the breach and give Tom Jardine one hundred and fifty pounds—your all?'

'Yes—if ye think it wad be your mother's will.'

'Betty, if Nathan won't object, will you please put your arms round my neck and give me a kiss,' I said, and I raised my head from my pillow.

The wind has died down, and through the low midnight air I heard the auld kirk clock strike the hour of twelve. Tom Jardine has just left my room. He has been with me for almost three hours, and we have had a long smoke together and a grand talk over the times and folks of auld langsyne. Betty, as an interested party, favoured us with her company part of the time, for Nathan was sleeping the sleep of the just and the tired, and the kitchen fire had long gone out. She was surprised to know that Tom's difficulties could be overcome and his affairs straightened out without her little legacy and her hard-earned savings being requisitioned. Only Tom and I know how this was arranged, and as it is a little matter of personal interest to us, and us alone, the details of the transaction will remain untold.

I am having a run of strange coincidences just now. When Betty was locking the door after Tom's departure I lifted my book to mark the page where I had left off on Nathan's coming into my room, and the paragraph opposite my thumb is as follows: 'I will pass through this world but once. If, therefore, there be any good thing I can do, or any kindness I can show, let me do it now. Let me not neglect it or defer it, for I shall never pass this way again.'

I shall read this to Betty to-morrow morning, and tell her that, though she may not have the faculty of thus beautifully and poetically expressing a sentiment, she lives it to the letter every day of her life.

(Continued on page 536).

THE BLUE NUNS OF FIESOLE.

NEARLY all visitors to Florence know the old Etruscan city of Fiesole on the hill; but not all have visited the Convent of San Girolamo, the home of the Blue Nuns. It is indeed a home in every sense of the word, for there the sick are tended with every care, the weary find rest and peace, and the poor the help so much needed, with good and wholesome food.

Leaving the car from Florence at San Domenico to walk up the steep, winding road which was formerly the only approach to Fiesole, you pass near the summit a large stone with an inscription,

erected above where several early Christians were martyred; and a few yards farther on you reach a broad flight of shallow steps, flanked by two rows of ancient cypresses, on the top of which is the picturesque *loggia* and the Church of San Girolamo. A ring at a modest door is responded to by a sweet-faced nun. On learning that you have come to see a sick friend she readily and cheerfully admits you, and you pass into a small arcaded cloister, kept ever fresh and green with palms and ferns, flowering shrubs and plants. In the centre is a fine old well

which on one side bears the inscription, 'Cosimus Medices,' and on the other, 'Flore Dux II.,' and standing in this beautiful court it is almost impossible not to realise that you are not transported back to years long since gone by, and a sensation of peace comes over you.

From the cloister numerous doors open, one leading to the pretty chapel, simple but stately, constructed after designs by Michelozzi. It was once rich in artistic treasures, but is now chiefly adorned by flowers, always fresh and beautiful. Indeed, for certain festivals, especially for Easter, the floral decorations are of such exquisite taste and the services so full of true devotion that it is a pleasure, even for those of other sects, to worship with these good and devout nuns.

On ascending a staircase on the other side, long corridors filled with plants and bowls of flowers, and large and cheerful rooms, are reached. The Jesuits, to whom these monastic buildings formerly belonged, did not believe in narrow, badly lighted cells; on the contrary, the rooms are large and airy, and flooded with sunlight, and in all English taste and skill of arrangement prevails, comfort, daintiness, and quiet simplicity.

As you step to the window of one of the rooms, all of which look south, what a view meets your eye! In the valley lies Florence, the city of flowers, 'of fairest Italy the fairest gem,' with its noble dome conceived by Brunelleschi, and close by Giotto's slender Campanile. To left and right flows the Arno, sparkling in the distance like a silver thread.

But let us descend to the garden for a still greater expanse of view, and before going out we too must accept the nuns' proverbial hospitality, and partake of tea and thin bread and butter, very welcome after our tramp uphill. The dining-room opens off the drawing-room; and what a treat it is, after many months of hotel and *pension* life, to see such a daintily laid table, spotless linen, shining silver and crystal, and artistically arranged flowers! The nun to whom the duty is apportioned to wait at table takes such a pride in her work that every two days the table decorations are changed. On going out we find ourselves in the square Italian garden, its walks lined with orange and lemon trees, and here and there flowering azaleas give a patch of colour. It is the season of the roses, and the house on one side is covered with luxuriant *Maréchal Niel*. At the other end is a tiny *loggia*, its pillars half-hidden by the Virginia creeper, and a terrace where we must stop to drink in the beauty of the scene before us.

Below lies San Domenico, and to the left Fiesole, dotted over with historical and princely mansions and more modern villas, the whole hillside clad with the soft gray-green olive and more vivid vine, while here and there dark cypresses rise in stately rows, as if guarding some ancestral home.

Only a narrow roadway divides us from the

Villa Medici, built about 1450 by Cosimo de' Medici, who, with his characteristic munificence, became the benefactor of the Order of the Girolamites, the first holy sect to inhabit the monastic building, as the name indicates. In this villa Lorenzo de' Medici loved to gather around him the leading spirits of the time—poets, painters, philosophers, such as Poliziano, Ficino, Pico della Mirandola, and others—and spend the long summer evenings in discussions of Platonic philosophy. A little to the left of San Domenico—within whose holy precincts Fra Angelico found inspiration to depict his wonderful masterpieces—rises the Villa Lador, in the garden of which trickle the tiny Affrico and Mensola, sung of old by Boccaccio. Higher up, the hillside is dotted over with large quarries which supplied the stone to build Florence; and here, some short distance below, lies the village of Settignano, where Michelangelo was put out to nurse, and where he learnt to chisel marble. Nor must we overlook the Villa Crawford near Florence, where Queen Victoria twice spent many happy weeks in the spring. Tradition says that it was once Boccaccio's villa, and that it was here he commenced his *Decameron*. To the west runs the old Bologna road, through the valley of the Mugnone; and on the summit of the hillside rises the Bird Tower. Tradition also says that Dante, as an exile, often wandered to this spot to gaze down on his beloved city; although we have no authority on this point. Monte Morello, known as the weathercock of Florence, dominates the whole range of the Apennines; and below it lie the fair villas and gardens of Castello and Petraia, summer residences of the Medici, and now country villas of the Italian royal family. But grandest of all, in the glow of the setting sun, rise in the distance the white and rugged peaks of the Carrara Mountains.

In the valley no smoke mars the outline of the domes and spires and towers of Florence, so that beyond and above the Piazza Michelangelo we shall see that gem of Tuscan-Romanesque architecture, 'San Miniato, Galileo's Tower, and poet-sung, fair Bellosguardo.' In the background the fine old Certosa Monastery comes into view; while to the east rises again that same range of Apennines, on one of whose summits nestles Vallombrosa within its pine-clad shades.

But although the eye never wearies of this lovely panorama, we must perforce tear ourselves away from it, and continue our stroll through the garden and saunter along the terraced cypress walks. These fine old trees were planted centuries ago by the monks, and in their shade, where rows of irises grow at their base, we can picture to ourselves the good old monks still working there with spade and trowel. The extensive grounds reach to the old Franciscan monastery; and in the shade of cypress grove and ilex, Judas-tree and pine, the invalid or

weary patient can be found in many a secluded nook, or overlooking the wide expanse of hill and dale, inhaling the balmy and health-giving odours; while the more active can stroll through the orchard under the bright blue sky, and chat with the ever-busy *contadino* who tends the fruit and olive, but is always grateful for an opportunity to rest from his labours and talk about the cultivation of the soil. It is a picturesque sight in spring to see that hard-working peasant, with his pair of meek-eyed white oxen, turning up the rich sod under the olives with his old-fashioned wooden plough, utilising every inch of ground that will yield a crop of vegetables later on.

The other entrance to San Girolamo is by the Rose Walk, many of the trees having been planted by the Very Rev. Father Anderley, General of the Society of Jesus, to which society the monastery belonged before being taken over by the Blue Nuns. Traces of old Etruscan masonry are still discernible in the upper part of the grounds, where, on the brow of the cliff, among some farm buildings, is a disused chapel containing dilapidated frescoes of great interest and beauty. This chapel is a thirteenth-century copy of the Holy Sepulchre at Jerusalem; but it was evidently considered of more importance than several others that exist in Tuscany, as indicated in local maps, and in the archives its site bears the name of 'Gerusalemme.' It is of minute dimensions, eight feet by twelve, built with an apse and barrel roof. Only some years ago the fresco of a *pietà* was discovered on its walls, and through the assistance of two artists it was cleaned and brought to light. By some it is considered Giottoesque in composition, by others that it belongs to the Sienese school of the late fourteenth century. I should be inclined to favour the latter opinion, for in the Belle Arti in Siena (Room II., fourteenth and fifteenth centuries) is a picture, entitled 'After Berna,' similar in composition, colouring, and expression. The *pietà* in this little shrine covers the long low wall. Christ lies upon a bier; but upon His countenance we see no signs of physical suffering, rather an expression of serenity. The Virgin, whose face expresses great sorrow, raises His head; and next her is a saint weeping. St John, a youthful figure of great beauty, occupies the centre of the composition. Other personages are grouped behind, one presumably Mary Magdalene, who embraces the dead Christ's feet; and angels hover above each end of the Cross. All the figures are impressive; and, although much damaged, the colours are rich and harmonious. The other frescoes in the chapel are a charming Annunciation and a Christ who lifts His hands in blessing.

In San Girolamo (or St Jerome, as we have it) we find an interesting history. In the early days of Christianity a little chapel was first dedicated to him, and about 1360 one Carlo dei

Conte Guidi retired from the world and built himself a hermitage near by. In this choice of life as a hermit he was joined by others, and the brotherhood became a strong one. Their little cells are still to be seen under the more modern buildings. They gave themselves up to a life of prayer, and prayed for the unity of the Eastern and Western Churches. When Cosimo de' Medici built his villa close by, he rebuilt the monastery and pensioned the poor hermits. Two centuries later, however, their piety was on the decline; the order was ultimately suppressed, and the property bought by the Ricasoli family, one of whom presented it later to the Society of Jesus. It was then turned into the private residence of the General of the Order, until at the end of the nineteenth century he returned to Rome, when the Little Company of Mary acquired the property, and adapted it to the requirements of a 'home' for invalids.

The Little Company of Mary, or the Blue Nuns (so called from the colour of their veils), differs somewhat from other orders in so far as, when a call to the sick arrives, the Sister appointed in charge of the case packs her bag and starts without being accompanied by another, as is customary in other orders. The sisterhood was founded about thirty-five years ago in Nottingham by Mother Mary, and protected by Bishop Bagshawe. They have now nursing homes and hospitals in Great Britain, Ireland, the Colonies, in Malta, and even in the United States of America. In the East End of London they have a home where only the poorest of the poor are nursed, and one for fallen girls. Far-reaching is their charity. The rich patients, of course, must pay for their treatment; but the money received is quickly spent in relieving their poorer brethren.

All this good work was begun by a frail little woman, Mother Mary, who died recently in Rome. She was one of the most delicate of her sex, indeed an invalid for years, yet from her couch of suffering she directed the work of the institutions all the world over. Her loss was deplored by rich and poor alike, and her funeral was a most imposing one, being attended by members of all the ecclesiastical orders in Rome, laymen, and great numbers of the medical profession, in addition to the large procession of mourners.

The nuns in San Girolamo number about thirty, consisting of Mothers, Sisters, novices. The chief Mother directs the whole; then there is a real Mother Martha to look after all household arrangements, and a third to instruct the novices in the care of the sick. Several of the nuns do the cooking, which is excellent; and, while there are some good Italian dishes, English and American tastes are also considered. Having been a patient myself in their home, I can speak of these good nuns with the highest praise.

The patients confined to their rooms and unable to benefit by the health-giving beauties of nature are tended with a care far exceeding that of any hired help, for the nuns bring to their work a cheerful spirit not always to be found in the most highly trained nurse. Everywhere you are met by a happy smile and encouraging word.

Nor are their labours confined solely to their own sect. Irrespective of creed, it suffices to be bodily or mentally sick to be the object of their loving care. No fear of a proselytising spirit mars the sojourn, for it is forbidden to the Sisters, by one of the rules of the order, to speak of religion. On entering the convent the worries and din of the world are left behind you, and under the influence of the all-pervading harmony, you give yourself up, for the time being at least, to a life of peace and contemplation. Truly their home has been called a haven of rest.

Naturally the patients of doctors get the best rooms, the smaller ones being given over to students or to those who cannot pay so much; while even the little old cells are gladly occupied during the season by those in need of rest. The price of *pension* varies with the room and the attention required, but it is always moderate.

There is a perfect little operating-room on the upper floor, with a surgeons' room attached; but

as Fiesole is some distance from Florence, doctors and surgeons prefer sending very serious cases of illness to the Casa di Cura, a home also kept by the Blue Nuns just outside the gates of the city.

In connection with San Girolamo is a small hospital for the poor, founded by the generosity of a lady, and now kept up by donations; and during two months of the year the very needy are fed at the convent door.

Legend informs us that Fiesole was once the favourite earthly abode of Atlas, and that he chose it as the resting-place for the body of his dearest child. When he had laid her to rest he craved a boon of great Jove, and the boon he craved—not for himself, but for others—was that all dwellers on these heights 'might ever find rest for their souls, recreation for their minds, and joy for their hearts.'

Was it not in the shadow of this old Etruscan city that early Christian saints and martyrs brought joy to all believers by their teaching and faith; was it not here that poets and painters found inspiration for their writings and their art; and is it not within these monastic buildings that many a weary sufferer to-day finds never-failing care, and many a tired-out wanderer health and consolation?

A DAUGHTER OF HETH.

A STORY OF THE WILD.

By F. ST MARS.

THE furze stood very still, the marsh was very quiet, and the sky hung very low about the time that the trouble arose. Oaring slowly over the thousand-spiked furze that fringed the inner side of the sea-bank, he had sighted a rat busy with a mussel-shell. There was a little heap of mussel-shells beside the whiskered outcast, showing that he had laboriously carried—how, he knows; I don't—each one from the shore, probably some distance out on the mud-ooze, back to this place to consume. Being a rat, he had reasons not to love the open, and there was probably no health in this act of his, though there was courage.

The old rook 'banked' sharply and wheeled back, peering down. He was a 'winter rook.' Just so. There is a difference of nationality, not of species, and it may be of habits in some ways. The 'winter rook' has nothing at all to do with our black republics of the elms in the home park. No, indeed, it is not one of the old jovial ruffians whose voice takes root somewhere in your memory, and goes with you into the far corners of the earth, and wakes up again and makes you hunger for 'home.' The 'winter rook' comes from far away across the jade-green, icy mine-fields of the North Sea, out east'ard away, from the lands where the elk and the wolf

and the marten cat still have their being, and the gaunt, grim pines stand, tier upon sighing tier, eternally on guard above the breaking waves, and elm and home park are not, nor ever will be.

That rat saw the black shadow fall upon the ground, and looked up insolently, truculently, sharply, with little enough fear, but all the world of cunning in those amazingly bright eyes of his. But your rook wears the livery of the powers of darkness too, plus—and here he had the advantage of the rat—that saving sense of intelligent humour which has won for the crow tribe that place at the head of all the feathered tribes to which science has been pleased—tardily, 'tis true—to gazette them. He sank to a bare furze-bough, whereon he perched—none too comfortably by reason of the spikes.

Thereafter—well, bird looked at beast, and beast looked at bird, and there you are. That is the wild all over, always on the eve of revelations indefinitely postponed. Moreover, all wild creatures have a patience that would have turned Job into a New York hustler; and it was entirely natural to the rook, though 'extinct with famine,' that he should wait like a coal-hewn image, staring at nothing for half-a-day if need be, and make no sign.

The rat was the first to break the spell by

endeavouring to retire—backwards, of course, since he wasn't a fool—with his booty into the *chevaux-de-frise* of furze, where no bird could follow. And the harsh *frou-frou* of the bird's wings was so sudden that the rat dropped his mussel, and pivoted on himself only just in time to save his own tail! He side-slashed upwards, in shark-like fashion, quick as light, and you could have heard his yellow wedge teeth grate on the horny beak, held as a shield, but swifter than ever shield was held, to parry the blow. In the same instant, it seemed, he side-leapt, even as that same black gouge of a bill sprang back with a jar from the very spot where he had been, but wasn't then; and—oh horrors! the long-drawn, ghastly squeal that sawed the silence shot the old rook up twenty feet into the air, as if he had been sitting on a mine. He checked and swung, ready to remove at top speed into the horizon in any direction you please before he realised that the rat was in trouble, and that that unearthly shuddering squeal had come from him. His last move had landed him into a wire rabbit-snare, and if he was not raving mad (the violent kind) at that moment, he was certainly putting in a very good imitation.

Pity is not included in a wild creature's training as a rule, unless it be, perhaps, an elephant or a chimpanzee; for which reason, it may be, the rook annexed, and retired with, the mussel to the shore, entirely unaware, one would think, that there was such a thing as a suffering rat within inches of him at all.

The mussel fell, by design, not accident, some thirty or forty feet on to a pebble; and, its defences ruined, so to speak, the rook leisurely proceeded to bury the luckless thing in himself!

The frost mist was creeping like smoke across the water, and the west resembled a distant forest fire by this time, and the first soft eerie whistle of the inshoring widgeon breathed from away out over the cold mud-flats, and the red-wings were 'weeping' across the sky. The rook returned to his rat—at least, that is how he regarded the rodent now—but could only see the green gleam of two eyes deep down in the darkness among the furze. The eyes were not pleasant to look upon, and less so to approach in that gloom; and the rook, having no desire to end his days perhaps in that spot, flapped away to a little lone spinney close to the shore, where, somehow miraculously, he slept.

Since famine stalked at that time unafraid across the wild even by day, what could one expect of the night? The night, in fact, was a mist-cloaked terror, for it is worth noting that, just as in times of drought and hard ground, so in times of frost and frozen ground, all the wild world and his wife, or wives, trek down to tide-line, there to canvass the drift, or search for lob-worm or sandhopper, or stalk those that do.

Winter, indeed, had decided to retreat at last; but, like a good general, he was making a savage

attack with a late hard frost all along the line to cover his retirement. It was a night of wind, too, and nearly all the feathered folk are strangely nervous and extra highly strung in wind.

Once the old rook—fixed firm on a branch of a Scots fir by the patent automatic lever action with which the legs of all those known as perching birds are fitted—awoke, for no reason at all, it seemed at first, till he saw a form, free, raking, fierce, and sinister, perched in the next tree asleep, and that was a peregrine falcon bound for the White Sea in leisurely fashion, who might have to be reckoned with when dawn came. Once, too, a sudden lull in the roar of wind through the spinney enabled him to hear—and he did far too clearly—the unspeakable shriekings of several things, or portents, or fiends, which might have been the very spirits of the lone treacherous marshes come out to gambol in the night and the storm, if they had not been those strange nomads the short-eared owls, raiding as they passed slowly on their yearly journey back to their homes in Norway, or beyond. And once—this was the most trying disturbance of all—a stoat, climbing (they do climb very well) on the off-chance of a sleeping squirrel or bird deafened by the wind, was itself deafened by the wind; and, since it approached from the 'weather side' of the tree-bole, almost unable to smell, so nearly ran into him before realising the fact that he woke up. In this case attack may or may not have followed—who knows what is in the mind of a stoat, or any other wild creature, for the matter of that?—but the old rook knew only that his instantly returned consciousness beheld the sharp, merciless visage of a dog stoat thrust out of the darkness and grinning at him within two inches; and, anyway, what would you have had him do? In the wild it is a sound maxim—nay, a grim law—to act first and think afterwards. And the old rook acted with his beak, and with every last dram of weight that he could throw in behind to back the blow. The face withdrew into the gloom, with 'marginal remarks,' as if a hand had plucked it back. It did not reveal again, and the crow blundered through the darkness into another branch with something almost approaching the abandon of a fowl in the dark.

Nature had taken a smudging-brush with which to wipe the eye of day, and out through the silent grayness the old rook flapped at the break of dawn. Apparently he knew quite well where he was going, and what he was going for. Sometimes I wonder if he ever did not. Straight to the scene of the martyrdom of the rat he oared his slow course against the wind, and therefore very low, knowing the risk and taking his chance, a strange form of ill omen sliding silently through the half-light.

The sound of the crushed dead furze-spikes, the low, scolding *cha /* of a furze wren or Dartford warbler, smack in the path and only just

ahead, were the only warnings that he got of danger; but, being a rook, they were enough. Before you or I could have realised anything at all he had opposed the whole of the under surface of his broad body and rigid wings to the wind; and, since you cannot instantly stop a bird nearly twenty inches long and going at a good speed, the result was that he shot straight up aloft vertically; and—*bang!*—the shrieking charge of No. 4 shot tore through the air just beneath his fanned black tail, or the place where he ought to have been, but was not. He went, that rook, as only the wild feathered ones can go at the invitation of a gun, into the horizon; and so did the disgusted gamekeeper, who had waited at dawn for a shot at the numerous 'vermin'—so he styled some of nature's most charming forms—that the hard weather had driven to invade from afar his marsh-side spinneys.

Fifteen minutes later the old rook approached the scene of the rat's defeat from the opposite or windward direction. He even settled on a boulder to sharpen his big beak before finally flapping down, but this may have been simply to make a careful inspection of the scene. Then he stared. Perhaps you will admit, too, that he might well stare, for there was a trap, 'tis true, and there was the rat, and at the same time there was not the rat. Only his skin remained, cleverly taken off as with a sharp knife, nicely cleaned as with a scalpel, and, as I live, turned neatly inside-out like a glove!

Birds have no expression of face, it is said. But they make up for it a little in expression of body. They can look what they feel, or what we may presume—humbly, since it is like groping in a dark night—they feel. Untidy and slouching at the best of times, the rook's whole aspect denoted disgusted and sullen surprise.

Then the voice spoke. *Curra! curra! curra!* it said; and at a distance—the strange, still, hollow distance of the marsh—it sounded almost exactly like, 'You can't! you can't! you can't!'

The rook heard it, though he made no sign. He knew that it came from the top of the sea-bank above and some distance away from him, and he needed none to tell him who was the owner of that voice. Then he went, because of the voice probably, there being no love lost, one gathers, between himself and the owner of this harsh and cruel sound. And, after all, he was right. There is in the wild nothing to be gained by gleaning where the hooded crow has harvested.

Noon had come, and a cold sun was peeping through, before the old rook found himself a meal. He was by that time famishing, with the delightful knowledge to cheer him that if night came in that cold, he had a very good chance of perishing on his perch as he roosted.

With other rooks—home ones, not 'winter

rooks'—he had tried to do some beach-combing. The others, however, would not accept him—they are exclusive, the rook people; you may have noticed it—and invited him off. Off, therefore, he went, since the invitation took the form of many strong beaks to his one.

Not very far did he go, though. He kept in sight, and had the satisfaction of seeing that the homeland ones fared little, if at all, better than he. That morning there was a high spring-tide, and though the pirate gulls held high carnival at the burial—in themselves—of a bloated floating dead dog, the rooks need their dainties stranded, and that is usually a low-tide job.

Then his chance came. Probably every one gets a chance—once, very seldom twice, and still more seldom a third time—even in the wild. A party of fieldfares, those rather mysterious and derisive handsome thrushes of the far north-east, came flying over the waters of the estuary from the west. The rook saw them coming, of course, probably long before we could have done—though their derisive, cackling laughter was wafted over the jade-green wavelets long before they appeared—and apparently took no notice till one fell out. It settled some little way along the sea-bank, that one. The others flew on to a lonely bare tree.

For a moment the old rook squinted down his long, heavy beak in a roguish way he had, then rose and flapped towards the settled bird. It rose too, as one who has a poor conscience, but its flight was low and weak; and, before it could make the tree, the rook—his wings whistling amazingly in that keen silence—had caught it up and headed it back.

The chase that followed was neither grand nor graceful. Rooks are not built for that work, anyway, and the fieldfare was already exhausted, it seemed, probably for lack of food. It dropped suddenly, and down dived the rook. He found the big, handsome thrush on its back, claws up, beak open, screaming at him in a horrible and angry way that anger which is born of utter fear. But he did not care; he was a wild thing, and when great Nature deleted for them the power (or curse) to worry about things, she took from them pity also. There is, in fact, no pity in the wild. How could there be? Nor was there any battle in the true sense. The fieldfare never had a chance, and the big gouge beak of the black giant, used as a pickaxe, did the work effectually, if not perhaps quite as quickly and neatly as that of a hawk. Anyway, it was done, that cool murder, unabashed, out there in the open, and in the dull, cold light of day, for the rook was starving, and could not wait to observe niceties. How little fitted he was for the part, however, seemed evident by the extraordinary time he took over the meal. He appeared to have only that one pickaxe stroke; and when, perching bodily on the 'dinner,' he essayed to pull and wrench, he

generally finished up by falling backwards on his tail.

Now, you can never do anything in the wild without the certain knowledge that you are being watched by unseen eyes. It is not a nice feeling, if you come to think about it. The rook, however, did not think about it. He went on with his amateur carving till a black shape took the light out of the weak sun above, and he came suddenly to 'attention.' Followed then a rustle of harsh wings, and down dropped a big bird. Another rook! For forty-nine seconds the two looked at one another as motionless as carvings in coal. They made absolutely no sign, and you couldn't guess at all from their roguish eyes what they thought.

Then the old rook did a strange thing. He bowed with great solemnity, and, remaining there with his beak touching what was left of the fieldfare, fanned his tail and drooped his wings. He did this several times rather quickly, almost as if pecking, and before you could wink the other bird was beside him, feeding like one possessed. She was, it appeared, a young hen-rook from the flock of resident birds who were pessimistically trying to find a meal just over the other side of the sea-bank; but how am I to say whether she had had her eye upon our old 'winter rook' the whole time or not? You picture her: a great, lolloping, wallowing, fat, untidy specimen, with no soul—or whatever birds keep in place of a soul—above any single thing on earth than her own stomach.

Suddenly the old rook jumped aside, pivoted far more quickly than you would have given him credit for, and struck. It was a vicious and a shrewd blow; and, whether or not he was much of a hand at carving, there could be no doubt about him now in the fight. It caught fairly the big male rook that landed, pecking as he came, at that moment on the spot where our old rook wasn't—caught him fair on the shoulder, it did, and spun him clean round, just as his dropped, skinny black claws touched the ground. There was science in that lunge of our old rascal's, science and knowledge born of bitter experience gained in a long and chequered career. But how he had managed to act thus with less than half-a-second's warning is more than I can tell you. Wild creatures, however, think really nothing of this sort of thing.

The old rook must have known what strategists may have found out lately—namely, that in warfare an initial advantage, if it is to be any good, must be pressed home instantly and with fury. And this he did. He was upon the foe like a black whirlwind, hacking, hacking, hacking with his terrible pickaxe stroke—but not always delivered from above—and a low, cruel lunge, endeavouring all the time by ceaseless blows from his strong sable pinions, and with his claws, as he hopped, to smother down all possible counter-strokes.

This form of attack, it would appear, can be effectively met only in one way, and that is full front; but our rook, having once knocked the enemy sideways, never gave him a chance to face round. He drove on him with every ounce of strength and weight, and speed and quickness of movement, and force and number of blows that he could screw out of himself; and the other rook continued to blunder sideways in spite of himself, flapping, hacking back, guarding as best he could, but driven on and down with a fury of onslaught against which he could make no effectual resistance.

At least, that is what fact—who is a stickler—said. The eye said that there was only a quite hopeless tangle of beating black wings, rustling black feathers, and black remarks from black hearts.

The lady in the case said nothing. She fed furiously and frankly, unbeautifully ravenous, hoping probably against hope that she could bolt all down before the battle ceased. If she cared a quill who won she never showed it; but then she may have known that the old rook had been forced by circumstances into a seeming complete generosity he had not meant to show.

As for the attacker, he was a fool, and a handsome one. She knew that, one suspects, as well as any other member of her sex would. Also, because she was truly feminine, she liked him as much as her big, selfish self could like anything other than self—which would not be a very lucid explanation if I could give you any other, but I can't.

Then the aggressor, who had also come from the feeding flock of home birds on the other side of the sea-bank, gave ground at a run, and fled. He had had enough, that black knight, and was glad to get away alive, if not whole.

The old 'winter rook' turned with the bearing of a victor, and bowed again with fanned tail to the big, fat hen-bird; and he must have noted, one thinks, that what was left of the fieldfare was not much good to him, or to anybody else, for the matter of that.

Apparently the same thought struck them both, for she, taking no more notice of him than of the earth—less, in fact—rose and flapped, slowly and low down, towards the furze, where, half-hidden, she dropped, and, turning back towards the old rook, cawed, or, rather, gurgled softly, once.

Half-hopping, half-flying, he was beside her quicker than you could count five, and then he stopped dead. She was looking at something on the ground, something pinky, horribly and suggestively still, on its back—a very young rabbit, dead, cut open, and partially skinned. What a diabolical temptation!

The old 'winter rook' stood as rigid as a coal-lump, staring with shrewd eyes at the thing, with the other whispering, rook-fashion, by every gesture, and rustle, and gurgle, into his

ear all the time that she was starving. And as he stood there two things happened almost at once. Firstly, a tuft of coarse, stiff marram grass close at hand stirred suddenly, leaned over, and began to whisper; it was the turn of the weather, the wind had gone round to the south-west, and in ten seconds all the furze around was stirring and singing strangely of the rain-laden gale that was coming in past the Lizard. Secondly, from far, far overhead, without warning, there broke out, all at once, a loud shouting chorus of *jack! jack! jacker-r!* and stopped as suddenly as it had started—a company of gray-pated jackdaws, travelling the great Aerial Grand Trunk Road, journeying to the far north-east.

The old rook looked up, and started.

At a lower altitude than the jackdaws, streaming along in steady, sturdy, slow, and untiring procession, in dead silence, was a band of sable 'winter rooks.' They too were heading north-eastwards, bound for their birthplace beyond the sea, and they knew what the south-west wind had told the jackdaws, and the old rook, and the lolloping, wallowing female—namely, that winter was broken for good.

He stood erect, staring at them, a strange, and (I like to think) wistful light in his clever eyes; and, as he stood, there came down to him faintly from the very last bird in the straggling flock a homely, harsh *caw!* twice repeated. It was the Call of his own People, the Call of his Home, the Call to him to rise up and join that journeying throng, as he had done before at the same time of year. He bent a little forward. He half-unfolded his shadowy vans.

The big female 'home rook' by his side was nearly going frantic. She gurgled and she moved her wings like a young cuckoo, appealing by every cunning gesture of birddom to him to stay, only just to stay, with her, and—this was her real concern—secure for her this gorgeous meal that, for some strange, suspicious reason, she seemed afraid to be the first to touch. Far better had he killed her on the spot.

He checked himself. He looked back at her, his wings still half-open, and she started her gestures of appeal afresh, a new lot, and even more helplessly appealing.

He paused motionless, undecided, waiting.

If only that rough, cheery *caw!* had been repeated I think he would have gone. I believe he was really waiting for it, hoping for it; but it never came again, and the bird that had uttered it was now a mere speck far away in the lowering north-east.

The old rook turned, walked to the banquet so mysteriously placed there by fate, and half-recklessly, half-blindly struck down, and struck hard, too, at the corpse, to drag it out of the grass-clump for his 'lady fair.'

But fate has no favourites, and she is very cruel. The instant horrible clash of cold metal,

the whirl of wildly beating black plumes that stayed in one spot, and the whirl of the terrified wings of her who didn't, and fled, proved it. The old rook was caught in a vermin-trap, and the freshly opened corpse of the poor fat-cheeked baby bunny was the bait.

Fifteen minutes later, as the sun went to sleep behind hurrying leagues of clouds, and the first soft drops of rain began to fall, the flock of 'home rooks' that had been at business by the shore rose up and streamed away home to their elms in the home park to bed.

They passed not so very far away from the old rook among the prickly furze, caught in the trap. Those on the extreme right of their path could see him. But there were only two on the extreme right of their path, and they came last. They were the big, coarse, feline-looking female rook and the handsome male that was a fool.

They saw the old 'winter rook' down there in the gathering gloom among the furze. Perhaps they heard the surreptitious rustling, saw the green, half-guessed gleam of eyes that marked the waiting rats. I know not.

The old rook was swaying now. The last of his strength was oozing from him with his life's blood. He toppled, fluttered, and fell. He lost consciousness, fighting against fate to the end; and as his bird-mind slid from him he heard—he must have heard—the single, lazy, mocking *caw!* that was flung back to him from the black beak of that big she-devil hen-bird, from that sable-gowned daughter of Heth.

Then he was dead. He never knew that his betrayer had come to the shore with the flock an hour before he arrived, had seen the keeper set the trap, and, suspecting something, had been only too glad to coax him to seize hold of the bait first and test its genuineness.

FIR NAM BEANN

('LAND OF THE HILLS').

BACK from the fevered crowd and stifling weather,
To the wide moorland with its soothing winds,
Faint hum the bees among the blooming heather,
And the red stag is calling to his hinds.

High over far-off hills the eagle yet is sailing;
In frothy rushing pools the leaping salmon play;
Loud in the glen uncanny curlew wailing,
Iecariot-driven, their mission to betray.

Past strath and ben the clouds flit shadow following,
Fionn and Diarmid of old time watched them go,
Cry of faint shepherd heard, or phantom hunter
holloaing,

His ghostly hounds against their shadowy foe.

Yet to the hearing ear forgotten pibrochs swelling
Sound; in the haunted glens elusive echoes sigh;
Dim shades of heroes within their lonely dwelling
Stir at the native sound and shout their battle-cry.

THE BIRTHPLACE OF DR JOHN BROWN,
AUTHOR OF 'RAB AND HIS FRIENDS.'

By GILBERT RAE.

BIGGAR, the birthplace of Dr John Brown, lies like a jewel upon the breast of Scotland. It rests upon a gentle eminence that terminates in the rolling range of the Pentland Hills. This is in itself significant. For the light of that life which dawned in the obscurity of this upland town passed to the fulfilment of a strenuous and worthy career in that city above which, like a guardian angel, the Pentlands stand. A hill burn sings its tender song by the western portal of the town; and this same stream, in gathering strength, runs, like a silver thread, through the meadow-lands beyond. On the fringe of this meadow stands Strathview, once known as the Secession Church manse of Biggar. It was here, on the 22nd of September 1810, that Dr John Brown was born. Doubtless, in the right-of-way that runs from the gable-end of Strathview southward through the meadow, he would oftentimes play, and in this meadow, like the children of to-day, he would gather the marsh-marigolds that in summer-time adorn this beautiful place.

Beyond the vale of Biggar, with the ruined fragments of Boghall Castle between, the hills of Peeblesshire appear. Along that rugged way, from the viewpoint of Biggar, the sun pursues its daily course. Above the shoulder of Mossfennan hill the morning beams arise. This treasure of the day, which shines in fullest majesty above the heights of Cardon and Coulter Fell, sinks into the lap of twilight above the rounded summit of Tinto, and, with the blessing of a well-spent day abiding on it, seems as if to fall on sleep in the quietude of Shieldhill. The eastern prospect from the old manse windows is toward the borderland. Tweed, that river of rivers, is invisible, but the wooded slopes of Dawyck, underneath which it flows, wave a greeting from afar. To southward, through a cleft in the great range of hills, the river Clyde flows slowly west. Beside that river, in the village of Symington, a place three miles distant from the town of Biggar, they laid to rest the mother of this illustrious son.

But it is in the manse garden we upgather the tenderest memories of other days. It seems as if the walled security of this pleasure had secured, as an abiding heritage, the peacefulness

of bygone years. Outside those walls (and this may be said of any old-world garden) the village life of joy and sorrow, with its trivialities and absurdities, passes unheeded and unknown; but within men and women find refuge from the storms of a vain and blustering humanity, and in such an atmosphere of rest grow into a calm security not of this world. Of such a type were the parents of Dr John Brown. The father, in the preparation of those uplifting discourses, had for his inspiration this garden of flowers, and here, with a gentleness that made her life complete, the mother of the boy laid deep the foundation of what proved in after years to be the structure of a brave and tender soul. For twelve years Dr Brown had the environment of Biggar, and who can measure the far-reaching influences of those early days? Intellectually we have fallen upon an evil day; but in Biggar, in the boyhood of Dr John Brown, there were giants in literature and art. The list is too extensive to record, but we seek in vain in these parts to-day for one to compare with Robert Johnston, merchant, who, in addition to an intimate knowledge of mathematics, theology, politics, and art, was a distinguished linguist, being well versed in Latin, Greek, Hebrew, French, Spanish, Italian, and German.

For the inhabitants of Biggar, in the prime of his intellectual attainment, Dr Brown, at the request of his uncle, the Rev. Dr Smith, composed that most touching and human story, *Rab and his Friends*. To them, in a schoolhouse in Biggar, and before the Athenæum, a literary society which existed then, he, 'with fear and trembling,' as he afterwards confessed, read his classic production.

The old Secession Church of Biggar still stands. The outer form remains, but the inner fabric of the sanctuary has passed away. An old worshipper recently gave an interesting description of the internal structure, and, in an enthusiasm for all that pertains to a vanished past, we ascended by a trap-door to gaze on the stout oaken rafters that support the whole.

In the kirkyard upon the hill many of the worthies and notabilities of Biggar are laid. Under a throughstane near the east doorway of the church the forebears of William Ewart

Gladstone sleep. In the centre of this hallowed spot, with form outstretched like the all-embracing arms of Christ, our church uplifts its hoary head. Founded by Malcolm, Lord Fleming, Baron of Biggar, in the year 1545, and gifted by him, in 'praise, glory, and honour of the most high and undivided Trinity,' as he himself expresses it, to the Roman Catholic persuasion (a fact too often overlooked by those who denounce its tenets), the church of St Mary stands in all its glory and dignity, the one priceless possession in which the whole of this community may claim a righteous share. Had it not been for the faith and devotion of Malcolm, Lord Fleming, our poverty would have this day been great. The strong personality of the Fleming family spared the church from the ruthless devastation which accompanied what is known as the Reformation (to what we have been reformed it is somewhat difficult in these days to know), and these old gray walls, in the worshipful spirit they of themselves create, remain, for this pilgrimage of ours, the true home of the heart. In the eastern transept, with all the ceremonial of the Church of Rome, generation after generation of the Fleming family was laid to rest.

A winding staircase leads to the tower, and there a panorama of perfect loveliness unfolds itself. Girdled by hills, surely, when blessed by the sweetness of a summer day, there are few places with a tranquil graciousness like unto this. In a clump of trees beyond which the sun goes down, George Meikle Kemp, architect of the Scott Monument, Edinburgh, was born. Notwithstanding all opinions to the contrary, opinions which, when carefully examined, are found to be without substance, we know of

a surety, from testimony bequeathed by those present on that eventful day to relatives still alive, that in the parish of Biggar the famous architect was born. It was to Edinburgh both Kemp and Brown made pilgrimage. George Meikle Kemp demonstrated in stone the greatness of his soul, while Dr John Brown in that city drew from the hidden heart of humanity a gracious melody that lingers still. It is to Biggar the grateful heart of Edinburgh should oftentimes turn.

With the memory of a glorious past abiding with us, this humble tribute to the town is paid. We are, alas! made too much alike in these days, and traverse a pathway which conventionality prescribes; but the wonder and charm of nature abide. With lavish hand, before our hearts' door, she scatters in every season her varied gifts. Some spurn and trample them under foot with an appalling ignorance of their worth, but others tenderly upgather the treasures of this earthly day, and in their possession grow wise and strong. Of the strong company of men was Dr John Brown, whose infant feet once trod those pleasant ways we know and love. What brighter spot in all the world, e'en though the sting of poverty should sometimes cloud the way, could the heart of man desire? To feast the eyes in adoration upon the long, sweet valley of the Clyde, down which the western river of that name throws a long farewell to that fairer river which seeks the northern sea, is an hour of precious privilege. And, when life's working day is ended, what more hallowed place could the weary soul of man long for wherein to rest than the quiet God's-acre beside the church of St Mary, upon a sun-swept hill?

THE BRIGHT EYES OF DANGER.

CHAPTER XXXV.—THE MEETING.

ONE minute—three minutes—passed, and the peaceful figure in the chair never moved, except in its quiet, regular breathing. We drew back from the window noiselessly, and joined the others.

'He is there, and asleep,' I told the captain.

We held a whispered conference. To waken the house at that hour would have jeopardised our chances. It meant alarm for the inmates and perhaps the street, a challenge, questionings, a commotion that would set Macdonell on guard at once. To wait until morning offered advantages. The captain would then inquire for his passenger, 'Mr Mortimer,' and gain admission naturally. In the meantime we would keep a watch on the house.

We took posts within easy call of each other; the captain and Hugh Scott at the back, Bertrand in some bushes to the north, while I

went to the courtyard gate. Relieving the mate of the custody of Innes, I placed him behind one of the pillars, and went to the other one myself. Scarcely had I taken up my position when there was the sound of a bolt drawn very quietly, and a footstep crept toward the gate, a step or two at a time, a halt, dead silence, another step or two, until it was within two or three yards of the gate. I was steelled to any emergency, pistol up, when my glance fell on Innes. He had heard the footfall, and was shaking where he stood, hatless, his dishevelled hair hanging black against the pallor of his face, as uncanny as a thing risen from the dead. I drew back a step.

A figure crept close up to the pillar that concealed Innes. It was Macdonell. He dropped to all-fours, and, with face almost to the ground, peered cautiously round the pillar, to leap sud-

denly back to his feet with a choked cry. He held something in his hand. I had him covered, but he never looked my way.

Innes was standing motionless, paralysed, I believe, by fear, livid, glowering, his hollow eyes thrown into horrid relief against the snow of the moonlight. The two figures stared at each other, Macdonell's face shrunken, his lips moving convulsively, no sound coming from them.

Suddenly Innes pointed a shaking finger at him. I believe that he meant it as a signal to me, but the effect was instantaneous; guilty terror leaped into Macdonell's eyes. Something fell from his hand. With a shuddering cry he fled back to the house, and the bolt was shot in the door. I picked up the pistol he had let fall, and, seizing the limp Innes by the wrist, ran with him to the bushes where Bertrand was hiding, and there we lay till the first glimmer of morning began to show. The captain joined us. He had heard the sound of the bolted door.

'Macdonell has seen a ghost! He will not stir till broad day, I warrant,' I whispered, and told him what had happened.

He gave a grim chuckle. 'The house is wakenin'. Time for me to knock at the door and speir for "Mr Mortimer." What say ye?'

I nodded. Anthony examined his pistol, stuck it in his belt, and we both went round by the back of the 'Crown and Anchor.' When we came to the courtyard I crouched again at the window. Left Hand was sitting with a flagon and a tumbler beside him, his face drawn, nervous tension in every line of it. I signalled to Anthony, who came forward with a brisk step, and knocked at the door. 'House within!' he cried. I saw our man jump to his feet. He poured out a drink hastily, gulped it down, and came into the middle of the room, where he stood listening intently. 'House within!' the captain called again loudly.

An attic window opened, and 'Wha's there?' came from a night-capped head peering into the gray morning.

'Captain Brander o' the *Gannet*. My respects to Mr Mortimer, who has business with me.'

'It's you! You are dooms early, Anthon', said a sleepy voice.

'And ye are dooms lazy, John. My business winna wait. Haste ye.'

A wave of relief swept over Left Hand's face when he heard Anthony ask for 'Mr Mortimer.' He took a long breath, and walked boldly to the bolted front-door. I had barely time to dodge round the corner before he opened the door and gave the captain good-morning.

'My service, sir,' quoth Anthony, pulling off his hat as he followed him inside.

I came back, ducked under the window, and listened by the half-open door.

'Ye are early, captain.'

'Deed I am, but sailors canna keep landamen's hours. Ye are early astir yoursel', sir.'

'Yes; I woke early.'

'The fact is, Mr Mortimer—an' sorry I am to say it—the *Gannet* has been fouled in port, and I canna guarantee her to sail before twa days.'

Macdonell rapped out an oath. 'I counted on sailing to-night,' he said.

There was a pause.

'Did you—did you see anybody about? I thought I saw—I thought I heard— Are there others? Speak, man!'

'Guid sakes, sir! there's nobody astir so early.'

'Nobody!'

'Weel, 'tis a strange thing; but—ye'll no' laugh at me, Mr Mortimer; I didna mean to come ower it—but if I believed in speerits and bogles and siclike, I would sweir I had seen ane no' an hour syne.'

'What foolishness is this?'

'As ye say, sir. Foolishness it maun be. Ye have more book-lear than the likes o' me. But I could ha' sworn that I saw a thing in man's shape that glowered through me and vanished like a flaff o' smoke when I made to speak to it. There cam' a kind o' lowe round it, and—pouf! pouf!—it was gone. It had great een that seemed to be lookin' for somethin' or somebody.'

'Bah!' said Macdonell, but his voice was hoarse and shaking.

Anthony bent forward. 'Its wet hair was hangin' round it like a corp—a drowned man, sir, as I stand here.'

'A—a drowned man! What—what is this?' the other jerked out. 'For God's sake, let in the daylight!' He went to the window and flung the curtain aside. 'There is nothing! See! There is no one.'

'Things like that dinna walk after cock-crow. It is no' o' this earth,' Anthony said solemnly.

I would have liked to see the other's face, but dared not peer round the half-open door.

Macdonell forced a short laugh, false and mirthless. 'Well! well! drowned men concern neither you nor me. When can ye sail?' he snarled.

'In twa days.'

'So be it! Ye'll have a glass with me, captain. I feel the morning chilly.'

I slipped quietly into the room while his back was toward me. He was pouring the brandy out, his eyes on the glass.

'Good-morning!' I called suddenly and clearly.

He spun round on the instant, the glass falling from his hand with a crash on the floor. He made a dive at his sword-hilt, backed to the corner of the room, and stood watching me, breathing heavily, the whole man shrunken and incredibly mean-looking.

'You! You! What do you want?' came at last from him.

'I came north to settle a score,' said I, 'a score between myself and Walter Irving, or Philip Macdonell, or Mr Mortimer, or whatever he chooses to call himself.'

He had regained command of his voice, and straightened himself as he spoke. 'It is a safe rule not to meddle with other folk's affairs.'

'Or with their lives or money.'

His eyes narrowed, the question, 'How much does he know?' plainly to be read in them.

'Do you require a third party to be present?' he asked.

'Not where I deal with honest men.—Stay where you are, captain.'

A hint of disappointment flickered for an instant on his face. He gave his shoulders a shrug.

'As ye please; but if ye think I'll discuss a gentleman's private affairs before a tarry sailor, ye're much mistaken. I wish ye good-morning.'

He had come to the middle of the floor and was making for the door. The coolness of it almost threw me off my guard. I suspect that his game was to get near the door, and then hazard a sudden dash for liberty, for his look was ugly when I stepped back to the door and levelled my pistol.

'What means this?' he cried.

'It means that I do not intend to lose sight of you.'

'Lose sight of me! Ye'll maybe be glad enough to lose sight of me. Do ye think that I am afraid—that I would run away?'

'It would not be for the first time. You ran

away from The Garth, and again on a certain night after a ball at Holyrood.'

'I had no quarrel with you on the road from the Border. I sought none wi' ye at Edinburgh.'

'Until you discovered that I stood in the way of your black scheme to steal the French money that Glenira hid. Let us waive all that just now. Tell me, where is Kenneth Innes?'

A leaden pallor crept slowly over his face. 'Kenneth Innes! Kenneth Innes!' He repeated the name slowly in a masterful effort at composure; but he was white to the lips. 'What is he to you?'

'Less than nothing, the poor cat's-paw! But his friends, his chief, and Prince Charles are no doubt interested more than I am in his welfare. I do not believe that you meant to return to the Prince with the money; but let us assume that discretion, force of circumstances—in other words, anxiety to keep a whole skin—made you change your plans. In that case, you would perhaps have returned to the Prince as Philip Macdonell, successful emissary, to be loaded with honours. It is a pleasant picture. But now, you cannot have Kenneth Innes with you. By what foul lie will you account for his absence?'

He almost flinched, but recovered, and began to bluster. 'What right have ye to discuss my mission or Innes's part in it? Ye are a Hanoverian. I can prove your cursed meddling from the day ye came to Edinburgh. I know of your spying at The Garth, your disguise at Holyrood. Ye prate to me of lying. Ye want to lay hands on the French money yourself.'

(Continued on page 548.)

RUSSIAN WAR PICTURES.

By JEAN D'AUVERGNE.

'WHAT is Russia like in war-time?' This is a question which my friends are always asking me; and, looking back after ten months of war, I have no better answer than to say, 'Probably very much like England.' The feverish excitement, the manifestations, the topsy-turvydom, that characterised the first weeks of the war have long since died away, and the people of Russia have settled down to await results with a patience and calmness worthy of the highest Anglo-Saxon traditions.

In Russia itself, which, like England, is outside the actual fighting zone, the outward picture of life is much as it was before the war. There are more soldiers in the streets. In every street, in almost every house, the Red Cross flag is flying. The hospitals are overcrowded. There are a thousand and one signs that this great people is at war, and yet so great is the power of time that the eye has become accustomed to these

outward symbols and has almost ceased to notice them. 'Every Russian,' says Tolstoy, 'feels that Moscow is his mother,' and in this war it is of Moscow that the Russian soldier thinks and dreams. Yet here in Moscow the theatres are open, the restaurants have begun to trade again, and people go about their business as usual. Everything is quiet—even the newsboys; and there is not even an appreciable lack of young men in the streets. In spite of the great work of organisation and charity that she is doing, Moscow scarcely seems to have changed. It is not apathy, for never in her history has Russia been so determined or so resolute. It is not lack of sympathy, for there is no people in the world so humane or so sympathetic to all suffering as the Russian people. It is merely that Russians have come to view the war in its proper proportions, and that the vast majority have learned the great lesson that in a war like this

'time and patience,' as Tolstoy makes Kutuzov say in *War and Peace*, are necessary, and that for those who cannot go to the front, everyday ordinary routine work is a higher and more patriotic duty than song-singing or manifestations.

In the first few weeks the Russian people tried to live themselves into the spirit of the war. The theatre-bills stared at one with glaring announcements of patriotic plays such as Leonid Andreeff's nauseous *For King, for Law, and Liberty*. Places of amusement like the Letuchaisa Mysh, famous for their light and sparkling comedy, devoted their efforts to portraying the horrors of war on a stage which had hitherto evoked only healthy laughter. People talked glibly of the war finishing in three months, and went to the theatre to weep and cheer hysterically. The war had as yet only touched the imagination; it had not yet eaten into the soul. I shall never forget one performance of Guy de Maupassant's *Les Deux Amis*. Every one knows the story of the two Frenchmen who persuaded a friendly colonel to allow them through the lines of Paris during the siege of 1870 in order to indulge in their favourite pastime of fishing. They are caught by the Germans, and are informed that they will be set at liberty if only they will give the countersign. After being cajoled, threatened, reasoned with, and bullied, they stick to their guns, and are shot as honourable men, to the glory of France.

At this Moscow theatre the play was exceedingly well staged. The German officer was magnificently brutal; the Frenchmen were all that an ardent French patriot could desire. The realism had already made its effect. Several people beside me were in tears. One Frenchman had already been shot. The Prussian *boche* was twisting his moustache with proper ferocity before giving the final order that was to seal the other's fate. One could have heard a pin drop. And then, by chance, I turned round to the back of the stalls where some thirty or forty wounded soldiers were sitting. All the evening they had been very quiet, and strictly on their best behaviour. At this tragic moment their faces were convulsed with laughter. This wonderful piece of realism struck them, after 'the real thing,' as a screaming parody, and for the first time that evening they were able to laugh! To-day, when all men and women have some one of their nearest and dearest at the front, the patriotic play is out of place. The Russians were quick in realising this, and, in spite of pro-Germans, in spite of peace-croakers, after the first two months of the war the whole country settled down to await the ultimate victory with a determination and resolution that have been proved again and again on the field of battle, and, more particularly, by the brilliant recovery after the severe check in East Prussia. This calmness is all the more praiseworthy, because, as Mr Maurice

Baring has well pointed out, the Russians go easily to extremes. It is a fine attitude—an attitude, too, from which even we in England can learn a lesson.

I do not mean to say that the Russian people have gone back to their former careless life of pleasure. For in the great concentrated effort which the whole country knew would be required in order to crush Germany the help of all was essential, and calmness, determination, and discipline were as necessary and as important in the streets and factories of Moscow and Petrograd as in the trenches in front of Warsaw.

When one penetrates into the under-currents of Russian life, one soon realises how greatly the country has altered during the last ten months. And the greatest change of all has been wrought by the mere signing of a scrap of paper. War has a sobering influence. The Boer War taught Britain a valuable lesson. The Japanese War did the same for Russia. Profiting by the bitter lesson of experience, by an almost divine spark of genius, the Russian Government stopped the sale of vodka from the first days of the war. I have seen it stated that 'too much fuss' has been made over the abolition of drink in Russia. To my mind we foreigners have scarcely grasped even the outside fringe of the significance of this measure. Whatever the drink question may be in other countries, to Russia it is almost a matter of life and death—a question far more important than the Jewish problem or any other question of reform.

It is unnecessary to dwell here on the material benefits that have already resulted from this happy measure, or on the vexed question as to how much drink is being sold illicitly. For myself, I am satisfied that during the last ten months, in spite of illicit stills and secret preparations, ninety-nine per cent. of the Russian people have been leading a sober life; while as to the material benefits, the chief of these have been, first, the rapid and successful mobilisation (which with vodka would have been impossible); and, second, the increased prosperity and buying-power of the peasantry.

Drink, we are told, is a stimulant. When it becomes a national vice, it is in reality a narcotic. It is stagnating. It chokes all progress and makes a man contented with a life from which without drink he would insist on freeing himself. To Russia the moral gain from this enforced temperance has been inestimable. Abstinence, combined with the religious sentiment which the average Russian brings to this war, has given a stupendous moral fillip to the whole nation, and has awakened a fine healthy patriotism which has astonished all foreigners and even Russians themselves. In 1812, at Borodino, the Russian soldiers put away their vodka, because they knew that to drink vodka was a sin on the day which was to settle the fate of their

country and of their mother Moscow. In 1914 they put their vodka away for ever.

The last ten months have seen the cementing of the new Anglo-Russian friendship. On the part of Britain the attraction to Russia had already begun before the war. It was a friendship of art and letters—a friendship which has now been hallowed by ties of blood; but so far it is still only a friendship on paper, and our knowledge of Russia is unfortunately superficial and second-hand. At the present moment there are several well-known English men of letters pursuing a feverish study of Russia and of the Russian people, and doubtless after the war we shall have many new books on Russia. This is a state of affairs greatly to be welcomed. To our surprise, we are gradually learning that Russia is not in the least like the Russia of our imagination. We have 'discovered' a new Russia which pleases us mightily, a Russia of art and letters which we welcome and value for its great mind and its broad, comprehensive nature. In our very enthusiasm, however, there is a danger which it would be as well to avoid. In the last few months we have heard much, too much perhaps, of the 'soul' of Russia. We have been a little gushing, a little too prone to exaggeration and superficiality. There has been, too, in a certain section of our press a doubtless well-meant, but to Russians somewhat smug and irritating, patronage; a kind of spirit which seems to say, 'By Jove! we thought you were barbarians, and now we find you aren't half-bad.' The Russian detests anything in the shape of hypocrisy and sycophancy; and, even if the latter may turn his head a little, he is quite able to see through it. He admires the Englishman for his practical ability, and perhaps above all for his sang-froid and his dignity. In our new attitude to Russia we must not for the sake of our expansiveness give up those qualities for which the Russians value us most. The soul of Russia is not to be grasped lightly, nor is the friendship of the Russian people to be won by much splashing of ink. At the present moment Russia is more interested in hearing how many men we have under arms and how many stores we can turn out than in reading minute analyses of her own 'soul.' In this respect the personal equation is of great importance, and, as far as Russia is concerned, Sir David Beatty's naval visit to Petrograd and Moscow last July did more to bring England home to the Russian mind than almost any book ever written. The present war has furnished a charming proof of this statement. In October and November German influences did their best by covert hints and secret propaganda to spread the idea that Britain was not doing her fair share in the war. The moment was well chosen. The Russian people had at first expected the war to finish in a few months, and, not being a sea-going nation, they had an exaggerated idea of

the possibilities of naval warfare. They were told nothing of the new armies that were being created (I am speaking, of course, of the man in the street), and they failed to grasp the significance of 'the silent vigil' in the North Sea. Then came the victory of the Falkland Islands, the British Ambassador's speech at Petrograd, and, finally, the sinking of the *Blücher* near the Dogger Bank. Nothing that Britain has done so far in this war has pleased the Russians so much as this last victory. And it is significant that in speaking of the victory many Russians who had seen and met the gallant admiral spoke of him not as Admiral Beatty or Sir David Beatty, but as '*nash* Beatty'—'our Beatty'! This is a point to remember for those who think all international visits a waste of time and public money.

It would be unfair to write of Russia during the war without some mention of the great charity work that is being done by the Russian people. Russia has more than once been described as a nation of almsgivers, and in this war she has not belied her reputation. Here, too, it is not merely the rich who give. It is an everyday sight in the streets of Moscow to see even the very poor stop and open their purses and give their pennies to some beggar who perhaps is better off than the giver. Poverty in Moscow has not the same hard, cruel, relentless appearance that it has in London. Here the poor rely on the support of their fellow-citizens, and the support is rarely refused. It may be religious superstition, it may be what you like, but it is one of the hundred and one estimable qualities that make the Russian character what it is. Moscow is famous for its hospitality, and I doubt if any town in the world has given as much to the war in proportion to its wealth as the ancient capital. And this magnificent result has been achieved not only because the millionaires have opened their purses, but because the whole people are bearing the sacrifice, and because, to quote only one instance, little Lyolia, the shop-girl, and Verochka, the seamstress, who earn anything from ten to twenty roubles a month, are giving up a portion of their salary to the good cause.

Russia is sufficiently original in her methods of collecting charities. What we now know as 'flag days' in Britain and France have been regular features of Russian life for many years. Since the beginning of the war there has been one of these days on an average of about once a week. There has been a Belgian Day, a Polish Day, a Serbian Day, a Cossack Day, a Widows and Orphans Day, a Soldiers' Presents Day, and, indeed, every kind of 'day' that one can imagine. The most interesting of these days was perhaps 'The Press Day' in Moscow, on which day none of the daily papers appeared, but instead one single paper was issued by the united editors of all the Moscow press. Editors, printers, leader-writers,

reporters, all gave their services free, and the paper-manufacturers made a gift of the paper. The paper appeared three times during the day, and was sold at twice the ordinary price. Here is an admirable method of raising a large sum of money which might well commend itself to the lions of our own Fleet Street.

Of the Russian soldiers I shall say little. Every correspondent has sung their praises well, badly, or indifferently. In fact, in spite of its great achievements, the Russian army has perhaps been a little overpraised in England, with the result that some of us have become disillusioned and a little disappointed at the slowness of the advance towards Berlin. It may be said, however, with sincere conviction, that the Russian army has done far better than even its most sanguine supporters had hoped before the war. The Russian fighting-man is not on a level intellectually with our own Tommy. He is drawn almost exclusively from the peasant class, and in a certain proportion of cases he is unable to read or write. One has only to see him bear pain, however, to know that he has a great heart. When one has seen him with a batch of prisoners, offering them cigarettes and kind words instead of jeers, one realises that his heart is a great heart in every sense of the word, and that, in spite of all our talk of civilisation and culture, the fundamental principles of humanity are more deeply embedded in his soul than in the German, trained for years to believe that brutality is one of the world's greatest virtues.

Some time ago I was talking to a Scottish doctor, who has now the rank of lieutenant-colonel as a surgeon in the Russian army. He had come back to Warsaw for a few days' rest after a very trying experience at Lodz during the Russian withdrawal from that town. After describing how, in the enormous length of the modern battle-line, no one knew whether he was winning or losing, and how this state of affairs was practically favourable to the Russian, who fought without any questions as to how long the war would last, but went on until he dropped, because it was his duty, the doctor added that he believed the very ignorance of the Russian soldiers was a blessing in disguise. But it is not ignorance that makes the Russian fight and die for his country. It is something much more than this, much more even than the reckless courage that laughs at death. It is his religion, his patriotism, his fatalism, call it what you will, and it is best described by Mr Stephen Graham's words that 'a glorious death is spiritual meat to the Russian.'

In any case, the ignorance is not so great as the doctor thinks. I have been agreeably surprised to find that the large majority of the soldiers can read and write, and the percentage of illiterates is infinitely lower than during the Japanese War. Here, too, is an extract from

the letter of a wounded private to his wife in the village, which shows how alive even the poorest peasant is to the evolution that is taking place in Russia:

'MUCH-TREASURED WIFE, DARIA PETROVNA!—In these days when so much is changing in the world, and such great deeds are happening, it behoves no man "to live in darkness" (to be illiterate). Send little Fedya to school at once, so that he may learn to write, and to read books. Remember this is my solemn charge. On you be the blame.'

If his ideas of western geography and the western front are hazy, he has a better knowledge of Turkey and the Eastern question than his British confrère. Indeed, it is wonderful what an appeal Constantinople and Sancta Sophia make to every class of Russian, and it is doubtful if even the fall of Berlin would be hailed with such universal joy in Russia as will the fall of 'Tsargrad' (a name applied in Russia to Constantinople). The bombardment, too, has increased Britain's prestige in the eyes of the common Russian. To-day the droshky-driver and the scavenger no longer greet one another with such questions as '*Chto dielact Anglia?*' ('What is England doing?'). To-day they pipe a new tune, which runs something like this: '*Kak anglichane tam rabótayoot u Dardanell! Slavnoe diels! Molodtsi!*' ('See there how the English are working at the Dardanelles! Fine work! Great fellows they are!').

After the war? It is out of place to say more than a few words on this subject. Never, perhaps, has there been a time when it was so difficult to predict the development of a nation as at the present moment in Russia. Russians themselves are as uncertain of the future as is the most ignorant foreigner. Everywhere one finds all possible shades of opinion. There are the alarmists, who hint at political trouble and revolution. There are the idealists, who believe that the end of the war will see the realisation of their long-cherished dreams. There are, too, the cynics, who tell one solemnly that there will be no change, and that Russia will go on in the old slipshod way, just because she is Russia. And the truth probably lurks somewhere in all of these directions. The intellectual classes expect reform, and, doubtless, reforms of some sort there will be. Without any discussion as to their extent, it may truthfully be said that the Russian Government understands its people better than most Russians and many foreigners are prepared to admit.

One thing, however, is certain. Even if she does not change outwardly, Russia after the war will nevertheless be a changed Russia. During the last ten years the change has been coming slowly but surely, and the war has only helped to accentuate it. Everywhere new energies, new forces, are developing, which nothing can keep in check. Education is spreading among the masses, slowly perhaps, but still inevitably, and

a vast industrial life is growing up which is gradually changing the character of the townspeople. Sport and games are beginning to find favour even among the poorest classes, and the gospel of physical fitness may yet find as many disciples in Russia as in Great Britain. Every day Russia is becoming less Eastern, more Western, both outwardly and inwardly, and the change is not always for the better. Russia is at present in the throes of a second birth. Will she bring forth a healthy young giant, as we all hope, endowed with all the best qualities of the Russian character, or a puny weakling that will require years of nursing and doctor's care before it can be brought to manhood? For the next twenty years this will be the most interesting problem of Europe.

In one thing, however, we can place our confidence, and that is in the good sense and fine humility of the Russian people. These people, whose lives seem to us very often shrouded in darkness, and yet who cling to God with a belief that no suffering can ever crush, are, and must always be, of the great peoples of this earth. They may be backward, ignorant, and foolish in the ways of worldly wisdom, but they have to an extraordinary degree the highest Christian virtue of charity and sympathy, and in them we find something that attracts us more than all the inventions of America or the scientific discoveries of Germany. At any rate, the day is to the Slav. We shall watch with interest what use he will make of it.

BETTY GRIER.

CHAPTER VIII.

TO-DAY, when Betty was tidying my room, I took the opportunity of referring to Nathan's conversation of the previous evening, particularly that portion of it in which he advised me to take up my quarters downstairs. From the insinuating way in which he had introduced the subject, and the allusions he had made to my 'no weel' look, I naturally concluded that his advice might be interpreted as a hint to me that I was not so well as I fondly imagined; and that, for my own good, and for the convenience of my faithful old nurse—not to speak of obviating the necessity of taking a six-foot coffin down a narrow staircase with a sharp turn—I ought to agree to his proposal at once and without demur.

Betty now assures me, however, that if I am contented and comfortable in my own little room, she is quite satisfied. I am not for a moment to imagine that she advocates the change for the sake of saving her any trouble in attending on me. 'There's nae trouble where ye are concerned, Maister Weelum,' she said. 'I look on ye amaist as my very ain bairn, an' I coont it a privilege to get waitin' hand an' foot on ye. It's a nice, easy stair to climb, it's handy for the kitchen, an' mair an' forby, it's no' as if ye'll aye be lyin' here. In a day or twae, or a week at maist, ye'll be up an' aboot again. A' the same, Maister Weelum, believe me when I say that ever sin' ye cam' to bide here I've thocht it a pity that ye didna use the dinin'-room. I understaun' your likin' for this wee room. It was aye your very ain, an' mebbe a' richt to sleep in, though the sooth bedroom is bigger an' airier; but it's juist no'—it's juist no' like a room that ye should ha'e your meat in, ye ken. When you're up an' aboot again ye'll mebbe think it ower.'

'Is the dining-room in good order, Betty?' I asked.

'It's juist as the mistress left it, Maister Weelum,' she said, with a catch in her voice. 'I've things covered to keep oot the dust, an' I've lifted an' cleaned, but juist aye replaced again. Nathan an' me are never in it, except to lift the winds on guid days to air it, or to pit a fire on noo an' again, when the weather's damp. The kitchen an' oor back-room are guid enough for us, an' we've juist, as it were, keepit the rest o' the hoose on trust. The picters in your mother's wee drawin'-room are a' juist as they were, the piano-lid has never been lifted since she shut it, an' her auld china an' ither knick-knacks are as clean an' weel cared for as they were when she handled them hersel'. I've often gane up the stairs, ta'en a bit look in, an' come doon again a prood, prood woman that she considered me worthy to live amang it a', an' to tak' care o't.'

Betty and I have a community of interests in the long ago, a joint possession of memories which will ever be our dearest treasure. The links which bind us together were forged away back in the misty past; but time corrodes them not, and they are stronger to-day than ever they were before. To do her will was my sure pleasure, and so I began gracefully to waive, one by one, objections I had entertained, and to acquiesce with her and back up her arguments by referring to the coming wintry months, the comforts of the dining-room, its large, roomy fireplace, and the cheery, heartsome outlook the window commanded of the Cross and the Dry Gill.

'But, Betty,' I said, 'we'll have to do something to give it a more modern look. If I remember aright, the ceiling and cornice are very dark, and the wall-paper is a dismal green, patched with a gold fleur-de-lis, and it has been on too long to be healthy.'

'Ay, weel, mebbe ye're right; an' ye mentionin' wall-paper reminds me that the damp frae the gable has discoloured the end wa'. But the whitewashin' and paperin' o' ae room will no' be a big job, an' aince we gie the painter the order we'll no' ha'e lang to wait for him. His back-en' slackness is on noo. I saw him paintin' his ain doors an' windas; an', as there's little chance o' him gettin' fat on that wark, he'll no swither about gi'ein' it up for what is likely to pay better. Imphm! Mebbe I should ha'e seen to this afore noo. The fact is, Maister Weelum, except for a few shillin's for paintin' the outside woodwark, I've spent no' a penny on paint or paper for the hoose since Nathan an' me were marrit. I should ha' had things in better order for ye; but, believe me, it was juist want o' thocht.'

'Nonsense, Betty; the whole house is in apple-pie order. There was no call for you to spend money on painting and papering, and I won't allow you to do that now. This is my little affair, Betty, and all I ask you to do is to see the painter and arrange for the work to be done as soon as possible.'

'Do you mean, Maister Weelum, that ye're to pay the whole thing?'

'Most certainly. So, my dear Betty, please say no more on that point, as my mind is made up and unalterable.'

'Weel, weel, sae be it. "Them that will to Cupar maun to Cupar." What kind o' a paper wad ye think o' puttin' on?'

Within my own mind I had decided on a nice warm buff canvas, but I refrained from giving my opinion. 'What do you think would be nice, Betty?'

Of old I remembered the garish colouring of the paper on her bedroom walls. Her taste in this was always a law unto the paperhanger, and my mother used to shiver when she peeped in, and wonder how Betty could sleep peacefully in such a profusion of colour.

Betty pondered over my question for a moment. 'Mrs Black, the clogger's wife, got her parlour done up last spring, an' it looks juist beautifu'. The paper has a kind o' mauve gr'und wi' a gold stripe runnin' up, an' roon the stripe there's a winkle-winkle o' nice big blue roses, an' a wee bit o' forget-me-not tied wi' a pink ribbon keeks oot here and there, juist as if it was hangin' in the air.'

'Blue roses are not natural, Betty.'

'No, so Nathan says; but they're most by-ordinar' bonny, an' they're hangin' roon this gold stripe for a' the world as if they were newly blawn; an'—an' the leaves are a brisk green, an' the buds standin' oot abune the bloom as like as life, an' a' this beautifu' colourin' for a shillin' a piece! It was John Boyes the painter that put it on, an' he telt Mrs Black that there was only anither room like hers, an' it was in the Crystal Palace at London.'

'A shilling a piece, Betty,' I said, in astonishment, just for something to say. 'Oh, but I would give more than that!'

'Oh, then, ye'll juist get a' the mair gold and roses for the extra money, Maister Weelum.'

'I am just wondering, Betty,' I said meditatively, 'if a wall-paper with roses—blue or otherwise—is the correct decoration for a dining-room.'

'Oh, there's nae rule, Maister Weelum—at least, no' in Thornhill. No, no; as lang as ye pay for the job, ye can put ony kind ye like on; and she added, 'Wad ye no' leave the paper to the womenfolk, Maister Weelum? If ye do ye'll no' gang far wrang.'

'Yes, Betty, that's all right; but I don't know that I could eat my meals comfortably in a room among blue roses. How would a nice, warm-coloured imitation of canvas look, without any pattern at all?'

'A warm-coloured imitation o' canvas? Imphm! I—I juist canna tak' that in; but if it's what I think it is, wad that no' look awfu' mealie-bag lookin'?''

'I'm sure it won't, Betty, and—and—well, I know it is the correct thing. Besides'—

'Ye will hark on "the correct thing," Maister Weelum. I've telt ye that whatever ye want, an' pay for, is the correct thing in Thornhill. I've great faith in Mrs Black's taste. I aye tak' my cue, as it were, frae her, though I dinna tell her that; an', where colour is concerned, whether in papers or bonnets, I never think she's far wrang. She comes honestly by it. She aince telt me that it was bred in the bane, for her faither was a colourin'-man in a waxcloth factory aboot Kirkcaldy.'

Mrs Black's hereditary claim did not appeal to me, and in a most agreeable and ingratiating way I was advocating my own scheme, when the outer door opened.

'That'll be the doctor, I'm thinkin',' said Betty, and she hurried off downstairs to receive him.

As my acquaintance with Dr Grierson ripens my admiration for him increases, and my regret becomes all the keener that I had no knowledge of him in my boyhood. An early impression of any one, the outcome of youthful intimacy, is ever a sure basis on which to found true friendship, and I somehow imagine that, to a thoughtful, observant boy, such as Betty assures me I was, he would have been not only a willing, sympathetic preceptor, but also a great power for good in many ways. I have known him now for only a few months; but during these quiet, uneventful days of convalescence I have had opportunities of studying him well, and have noted with peculiar pleasure his love of nature in all its phases, his reverence for everything uplifting and elevating, and his sympathy, deep and profound, for all in suffering and distress.

Yesterday, when I was in the dumps, seeing everything as through a glass darkly, and feeling isolated and bereft of sympathetic, intelligent companionship, those lovable traits of his stood out vividly, and the thought came to me that I should tell him of the lady of my dream, and of our strange meeting in the Nithbank Wood. Betty, I know, ought to be my confidante; but I have the feeling that her experience is too

limited and her outlook on life generally too parochial to admit of a well-reasoned, dispassionate view of my case; and, though yesterday and to-day I have had ample opportunities of opening my heart to her, I have felt restrained and dissuaded. Some day I shall tell her everything, and I know she will rejoice with me. But the time is not yet.

(Continued on page 554.)

DECADENT EUROPE VERSUS MODERN CHINA.

A STUDY IN RACIAL ENERGY.

CHINA is undoubtedly one of the most interesting countries in the world, and until the present European war broke out the eyes of all civilised nations were fixed upon it. What is happening in China now? What will happen in the future? When is the yellow man going to challenge the supremacy of the white? These and kindred questions have been absorbing much time and thought the world over.

One point in the discussion always receives more emphasis than the rest—namely, the fact that dormant ancient China is being made to stir up and awake because of the repeated and insistent impressions she is receiving from Europe. The civilisation of Europe is thrusting itself upon the civilisation of China. How far it will succeed is an intensely interesting question, and many pages, mostly of conjecture, have been written on it. But the object of this short article is to show as interesting an experiment, one much more unexpected, and in fact unknown—namely, the impressing of the modern Chinese spirit upon that of decadent Europe.

Every Chinese who has met Europeans draws a clear distinction between two classes, the Northern and the Southern. That there is a difference no European will deny. We know that the countries of Northern Europe produce men of a quite different type from those of the South. Of the two types one plays to-day an enormous part in the affairs of China, while the other can almost be entirely neglected. Spain, Portugal, Italy, the Balkans have no weight in Chinese matters; Britain, Germany, and France have. Why is this? The principal reason is that the world to-day is governed by trade, and the latter three nations, with the United States—which for our purposes we will count Northern European, since its ideals and energy are those of the North, whatever its blood may be—are the great trading nations of the world. Every Chinese is a business man. China is a nation of shopkeepers. The Chinese admires and appreciates a keen business man. This admiration he transfers to the nations, and accordingly he has a low opinion of the Southern European. There are other reasons, of course.

The irresistible energy of the Northern type compels him to bow down before it. The Northern nations have forced him to do many things against his will. When he emigrates he goes to America or Australia or Malaya, where the Southern type is of little importance. Also, all the European colonies in China, with one exception, belong to Britain or France. The exception is the one I wish to deal with. It supplies an ideal instance of the distinction between the two types.

The discoverers of the sea route to China and India were the Portuguese. Vasco da Gama and his bold companions led the way. At that time the Portuguese were a nation typically Western. They possessed in a large degree that intelligent and directed energy which differentiates the European from the rest of the world. A very small nation, numbering at that time less than most of our big manufacturing towns of to-day, they scoured every sea on the globe and touched almost every shore. They reached China some time after the year 1500, and in 1557 settled permanently on a small rocky peninsula called Macao. They were not permitted to remain long in peace. The Chinese objected strongly to their presence, but very short shrift was given to the original inhabitants of the place; they were allowed a certain time to clear out, and soon Macao was peopled by a few Portuguese soldiers and sailors, with their Chinese and Japanese servants. Then came the Dutch, who had settled on an island twenty miles away. Eight hundred Dutchmen landed on a beach near the little town, and marched to attack it. The Portuguese sallied out, drove them back into the sea, and the unfortunate Dutch were almost to a man killed or drowned. After this, save for occasional bickerings with the Chinese, the history of the little town has been until recently one of peace and prosperity. For almost three hundred years it was the sole European possession in the Far East. It possessed a good harbour; it was near Canton, the largest city in China; and through it passed all the produce of South China and the merchandise of Europe.

During these three hundred years a change was

taking place in the once powerful masters of the city. Portugal dropped rapidly from her high position. Her sons lost their conquering energy and decision. The balance swung from South to North, and in 1841 a few British ships dropped anchor in the shelter of an island forty miles away. This island they took, and built houses upon it. From that day Macao has been steadily dying. From the point of view of commercial and political importance, Macao has been as surely destroyed by Hong-kong as Carthage was by Rome. Its population has remained almost stationary, while that of Hong-kong now reaches half-a-million. No ships enter the port of Macao. Hong-kong harbour is one of the sights of the world. In short, there has been a complete transfer of all business from Macao to Hong-kong. Now, Macao is as favourably situated as Hong-kong. It is much healthier. It is the same distance from Canton. It is not so steep. Why, then, has it lost its position so rapidly? The answer is found in the difference in the energy possessed by the British and the Portuguese. Did Macao make no fight to retain its hold? It simply relaxed its grip and let everything slide away. Take the most important example—namely, the harbour. Macao harbour is long and sheltered. There was little to choose between it and that of Hong-kong. But now ships of any draft can steam from one end to the other of Hong-kong harbour, while small vessels drawing seven feet of water often stick for hours in the slimy mud of Macao. A branch of the large Canton River runs past Macao, bearing tons of silt, and much of this silt it deposits near Macao. This is a disadvantage, but it is not an insuperable obstacle. The Portuguese did not exactly lie down and permit their harbour to fill up. All the attempts they made, however, were on such a paltry scale that each day the harbour grows steadily shallower. So far they have made no really serious effort to check this disastrous silting. This harbour is much used by Chinese trading-vessels and fishing-junks. In a few years even these will not have enough room to turn in, and must perforce seek another port. Fair-sized ships of any draft cannot approach nearer than six miles from the town.

What of the town itself? As far as reports go, the place has not changed at all during the last fifty years. No more picturesque town exists. Its situation is superb, its bay is always compared to that of Naples, its narrow cobbled streets are wonderfully charming, the colours of the houses viewed from the sea are indescribably beautiful, and the whole town is clean and attractive. But it is a dead city. In Hong-kong one has difficulty in walking along the crowded streets. Many Macao streets are deserted, save for the few coolies who are employed picking the grass from between the stones. It is saddening to watch how quickly the grass

grows here, even in the most frequented streets. The town to-day is a unique combination of medieval Europe and modern China. I cannot say how many churches there are; but at all hours of the day and night the soft stillness of the air is broken by the tolling of bells. Early in the morning the slow-moving figures of nuns and sisters may be seen passing to their chapels. There are many priests—priests of the Dandy Sadler type, from the shaven crowns of their heads to the silver buckles on their shoes. There is a bishop in the blue house on the top of the hill, a fine old fellow who seems to have stepped straight from the Middle Ages into the twentieth century. There are forts on all the hills, forts with buttressed and loopholed walls, above which the noses of cannon peep out. Cannon are here in hundreds, rows of them, and behind them stand neatly piled heaps of iron balls such as Drake or Hawkins used. In Shanghai the Chinese have built an arsenal, and are turning out the most modern weapons.

Now the great majority of the inhabitants of Macao are Chinese. Macao is a kind of refuge for Chinese of all descriptions. When they are sought by the Chinese Government they take refuge under the ancient guns of Macao. Half the population are rogues of every description, with one redeeming feature—they are progressive. They own steamers which run to Hong-kong and other towns around the coast. Their steamers stick in the mud for hours, and they don't like it. They thus assist in forcing the governing people to think about their harbour. They are allowed to set up gambling-houses and opium-dens, for no trade means no money, and the Government must have money at all costs. Gambling-houses must be alluring; hence the reason for the modern electric-light plant recently installed by an enterprising Frenchman. Left to themselves, the Portuguese can manage very well with candles and oil lamps, as Vasco da Gama did; but John Chinaman has had experience of the clearness, brilliance, cheapness, and attraction of the electric light, and has forced it on his rulers. The only theatres in the place are Chinese theatres. Of three kinematograph shows two are run by Chinese. The only newspapers are Chinese. John seems to have decided that English is going to be the language of the world, and so he sticks up 'Barber's Shop' or 'Sale now on,' and drives it in forcibly upon the Portuguese that changes are taking place.

Thus we have the spectacle of a dormant European race being prodded on by an intelligent Asiatic one. This might be humiliating for the rest of Europe but for the distinction which the Chinese make. The writer remembers encountering an old Chinese near Macao who solemnly assured him that 'white men were no good.' This was disconcerting enough in

itself, but it was immediately followed by the announcement that the only men worth their salt were the 'red men.' After much discussion, the discovery was made that by 'white

men' he was indicating the dull olive complexion of the South of Europe, while by 'red men' he meant those with the ruddy complexion of the men of the North.

FROM THE FRONT.

By OTTWELL BINNS.

I HAD worked twenty-one hours at a stretch, and was sleeping on some hay which a hospital orderly had commandeered from a stack, when I was rudely awakened by that same orderly.

'Go away, Parker,' I said. 'I don't want breakfast. Waken me at lunch-time.'

The orderly did his best to keep from grinning. 'But, sir,' he protested, 'it's not breakfast-time; it's 1 A.M., an' rainin' like Noah's Flood; an' there's a fresh batch of wounded just come in—scores of 'em. An' Captain Cardew is dead-beat; fell asleep just now over an amputation, 'e did, sir, an' I 'ad to wake 'im. That's why I came for you, sir. 'E can't go on any longer.'

I sat up in the hay, every limb of me groaning with stiffness, and then I asked, 'How long have I been asleep?'

'Three hours,' answered the orderly.

'You've made a mistake, Parker,' I said. 'You mean three minutes. But if Captain Cardew is dead-beat, there's nothing for it but for me to come. Just find me some water, will you!—to wash in, I mean.'

'Yes, sir.'

He departed, and three minutes later returned with a tin basin full of water. I sluiced my head and face well; and while I was drying myself I asked the orderly, 'How long on duty now, Parker?'

'Seventeen hours, sir.'

'Time you had a rest!' I said.

'Yes, sir! But there is no rest in this station till this lot is off. They're comin' in, in 'undreds. Just listen to them, sir.'

Outside the ramshackle building where I had sought rest there was a steady rumble of wheels. They were, as I guessed, the wheels of the ambulance-wagons bringing in the injured men from the firing-line; and from the sounds which occasionally punctuated the rumble of the wheels I guessed that there was severe work before me.

'Yes,' I said, as we moved toward the splintered door—a shell had struck it in the afternoon—'it sounds bad.'

'We're overworked, that's what we are,' grumbled the orderly; 'but it can't be 'elped; we can't let them poor fellows want attention.'

'No,' I said. 'Duty's duty!'

I stepped out into the pouring rain. Far off I could see the flare of searchlights, the roar of great guns sounded through the night, and

sometimes a reddish-yellow star appeared suddenly in the darkness—the star of a bursting shell.

'Night or day,' I thought to myself, 'these confounded Germans are always busy. I wonder when this battle of the Aisne will end.'

A wagon rumbled by on the road in front of me. It carried no lights, but a patch of white on the hood told me where the Red Cross was painted, and the sounds that came from it left me in no doubt as to the nature of the merchandise it carried. I followed in the wake of it down the puddled road to the little Catholic church that we had commandeered for a dressing station, and from which all the furniture except the altar had been removed. The door was open, and the whiff of disinfectants came out into the rain. As I entered I knew that there was work before me, and the sight of Cardew, in his shirt and trousers, sleeping like a log in the corner where his last case had lain, made the fact more plain. I threw off my wet coat and got to work.

There is no need that I should tell you what my work was like. Believe me, it was bad enough; but the way our gallant fellows stood what they had to go through would have made a stone image glow with pride of them. I remember one, a private of a Manchester regiment. He'd been hit by a piece of shrapnel-casing, which had cut its way into the shoulder, and which at all costs must come out. It was pretty bad, and I knew that it would hurt more than a bit. His was a case for an anæsthetic, and there had been such a run on that kind of stuff that we were getting short, and it would be daylight before a fresh supply from the field hospital could reach us. Parker, with the pad in his hand, was whispering that fact to me, and I suppose the man must have heard him, for he said suddenly, 'Gi'e me a fag to suck, doctor, an' I'll stick it out! There's worse than me behind. Save your stuff for them.'

I hadn't had a smoke for two days, but Parker procured a cigarette from one of the men who'd been brought in, and the Manchester man smoked it, face down on the table, while I probed for the piece of shell-casing.

He squirmed a bit; but he never made a sound; and when the job was over, and he was lifted off the table to make room for the next man, he grinned, 'Thank you, doctor. That was the best smoke I've ever 'ad i' my life.'

Somewhere about 4 A.M., when things were slackening a bit for me, owing to Cardew getting to work once more, a case was lifted on to the table that at the first glance looked to me like being a waste of time. He was a sergeant in an Irish regiment. His eyes were closed, and his unwashed face, under the flare, had a gray look that for the moment deceived me. There was a big splotch of blood on one of his legs, and another on his tunic high up on the right shoulder, not to mention a bullet-graze on the cheek. I thought he was insensible, and I shook my head at Parker as I began to cut away the tunic.

'Been at hand-to-hand work,' I said, 'from the look of it. I don't suppose I can do much. It looks bad.'

The sergeant opened his eyes. Evidently he had heard every word. 'Try, doctor,' he said in a soft Irish voice. 'The leg's nothing, and the shoulder is no more than one of those rotten saw-bayonets through the scapula. It hurts terribly; but'—

'Great Scott!' I said; 'who are you to be giving names to your bones?'

'Sergeant Merion—for the present,' he replied, the ghost of a twinkle coming to his eyes.

Of course I knew he was a ranker, and I guessed that at some time he had walked the hospitals; whilst that 'for the present' told me that he was one of those who meant to get on and win a commission out of the mistakes which Potsdam had fallen into. I didn't know then that he had already won it—that knowledge came to me later; but I set out to do my very best for him, for I liked the spirit of him; and when a man has given up medicine for the sergeants' mess he deserves to be looked after.

Those saw-bayonets are dreadful things. They tear the tissue and splinter the bone; and, as I didn't want Merion to suffer too much, I gave him a good deal more attention than we've usually time to give at a dressing station, and when I'd done with him I knew that there would be precious little left for them to do at the field hospital except attend to the dressing.

When I'd finished he thanked me, and then an anxious look came on his face. 'Doctor,' he asked, 'shall I be sent down to the base, or, worse still, back home?'

'That doesn't rest with me,' I said. 'We shall send you down to No. 4 Field Hospital, and they'll have a look at you there, and I dare say pass you on to the stationary hospital. I'll wager, though, that you'll be in England in a week.'

His disappointment was written plain on his face. 'I don't want to leave the firing-line,' he said. Then he asked, 'Doctor, couldn't you keep me here?'

'No, Sergeant Merion,' I said, smiling; 'not this journey. It's against all the laws of the R.A.M.C. We pass all cases on. But never

fear; after what I've done for you, it's back you will come before long.'

'Please God, I hope so,' he said; and then the bearers carried him away to wait for the ambulance-wagon that would take him down to No. 4.

After that there was a fresh delivery from the collecting station, and again Cardew and I were kept as busy as the devil in a whirlwind, sewing, bandaging, amputating, plastering wounded men into travelling order, and I had no more time to think of Merion, or to wonder what a man so obviously of breeding and education was doing in the ranks; and by the time that batch was through I was so done up that he passed from my mind altogether.

But the daylight and a mention of his name brought him back to remembrance with a rush. I breakfasted with five officers of the staff—because I like to know how things are going, and in this titanic warfare the staff fellows are the only ones who know—and I heard about the night attack on the German position. By all accounts the affair had been more tremendous than anything that has happened so far in this campaign, and the biggest thing in the battle of the Marne was child's-play to it.

As you'll have read in the English papers, the German position on the Aisne was prepared weeks before, and what with its deep trenches, its guns on the heights, and the river in the valley between, is about as strong a position as could be found.

'Pushed forward all along the line last night,' said one of the officers. 'It was simply great. And the way they got the Priedaux Château was beyond words!'

I jumped with delight. 'We've got the château, then?'

'If you'll get a mile nearer the firing-line, and borrow a pair of field-glasses, you'll have conclusive evidence of the fact. The Germans are shelling it like mad.'

It was good news to hear that the château was ours, for it had been a source of trouble for a week. Being held by German infantry and some artillery, and situated on a huge spur of the hills, and able to enfilade some of our trenches, it had brought the whole operations of our wing into danger.

'How was it done?' I asked.

'By British pluck and dash. You know that bridge just above the bend of the river, which the Germans blew up when they crossed?'

I nodded, for I had seen it through a pair of strong glasses, and to me it had seemed a mere wreck of twisted steel.

Well, one of the sapper officers made a reconnaissance on his own, trying to find out what the chances would be for a pontoon. He saw that it would be impossible to throw one across with those guns at the château commanding the river; but he saw another thing too, and that was that on one side the steel girders were practically

intact, and that it would be possible for men to crawl across under cover of darkness. He reported at headquarters; and, because the possession of the château was so important, it was decided to make the attempt. Accordingly Callaghan of the Royal Rifles was sent for and asked if his men could get over the bridge and attack the château in the dark.

'You know Callaghan? He's Irish to his finger-tips, and he made all the staff laugh with his answer. "Is it monkeys we're to be, or only Blondins? I've no doubt the regiment is made up of acrobats who'll be equal to this trapeze-work. Only give us the chance, and we'll do the trick."

'Well, the chance was given to Callaghan and his men; and while a diversion was made at another point, the Royals started to cross. It was ticklish work in the dark, and more than one man fell off the girders into the river; and when less than a third of the men were over, one of those confounded searchlights struck the bridge, lighting it up as clear as day. Two minutes later the guns at the château were firing at the bridge, and the whole thing went down into the river, carrying twenty men with it.

'You can understand what Callaghan felt like. He was on this side, and a third of his regiment on the other, and from the way he profaned there can be no question about his having kissed the Blarney Stone. He threatened to swim the rest of the regiment across the river; but, as you know, it was raining torrents, and the river was in flood; and in the end the searchlights and the shells between them drove him to cover, and we all thought the men on the other side were lost. But Callaghan waited and watched. "They're Irish," he said; "and I'll stand by till I know."

'An hour later one of his subalterns tore up to headquarters like a madman, and demanded sappers for a pontoon. We all thought Callaghan had gone off his rocker, but it wasn't so. He'd sat there in the rain and darkness wondering what had happened to the men on the other side, and watching the searchlight glaring on the ruined bridge, when suddenly it was withdrawn, and then a moment later began to shine again in quick, stabbing flashes, some short, some long, and it struck Callaghan that it was remarkably like the Morse Code. He began to try to follow the dot-dash of the flashes. It was as easy as winking, and the message was an amazing one: "Throw pontoon across. Royals in possession."

'When we got that message all the staff looked on it as a trap; but Callaghan set a signaller at work. "Who commands at château?" he asked, and we all waited anxiously for the answer. "Merion—sergeant—B Company. Hurry!"

'Merion!' I cried, in surprise. 'I know him. I patched him up last night. He's a ranker.'

'Yes; and it's to him we owe the château—to him and the men who followed him. Callaghan recognised the name instantly. "It's right," he shouted. "Merion is the best non-com. that ever came out of Tyrone. Get your d—d pontoon over quick, and let me get reinforcements to him. If Merion's in command they've lost men and officers."

'The sappers had a section pontoon all ready, and they set out to throw it across the river, the searchlight burning steadily to make their work easier. It was hard work in the flood, but they did it; and when it was fixed, Callaghan was the first man to cross. "If it's a trap," said he—"and it can't be—I'll die first."

'He didn't die, of course. Three-quarters of an hour later he flashed the signal that he was at the château, and in command; and before dawn this morning they sent guns and supports across, for it's certain that the enemy will try to regain the château; but with Callaghan and the Royals there they'll have their work cut out. They're shelling it now; but our guns are searching for theirs, and when they find them the game will be ours.'

'But what happened to the men who crossed the river? Did they surprise the enemy?'

'Must have done! And if Merion did the trick, Callaghan will see to it that he gets his reward. Did you say he is a ranker?'

'I did,' I said as I rose to my feet.

'Then he'll get a commission, as like as not. Callaghan will insist upon it. He's great on promotion from the ranks. But where are you off to? There's another course yet. We're in luck this morning.'

'I'm off to learn about the rest of this affair from the man who knows all about it,' I said as I went off to my station.

However, I was too late to see Merion. Cardew had already sent him down to No. 4 with the last batch, and I was regretting that lost course, when two men came up to me, the one with an arm in a sling, and the other with a face swathed like a mummy.

'Docthor,' said the mummy, 'tis you we're wantin' to be seen'. Is he dead?'

'Is who dead?' I asked. 'There are many men here who were meant to be corpses, but aren't. Whom do you mean?'

'Mane, sir!' cried the mummy. 'Shure, docthor, we mane Sir Pether, who tuk that d—d château. Who else should we be manein'?''

I looked at the Irishman in surprise. 'I know nothing of any Sir Peter,' I said; 'but if Sergeant Merion—'

'Tis the same man, docthor dear. You'll not be afther tellin' us he's killed?'

'No, he's not killed,' I replied. 'He's knocked about a bit; but with moderate luck he'll be all right again in a few weeks.'

'The saints be praised!' cried the winged one. 'Where is it ye've put him, docthor?'

'He's on his way to the field hospital, where he'll be well looked after. But look here, what do you mean by calling him Sir Peter?'

'Because, docthor, that's what the man is—Sir Pether Merion, Baronite, an' sergeant of B Company of the Royal Up-an'-at-ems, an' Lord of the Manor of Balleymoon in Tyrone, where mesilf was born. Was to have been a docthor, he was, though the heart of him was nivver in pills an' physic, an' always wid the dhruams an' guns; an' whin his uncle, old Sir Pether, died, an' young Paddy, his cousin, broke the neck of him takin' a stone wall in a fog, Sir Pether chucked the pill-boxes an' jined the ould regiment, sure that before long he'd dine in the officers' mess. But none save me an' Mike here knew his station, an' we're under solemn oaths to kape it saycret, him bein' anxious to do the thing off his own bat, to use his very words.'

'Then I think he's done it,' I answered. 'But tell me what happened last night—that is, if you can. Were you at the château?'

'We was, sorr; an', by the Virgin! 'twas a gorgeous picnic.'

'Tell me,' I said. 'Begin at the point where the Germans began to shell the bridge.'

'Bridge d'ye call it, sorr! 'Twas no more a bridge than an empty crock is a dinner. 'Twas just a blessed tight-rope made of blistered iron; an' whin that bull's-eye lantern of the inimy found it I was three-parts of the way across; an' between the shock of bein' found out, so to spake, an' discovery of the acrobatic performance I was doin', I narely fell off into the wather. Fall off I did at the other ind, bein' a bit hurried by the noise of one of the inimy's blasted shells, which made what was lift of that ould bridge rattle like a tinsmith's shop. But the fall was not hurtful to me; an' I hadn't time to be worryin' about it, as the bridge wint down just as I picked mesilf an' rifle up out of the mud.'

'Ye'll know the fix we was in, I dare say, docthor. There was two companies of us, an' maybe half another, an' the rest of the rigiment was across the wather, wid the German shells goin' off between us like fireworks. I think the most of us thought thin that 'twas all over wid us, an' that there was nothin' for it but to die foightin', or to be sint to Berlin to be stared at like monkeys. But the company officers talked it over; an' whin they saw there wasn't a dog's chance of the rest of the regiment comin' over, we started for the château in three parties, hopin', as I guessed from the dishpositions, to surprise it on three sides at once. Sir Pether an' me was wid the lesser party, consistin' of half a company or so, under the senior lieutenant, an' we was told to climb some rocks that rose out of a wood half a mile or less from the château. We started to do it, an' came safe to the wood, wid one or two casualties arisin' from men fallin' down the rocks owin' to thim bein'

slippery through the rain; but in the wood we lost the lieutenant through him fallin' into a quarry an' breakin' his back.

'Twas thin that Sir Pether took charge, as the senior sargint; an' he led us through that wood as if 'twas his own, an' in half-an-hour we was lyin' within rushin' distance of the château, watchin' their gunners at work, an' wondherin' whin the other companies would show up. They nivver did show up till what was left of thim came in this mornin'. What happened I don't know, but whin we'd bin lyin' in the wet corn for about twinty minutes there came a rattle of small arms from the darkness in the direction where the other companies should have bin, an' a bit afther we heard Germans shoutin'.

'Sir Pether looked at the château, where we could see the gunners workin' at their leisure; thin he says to Sargint Malone, "I'm a Dutchman if the divvles haven't left the château wid nobody but the gunners! We'll attack an' find out, for if 'tis so 'tis the chance of a lifetime."

'He gave the ordher, an' we crept nearer. Thin not fifty yards away from the house we waited whilst Sir Pether hisself wint forward an' cut some barbed wire in front wid a pair of nippers, an' thin he whispered ordhers which was passed from man to man: "Pick your men, an' whin the next gun goes fire, thin charge wid the bay'nit. The beggars don't know of our presence."

'They didn't, docthor—that's a fact as big as a haystack; an' we waited till the next gun wint, thin let off a volley, an' a minute later we was at 'em wid the bay'nits.

'Twas the very divvle of a surprise to thim, docthor; for they wasn't lookin' for us; an', as Sir Pether had guessed, most of the garrison was out lookin' for the men that might have crossed, but not for us in particular. They squealed like sthuck pigs as we drove into thim, an' most of thim ran from the guns like rabbits. A few infanthry there was who made a show, an' 'twas from wan of thim that I got this arm; but 'twas all over in a few minutes, an' we drove most of thim over a cliff at the back of the château, whilst the others was shut in a room wid guards over thim; an' thin Sir Pether found a man what could signal wid lights, an' made him work that blessed searchlight like one o'clock.

'Twas a bit before he got an answer, and in the manetime he made his dishpositions for holdin' the château until the rest of the rigiment could arrive. He found five machine-guns, which he placed at strategical points, an' gave ivery man his place, wid ordhers to wait till he gave the word.

'I tell ye, docthor, 'twas a most excitin' time, waitin', wid your heart in your mouth, for what was to follow next, for we all knew that the situation was what ye might call ticklish an'

precarious, an' I could see that Sir Pether was a bit worried. But afther a bit he comes towards me smilin'. "They're comin'," he said. "The colonel an' the rigiment's comin', an' we must hold on till they git here."

'We mint to do that, an' we did it, sorr. Twenty minutes or so afther, one of the outposts fell back an' reported a considerable body of men approachin' the château. We waited, an' thin turned their own searchlight on to them. They was Germans, an' talkin' an' laughin' like anything; but whin we opened on them wid the machine-guns I guess they was the most astonished crowd on the Aisne.

'They niver tried to stand, but ran like sheep, thinkin' no doubt that their friends had made a mishtake, an' we peppered them as they ran; an' whin an officer came forward to parley-voo, we let him see that 'twasn't a healthy thing to do; an' afther that we waited to see what they'd do next. Took them some time to make up their mind, it did; an' whilst they was undher cover, Sir Pether got another searchlight goin', an' swept the front of the château with it, whilst the other lighted up the river for the Engineers, an' ivery man of us prayed the saints to keep the inimy from attackin' for a bit.

'Took them some time to make up their minds to that; but afther a bit I suppose it dawned on them what had happened, an' thin we saw them creepin' out of cover. We opened on them with the Maxims again, an' drove them back, an' 'twas a good two hours before they made an attack.'

The Irishman paused to light a cigarette; then he said, 'That was touch-an'-go, docthor. Just what happened is not for me to tell, because I can't; but twice some of them got up to their own intrinchments, an' on the third time they swarmed. But just thin we heard an Irish yell behind them, an' as I hit a big German wid the stock of me gun I let out a yell, for I knew it was Colonel Callaghan wid the bhoys.

'Afther that it didn't take long, an' in a few minutes those of the Germans who hadn't run away in the darkness was prisoners.

'As I was bindin' up me arm the colonel steps in front of me. "Where's Sargint Merion?" he asks, sharp as a rifle-shot.

"I don't know where Sir Pether is," I says forgetful like, "but"—

"Thin ye know him?" snaps the colonel.

"Yis," I said, "for he's me ould mother's landlord back in Tyrone."

"Thin go an' find him, or your ould mother will niver forgive ye!" An' that was thrue, sorr, though how the divle the colonel knew bates me entoirely. But I wint to find him, an' tumbled on him by one of the machine-guns. At first I thought he was killed; but afther a bit he opens his eyes, and I sint a man to tell the colonel what had happened. Colonel Callaghan ran to him an' took his hand.

"I kept the fort, sorr," says Sir Pether.

"Ye did," said the colonel; "an' ye're a d—d good man, an' if ye die now I'll niver forgive ye—niver."

"Thin, sorr, I'll do my best to hang on," said Sir Pether wid a choky kind of laugh. An' that's about all, docthor, I think.'

But it was not quite all. A week later I went down to No. 4, and found Sir Peter Merion still there. He remembered me, and was in a cheerful mood.

'Well, Sergeant Sir Peter Merion,' I said, 'how goes it?'

'First-class!' he said with a laugh. 'But you are a little wrong. 'It's Lieutenant Merion—for the present.'

'Then you got what you deserved,' I said, laughing with him. 'But, man, your ambition's boundless! I wonder if a field-marshal's baton will satisfy you?'

'It might,' he said with another laugh; 'and I'll perhaps live to get it, thanks to you, major.'

I nodded. I did not want him to thank me, and so I said chaffingly, 'You managed to persuade them to keep you here?'

'Yes,' he said with a smile; 'and if you try to persuade them to do the other thing I'll call you out, doctor; on my life, I will.'

We are in France, and I think it's more than possible that he would; and as I am no fire-eater, of course I shall not interfere. Thanks to my doctoring, he'll be back in the firing-line in another week or two, and no doubt will be happy as a sandboy. So far as I am concerned, I shall help any man who knows how to use his chances as he does; and (like you, I dare say) I love all Irishmen—they are so engagingly simple and straightforward.

THE PANAMÁ CANAL.

IT is solved for ever, the problem vast
Of a route from the icebergs free;
And ships hard bound by the wintry blast
May sail in a summer sea;

The dream of the race since the fateful day
When the Spaniard gazed to the west,
And the broad expanse of the ocean lay
Like a giant taking his rest;

The hope of Lesseps in the later years,
Ere the fever barred the way,
When every step was hallowed with tears,
And the Frenchman stood at bay.

But the march of progress cannot be stayed
While the fountains of reason flow,
And the sword of science was drawn to aid
In the fight with a deadly foe.

They have won at last, and the world's great seas
Are linked by a silver strand;
But the starry flag that stirs to the breeze
Is the flag of a kindred land.

NEVILLE BOSWORTH.

Chambers's Journal

SEVENTH SERIES

THE HEART OF THINGS.

By HENRY LEACH.

LONDON, Yesterday.

IT is a war of sad disillusionment. Ideas which had been fixed for centuries, bred in the blood and bones, are discovered to be imperfect. It is not clear that civilisation in general has advanced. Parts of humanity have clearly retrogressed toward brutal beginnings. There seems to be an irritating contradiction in the circumstance that all the best scientific discoveries of man for a hundred years past—the best fruits of his high intelligence, his ingenuity, and his industry—are now turned on at the highest pressure to the destruction of men. Engineering, electricity, chemistry—with all of them it is the same. The resources of such sciences are squeezed dry by the warriors in a frenzy for new and more effective means of killing, and in the end the most of them look vainly and reproachfully at the scientists because they cannot do more in the grand emergency. The chemists prepare gases to kill the enemy; the enemy make other gases to save the lives of those whom the enemy have in this and other ways tried to kill. What would have been the loss to the world and humanity if, a few centuries back, when man began to probe into the mysteries of Nature, and his tranquil mind was inflamed by discovery, such inquisitive practices on his part had, under penalty of torture and death, been effectually and permanently banned? His successors would still have lived, and would probably have been glad in their life. The war of these days could not possibly have had the horrors that we know. Probably it would not have taken place at all; but it is impossible to consider the line that life in the world would have taken if there had been no alliance between war and science, or if discoveries had mainly ceased at that definite epoch so forcibly represented in Turner's picture of the railway train crossing the bridge in the stormy night. Thus we have the sad spectacle of an important part of humanity that has attached itself to science with an enormous enthusiasm for decades past now lapsing to extreme barbarism, and, alas! taking its science with it. Only art, being a matter of the soul, has nothing directly to do with the war. It seems to be nearly the only branch of human creative endeavour that has not. Art in its nearly every form languishes now. The

spirit of right and truth and goodness works well for the cause of the Allies, but it is as if by instinct; for the rest, life is chiefly war and suffering and plain materialism, with much doubt about the future. Yet it is through art, and thoughts of it that reach the soul, that the best and most living hopes are kept burning now.

* * *

At the summer exhibition of the Royal Academy this year there is a picture which excellently represents this idea. It needs no title nor any inquiry by an intelligent observer. On a large canvas there are shown in good grouping four generations of a family, and they stand or lie amid the ruins of simple walls. To the three elder generations there seems nothing but despair. The youngest figure of the four has gathered a posy of spring flowers, glowing crocuses and others, from among the stones of the fallen walls. It is spring, and the flowers still bloom. Nature, and the hope she gives eternally, is undaunted by the utmost catastrophe that blundering man can accomplish. Mr Clausen's picture, with its characteristic colouring, is thoroughly impressive. And in this summer show at Burlington House, powerful in its appeal to saddened minds, there are many works that have the calming effect of simple beauty, even if there are few pictures of a kind to attract. One of the most soothing works to be given a place among the water-colours—and to be spiritually soothing is the most commendable quality in a picture at Burlington House this season—is a small, sweet thing all in green colour and no other, the best English country green, of grass and tall trees, and a smooth, slow stream in which they are all reflected. That is the perfection of peace and nature. Indeed, we find that we can walk through the galleries of this summer exhibition in the year of the worst war with a mind more open for good thoughts and appreciations than in other years. Morals and meanings seem to have a finer force. Reality, simplicity, natural goodness, worth, and beauty appear to count for much more than they did in 1914. A tiny picture of the corner of an English garden, with some clumps of rhododendrons and other blooms on bushes in natural carelessness and fine disorder, is delightful for its simple charm. It is the simplicity, the plain nature, the innocence

that appeals. The war pictures are, of course, inevitable, and even art must be with the times; but one cares less for them and the crude representations of battle realities, and there is nothing upon the score of fine and original artistic conception to recommend the pictures of horses wild with battle excitement being lashed by the drivers as they drag the guns and wagons along. But in a corner one looks upon a canvas of English and French riflemen beside each other in a trench, whence shots are being exchanged with the near and visible Germans, and a man in khaki lays a gentle hand of solicitude and compassion upon a blue gendarme beside him who has received one of the German bullets; and looking with us upon this picture at the same time are some women in mourning, two little Belgian girls, and a lieutenant of our army who has now but one leg, and stumps beside the walls on crutches, for he too was in Flanders. Such is this pathetic show of art in the year of war; but when the war is done entirely art will again come with uplifting and inspiring influence to the nation. Matters of materialism are to count for so much less than formerly, if the Germans are so thoroughly conquered as they must be. Then, with the spirit of the nation in freedom on the wing, there may be, as many think, a great glow of honest love for beauty and simplicity, and such a grand revival in art and true culture as that of the great Renaissance. A succeeding period of no other kind would be a proper complement to these hideous times.

* * *

I am led to make a quotation which is so startlingly apposite to the sense of some sentences just written that this is enough excuse for its many lines. It is from a book read in my London rooms on a night when the Zeppelins came to town; it was written some half-century ago, and is one of a literature that is only just beginning to be known by our people as it should have been long ago, the strong, fine literature, young as it is, of our friends the Russians. No man or woman is fit for talking and thinking society now who has no knowledge of Turgenev and Dostoevsky, and a familiarity with the splendid poetry of Pushkin is hardly to be accounted as a special accomplishment. The Russian writers give us a new and immensely rich seam for thought and reflection. They are mind-working, suggestive, wonder-making as few others. Never from Russia would you have expected such intricate, delicate, and sharp adventures in psychology as some of their writers yield in the posthumous translations which are given to the English readers. The book was Fyodor Dostoevsky's *Letters from the Underworld*, and in the introduction to that peculiar study there is a passage which no man can pass with a single reading. Listen: 'To maintain theories of renovating the human race through systems of classification of true interests is, in my opinion,

about the same thing as—well, about the same thing as to maintain that man grows milder with civilisation, and, consequently, less blood-thirsty, less addicted to fighting. Logically, perhaps, that *does* happen; yet he is so prone to systems and to abstract deductions that he is for ever ready to mutilate the truth, to be blind to what he sees, and deaf to what he hears, so long as he can only succeed in vindicating his logic. Of this let me give an example which will be clear to all. Look around you at the world. Everywhere you will see blood flowing in streams, and as merrily as champagne. Look at our nineteenth century; look at Napoleon—the great Napoleon and the modern one; look at North America, with its everlasting "Union;" look at the present caricature of Schleswig-Holstein. What has civilisation done to instil greater mildness into our bosoms? Civilisation develops in man nothing but an added capacity for receiving impressions. That is all. And the growth of that capacity further augments man's tendency to seek pleasure in blood-letting. Nothing else has civilisation conferred upon him. You may have noticed that the most enthusiastic blood-letters have almost invariably been the most civilised of men—men whose shoes even Attila and Stenka Razin would have been unworthy to unloose; and if such men as the former have not bulked in the public eye quite so largely as have Attila and Stenka Razin, it is only because the former have been too numerous, too transitory. At all events, civilisation has rendered man, if not more bloodthirsty, at least a worse (in the sense of a meaner) thirster after blood than before. Once upon a time he considered blood-letting to be just retribution, and could therefore, with a quiet conscience, exterminate any one whom he wanted to; but now we account blood-letting a crime, and indulge in that crime even more than in former days. Which, then, is the worse of the two? Well, judge for yourselves. It is said that Cleopatra (if I may take an instance from Roman history) loved to thrust golden pins into the breasts of her slaves, and took pleasure in the cries and contortions of her victims. Possibly you may say that all this happened in a comparatively barbarous age; that even at the present day the times are barbarous; that golden pins are still being thrust into people's breasts; that though man in many things has learnt to see clearer now than he used to do in *more* barbarous ages, he has not yet learnt to act wholly as reason and science would have him do. Yet all the while, I know, you are persuaded in your own minds that man is bound to improve as soon as ever he has dropped some old bad customs of his, and allowed science and healthy thought alone to nourish, to act as the normal directors of human nature. . . . Then there will arise the Golden Palace of the Legends. Then—well, *then*, in a word, there will dawn the millennium!

It is arresting philosophy, and peculiar in a certain application to existing circumstances. We have seen a nation highly prepared with science, and organised to its last thought and act—and its approach to a millennium! It was said that with the war there is continual disillusionment. If there is anything worse than the sacrifice of tens of thousands of lives, the maiming of strong bodies, the desolating of happy homes, it is the shattering of some ideals that is taking place. There are things in which even we, endowed with full optimism as we are, can never believe again. We may not be worse for it; the beliefs may have been wrong. Yet something seems to be lost. A loss of blood is a matter that time will balance; but when an ideal is crushed something of fine worth is struck from the soul, and the mind is left so much poorer and with an unfillable void. The ideal of a good man or woman is always good, even though the reality is unequal to the ideal. Reverence for the abstract is an uplifting act; devotion to it is constantly inspiriting and purifying. Poor things we should be without our ideals to reverence, and far better for us always that the cold truth about these ideals, as it is known in heaven, is not known to us on earth. So, if one has an ideal, and, more, if on an unhappy day one faint suspicion about it enters into the mind, it is better not to inquire and investigate, nor to look too straight into the eyes nor peer behind curtains. A little blindness in worship makes for peace and tranquillity. If we must always investigate and know and think, then it may turn out in our minds that nobody is any better than ourselves, and a sad conclusion that would be. Through faithfulness to ideals we of Britain have been brought to our greatness. And even our illusions and disillusionments have given us assistance. But there are to be fewer of them in the future. This avalanche of materialism which now tumbles on the world destroys the delicate fancies and conceits of a social system that has been shaped through the ages and embroidered with tradition continually. Fact—common-sense—business—these are some of the watchwords of materialism which may indeed make for a smug smoothness in life, such a mechanical regularity and precision as Dostoevsky urged would cause a revolt of man; but they can never inspire, can do nothing for the spirit, and so they hinder the best progress of man toward heaven. We must have our blind beliefs. But now in the war the curtains are being torn away as vulgarly as never before in modern times, save in the French Revolution, and the idols, poor mean things some of them, are exposed. Pity us indeed for the disillusionments of to-day. Take statesmen and ambassadors for a fine example. In high government the party system has been abandoned, and properly so, as most of us think. At the same time Ministers have ventured to speak pub-

licly with contempt about our own governmental systems. They even say that the devil himself may take all their red tape! Impiousness! They admit that they intend in the throes of this war to be merely business-like, and to act like commercial men, indeed to be guided by such. But, despite the public attitude in a crisis in ancient Rome, there are still many thousands of persons, mainly old, in this country whose belief in party and the party system is hardly less than their belief in the highest things. I have heard a notable personage, one of eminence and influence as a publicist, say that he could not undertake certain work in which he believed, and would surely be to the advantage of the State—and incidentally of enormous advantage to himself, who sorely needed it—because it was contrary to the interests of the party to which he had been attached all his life, and his father before him. So he sadly turned away. These men speak of 'the party' with gentle reverence as if it were not an arbitrary thing, but something far beyond all human constructions, and sanctified by letters patent sent down from heaven itself. The loss of party in this crisis is to them even now one of the most terrible results of the European war. Their idol is in bits! Some of them believe it will be mended again. Poor delusion! Party, as we have known it, will never come again. Of course there will be party, but it will be recast, and much of its beautiful nonsense will be stripped from it. But to the old men of party, those who believed with a faith that was nearly divine, and would have incense swung at their conclaves, the world will never be the same again for the loss of it. One idol, one ideal, has gone. So, with statesmen declaiming about business and common-sense, how are we any longer to think of them as the great supermen meditating always in a higher plane than any other human beings, in a special area of human spirituality reserved for them by the high lords of the universe because they controlled the materialistic destinies of the world? These men were beyond us; they had powers of thought and achievement which were not vouchsafed to any ordinary men, however fine intellectually they might be. We could not even imagine their lines of consideration nor their capacities or forms of conclusion. A Cabinet in council was like apostles in conference. They were the highest form of supermen, those who were really beyond men, the crystallised products of party, and selected, probably with some divine influence, for the arrangement of the world in special relation to the terrestrial system. And now party collapses; the supermen talk of 'business' and 'common-sense,' and call in the works managers to help them. Over goes the idol!

* * *

If indeed there is one kind of supermen who seemed to be in a class of the finest selection, it was the ambassador, the diplomat.

He in one man stood for an empire, and he would speak with the fate of an empire on his lips. Diplomacy! It seemed to represent the highest art of intellectual man, to stand for achievement and possibilities in wits and perception that were quite beyond the contemplation of other beings. The ambassador! Why, he leaned over the dinner-table and cracked a joke with the foreign king, yet all the time there was a dignity and a solemnity and a high reserve about him that suggested always the higher life he lived above mortals. And now nearly every day brings its sad disillusionments in diplomacy. Ambassadors are like other men! Blue-books and white papers are making appalling revelations in the human simplicity of some of these supposed supermen. The pitiful tale began when the German Chancellor Von Bethmann-Hollweg lost his temper in talk with our ambassador in Berlin on the eve of our entry into the war. That was the 'scrap of paper' interview. 'I found the Chancellor very agitated. His Excellency at once began a harangue,' wrote our ambassador. The Chancellor was really in a towering and most vulgar rage. 'After this most painful interview'—wrote the ambassador.

And all the diplomacy of several decades, the concentrated thought of hundreds of ambassadors, the negotiations of most beautiful and intricate delicacy, crumbled, and a statesman, red in the face and spluttering in choleric anger, behaved as no business man with a care for his reputation on his Exchange would have permitted himself to do. And now a commission has solemnly concluded that the diplomatic service in this country must be reorganised, and that blue blood, influence, and private means must have less concern with it. Clever and educated men, who want to get on in the world, and feel they have the ability to do so, are to be admitted to this profession, and are to be adequately paid. This in essence is a renunciation of the idea of the ambassadorial superman. He leaves us. Alas! Writing of children's playthings once, Anatole France said, '*Je ne crains pas, pour ma part, de formuler mon symbole. Je crois à l'âme immortelle de Polichinelle. Je crois à la majesté des marionnettes et des poupees.*' And how much poorer is the spirit of some of us when, in the days of becoming grown up, of the loss of simplicity and faith, we cease to believe in the soul of Punch and in the majesty of the marionettes!

THE BRIGHT EYES OF DANGER.

CHAPTER XXXVI.—BY THE CULBINS.

A COLD rage seized me. He took my silence for discomfiture, and, emboldened, leaned across the table. I heard part of his sneering speech, as if far away. 'Chivalry and honour, forsooth! Mistress Charlotte! . . . Young and innocent!'

'You speak of my future wife!' and with that I struck him full on his curling lip.

'Your wife! Yours!' he said very quietly, wiping the blood from his mouth. Then he turned, as if to look in a mirror over the chimneypiece. For a moment I could not see his hands.

Suddenly 'Ware!' came from Anthony. I saw a blade flash, the captain throw himself on Macdonell, gripping his sword-arm, and the two men wrestling for a few moments. He was no match, I knew, for Anthony; and when he saw me covering him with my pistol he gave up the struggle. Anthony relieved him of his sword.

The door opened, and in stepped Bertrand. His ironical bow was good to see. 'Ah, my amiable cousin, *quelle félicité!* You have been much in my thoughts for some time. Imagine us meeting in this outlandish place! But you do not look overpleased to see me, and you are a little white round the gills. Is it that you are indisposed? Ah! if Kenneth Innes could only be here. *Ciel!* What a reunion! We have not met since you and he called—you remember?—one stormy evening at The Garth. Where is he?'

Never a word did Left Hand say, but looked from Bertrand to me, his throat gulping.

'I fear me,' Bertrand's silken voice went on, 'that in the matter of—shall we say?—the dissolution of your partnership with Innes you have not shown the thoroughness that is the very hall-mark of the artist. But you are doubtless anxious, in the truest sense, as to his whereabouts. Permit me, then, to present your esteemed *frère d'armes*, safe and sound.'

He reopened the door, and Innes, the mate guarding him, took an uneasy step forward.

Philip swayed for a moment, thrusting out a hand to the chimneypiece as he steadied himself and looked at him.

Innes stared back, felt himself safe, and found his voice. 'This is a braw end o't. A bonny market for ye, Philip! Ye may well stare. I'll see ye starin' in a tow ere lang.'

'I'll see ye day about for this,' Macdonell hissed out with such concentrated fury that Innes, who had prudently kept out of his reach, slid hastily behind Bertrand. 'I am well served. I knew he was a rat!'

'Which was your reason for choosing him, I make no doubt,' I intervened. 'And the rat, having served your turn, was left to meditate on honour among thieves before he drowned in the forehold, while you made off with his share of the *louis d'ors* as well as your own. Oh, a splendid feat! Enough of this, man!'

'Enough, then! If I am at the end o' the tether, so be it. It is past caring I am. What do ye propose? Ye'll keep in mind that I preserved the French money for its rightful owner.'

'You can publish that and a few more lies when the occasion offers! Meanwhile you and I have accounts to settle.'

His face cleared a trifle. Here was a last chance. 'I seek nothing better than to stand up to ye, Mr Layton. Over there we'll be free from interruption.' He pointed through the window across the Findhorn. 'There are no houses, nothing but quiet and a greensward. The landlord will hire us a boat to cross in.'

To this I agreed. Macdonell was handed his sword, and the landlord summoned. He showed us the jetty where his boat was moored. Innes was left in the charge of the mate, and we got into the boat, Anthony at the oars.

On the western side of the estuary lie the Culbin Sands, a great tumbled wilderness miles long, not a blade of grass to be seen on it, its huge undulations heaved ridge upon ridge as far as the eye could see; startling in its desolation and silence; a miniature Sahara.

Anthony ran the boat up a tiny creek, and the four of us got out and struck into the waste, toward a line of dark woods southward in the distance. Macdonell was a step or two in front of us, humming a tune to himself with an air of great unconcern. For ten minutes we went on, ankle-deep in fine sand, no one speaking a word, until Left Hand halted and turned round.

'Before this affair begins, if he cares to hear it, I have something to say in private to Mr Layton,' he announced.

I let him see me cock my pistol. 'Very well!' I made answer; and 'Do you two leave us for a moment,' to Bertrand and Anthony, who went a little way off.

'I am unarmed, but for my sword,' he began. 'Your pistol is a menace.'

'A precaution merely! Do you wonder? What have you to say?'

'Mr Layton, ye came into this matter through your own fault, meddling in other folk's affairs. In my heart I am sorry, for I think ye'll never cross the Findhorn again alive. In this affair of swords I am going to kill ye.' He paused and looked at me.

'Well! I shall die like a decent man, I hope. Go on!'

'Ye are young, and all the world bright before ye. It would be a great pity if other folk's affairs darkened it for ye,' he continued in the same strain, concern in his pleasant voice; now a hint, a lifted eyebrow; now an unfinished sentence; how I had everything to lose; and so forth, until I suspected his motive and sickened of his very proximity.

'No more beating about the bush! Out with what you have to say. I give you another minute,' I told him.

He came a step nearer. 'The French money. A friendly arrangement. It would be better than bloodshed.'

'A friendly arrangement?'

He glanced at the others and dropped his voice. 'There's enough o' the French money for me—for us—to share.' He had made his last throw on the chance that Innes had not confessed the whereabouts of the *cache*. I laughed in his face.

'The French money is out of your clutches or Innes's for ever!'

Although he must have suspected and feared its coming, this was a staggering blow. The money, the shining lure that he had followed, that he had schemed and dreamed and lied and plotted and shed innocent blood for, trailing his name and his clan's honour in the mire, was out of his reach, and in our hands. He could not conceal his mortification. His eyes, searching mine, recognised defeat, and he glared from them. There was a long pause. He moistened his dry lips, tapped his sword-hilt, and played his last card. 'If ye fall—and fall ye must—what about your bride to be? Will she thank ye for leaving your bones so far from home?'

My mind winced, but I kept a steady eye on his. 'Let us go on, if that is all you have to say.'

'So be it,' he said, and turned on his heel.

I signalled Bertrand and the captain to join us, and in a few minutes we came close to the wood. Here was a level stretch of turf, crisp under foot, and in a good light.

'I think this may suit us,' said he.

I bowed an assent.

'Have ye any choice of places?'

The ground nearer the wood looked the least advantageous, for the dark screen of the trees would throw a man's figure into relief against it.

I balanced a guinea on finger and thumb. 'Head or shield?'

'Head,' called Left Hand as the coin spun. He won, and, to my surprise, chose to stand with his back to the wood.

We stripped coats. I drew Bertrand aside, gave him a message to my most dear Charlotte, and striving to shut out all thoughts that might sap my nerve, turned and faced Macdonell.

'I call ye all to witness that his blood is on his own head,' he said to the others as he took his place. 'I offered him terms.'

'Thieves' terms. On guard!' I called. He gave a stony *salut d'armes*, and next moment the swords were tinkling, their wicked supple lines catching the sun.

For some minutes we circled, gauging each other's swordsmanship, no sound but the clink of the steel and our soft footfalls on the carpet of the turf. I pressed him a yard or two, let him back in the counter, and fainted. He made a vicious thrust in tierce, uncomfortably near my throat, but my parry was true, and I found myself fencing warily, well within myself, biding

my time. The knowledge gave me a glow of confidence. I pressed him, inch by inch, until he was nearly at the edge of the wood. He recovered, was almost under my guard, when I risked pretending to bungle the riposte. He overreached, his point too low, and I got home on his forearm. We lowered.

'A scratch. A mere nothing,' he said, looking at it; and, indeed, it was hardly more than a graze. 'To it again!' He had turned, and was going, as I thought, to take his stand again, when suddenly he gave a leap, and dived into the thicket.

'*Sapristi!*' shouted Bertrand, and levelled a pistol.

The report rang out; but Left Hand had made the most of his three or four seconds' start. The birches screened him. He had not been hit, at least not seriously, for we could hear him running, and a glimpse of him crouching, twisting round the tree-trunks, sent us in

hot pursuit. Bertrand and the captain swung to the right, to cut him off should he make a dash for the open country. If not, he would be forced to run straight ahead and trust to his speed, for the estuary barred him on the left. There was no semblance of a path. The trees were thick, the undergrowth rank and tough. I wasted precious time ploughing through it, falling, disentangling myself from its clutches, in a frenzy of chagrin and anxiety. On I blundered for ten minutes, and when I drew up for breath Left Hand's running footsteps and the crackling in the undergrowth had ceased altogether. I own that by this time the strain of the last few days told on me. I felt sick and giddy. My breath came in gasps. I could go no farther. I sat down panting, and gave up the chase, cursing myself for having been fool enough to trust Left Hand to play fair in a duel.

(Continued on page 556.)

ON THE WESTERN FRONT.

By NIMROD.

IT has been said that the present struggle will go down to posterity as the World War, since every continent is not only directly concerned in it and the issues resulting from the terms of peace, when they come to be discussed, but is yielding its quota to swell the far-flung battle-line. Although the campaign in France and Flanders commands great and widespread attention, the remarkable nature of the struggle and the conditions obtaining there are scarcely appreciated by the public at large. We have no parallel in history to this war on the western front; it is fortress warfare on a vast scale, where every device known to modern science has been brought into play; where semi-permanent works have been erected, and batteries of machine-guns secreted in concrete emplacements; in fact, fortification on the latest and most improved scale, the whole protected by barbed-wire entanglements, *chevaux-de-frise*, and other obstacles, a line that the allied forces have to break through and overcome. To break down this formidable array high-explosive shell is essential, and the recent attacks along the German front which have been carried out by the British forces have proved the necessity of an unlimited supply of such shell. The bombardment carried out by the British artillery during the first fortnight in May, which resulted in the German line being pierced on a front of two miles, was an object-lesson as awe-inspiring as it was interesting. It was timed to start at 5 A.M., and was divided into several phases, the first of which was the concentration of all the guns on the enemy's barbed-wire entanglements, with the object of cutting them to pieces

and opening the way for the infantry assault. A large number of guns had been massed for the occasion, of varying calibre. It is extraordinary the effect high-explosive shell has on strongly entrenched positions and lines of obstacles. It tears up the latter and sweeps them away like dust blown forward by air-gusts from a bellows. Given a tornado of this kind of shell, nothing can live under it; and even the garrisons of the hostile trenches, albeit they are protected by strong parapets and traverses, are forced to seek shelter underground in dug-outs and bomb-proof shelters to escape the deadly hurricane. Even there they are by no means immune from danger, for the shells penetrate deeply, and the effect when confined to a limited area is very great.

A few minutes before the bombardment was due to open on the Hun lines the gunners indulged in a few trial shots here and there along the line, registering and as it were putting the finishing touch before entering upon the game in earnest. At the stroke of five the ball opened, a concentrated rain of shot and shell of every description, high-explosive, shrapnel, common shell, and those from the guns of the heavy artillery. The air was filled with the roar and rush of hundreds of projectiles, the earth shook with the concussion, for each gun was firing at a high rate in order to achieve the object in view, which was the destruction of the formidable line of obstacles bristling along the German front. For twenty minutes this hurricane of shot and shell continued, and then the guns lifted in order to concentrate their energies on the trenches in rear and render

them untenable. For this task shrapnel is largely used. The steel case of the shell contains a large number of bullets, and when these are released by the burst they spread over an area some three hundred yards long by twenty-five yards wide. It was a thrilling sight to watch this terrific hail. The German lines were a sheet of bursting lyddite, shrapnel, and other shells; clouds of dust and fumes hung in the air, obscuring the landscape and giving some clue to the devastation caused where the shells burst. Amidst the tumult and pandemonium which reigns one can imagine the death and destruction being wrought beneath that sheet of fire. It is not long before the Boches realise the situation, and then their artillery weighs in and adds to the inferno, giving the impression, from such a combination, that all the thunder of the universe has been concentrated in that one spot. At the appointed moment the British artillery lifts its fire to allow the attacking infantry to move forward, and the guns are then switched on to the rear of the German lines. One has but to have experience of such a bombardment to appreciate the vital necessity of an unlimited supply of ammunition in order to tear down the enemy's defences, pulverise every living thing, and render his position an earthly hell from which escape is barred.

From the mental point of view the strain of being under a constant and heavy shell fire is very great, especially on those at all inclined to be nervous. As an illustration of this, it may be remarked that after the bombardments in question three men were brought into a clearing hospital in a state of acute mania, one of them having become affected to such an extent that he endeavoured to burrow into the walls of the ward to seek shelter from an imaginary storm of shell.

The Boches usually indulge in a morning and evening 'hate,' when they shell everything within sight, mainly directing their energies on the front line of trenches with the 'whiz—bang,' a type of shell possessed of great velocity; in fact, as a wag remarked, 'It's almost there before it's started.' Occasionally the Boches, suspecting that some particular spot is an observation-point, or is secreting a battery, will concentrate on it with commendable accuracy. Such a point was recently noted where within a space of nineteen yards by twenty-one yards ten shells had been placed, six of them being from heavy guns, and tearing huge gaping holes in the ground. It affords some idea of what concentrated shell-fire means and the significance of modern war. In the recent fighting round Ypres a shell from a German seventeen-inch gun which fell on the roadway made a hole thirty-six feet in width! The artillery duels along both fronts are incessant, especially toward the south, where the French are driving a wedge into the Hun lines and making progress in conjunction with their British allies. The thunder

of our Ally's guns goes on day and night, and tells us that the French are hard on the trail of the Boche. The famous 75 mm. cannon maintains its reputation. Quite recently the shelling of the trenches by the Boches in one of their evening 'hates' became rather too pronounced, and so, in addition to our own guns, the French opened on them with the 75. The guns are fired usually in groups of four in rapid succession—the French term it a *rafale*—and the gunners place their shots with great precision, searching the German line most effectually. On this occasion it was evidently too much for the Boches, for they ceased fire, and comparative peace reigned again.

The war has given prominence to night operations, the necessity and importance of which were amply demonstrated in the Russo-Japanese campaign. Each successive war sees changes and improvements; and to counteract the darkness powerful searchlights and flares are in evidence, which turn night into day, and light up the surrounding country with a lurid glare. The searchlight slowly traverses the zone between the hostile fronts, innumerable flares are sent up into the skies, the whole directing by their brilliant rays the fire of rifle and machine-gun. The slight distance—in some parts as little as one hundred yards—separating the two fronts renders the task of night-work and the arrangements in connection therewith doubly difficult and dangerous. The distance may, indeed, be limited, but the approach is covered by machine-guns ever ready to open fire, for the gunners are constantly on the alert, and the Boche has reduced the handling of them to a fine art. The operations on the night of 15th May resulted in the German line being pierced to a considerable extent, the attack having been preceded by an artillery bombardment which wrought much damage in the enemy's lines. At one portion of the British front a stream some nine feet in width and five to eight feet deep had to be bridged to allow the attackers to cross. Special bridges of planking and cross-pieces had been constructed and brought up into the trenches in readiness to be put out when darkness should permit of the operation being carried through. No light task this, for the Boche is suspicious, and scents danger in the air. All is comparatively quiet along the British front, but an occasional burst of fire proceeds from the Boches' parapet; for should silence reign opposite them they instantly become suspicious, and conclude that working-parties are out, and so on come their machine-guns in the hope of compelling the cessation of work. Flares are constantly sent skyward, and in the slight intervals which elapse between them the bridges are quietly and rapidly pushed over the parapet. In a few minutes all have been deposited outside, and the men who are going to place them in position over the stream watch their opportunity, and in a momentary

interval of darkness slip rapidly over the parapet and gain some slight cover afforded by a depression in the ground on the near side of the stream. Two of the bridges are placed, and then a brilliant flare shoots heavenward, revealing something to the Boche which causes him to open a fusillade. With an alacrity born of experience in this eerie night-work, the little party drops to earth, lying prone on the muddy surface of what was once a ploughed field, but is now only a labyrinth of shell-holes, broken branches from willow-trees lining the banks of the stream; whilst here and there are dotted the bodies of the gallant dead who have gone before, the incessant fire by day and night having prevented their retrieval and burial. Presently the fusillade dies down, the working-party comes to life again, and the hazardous task is resumed. At last the work is accomplished, the bridges are in position; but there is yet the shelter of the parapet to be regained. Those blue flares, with which the Boches are so amply provided, seem never-ending; and, as if to show their superiority, one shoots across the zone and falls into the trenches, revealing to the senders a dark figure silhouetted against the sky in the act of surmounting the parapet. Fortunately he does so unscathed, despite the hail of bullets directed with lightning precision on the spot. One by one the workers regain the welcome cover, and drop into the trenches with a sigh of relief. Farther down, the efforts of those on the right have not been attended with the same element of luck, and the officer superintending the work has been shot dead by a bullet through the forehead. It is not a matter for wonder that a man is hit; rather it is one for astonishment that any of the workers return unharmed. But such are daily occurrences to the gallant soldiery who are fighting over this immense battle-front.

In places the result of the recent captures of trenches has been to bring the opposing lines within forty yards of each other, for the Boches have taken up a new and previously prepared line which can only be reduced by sapping operations and the employment of bombs and hand-grenades to evict them. The bombs are of varying types, those of the smaller variety being thrown by hand, and capable of being launched about the same distance as a cricket-ball. To give some idea of what bombing means, an instance may be quoted where in one section of the front the Germans hurled over sixty of these deadly instruments into the British trench, the latter responding with over one hundred and fifty, for here the distance between Briton and Boche was but thirty-five yards.

It is now some time since the Boches commenced their campaign of asphyxiating gas, in defiance of the laws of war. The deadly effects of this form of weapon has been only too well demonstrated not only on the western front, but

against the Russians in Poland and Galicia. The gas assumes a yellowish hue, and its influence extends over a very considerable area. To combat it special masks and helmets have been introduced, a head-dress which gives to the wearers an appearance somewhat similar to the monks of the Inquisition. The war may well be characterised as extraordinary, for it has brought into play every manner of death-dealing device, beside which all previous wars pale into insignificance. To be laid low by rifle or machine-gun, to be bayoneted in a hand-to-hand fight, or to be bombed or shelled is part and parcel of the common task, the daily round; but the line may well be drawn at being 'gassed.' The impression has ever been that gas is restricted to dentists! In addition to the use of these asphyxiating gases the Germans now utilise burning liquid, which they squirt at their enemies. It is a form of destruction which is fortunately only effectual at close quarters, since the range of the hose-pipes is restricted, and if employed at any distance they could be rapidly put out of action by a few well-directed rounds of high-explosive shell.

The aerial service has commanded widespread attention in this war, and deservedly so, for it has surpassed the most sanguine expectations. The allied airmen have consistently proved their superiority over the Germans, and the latter do not display anything like the boldness and initiative of the British and French aviators. Several aeroplanes from the German side have been brought down; and within the last few weeks a hostile biplane, more venturesome than usual, came well over the British lines. Whether it was struck by bullets or trouble had developed in the engines was not apparent, but all control over it was lost, and after executing some dives and forward rushes in the air it fell to earth from a height of about a thousand feet, the machine being completely wrecked, and the engine buried four feet in the ground.

Sniping is a favourite pastime with the Boches, and they indulge in it to a large extent, mainly from the upper parts of houses or the tops of trees commanding a good view of the surrounding country. These snipers are often a source of considerable annoyance, as they train their rifles on to certain objects during the daytime, and fire them at night. Such an instance occurred lately, the sniper being located in a tree where his presence had been revealed by a tell-tale ladder placed against the trunk. Although this had been carefully hidden by branches and foliage, a powerful pair of telescopic binoculars clearly showed the true nature of the object. A round or two of well-burst shrapnel on the tree in question evidently disposed of the pest, for no further molestation occurred. The gun had been laid by daylight, and fired after dark, when the sniper would be in his leafy lair, all unconscious of the fate in store for him. It is said that the

Boches have selected men to act as snipers, foresters and others accustomed to hunting and woodcraft, who devote their ingenuity to the picking off of the unwary and those who expose themselves unwittingly. Certain it is that a man cannot show himself for an instant above a parapet without a number of bullets whistling around and striking it, warning him that exposure is a risky game to play.

From the statements of German prisoners captured in the recent fighting, it would appear that the real state of affairs in Europe and elsewhere is unknown to them. They express unbounded confidence in ultimate victory; and on being questioned as to the part the Russians were playing in the war, and notably the successes they had gained on the eastern front, the Germans made a sweeping movement of the hands to indicate that the Muscovites had been completely disposed of. The majority seem glad to have been taken, for they declared that the heavy bombardments by the British artillery had given them no rest day or night.

Along parts of the front Bavarian troops have been in evidence, and they bear a somewhat grim reputation, if reports be at all true. They are commanded by the Crown Prince Rupprecht of Bavaria, an officer who appears to pass most of his time composing proclamations in which the British are denounced in blind anger as a people embracing all the bad qualities in the human race. It is surprising how well the truth has been concealed from the people by means of these proclamations and *communiqués* emanating from the German headquarters. Such a state of affairs demands the most complete submission to authority and a spirit of discipline inculcated in the people which does not exist elsewhere. One cannot but admire the German military machine and the manner in which it has worked since the opening of the war. Apparently nothing has been left to chance; the plan of campaign has been thoroughly worked out, to embrace potential conditions; although it is certain the Germans did not calculate on the set-back they received at the start, circumstances which entirely upset their preconceived plans. Even down to minor details one notices the same thoroughness, the mechanical skill by which the German forces have been prepared and equipped for this war. An inspection of the kit of German prisoners and dead displays the care and forethought devoted to the equipment of the men—the emergency ration of specially prepared biscuit, down to the miniature tent with its little poles made to fit. The German soldier, however, has too much to carry, and it cannot but militate against rapid movement, especially over broken ground.

The German railway system and the network of lines traversing the country in all directions have enabled them to carry out the various strategic moves which have been so much in

evidence recently. A success is gained in Poland and Galicia, and the opposing forces held for the time being; whilst part of the troops are then rushed across Germany to the western front, where the Germans still pin all their faith and hopes, and continually watch for an opening to Calais and Paris, an opening barred to them, an access to which they are denied, by the solid wall confronting them from across the Channel.

It will be of interest to give some account of how the army in the field is supplied, and of the marvellous organisation by which the daily wants and needs are administered without hitch or hindrance. Stores and supplies come from all parts of the world to what might be termed the central distributing point—England. There they are shipped across the Channel and taken over by the railways, which are, of course, under military control. Thence they are conveyed to various railheads, the distributing-points for the large forces now in the field. An admirable system of motor-transport takes over what the trains have brought up, and the motor-lorry in its turn distributes to selected points where units receive their supplies and all that is vital to their work and well-being. Petrol plays a conspicuous part in the war; in fact, without it and the invaluable motor such vast numbers as are now under arms could not possibly be maintained and supplied.

As with the supply and transport, so with the medical arrangements, which leave nothing to be desired. So admirable is the organisation and the celerity with which the wounded are dealt with that a man, unless the case be too serious for removal, is usually in England within forty-eight hours of being hit. Let us trace his progress from the firing-line to one of the many hospitals at home. He is first attended to by the medical officer of his unit, or sent to the first-aid post just in rear. There the wound is dressed, and he is passed on by motor-ambulance to a clearing hospital, where he again receives every attention. Thence, after a brief rest, he passes to the ambulance-train, and is conveyed to the coast, and then by fast steamer across the Channel, proceeding either to London or to one of the institutions elsewhere; and later he may be transferred to a convalescent home to recoup before returning to the front.

The brilliant weather with which we have been favoured has hardened the roads into a fit state to stand the strain of the motor-transport constantly passing over them. In the zone between the two armies the grass has grown up, whilst in rear of the firing-line are fields of wheat and oats sadly overgrown for lack of attention. The land has indeed, by reason of the weather conditions, assumed a green and refreshing aspect, but there is little else to sustain the picture. The inhabitants have gone; the cottages and farms are in ruins, silent witnesses to the ravages of war. Here and there amidst the

waving corn is to be seen a grave with an inscription at its head, 'To the memory of a soldier of France,' a hero who has been laid to rest by his British comrades. It is a simple inscription, but it has a wealth of meaning, for

the soldier of France has not died in vain. He has given his life for the consecration of a new Europe, for the dawn of a new era which shall determine between Prussian domination and European liberty.

BETTY GRIER.

CHAPTER IX.

WHEN Dr Grierson sat down at my bedside this morning and took my wrist between his sensitive finger and thumb, I felt magnetically drawn to him, and the desire to confide in him became irresistible. I had been wondering in my mind for hours how best I could introduce the subject; and, not hitting readily on a fitting opening, I had left it to chance and circumstance. Strangely enough, it was he who paved the way for me. After we had talked briefly on general subjects, he referred to my 'temporary breakdown,' as he termed it, and told me he was quite sure I had undergone a sudden mental strain which had adversely affected me physically; but that, once my mind and body were sufficiently rested, I should be quite all right again.

'You're quite right, doctor, in your diagnosis of my case,' I said. 'I have had rather a queer experience lately, and, if you care to hear about it, I shall gladly tell you. Would you share a little secret with me, doctor?'

'Most gladly,' he said.

'Well, will you please light your pipe? Take that easy-chair by the fire, and you may sit with your back to me, and I sha'n't feel slighted.'

He laughed softly, and, extracting a short clay pipe from his waistcoat pocket, took the chair I indicated. Seated thus, and smoking steadily, he listened in silence till my story was finished. I gave him the whole history, kept nothing back; and in telling all the details I never hesitated, for the incidents were fresh in my mind, and I had everything well thought out.

'Ay, Mr Russell,' he said, after a long pause, 'you tell a story very well, and what you have told is most interesting and wonderful. I have read of such occurrences, but I haven't till now come across one at first hand, as it were. Shakespeare says there are more things in heaven and earth than are dreamt of in our philosophy, and your experience certainly goes to prove it. It is usual, especially during a man's romantic years, to dream of a fair lady's face—very usual indeed; but I consider it most remarkable that everything came to a head so shortly after you had taken Betty into your confidence, and also when, for the first time, you had entertained doubts as to your dream being realised. I suppose you are very much in love with this lady?' and he looked over his shoulder at me.

'Well, yes, doctor, I am.'

'What is your age, again, Mr Russell?'

'Thirty in January.'

'And—and, you've never been in love before?'

'I think I've been in love ever since I dreamed my dream, now nearly ten years ago; but since that interview in Nithbank Wood I'm more hopelessly in love than ever;' and, somehow, I began to blush, and I was glad his back was turned toward me.

'Imphm! Ay, the old story is ever new,' he said, more to himself than to me; and he rose slowly from his chair, knocked the ashes out of his pipe on the top rib of the grate, and came over to my bedside. 'Have you told Betty of this strange meeting?'

'No.'

'Why?'

'Well, doctor, I can hardly explain why I haven't told her, as the dear old soul is "nearer" to me than any one else in the world; but I felt, somehow, that I wanted to confide in you first.'

'Thank you, Mr Russell; and it will be a joyful day when you and I and Betty can talk it all over among us. Meanwhile we'll keep it to ourselves, you and I, and I don't think you should allow this—this *affaire de cœur* to monopolise your mind too much. To worry and distract your thoughts over it would be as harmful as it would be futile. So far, the stars have fought in their courses for you, and, without much exertion on your part, your fondest dreams seem in a fair way to be fulfilled. William—no "Mr Russell" after a crack like this!—I am more than double your age, and for many years I have lived a queer, prosaic, loveless life—a full life if hard work and gain and recognition be reckoned everything, but empty—oh God, how empty!—if love counts for all. I am old, but not so old that I cannot understand you and sympathise with you, for I well remember days which were brightened to me by the sunshine of a woman's loving smile; times when all this earth was heaven to me, the singing of the birds an angel song, all its people upright and just; sermons I read in stones, and good I saw in everything. But that was long ago. When love was taken away from me, the whole world seemed changed. My life since then has been selfish and self-centred. I have long ceased to take any interest in the social doings of others; and were it not for my work, my books,

and my daily communings with nature, I should be a lonely, miserable old man. I don't mind telling you, however, that you have touched a chord in my heart and awakened memories which have slumbered long. I am very much interested in you, partly on account of your own personality, but mainly because it was a very near relation of yours who brought to me the only true joy and gladness that my heart has ever known.

He sat down on the basket chair at the foot of my bed, facing me, and with his back to the light.

'You will doubtless remember,' he continued, 'that, during my first visit to you here, Betty, in course of conversation, casually or otherwise, mentioned the name of your aunt Margaret.'

'Yes, doctor, I remember that distinctly, and also that you were visibly affected; but'—

'I must confess I was, William,' he quickly interposed. 'Well, confidence for confidence. You have told me your love experience, so far as it has gone, and it may be that, by doing so, you have relieved your mind and hastened your recovery; and perhaps, if I recount mine to one who can understand, it will bring a balm and a solace to my old heart, of which, in these my years of sear and yellow leaves, I often stand sorely in need. You—you don't mind my smoking?'

'Certainly not, doctor; and, to be sociable, I'll join you in a pipe.'

'That's right—that's right! Nothing like tobacco for promoting good-fellowship.'

We filled our pipes in silence. Though it was only late noon, the light seemed to be darkening in my little room. I looked toward the window, and down from a dull leaden sky the first of winter's snowflakes were quietly falling—falling, as it appeared to me, into the eager upstretched arms of the leafless lime. The doctor's gaze followed mine; and slowly, with his pipe filled but not lit, he rose from his chair and looked long and thoughtfully toward the quiet, obscured Dry Gill.

'I have always loved to see snow falling,' he said, after a pause. 'It has a strange fascination for me; and to see it in its fleecy flakes, whirling and dancing and drifting and playing, is a sight which always soothes and inspires me. I pray God that my eyesight may long be spared to me, because it is an avenue through which many of His richly stored treasures are conveyed. I have no ear for music—instrumental music I mean particularly; but, strangely enough, a wimplin' burn can speak to me in its flow, a mavis can call me from my study into my garden, and the eerie yammer of the whaup in the moorland solitude is always to me, as it was to Robert Wanlock, "a wanderin' word frae hame." The human voice raised in song conveys nothing to me, but the croonin' lullaby of a loving mother over her suffering child tirls

the strings of my heart and makes me humble. To be unable to *feel* the pleading of the violin, the rich soprano, and the resonant bass is something I deplore. But Providence has ordained that if one sense is minus one, another sense will be plus one. Well, my sense of sight is plus one, both in strength and appreciation; and in the midst of these beautiful surroundings in which, for the last forty years, my lines have been cast, I have revelled, William—positively revelled. The opportunity has always been mine of noting the changing of the seasons—the virgin green and promise of spring, the glory and fullness of summer, the russet and gold of autumn, the sleep and decay of winter—and each, to him who can see aright, has a beauty and significance of its own. Ay, and this is winter—winter heralded by a shimmering veil of pirling snowflakes, through whose dancing meshes I can trace phantom forms I saw in youth, and whose madcap antics still, thank God! bring me solace as of yore. Oh, how grateful and thankful I ought to be!'

He lit his pipe with a paper spill, and stood for a minute blowing clouds of smoke round the old china dog on my mantelpiece. Then he resumed his seat at the foot of my bed; and, inclining his head sideways toward the window, he said, 'The last good-bye I said to your aunt Margaret was spoken amidst falling snow, and it is strange that I should be speaking of her to you for the first time with these flimsy flakes dimming your window-pane. There's not much to tell you, William; and, to be candid with you, when I was standing smoking at your fireplace there the thought came to me that, as your mother had never deemed it expedient or necessary to mention my name to you, it would be more in agreement with her will that I should be silent. However, as I have started, I may as well proceed; but I shall be brief, as I haven't the heart to go into what must ever be sacred details. I first met your aunt Margaret in Edinburgh, when I was at the University. Her father—your grandfather, Colonel Kennedy—had returned from India (where he had served with distinction), and had, with his wife and two daughters, taken up residence in the suburb of Murrayfield. Being of a Dumfriesshire family, and well known to my father, who was a merchant in Dumfries and Provost of that town, Colonel Kennedy, on the strength of my father's letter of introduction, gave me a hearty welcome to his domestic circle, a welcome of which I may say I took ample advantage. Your father and mother got married shortly after I became acquainted with the family; and as your aunt Margaret was thus deprived of a sister and companion to whom she was ardently attached, I gladly embraced every opportunity of showing her little kindly attentions, acting the part of a thoughtful brother, and generally doing my

utmost to minimise the loss which I was sure she had sustained. Well, William, this ended in the usual way. Sympathy begets love, and I fell hopelessly in love with Margaret Kennedy. How I found out that my love was returned is a secret which is a joy to me, too holy to share even with you, William. Ah me! the happiness of those halcyon days—the quiet afternoons in that old drawing-room facing southward to the distant Pentlands, the evening walks on Corstorphine Hill when the sunset rays still lingered above Ben Lomond, the talks we had of the future we had planned! Tennyson says that "sorrow's crown of sorrow is remembering happier things." That may be poetic, but I don't think it is true, for it is a crown of joy to me to call these times to mind, and I feel that to have had this experience, and to have garnered such memories, I have surely not lived in vain. Our love, as is the case with all young people, was unreasoning. We gave no thought to ways and means, and position or status we never for a moment considered. But your grandfather brought us to earth and faced us with realities. In response to a written request, I waited on him one evening, and in a very few words he gave me to understand that I must on no account pay further attention to his daughter, and that my visits to his house must cease. He reproached me with lack of honour in taking advantage of his hospitality to further my own interests and clandestinely win the affection of your aunt Margaret. I repudiated this charge, perhaps somewhat warmly, informed him that if I had broken any of the accepted social laws in the matter I had done so in ignorance, and assured him I loved his daughter, and that nothing short of her renunciation would deter me from some day making her my wife. He lost his temper, and bluntly asked me if, for a moment, I, a prospectless student and son of a provincial merchant, considered myself worthy of a Kennedy of Knockshaw; whereupon I told him that there were Griersons in Lag, as wardens of the Border Marches, when the Kennedies were sitting in farmyard barns making spoons out of ram-horns. The old riever blood coursed warmly through my veins, and I faced him without fear. This was the last straw. He raised his cane to strike me; but, noting my air of defiance, he immediately lowered it, and pointed to the door. I bowed in silence, then walked slowly out, and I never entered the house again.

'The days which followed that interview were perhaps the most miserable I ever spent. I had had no opportunity of seeing your aunt, and though I knew she loved me, and that no mercenary considerations would sway her, still there was the uncertainty of it all, under altered circumstances, and the possibility of her being dominated by her father's masterful will. At last, after weary weeks of waiting, of alternate spells of hope and despair, I received a letter from her,

written from a lonely island in the Pentland Firth, and letting me know that she had been sent thither by her father on a visit to her uncle, who at that time was proprietor of the island of Stroma. She assured me of her unfaltering love, told me that nothing on earth would shake her resolve, and that, notwithstanding her father's threats, she would join me sooner or later in a haven of rest. She would take my love for granted, and asked me not to write, as my letters would be intercepted. With this ray of hope I had to be content. She wrote to me at intervals; but, as letter followed letter, each became more despondent and despairing, and at last she informed me that it was evident she would not be allowed to return until she promised not to see or correspond with me again. Then came a little, short note pleading for an interview. "It is a long journey, I know," she wrote; "but I dearly—oh, so dearly!—wish to see you again. Your presence will cheer me and strengthen me to bear whatever the future may hold. On Wednesday next my uncle goes to Kirkwall, and on that afternoon I will walk down to a little, sheltered creek called Corravoe. It is the nearest point to the mainland, and only a mile or two from Huna. Matthew Howat has a good boat. When you reach Huna ask for Matthew. He knows everything, and will help us." . . . Never a day passes but that weird, solitary scene comes before my eyes—no trees, no hills, no signs of human habitation; only a short, gray-green stretch of low-lying, patchy landscape, bordered by a narrow strip of rocky beach, lapped by the crested tide of the Pentland Flow. One short hour we spent together, for the tide was turning, but the smile of hope shone in her wan face ere we said good-bye. I was the bearer of joyful news, comforting words, and assurance of release. I told her I was specialising in Edinburgh; that an unexpected legacy of three thousand pounds had paved the way to our happiness; and that, when I had arranged with my mother for her reception, she would sail across to Huna, and find me waiting her there. . . . The roar of the far-off skerries is in my ear, the echoing homeward cry of the seabird, the humming and hissing of the waves among the shells on the shingle! The shortening day is drawing to a close, mist is clinging to the scarred face of Dunnet Head, from the darkening sky the snow is falling, and through the whirling flakes she fades from my sight.

'A day came when again I was in Huna, looking over the angry, wind-tossed Pentland Firth, waiting for a boat which, alas! never reached its haven. What happened no one ever knew. The sullen waters guard their secrets well; but a broken oar, bearing Matthew Howat's initials, picked up in Scrabster Bay, told a story which robbed my life of the only light which ever shone in my soul.'

The doctor sat for a minute, after he had finished his story, with his eyes closed and his chin resting on the knot of his stock. Then he wearily rose from his chair and went quietly downstairs without saying good-bye. He has a

keen sense of the fitness of things, and I feel he knew that no word of mine, no pressure of my hand, was needed to prove to him that my heart was with him.

(Continued on page 570.)

THE MONTH: SCIENCE AND ARTS.

REVIVAL OF 'HAY-BOX' COOKERY.

COOKING in the hay-box has undergone a revival, and is becoming a feature in many of the leading cookery schools, the revival having been influenced by the increasing cost of fuel, the simplicity of the process, and motives of general economy. It is an old idea, and probably first claimed serious notice from the practice of agricultural labourers, who, upon reaching their work in the morning, buried their dinner-cans containing a hot meal in the hay-rick, so as to keep the contents in a heated condition. The simple hay-box is especially applicable to a stew, which, partially cooked upon a coal-fire or gas-stove, is poured into a suitable vessel, which is sealed and then placed in the hay-box. This last is a perfect heat insulator, the result being that not only is the stew kept in a heated condition, but cooking continues. All kinds of dishes—meat, fish, fruit, and vegetables—can be cooked in this manner, with one exception—roasted joints. The box is simple to devise. It should be about thirty inches in length by twenty-four inches in width and depth respectively, and fitted with a hinged lid which can be closely and securely fastened. The interior surfaces of the box should be lined with several thicknesses of newspaper, ordinary house flannel being used as an outer covering. The hay is packed tightly into the box, and a nest prepared for the reception of the vessel containing the partially cooked dish. An earthenware vessel is the most suitable for the purpose. The vessel is covered with cork shavings, such as are used for packing grapes in barrels and may be readily obtained from any fruiterer, and over these is placed a top layer of hay. The box is then closed, and may be left for several hours. When it is opened the meal will be found to be quite warm and thoroughly cooked. Such a hay-box will last for years; and the only maintenance expense incurred is the periodical renewal of the hay. Hay-box cookery has appealed especially to the soldiers at the front, since in the trenches great difficulty is experienced in preserving the meals and refreshments in a heated condition. After a hard day's work nothing is so refreshing and palatable as a hot meal, washed down with hot tea, coffee, cocoa, or milk. The soldiers are making their boxes on the spot, contriving suitable receptacles from ammunition-cases and so forth; while the hay is readily obtainable.

COMBATING AERIAL INCENDIARY-BOMB FIRES.

The incendiary bombs which are carried by German aircraft, and by Zeppelins in particular, have naturally given rise to some anxiety in certain quarters. But if the proper precautions be observed the damage wrought even by these fiendish instruments may be localised, and in order to instruct the public as to the best measures to adopt the British Fire Prevention Committee has issued a small pamphlet. These warnings apply not only to private houses but to factories in general, while technical advice concerning what to do in connection with the possible ignition of especially combustible materials is given gratuitously upon application. Moreover, the advice of the experts attached to this organisation is also available. The committee points out that all premises which are equipped with warning and first-aid devices should be frequently overhauled to make doubly sure that these are in working order, while staffs should be drilled frequently in emergency measures. Chemical fire extinguishers which have been standing for more than three months should be overhauled, while buckets of water and sand should be freely distributed about the various floors of a building and in places where they will be readily accessible. If possible, one or more small hand-pumps should be installed in large buildings, and responsible persons drilled in their proper use. The urgency of individual effort in fire-fighting is driven home, and the advice is given that one and all should in reality become fire-fighters. It is pointed out that in the event of a big raid the fire-brigades are certain to be fully occupied in dealing with the largest outbreaks, especially if public buildings, military stores, hospitals, docks, and so forth are attacked and burst into flame. Private and semi-private buildings must depend essentially upon private individuals for protection.

THERMIT.

At one of the inquests on victims of incendiary bombs dropped from a hostile airship over London, the coroner remarked that these missiles did not appear to be very finely finished, but apparently they were very effective. Lieutenant E. T. Cobbett pointed out that a label had been found on one of these bombs showing that it had been made at Krupp's in Essen. All the bombs had handles; and it might be of use to the

public to know that with a pair of tongs or a piece of stick they could be thrown out of a window before they had a chance of setting fire to a place. The public notices, however, recommend acquainting the police at once in such a case. The *Times*, in a note on thermit, the explosive in these bombs, pointed out that this is the trade name of a mixture of powdered aluminium and magnetic iron oxide, used in welding iron and steel and in repairing broken steel castings. When this mixture is ignited the oxygen leaves the iron and combines violently with the aluminium, producing a slag which rises to the surface, the molten iron sinking to the bottom. The heat evolved by the reaction is enormous, and a temperature can be attained second only to that of the electric arc. The process was made practicable by Goldschmidt in 1898; for, although the principle was known already, serious difficulties were encountered in its application, one of them being the danger of explosion. Goldschmidt overcame the difficulty by finely dividing and intimately mixing the materials, and by starting the reaction at one point by raising its temperature sufficiently high. The thermit reaction is used largely in the preparation of metals from their oxides, and is of particular importance in the production of chromium, which is employed largely in the manufacture of high-speed tool steel and armour-plate.

ELECTRICITY IN HOSPITALS.

The extent to which electricity enters into a modern hospital is brought home very vividly in connection with the equipment of the Sick Children's Hospital at Yorkhill, Glasgow, which was opened some months ago by His Majesty the King. The buildings are electrically lighted throughout by some two thousand incandescent lamps. The thirteen lifts, and the whole of the laundry, kitchen, and other machinery, are operated by this agent, for which some forty motors have been installed. Ventilation depends exclusively upon electric fans. The intercommunicating telephone system has thirty stations, in addition to the postal instruments. The clocks are controlled upon the magnets system; while further extensive and varied uses of electricity are shown in connection with electro-surgery, Röntgen ray, high-frequency, and other special apparatus. The installation—which was carried out under the supervision of Messrs Sayers and Caldwell, who, acting as consulting engineers, gave expert advice upon several matters—is considered to be one of the most complete in these islands.

TWO HUNDRED THOUSAND BULLETS PER HOUR.

Considerable interest has been aroused in metallurgical circles by the perfection in America of a new machine for automatically casting rods of metal in one operation by means of a specially designed machine. At present this

apparatus is of more than usual interest, for the simple reason that by a recent improvement it is now possible to cast rods of lead and soft alloys in bars one quarter of an inch and upwards in diameter. The casting of such rods enables the production of bullets for shrapnel-shell to be expedited and facilitated to an enormous extent, inasmuch as the preparation of the rod constitutes the first stage in the bullet-making process. By means of this machine sufficient lead rod can be cast to enable two hundred thousand bullets to be produced per hour. The process is not only rapid and automatic, but it has the advantage of being very cheap. The electric motor for driving the machine need only be of two or three horse-power, while only one workman is required. It is stated by the inventor that the operating cost in America is about one shilling per ton of molten metal poured into the form of rods. The outstanding feature of the system is the direct transference of the hot liquid metal from the melting-crucibles into the machine during the passage through which solidification takes place, the rod issuing from the opposite end in a continuous length of solid homogeneous form so long as molten metal is being poured into the machine.

'KILL THAT FLY.'

The campaign which was inaugurated in the United States some two or three years ago for the extermination of the fly has extended to this country. Prevention is better than cure, and this end can be achieved to a very pronounced degree by rendering the household dustbin and other garbage receptacles absolutely untenable by the pest. According to the pamphlet which has been issued by the Imperial College of Science, the fly has been proved guilty of carrying the germs of typhoid, tuberculosis, cholera, anthrax, and plague; while it is suspected of being the principal factor in the dissemination of ophthalmia, dysentery, and infantile diarrhoea. As part of the house-fly campaign instituted by the Zoological Society, Professor Maxwell Lefroy, in a lecture, has said it was worth noting that flies needed moist conditions for their larvæ; dry material breeds no flies. Flies also dislike darkness. Municipal and other 'tips' should be treated with chloride of lime. The burning of refuse of all sorts was strongly recommended. Sulphate of iron might be applied either powdered or in a 20 per cent. solution. When possible, stable manure should be kept in covered enclosures. For open receptacles or heaps most satisfactory results were obtained from borax treatments. Borax in small amounts, such as one and a quarter pounds per eight bushels of manure, destroyed 98 to 99 per cent. of the maggots. A 20 per cent. solution of slaked lime was also said to be a good larvicide. For indoors, a solution of formalin (40 per cent. formaldehyde), one table-

spoonful to one pint of water, with the addition of a little bread or sugar, attracts and poisons flies if distributed in shallow vessels in light spots. Flies avoid shade. Vessels with a crust of bread in each should be set out overnight to draw the earliest flies. Milk, water, food, and fruit should be covered, and kept in fly-screened larders or meat-safes. The Medical Officer for Westminster has stated in a pamphlet that rooms in which there are many flies may be cleared by pouring twenty drops of carbolic acid on a hot shovel, or burning cones of Persian insect-powder on a dish or plate. The cones may be made by moistening the powder and allowing it to dry. In both cases the fumes stupefy the flies, which fall and can be swept up and destroyed.

A RETRIEVED BRITISH INDUSTRY.

One of the many ramifications of British industry which suffered from German competition, but which has recovered remarkably since the outbreak of war, is the manufacture of geographical globes. The Germans succeeded in making great headway because the British article has always been somewhat expensive; but at the same time it is absolutely accurate, owing to the care taken in the preparation, while it is of great strength and capable of withstanding hard usage. The Germans, however, devoted the utmost attention to cheapness, fashioning their globes from inferior material, ignoring questions of accuracy, and depending rather upon gaudy colouring than the correct fitting of the maps to the spherical surface. But the cheaper article found a ready market; and as the dearer British globe was ousted and was seldom seen, it was impossible for the prospective buyer to compare the two grades of manufacture. But the demand for globes is increasing rapidly, since nowadays a school cannot possibly complete the geography lesson without one. The manufacture of a perfect globe of solid construction is a somewhat slow and tedious process. The shell is composed of several superimposed thicknesses of brown paper, upon which is laid a secretly prepared and special composition. When hard and dry, this surface is trued in a gauge, smoothed, and polished. This is a phase of the work which demands the greatest care and skill, since, if the sphere is not true to the smallest fraction of an inch, the gores of the maps will not fit exactly. These are pasted on in such a manner that there is no overlapping whatever, the edges coming flush together. The globe completed, it is coloured and varnished, the final operation, after mounting on the stand, being the fitting of the meridian ring.

AEROPLANES AND DIRIGIBLES OF WAR.

A writer in the *Times* Literary Supplement, in noticing a work on *Aeroplanes and Dirigibles of War*, by Mr F. A. Talbot, says that the raids which have been made upon England have been

carried out by means of airships—not necessarily Zeppelins, although that term has become generic in the popular mind. It is not improbable, however, that in the event of an organised attack upon a large scale the air fleet would include aeroplanes and waterplanes, for it has been shown on the Continent by our own airmen and those of our Allies that these machines can be employed effectively in combined operations. The chief weapons of defence against attack by aircraft are armed aeroplanes and anti-aircraft guns. Fighting in the air has been of frequent occurrence during the war, culminating in the daring exploit of the late Flight Sub-Lieutenant Warneford. This event marks an epoch in aerial warfare, for it proves that the aeroplane may be considered as a trustworthy weapon of defence against invasion. The development of efficiency in the anti-aircraft gun has been attended by many difficulties, of which obtaining a sufficiently long range was probably one of the least. It is extremely difficult to drop a bomb with precision even from a comparatively low altitude; and, it is stated, the modern rifle, if fired vertically into the air, will hurl the bullet to a height of about five thousand feet, while the weapons which have been designed to combat aircraft have a range of ten thousand feet or more. The most troublesome part of the problem has been in obtaining rapidity in range-finding, sighting, and training, and in correctly timing the fuse when explosive projectiles are used. Among many suggestions which have been made of protective measures against aerial invasion, one of the most remarkable is that the air should be 'mined' during periods of darkness and fog. The theory upon which this suggestion is based is that dirigibles, especially, would fly low, and be likely, on account of fuel considerations, to take the most direct course to their objective; and that such a course is practically as obvious as if the airship were condemned to a narrow lane marked out by signposts. The mines, containing large charges of high explosives and combustible material, would be attached to captive balloons anchored at close intervals so as to form a screen across the assumed route.

A NEW LOGARITHMIC TABLE—A BOON TO THE SCIENTIST AND THE ENGINEER.

The mathematician, the astronomer, the physicist, the surveyor, the engineer, and the navigator—not to mention other classes of workers—must ever hold in grateful memory the genius of Napier of Merchiston, who, by his invention of logarithms, lightened so enormously the labour involved in making lengthy calculations. By the use of logarithms, multiplication and division become mere matters of addition and subtraction; involution and evolution are robbed of half their terrors when they are reduced to multiplication and division. As

announced in a paper recently communicated to the Royal Society, the process of simplification has now been carried a step further. By means of a table giving the logarithms of logarithms, which has just been constructed by Mr E. Chappell, B.Sc., involution and evolution are robbed of *all* their terrors, for they are now reduced to addition and subtraction. This table, which Mr Chappell has named a *lolog* (log-log) table, will be specially useful to engineers and others dealing with formulæ in which fractional indices occur. It forms one item of a valuable set of *Five-Figure Mathematical Tables* compiled by Mr Chappell, in which, in addition to this entirely new feature, the ordinary logarithmic and trigonometrical tables are arranged in an unusually convenient form.

SUBMARINE SIGNALLING.

The apparatus for signalling under water has been much improved since the bell appliances used for this purpose were described in these notes. According to *The Engineer*, the latest device consists of a thin copper tube which is caused to vibrate one thousand times a second by a powerful electro-magnet. These vibrations are imparted to a drum which transmits the sound-waves through the water. This apparatus, which was invented by Professor R. A. Fessenden, can be clearly heard at a distance of nearly twelve miles, and it may be used either for sending or receiving messages. When a message is received the direction from which it comes is given by the instrument, while the distance away of the sender can be ascertained by taking the time between sending a message to him and the answering signal. The morse code in dots and dashes is used, and the speed is equal to that of wireless telegraphy. It must also be remembered that sound travels four thousand seven hundred feet a second in water, or about four times the velocity in air. This method of signalling should prove invaluable to submarines, which can thus locate their position from a 'parent' vessel on the surface; while in a modified form it can be applied to finding the whereabouts of enemy ships within range of the instruments.

LEAFLETS OF THE BOARD OF AGRICULTURE ON FRUIT-PRESERVING.

The Board of Agriculture and Fisheries has issued a number of special leaflets containing valuable information to those who have gardens, small holdings, or farms. One of these is on the subject of fruit-preserving, and another is on storage and disposal of apples and pears. The writer says that apples, especially those of the later varieties, should be carefully stored in cool, dry sheds, with a free circulation of air; and that bruised and decayed fruit should be removed. It is recommended that, even with the present high price of sugar, a certain quantity of fruit should be made into jams and jellies. In the

case of those who have to purchase their supplies, the low price of fruit will compensate for the high price of sugar. Liquid (syrup) glucose, which is made from maize, may be partially or even entirely substituted for cane sugar. Good results are secured in jam-making by replacing from a quarter to a third of the sugar by syrup glucose. No sugar is required in bottling fruit. A proper sterilising apparatus can be had for ten shillings, while airtight quart bottles cost about three shillings and sixpence to four shillings a dozen. Instructions are given in fruit-bottling for small-holders. The process consists in filling the bottles with fruit, adding water to within half-an-inch of the rim, and putting them in the steriliser, the temperature of which should be raised slowly to about one hundred and sixty-five or one hundred and seventy degrees Fahrenheit for about ten minutes. The bottles are then securely fastened down. Other special leaflets deal with storage of apples and pears, cheese-making, bee-keeping, and egg and poultry farming. These leaflets may be obtained free of charge and post free from the Secretary, Board of Agriculture and Fisheries, 4 Whitehall Place, London, S.W. Letters of application so addressed need not be stamped.

To Correspondents who wish fuller information regarding new inventions mentioned here, addresses will be furnished, when possible, provided a stamped and addressed envelope or post-card be sent to the Editor, 339 High Street, Edinburgh.

IN MEMORIAM.

HAMISH MACKAY,

DROWNED IN THE 'LUSITANIA,' 7TH MAY.

God's sunshine on thy closing eyes,
And at thy feet His sea;
Around were hidden wings unfurled
To bear thy soul from thee.

Godlike thy beauty, pure thy soul,
Could death for thee hold fear?
Through thee I learnt more splendid faith
In human goodness here.

Strongest of men, I see thee kneel,
Thy faith a little child's;
I see thee quaff this cup He held,
And still thy dear lips smiled.

Not dead, I know, but vanished
Awhile from eyes of men,
Who have not laid thee 'earth to earth,'
Nor sung thy requiem.

And what is left the beating tides?
A chrysalis floats away,
While I in radiant dreaming
Know thy rebirth to-day.

MORLICH M'LEOD.

Chambers's Journal

SEVENTH SERIES

AN EYE FOR AN EYE.

By TAFFRAIL.

PART I.

THE sub-lieutenant of H.M. Destroyer *Nestor* clattered noisily down the steel ladder and knocked softly on the lintel of the curtained doorway in front of him. He was rather pleased with himself, for the little ship had just returned to her base after spending the greater part of the last four days in the North Sea. The weather had not been pleasant, and he was very glad to be in harbour again, more particularly as the mail had just arrived on board, and he had in his pocket a bundle of thick letters which he was itching to read in the privacy of his cabin. They came from a certain young lady who usually addressed him as 'My darling Billy.' She was somebody else's sister.

There was no reply to his tapping, but he knew instinctively that there was some one inside. He knocked again, louder this time. 'Captain, sir?' he queried.

'Well?' came the answer, in a voice which sounded unnaturally muffled and weary. 'What is it? What d'you want?'

'I've come to show you those new charts you asked about, sir,' said the sub, drawing the curtain aside and stepping into his commanding officer's cabin. 'I have them here.'

The lieutenant-commander made no signs of having heard. He was dressed exactly as he had left the bridge half-an-hour before, in sea-boots, an old coat, and a once white muffler. He sat at the small writing-table under the scuttle, with a newspaper spread out in front of him. His elbows rested on the table, and his head was pillowed on his hands. He did not shift his position, but his shoulders worked spasmodically.

Jephson, the sub-lieutenant, approached and stood at his senior's elbow. 'I've brought those charts, sir,' he began again. 'I thought—Great Scott, sir!' he suddenly blurted out, his eyes opening wide with surprise; 'whatever's the matter?'

The lieutenant-commander had raised his head and turned his face toward him. There was a look of absolute agony in the eyes, and one or two tell-tale splashes still showed on the news-sheet before him. He brushed them aside with an impatient gesture, but it was only too evident

that he had been weeping. Crying! The skipper crying!

The sub could hardly believe his eyes. His first inclination was to leave the cabin, but then a feeling of sympathy prompted him to stay. The skipper was evidently in the deepest distress, and the youngster hated to see a fellow-creature in trouble without volunteering what consolation lay in his power to offer.

'I'm awfully sorry, sir,' he said sympathetically, still unaware of what was causing the other's grief. 'Can I do anything?'

'I'm afraid not, Jephson,' answered the lieutenant-commander, his face working pathetically as he tried to control his feelings. 'I've had an awful blow. My God!' he burst out fiercely; 'if ever I get hold of one of them! If I do I'll— Look at that! He pointed to a column in the paper.

The sub-lieutenant looked.

'British liner torpedoed by German submarine,' ran the conspicuous headlines. 'Ship capsizes in five minutes. Many passengers drowned. Seventeen survivors.'

Jephson stared at it, frowning. Then he suddenly remembered. 'Good Lord, sir!' he stammered awkwardly; 'is that the ship—er—was your wife?'

'My wife was coming home from Malta in her,' muttered the other, his voice husky with emotion. 'She is not among the saved. Good God! how it hurts!' It was a cry of poignant anguish. He dropped his head on his hands with a dry sob and stared into vacancy with unseeing eyes.

The sub crept quietly from the cabin, leaving the other to his silent grief. He could do nothing to alleviate it.

The German submarine U69 had torpedoed the *City of Edinburgh*. All the survivors were quite confident about that. They had read her number. It was quite clear and unmistakable.

Lieutenant-Commander Michael Dene was a changed man. He still did his duty efficiently, for it was not in him to do it otherwise, but the very heart and soul seemed to have been torn out of his existence. Before the tragedy he had

been happy and contented, and his keen ambition to do well in his profession had spurred him on. Then the war had come, and in spite of its risks and hardships he had welcomed it, for was it not the very thing he had been preparing himself for ever since he had entered the service? Now there was nothing left to live for. It seemed as if he could never be happy again, for not even the affection for his work could make up for the love he had borne his wife. His wife was dead! Dead! At times he could hardly bring himself to realise that it was true.

At first he had seriously thought of making away with himself to escape the awful grief numbed at his very soul, and on one occasion he sat silently in his cabin trying to make up his mind to rid himself of the world. He had the means of ending his existence ready to hand. A loaded pistol lay in one of the drawers of his writing-table, and he had only to point it at his head. A slight pressure on the trigger would do the rest. He wondered vaguely if he would feel much pain when the crash of the explosion came. Cowardly! Was it? He considered the point carefully. He had often heard that suicide was a coward's refuge. It seemed to him as if that was rather a mistaken idea, for even he, miserable and lonely as he was, realised what a tremendous effort it would be. He could never screw up his courage sufficiently to do the deed. He put all thoughts of self-destruction aside. It was a cowardly way of escaping from pain and misery, he eventually came to the conclusion. No, suicide was not for him.

His work, automatic as it had become, served to some extent to keep his mind off his great loss; but in his odd hours of leisure, when his ship lay idle in harbour, his thoughts always reverted to the tragedy which had completely wrecked his life. It became an obsession; he could not rid himself of his thoughts. The gaiety and idle talk of his messmates jarred on his nerves; though, with due respect for his feelings, they hushed their voices in his presence. Dene could have had their sympathy for the asking; but he did not want it. He became morose and gloomy. They had something to live for, something to look forward to. He had nothing. Life was not worth living, for henceforth it would be so unutterably lonely. But he would live, for all that.

Fog, gray blinding fog, with hardly a breath of wind or a ripple on the water. Daylight had long since come, but the rising of the sun had only served to make the murk more impalpable and intense than ever. Dene himself would have preferred a gale of wind. Bad weather, unpleasant as it was, permitted one to see; but now he felt like a blind man lost in a desert.

The *Nestor*, with three other destroyers, had been despatched from her base forty-eight hours before on an errand which has no bearing on

our story, and the four craft had been spread out ten miles apart the previous afternoon when the fog had come down as thick as a blanket. They had become separated, and had lost touch with each other, and had now been ordered by wireless telegraphy to make the best of their way home to their base. Dene, by dint of being particularly careful with the dead reckoning, and by constantly using his sounding-machine, had a pretty shrewd idea of where his ship was. He felt no qualms from the navigational point of view, though the North Sea was full of mines and most of the lightships and buoys had been removed. But the very fact of being unable to see more than four hundred yards made him feel helpless and irritable; and now, at seven o'clock in the morning, with his nerves all on edge, he was leaning over the bridge-rail trying to pierce the wall of filmy vapour which bounded his narrow circle of vision.

'What was the last sounding, Jephson?' he asked.

'Seventeen fathoms, sir,' answered the sub, whose morning watch it was.

The skipper went to the chart-table and looked at the printed sheet with the pencilled course of his ship laid off upon it.

'Humph!' he grunted. 'What water did we get at six-fifty?'

'Nineteen and a half, sir.'

'That's all right,' he muttered. 'We ought to be shoaling gradually. It fits in all right. I put her about here.' He placed his finger on the spot.

The sub acquiesced.

'In half-an-hour we'd better alter course to the northward,' the skipper went on, busy with a pair of dividers. 'We shall be'—

'Ship right ahead, sir!' came a sing-song but rather excited hail from the man on the lookout on the fore-castle.

Both officers darted to the bridge-rail with one accord. Both peered anxiously through the murk, but at first they could see nothing. The seaman who had hailed was nearer to the water than they were, and must have caught a momentary glimpse of something under the fog-curtain.

Then, almost imperceptibly, a long, gray, horizontal shadow came looming up out of the pall. It was quite motionless, but was manifestly something tangible; and, acting instinctively, Dene rapped out an abrupt order to the man at the wheel.

'Hard a-starboard it is, sir!'

The destroyer's head began to pay off to the left. The gray smear became more and more distinct, until at last it slid slowly out of the mist and into broad daylight barely four hundred yards distant.

The lieutenant-commander could hardly restrain a gasp of astonishment. It was a submarine lying stopped on the surface. A submarine, but not a British craft. Her nationality was amply proclaimed by her light-gray, almost

white, colouring, by her high, collier-like bows, and the peculiar-shaped conning-tower. A white, black-crossed ensign hung limply from a short staff. She was a German, and though no distinguishing number could be seen, her enormous size showed she was a vessel of a very late type.

'My God!' Dene exclaimed, hardly able to realise the opportunity which fate had thrown in his way. 'Open fire with the foremost gun! Steer straight for her, quarter-master!' He retained sufficient presence of mind to dash to

the engine-room telegraphs and wrench them both over to 'Full speed!'

The submarine, having seen the destroyer at the same time as the *Nestor* had spotted her, was making every effort to escape. A flutter of disturbed water bubbled round her stern as her propellers revolved, while the men on deck started to tumble down their conning-tower hatch like so many bolting rabbits. She was evidently about to dive.

(Continued on page 589.)

THE BALANCE OF NATURE.

By E. K. VENNER.

ONE of the commonest sights of the woodlands is a pole fixed horizontally between two trees. It is a place of ill-omen to the people of the wood. Death is there in a dreadful form; for nailed along the pole are carcasses of birds and animals, some of them dried and shrivelled, others quite recent fixtures. The woods are full of death. Every night overflows with tragedies, all of them enacted with a terrible and merciless suddenness which is the outcome of necessity and hunger; but the trail of death ends with each morning. Hidden away in the night, in brake and bramble and in the thick-nesses of the wood, are the remains of things, and the wood gives them decent burial. But this horrid perpetuation of death is quite another thing. The people of the wood have no part or hand in that. They, at all events, do their work for the most part in a decent, natural way behind the scenes, always excepting, of course, the eccentricities of the butcher-bird; but he is a freak, and one expects to meet with freaks and faddists in every walk of life. Therefore the pole of death is a contravention of the un-written law of the wood, which, like all the other natural laws, is constantly coming into collision with laws made by man.

That sinister pole, with its row of victims, speaks far more forcibly and suggestively than any notice-board which was ever put on the confines of the wood. It is the keeper's warning of the fate of those who obey the law of nature rather than the law of man. There they hang, a mournful set of relics, amongst which may be noticed, from time to time, sparrow and kestrel hawks, barn and tawny owls, jays, stoats, weasels, and rats, all victims of a common fate, all examples of the saying, 'The way of transgressors is hard.'

But in this case there is at least a question who the transgressors are. There is a necessity, no doubt, for keeping under what keepers would call vermin; but it is to be feared that the woodland execution-ground is rather expressive of the idea of extermination. 'These creatures have no right to live. They are vermin. They

interfere with our ideas. Away with them.' There is no idea of any usefulness attaching to these furry and feathered lives, no thought that they have a part to play in the economy of nature which is often beneficial and advantageous even from a human point of view, if that point of view were only more often taken.

The only one of that row of delinquents for which a policy of extermination could be reasonably urged is the rat. For him, as is pointed out, there is not a sane apologist. He is useless where sanitary science even in its most primitive form is practised; he is a robber, he is a conveyor of dread disease, and his depredations cost Great Britain alone some fifteen million pounds a year.

But the thing to be realised is that nearly all his companions on the pole of doom belong to the class of his natural enemies, who are ceaselessly at work, day and night, patrolling the fields and woods in all directions, and apprehending every rat at sight.

It is a curious thing how seldom these natural guardians of the law and their victims are seen, considering the vast host of them with which we are surrounded; and yet the brakes and hedges are alive everywhere with thousands of eyes that see without being seen, and with ears that are ever open to the thousand and one sounds of the countryside.

It is herein that nature's police have such a special equipment for their work. They are up to every move in the game. A clumsy human, for instance, sees a rat, and goes blundering after it with stick or stone or the first thing handy; or he comes across a trail, and sets a trap in it leaving such evidence of his handiwork that it serves as a danger-post as often as not. His victims see him, and pit all their powers of cunning and of approximation to their surroundings against him, with excellent effect from their point of view. But the case is otherwise when they are dealing with the secret police of the wild, whose cunning and quickness are constantly more than a match for their own.

Take the weasel and stoat, for instance, whose

taste for hares and rabbits and other things makes them the special objects of a keeper's animosity. Their lust for mere slaughter and destruction is undeniable, as many a poultry-house in the history of poultry-keeping has shown. But it is sometimes forgotten that the rat and its congeners are also involved in their love of destruction, and that the rat has yet to be born who can hope to cope with it. In fact, the ruthless ferocity of these little guardians of the law towards the enemies of the human race can hardly be over-estimated. It is not too much to say that the weasel is one of the most efficient and able members of our countryside police; it is the Sherlock Holmes of the animal world in the assiduity and keenness with which it follows its victims, which as often as not are rats and mice. Wherever they go it can follow, the sinuosities of its body allowing it to make way through the smallest of apertures and along the most contracted of channels. As an instance of this, a weasel has been known to enter a cage of freshly caught birds through an aperture adapted to the body of a mouse, slay the whole of them, and slip out through the same entrance before it could be apprehended by the enraged owner.

It is curious how often both stoats and weasels are to be found on the confines of well-frequented roads, often leaping across them in front of carts or bicycles. There seems to be something in these last especially challenging to the stoat, for I have heard of three cases at least where this member of the secret police has so far forgotten itself as to forsake its proper function of striking nature's balance in the background, and actually to pursue a cyclist along the high-road. In one of these cases the rider was a girl, who was chased by this ferocious little highwayman to the entrance of a village, where it was settled while trying to attack her as she dismounted. These incidents make quite credible the story of the attack by stoats on a man who had knocked over one of a pair with a stone. The survivor uttered a peculiar cry, and before the aggressor could realise its meaning he was attacked by a legion of stoats, which suddenly appeared in response to it, and ran up him with the greatest ferocity. Unable to shake them off, he rushed homeward with stoats all about him. Some dropped off as he ran, but five still clinging to him on his arrival home were killed by his servants. Had not his neck been protected by a thick woollen comforter he would have been vitally injured; as it was, he was seriously bitten.

It is this clinging power for which their forepaws are so well adapted that makes the attack of the stoat and weasel police so deadly, especially as that attack is always from behind. In a face-to-face struggle with some desperate old rat, the odds would, as likely as not, be in favour of the rat, at all events in the case of the weasel, which is considerably smaller than the stoat. Let the rat once seize a chance

of getting in with its sharp chisel teeth in a rapid succession of bites, its usual mode of fighting, and the issue would not be long left in doubt. But a sudden paralysing seizure from behind, a tenacious grip, and a single bite never to be loosed till the victim sinks down exhausted is another thing altogether, and makes us realise the dread inspired throughout the countryside by this terrible little hunter.

To be dogged by destruction in this deadly form is bad enough for the devastating hordes of the fields and barns; but they have also to take into constant consideration the terror of the air. If you have the good luck to escape, say, a weasel by some extraordinary chance, of what avail is it if you should come into the view of one of those winged horrors which are always floating about, day and night, different specimens in each? You may, to some extent, make calculations as to the whereabouts of some enemy on the ground, and avoid its habitat like poison; but what are you to do in the case of an element you cannot investigate without wings, out of which any moment may bring an awful silent apparition with terrible eyes, and a beak and claws that make your fur bristle to think of? That would be the point of view of a rat or a mouse.

When these wings of death belong to the owl, for instance, and when there are several pairs of immature wings to bring on in the background, it takes an astonishing tale of victims to meet the needs of the case. For instance, a pair of young owls which tumbled out of their nest in a hollow tree were picked up by the keeper's children and taken to their home a mile away. There the treasured captures were put into a cage and hung up outside the cottage. The next morning three young rats were found on the top of the cage. The parents had found out their children, and were not going to have them starved by ignorant humans. And they continued to bring contributions of rats and mice in such large numbers that the keeper finally made a resolution that he would never shoot another owl. He said he could not have believed it possible that a pair of owls could have done so much execution. In another place a pair of barn-owls were watched at their work. It was noted that in the short space of twenty minutes they carried food to their young twelve times, thus destroying some forty mice every hour they hunted.

The invaluable nocturnal work done by these aerial police cannot be overestimated, and the appearance of one of them on the pole of death should mean the dismissal of the keeper who placed it there. Eliminate the terror that flies by night, and we should not be long in finding out how much we owe to the ceaseless activity of those beautiful wings.

The same may be said of the work of the kestrel hawk by day. It is one of the guardians

of our woods and fields, but it often meets with a much shorter shrift than the owl. When it hangs suspended in the air over some selected spot, there is not a movement in the grass or soil that escapes its piercing scrutiny. The ground below, in fact, is subjected to a minute examination from what are, to all intents and purposes, a pair of field-glasses of extraordinary power and definition.

It will always be noticed that the hawk sustains itself in this position with its head to the wind. The stronger the wind the less perceptible is the movement of the wings; so much so that a kestrel was once noticed suspended in a high gale with wings folded close to the body, and with no visible muscular motion whatever. I watched one hovering over a haystack on one occasion. There was a furious headwind blowing which had a most retarding effect on a bicycle; but it seemed to suit the plans of the hawk beautifully, as he hung head toward it, lifting very slightly every now and then, but never carried away from his coign of vantage, as he searched every likely place for his prey. A cat sat watching hopefully on one side of the stack, affording a suggestive contrast between the two points of view, one dealing with a very limited area, and the other taking in all the details of the stack at a glance. On this occasion there was evidently 'nothing doing' down below, for, after hanging in the wind for some time, the hawk flew off to another hunting-ground.

It is the same with what we call the insect police. They are not objects of a keeper's wrath as a rule, and would not be found on the pole of doom amongst other feathered and furry fixtures. They fly at other game than that of the preserves. Enrolled as constant and active workers in this department are the tiny protectors of our trees and shrubs. It is true, you will find amongst them those which will do on occasions a most irritating amount of damage amongst fruit-tree buds; but, as in the admitted cases of destruction in the other department, a balance is easily struck in favour of the good that is done in other directions by the depredators. If one is patient enough to watch, say, a pair of blue tits, saddled with the responsibilities of a family, in their catering-work, it is easy to get some idea of the beneficial care exercised over our gardens. I once watched a pair for some time flitting in and out of a nesting-box, and I can only say that the succession of green twirling caterpillars which went into that box was enough to make the heart of a rose-lover go out in thankfulness to those little blue workers. Aphis-brushes, quassia-chips, soap-suds, and all the rest of our clumsy paraphernalia are all very well; but the fact remains that to arrest the spread of the horrid population of our trees and bushes with any hope of success you must fall back on natural means. We can bring nothing to the question to compare with the

lightning glance, the clinging claws, the unerring beak, and that innate faculty for examining exhaustively the under-side of things which are the distinguished marks of the officials of the insect department. The caterpillar must be met on his own ground, and his wriggling and secretive efforts must be counterbalanced by efforts which were called into being to outmatch his move at all points; efforts, moreover, which have behind them the all-powerful driving force of hunger. The thing is all worked out in the beautiful scheme of nature, in which one force is so perfectly balanced against the other that the disturbance of that balance is a very serious thing, and is bound to react on human interests. Statistics prove beyond possibility of doubt that the destruction of a bird population in any given place is sure to be followed by the destruction of vegetation.

Most illuminating instances of the fact come to us from Germany, where considerable attention has been given to the preservation of bird-life solely for utilitarian reasons. In the spring of 1905, we are told, Hainich Wood, south of Eisenach, which covers several square miles, was stripped entirely bare by the larvae of a little moth (*Tortrix viridana*), while a neighbouring wood in which birds had been encouraged by nesting-boxes and other means was untouched, and actually stood out like a green oasis. In the same neighbourhood good fruit crops have been obtained for many years in those places which have been longest and most abundantly provided with nesting-boxes, and where most of the trees have grown up with the protection of birds.

In Jamaica it has been noticed that man is beginning to pay a high price for the profit he has made out of feathers. 'For,' says the writer of an interesting article, 'now that the beautiful native birds are disappearing, ticks and other noxious insects are increasing to such an extent that food crops are often destroyed, and several kinds of cattle are overtaken by strange maladies and perish.' The destruction of various plumage birds in the United States often causes heavy loss to farmers and fruit-growers. The beautiful scarlet tanager, that is now disappearing, can kill two thousand one hundred moth caterpillars in an hour; and the yellow-throat warbler can eat three thousand five hundred plant parasites in a minute. So, while five hundred thousand birds are now yearly destroyed in the United States for the adornment of women's hats and garments, the increasing damage done to the trees, vegetables, and fruit of the country amounts to more than twenty million pounds. In Africa, we are told, it is now known that certain flies which spread some dreadful tropical maladies are the natural food of the guinea-fowl, which Europeans are so wantonly destroying; while it seems that very possibly the destruction of birds which kept down deadly insects is a contributing factor

to the spread of sleeping sickness through vast regions of the African continent.

Some of the most recent items against humanity come from statistics of 1913, which record the slaughter of seventy-two thousand egrets, twenty-five thousand humming-birds, and one hundred and sixty-two thousand kingfishers. This last item ought to touch us very nearly, as it indicates the progress that has been made toward the extinction of one of the most beautiful of all our home birds.

We cannot afford to disregard the serious warnings and considerations connected with the upsetting of Nature's balance. We are surrounded with vast hordes of enemies which are never far from assuming the proportions of one of the plagues of Egypt; and when we think how utterly unable we are to cope with this state of things without the co-operation of our furred and feathered friends, we should regard this co-operation as one of the most valuable assets of our national life.

THE BRIGHT EYES OF DANGER.

By JOHN FOSTER, Author of *On Old Speyside*, *The Bernardine*, *The Ship of Shadows*, &c.

CHAPTER XXXVII.—FROM THE CULBINS TO SPEYSIDE.

PRESENTLY I heard cries on the right, and the crack of a pistol. I got to my feet, and striking into the wood in the direction of the shot, came upon the captain. He was on one knee, behind a tree, pistol in hand, and signalled to me to lie low beside him. In front of us was a space, about thirty yards wide, clear of trees, but covered with a tangle of broom, breast-high.

'He's in there,' Anthony whispered. 'We came on him suddenly in the wood. We got in a shot apiece. I heard him come down, but he ran on again, and for a while we lost him. Syne he appeared, and there'—he pointed to the farther edge of the broom—'he threw up his hands and fell. Monsher's slippin' roun' on the flank.'

In a minute or two Bertrand's head and shoulders appeared on the opposite side. He was going slowly, looking at the broom. Coming in a line with us, he waved to us to come across.

'I'll watch this side,' said Anthony.

I plunged into the midst of the strip, Bertrand watching the other side; but not a feather of the broom stirred. Not satisfied, I signalled to the others, and the three of us quartered the place across, up and down, from side to side, and top to bottom, patiently and thoroughly, but to no purpose. We drew blank.

'The deil's kind to his ain!' said Anthony. 'The brock has gi'en us the slip.'

We had come out at the end of the strip nearest the estuary, where a high bank sloped abruptly to shingle bordering a flat stretch of wet sand, with no 'cover' of any kind on it. There was nothing for it but to back with all speed to the edge of the Culbins and cross the Findhorn again to the port. Our mortification cannot be described. It was beyond the cold shackles of pen and ink.

Tired, outwitted, entirely out of conceit with ourselves, we started to trudge back along the water's edge. We had gone about a hundred yards, when Anthony stooped and picked up a pair of shoes. I looked at the brass buckles.

'Macdonell's!'

'Ay! Look!' The captain pointed to the wet sand.

The prints of stocking feet were plainly to be seen running toward the river. 'The water!' came from us all. Already the captain had the spyglass up, and was ranging the estuary.

'He has got the wind'ard o' us and no mistake,' said he. 'I come near to admirin' him! Can ye pick him up?'

I took the glass. A tiny black dot showed far away on the bright, smooth surface of the estuary, drifting with the current, but moving in a slant toward the land. It might have been a duck or a bit of driftwood; but gradually, as I looked, the dot grew to the head and shoulders of a swimming man. Coming to shallow water, he waded out, the light glinting on his white shirt, and reaching the bank, sat down and wrung the water from his hair. This done, he stood up, shaded his eyes, and looked across toward us. Then he saluted us twice with a low, mocking bow. It was Macdonell.

'I would give a hundred guineas for a boat,' groaned Bertrand. 'A man of resource! I wish I could admire him! He can swim like an otter. He must have slammed a fall, and then doubled back under cover of the broom to the water! Oh for a boat!'

'One thing at a time,' said I. 'He has the heels of us. He has won the trick. Let us concentrate on getting the French money safely south. After that, a man-hunt! He cannot hide for ever. If Left Hand does not face my sword again before long, it will be because I am dead.'

Macdonell was still standing watching us. He waved a hand as we turned from the water, and began to pick his way over the shingle. At the top of the slope he turned round, kissed his hand triumphantly, and disappeared among the tumbled hillocks.

Bertrand tossed the shoes into the water.

'I should not wish a beggar to stand in them.'

Philip must get another pair to die in. Let us go!' and, without another word, we turned our backs on the scene of our defeat.

At the Culbins, where I picked up my coat and sword, we made the crossing of the Findhorn, all aglitter in the sunlight, the quick-winged oyster-catchers piping round and round the boat.

The landlord, along with the mate and Innes, was at the jetty.

The man's broad face lengthened visibly when we told him that 'Mr Mortimer' was not likely to return. 'He hasna paid his lawin'—saxteen shillin's, no less!'

On condition that he made haste to spread a breakfast, Bertrand gave him a guinea, his gloom vanishing magically at the sight of it.

The mate had an easy task to guard Innes, who had sought nothing better than to sit and stare moodily into the fire.

Innes himself came to me, a gleam of hope in his eye. 'Where is he? Have ye—— Is he—is he dead?' he asked. When I told him that Left Hand had escaped he threw up his hands. 'I'm a lost man, then. He'll kill me.' He laid a hand on my arm. 'Ye'll take me with you? Ye'll no' turn me adrift now, Mr Layton!'

I told him that his future would depend on his loyalty to us, but I resolved not to let him out of sight until the safety of the French money was assured.

We were all dead-tired. To go on without sleep was a flat impossibility, but before resting, the three of us, after breakfast, held a council regarding our next move—the getting the French money on board the *Gannet*.

'Here's my mind on't,' Anthony said: 'The mate can bring the lugger in here th' morn. In that case, we can get the stuff on board at night, but gettin' her out is another story. The Preventive men ken her, and although the money isna contraband, it's French, and in these days it would be a braw excuse to send a King's man to her tiller. Nuh! If the *Gannet* lay off near where the money is hid, we might get on board at night, but we risk weather. Nuh! The best plan is for the lugger to lie where she is at Garmouth, until we manage to bring the siller there by land. Then, if the coast is clear, we can slip it on board, up anchor at the darkenin', and be round Rattray Head by mornin'. What say ye?'

We took the captain's advice, and, after ordering a couple of horses to be ready in the morning, lay down in the early afternoon; the mate on a couch across the door of Innes's room, and the rest of us in quarters cramped enough, but redeemed by the warmth and perfume of a peat fire.

In the morning I was awakened by the thunder of a heavy sea on the beach and the whoop of the wind round the gables. A nor-east gale

was blowing, driving against the windows wild bursts of rain that boded ill for the comfort of our passage through the hills to Speyside; but, black weather or fine, we had the day's business on hand. I hurried, shivering, into my clothes, to join the others at breakfast by candle-light. The horses were ready at the door, and at day-break we went out into the wild, dark morning. The wind was in our teeth, and an icy stinging rain sent us cowering under the lee of the horses, so that we made but slow progress, plodding doggedly on, heads bent to the gale; but the day promised the end of our adventure in the North, and the thought of it set the menace of the weather at naught.

The cold sky-land of clouds began to lighten slowly in the east, the outline of the coast just distinguishable in a gray smother of flying foam and spindrift, the awakened seafowl swinging, dipping, wheeling into the gale with inimitable cries. In a lift of the weather I got a glimpse of the Fountain Reef, its column bent in an arc by the force of the gale, a long tattered pennant of white trailing from its crest; and farther out, indescribably mournful, yet with a wild and mystical beauty in its setting of gray streaming weather, appeared at intervals the meek bowed head and clasped hands of the Virgin, the figurehead of the lost brig. The sky lowered again, and my last impression of that lonely place, except in dreams that I am glad to waken from, was a long callous procession of waves.

Striking obliquely through the sand-dunes toward the dense blanket of whins where we had secreted the French money, we found the hiding-place without difficulty, the bags safe and untouched, exactly as we had left them. To stow them into the panniers was the work of a few moments. They were then covered over with innocent-looking peats, surcingle of rope slung round the whole, and the little cavalcade started for the Spey valley.

'Keep close together,' was Anthony's last injunction. 'A mist on the hills might be a kittle business. Bar accidents, we'll be on board the *Gannet* before sundown.'

The wind, as we struck southward, was at our backs, an unspeakable relief, for our faces were smarting from the needles of the rain. We jogged on, keeping the horses at a brisk walk, Anthony guiding us a few yards in front. Smuggler, with his hand against authority, dodging the law, an ill character to meddle with, to us he had proved the staunchest of comrades, honest, resourceful, courageous. His livelihood had given him equipment beyond the ordinary law-abiding citizen. Most valuable for us, he knew the byways that the lighthousemen used for carrying contraband inland, leading us through wild moorland and wintry inhospitable-looking woods without a check. We would come to an apparently trackless waste, or a burn swollen

by the rain. A turn to right or left, and he had found a path or a ford, as though signposts invisible to us guided him. Not once did he lead us into a *cul-de-sac*. On we went, breasting uplands, through rain-discoloured streams, down steep slopes. Never a soul did we see but one man, a ragged-looking object who appeared suddenly from a hollow. He was looking for some strayed cattle, he told us, and asked if we had seen any; but as to whether he was a liar or not I am in two minds to this day.

We swung to the right, giving Elgin a wide berth (for towns meant inquisitive gossips and prying eyes), and after five or six hours crossed the little river Lossie above some waterfalls, and came to high moorland, brown, bare, a place of wide horizons.

'We'll no' see a reekin' lum now until we come down near the Spey ayont the hills,' Anthony told us; and indeed the place was

solitary to the last degree, no sound breaking the silence save the horses' monotonous hoof-beats and the strange wary calls of the moor-cocks.

The weather relented, the wind dying hard, the laggard sun clearing the sky of the ragged, discoloured remnants of the clouds, revealing the scalp of Ben Rinnes in the distance, powdered with white, the herald of the coming winter's snows. On our right the uplands stretched to the brown, windy heights of the 'Roof of Moray,' and for a couple of hours we took the gradual ascent along its flank. Just as we breasted an abrupt rise in the path the sun made a gallant stride, unveiling below us one of the fairest sights in Scotland—the Spey valley, the dark-green tartan of a forest of proud pines, shot here and there with a sparkling thread where the sun struck the bright steel chain of the river; beyond it the blue of broad-shouldered hills.

(Continued on page 579).

THE SOCIAL EVOLUTION OF HONOURS.

By W. V. ROBERTS.

THE lists of King's Birthday and New Year Honours are issued with such punctilious regularity that few people, probably, stop to inquire how far they mark the progress of social evolution in this country. Of course everybody concedes that the old order has changed, giving place to new; that the peers of to-day are not the direct descendants of the barons who played so great a part in our early history down to the signing of Magna Charta or perhaps a little later. The title of 'thane,' for example, has fallen out of usage. Yet the thane was a man of rank in Anglo-Saxon life, required to hold land and other property, and to perform important duties. To-day he is known to many chiefly because of the part which the Thane of Glamis or the Thane of Cawdor is made by Shakespeare to play in *Macbeth*, which, by the way, takes us back to a time somewhere in the eleventh century.

But what is the chief characteristic of change as it affects social honours, and in what respect has tradition been continued or broken? One may trace the answer largely in the ownership or non-ownership of land. The power and authority of the ancient barons rested largely on land-ownership, and the association of the peerage with the land is a tradition that has persisted. Even to-day it is computed that members of the peerage own a third of the land of the United Kingdom; and there are those who, rightly or wrongly, define a 'gentleman' as one who owes his income to rentals derived from land, and who has not associated himself with 'trade.' It is recorded that as lately as the time of King George the Third the sovereign was averse to the elevation of any one to the peerage who was not a member of an old county

family, and counted, therefore, as one of the landed gentry. There was some stir when His Majesty George the Third conferred a barony of the United Kingdom upon Mr Robert Smith, a great banker of that day, under the title of Lord Carrington. But quite recently a descendant of that peer—one of the most popular men in society and politics—has become successively Earl Carrington and Marquis of Lincolnshire. With tradition once broken, the gap widened. Bankers, financiers, manufacturers, brewers, and others were admitted to the peerage, and the idea of ownership of land being the sole stepping-stone to a title has gone for ever. What, for instance, would peers of four or five hundred years ago have said to the creation of such peerages as those of Lord Macaulay, Lord Leighton, Lord Lister, or Lord Tennyson? Not one of the four could have claimed a peerage on the ground of landed possessions, and the gifts that distinguished them would hardly have been recognised. Now personal distinction is no bar but a pathway to the peerage, and 'trade' is no disqualification. The company-promoter is frequently alert to secure peers for his directorates, and more than one peer have opened shops in London for the sale of the products of their land.

To some extent the change in the position is illustrated by the change in the character of the title. Trace the various modifications for a moment. The duke is the highest of our modern titles. Most people would say at once that it is derived from the Latin *dux*, 'a leader.' Among the Normans the commanders of armies were called dukes—Duke William, Duke Richard, and Duke Robert, for

example. When Edward the Third introduced the title into this country he followed the fashion which had then come into vogue on the Continent, and styled his eldest son, the Black Prince, Duke of Cornwall, thus giving the title a place-name—in other words, associating it with land. The Duke of Cornwall has been a title of the eldest son of the British sovereign ever since, and the revenue from the lands of the duchy is still enormous. One may briefly recall, though the facts are well known, that other titles in the peerage which we have introduced from abroad also originally indicated connection with the land. That of marquis was first given to those who commanded the marches or border districts. The earl had charge of his county, and to this day the earl's wife is a countess. In the earl's absence with the king or Court the affairs of the county were conducted by his deputy or *vicecomes*, who survives in the viscount of to-day.

That association with the land was almost invariably emphasised with the place-name of the title. Even now, when a new peerage is conferred, there is a question whether the recipient will choose to be known by the name of any estate he may happen to possess, and many familiar surnames become lost in a place-name. Mr Disraeli, for example, became merged in the Earl of Beaconsfield. But the practice of adhering to the surname for the purpose of a title is growing, and has distinct advantages in maintaining identity, as any one may see by recalling such peerages as those already mentioned—Macaulay, Lister, Leighton, Tennyson; or by adding to the list the titles of Lords Wolseley, Roberts, Kitchener, Fisher, and many others.

A further change is to be noted in the frequency with which peerages are now created, amounting almost to democratisation. At the death of Queen Elizabeth the peers numbered only about sixty. James the First added forty-five, George the Third nearly four hundred, and Queen Victoria nearly three hundred. Now there are nearly seven hundred peers, and the numbers creep up almost every year, notwithstanding a steady stream of extinction through lack of male heirs. The holding of certain high offices, such as the Viceroyalty of India or Governor-Generalship of Canada, now usually means a step in the peerage. A peerage is generally given to the Speaker of the House of Commons on laying down office, because, as he has been First Commoner, no other dignity giving precedence above the First Commoner could be offered. Circumstances are constantly arising leading to the creation of new peerages. Thus for the part he played in the financial crisis which followed the outbreak of war a peerage was bestowed on the Governor of the Bank of England.

Another fact which marks the change from the old order to the new is that, whereas titles in the peerage are, as belonging to the older

order, hereditary, none of the newer orders of distinction, with the exception of the baronetcy, is hereditary, and the baronetcy was of course in its origin a monetary distinction. When James the First instituted it no less a sum than one thousand pounds had to be paid for each baronetcy, and not more than two hundred baronetcies were to be created. Both in England and in Ireland bestowal of the order was made the means of providing funds for defending the new plantation in Ulster, whence in the popular view the 'Red Hand' of Ulster. Later Charles the First extended the order to Scotland in association with the scheme for developing Nova Scotia, and something like three thousand pounds had to be paid for each baronetcy. But all these conditions were swept away when, with legislative union, came the recognition of baronetcies as an order of the United Kingdom.

A knighthood, of course, is not hereditary. It is an old title that figures largely in chivalry, story, poetry, and song. In recorded history it was conferred by King Richard the Second on William Walworth, Lord Mayor of London, for mortally striking Wat Tyler to the ground, and many trace its present form to that incident. Queen Elizabeth thought it a sufficient honour for Francis Drake in recognition of his exploits on sea. Nowadays it is given with some freedom for service in the public weal in almost every sphere of activity.

But perhaps the most significant point to note is that, while in bygone days the sovereign rewarded a favourite with a grant of land or a peerage, the recognition of service to-day most frequently takes the form of appointment to one of the orders of distinction which are never hereditary. Two of these, however, may fairly be described as ancient. The Order of the Garter, legend says, dates back to the battle of Acre, when King Richard the First caused twenty-six knights who stood by him to wear thongs of leather about their legs. In its present form the order was founded by Edward the Third. The Garter is not now of leather, but of dark-blue velvet, edged with gold, and having a buckle and pendant of richly chased gold. Round the buckle is the motto of the order—'*Honi soit qui mal y pense.*' As to this there is a tradition, difficult to prove or disprove, that at a Court ball the Countess of Salisbury, who stood high in the favour of King Edward the Third, dropped her garter. The King picked it up, and, observing some of his courtiers smile as though this were not an accident, exclaimed, '*Honi soit qui mal y pense.*' Hence the adoption of the motto. In 1831 membership of the order was limited by statute to the Royal Family and twenty-five knight-companions (with occasional extra knights admitted by special statute), who are mainly chosen from foreign royal personages and men of the highest rank in this country.

The inclusion of foreign royalties recently led,

as readers will recall, to a very acute controversy. The Kaiser, the Emperor of Austria, the King of Württemberg, the German Crown Prince, the Grand Duke of Hesse, Prince Henry of Prussia, the Duke of Saxe-Coburg, and the Duke of Cumberland were all Knights of the Garter, and the question arose whether, owing to the character of the war, they could retain the dignity. Popular report said that the Kaiser resigned at the outbreak of hostilities, but this, it was found, had no legal effect, as no provision was made for the resignation of a knight. King George therefore solved the matter by striking all the eight names off the roll. The King of the Belgians received the honour in succession to his late uncle, King Leopold. The Earl of Rosebery, ex-Prime Minister, and the Marquis of Lansdowne, some time leader of the Opposition in the Lords, are Knights of the Garter. Sir Edward Grey is the only commoner holding the distinction, a Garter having been bestowed upon him some months ago in recognition of his work as Foreign Secretary. More recently, for his great services at the War Office, His Majesty conferred a Garter upon Lord Kitchener.

The Order of the Bath is usually counted as dating back to the fourteenth century. The honour of founding it is ascribed to Henry the Fourth, who, at his coronation, we are told, fixed the number at forty-six. It is said that the name is derived from the custom of bathing by the knights before receiving the golden spur, one of the insignia of the order. But the original form of the order became extinct. George the First revived the name under new conditions, military and civil sides have been introduced, and the number of knights and companions is unlimited.

The newer orders illustrate the growth both of the United Kingdom and the Empire. The Order of the Thistle is peculiarly Scottish; that of St Patrick is Irish. The Order of St Michael and St George specially marks the colonial service; while the Star of India, the Order of the Indian Empire, and the Kaisar-i-Hind, as the names imply, are reserved mainly for recognition of work relating to India. The further growth of rewards for service to the Empire may be traced in the establishment of

the Royal Victorian Order about the time of the Diamond Jubilee, thus setting a seal in some degree upon the many activities of Queen Victoria's reign; while the Imperial Service Order, inaugurated in 1902, marks the close of the Victorian era and the beginning of the short reign of King Edward the Seventh. Beside these are orders, notably the Distinguished Service Order, conferred in special recognition of military or naval distinction, as bestowal for many heroic acts during the progress of the war abundantly proves. Ladies have the Order of Victoria and Albert, the Crown of India, and the Royal Red Cross, the last-named, of course, for the work of nursing. They may also be members of the Order of St John of Jerusalem.

Another reward greatly coveted, marking personal distinction rather than the possession of property, is membership of the Order of Merit. This again is a new order. It was instituted as recently as 1902. The sovereign may admit to it only twenty-four members, who must be subjects of the Crown 'who have rendered exceptionally meritorious service in navy, army, or the advancement of art, literature, and science.' Who shall say that that intention has not been maintained when it is seen that the members of the order have already included or now include such names in the army and navy as Wolseley, Roberts, Kitchener, French, Fisher, and Seymour, with in other walks of life names of such eminence as those of Lister, Huggins, Hooker, A. R. Wallace, Lord Rayleigh, Lord Bryce, Lord Morley, Lord Cromer, Alma Tadema, F. G. Watts, Holman Hunt, Sir William Crookes, Florence Nightingale, Thomas Hardy, Sir Archibald Geikie, Sir Edward Elgar, Sir J. J. Thomson, and Lord Haldane? Yet, while the Order of Merit ranks so high, its distinguishing letters O.M. pass almost unnoticed by the multitude. Like the Privy Councillor's P.C., the O.M. confers no title such as 'Sir,' and of course it is not hereditary. But in considering it, the idea that emerges is that the O.M. and all the other distinctions that have been enumerated are conferred not for territorial greatness, but for service in one of the myriad forms of activity that aid mankind or add lustre to the State.

BETTY GRIER.

By JOSEPH LAING WAUGH,

Author of *Robbie Doo*, *Cracks wi' Robbie Doo*, *Thornhill and its Worthies*, &c.

CHAPTER X.

THE painters have come and gone, and on the dining-room walls and woodwork they have left evidence of tasty, careful workmanship. John Boyes, to whom the question of wall-paper was referred, was of the opinion that the decorative scheme adopted by Mrs Black for her parlour

was not exactly applicable or advisable in our case; so Betty at once deferred to his better judgment, but warned us, all the same, that if the work didn't turn out a success we were not to blame her. There was, however, no occasion for what she calls 'castin' up,' as the room looks

exceedingly well, and we—that is, Betty and I—have complimented John Boyes, who likewise looks exceedingly well, not so much perhaps by reason of our commendation, but because his account was asked for and paid the day after the work was completed. I understand the general rule in the locality is to pay tradesmen's accounts once a year, and when I offered such prompt payment John was both surprised and perplexed.

'I thocht, Mr Russell,' he said, 'that you were satisfied wi' the job;' and he placed his hat on Betty's kitchen dresser, fastened a button in his coat, and stood on the defensive.

'And I *am* pleased with the job, Boyes,' I replied. 'You and your men have worked well, and—and whistled well,' I added, with a laugh; 'and in attending to this work just now you have suited my convenience.'

'Well—but—does it no' look as if ye warena pleased, when ye're payin' me so soon?'

'No, no, Boyes, you mustn't think that. I happen just now to have the money beside me, and now that the work is completed it is yours, not mine.'

'Oh, that puts a different complexion on the face o't, as the monkey said when he pented the cat green;' and he gave a cough of relief, and surreptitiously bit off a chew of brown twist. 'It's no' often that money's put doon on my pastin-table, as it were, an' it's braw an' welcome. I assure you I'll no' forget ye wi' leebral discoont, let me tell ye.' When he came back to receipt the account he borrowed a penny stamp from Betty, and with great deliberation and no little ceremony drew his pen several times through the pence column, completely obliterating the 8½d. 'Ye see, sir, when a gentleman treats me weel, I'm no' feart. We'll let the eichtpence ha'penny go to the deevil, an' that'll be five pounds six shillin's—nate, as it were.' He stowed the notes away down in his trousers-pocket, unbuttoned and rebuttoned his coat, and jocosely informed me that the price of liquid drier was on the rise, and he would now lay in a stock before the market was too high. An hour afterwards I saw him emerge from the side-door of the inn, wiping his mouth with the back of his hand, and the term 'liquid drier' was to me stripped of any technical vagueness it had previously possessed.

I have rearranged all the old dining-room pictures so that, without discarding any of them, I shall have sufficient space for the painting of Nith Bridge which the Laurieston minister looked upon as a valuable asset to his bazaar. One day, when I was confined to bed upstairs, I pencilled a note to my confidential clerk in Edinburgh, asking him to find out in which of the five Lauriestons noted in the Post-Office Directory a bazaar was to be held, and to make sure of purchasing thereat a certain oil-painting of which I gave full particulars. Ormskirk is a

cute, long-headed chap; and, knowing the man well, I was really not surprised when yesterday morning I received a letter from him advising me that, without any difficulty, he had 'struck' the right Laurieston, and that through our corresponding agent in Falkirk the picture in question had been secured. Following out my instructions, he is getting it suitably framed; so I trust shortly to see the space filled which I am reserving for it.

Poor Betty has put herself to no end of trouble over the modernising of this room. She has planned and worked unceasingly; and as she couldn't be in two places or do two things at once, Nathan and I these last few days have been in a manner neglected. I was sorry to know of her toiling on late and early, and I told her to get a woman in to help her; but all she said, and that with a sniff, too, was, 'It may happen;' and for the first time I saw Betty's nose in the air. And now that everything is done that she recommended, she is regretting all the expense I have been put to, and bewailing the fact that 'eften a' it was hardly worth while.' 'It's a braw, braw room, Maister Weelum,' she said, as she surveyed it for the twentieth time from the doorway—'a braw room indeed, and I trust ye'll lang be spared to enjoy it. Ay, I do that;' and she sighed.

I looked keenly and quickly at her.

'No, no, Maister Weelum, I dinna mean that. I'm no a dabbler amang leaf-mould;' and she laughed cheerily. 'A' the same, an' jokin' apairt, I trust ye'll live to get the guid o'a' your ootlay. At ony rate, ye'll be gay bien here ower the winter. An' when ye're weel again, an' away back to yer wark in Embro', ye'll no' forget that ye have sic a place here. Somewey, I think ye'll get marrit sune—hoo I think sae I canna tell, but the look's comin' to your e'e—an' whatever the lucky leddy may be, ye needna be feart to bring her here, for it's a room fit for a duchess.'

The early fall of snow, which I shall ever associate with the doctor's love-story, was, after all, very slight, and except in the uplands, where it lies in the crevices gleaming white in the wintry sun, it has almost entirely disappeared. I have been allowed outside again, and, but for a little stiffness, due, the doctor says, to inaction, I am feeling wonderfully strong and even vigorous.

John Kellock the butcher is the nominal owner of an old bobtailed collie which rejoices in the name of Bang. Bang carries with him into old age many mementoes of his pugilistic days, not the least obvious of which are a tattered and limp ear and a short, deformed foreleg. He is long past active service, and only barks now from the shop-door when sheep pass along the village street; but he dearly loves a quiet dander down the pavement and along the country road with any one who has a mind to chum with him

and can keep step with his. John Sterling the shoemaker is also the nominal owner of a dog, a Dandie Dinmont named Jip, which was long a doughty antagonist of Bang, but he is now on the pension list too, and glad of congenial company of limited locomotive capabilities. So the three of us—all more or less ‘crocks,’ and mutually sympathetic—take a constitutional together almost every day. I have mentioned Jip last, but really it was he who made friends with me first. His master made no demur to Jip’s frequent strolls with me, as he himself leads a sedentary life, and no man knows better than he that a dog should get exercise; but since Jip has on more than one occasion taken French leave and remained overnight with me, I am afraid jealousy is springing up in the shoemaker’s breast. Bang noted the ripening acquaintanceship, and girmed disapproval as we passed the butcher’s shop; but I never neglected an opportunity of scratching his shaggy underjaw and talking coaxingly in a ‘doggie’ way to him, and so it came to pass that after following us bit by bit, day by day, he agreed with Jip to bury the hatchet, and we are now a happy trio and the very best of friends.

As companions in a country walk I prefer Bang and Jip to any man I know. I can be silent and meditative, and they don’t feel neglected or out of it; and when I am minded to talk, they, in the wag of the tail and the intelligent look of the eye, respond and approve. But they never trespass upon my attention or disturb my vein of thought.

At first, after our walk, when I reached Betty’s door, I asked them to come inside, but they stood with a dubious look in their eyes and with heads turned sideways. Then Jip evidently remembered that John Sterling had paid his license, and that he was in duty bound to make some show of recognition; so he walked sedately and with fixed purpose across the street, while Bang, with recurrent memories of truant acts associated with ash-plants, limped his way to Kellock’s door. Now, however, they have both flung discretion and fears to the winds, and accompany me to my fireside with an ‘at home’ sort of air, and just as if Betty’s abode were their own.

Betty has a cat, a very nice, comfortable-looking cat, with a glossy, well-cared-for fur, and a strong masculine face; and she often wonders why I take no notice of Jessie, as she, in her simplicity, misnames him. The truth is, God’s creatures, great and small, interest and appeal to me, but I cannot love cats. I admire their graceful movements, their agility, their cleanliness so far as their fur is concerned; but their eyes cannot draw me lovingly to them as a dog’s can, and I have the feeling that they are capable of loving only those who minister to their wants, and that they are putting up with domesticity because it assures them of food and shelter

without putting them to the trouble and inconvenience of seeking it for themselves. I am sorry I cannot love Jessie, but it can’t be helped. Jessie, I know, never loved me; and since Bang and Jip have got entry to the house I know she positively hates me.

This afternoon Bang and Jip accompanied me as usual in my stroll, and after I had leisurely surveyed all the countryside around, and the two dogs had to their hearts’ content explored every rat-run in the roots of the bordering hedgerows, we turned for home. For a little while I halted at Hastie’s gate, and watched with interest the northward rush of the afternoon express. I remembered how, when a boy, I used to stand at this coign of vantage, with my eyes riveted on the speeding trains, following them in imagination and desire through distant fields and woods, past towns I knew of only through my geography, on and away to the busy, bustling terminus on the Clyde, with its big houses, its long streets, and attractive shops. How I envied the driver on the footplate, and how I longed to be a passenger with him *en route* to the city which was then to me unknown and unexplored! *Experientia docet*; the express in its flight was as interesting to me as it was then, but the desire and longing to be in it were lacking. ‘No, no,’ I said to myself; ‘no bustling city for me at present. Here around me is life without veneer; here is the peace I crave; here, I feel, is the goal.’ The sound of approaching footsteps cut short my reverie. I turned my head, and for the second time I looked into the eyes of my dream-lady.

Had I had time to gather my wits and consider the situation, I should probably have recognised her presence by merely raising my hat, but this was denied me; and, acting on a sudden impulse, I went forward to meet her with my hand outstretched. With a look of surprise and, I imagined, annoyance, she stopped and regarded me earnestly for a moment. In a flash it came to me that we had never been introduced, and I blushed awkwardly and retreated a step, muttering an incoherent apology. Then ensued a long pause, an awkward silence. It was Bang who came to the rescue, and saved the situation. Wagging his scraggy apology for a tail, he sidled up to her, and in an ingratiating, wheedling way which only a dog possesses, he claimed her attention. She spoke to him, and stroked his shaggy head. Then Jip ventured forward, demanding his share of her favours, and she bent down and asked him his name. I remained tongue-tied and ill at ease, and was wishing myself a hundred miles away, when she suddenly looked toward me and smiled.

‘I consider a collie and a Dandie Dinmont ideal companions,’ she said. ‘They are evidently very much attached to you, and old friends are the best friends.’

‘Friends, yes; but they don’t belong to me,’

I replied. 'Bang here is an old pensioner of the village butcher, and wee Jip is the apple of our local shoemaker's eye. We've been good chums since I came down here, and I seldom go for a walk without them.'

'They weren't with you that day in Nithbank Wood?'

'No.'

'By the way,' she hastily interposed, as if glad of an opening, 'I am pleased to have met you again, and to see you are none the worse of your indiscretion in venturing so far when you weren't feeling fit. You have only one walking-stick now, instead of two, so I argue you are making good progress. Do you know,' she continued, and she gave me a look which set my heart thumping, 'I have, time and again, reproached myself for leaving you as I did. You acknowledged you had attempted too much, and you looked so helpless, so—so'—and she hesitated. 'What is that very expressive Scots word, now? So'—

'Forfaughten,' I hazarded.

'That's it—*forfaughten*; and you must have felt *forfaughten*, otherwise the word wouldn't have appealed to you as suitable.'

'Well, I admit now, I was, but at the time I didn't wish you, a lady and a stranger, to know it. Besides, you had already done a good deal for me, which, allow me to repeat, I shall not readily forget.'

I was gradually regaining the confidence I had lost, and felt inclined to say more, and to tell her of my dream and what her presence meant to me; but I restrained myself; and, pointing to the paint-box she carried, I changed the subject by asking her if she was finding much inspiration in our beautiful surroundings.

'Yes—oh yes!' she replied; 'it is a beautiful countryside, and the longer I live in it the more I see in it to admire. A wooded locality, such as this, looks at its best—at least from an artist's standpoint—in the late autumn, when sufficient foliage is shed to allow the gray-purple of the branches to mingle with the yellow and russet of the leaves. I am fortunate in being here at this particular time, and I have made quite a number of sketches, which I may work up later. But I am not really an artist. I am only a humble amateur, though I may to an extent have the eye of an artist—to appreciate all the beautiful sights, you know, and that, after all, is something. But I must be going. Good-afternoon; and I'm glad that you are getting on so nicely.—Good-bye, Bang.—Good-bye, Jip;' and she gave them a parting pat, and walked away.

It is a very slender hair to make a tether with, but somehow the fact of her remembering the dogs by name is a consoling thought, and a source of peculiar satisfaction to me.

(Continued on page 585.)

HOME-MADE WINE.

By Mrs DOUGLAS.

IN years when fruit is abundant there is no more delightful and easy way of using up surplus supplies than by making them into wine.

Wine-making, like other things, is very simple when you understand the process; yet the process of fermentation is one that, even in these days of more scientific education, is not always taught in schools. Fermentation, to define it in a literary rather than a scientific manner, is Nature's ingenious method of utilising her own fatal tendency to decomposition. Wine, bread, cheese, and beer are all triumphant results of judiciously directed decomposition. Man, not to be outdone by Nature, first aids and abets, and then imitates and improves upon her. Grape wine is Nature's own incomparable effort; for the grape, as Bacchus first discovered, supplies its own fermentation; it creates its own yeast, and the natural warmth of the climate in which it is grown aids its development. There was a curious habit in the old days, when the weather was inconveniently cool and the fermentation did not proceed as it ought to have done, of putting a man into the vat, that the natural heat of his body might stimulate fermentation!

The difference between grapes and other fruits,

as regards wine-making, lies in two things: first, that no other fruit has the inborn power of fermentation so strongly as the grape; second, that the acid of the grape is tartaric acid, which, when fermentation starts, precipitates itself on the edge of the cask and of the bottles in the form of cream of tartar, and so relieves the wine from any excess of acidity. The acid in most other fruits is mainly malic acid—sometimes there is oxalic or citric acid—which is not only an inferior acid, but lacks this power of precipitating itself, and so to these fruits a large amount of sugar must be added to counteract the acid that remains in the wine.

Thus the process of the home manufacture of British wines resolves itself into three stages: (1) the bruising of the fruit and the addition of water to extract the juice; (2) the sweetening of this juice with sugar, and putting it in a warm place to ferment, adding yeast when necessary; (3) after it has fermented, keeping it in a cask in a cool cellar until it matures, examining it, and fining it to attain clearness and sparkle.

One of the best wines that can still be made is gooseberry wine, for the gooseberry—called by an astute Scots gardener the vine of Scotland—

flourishes in the North long after it passes in the South. The plentiful rainfall in the North swells the berries, and in the South of Scotland you may make a gooseberry wine almost equal to sillery.

The gooseberries should be fully grown, but not too ripe. Pick and bruise the fruit, and put it in a large tub in the proportion of forty pounds of fruit to four gallons of water. The wise old wine-makers stirred and bruised the berries with their hands. After twenty-four hours the gooseberries are run or pressed through a big bag of either loosely woven flannel or canvas, and then to the juice thus obtained is added from twenty-five to thirty pounds of sugar, the quantity of liquid being made up, after the sugar has dissolved, to the amount of ten and a half gallons. All this is put in a tub and placed where it will attain a temperature of from fifty-five to sixty degrees Fahrenheit; the corner of a roomy old farm-kitchen is as good a place as any. Throw a blanket over the tub, and let it stand for from twelve to twenty-four hours, according to the time at which fermentation develops. When it has developed put it into a cask to continue its fermentation. It can be tested from time to time, and the fermentation stimulated, if necessary, by the addition of yeast. When the fermentation is complete the cask is removed to a cool cellar, and it can remain there until the spring, when it may be bottled. It will be clearer and brighter, however, if transferred to a clean cask about December. It should also be 'fined' with isinglass. The isinglass is dissolved in tartaric acid and water, and then added to the wine, as it has the quality of collecting all the impurities and carrying them to the bottom. Gooseberry wine should not be drunk under five years; some that has lain for twenty years attains a wonderful aroma.

Rhubarb wine is a good thing to make, because rhubarb grows so profusely that most gardeners have a difficulty in using it up. Take twenty-five pounds of rhubarb, wipe the stalks, lay them on a clean board, and bruise them with a flat-iron. Put them in a tub, add five gallons of

water, and let it stand for nine days, stirring occasionally. Strain the liquor thus obtained, and to each gallon add three pounds of sugar and the juice and half the rind of a lemon. Put it in a cask with two ounces of isinglass, and let it stand for a month to ferment. A little currant or damson juice improves the colour of rhubarb wine.

Rhubarb and gooseberry wines have been mentioned because these are products often too abundant. But the wine-maker, once he gets his hand in, is not content with commonplaces, and there is no end to the many curious things he may experiment in. There are the flower-wines—cowslip, marigold, and gilliflowers. Here we have poetic vintages worthy of the Japanese and his chrysanthemum salad. There is the birch wine made when the sap rises in the trees in March. 'Solerion' is 'a small wine' made in a quaint way with raisins, and 'Nants wine' may be cleverly counterfeited with raisins and elder-berries. Nants or Nantes wine, it may be mentioned, was a kind of brandy that owed its name to being shipped from the French port of that name. Scott refers to it in the *Pirate*: 'What a leer the villain gave me as he started the good Nants into the salt water.' After all, raisins are but dried grapes, and are very good to make wine with.

Brillat-Savarin rates the desire for wine extremely high. He considers that and the anxiety about a future state to be the two things that separate men from beasts—to be, in fact, their most distinctive attributes; 'the masterpiece of the last cosmical revolution,' as he largely but vaguely puts it.

Here is a recipe for 'Ebum Drink' from an ancient book: 'Put one peck of Elder berries to the quantity of halfe a hogshead of Ale 2 penny worth of Cloves and mace bruise all your Spices boyle all together with the berrys till they breake, then strain them through a Straining Sive and when 'tis coole as your usuall wort put barm to it as to beer. There must be some hops be boyl'd in it. And when fitt to bottle, bottle it with a lumpe of loave Sugar it will drink much ye more Lively. It is good for ye Spleen or Dropsy.' The writer of this recipe is deliciously sparing in punctuation.

HIS OWN PETARD.

By GURNER GILLMAN, Author of *The Making of a Bishop, &c.*

THE Bishop came briskly into the room. In his right hand he was carrying a gentleman's visiting-card, and on his forehead there was a tiny pucker of doubt. The young man who was looking out of the window turned round quickly.

'I can spare you five minutes; no more, Mr—— Here the Bishop paused, referred to the card he held, and added, 'Harcourt.'

'It is good of you to see me at all, my lord,' Mr Harcourt said nervously.

The Bishop waved him to a chair. 'Not at all! I endeavour to do my duty at all times, Mr—er—Harcourt. You are not one of my clergy, I think?'

'No, my lord; I am in the Exeter diocese. But I have heard such glowing accounts, if I may say so, of your lordship's grasp of affairs and capability for giving advice that I have ventured to intrude upon you thus.'

The Bishop beamed. 'And may I know the name of your informant?' he asked.

'It was your lordship's daughter,' Mr Harcourt replied.

'Not an impartial judge, I fear,' said the Bishop.

'Your daughter, my lord,' went on Mr Harcourt hastily, 'happened to become acquainted with the fact that I stood in need of advice, and heartily recommended that I should come to you.'

'Well, well! we must come to the point,' observed the Bishop. 'The fact is, Mr Harcourt, that I am momentarily expecting the arrival home of my daughter. She has been away from home for a month, and I must be free to welcome her.'

'I will not detain you, my lord. Perhaps another time'—Mr Harcourt was horribly nervous, a fact that did not escape the Bishop. The young man had perched himself on the extreme edge of his chair, and was fumbling awkwardly with his hat.

'There is no time like the present,' observed the Bishop. 'Pray proceed.'

'The matter upon which I wished to consult your lordship is of a somewhat delicate nature;' and Mr Harcourt coughed deprecatingly.

'The old tale, I perceive. A girl!' And the Bishop emitted something that was first cousin to a chuckle.

'Yes, my lord! A girl!'

'Girls,' declared the Bishop sententiously, 'are the curse of the younger clergy. They defer to them, they flatter them, they surround them with an atmosphere of adulation, and they spoil them. Oh, I know—I know, Mr Harcourt! I was a curate once. Some woman has been setting her cap at you, eh?'

'Not exactly, my lord. I am afraid that I'—

'Quite so, my dear lad! Quite so! You think that you have been the hunter, whereas, in fact, you have been the hunted. That is mere feminine diplomacy, and is as old as our common mother herself.'

'In justice to the lady, my lord'—

'Don't worry about the lady. She is in very capable hands, believe me—her own. Simply drop her! Have no explanations, or you will become the worse entangled.'

'But, my lord'—

'I will not listen to a single but!' declared the bishop heartily. 'You have been a little foolish, a little indiscreet, shall we say? In his young days who has not? But to continue in folly is worse than foolishness; to pursue the path of indiscretion is lunacy. Now, Mr Harcourt, listen to me. You must be master of yourself. You know the greatness of that. And the man who is master of himself can compel his inclination to walk hand-in-hand with his ambition.'

The Bishop rose from his chair. He regarded Mr Harcourt as a crowded congregation, ready

to pick up the pearls of wisdom that dropped from his lips. 'When I was a young man, Mr Harcourt, old enough to know better, but a young man, I experienced a tenderness for a girl just as enchanting as the lady who is not named between us. And I saw, as you see, the folly of what I was about to do, and I uprooted that tenderness from my heart. What followed? I schooled my inclination till it was ready and willing to walk with my ambition. And as a result I married the Archbishop's daughter.'

'But, my lord,' protested Mr Harcourt, 'I do not happen to be the Archbishop's secretary; and, even had I the honour, his Grace has no daughter.'

The Bishop laughed. 'You are a very literal young man,' he said. 'I am not suggesting that you should seek a wife at Lambeth. I am merely laying down certain main principles.'

'Your lordship suggests, if I understand rightly, that the daughter of a Bishop would do equally as well.'

'I did not say that, Mr Harcourt. I should be sorry to advise you generally; but even an Archdeacon as a father-in-law would not be calculated to prove a hindrance to your advancement in the Church.'

'May I say,' said Mr Harcourt, 'that your lordship's daughter is very charming'—

The Bishop held up his hand warningly. 'We will not become personal,' he said with a touch of asperity. 'My daughter is my daughter, and her name must be kept out of discussions of this kind. Do not think that I wish to be severe, Mr Harcourt; but it is my considered opinion that you made an error of taste there. May I ask if you have a benefice?'

'No, my lord. At the moment I am an unemployed curate. I have a few hundreds a year of my own, which fortunately enable me to pick and choose my vicars.'

'I agree that you are fortunate. There are vicars and vicars. I had my experience years ago. Have you any other questions you wish to ask me?'

'I had several, my lord; but they seem to me to be unnecessary now.'

'I am glad to hear you say so. That means that my advice has not fallen upon stony ground.'

'And yet, my lord, somehow your advice seems to have a worldly flavour.'

'Admitted! admitted!' agreed the Bishop graciously. 'You will observe, though, Mr Harcourt, that I have advised you to do nothing that can be called mean or mercenary. I have counselled you to conquer yourself, a deed which, as St Paul reminds us, confers greatness upon a man. I told you that it was an essential that you should be able to command your inclination. I do not forget the teaching of the Church concerning Holy Matrimony. When

you marry you will promise to love your wife, and you will perjure yourself at the altar if you are not able to do so. All that I say is, love wisely.'

'I follow your lordship. There is one further difficulty which presents itself to me. Bishops and Archdeacons do not give their daughters in marriage to unbeneficed priests who lack influence.'

The Bishop laughed gleefully, 'I fear,' he said, 'that yours, Mr Harcourt, is the faint heart that never won a fair lady. And that is what you have to do. Win the lady first. Her father is a secondary matter. Ways and means of overcoming parental opposition will suggest themselves to you, or to the lady, when the time comes, depend upon it. I know that they did in my case. I have no time to tell you the whole story now, or I would do so; but I assure you that my father-in-law did not receive my proposition for his daughter's hand with that enthusiasm I could have wished or that I considered that my attainments warranted. To tell the truth, he accused me of all kinds of things of which I was innocent. He accused me of having abused his confidence, and the like. But being a wise man, he bowed to the inevitable when he realised that it was the inevitable that had come upon him. The story is pretty well known; I wonder that you have not heard it.'

'I think that I have heard something of it, my lord. You must have been a very resolute young man.'

'I think that I may say without conceit that I was,' the Bishop admitted. 'And that is my last word to you, young man: be wise and be resolute! Ah, I hear the car! Here is my daughter. I must beg of you to excuse me.'

'Just a moment more, my lord.'

'Not one!' said the Bishop with decision, and made toward the door.

Mr Harcourt, overcome by nervous trepidation, caught the prelate by the tail of his coat. 'My lord,' he said, 'supposing'—

The Bishop turned upon him, his face flushed with anger. 'You presume very greatly,' he said. 'Leave go of my coat at once! I positively decline to hear another word.'

'But, my lord, I insist.'

Mr Harcourt had succeeded at last.

The Bishop turned on him, his face now purple with outraged dignity. 'You dare to use the word insist to me!' he said. 'I have received you here. I have listened to you. I have given advice of great value. I have treated you, a stranger, as though you were my son, and you speak to me of insisting! You have more resolution than I thought.' And his lordship laughed nastily. 'Leave my house at once, Mr Harcourt, and never dare to come here again. Such insolence passes all'—

But what his insolence passed Mr Harcourt was never destined to hear, for the episcopal eloquence was cut short by the opening of the door of the room and the entrance of a radiant girl.

'Oh dad! dad!' she said, holding out both hands to the angry Bishop, 'it is good to see you again.'

The Bishop forgot his anger in the sunshine of that smile, and took the hands held out to him, and kissed their owner on the lips with fond pride. And for the moment Mr Harcourt too was forgotten.

Quite suddenly the Bishop released his daughter's left hand, which he had been holding in his right. He had felt the touch of smooth metal, and had experienced a sense of shock. He looked down at the hand he had just released, and saw the plain gold band adorning it. 'Barbara! Babbie!' he cried sharply.

The girl held out her hand to Mr Harcourt, who took it.

'With the greatest resolution, we acted this morning upon the excellent advice your lordship has given me,' the young man said.

For one—two moments the Bishop did not know whether to be furious or to laugh. Then a rush of paternal feeling overcame him. 'You love her?' he asked, looking Harcourt squarely in the eyes.

The young man, whose nervousness was past, laughed frankly. 'My inclination walks with my ambition,' he said.

Then with great boldness he kissed his bride.

OUR INCOMPARABLE INFANTRY.

THEY go, arrayed in splendid power,
By dark and silent ways,
To meet the full, tremendous hour
That crowns their waiting days.

They sweep, a great, resistless tide,
Through fire and flame and shell,
To shatter with triumphant pride
The armaments of hell.

But where they press, to do and die,
A phantom army stands,
Holding a guiding torch on high,
With strong unfaltering hands.

The flames their broken line reveal
Shall still undarkened shine,
As when they stood, a wall of steel,
And held the British line!

The first to go, the first to fall,
With lavish blood outpoured,
They heard the far, faint bugle-call,
They saw the unsheathed sword.

Britain shall lay her honour low,
Shall fling her crown away,
If she forget those first to go—
The men who showed the way!

A MEMORY OF LOCHLEVEN.

By H. HILTON BROWN.

THERE is but one 'memory' of Lochleven. When we invoke the recollection of the past we invariably think of the beautiful and unfortunate queen who was imprisoned in its small and dingy Castle. But the story of that tragic imprisonment has been told once for all in the pages of *The Abbot*, and it is not for me to retouch a tale which has been immortalised by Sir Walter. The memory which I seek to recall is far more ancient than the episode of the unhappy Mary, and of a totally different character.

I was seated on the northern slope of Benarty when the idea came to me. Beneath me extended the placid surface of the lake, lying like a great mirror fashioned in the shape of a heart. In the lower right-hand corner was St Serf's Isle, in the upper right-hand the Castle Island, with its ruins dimly visible. Along its eastern banks the grim slopes of the Bishop's Hill towered above the villages of Scotlandwell and Kinnesswood, and were themselves overtopped by the twin peaks of the Fifeshire Lomonds. Behind and to the left of the Castle Island the gray smoke of Kinross rose straight up in the still air, while in the distant background I saw in the east the tall chimneys of Leslie, and in the west the gray-green mass of the Ochils.

As I looked I was reminded of a bold feat performed here by Sir William Wallace. It has been overshadowed in popular estimation by greater deeds of that hero, and has been forgotten by most historians; yet it is worthy of being kept in remembrance, because it has something to teach us. The incident is graphically told in the verses of Blind Harry. The bard wrote a couple of centuries later, but in this instance he has probably preserved an authentic tradition. His narrative of the deeds of Wallace is frequently marred by gross exaggerations, and even by statements that are utterly incredible; but it has been corroborated by documentary evidence in so many small details that we are justified in accepting it as truthful when it relates facts that do not strain our credulity too far. The episode of Lochleven is in itself a credible story.

Sir William had cleared the English out of such minor strongholds as they had secured in Fife, and turned his attention to further efforts in the north. The map of Scotland shows what a peculiar situation is occupied by the county of

Fife. Water surrounds it on every side except the west, where for a considerable distance it is fenced from the rest of the country by a natural rampart and moat, consisting of the two Lomonds and Lochleven. Wallace would probably leave the county by the comparatively open passes north or south of this barrier, and he seems to have chosen the latter, as the minstrel brings him to the south-east corner of the loch.

From time immemorial the great road to the north, whether footpath, bridle-track, turnpike road, or railway line, has passed up the west side of Lochleven. In consequence of this fact, the Castle on the island was a point of strategic importance, commanding the main thoroughfare which linked north and south together. The King of England was too good a general to neglect this position, and had placed a garrison in the Castle. As the waters of the lake cut off approach from the shore, as the fortress was beyond the range of any missile then known to the military art, as there was but a single boat available, and that one was moored at the island, the position might well have been deemed impregnable.

When the shrewd and valiant Dugald Dalgetty was criticising the strength of the Castle of Ardenvohr, he said to Sir Duncan Campbell that no fortress, 'however secure in its situation, is to be accounted altogether invincible, or, as they say, impregnable.' So it proved in the case of Lochleven. Wallace picked eighteen trusty men, and stationed them on the shore of the loch. He himself swam in the dark out to the island. It is easy to state the bald fact and think little of it, but the feat was very daring. It is always dangerous to swim in a Scottish loch after dark. The cold, black water chills the blood, and the gloomy shadows of the surrounding hills, rising against the dim light overhead, produce feelings of solemnity and awe sufficient to quell the bravest heart. Wallace was not a man to be frightened by mere feelings, yet there were considerations which even he must have known to be serious. Swimming out from the shore into darkness, he might err in the matter of direction. The island and Castle stood too low to be visible from the water-level at night, and had he passed them he would have been challenged by the English sentinels. Added to this,

there was the obvious risk of being heard or seen as he approached, and discovery meant death.

The upshot proved the soundness of his judgment. He steered a true course, and landed on the island without being heard or seen. The boat was quietly launched and rowed to the shore. The trusty eighteen embarked and reached the Castle. The garrison were completely taken by surprise, for they had placed too much confidence in the insular position of the stronghold.

The possession of this place was of much consequence to Wallace. He was on his way to the north to raise levies for the Scottish army which afterwards met and defeated the English at Stirling. A fortified position in the hands of the enemy, set directly on his line of communication, and not only acting as a menace to parties of his own troops, but also serving as an outpost for those of his opponent, would have fatally interfered with his plans. In this incident, therefore, we recall the memory not only of a gallant deed, but of a success which had no small bearing on the history of Scotland.

The story of Sir William Wallace, taken as a whole, is one of many instances in history which demonstrate that to self-denying resolution and courage nothing is impossible. His career was truly remarkable, even after we discard the legendary embellishments which would make him superhuman. His gifts as a political and military leader were of the highest order. The strategy and tactics which he used in the management of an army vastly inferior both in numbers and equipment to that by which he was opposed were worthy of the great masters of the art of war; the diplomacy and firmness which he displayed in promoting the interests of Scotland before the Courts of France and Rome were of a quality rarely found combined with military genius. But these characteristics were more or less shared by other great Scotsmen, such as Bruce and Douglas. The outstanding attribute of Wallace was something very different from such qualities, and far higher.

When he first appeared upon the scene his country was sorely in need of a leader in whom the people could trust. The Scottish nobles, who ought to have been the leaders of the nation, were too deeply interested in personal claims to the throne of Scotland, or to large baronies in England, to be reliable guardians of the national liberty and honour. Sir William Wallace, from his rank as a knight, was entitled to command an army in the field, and he had no personal claim to put forward, no individual ambition to serve. His interest was at one with the interest of the Scots, and, like them, he sought only the independence of his country. His aims were not vitiated by ambition. It is touching to observe the scrupulous care with which he made it clear in every letter and proclamation that he represented the Scots king and people, and took care that whenever his name was coupled with

that of another leader it was placed last. His nature was most noble and unselfish.

There is an aspect of the War of Scottish Independence which is often ignored. One of the chief results of the struggle was the salutary lesson it taught to the haughty mail-clad knights. They had hitherto deemed themselves invincible in conflict with those whom they contemptuously regarded as an inferior race; but Sir William showed them that peasants and artisans, on suitable ground and properly led, could inflict crushing defeat on the proudest chivalry of Europe. This truth was confirmed on many a subsequent field, and the knowledge laid the foundation of the modern conception of warfare.

One reflection arising out of these events may close this memory, and happily it is comforting, especially at this juncture, when the forces of the British Empire are being marshalled to maintain the cause of truth, honour, and freedom. We have been assured by pessimistic writers and others that the British race is decadent. We have become, they say, neurotic, self-seeking, greedy for money, eager for pleasure, and deficient in patriotic spirit. It has been asserted over and over again that in a national crisis we should be found wanting. Sweeping generalisations are always dangerous, and this instance is no exception. The glorious rally of the sons of the Empire has given the lie direct to these miserable allegations. But apart from this, we might have inferred the folly of such *à priori* judgments from the lesson taught to us by the history of Wallace and the Scottish War of Independence. There was never a nation which seemed more hopelessly sunk in apathy and deserted by its natural leaders than Scotland at the end of the thirteenth century and the beginning of the fourteenth. Then, if at any time, one might have predicted the disasters which were bound to follow selfish schemes and restless ambition. The king was a puppet in the hands of a powerful and unscrupulous opponent. The nobles were mostly time-servers, eager to save their rich fiefs in England, even though in so doing they should sacrifice their Scottish allegiance and the honour and liberty of their native land. The people were poor, oppressed, disorganised, and without leaders in whom they could place confidence. No conditions could appear more desperate; and yet it was in this seemingly decadent period, and at this apparently hopeless crisis, that there appeared for her deliverance one of the most noble, courageous, and unselfish of patriots.

May we not, therefore, take courage and disregard the pessimists? So long as Britain is true to her high traditions, so long as she maintains inviolate her faith and pledged word, so long as she is ready to fight for truth, honour, and freedom, so long will she prevail, and the forces of violence and mean treachery, though clad in triple mail, will go down before her. In the day of her necessity there will always be found another Wallace.

THE BRIGHT EYES OF DANGER.

CHAPTER XXXVII.—*continued.*

THE sight filled me with elation. Peat-reek rose from farm-steadings and cottages dotted in the distance, the great strath, placid in the sun, holding a suggestion of peace and quiet after our days and nights of wind and weather, strained nerves, tired bodies, and meetings with violent men. It held, too, the promise of our journey's end. I saw us, in a few hours at most, sitting safe round the fire and at good cheer in the 'Norway Lass' at Garmouth; the *Gannet* waiting, ready for sea; the voyage over; a vision of Charlotte and cloudless days in store for us two together.

'*En avant!*' Bertrand called gaily, with a clap on my shoulder that scattered my day-dreams. 'Are you asleep, *mon vieux*? The captain, too, he is what you call mesmerised!'

Anthony, a little way in front, was gazing up the strath, in the only fit of abstraction I ever saw him surrender to.

'What are you looking at, captain?'

'Hame. Ayont the hills there up the Spey I was born. It lies in the howe ten miles up the strath, in the bield by the river. I havena seen the place for guid kens the years. Whiles I think I'll turn my back on the unchancy business o' "free-tradin'," and rest content wi' a snod bit farm in the glen; but, man, I doot I'd be thinkin' lang to have the tiller in my hand. Every voyage had to be the last, and here I am at it still, and like to be till the North Sea gets my bones. When I'm at sea the Spey calls to me, and if I'm a week ashore the sea cries "Come back;" and so it will be to the end o' the ballant.'

'Tis a noble valley. It reminds me of many in France,' said Bertrand mischievously.

'France! Where ever did you see the like o't in France?' the captain snorted contemptuously. It was plain that to him nothing could compare with the stream of his youth. 'Na! na! There is no river like it. D'ye no ken the sang:

Wander east, wander west,
By Nith, Tweed, or Tay,
But seek North for the best,
The lang run o' Spey?'

I think these were the lines. Truly, they went on crutches; but Anthony ended the doggerel on a note of triumphant finality, and put the horses forward as one who had closed the subject. We allowed him the last word. After all, patriotism, whatever the logicians may say, is for any man a cleansing and redeeming thing, and in the Scots a noble passion. Many times since then I have met Speyside men far from the heather, and heard their voices soften at the memory of their river of the mountains.

The track dropped gradually until we came

to fairly level country, and beside a burn we loosened the girths and watered the horses.

While we rested, a man appeared a little way off, and vanished into the heart of a bunch of spruce. He was perhaps only an inquisitive rustic, but I was uneasy, and when the bushes at the edge shook more than the wind warranted, I went forward to them. But he was too quick for me. He had heard or seen me and made off.

'We saw him,' said Bertrand when I rejoined them; 'a scarecrow of a man, running like a hare. Innes says he is the same one who asked us about the cattle.'

Innes struck in with, 'He is a scout of Macdonell, like enough.' His white face said more than his words.

'Maybe!' said the captain; 'maybe! Standin' lookin' at each ither 'll no' strauchten matters. Let us push on, and keep well in the open.'

All turned to the horses at the words, the panniers were re-slung, and we went forward to the last stage of the descent to the levels of the Spey, along the downward slope of a great hog's back of country.

Innes was plainly terror-ridden, keeping between the horses, peering around him in an agony of suspicion of every bush. Though I loathed the sight of the craven, and the sound of his voice harping on premonitions, nevertheless he had good grounds for fear, and every yard we went we kept a strict watch.

The Spey's voice grew from a murmur to a hoarse and clamorous sound as we drew nearer, to find it swollen by rain and innumerable hill-burns, abrim from bank to bank with the swiftest river current that I have seen.

'She's risin',' said Anthony. 'If it's still rainin' up-country she'll be in spate in an hour or twa. We are safe so far, for we kept off kenned roads; but if the man on the hill is a spy o' Left Hand, ony mischance might happen atween here and the mouth o' the Spey. I'm no just easy aboot it; so I commend a safer plan than the horses and the road—ay! and a quicker. It's to gang by water. There are "floaters" comin' down Spey every day, and a guinea or two will be wisely wared on them. We may find some there, like enough!'

He pointed to a plume of peat-reek, which turned out to be from the clachan of Rothas, a drab-looking handful of clay-built, thatched-roof cottages about half a mile from the river's bank. Notwithstanding its squalor, the place, like all north-country clachans, possessed a change-house, and thither the captain led us. A raucous sound of rough voices singing came through the window. Standing by the horses, we consumed oatcakes and some new and fiery spirits, the only liquor

the house boasted. The goodwife who brought the stuff to us was a buxom dame. She took two looks at Anthony before she spoke, and her first words roused us like an alarm-bell.

'If I'm no wrang,' she began, 'I had a gentleman here speirin' for ye the day.'

'Very likely!' quoth Anthony glibly. 'We're half-expectin' to meet some folks here. Wha was he?'

'He didna say. 'Twas the best o' an hour syne.'

'Whatna way did ye ken it was me he was seekin'?''

'Weel, it's no' your faut, I'm thinkin',' said she, after a moment's hesitation, born of a struggle between politeness and direct speech; 'but, if ye maun have it, he said I would ken ye by an afflektion—that ye had but a single e'e, and no offence to ye!'

'Ye've twa o' the best o' them, mistress,' said Anthony gallantly. 'I think maybe 'tis the gentleman we ken. D'ye mind on what he was like?'

'Fine that! A big, upstandin' man, weel put on, but his claes sair connached wi' travel, and he had his brogues stolen, he said. The souter gied him a pair.'

Anthony gave us a glance. 'He's no inside by any chance?'

'No. There's only some "floaters" havin' a spell off.'

'Weel, mistress, we'll mak' a clean breist o' it. If I'm no wrang, the stuff we're drinkin' never paid a saxpence to King George, and we here happen to be in the free-trade oursel's. The gentleman ye saw is neither mair nor less than a preventive officer. If he lost his brogues, it's maybe less than he deserves. We would as lief see the deil, and that's the truth. We'll see the inside o' Elgin jyle unless ye can help us!'

The word 'preventive' wrought like magic. The good woman poured the vials of her wrath with astonishing fluency on all such interference with honest folk. She had a 'good-brother' who had to flee the countryside because of them. By this thing and the other they were the curse of the country. She would never lift a finger to help the likes of them—never! She was our ally on the spot.

'It's like this, mem,' Anthony went on when she paused from sheer want of breath. 'There's a warrant out for us,' he lied easily. 'If we gang by the road wi' the horses, as like as no' we'll be taken. I've no mind to risk it. But gi'e me a word by your lane.'

The two went into the house. The singing suddenly ceased, and in a few minutes the captain came out with the goodwife, and along with them a couple of the 'floaters,' as rough-looking characters as could well be imagined, one of them tall, lean, and bony; the other a shaggy, red-haired youngster in a ragged kilt; both of them reeking of whisky. A rough and dangerous life

theirs, and a hard-drinking one, I was told, but in the main the Spey 'floaters' were men of nerve and brawn, as demanded by their calling.

We gave good-bye to the dame, and with the horses followed the men across a haugh to the river's edge, where a 'float' lay moored in the shallows. This was a number of newly felled tree-trunks chained together. They had been felled far up the Spey, in the big forest of Badenoch, and were being floated down the river to Garmouth, to the shipbuilding yards there. The two men had been on the 'float' for many hours, and had run ashore for a rest and a 'dram.'

The panniers were lifted on to the raft, and the horses sent back to Rothes to wait our orders.

'A guinea apiece, lads, when we are down Spey,' said Anthony. (I dare say this was more than they had ever dreamed of making honestly in a couple of hours.) 'Ye ken the river?'

'We could tak' ye doon i' the dark, captain.'

'Cast off, then, and move lively. We're in a hurry!'

The two men slipped the cable. Each took up a long pole, very thick, and shod with iron, and shoved off. The strange craft's snout was soon in deep water, the hand of the current caught it, and the mass swung slowly into mid-stream. Except Innes, who was nearer the front of the float, we sat amidships, where the panniers were. The two men stood upright, pole in hand, watchful eyes on the river, guiding us with surprising skill. They knew every shallow and every bend of the river by heart. Once my throat went dry, for the 'float' suddenly checked, veered round broadside to the current; the swift current was dammed for a moment, and a rush of icy-cold water brimmed over the edge and made us jump to our feet. It came up to our knees and was gone in a moment; but the two pilots scarcely gave it a glance. Next moment we shot, head on, as it seemed, to a huge knuckle of a rock thrust out from the bank into the swirling brown water. I shut my eyes and held on, but there was no concussion. The man in front, eye, hand, and muscle balanced and co-ordinate, timed his action to a second. The 'float' knew and answered the master's hand, and shot safely round the sharp bend like a live, conscious thing.

'Well handled!' called the captain. . . . 'My God! what's that?'

'That' was the sharp crack of a pistol. Innes, on one knee in the front, put his hands to his throat and staggered to his feet.

'Hold him!' some one shouted. The 'floater' sprang, too late. Innes, with a choked cry, lurched into the current. A red tinge stained the surface.

A second shot rang out, spattering the face of Hugh Scott, the mate, with peat from the top of one of the panniers.

We dropped instantly to what cover we found, the captain, Scott, and I in the shelter of the

panniers, Bertrand and the two 'floaters' wriggling behind a big pine's bulwark. From where I crouched I could see something dark in the broken water in our wake. It was Innes. He had come up, and was struggling desperately to get clear of the current. He went under twice, came up again, this time with head and shoulders clear, nearer the bank, and half wading, staggered into the shallows and fell, to crawl slowly foot by foot nearer to the bank. He was two or three yards from the shingle, when from behind a boulder rose the figure of Macdonell. He stood erect, arms folded, watching the wretched crawling object in the shallows.

'We'll be out o' range! Quick!' said Anthony.

I took careful aim and fired. The bullet hit the shingle. The captain's and Bertrand's pistols rang out in quick succession, too late. There were a harmless couple of *zippys* on the water. We were out of range. The two 'floaters' ran to the front and heaved against

the poles; but the current was fierce, the momentum of the great raft tremendous. We drifted thirty yards before I felt it check.

Macdonell fired once at the raft, more, I think, to assure himself of the range than with a hope of winging any of us. He walked without haste down to the shingle and bent over the doomed man. I saw his hand rise and fall twice, and with the first blow a faint scream reached us. Then Macdonell waded out waist-deep with his limp burden into the river, and held it under water.

Anthony had shouted to the 'floaters' to bring us nearer the shallows. The 'float's' bows were swinging slowly round. We were ready to jump; but Macdonell saw the movement. Watching us warily, he backed a yard or two, swung the dead man up over his shoulder, and heaved him far into mid-stream. It was the last of Innes. The murderer waded out, washed his hands in the water, ran across the shingle, and vanished into the dense cover of the brake.

(Continued on page 596.)

MORE LINKS IN THE CHAIN OF LIFE.

By AUBREY CRASHAW DENHAM.*

IN an interesting article by Miss Winifred Jones, entitled 'Some Links in the Chain of Life,' which appeared in *Chambers's Journal* for November 1913, it is stated that with the death of the 'Warsaw Jew,' in 1912, there died probably the last man who could boast of having seen Napoleon. As the point is one of some general interest, it may at once be said that this assertion is incorrect. There are still living at the present day two men who, in their now far-distant youth, not only saw, but had the honour of conversing with, the great Emperor.

The elder of these two links with a famous past is a Cossack of the Don named Peter Laptieff, who is now one hundred and twenty-one years old, having been born on 29th June 1794. He was one of the eight Russian survivors who in 1912 took part in the celebrations of the centenary of the Battle of Borodino (styled by the French *La Moskova*). This hardy old veteran related his experiences of 1812, when he was living in the province of Vilna, in the following terms:

'When we heard the French were coming into Sventsian (a small district town in the province of Vilna), the whole of our family fled, with what they could carry away with them, into the Tsvikminsky woods, about three miles off, and there we concealed ourselves from the enemy for three or four days. But I could not resist a desire to see the French soldiery, and in order to get a sight of them I left the family and made

my way through the forest to the Ekaterinsky road. My plan was to climb into a tree and look on. The French at last noticed me, and I was taken prisoner and marched into Sventsian.

'The next morning they conducted me to the house where Napoleon was lodged (Girutsia's house in Vilna Street). The Emperor was sitting on the balcony and drinking coffee. He asked me through a Polish interpreter whether I knew well the road to Düna, now Dvinsk. I replied that I knew it. Napoleon then ordered me to show the way to a vanguard detachment of his army. We marched, with short intervals of rest, for thirty-five hours. During one of the halts, when the watch over me was relaxed, I managed to escape and disappear into the forest, where I wandered about for nearly a week, until I found my father near Sventsian.'

Subsequently Laptieff fought at Borodino, and later served in the Crimean war and in the suppression of the Polish insurrection of 1861-63. He eventually settled down to a commercial career, as the proprietor and manager of a small brickwork, remaining in business until the year 1900, when he retired. He now resides with his son and grandson in the village of Melakh, Sventsian, near Vilna. Despite his great age, he still retains, it is said, a remarkably clear memory.

The other living link with Napoleon is a Frenchman named Pierre Schamal, who resides at Paris. He is now one hundred and nine years old. Schamal was the son of a soldier in the Imperial Guard. When a child he was taken by his mother to the Palace of Saint Cloud, where his father was on duty as a sentry,

* Since the above was written, we regret to learn that the writer, Lieutenant Denham, was killed on 1st April in the service of his country.

the Emperor being then in residence. Napoleon happened unexpectedly to come across Madame Schamal with her little son, and—always fond of children—he stopped and spoke kindly to the little Pierre, asking him if he intended one day to become a soldier like his father. Schamal remembers as a child having played with the little King of Rome in the alleys of Saint Cloud. In later life Schamal officiated as dresser to Talma the celebrated actor, and was afterwards chief costumier of the Opera House in Paris.

There are in all perhaps a dozen centenarians—including Peter Laptieff and the seven other survivors of Borodino present at the centenary celebrations—who were witnesses of the stirring events in the great Napoleonic drama. But it is doubtful if any of these actually set eyes on the Emperor himself; although four or five years ago there was still living in Belgium an aged woman who, when a little girl, was taken by her mother before the Emperor, on the morning of 16th June 1815, to complain of some exactions levied by the French soldiery on her farm. It is possible that she may yet survive. At all events, I do not recollect her death having been recorded in the papers. There is to-day living at the village of Mankovo-Kalikovskoi, in the Don Cossack territory, a sturdy old woman, still able to engage in housework, named Mary Popoff. Her exact age is not known, but it is somewhere about one hundred and twenty-five years. She was living in Moscow at the time it was occupied by the Grand Army, and remembers having seen the city in flames. At the village of Dormovo, in Germany, lives an aged yet still active old lady popularly known as 'Old Mother Stavne.' She was born on 16th October 1794, and well remembers the return from Moscow of the shattered remnants of Napoleon's gigantic host. On the approach of Napoleon she and her parents fled to the forests. A portrait of her, hale and hearty, and still engaged in work on her farm, appeared in the *Daily Telegraph* on 24th October 1913.

In conclusion, it cannot be too clearly stated that the tradition of Napoleon having landed at Lulworth Cove is an oral tradition only, and is not based on any historical or documentary evidence. Although it is quite possible that a woman may there have witnessed, as described, a landing from a French vessel, it is very certain that Napoleon himself was not amongst the party; and, in fact, that his nearest view of our smiling shores was obtained on that summer morning of 24th July 1815, when the *Bellerophon*, bearing her illustrious captive, dropped anchor in Torbay, five weeks after the crowning catastrophe of Waterloo.

Another correspondent, the Reverend E. C. Wareham, sends us the following: 'When I was a boy of about six years of age I was visiting an uncle in Dorsetshire, who one day took

me for a drive in a dogcart. I remember very well indeed my uncle stopping the trap in a village through which we passed, and pointing out to me a very old man sitting on a bench under a tree in front of a cottage. He asked me to jump down and shake hands with the man, and I asked my uncle why he wished me to do so. He told me not to ask questions, but do as I was told; and accordingly I did so. All I can recollect of him was that he was apparently of very great age. When I returned to the dogcart my uncle said to me, "Now, when you are an old man you can say that you have shaken hands with a man whose grandfather fought at the Battle of Naseby." The grandfather was in reality a drummer-boy at that battle, which was fought in the year 1645; so that, assuming Mr Wareham to have spoken to the old man in the year 1845, the grandfather must have been alive about two hundred and fifteen years before the date of their meeting, if we assume that a drummer-boy would be about fifteen.

REMARKABLE HISTORICAL LINKS.

By GEORGE PIGNATORRE.

How rapid and thorough are the changes wrought by Father Time on the social aspect and on the political conditions of the more recent generations in comparison with those wrought by him on inanimate nature is hardly conceivable at a first glance. One single life protracted beyond the usual span, a combination of certain circumstances, or both causes united, will frequently supply the one or two links needed to connect the present with a past removed from us not only by an intervening lapse of time, but also by habits of thought, by a mode of living, by a social organisation very different from ours, and hence apparently very distant when viewed through modern spectacles. The instances of individuals whose lives have been prolonged beyond the allotted span of threescore and ten, who have been intelligent spectators or actors at widely separated periods of their country's history, irrespective of coincidences or chance combinations, are of course relatively few; but they do occur, and they serve to enforce more strongly than any possible combination of circumstances the fact of the relative propinquity of events which we are accustomed to regard as very far off from us.

The names of two illustrious men who witnessed their respective countries attain the pinnacle of greatness, and saw their decadence, spring to the memory. Isocrates the Athenian was born in 436 B.C., when Athens was at her zenith, the mistress of the seas, the focus of art and literature; and died in 338, when her power was struck down for ever on the plain of Chæronea. Fontenelle, again, came into the world in the year 1657, under the Protectorate during the

minority of Louis the Fourteenth, and died in 1757, three years before the accession of George the Third. Fontenelle was a contemporary of the famous warriors, statesmen, artists, and the writer of the *Siècle de Louis XIV.*, when France was the leading state of Europe in art, science, and literature; he knew them all, and survived to behold France fallen from her high estate, on the verge of the disastrous Seven Years' War. Both the Athenian orator and the French writer were spectators of woeful and portentous changes; and if the decline of France was not, owing to peculiar causes, either final or complete, she never regained the ascendancy she had enjoyed in the second half of the seventeenth century; and the life of Fontenelle, like that of Isocrates, covers an important epoch in the annals of his country. But instances of longevity in the persons of humbler individuals who have borne their part as actors or spectators in distant periods can be quoted in every age.

Some of these, as bearing on recent events, are especially illustrative of our subject. A certain Baron Waldeck, a native of Prague, who terminated his long career in 1875, was born in 1766. He was the senior of Napoleon, Wellington, and Soult by three years; he was ten years old when our revolted colonies proclaimed their independence; he was in the prime of early manhood when Louis the Sixteenth and his fair queen were executed, of which event he was an eye-witness; he saw the rise and fall of the First and Second Empires and the dawn of the present Third Republic. There are many middle-aged Parisians who recollect Baron Waldeck strolling along the boulevards of renovated Paris, round the purlieus of the Palais Royal, where he had seen and heard Camille Desmoulins haranguing the crowd, recalling, as he wandered, those far-off days.

As late as 1911 there were three persons still living whose memories ran back to the first decade of the nineteenth century. The youngest of these centenarians was a Frenchman named Channer Roi, who had completed his one hundred and fourth year, and who had not only seen Napoleon on more than one occasion, but had had the honour of being dandled on the imperial knee when a child of four. Roi had been taken by his godfather, Talma the celebrated actor and a personal friend of the Emperor, to the Comédie Française. Napoleon happened to be present, and Talma went with his charge to the imperial box to pay his respects or receive instructions regarding the subject of the play; and the Emperor, who was always affable when among old friends, unbent so far as to take the bright little fellow on his knee. Roi was wont to tell of this incident, of which he was very proud, and which people said had made him a Bonapartist for life. He was twenty-four when the first working railway was opened, and he lived to see the completion of the trans-

Canadian and trans-Siberian lines, and the laying down of a long portion of the Cape to Cairo line. Save in Great Britain, the United States, and Switzerland, absolute or personal monarchy was the sole form of government in 1804; constitutional monarchy is the form now more or less successfully applied everywhere. In short, when you came into contact with old Roi you felt that you were face to face with a bygone period, totally different in aspect from the present age, though seething with the elements of a coming evolution.

The second member of the trio in point of age was a Mrs Dennis, a Russian by birth, but married to an American, who had reached her one hundred and eighteenth year in 1901. This very ancient dame, who had preserved unimpaired all her mental faculties and in a great measure her bodily powers, was an eye-witness of the entrance of Napoleon into Moscow in September 1812, and likewise of his departure from the burnt-down city on the first stage of that downward path which was to lead to and end at St Helena. The Emperor was wrapped up in furs, and wore a fur cap or bonnet drawn down over his ears instead of the historical cocked hat. Mrs Dennis, whose one hundred and seventeen winters had neither chilled her blood nor dulled her mind and memory, was wont to speak of Governor Rostopchin, by whose orders Moscow was fired, of her escape from the city, of her return, and of Napoleon, as of recent events. Her recollections, indeed, went much farther back, to the days of Eylau and Friedland (1807), and to the reign of the murdered Emperor Paul (1801), whose descendant, the present Nicholas the Second, she had lived to see.

The third and oldest of these survivors of the epoch of the first great French Revolution and Empire was, or is, a Portuguese who fought under Beresford and Wellington throughout the six years' Peninsular war. He had often seen the Duke of Wellington, as well as Picton and Crawford, and at the age of one hundred and twenty has lived to see his country again plunged into anarchy, whence she had been rescued by the strong arm of Britain. As a youth of seventeen, Perez had witnessed the flight of the royal family overseas, fleeing before Junot, who fortunately for himself found Lisbon undefended. Again, twice overrun by the French armies, Portugal was saved from conquest by British steel and British gold, only to fall back, unfortunately for herself, under the former misrule which seems to be the lot of many Latin races. Twice has this Portuguese patriarch beheld the flight of royalty, only to be followed by a régime of anarchy and corruption. In the hasty departure of King Manoel we see events repeating themselves in a vicious circle; but if time has stood still in Portugal and Spain, in some respects it has moved swiftly in other countries within the last one hundred and twenty years. Throughout the

world, indeed, the portentous material changes effected, owing to the fruition of the accumulated knowledge of ages, would have caused a second Rip Van Winkle, who had fallen asleep in the year of grace 1790 and awoke in 1910, to think himself under a spell or still dreaming, or even transported to another planet similar to ours, but not identical. Yet this momentous epoch in the world's history has been covered by one single life protracted but some fifty years beyond ordinary old age.

But, apart from such exceptional cases of longevity, there are many instances on record in which the link is supplied by a peculiar combination of circumstances. On this head I can quote some personal experiences.

During my residence in Athens in the 'seventies as a law student, I had the privilege of being introduced to General Sir Richard Church, who had fought at Aboukir, had been present at the blockade of Malta by the British fleet, and had, as Captain Church, been severely wounded at the siege of the fortress of Santa Maura, held by the French in 1809. On the conclusion of peace General Church entered the service of King Ferdinand the First of Naples and Sicily, who conferred on him the title of Viceroy and of *Alter Ego*, with full and unlimited powers over two of the most distracted provinces of the kingdom. The two Puglia were at that period the prey of brigands and outlaws, and of those secret criminal associations in which southern Italians have always excelled. These criminal elements are especially formidable on account of the friendly or passive attitude of the population, who, if they do not actively abet the bandits, never assist the Government in its efforts to bring notorious murderers or other lawless characters to justice. Yet the daring and energy of Church enabled him, in spite of the many moral and material obstacles, to quell brigandage in this disturbed zone. Within a year he handed back to King Ferdinand his pacified provinces. During the later years of the War of Independence waged by the Greeks against their taskmasters, General Church—who had gone over, like Byron, Cochrane, and other illustrious Philhellenes, to the assistance of the Greeks—organised the first body of regular troops, no easy task in view of that spirit of indiscipline which seems inborn among the Greeks. In reward for his services, Church was promoted to the rank of General in the Greek army, and he was allotted a yearly pension of nearly six hundred pounds, which, considering the value of money at that time, would represent twice that amount at the present day.

General Church, when I knew him, was about eighty-seven, but still very erect and alert, with iron-gray hair which the snows of so many winters had not sufficed to blanch, as they had not been able to numb his blood or his intellect; and, a living monument of history, his accounts

of the scenes he had gone through were lucid and vivid, and many were the incidents he related to me of his long and eventful career.

Within the narrow circle of my family there were two who remembered well the old Venetian oligarchy and its downfall in 1796, and the Napoleonic era. These were my grandmother, who died in 1873, aged ninety-two, and who would insist on calling the British residents in the Ionian islands *Provveditore*,* the Venetian corresponding title; and my granduncle, Chevalier Marino Metaxa, who had been on a mission to Paris in 1808, and had been received by the great Emperor. Though, owing to circumstances, my granduncle reaped no material benefit from his interview with the Emperor, he ever remembered the event with pride. He died, aged eighty-two, about 1860, and thus a man of middle age, living in 1915, may have known a contemporary of Napoleon, and of the fall of monarchy in France. A distant kinsman of my relation, Count Metaxa, is, or was, a Rear-Admiral in the British Service.

But perhaps the most singular case recorded of an intermediate link between past and present, without the agency of a centenarian, was that of the Duchess of Richelieu, in connection with whom an incident is recorded as having occurred at the Tuileries in the year of grace 1867, the year of the great Paris Exhibition, as well as of crinolines. The Empress Eugenie, then in the heyday of her prosperity, held a private reception, to which only a privileged few were admitted. The subject of Court etiquette observed under the old régime was being discussed, when, without warning, an old lady sitting near the Empress said very calmly, 'When my husband was a page at the Court of Louis the Fourteenth,' &c., and proceeded to give a detailed account of the official forms and ceremonial in force at the Court of the great king; but to these particulars those present paid little heed—the opening statement had been too startling. Had the Court Usher or the Master of the Ceremonies ushered in at that instant Madame de Montespan or Mademoiselle de la Vallières the blank amazement of the assemblage could not have been greater. Nevertheless the statement of the old, dignified Court dame was as veracious as it was startling. The speaker, Madame la Maréchale de Richelieu, had been wed in 1788, at the early age of sixteen (early marriages were the rule in those days), to the Duke of Richelieu, Marshal of France, the hero of Fontenoy, the captor of Port Mahon, the brave, witty, but frivolous and gay grand gentleman, a scion of the proud nobility of France of the eighteenth century, of which he was one

* The *Provveditore* or *Proveduro* was the title bestowed under the Venetian rule on the Governor of the island of Cephalonia, and that of Resident was the name given to those who held the same office under the British Protectorate. Among these were Sir Hudson Lowe and the great Sir Charles Napier, with both of whom my ancestress, Maria Pignatorre, was personally acquainted.

of the most perfect types. The old Duke had reached the patriarchal age of ninety-two when he espoused the young girl; but in spite of his fourscore years and twelve, he was ever the witty, courteous gentleman of the old régime, one of the brilliant courtiers of King Louis the Fifteenth. The Marshal-Duke had been a page of the Grand Monarque, who died in 1715, and was consequently an authority on matters of Court etiquette. And thus it came to pass that, at the Court of the Third Napoleon, in the age of railways and steamships, of nationalities and constitutions, without the intervention of an elixir of life, the widow of an ex-page of Louis the Fourteenth was able to speak of the great Bourbon as a contemporary. The chain of connection might be lengthened to the present period, for there are doubtless some few still living who may have seen, if not spoken to, the venerable relict of the Duke of Richelieu, in his youth a page of Louis the Fourteenth.

Many other instances could be cited, almost as

singular, of similar historical *rapprochements*; but enough has been said to prove the pregnant fact of the rapid changes a few years will effect in our age of compound material and intellectual progress. The fleeting existence of man, a mere imperceptible atom of time in the physical history of the globe—whose annals engraved on rock and sand refer back millions of years—serves as a measuring unit of the political life of nations. A few generations strung together will often suffice, and the span of one single existence will cover an historical epoch within which trenchant and far-reaching social mutations have occurred. Some of these are permanent, some have come into fruition before their time, evanescent, reminding us of the necessity of observing the golden rule of *festina lente*—in homely English, the more haste the less speed—which even the most civilised nations are apt to overlook in their headlong course, and which less civilised communities systematically ignore to their injury.

BETTY GRIER.

CHAPTER XI.

WHEN I got home, and was comfortably seated in my arm-chair by the fire, Betty came in to set my tea, and I wasn't long in noticing that, from her abstracted air and the listless way she was moving about, she had something on her mind. She looked for a moment or two at Bang and Jip lying comfortably curled up on the hearthrug. 'Thae dugs are braw an' snug lyin' there,' she said; 'an' my puir Jessie's sittin' in the cauld stickhoose in the huff. No' that I grudge them their warm bed, for I'm gled—he'r't gled—to see them peaceable at last wi' yin anither. It's nae time since they were girmin' an' fechtin' an' tumblin' ower each ither frae the Cross to the Gill, an' noo, haith, they canna get ower cheek-for-chowie. Ye maun ha'e a wonderfu' wey wi' dugs, Maister Weelum. It's a peety ye couldna exert it in ither weys.'

I know Betty too well to venture assistance, and I had the feeling that she would soon work her way round to her subject without my aiding and abetting.

'The kettle will soon be through the boil, an' ye'll get your tea in a jiffy,' she said. 'Imphm! it's a gey comfortable-lookin' chair, that yin opposite ye, Maister Weelum; an', d' ye ken, I met a leddy the day that I wad like to see sittin' in it.'

'Indeed, Betty!'

'Ay. I dinna ken when I was sae much impressed wi' onybody at first sicht as I was this day; an' when I was sittin' lookin' at her, an' listenin' to her voice, something whispered in my ear, "That's the wife for my boy."'

'My goodness, Betty, you're forcing the pace! I laughingly said. 'First you wish to see this

lady sitting in my chair, and in your next breath you say you wish to see her my wife! Where did you meet this paragon?'

'Weel, this efternoon, when you an' the dugs were awa' yer walk, I slippit in next door juist for a minute to see hoo they were a' gettin' on, an', as I usually do, I opened the door without knockin' an' walked strecht ben to the kitchen, an' there, Maister Weelum, sittin' on the wee laich nursin'-chair at the fireside, was the leddy I speak o'. I gaed to gang back into the lobby; but Mrs Jardine wadna hear o't, an' she made me step in, an' she introduced me, quite the thing, mind you. Ye see, Tom's wife was toon bred, an' she kens a' the weys o't, an' she mentioned me by name an' the leddy by name; an' if she had been staunin' in a drawin'-room on a Turkey carpet, an' cled in brocade, she couldna ha'e dune it better. I juist didna catch the leddy's name, for what wi' the suddenness, her bonny face, an' ae thing an' anither, I was sairly flabbergasted an' putten aboot. It seems, however, that she's in the picter-pentin' line, an' she's ta'en a great fancy to wee Isobel, an' she's makin' a portrait o' her. A week or twae bygane she saw the wee lass staunin' at the door as she was passin', an' she was so struck wi' her bonny wee face an' her lang fair hair that she spoke to her an' asked to see her mither. Weel, the upshot o' this was that, as I've said, she is pentin' her, an' a capital picter she's makin'. It's hardly finished yet. I ken fules an' bairns should never see hauf-dune wark, an' I'm no' a judge, into the bargain; but I'll say this, photographin' micht be quicker an' mair o' a deid like-

ness, but it's no' in it wi' yon for naturalness and bonny life-like colour. But that's by the way, as it were. Her work is guid, without a doot, but she hersel's a perfect picter.'

I felt my heart beginning to thump and throb, and my breath getting catchy. 'Pity you missed her name, Betty,' I said, with forced unconcern.

'Ay, as I telt ye, I was putten aboot, an' missed it; but I'll speir at Mrs Jardine again, 'at will I.'

'And—and what is the lady like?' I asked, with as much indifference as I could command.

'Weel, Maister Weelum, I juist canna exactly tell ye. She's yin o' the few folks ye meet in a lifetime that ye canna judge o', or scrutinise bit by bit. It's impossible to do that wi' her; you've to tak' her in a' at aince, as it were; ye ken what I mean—eh?'

I did, and I didn't; but I nodded as if I understood.

'What struck me mair than ocht else,' she continued, 'was her couthie, affable mainner. To look at her ye wad think that she's a' drawn thegether—prood-like, ye ken, wi' an almichty set apairt kind o' an air; but whenever she speaks an' looks at ye, ye've the feelin' that she's a' roon aboot ye, an' that there's only her an' you in the whole world. An' she was so composed an' calm, so weel-bred without bein' uppish! Oh, I tell ye she juist talked awa' to Mrs Jardine an' me as if we were o' her ain kind. An' when she rose up to gang away, an' was staunin' her full heicht lookin' doon on us, do you know, Maister Weelum, she seemed to me to be kind o' glorified, an' the kitchen an' a' its plenishin's faded frae my sicht, an' a' I was conscious o' was the kindly glent o' twae big dark een an' the feelin' that I was in the presence o' some yin by-ordinar'—imphm! An' efter she had gane I couldna carry on a wiselike conversation wi' Mrs Jardine for listenin' to the whispered words in my ear, "That's the yin! That's the wife for Maister Weelum."

Since the forenights began to lengthen the doctor has got into the way of dropping in and smoking a quiet, meditative pipe with me over the chess-board. When he called to-night I drew out the little table with the squared top, and we settled down to our game. But my mind was not concerned with bishops, pawns, and knights, and my thoughts kept careering between Hastie's gate and Mrs Jardine's kitchen. I made an effort to centre my interest, and to look the part of the keen, zealous player; but, unfortunately, I cannot dissemble. I lost two pawns very stupidly, and the doctor looked keenly at me, but said nothing. I blundered on, and at last I made a move which caused the doctor to smile. He got up, relit his pipe, and sank into an easy-chair. 'Ah, William,' he said, 'Love is a tyrant! Heart claimed, thoughts claimed, all dancing attendance on the enslaver.'

I blushed, and made a show of riping my pipe into the coal-scuttle to hide my confusion. Then I told him of the meeting on the Carronbrig road, and of Betty's experience in Mrs Jardine's kitchen.

'The plot thickens, William,' he said, as he rose to go; 'and if I were you I would tell her of your dream next time you meet her. It will interest her in you; and, you know, once interest is aroused—well, love will follow. Good-night.'

My picture has arrived, and I have got it hung in a favourable light, in a place of honour above the mantelpiece. I became quite excited when it was delivered, and, like a child with a new toy, was impatient to see it, and to gloat over it. But the lid of the wooden case was tightly screwed down; and, as a hammer and a saw were the only joinery tools which Betty possessed, I had to call in Deacon Webster's aid, and Betty, poor body, got no peace till he arrived with his screwdriver. When at length the picture was taken out of its packing I noticed there was no signature in the corner, and this at the time was a keen disappointment to me; but it has ceased to trouble me now, because I have the feeling that it will shortly bear the artist's name, and till that time comes, when I am not admiring her handiwork, I shall just entertain myself filling the corner space with names which appeal to my mind as fitting and appropriate.

When I asked Nathan's opinion of my purchase, he looked several times very deliberately from me to the picture; then, after a pause, informed me he had 'never till noo seen purple gress.' I explained to him that this was the purple sunset glow; but he shook his head sceptically, spat in my fire, and walked slowly ben into the kitchen. Betty, who spent her early girlhood in the Keir, is delighted that a picture in which her native parish hills are depicted should be hanging on her walls, and she was very anxious to know who the painter was, and how it came into my possession. I just said I was very much interested in the artist, and that the picture had been sent from Edinburgh. She pointed out to me, what I hadn't noticed before, that the bright richness of the gold frame made the others shabby and tarnished-looking, and she warmly advocated the application of a liquid gold paint which John Boyes retails at sixpence a bottle, and which, she assures me, 'is liker pure gold than a sovereign.' Betty dearly loves to dabble in paint. It was Nathan who acquainted me with this predilection, and he instanced a case of her blue-enamelling the long hazel crook, the representative staff of the Ancient Order of Shepherds, which on gala-days he carries in the procession; and another, when she varnished, with a strange concoction, a workbox which she has never been able to open since. Knowing this, I purposely belittled Boyes's liquid, and assured her that in a week or two our eyes would become so

accustomed to the conditions that we shouldn't distinguish any difference between the frames. It grieves me very much to thwart Betty; though, truth to tell, I seldom have occasion to do so, as our opinions on the big things of life, the essentials, are rarely in conflict, and the smaller we think not worth wrangling over; so I talked her into a gracious amenable humour, and ultimately took leave of the subject in what I considered mutual agreement.

This morning, however, when she brought up my ante-breakfast cup of tea, she reverted to the subject without any preliminaries. 'Man, Maister Weelum,' she began, 'I've just been takin' anither look roon' the dinin'-room. Noo, since we've got it done up it's the first thing I do in the mornin' and the last at night; and, do you know, I feel quite prood and important when I'm puttin' a nice white cover on the big table, and the silver candelabra in the centre o't. But, oh man, since yesterday I'm positively he'r-sorry for thae auld frames. In a mainner it's my pleesure spoiled; to me it's a case o' dead flies in the ointment, ye understaun? Imphm! and I'm gettin' fair angry at the new yin hangin' oot so prominently and skinklin' as if to chaw the ithers. Dod, I imagine it's laughin' and jeerin' at them. Noo, Maister Weelum, twae sixpenny bottles o' John Boyes's gold, spread oot thin, would amaist do the whole lot, and—and I'll put it on myself. I'm rale knacky wi' a brush. It'll no' come to much—implum!—the cost'll be very little. What think ye?'

'I don't know, Betty, I'm sure. I'm sorry to know the old frames annoy your eye. Personally I like the old ones better than the new one; but I'll tell you what, Betty,' I said gleefully, as a happy thought struck me; 'we'll get the new frame coated over with some sort of stuff to dull it down a bit. They'll be all alike then. How would that do?'

'It'll no' do at a', Maister Weelum,' she said emphatically. 'That picter maunna be touched. No! no! It has some history, or I'm cheated. Time will prove'—

A sudden loud knocking echoed through the house and cut short her sentence. 'Mercy me, what a bang!' she said. 'That's Milligan the postman, and as sure as my name's Betty Grier he'll bash through that door some day;' and to my relief—for she was stumbling into 'kittle' ground—she hurried downstairs.

Since I came down here my correspondence has become almost a negligible quantity. I rarely write to any one, and the few letters I receive are of a more or less private business character. I had two this morning—one from the treasurer of my club reminding me my subscription is due at the end of this month, and the other from my partner, Murray Monteith, who, after alluding to minor matters, writes as follows:

'Now for the real reason of my troubling you at this time. The Hon. Mrs Stuart wrote to

me yesterday from Nithbank House, near Thornhill, saying she was desirous of consulting me on a very important matter; but owing to indisposition she couldn't travel to Edinburgh, and she would be much obliged if I could make it convenient to call on her at that address any day next week. I wrote to her by return saying I would travel south on Wednesday first, and would be with her during the early afternoon of that day. As you know, I am a stranger to your native county; but I presume Nithbank House is within driving distance of Thornhill, and as I am due at the station of that name at 11.30 A.M., I shall thus have ample time to call on you prior to my visit, and talk over matters with you.

'The important matter she refers to is, without doubt, in connection with the affairs of her brother-in-law, the late General Stuart, which, I regret to say, are still in a most unsatisfactory state, owing to our inability to unearth a will or to procure any information regarding his marriage. We have made exhaustive inquiry in every conceivable direction, but without result; and his daughter, Miss Stuart, must now be acquainted with the facts as they at present stand. She called here on the 17th ult., and asked to see you. Ormskirk informed her that you were at present invalided in the country, and showed her into my room. We talked over matters in a general way, and I think I managed to satisfy her on the main points, without giving her any reason to suspect we were faced with such serious difficulties. But, as I have said, she must be told now, and I approach this part of the business with misgivings, as it is a very delicate matter indeed; and, from the little I have seen of her, I argue she will take it very keenly to heart. For us to inform her, in our cold, unfeeling legal phraseology, that she is, in the eyes of the law, illegitimate would be nothing short of brutal, and I trust we may prevail on her aunt to discharge this unenviable obligation. I assure you I have no desire to trouble you unnecessarily at this time with business concerns; but, as you are in the immediate locality, and are not only acquainted with the parties but conversant with all the details of this case, I hope you will see your way to accompany me to Nithbank. Miss Stuart informed me that she had transacted business by correspondence only, and that she had not yet met you. Would this not be a good opportunity for us all to meet and decide what ought to be done?'

Needless to say, I shall be delighted to receive Murray Monteith here. We must arrange to have him remain overnight with us, and I shall take peculiar pleasure in introducing him to Betty and Nathan and Dr Grierson, types, I feel sure, which he has never met before, but which I am equally sure he will appreciate. I shall certainly accompany him to Nithbank House; and I must be prepared to have the vials of the

Hon. Mrs Stuart's wrath poured out upon me when she learns that for almost six months I have resided within two miles of her, and have not considered it my duty and privilege to call on her. I am very, very sorry to learn from Monteith that things have turned out so unfortunately; but somehow I have dreaded such an outcome all along. And my heart goes out to that poor girl who is likely to lose her patrimony under the inexorable law of succession. But, wait now, let me think. Yes, these four thousand Banku oil shares which her father

transferred to her, on her coming of age, are hers, and cannot be contested; so that, after all, if our worst fears regarding the property are realised she will not be penniless. I wonder if she is a level-headed business girl, and if she knows to what extent she will benefit from this. Banku oils are worth looking after. This will be one cheering subject, at least, which we may broach to her. But, after all, the stigma of illegitimacy remains, and money cannot make up for that. Poor girl!

(Continued on page 600.)

BIRD VISITORS TO A TINY HEBRIDEAN ISLE.

By R. S. CLYNE.

TO the nature-lover the woodland copse, hedge-encircled field, riverside, seashore, and lonely mountain tarn have—in each recurring season, with their varied plant and animal life, and chiefly the bird visitors—a thrilling interest of their own. So fares it with a small detached rocky islet which I have in my mind's eye, a lone, abandoned spot, though busy enough on some occasions. But, apart from the interesting bird visitors it annually attracts, its situation gives it an additional significance. Our little islet is an offshoot of the Lewis, and the extreme north-west corner of the long range of Hebridean Isles exposed to the open front of the North Atlantic.

Thoroughly deluged and scrubbed all the winter months by the forceful brush of the ocean billows, a few patches of rough grass, tufts of sea-pinks, and campions in the interstices of the rocks are all the vegetarian yield it can boast to give to it a bit of greenery during the summer months.

Naturally few birds resort to such an abode during the winter, but it is only in the wildest of weather that it is completely deserted. Gray crows, ravens, and marauding big black-backed gulls fly there with purloined tit-bits of fur or feather, where, out of gunshot range, they can enjoy the feast in safety, and tauntingly caw or croak defiance. For like reason do also hard-hunted flocks of plover, whimbrel, and curlew often find there a timely refuge. On its shag-rock a score of sheeny, bottle-green, mature birds or brown-gray-breasted immatures rest after fishing operations, and, taking advantage of a stray sunbeam, spread out their pinions to its warmth. Round its weedy reefs, when fair weather favours, a flock of eider-duck are often diving; also, but less frequently, numerous long-tailed duck, for they mostly prefer to fish in the sandy bay round the corner. Redshanks, knot, and purple sandpipers are its smallest winter guests, which come to forage for small marine life in the pools around its base.

With early spring come other visitors to this

and kindred inshore islets. Flocks of kittiwakes—the loveliest of rock-birds, and fit emblems of purity—thither betake themselves for several weeks after their arrival in February, and before they occupy for the season their adjacent nesting-cliffs. In February also arrive the lively, interesting tysties or black guillemots—the birds with the butterfly flight—to claim a resting and courting place on the low ledges, and later on a nesting-cleft on the rugged profile of our little skerry.

In March and April flocks of local-breeding herring-gulls resort there in the evenings, and doubtless keep up their usual courtship, calling all the night long, though nobody is nigh to hear. About a dozen pairs will commence nesting on its northmost corner in May, and most of the young will be on the wing in August. Noisy oyster-pickers, soon after their appearance in April, return to its safe retreat, where they for a few seasons successfully reared their little family.

In May migrant flocks of corn-buntings and white wagtails, arriving exhausted after a long sea-flight, are glad to make our little islet a temporary resting-place on their southern journey.

Last season fulmar petrels, during their first and prolonged stay here, chose to patronise our handy resort, often resting there after their swift-like circling flights; and we are in hopes that this year the little isle or the adjoining cliffs may claim them as a breeding species—an acceptable addition to the number.

For several years a small colony of about two-score of Arctic terns nested successfully on its grassy flats and over the rocky surface; but of late years these have dwindled down to only a few pairs of late arrivals, evidently those hunted and harried from other colonies, and forced to seek fresh quarters out of reach of human pilferers. We welcome the coming of these noisy, fleet-winged summer visitors, amused with their shrieks of intimidation and the threatening swoops with which they assail intruders on their domains; and we respect the faithful, constant labour they exercise in the feeding of

their nestlings till long after they are on the wing.

A small colony of local-breeding common guillemots also find there a suitable perching-place throughout the summer, when a smooth-water landing can be effected. Around it they can find food sufficient at the door of home; when tired they rest in rows until hunger again urges them to engage in another diving expedition.

Gannets do not visit the little isle, but in hundreds, sometimes thousands, pass over it daily on their eastern flights all the summer months. On their western flights they usually pass a mile to seaward. Whenever gannets seek to land or rest on any place other than their common home—one of the few recognised gannetries—or the bosom of mother ocean, they are sick or wounded unto death. Their hours of life are surely numbered.

To the little isle come in late summer lots of newly fledged gulls and kittiwakes, still baby birds with the downy covering of chickhood unshed. Evidently pleased are they with their first short adventure out to sea, but are ever hungrily gaping and seeking food from any and every parent bird which puts in appearance.

It is not too far removed from favoured cliff haunts of starlings, and numbers are often seen perched on its highest peaks. They may even share with the tysties some of their suitable nesting-vents. Migrant rock-pipits pay it seasonal visits, and the resident birds are only absent when wild weather compels them to seek an inland shelter. Peregrines, merlins, and frequently Iceland falcons also find it, in their discursive autumn flights, a resting and feasting place and coign of vantage, as did the black-coated rievers in the spring. It is frequently visited by parties of blue rock-doves, which in hundreds occupy all

the year the wave-hollowed caves in the vicinity. Scarce as is the herbage over its surface, there they safely collect a supply for the replenishing of their nests.

When our breeding sea-birds have gone, early autumn brings to it visitors of another sort. Migrant thrushes, redwings, and blackbirds, when in numbers round the coast, seek a hiding-place in its dividing gullies; and when, in mild 'backends,' there are present belated wheatears, warblers, fly-catchers, and goldcrests, feasting round the cliff-edges, where the midges are in myriads, thither, to the extreme limit of the little isle, do the small mites wing their flight, as if eager to evade the prying eyes of chance observers.

By the sea and from the sea the majority of the visitors reap their harvest. They live in a world and way of their own. Some find a sufficiency of food underneath or on the surface of the changeable, restless ocean, whether it be quiet, docile, and accommodating like some willing servant, or in the furious, raving, masterful mood of a cruel war-lord. Others find a rich provision on its shores, scavengers of the motley garbage cast up by it in its wrath.

In all our winged seaside visitors we take an interest, noting their several characteristics and their whole wonderful existence, and give each a greeting on its return as the seasons circle round. It is said that solitariness and the sea breed strange thoughts, and that the noise of the winter winds and ocean waves thundering in our ears at times beat curious ideas into our head; so we sea-dwellers welcome the early movements of the birds, usually to us the first indication that spring is near. Then we know it is time to bestir ourselves to fresh exertions, and feel a renewed impetus to be up and doing.

AN EYE FOR AN EYE.

PART II.

FOR the first time for a fortnight Dene chuckled grimly. He realised he held his enemy in the hollow of his hand. It would take her at least two minutes to dive, and the *Nestor's* stem would have crashed into her long before that. One touch from that knife-edge would either sink her outright or damage her so seriously that she would not be able to dive and escape.

He had no feelings of sympathy for his victims. He was merely very excited and rather happy—happy in the thought that he was about to destroy one of the instruments and some of the perpetrators of German frightfulness. To tell the truth, he gloated. He would still gloat when his ship's sharp stem drove deep into the shell of the submarine and sent her to the bottom like a stone. If any of her unfortunate crew did float after the collision, he felt as if he could

gloat again when he saw their struggling figures in the water. He would see their awful staring eyes and the agony of fear in their faces; but he would not make a move to help them. 'Save, Englishmen; save!' they would cry in broken English as they floated past. This had been their piteous appeal when one of their destroyers had been sunk during the battle of the Bight of Heligoland on 28th August 1914. On that occasion the *Nestor* and several of her consorts had stopped, lowered their boats, and had been the means of saving many German lives. But what had happened? A hostile light cruiser had appeared on the scene, and had shelled them heavily while the boats were still away on their errand of mercy.

The Coronel incident, when Von Spee's victorious squadron steamed through the strug-

gling survivors of the *Good Hope* and *Monmouth* after their ships had been sunk by the gunfire of the *Scharnhorst* and *Gneisenau*; the *Falaba* and *Lusitania* affairs, when innocent non-combatants, some of them women, had been sent to their doom by a submarine; and, above all, his own great tragedy, had hardened his heart. Mercy? His enemies never exercised it, so what right had they to expect it from him? If he did ram and sink this submarine, there would be no survivors; he would take good care of that. A corpse or two to prove that he had done it, perhaps; but no survivors! He chuckled grimly. Revenge would be very sweet.

Then suddenly came a sharp roar as the four-inch gun on the forecastle went off. It was practically impossible to miss, and the shell, driving home on the low-lying hull some distance abaft the upstanding conning-tower, burst with a loud detonation, a brilliant sheet of ruddy flame, and a cloud of black smoke.

'Fire at the conning-tower!' somebody shouted.

Again the four-inch gun barked, but this time the gunlayer was flurried and excited, for the projectile missed its target altogether, and burst harmlessly in the sea beyond.

The *Nestor's* men, hearing the first report, were rushing to their stations. The destroyer had been travelling at about twelve knots when the submarine was sighted; but now, with her turbines using every ounce of steam they would take, her speed was momentarily increasing. The submarine was now so close that the gun could not be depressed sufficiently to fire again. Two hundred and fifty yards, two hundred yards, one hundred yards.

'Starboard a little, coxswain!' Dene whispered, breathless with pent-up excitement. 'Steady so!'

'Steady it is, sir!' answered the petty officer calmly, twirling his wheel. Æons of time seemed to pass before the crash came. In reality something under a minute went by between the time the submarine was first sighted and the actual collision; but to Dene, waiting on the bridge, it seemed an eternity.

On board the submarine only one man could be seen, and he was a young-looking, fair-haired officer standing on the conning-tower. He made no effort to go below, and the lieutenant-commander could even see the frightened expression in his eyes and hear his orders to the man at the steering-wheel in the interior of the craft below. Fifty yards, twenty-five yards.

The submarine's helm was suddenly put hard over to dodge the expected blow. She began to circle round; but her last despairing effort was too late. The *Nestor* was quicker on her helm than she, and the destroyer's coxswain, noticing the enemy's alteration of course, promptly moved his wheel ever so slightly to follow her round. Dene saw the officer look up at the destroyer. He evidently realised that his last

manœuvre was useless, and that the collision was inevitable, for he shouted something to his men, and a sailor's head and shoulders appeared in the opening of the conning-tower. Then the hostile craft disappeared, shut out from view behind the *Nestor's* high bows.

Dene gripped the bridge-rail and braced himself for the shock of the collision. It came, a shivering jar which nearly stopped the destroyer dead, and hurled many of her men to the deck. She heeled over bodily. There came an awful grinding and wrenching of violently distorted metal, and then a series of sickening muffled bumps and crashes deep down below the water-line as she slid over her antagonist and forced her under. The blow had not cut the submarine in halves; but it had opened up a great hole in her double hull, through which the water was now pouring like a mill-slucice.

The lieutenant-commander leaned out over the end of the bridge and looked into the sea. He was vouchsafed a momentary glimpse of the gray bow of the stricken vessel standing out of the water at an angle of forty-five degrees. It was sinking gradually, scraping along the destroyer's side, and so close that he could have jumped upon it.

'Hard a-starboard! Full speed astern port!' he ordered, watching the remains swirling by. Whatever happened, he must keep his stern, with the rudder and propellers, clear of the wreck.

The *Nestor* turned fast, and by the time her stern was level with the spot where the collision had taken place the blunt bow of her adversary had disappeared, sucked under the water as if by a gigantic magnet. All that remained was an ever-widening circle of thick, iridescent oil floating on the water and a commotion of gigantic air-bubbles, with, in the midst of it, three life-buoys, a few floating spars, a small collapsible boat bottom up, and the dark heads of three swimmers. All the rest of her men had gone to their doom in the riven hull of the vessel, now sinking quietly to its last resting-place in the still depths of the North Sea. Dene saw one of the survivors reach a lifebuoy, clutch it, and then wave an arm to the British destroyer.

'By God!' he muttered; 'I can't let the poor devils drown! Call away the whaler!' He forgot his previous thoughts of revenge. There was something so utterly un-British and unmanly in leaving drowning men to their fate that he could not resist the impulse to save them.

The *Nestor's* way was stopped, and the boat was lowered; and presently he had the satisfaction of seeing the three poor wretches dragged on board and rowed back to the ship. One of them was the officer in command.

Soon afterwards the destroyer's engineer-lieutenant, clad in dirty overalls and dripping with water, appeared on the bridge.

'Well,' Dene queried anxiously, 'what's the damage?'

'We're badly holed forward,' said the other. 'The foremost oil-fuel tanks are leaking, and most of the stuff's already gone overboard. Several plates and frames are smashed. We've made a lot of water forward, of course; but the collision bulkhead is intact, and seems to be holding.'

'Thank the Lord! D'you think we can get back?'

'Certain of it, sir! We can keep the water abaft the bulkhead under with our ejectors. It'll mean a dockyard job to dish her up, of course; but so long as you go dead slow, and the weather holds fine, the collision bulkhead will stick it. By the way,' he added, 'do you know what submarine it was?'

'No. Why?'

'I heard one of our seamen say it was U69,' said the engineer, with a meaning glance at his commanding officer.

All the colour left Dene's face. 'U69!' he ejaculated hoarsely, clutching the engineer by the arm in his anxiety. 'Are you quite certain? For God's sake, man! are you quite sure?'

The engineer-lieutenant nodded. 'The man I heard it from said one of the survivors had told him,' he answered quietly, disengaging himself.

Dene turned abruptly on his heel, and for some seconds walked up and down the small bridge nervously clenching and unclenching his fists. He was thinking hard, trying to make up his mind what he should do. Could it really be true that the man who had torpedoed the *City of Edinburgh*, the man who had been responsible for the death of his wife, was now a prisoner in his power?

'The number of the submarine you commanded,' said Dene with ominous quietness, 'was U69?'

The rescued German officer, very ill at ease, fidgeted as he sat on the cushioned locker in the *Nestor's* wardroom. He was clad in borrowed clothes belonging to the destroyer's first-lieutenant; and, though he had been quite uninjured when his vessel was rammed, he looked abject and miserable. 'You haf ask me zat before,' he growled in English, glaring unpleasantly at his captor. 'I answer nozing!'

'It doesn't matter in the least whether you answer or not,' the Englishman replied with forced politeness. 'I have already found out from the two men we picked up that it was U69.'

The foreigner's expression changed. 'Ach!' He laughed nervously, shrugging his shoulders. 'Zey tell lies. Zey say zat to please you!' It was an obvious untruth—so utterly obvious that Dene was not deceived.

'I prefer to believe it,' he observed, putting one hand into the pocket of his monkey-jacket.

The German shrugged his shoulders again.

'I believe it,' the lieutenant-commander reiterated with an icy coldness in his voice. 'Now, I will tell you a certain story. Do you happen to be a married man, by the way?'

'I am,' nodded the other, looking up with curiosity in his eyes. 'Bot vat ees zat to you?'

'Never mind. About a fortnight ago—sixteen days ago, to be quite accurate—U69 torpedoed and sunk a ship called the *City of Edinburgh*. It happened somewhere off the Scillies. Were you in command of the submarine at the time?'

Dene looked at his prisoner with a frown on his face and a steely glitter in his eyes.

The foreigner would not look at him. 'I do not answer,' he replied, licking his dry lips.

'You refuse to answer?'

The German nodded.

'Very well. If you refuse to answer one way or the other, I shall take it for granted that you were in command of U69. Do you hear?'

'Eet ees all ze same to me vat you believe,' retorted the other with another contemptuous shrug of his shoulders. 'I do not care!'

'Very well, then. Since you will not clear yourself, I assume that you were responsible for sinking the *City of Edinburgh*. She was a passenger-ship; I suppose you know,' he added with horrible deliberation. 'She had a lot of women on board. One of those women happened to be my wife! She was not saved!' He paused to allow his words to take effect.

The German changed colour and twisted his fingers nervously. He had some idea of what was to come next.

'Yes,' Dene went on, raising his voice; 'one of those women was my wife! You are a married man yourself, so perhaps you can understand what my feelings are. Do you?' he asked angrily, longing to strike his prisoner in the face, and only restraining himself with an effort.

'I say nozing,' repeated the other, licking his lips and looking round with a hunted expression in his eyes.

'You say nothing!' Dene muttered between his clenched teeth. 'You will not clear yourself?'

The German shook his head.

'Very well,' the Englishman said slowly; 'you are a murderer! Yes, a murderer! You understand what that means, eh? I see you do,' he added, laughing grimly as his enemy quailed. 'If I had my way I'd shoot you like a dog! Shoot you, do you understand?' He suddenly produced a small automatic pistol and balanced it carelessly in his hand.

His enemy's face blanched. He shrank back from the weapon with horror in his eyes. 'You vill shoot me?' he gasped.

'Nothing would be easier,' Dene answered with a contemptuous smile, gloating over his prisoner's terror. 'If I had my way I should do it here. Nobody would be any the wiser.

My ship has rammed and sunk your submarine. I have picked you up, and two of your men. It would be quite easy for me to say that there were only two survivors. Two survivors! Do you understand?

'You will keel me?' ejaculated the other, starting up from his seat with genuine alarm written on his face. 'You cannot do it!' He looked round nervously for some means of escape.

'You can't get away.' The Englishman laughed grimly, toying ostentatiously with his pistol. 'I can shoot you long before that. We are alone here—quite alone!'

The German clenched his fists and advanced threateningly.

'Stand back, you fool!' Dene exclaimed, levelling his weapon. 'Stand back, I say, or I'll fire!'

The prisoner recoiled.

'I could shoot you!' the lieutenant-commander went on angrily. 'I should like to do it, but I am not a cad. I don't kill unarmed people. Sit down and listen carefully to what I say. Sit down!' He still held the pistol steadily.

The German obeyed without a murmur.

'I'll tell you what I propose to do,' Dene resumed. 'I am going to give you a chance for your life. I have another pistol here, exactly like this one. It is loaded. I will give it to you, and then I shall go to the other side of the table and shall count one, two, three. At the word *three* we both open fire, and go on firing until all the six cartridges are fired. You may be killed, or I may be, but I'm giving you an equal chance. Do you agree?'

The foreigner hesitated, licking his dry lips.

'Be quick! Do you agree?'

'No; I will not fight! I demand treatment of prisoner of war. Eet ees not fair zat you should propose'—

'Fair!' Dene interrupted, curling his lip. 'Fair! I'm giving you an equal chance! Did you give the passengers of the *City of Edinburgh* a chance of saving their lives? No, you hound! You fired the torpedo before they could even lower their boats. Fair! Who are you to talk like this? You're a murderer! Yes, a murderer of innocent women!'

'I vill not fight!' the German repeated mechanically.

'Bah!' the lieutenant-commander retorted, 'You're not worth killing! You're a coward! Yes, a coward!' He returned both pistols to his pockets.

The German seemed rather relieved, for the expression of terror left his eyes. 'I am not coward, I'—

Dene laughed bitterly. 'No coward!' he jeered. 'Humph! I should have said you were! Nevertheless, I will not kill you. I will merely'—

He finished his sentence by springing at his

enemy and striking him violently in the face with his fists. 'Take that!' he exclaimed, his pent-up rage getting the better of him. 'Take that! and that! Hit me back! Come on! Hit me back!'

The German made no effort to defend himself, but collapsed on the locker, trying to protect his face from the rain of blows.

Dene recovered himself and glowered at his cowering foe. 'That is how I treat a coward!' he ejaculated breathlessly. 'You will probably remember this day till the end of your life. When you do get back to Germany after the war, you can tell your wife that I spared you for her sake—that I spared you; I, whose wife you murdered! I am a fool to do it, I know; a fool!'

He turned abruptly on his heel and left his stricken enemy to staunch the blood flowing from the wounds in his head.

Early the next morning the *Nestor*, with a collision-mat over her damaged bows, and two tugs lashed alongside, limped painfully into a certain dockyard port on the east coast. The prisoners were landed in charge of an armed escort, and half-an-hour later Dene received a telegram.

'Missed passage in *City of Edinburgh*,' it ran simply. 'Have just arrived Plymouth in *Somali*. Am going straight to London.—MAUD.'

Dene gazed at it, unable to believe his eyes. His wife was still alive; his wife, who he thought was dead! A great wave of thankfulness surged through his heart. 'Thank God!' he ejaculated feebly. 'Thank God!'

He had two good reasons for thanking his Creator.

STODO KIRK, BY THE RIVER TWEED.

WHERE sleep they now who built thy aged walls,
And laid them deep beneath the clover sod?
Who raised this tower whence silvern music calls
The moorland shepherds to the feet of God?

The evening shadows touch thy tranquil breast,
Outside thy gates the happy children play;
But in the calm of heaven's eternal rest
God keeps the builders of that other day.

Mayhap this mound the sacred fragments hold
Of one who fled the troublous ways of men;
And, as the waves of longing round him rolled,
He built to God this temple in the glen.

Tweed's gentle river seeks the restless sea,
Its murmur trembles on the evening air;
And from those shades that round envelop thee
I hear the sound of angels chanting there.

Oh day of life whose hours un pitying glide!
Oh house of God, touched with a tender grace!
I find my peace, on this sweet eventide,
Beside the portals of thy holy place.

SEVENTH SERIES

X-RAY WORK IN WAR-TIME.

By FRANCIS VIPOND, an X-Ray Worker.

THE war has, amongst many other things, brought X-ray work into prominence on account of its great usefulness to military surgeons in the work of locating bullets and fragments of shrapnel, and in treating fractures and injuries to bone. To those, however, not actually engaged in X-ray work it still remains something of a vague mystery, and to many of the victims condemned to 'go under the Hex-rays'—as Mr Atkins often puts it—the X-ray room is regarded as a dread combination of a witches' cave and a torture chamber of the Inquisition.

Most people know that the mysterious emanations of a powerful electric current passed through a glass tube of high vacuum causes the production of a group of rays of weird potentiality, and that amongst these rays those termed 'X' have been harnessed by scientific men for the use of their suffering fellows. It is common knowledge that these X-rays were first identified by a German scientist of the name of Röntgen, and that by their means broken bones may be seen and bullets and other foreign bodies localised in the victim of accident or war. It is often affirmed by those who have been in an X-ray room that the rays are of a beautiful yellowish apple-green colour; but this is a mistake. The colour is due to fluorescence of the glass, the rays themselves being colourless and invisible. The English glass now used for X-ray tubes (German glass being no longer obtainable) fluoresces a most exquisite blue-beryl shade of blue. The German glass was a soda glass (its exact manufacture being a trade secret); the English is a lead glass.

If, then, you pass an electric discharge through a glass bulb of very high vacuum a fluorescence appears on the walls of the tube or on any suitable object that is placed between the electrodes. The electric ions themselves are termed 'kathode rays.' After the kathode rays impinge upon the glass wall of the tube—or, as is now done in X-ray tubes, on an anti-kathode of platinum of tungsten—we get X-rays. This anti-kathode (or target), enabling us to focus the rays, was introduced by Herbert Jackson.

X-rays have the power of penetrating various substances which are opaque to ordinary light, this power varying inversely with the density

of the substances in the path of the rays. Bone, for instance, is denser than flesh, hence we get shadow pictures of bones enabling us accurately to diagnose fractures. Again, the density of bone in disease differs radically from that of healthy bone, so that bones afflicted with tubercular or other forms of disease may be accurately classified for the information of surgeons or physicians treating such cases. Most metals—aluminium is a notable exception—are opaque to the rays; hence bullets, needles, pins, &c., throw heavy shadows, and are easily located by means of the rays. Bismuth, either in the form of capsules or a kind of thick gruel, is administered to patients with symptoms of œsophageal or intestinal obstruction, and a series of radiograms being taken during the digestion or swallowing of such 'meals,' an accurate picture of the condition of the œsophagus, stomach, or intestines is obtained. Malignant disease is thus negatived or demonstrated, and the physician or surgeon knows exactly where and what is the fell disease he has to tackle, for the bismuth throws a dense shadow wherever it passes. Bismuth emulsion, too, is injected into sinuses, and their depth and course thus ascertained.

Ringworm, a disease of the skin caused by minute parasites, afflicting the skin with an especial preference for the scalp, is treated with the greatest success by means of X-rays. Let us follow the course of a shrinking and scared small youth, who, condemned by the skin specialist of a London hospital to X-ray treatment for ringworm, is led, awed and somewhat sullen, by an officer of the Education Committee of the great city of London, to the treatment room of the hospital's X-ray department, the door of which is opened to his guardian's knock by a nurse, to whom a paper is handed setting forth the victim's complaint, age, address, school, and other details. This missive the nurse in her turn hands to the Sister in charge, whilst little Willie wishes he could turn and flee, or that the earth would open and swallow him up.

'Do it 'urt much, miss?' he whispers to the nurse, who looks kind and friendly, as Sister fills in a card with instructions as to the dosage, &c., he is to receive.

Nurse shakes her head and laughs as she takes a blue pencil and a tape measure from a drawer, and proceeds to measure out mysterious angles on Willie's closely-shorn bullet-head, marking what are apparently five points of interest thereon with the blue pencil. These five blue dots represent the five 'areas' which are to be X-rayed. So accurately is this system worked out that, if properly applied, every hair of the head falls out, leaving a scalp resembling an ostrich's egg or the proverbial billiard ball, on which it seems to horrified parents a sheer impossibility that hair can ever grow again. Nevertheless, grow it does, beginning as fine soft down, and ending in a normal crop; in the end all is well, including the cause of the trouble, the ringworm, which is totally eradicated.

Meanwhile little Willie surveys his surroundings with rapidly growing apprehension and alarm, Sister uttering the cryptic remark, 'Tube eleven, nurse. Two or three milliamps, one P.D.,' vanishes, and Willie finds himself lifted on to an operating-table and gently laid flat thereon. A second nurse emerges from the shadowy background of switchboards and tube-racks which make up the scenario of the Inferno into which an unkind Fate has precipitated little Willie. She throws a lever across from point to point, and a sound as of an underground train starting rumbles through the quiet room, vibrating and jarring up Willie's already overwrought spinal column. He wonders dully if he may not perchance be electrocuted, an accident he has read of in the Sunday Press as occurring to trespassers on electric railways.

Nurse No. 1 bends over him. 'There is nothing to be frightened of,' she says in a level, soothing voice; 'it is only a light. But you must keep quite still.'

Willie yields to the inevitable. A square box is lowered to a few inches above one of the blue spots marked on his head, then, 'Quite still, my lad,' says nurse, and there is the clang of a lever as the second nurse turns the current into the tube. Willie's eyes, ears, and all vulnerable portions of his person are protected by thick sheets of rubber; but he is aware of a curious yellow glow somewhere above him. His scalp prickles and tingles, then after a second or two he falls asleep, only when the first of the five areas is finished to be roused to be put in position for the radiation of the second, and so on throughout the five on which the rays have to exert their influence.

The dosage is not given haphazard. An aluminium filtering screen of known thickness is employed to filter out the rays which burn the skin, and each dose is measured by means which never vary. In this way all risk is obviated, and with the highly trained operators who alone are employed in our hospitals all risk to the patient is eliminated. Sometimes a child is so restive and scared that adequate dosage with the

rays is impossible, and the patient must be sent away as untreatable; but this is an exceedingly rare event. Parents and those who come in charge of children almost invariably do their best to help the nurses to reassure and control the children under treatment.

'Enery,' said a woman the other day to a wildly kicking and struggling small youth whom two nurses were vainly endeavouring to reassure, 'if yer don't chuck it, 'ome ye goes, an' what 'll yer pa say?'

'Tan me,' wailed 'Enery, and the Scylla of the X-ray operating-table plainly faded into insignificance before the Charybdis of his parent's just wrath. His relative's firm hand pressed him down in the position nurse demanded, and beyond a few snuffles of irrepressible protest, we had no more difficulty with 'Enery.

'E's 'eavy in the 'and 'is pa is,' his relative confided to us as we gave her a paper requesting her to bring Henry to see our electrical and radiographic specialist in three weeks' time, and duly to wash Henry's moulting head with soft soap once a week during the interval. 'E don't stand no nonsense with 'is kids.'

'Sensible man!' said the nurse. 'Don't forget to bring Henry up here in three weeks, will you?'

In three weeks a bald and grinning Henry is led up for inspection; and on his card the doctor jots down 'Epilating nicely,' so that we know that all is well with him.

Every X-ray treatment for ringworm takes an hour or more to carry out, and the wear and tear on the tubes used is great; but it is becoming more and more used, as its certainty and effectiveness become known. The treatment of cancer, skin diseases, &c., is undertaken in this department, and in certain cases radium is used. The radium applications are kept in a casket which, when not in use, dwells in the office safe, from which only the radiographer (who keeps the key of the casket) may obtain it. It is perhaps well that patients with various skin diseases do not realise that, as they sit comfortably reading in the treatment-room, the little square or circle or tube which has been plastered on to them is worth anything from three to five hundred pounds.

Though treatment with X-rays is extremely interesting, diagnostic work is perhaps even more enthralling. In the surgery a house surgeon examines an elderly man's wrist.

'Colles, I think, Sister,' he says, scribbling on a paper. 'Send him to the X-ray people for report.'

Daddy listens with a sinking heart. X-rays are amongst the horrors they keep in hospital, he knows. What do they do to you 'under the Hex-rays'? His heart sinks yet lower as a nurse leads him down a corridor and knocks on a door bearing the legend, 'X-Ray and Electrical Department.'

The door opens, and daddy is handed over to another nurse, who reads his paper. 'Right wrist. Query, fracture?' she quotes. 'Come on, daddy. Don't look so scared; we aren't going to electrocute you. We are only going to take a photograph of your bones.'

Daddy, considerably reassured by her manner, follows her into the room. 'I ain't never 'ad me photer took afore,' he confides as he is piloted to the X-ray operating-table, above and below which are queer objects of thin hollow glass. He is asked to put his injured wrist on a parchment square in the middle of the operating-table, and he notices that high above him is a network of insulated cables, whilst against the wall are tubes and things that look like glass rods above a tall marble switchboard. Another switchboard somewhat resembling the controls of an electric tram is at the other side of the room, and above it are dials and gauges. The nurse in charge of him puts a queer yellow object, like a framed and glazed picture with brass handles, over his swelling and painful wrist, carefully easing all pressure by resting it on sand-bags. 'All right,' she says to a second nurse who is standing by the control-table.

Suddenly the electric light goes out, and there is a pause in darkness; then with a click a lever is touched, and the screen above daddy's aching wrist is flooded with an unearthly yellowish-green light.

'Look!' says the nurse. 'You've made a nice mess of your wrist, daddy.'

Daddy looks. He forgets the pain as he gazes on the bones of his arm, which even he knows should not stick out in angular splinters. 'It's all along o' them nasty dark streets,' he says. 'I stumbled orf the kerb an' fell against a barrier, an' there ye are. Wonderful thing this 'ere,' he adds, as in the darkness over his head strange violet flames flicker and dance about the cables like impish spirits at a witches' carnival. 'I never thought to see my own bones like this 'ere.'

'Don't move your arm,' says nurse, and the lights spring up. The fluorescent screen is taken off his arm, and its place taken by a dry plate in a double envelope, which is exposed for about five seconds. A second position is taken, so that the fracture may be verified and localised, and daddy is told to go back to the surgery, where in the course of ten minutes or so the developed plates of his broken wrist arrive to guide the surgeon on duty in the setting of the fracture.

As daddy goes out of the X-ray room a soldier is wheeled in on a stretcher trolley. This warrior has a bullet in his chest, the position of which has to be located for the surgeons. After him other soldiers come, some from the wards, others out-patients. Some have bullets or pieces of shrapnel embedded somewhere in their bodies, and these have to be found by means of the

X-rays. There are now many efficient means of accurately localising such foreign bodies, which in some cases are extracted in the X-ray room under the fluorescent screen. Strange are the things issuing from the German shells that are found in the persons of our gallant warriors. A brass screw-nut was discovered under the X-rays in a man's leg, and subsequently removed by the surgeons. The victim of this missile preserved it as a 'keepsake o' them blasted Germans,' in a highly polished condition, hung to a chain along with his identification disc, and—he was a very devout Catholic—a crucifix.

Bullet wounds are often complicated by terrible fractures of bone, and here again X-rays are in constant requisition in order that the progress of the healing of these injuries may be observed. It can be seen, if the fragments are in good position, whether they are uniting properly. If this is not the case, operations are undertaken, so that the greatest possible usefulness may be retained in the injured portion. If the fragments of a bone shaft, say, are not uniting as they should, or the position of the fragments is bad, the surgeon cuts down on the bone and secures the splintered portions by means of a plate or screws. When the knee-cap is broken in two (a very common injury) the portions are lashed together by means of silver or copper wire. A bullet through the jawbone is not a pleasant injury, but modern surgery tackles its repair with success. An X-ray picture shows where the mischief lies, and by means of skilfully arranged plates and frames the jaw is again made serviceable.

As well, however, as wounded soldiers there are sick ones, and X-rays are used more and more for purposes of diagnosis. On the fluorescent screen the beating of the heart can be watched; if there is pleurisy with effusion, the rippling waves on the fluid in the thorax can be clearly seen. Now that instantaneous radiography is possible—for with the tubes and high-tension apparatus now at our command exposures of one-hundredth of a second can be given—clearly defined pictures can be taken which show the heart and lungs, and any abnormal condition is easily recognised by the radiographic specialist. Tuberculosis of the lungs, for example, or internal cancer, can be clearly made out, as can aneurism and dilation of the heart. Calculi (stones) in the kidneys, &c., can be photographed and their positions localised like any other foreign bodies which are opaque to the rays.

X-ray work is growing every year in scope, usefulness, and, one might add, in safety, both as regards patients and operators. With the safeguards now employed accidents practically never occur. The skin is shielded, and the rays are filtered so that they only reach the spot they are intended to act upon, and in known and carefully measured doses; and all the time

we are learning, and the practical use of X-rays grows and grows, and will go on growing as the wounded pour in on us.

An efficient X-ray department is expensive to maintain, and, like most other things, the price of apparatus is steadily rising because of the war. Plates, for instance, have increased in cost 20 per cent.; and we use a lot of plates, from the humble half-plate to plates fifteen by twelve inches. Larger plates, twenty by fifteen inches, are used mostly for heart and lung diagnosis, and cost two shillings and sixpence apiece, or at the present time rather more. The great dishes of fixing solution for these plates have to be supplied with two quarts of solution each—that is, two pounds of hypo (thiosulphite of soda), with two ounces of meta-bisulphate of potash, to two quarts of distilled water go to make up the complement of each dish. The dishes themselves for these developing and fixing operations cost six shillings apiece. X-ray work is not cheap, and house governors are wont to remark sourly to the X-ray staff that their department eats money. Still, X-ray work has come to stay, and to those engaged in it is absorbingly interesting.

A good X-ray assistant must understand

thoroughly the management of tubes, which are rather like thoroughbred horses to deal with. Some are fretful, some are willing and tractable, some are bad tempered and difficult. Each tube has a distinct personality of its own, which must be studied and considered. A good practical knowledge of photography as applied to X-ray work is required, as the development and manipulation of the plates require absolute accuracy and faultless technique. A good working knowledge of osteology and elementary anatomy is essential for the interpretation of the results achieved. To this must be added a smattering of electrical physics and a certain amount of mechanical skill in managing the various details of the switches and controls.

Most of us feel that we are learning all the time. As one thing is mastered some fresh method crops up. It is in some ways trying and exacting work, but results pay for pains taken. It is worth any amount of trouble when the medical radiographer in charge of the department gazes on a negative placed for his inspection in the viewing box, and says, 'A beautiful picture, Sister,' as he surveys what to the uninitiated looks like a confused jumble of bones.

THE BRIGHT EYES OF DANGER.

CHAPTER XXXVIII.—A BUSY EVENING.

CROUCHING under cover of the panniers and the pine trunks we waited Macdonell's next move, while the unsteered 'float,' swinging into the current, gathered way in the rising river. Bertrand, well sheltered, put his hat on his sword-hilt and raised it slowly above the pannier. A bullet sang past it. I caught a glimpse of Left Hand slipping from behind one tree-trunk to another, and got a shot at him, but it was almost at random.

'Lie still. We're comin' to open country. My gentleman will have to show himself,' said Anthony; but when the 'float' came clear of the wooded banks, we saw him running on the level holms that flanked the river. Here the face of the country changed abruptly, the Spey's banks, rising almost sheer in tree-clad slopes, cliffs with great splashes of red sandstone, adventurous birches hanging to dizzy footholds on their crests, shutting out from us everything except the darkening sky. To steer the raft to the opposite bank was too hazardous, for Macdonell, under cover, could have picked us off easily as we disembarked. Every minute sweeping downstream meant a step toward safety, so there we lay, making the best of it, watching the interminable procession of the trees for a tense ten minutes, until the Spey swerved in a sudden bend round a bastion of rock. The 'float' ground along the rock's face, hesitated, buried

its bows sulkily in a spit of sand, and stopped dead. The 'floaters' strained at the poles. Ten, twenty seconds passed. The big mass crunched along the rock for another yard, and stopped again, the water, dammed by her stern, coming flush with where we lay. Not an inch farther could the men move her. Sick with apprehension, we all tugged and strained until exhausted, and then, to crown our discomfiture, from the leaguer of shadows of the trees at the rock's crest, there floated down to us a chuckle, a voice, an easy, mocking, confident voice, which hailed us with, 'Good-day to ye, gentlemen!' and a hand with a pistol in it waved to us from behind a tree.

'I said I would see day about with Innes. Now it's your turn. The luck's with me. Ye would go by water, would ye! A blunder, eh! a blunder? What say ye? Nothing? Has Mr Layton lost his voice?'

We stood silently waiting. Bertrand's hand closed on mine in an instant's pressure.

'And Cousin Bertrand too. Well, this is the end o' the ploy. If your mind runs on prayers, better begin them.'

Bertrand spoke first. 'Make an end of this,' he called.

'Ah! The French bantam crows! But do ye hearken to me. Whether ye die in fair fight or like rats in a trap is of little consequence.

But ye misjudge me sorely if ye think it's blood or vengeance I'm after. Ye are in the hollow o' my hand. Ye are blind if this is not plain to ye. I seek no blood, but blood it shall be if ye do not come to terms. See!' and he waved a white cravat from behind his shelter. 'A truce!'

I risked it, and held out a handkerchief. 'A truce be it, then. Lay down your arms where we can see them, and we'll do the same.'

To our astonishment, without hesitation, he bent down and laid his pistols against the foot of the tree where we could see them. We put ours down on the top of a pannier, and Macdonell instantly stepped out into the open.

'Here are my terms,' he began.

'Our terms,' I interrupted.

'Mine.'

'Ours.'

'This is a sorry beginning, Layton.'

'It is the beginning and the end,' said I. 'Our terms are that you finish the duel that you ran away from on the Culbins.'

He laughed, slipping back to the shelter of the tree's trunk. 'Mr Layton of the high hand! Ye were ever a fool. If I refuse; for it seems to me this is a one-sided offer'—

'Then the truce is ended.'

'So be it. But one word before we go back to—what name will I put to it, war or murder? Here ye are; your muckle raft failed you, and the French money beside you. Here am I, with nothing to do but stop behind my tree and draw trigger. Come! The cartes are with me, but I'm no' ill to deal wi'. Dispeace in this business leads nowhere, and, all said and done, I am dealing with my clan and blood. Give me half of the money and there's an end o' the weary business. Take time and think on't.'

'There's something behind this,' Anthony whispered, and this was my own view. For Left Hand to have suggested terms when he had the prospect of easily regaining the whole money was incredible. There must be a reason for it and one that had nothing to do with chivalry. For all his air of confidence, I thought he was peering at us too anxiously for one holding, as he put it, all the cards.

'I'll give ye another minute to decide,' he called.

Bertrand anticipated me. 'Get behind your tree again, you dog! Not a single *louis* will be touched by you unless you steal them,' he called out.

The minute sped. Never a word did Macdonell say, but watched us warily from behind the tree, without a movement.

The 'float,' I thought, moved slightly. I held my breath in intolerable suspense. Again it moved, this time lifting perceptibly. The river was rising. The water between the rock

and us widened. Macdonell stepped from the tree's shelter, the white cravat in his hand, without a word. I felt the lift of the current as the 'float' swung clear, and though we were manifestly leaving our perilous anchorage, there he stood like a man carved out of stone. He never even picked up his pistols. Another minute and we would be out of range. The Spey bore us on through the gathering dusk, until all that I could make out was the speck of the white cravat. It dwindled to a pin-point and vanished. Mystified, I turned to the others. What did it mean? He had tracked us, lain in ambush, sped a bullet at us, gloated over our helplessness when we grounded, and in the end had allowed us to float away down-stream scatheless.

'There is something, as Anthony says, behind this,' said Bertrand, voicing all our thoughts; and indeed there was, something that I afterwards discovered from Left Hand's own lips, so simple a thing that none of us gave it a thought.

'Whatever it is, Lord send that it bides in him till we are in Spey Bay an' my hand on the tiller. Then, the back o' our hands to the gallows-bird,' said the captain.

'Amen to that!—How far now to Garmouth?' I called to the 'floaters.'

'Less than fower mile,' came the answer.

Four miles—the open sea—and victory. The thought stirred me like wine. Two or three days more, my back turned on these fevered days and nights, I would be beside my Charlotte, and at the thought I could have knelt in thankfulness where I stood.

The Spey had gathered strength, and as the night came down we sped under Fochabers Brig, and soon saw in the distance a little half-moon of lights. Never was a sight so welcome.

Anthony explained his plan.

'I'm in no ways expectin' trouble, but we'll leave nothing to chance,' he told us. 'The "float" will be run alongside the others. You and Hugh Scott here can wait and keep a weather eye on the bawbees, and Monsher and I will see how the land lies. The Preventive gentry may be on the move, and, warrant or no warrant, I'm a kent man. Money isna contraband, but twenty thousan' lewies and a wheen guineas would mak' them stare. The Excise are Hanoverians to a man, or pretend to be. It would be "a case for inquiry." I ken what that means! Some doited auld wife at the court at Elgin glowerin' ower his specs at us, the *Gannet's* mast wi' the King's mark on't, and the Revenue cutter's crew aboard. No' if I can help it! So I'll gang to the ship an' come back and report.'

The Spey flotilla at Garmouth lay in dead water by the left bank; some two score 'floats' moored to stout posts. Ours was berthed at the rear. A few idlers collected and exchanged

greetings with our 'floaters,' but it was dark, the arrival of a 'float' was a common occurrence, and the panniers were well covered.

The captain and Bertrand stepped ashore into the darkness, leaving the mate and myself with the French money. An irksome half-hour passed, silent but for the even voice of the Spey's current and the great timber rafts straining at their shackles, until our ears caught the clank of oars, the yellow eye of a lanthorn crept nearer us, and the *Gannet's* dinghy with Anthony and one of the crew pulling, brought up alongside the 'float.'

'Move lively,' whispered the captain, clambering on board, 'and get the stuff in. There's a King's sloop in the harbour.'

Very quietly and swiftly the dinghy was loaded with the canvas bags. When the last one was stowed, a net was thrown over them, Anthony whispered a word or two to Scott, and without a word the mate pulled off alone into the darkness.

'The *Mastiff* has been dodgin' along the coast for a week,' Anthony told us. 'She's an armed sloop, ane o' a King's squadron. There's wild stories o' a French landin' under Lord John Drummond, and Lewie Gordon has been busy recruitin' in the North for the Prince. Like enough, the sloop's here to gather news. Her commander has searched a brig in the harbour already, and if he ran across a cargo o' French siller in the lugger I'm thinkin' he would be seein' himsel' admiral on the spot. But I'm no' anxious to help him to promotion. So, 'gin he comes aboard I'll show him a clean hold, and we'll up anchor and pick up the mate and the bawbees when my gentleman's back turns.'

The 'Norway Lass' Inn was crowded with tars, 'floaters,' sailors, shipyard hands, all busy at tobacco and drink after their day's work. Much to the delight of our two 'floaters,' we paid them handsomely, laying the strictest secrecy on them, and then went down toward the *Gannet's* berth.

'Keep a ceevil distance ahint me,' the captain counselled. 'Ye'll play at being deck hands for the next ten minutes. It's little disguise ye need.'

Indeed we should have passed for anything on this earth except gentlemen; unshaven, weather-beaten, our clothes torn, stained with sea-water and rain, we looked like the frowsy hangers-on of a sailors' tavern.

A cluster of people where the *Gannet* was warped separated when the captain appeared and a young naval officer came forward. Drawn up behind him on the wharf were half-a-dozen of his men with cutlasses.

Anthony went forward.

'Are you the captain?' the officer asked.

'At your service, sir.'

'A smart craft. Your port?'

'Rye.'

'You carry a large crew for a lugger.'

'Maybe, sir; we whiles need them a', replied Anthony.

'I wager the *Gannet* has showed her tail to the revenue cutter many a time.'

A smile flickered on Anthony's tanned face. 'She can sail, sir. I'll say that for her.'

'However, running brandy or lace does not concern me unless it's done under my nose. There are weightier matters afoot.'

The captain turned, nodding to us. 'Get for'ard, ye swabs,' he growled.

We stepped on board.

I pretended to busy myself pulling and hauling, but I was near enough to hear some of the conversation. The officer produced a paper and began to read it. I caught 'Enemies of our Realm . . . importation of arms and ammunition . . . assist all officers and others . . . disaffected persons,' and so forth.

'Sir,' said Anthony, after a line or two had been read, 'I ken my duty to the king's warrant. If yours calls ye to search my ship, I'll be blithe to help ye. I have an empty hold and neither arms nor Jacobites. I've neither the mind nor the shiproom for them.'

The officer came on board, followed by his men, and Anthony led the way to the hold. They returned in a very few minutes. The sailors went ashore and the officer gave a last look round the deck.

'I was looking for something more than a clean hold, I may as well tell you. A fair wind, captain! I hope your pockets will never be as empty as your ship,' said he as he stepped ashore. He marched off with his men, and the tramp of their feet had hardly died away when the *Gannet* cast off.

The captain, standing by the man at the tiller, peering into the darkness, pointed to a tiny yellow point of light that blinked in the distance, and swung a lamp over the bulwark with the motion of a pendulum half-a-dozen times. Instantly the yellow point vanished, the *Gannet* wriggled along in the dark, and in ten minutes the light showed again fifty yards on our port. It was the dinghy, pitching in a jabble of waves.

The mate ran alongside, I got into the dinghy, and the two of us handed the bags over the side to Anthony. It was a ticklish job and slow, for we were just inside the bar and the little boat tossed and capered like a restive horse in the swell. Once at least my heart was in my mouth. She had shipped water, heeling to the gunwale, and for a black instant I pictured the French money lying on the floor of the sea, all our labour lost in a twinkling. If the thought of it gave me a chill sweat, it made me alive to the danger, and every package after that was handed out singly, without haste, and transferred to the

Gannet in safety. The dinghy was made fast, and I drew a long breath as the *Gannet* made for open sea.

The fore-hold was a dingy little hole—narrow, ill-lit by a ship's lamp, dirty, reeking of stale tobacco and bilge-water—yet no palace could have been welcomed by us half so joyfully as that cramped kennel. It meant safety, a safety honourably and hardly won. As I write there comes to me recollection of that evening, the undescribably grateful sense of peace as we sat at rest, the sea making music on the forefoot of the *Gannet* heading south under a brisk wind.

We turned in, tired and happy, and I fell asleep piecing together my doings for the last month. The Garth—my Charlotte—the Highland army—Holyrood—the lone *Marie des Anges*—the swift-running Spey. Was it real, or a fantasy,

a dream, a tale from a book? But I woke to the tramp of feet overhead, the tang of the sea, and the *Gannet*, every inch of sail pulling, spinning gaily in the tide round Rattray Head.

We had a 'soldier's breeze' for the rest of the passage. The North Sea for once held its rough hand, and the deck was bone dry.

We agreed that Bertrand should take the money to Mr Waters the banker in Paris, through whom it came from French supporters of Charles Edward. If they chose still to devote it to his service, well and good. It was not my affair. I was for King George, it is true, but I had gone into the adventure with no political aim. Casuists and logic-choppers may split threads as to whether I was justified. Charlotte's hazel eyes may help to answer them.

(Continued on page 612.)

THE PASSING OF THE 'QUEEN'S HEAD.'

By A. PETER.

THE Post-Office authorities lately issued a notice stating that the use of postage-stamps bearing Queen Victoria's effigy would not be valid after the last day of June in this year of grace 1915. This cannot be regarded as a hardship, inasmuch as her late Majesty died fourteen years ago, and during that period King Edward reigned for nine, and our present sovereign has reigned for five, years; so that the number of stamps of the Victorian era in circulation must be small. However, the intimation marks an epoch, for it was in Queen Victoria's reign that postage-stamps were first used in England. Previous to their introduction letters had to be taken to one of the branch offices, which were limited in number even in large cities; and if the sender prepaid the postage a red mark was affixed, and it went forward. If the sender did not pay in advance, the postage was payable on delivery, which was very customary, and was frequently considered the safest method of insuring that the missive would reach its destination. Of course the rates were high, being eightpence to places some fifty miles distant, while from Dublin to Paris the postage was one shilling and elevenpence; but in most of the principal cities and towns there were local penny posts, with twopenny posts to the suburbs. The adoption of postage-stamps took place on the 6th May 1840, and was due mainly to the efforts of Sir Rowland Hill, who laboured long to demonstrate the loss to the State and the public by the then existing method of conducting this important traffic.

When the new stamp was introduced it was invariably called the 'queen's head,' and old people used this term for many a long day afterwards. When first issued to the public the

sheets on which the stamps were printed were not perforated, and each had to be separately cut, a process both slow and troublesome; and it was some years before perforation was adopted. The stamps were also thicker in substance than those at present in use, and not so adhesive. There are representations of Queen Victoria on the stamps issued during her long reign from the young girl of the forties to the aged lady of the twentieth century. The various advantages given to the public since the advent of these useful little articles in regard to the weight and delivery of letters have been many, and the multiplicity of receptacles where they can be deposited has added greatly to the enormous increase of written and printed matter.

Among the drawbacks of the postal system when Queen Victoria began her reign was the limit placed on enclosures. If a single sheet of paper was cut in two the letter was charged double, or if an address was enclosed on a separate piece of paper the same charge was enforced. With all the difficulties then in the way of correspondence it is not surprising that the practice of 'franking' was much abused. Certain persons had the privilege of sending letters free by simply writing their name across the envelope or cover. Members of Parliament were allowed to frank ten letters a day, and were also allowed to receive at the rate of fifteen daily free of charge. How far these rights were exceeded it would not be fair to inquire or easy to ascertain; but, what with the difficulties of posting and the cost, every device was resorted to by persons having much correspondence. Friends going any distance would be entrusted with numerous missives to deliver, and poor

persons would frequently refuse to pay the postage demanded on delivery, being content with an outside glance at the writing, which showed that the sender was in the land of the living. Sir Rowland Hill succeeded in his efforts to show how the splendid idea of a universal inland penny postage of a certain weight could be made a success; and since his day much more has been

done. Seventy-five years have passed since our ancestors first affixed stamps to their letters, and with curiosity and interest received at their doors those delivered bearing the 'queen's head.' Now another chapter of the great postal history of these islands is closed and the first stamp that we knew takes its place among the relics of the Victorian era.

BETTY GRIER.

CHAPTER XII.

PONDERING these thoughts, I slowly dressed and went downstairs to breakfast; but so wrapt up was I in reflection, and engrossed in legal procedure and probable eventualities, that, when Betty appeared with my bacon and egg I could scarcely reconcile myself to my surroundings or at once realise my whereabouts. Fortunately she didn't notice my preoccupied air, otherwise my firm's long blue tax-looking letter would again have been blamed and execrated; nor did she make any attempt to pick up the thread-ends of our conversation regarding the regilding of the old frames. I wondered at this, as the conditions were propitious; and Betty, as a rule, follows up the trail of a crack as surely and consistently as a weasel follows a hare.

'Joe's in the back-kitchen brushin' your boots,' she said, as she handed me the morning papers; and I sighed with relief in the knowledge that Boyes's liquid was likely, for the time being at least, to remain on his shop shelf. 'Puir sowl, he's quite pleased when I ask him to do ocht for you,' she continued. 'Yesterday, without bein' bid, he got oot yin o' your suits o' claes and pressed it wi' my big smoothin' ern on the kitchen table, and he's made sic a job o't as wad be a credit to ony whip-the-cat. He has learned mair than drillin' in the army, I tell ye.'

'I believe that, Betty,' I said. 'The service is often a capital schoolmaster. But it was very good of him to look to my clothes. I'll not forget him for that.'

'Oh, mercy me, Maister Weelum, dinna you gi'e him ocht! He wad be black affronted and terribly displeased if ye offered him money. No, no, it's neither wisdom nor charity to gi'e to Joe, for he's made mair siller lately than he kens hoo to tak' care o'. I can tell ye he cam' hame this time wi' a weel-filled pouch, and for the first week o' six workin' days he did mak' it spin!'

'Spin, Betty? How in the world did he contrive to make money spin in Thornhill?' I asked.

'Haith, if ye had only seen him ye wadna need to ask. Ahem, spin! Ay, Joe can not only mak' the money spin, but he spins himself,'

an' he mak's every yin spin that'll sit wi' him. But mebbe I'm gaun ower quick. Did ye no' ken that Joe tak's a dram?'

'No, Betty, I did not; and, as he's a brother of Nathan's, I'm surprised to know it.'

'Oh, weel, but it's juist possible that I'm wrangin' Joe noo. He's what I wad ca' a regular drammer—tak's his gless o' beer every day—ye ken; but aince a year, and for a while after he comes back, he gangs fairly ower the score baith wi' drinkin' himsel' and treatin' ithers. Ye ken he then has siller galore among his fingers, and wi' Joe, as wi' the rest o' folk, "the fu' cup's no' easy carried." Last year he had a gey time o't; spent a lot, and grudged it terribly when it was a' gane. Nathan canna be bothered wi' m in his thochtlessness. A' he says is "Benjy's a fule." He ca's him Benjy because he's the youngest o' the family. Ay, that's a' he says. But somewey I'm sorry for Joe, and I'm aye ceevil and nice to him. And, what think ye, Maister Weelum? He has signed the pledge to please me, 'at has he, and he hasna touched a drap for nearly three weeks. It's wonderfu' what a bit word will do, if it's spoken in season.'

'Yes, Betty, that is so,' I said meditatively; 'that is so. It is very good of you to interest yourself in Joe. I'm sure he'll bless your name every day.'

'Imphm! I've nae doot he does; in fact, I'm sure he does,' and a queer smile broke over Betty's face. 'Ay, he blesses my name, sure enough; he's a Hebron, ye ken. The Hebrons never say much, but they look a tremendous lot, and Joe's been lookin' at me lately as if he was blessin' me. The fact is, he's sairly off his usual. He has a queer cowed look I never saw before. Oh, the man's no' weel, and I'm sure he blames me for it. This mornin', when he cam' doon, he was lookin' fair meeserable, and I asked him, in a kindly sympathetic wey, how he was feelin', and, said he, "Middlin', Betty; very middlin'." It's a very stiff job this I've tackled. I've been teetotal for twenty days, and I've saved as much as'll buy me an oak coffin; and, Betty, if I'm teetotal for other twenty days, by the Lord Harry, I'll need it." And d'ye ken, Maister Weelum, he was so

fa'en-away lookin' that, though I kenned it was plantin' wi' ae haun and pu'in up wi' the ither, I gaed away and poured him oot a wee drap, juist a jimp gless, and then I gi'ed him your boots to brush, and he started to whussle like a mavis.'

Betty's face was quite serious when she was telling me this, and when I looked into her kindly, concerned eyes, and thought of Joe's patient misery, I began to laugh, and I laughed till the breakfast crockery rattled. She looked at me in wonderment, and, lifting the teapot, she made for the door.

'Excuse me, Betty, and pardon my levity,' I said; 'but just one moment'—

'Oh, I'll excuse ye,' she said as she halted. 'There's nocht I like better mysel' than a guid laugh, but it maun be at something funny; and if it's Joe you're laughin' at he was far frae funny this mornin', I tell ye.'

'I can well understand that, Betty; but I was going to say'—

'Maister Weelum, excuse me interruptin' ye, but do you believe in ghosts?'

'Do I believe in ghosts? Certainly not. Why do you ask?'

'Weel, I'm gled to hear ye dinna believe in them. I say wi' you; but Joe's juist been tellin' me that he met a leddy this mornin' on the public street that he could sweer died twenty-four years bygane. So what mak' ye o' that?'

'Oh Betty, Joe's most surely talking nonsense. Where did you say he met the lady?'

'Haith, Joe'll no' alloo it's nonsense. He's very positive aboot it. His story to me was that he cam' suddenly on her gaun roon' Harper's corner, and he was so frightened and surprised that a' gumption left him, and he couldna look efter her either to mak' sure o' her or to see where she was gaun. He was as white as a sheet when he cam' in to me, and between the fricht and the lang want o' his dram he was in sic a state that I'm sure the Lord will coont me justified in gi'en him a mouthfu'. What I tell ye before was only half the truth, and noo ye ken a'.'

I don't know Joe very well. Since he came home I have had few opportunities of meeting him and analysing him; but when Betty was talking he was very vividly flung on the screen, so to speak, and a possible trait in his character occurred to me.

'Betty,' I said, 'don't you think that Joe has just worked up this ghost story and feigned excitement and agitation, knowing you had spirits in the house, and that in the peculiar circumstances you would produce the bottle?'

'No, no, I dinna think that. Joe's a Hebron, as I've said, and the Hebrons ha'e neither the cleverness to think a thing like that oot nor the guile to carry it through. No, no, Maister Weelum, Joe met the leddy, whae'er she may

be, richt enough. I'm quite sure aboot that pairt o't; but of coorse he's wrang aboot the burial. It's been some yin very like her, and Joe's juist mistaken. Had this happened when he was as I ha'e seen him I wad never ha'e gi'en it a thocht; but this mornin'—weel, the man was—was ower sober to be healthy.'

'As you say, he's just made a mistake, Betty. At best, Joe's a mysterious individual; these annual disappearances are remarkable. Have you yet learned exactly where he goes?'

Her alert ear detected a cessation of brushing and whistling, and she walked quietly to the door, keeked past it, and then gently turned the handle. 'He has finished your boots,' she said, 'and he's gettin' Nathan's Sabbath-day yins doon frae the shelf to gi'e them a rub. Do I ken where he gangs? Ay, I do. For a lang time I jaloused; but last nicht he telt me a' aboot it, and as it turns oot I havena been very far frae the mark. His wife has a wee temperance hotel—a temperance yin—she kens Joe!—in a toon ca'd Brighton. She can manage a' richt hersel' in the dull pairt o' the year, but she's forced to get Joe in the busy time to gi'e her a haun wi' the fires and the luggage and siclike. She was only aince here, and we didna see much o' her; but frae the little I did see I wad tak' her to be a fell purposefu' woman, mair cut oot for fechtin' in a toon than settlin' doon to the quiet, humdrum life o' Thornhill. Joe in the airmy wad dootless be a' richt, but oot o't an' hangin' aboot here wi' a decent pension he wad juist be an impossibility. I was kind o' sorry for her when she cam' here. She had never been in this pairt before, and she didna tak' very kindly to it. She couldna understaun what we said, and we were in the same fix when she spoke. The first nicht she was in this hoose Nathan, for Joe's sake, tried to ca' the crack wi' her; but it gied him a sair heid, so he juist smiled and noddit to her efter that. She put twae months in here, and then she went away on her ain. First she kept lodgers; then she took this wee hotel, and by a' accoonts she's doin' weel. But it's a queer, queer life for baith o' them. Never a letter passes between them, and Joe seldom mentions her name. When he cam' back this time I asked him if his wife wasna vexed to pairt wi' him when the time cam' for him to leave, and he said he didna ken, for he didna see her. "Ye didna see her!" said I; "hoo was that?" "Oh," said he, "she was busy at her wark up the stairs, so I cried to her that I was away, and she cried back, "Right you are, Joe; so long till next July," and that was a'." Imphm! isn't that a queer state o' maitters, Maister Weelum? Mind you, I dinna a'the-gither blame her. I ken the Hebrons. They're a queer, quate family. Ye never can tell what they're thinkin'. I've the best o' them—ay, the best—and I often shut my een and thank God for Nathan; but if he had married ony

ither woman—I mean a woman wha didna ken him as I do, or make allowances as I can, and though she had been an angel frae heaven—she wad ha'e been as meeserable as I am happy. Ay, it was lang, lang before I understood Nathan, and the kennin' o' him was a dreich job, but it was worth it a'. Ye see, the Hebrons havena got the faculty o' expressin' their feelin's. They may be pleased or angry—it's a' yin—they never let on in their speech, but they show it in their actions; at least my Nathan does, and my impression is that Joe's wife—Sally her name is—doesna ken Joe yet. He'll no' ha'e met her half-road as it were, and gi'en her a chance o' gettin' to the bedrock, and she tak's his quateness for indifference, and the upshot is, as ye see, that for the best pairt o' a year she's as happy in Brighton as he is in Thornhill, and for the rest they put up wi' yin anither for the sake o' the siller their united efforts bring in. Ay, it's a queer world for some folk. But I'm deavin' ye. Joe'll be oot o' a job too, and to keep him richt I maun keep him workin' the day,' and she bustled off to encourage Joe in well-doing.

Later, I consulted with Betty about Murray Monteith's visit, and we arranged to get the south bedroom prepared for his reception. So I wrote him to-day at some length, extending Betty's invitation, and expressing my willingness to accompany him to Nithbank House. After I had finished my letter I perambulated the dining-room round and round, for the day was wet and boisterous, and I could not go out of doors. Bang and Jip, evidently conscious of the fact that a walk was out of the question, were making themselves at home on the hearthrug, and I was just finishing half a mile of carpet-walking when the street door opened, and Nathan's step sounded in the lobby. Betty had gone out on an errand, so I went ben to the kitchen.

'Hallo, Nathan!' I said, 'have you got a holiday to-day?'

Nathan looked up at me as he sat down in his armchair near the fire. 'I've ta'en yin, Maister Weelum,' he said. 'I've ta'en yin—very much against the grain, though. I'm—I'm—I'm no' feelin' very weel, so I thocht I wad juist come hame.'

'You did well to come hame, Nathan, and I'm sorry to know you are not up to the mark. You're cold-looking. Do you feel cold?'

'Weel, shivery weys, Maister Weelum; shivery weys. Imphm. Where's Betty?'

I told him she had gone out on an errand, but would be back presently; and, going into the dining-room, I poured out a glass of brandy and brought it to him. 'Here, Nathan, I know your mind on the liquor question; but put aside your objections and drink this. It will do you good.'

He smiled feebly. 'What would Betty say? Will ye tak' the blame?' he asked.

'Certainly, I'll take the blame, or rather I should say the credit. Drink it up now, Nathan.'

Joe, who had been splitting firewood in the stick-house, had recognised his brother's voice, and came into the kitchen. 'It is you, Nathan!' he said in surprise. 'It's no' often we see you wi' a dram gless in your hand, an' at this time o' day too. My word, but you're lucky.'

'Ay, Benjy, it is me, and I am lucky. I daur say ye wad like to chum wi' me the noo. Are—are ye still keepin' the teetotal?'

For a moment Joe looked shamefacedly at Nathan, then truth and honour—outstanding traits of the Hebrons—shone in his eye. 'No,' he said; 'I broke it this mornin'.'

'Ay—imphm! And hoo did you come to do that?' asked Nathan, without looking round.

'Betty tempted me, and I fell.'

'Oh, imphm! Betty gied ye a dram, did she? Weel, Benjy, whatever Betty did was richt. She didna tempt ye, man; she treated ye, that's what she did. Ye'll no' gang far wrang if ye're guided by Betty.—Eh, Maister Weelum!'

He was sitting very near the fire, with his long gnarled fingers spread out to the warmth, and he looked up sideways to me when he said this with a look in his blue eyes which told me, more pointedly than words, of his absolute confidence in her good judgment, and the pride he had in the possession of her love.

A TWENTIETH-CENTURY TRADE AGREEMENT WITH RUSSIA.

By W. F. BATTEN.

CAN there not be another agreement for trade as well as an alliance in war between Britain and Russia to help to pay the enormous war-bills of both? An affirmative answer to this question would seem certain, given two conditions: first, the ability of our business men, if reasonably

assisted by our Government, to rise to the occasion; and, second, a satisfactory solution of the Dardanelles Question. Anglo-Russian co-operation in a trade war against Germany is no new thing, though we must go back to the days of the Czars of Muscovy and our own Tudor sovereigns.

for a precedent. To be precise, it was in 1555 that the first joint-stock trading company was founded in England, and called the Muscovy Company, both countries then attempting to break the German Hansa League's monopoly of Russian trade, which debarred English merchants from obtaining pitch, tar, wax, oil, hemp, and many other commodities, except under most tyrannical conditions and at ruinous rates. This co-operation between Russia and England came about by accident. An English vessel, seeking to make the North-East Passage to China, entered the White Sea, and anchored at Archangel. Her commander, Richard Chancellor, eager to extend trade, journeyed to Moscow, where he was most hospitably received by the Emperor. A Muscovite Ambassador was sent to England, and a trade agreement was signed between the two countries. After this London merchants carried on a most profitable trade with 'Muscovy,' as Russia was then denominated, and their goods even penetrated as far as the Caspian Sea. But the German Hansa League was always jealous of this commercial intercourse, and so long as its power lasted, retained its monopoly of the Baltic trade. In more recent times Germany has found a profitable market for her manufactures in her neighbour's wide domains, and German traders continued to retain their hold on Russian commercial affairs right up to the commencement of the present war.

Now, within living memory, and indeed up to some fifty-five years ago, Russia was really a 'peasant empire,' living by agriculture of a most primitive type, and supplying her other wants chiefly by home industries, just as was the custom in Europe during the Middle Ages, though for many generations her rulers had been trying to transplant into their great Empire the arts and crafts of their Western neighbours, despite the formidable difficulties they had to contend against. But during the second half of last century a revolution was brought about in the conditions of commercial life in Russia by the emancipation of the serfs, the rapid extension of the railways, and the facilities for obtaining credit to work sound undertakings through the influx of foreign capital, which also encouraged the foundation of new and the extension of old industrial and commercial enterprises.

Germany has now lost her enormous trade with Russia, and the vital question at present is: Shall her successor be the British Empire or the United States of America? This coming commercial chance is of gigantic proportions, and with foresight and enterprise our mercantile men, intelligently backed by the Foreign Office and the Board of Trade, should secure it, instead of allowing their only possible rivals to do so; for a great bond of good feeling is being developed and consolidated by the loyal co-operation of the two countries in the great war.

Meantime it may be helpful to enumerate the

commercial advantages that the homicidal madness of the Germans has caused them to throw away. The territories of Russia's Czar are nearly forty-four times larger than those of the Kaiser, whilst their population exceeds that of Germany by over one hundred millions; yet our business men hitherto have known little or nothing about Russia beyond Petrograd and a few of the other great towns. They certainly have never—by studying the language or even the habits and requirements of her tremendous population that lie out of the beaten track—made any serious effort to oust Germany from her commercial supremacy in that Empire. Last year, up till August only, Russia had exported more than one hundred and sixty million pounds' worth of her produce; importing nearly one hundred and twenty-four millions sterling of foreign manufacture and produce in return; yet out of the enormous sum of thirteen hundred and seventy-five millions sterling, which British foreign trade amounted to in 1912, we find the unsatisfactory total of only sixty-two and a quarter millions sterling representing this country's exports to and imports from the Russian Empire in that year. In passing it may be mentioned that Germany's ratio in the same period was as two to one of our own. Now Russia will be obliged to find a market elsewhere for her own produce probably to the extent of about fifty to fifty-five millions sterling in value, whilst also finding a country or countries capable of supplying her commercial needs to the extent of nearly sixty millions sterling in value; this because German trade—and probably the comparatively small Austrian trade also—is moribund already, and with peace and the largely increased spending power which her commercial expansion alone will bring Russia, to say nothing of the development of her great agricultural resources, these amounts will be largely exceeded. But our business men must wake up and be ready to grasp their opportunity; for it is not to their credit that in the five years preceding the war German trade with Russia showed an aggregate increase of one hundred and thirty-seven and three-quarter millions, whilst that of our own was only thirty-nine and a half millions.

It has been said that British traders should receive all reasonable assistance from the Government, the Foreign Office especially; but when we find that Great Britain has only some four dozen consuls and vice-consuls in an Empire that extends from the Baltic to the Pacific and from the Black Sea to the Sea of Japan—hardly enough for the larger centres of trade even—it cannot be contended that our Government has hitherto in this most important matter given all reasonable assistance to enterprising business firms. Not only so, but the system on which our consular service is run stands in need of a thorough overhaul, so that these officials should more effectively promote and assist the action of our business men.

As to this, the Foreign Office could not do better than take a leaf out of the German book, for wherever the German goes he has the whole force of the State behind him. The German Government has never—as our Government for many years past has done—regarded the trader as an adventurer in whom the State had no concern.

At present the whole vast machinery of German trade and commerce is stopped, its wheels fallen out of gear, its workshops empty, and its tariffs, bounties, aids to shipbuilding, &c., have all gone by the board. But sooner or later the great machine will be running again; therefore from now onward every effort should be made to establish British commerce in the Teuton's lost markets so firmly that its dislodgment shall not follow on the restarting of Germany's efforts. Indeed, not for a hundred years has there been so great an opportunity for regaining lost trade and for obtaining increases; but it is imperative that British traders should take their measures *now*. The British Industries Fair was a step in the right direction, for above all British trade should be conducted with the British Empire. The several Governments of the British Empire must work together and to more practical purpose than in the past, since that immense Russian continent stretches out toward the borders of several of them, as a glance at the map will show. In every trade centre of Russia a British representative of high capacity should be appointed to supervise our business interests, his duties being to collect and tabulate all information, to serve as a trade-intelligence officer, and to assist British traders by every means possible. His salary should be an excellent one, and his promotion depend upon his success. The British trader neither needs 'dry nursing' nor will tolerate the interference exercised by the German Government, therefore the consul's task is by so much the lighter.

With a new policy in Russia must come new methods if the good understanding between the two countries born of their fighting side by side is to be made to bear fruit in their commercial dealings after the war is over. Since the great and rapid increase in Russian railway mileage during the past two decades such important centres as Vologda, Kherson, Kharkoff, Moscow, Vilna, Kieff, and Baku are much easier of access, whilst the Bokhara Railway and some other important new lines will before long be put in hand; and a series of canals to improve the waterways connecting European Russia with Siberia is also stated to be under the consideration of the Government. Then there is a department of the Ministry—that of Ways and Communications—that has been created to look after the splendid service of waterways for inland communication in Russia, nearly twenty-five thousand miles of which are navigable for vessels, and about twenty-seven thousand for rafts. All these great extensions of railways and waterways

are unmistakable indications that the Russian Government is aware of the urgent need for a great expansion of trade to help to counteract the enormous financial drain of the war; also, that there must be found an outlet other than Germany for the enormous increase of her vast resources under these changed conditions. This, particularly in her products of grain and oil, should at once affect the British market. But in return Russia would provide a great and rapidly growing demand for iron and steel goods, machinery and spare parts of it, and especially agricultural steam machinery and implements, wool and cotton yarns, electrical fittings, motor vehicles, and above all for the output of our shipbuilding yards and engineering works, for sections of steel bridges and girders, and for railway engines and plant. Over and over again have Russian friends and British residents in Russia impressed on the writer how both the quality of British workmanship and the honest dealing of British contractors and manufacturers are appreciated there; but German underground influence and methods stood between these and the market. The Teutonic grip of Russian trade was too firm to be shaken off then. Doubtless American firms are on the watch to secure enormous orders in this direction; but at present their hold on the Russian market is not consolidated, though they have one sufficient to make an excellent jumping-off place for future efforts to capture it. There is, it is said, an American Commercial Commissioner travelling through Russia on behalf of the Trade Bureau at Washington, or about to do so, and this would almost certainly have reference to the demand for new mills and factories where new industries are being developed in certain populous centres.

As regards both telegraph and telephone requirements Germany has hitherto had a practical monopoly, and here there is new ground to break. As one looks over the official returns it is almost always the same story, a practical monopoly by Germany, as seen in the linen, hemp, and jute line, where we supplied 2 per cent. of the imports and Germany 75 to 81 per cent. Again, as to coal, for which there is an enormous demand now, hitherto the great syndicates in Germany, particularly in Westphalia, have recently succeeded, by fair means or foul, in underselling our British exporters; but the Westphalian miners are now otherwise occupied—enormous numbers of them doubtless permanently so—whilst but such a proportion of British miners have gone to the front as should not cause any lasting injury to the industry. Moreover, there are possibilities of multiplying the yearly output of the Northern and Midland English coalfields by three; there is all the labour that would be required to do so at hand, and the output of the east coast ports at present cannot be much under ten million tons annually,

which is quite easily handled. It would almost seem that by a providential arrangement our highly developed industrialism and Russia's enormous agricultural population are especially fitted to meet the needs of their respective countries. The great agricultural implements at Lincoln, Grantham, and elsewhere are capable of turning out goods that for durability and excellence of workmanship easily beat those of the American Harvester Company, that has recently done such good business in Russia; but American energy and business acumen will always have to be reckoned with.

The need for far more extended facilities for studying the Russian language with a view to the better equipment of British agents is urgent, though this concerns the great problem of how to readjust our present educational system to meet the needs of the Empire rather than an Anglo-Russian trade agreement; for in the future we shall have to face far keener competition in 'the civilians' war of commerce' than we have had to meet in the past. Then, too, when the great war is ended, Germany expects to reap the advantage of the damage she has done to the industries and agriculture of France and Russia, by flooding the markets of the countries now neutral with the goods she is at present accumulating for that purpose. It must not be forgotten, however, that in 'the civilians' war of commerce' the organisation of kindred industries in Great Britain would be of great advantage in attempting to capture the Russian market.

With regard to foodstuffs, Russia at present only raising one-seventh part of the world's

supply of wheat has of course to face competition in foreign markets; but in the case of rye, barley, and oats she can dominate them, as she produces about half of the world's supply. But besides the Russian market in Europe there is the Siberian one, and as Siberia will not have suffered from the effects of the war to any great extent it should prove a very profitable field in the future for British manufacturers and merchants. Finance is already strongly represented there by powerful syndicates—to the extent of nearly forty millions sterling it is said—and many credit associations have been established as the result. Siberia has an area of over a quarter of a million square miles of forests. There are large exports of pine and other kinds of timber, and an increasing trade is being done with both the British and Australian markets already. There are valuable mineral products also—according to the official returns including gold, platinum, copper, lead, and zinc—and considerable mining operations will be carried on in Western Siberia; and a number of well-known English companies, besides French and Russian, will be engaged in working these, which would produce a demand for mining machinery; whilst the extensive employment of British capital in Russia after the war should certainly promote our commercial interests there.

Before leaving the subject of a trade agreement with Russia, it may be mentioned that the present admirable ruler of that Empire is known to desire most earnestly that the good feeling existing between the two countries should be permanent, and that is all that is requisite to make it a pronounced success.

THE LOCUM TENENS.

By E. TREEBY.

A SOLITARY man was riding hard along the bush track, every now and again looking anxiously and apprehensively behind him, but in no wise slackening his pace except at long intervals when he paused altogether to listen intently, and then with a relieved encouraging pat to his foam-flecked horse, which seemed to share intelligently in his uneasiness, they went on again.

The night was tempestuously grim and dreary—every few minutes a chill deluging down-pour of rain, intermittently dashed with hail, lashed at them from the south, and both man and beast seemed fairly done up.

'Cheer up, Joker,' he said at last; 'even the heavens are siding with us to-night all right; they'll never track us so long as the blessed rain keeps coming down in buckets' full like this.'

His horse, too well trained to make audible answer, shook its head by way of acknowledgement, and they went pounding doggedly along the road again as before.

Suddenly the man's quick ear caught a suspicious sound even before the horse, which stopped dead in an instant at his master's warning touch on the bridle, and he listened again.

Hastily jumping off and winding the reins around his arm, he led Joker into a clump of thick bush. Leaving him there, he made his way, revolver in hand, steadily back to a spot from where he could see and yet be totally unobserved, and presently, with a great clog-clogging of hoofs on the soaking leaf and bark strewn track, and their dripping waterproofs glistening in the gray light, four troopers rode by.

'He can't be very far ahead now,' one said as he unconsciously passed within the hidden man's certain range.

'Even a black tracker wouldn't be much use to pick up his traces through this'—began another.

The fugitive listened breathlessly until their

voices died away in the distance, and then grimly pocketing the revolver went for his horse, and in two seconds they were doubling back and riding hard in the direction from which the troopers had come.

He rode on not slackening rein again until he came to a ford in miniature flood, and then he halted and looked around him anxiously, for he did not recognise the spot at all. He must have taken the wrong turning some little way back. He got a drink for himself and the beast, and then retraced his steps slowly and cautiously. But it was no use; he couldn't pick up the path again, and was practically bushed, to his chagrin. He turned tail and crossed the ford again, keeping a sharp eye all around him, and listening frequently.

'Before we know where we are, we'll be running into their very arms with this tomfoolery,' he growled aloud at last. 'I'm bothered if I know where we are now.'

He went on anxiously, still keeping an eye open all around, until at last they came to rather more open space than usual, and in the distance through the scrub he spied a solitary light in the window of a lone selector's hut. After cautiously taking his bearings, he made for it at once, getting entangled as he went in some barbed wire that gave him about five minutes going around before he reached the shanty. He rode up to the door and rapped, and a woman hastily and noiselessly opened it.

'S-s-h.—Oh thank heaven you've come, Tom'—she began, when she saw it was a stranger and moved hastily to shut the door; but he had put his foot in it before she could do so, and she was looking fearfully down an extended revolver barrel.

'Awfully sorry for this rudeness, madam, I can assure you, but necessity presses,' he said in a mellow, pleasant voice, taking off his hat politely, but still keeping her covered.

'Who are you? What do you want?' she asked tremblingly.

'Merely some food and the direction to Red Trail Gully, and a mum tongue that you've seen me at all.'

'That there's the road to the Gully,' she said, pointing to a dark patch, 'through that bit of bush, over the track and along the creek past Two Man Tree; you can't miss it, and just over the hill you'll see it plain. As for food, there's oats in that there shed for the horse, and I can give you some damper and mutton'—

A sudden, fearsome, choking, childish crying sound from within interrupted her.

'Oh my precious!' she moaned, flying inside the hut again. 'Oh my precious one'—

He took her word about the oats in the shed, and Joker was soon enjoying a snack, while his master came into the hut to forage for himself. It possessed only one room, and a bed took up one end of it, and a few spare chairs, an old sofa,

and a knocked-up bush table the rest. Beside the large open fireplace was a box-cradle, from which the young woman—she was hardly more than a girl—had lifted out a small fair-haired child, crying in the paroxysms of some infantile complaint, and sat down with it beside the fire.

The man helped himself to food from the table without a word, and ate rapidly as if there was not a moment to lose, going to the door every few moments to look out anxiously.

'Have you had any troopers by here to-night?' he asked at last.

'Yes; they woke the boy up with their noise—my precious, did it then—Oh mummy's boy! If I only knew what to do to make you better!' she cried desperately.—'Tom, for the love of God, do be quick and come'—and she broke off into a silent storm of weeping.

For the first time, the man seemed to realise her distress and the great trouble that overhung the place.

'What is the matter with the youngster?' he asked, coming over to her, still munching wolfishly at a great crust of damper and meat.

'Blest if I know,' she sobbed. 'Tom's gone for the doctor—he ought to be back soon; but it's five miles away, and then he may be at another case—and meanwhile my baby is dying. Oh, what shall I do—what shall I do?'

He bent down and looked at the child frowningly, and then he went to the door again and peered out listeningly.

Then muttering savagely something about the tomfoolness of women having babies at all in the bush, away from any sort of civilisation, and that there ought to be a law to prevent it—that's what laws were wanted for instead of being mostly about things that didn't matter in the least—he finished up by saying gruffly, 'Here, give the kid to me, and hurry up and get some boiling water ready.'

'Are you a doctor?' she asked hesitatingly, holding the child protectingly to her while she regarded him apprehensively.

He didn't look altogether an object to inspire complete trust and confidence. He was a big man in the prime of life, although his dark hair was slightly tinged with gray over the ears and temples, but there was a stern haggardness and unemptiness about him that gave him a sinister aspect.

He laughed at her words as if he were suddenly tickled very much. 'No, but I very nearly was once, only the fates and some other people decreed against it; but I think I'm still good enough for a touch of croup.'

'Croup!' she almost shrieked in horror. 'Do you think he's got that? Why, they hardly ever get better from croup, do they?'

'Now, no noise,' he said not unkindly but firmly, taking the child from her reluctant arms. 'I tell you his life depends upon the way we

jump around now, and it will be touch and go. Hurry up with that water!’

For an hour they both worked strenuously with the simple primitive remedies at their command, thoroughly absorbed in the battle, she following his every direction with pitiful obedience.

At last he said quietly, with a professional reassurance, as he laid the child back in its bed again, ‘There, I think he’ll be all right now, as soon as he’s slept off his exhaustion.’

The mother bent over her boy in an ecstasy of gratitude and delight as he peacefully slumbered with faintly glowing cheeks and his hair crinkled over his head in damp moist curls.

‘If it hadn’t been for you he’d have been dead. Oh, what can I do to show you how thankful I am! And how Tom will be too when he knows about it,’ she whispered so as not to disturb the child.

‘He mightn’t be so much as you think,’ he gruffly cut her short. ‘Go to the door now and see who it is that’s coming along. If it is the troopers again, give me time to get out before the shooting begins and wakes baby.’

‘What! Is it so bad as all that?’ she asked with whitening face; ‘and it will be all through us if you are taken.’

He waved her to the door, and she peeped out as a stentorian voice outside shouted, ‘Here, Nora, come and give us a hand.’

‘No; it is Tom at last,’ she cried, joyfully throwing it wide open. The stranger followed her out.

A young man was supporting a drooping figure of a stoutish elderly man hunched up before him on his horse.

‘Here’s the doctor, Nora, drunk as a lord,’ he cried disgustedly. ‘I made him come; but much good he’ll do you, old girl.’

They helped him down and set him on his feet, where he swayed unsteadily. ‘How d’you dosh, Mrsh Fingal. Wheresh the pashent?’ he said thickly. ‘Damn fool business this, you know, Tom Fingal. A dose of castor-oil would have done just as well until morningsh.’

‘My God, doctor, if that kid pegs out through you’—

‘Hush, Tom,’ cried Nora, hanging on to him. ‘It doesn’t matter now at all. Baby’s better and sound asleep, thanks to this—friend,’ she finished hesitatingly.

Tom, though puzzled, nodded cordially to the stranger, only his heart was too full of rage at the doctor to think collectedly about anything else just then.

‘Well, what am I going to do with him?’ he asked helplessly. ‘Put him into the cow-shed for the night? I don’t feel inclined to tote him back again now.’

‘No; he’d get his death of cold there. Let him sleep it off till morning in the house,’ said

Nora grudgingly; ‘but for goodness’ sake, don’t let him wake baby up.’

They helped the doctor to the sofa.

‘What! you heresh, Spindrift Max?’ he suddenly muttered, peering beerily into the face of the stranger, who was helping him on the other side. ‘What the (hic) devilry have you been up to to-night?’

Nora turned pale and stifled an exclamation, while Tom looked curiously grave but made no comment; neither did the man who had been addressed by the name of the most notorious and most wanted outlaw in the country at that time. The doctor, without waiting for an answer, had almost immediately dropped into a profound slumber.

After he had had a look at his boy, Nora told Tom how the stranger had saved the situation.

Tom thanked him heartily, and was pressing upon him such refreshment as was available and a night’s shelter, when a sound of galloping horses was heard coming toward the hut.

The stranger quietly took direction of affairs. ‘Quick, tell me again the direction of’—

‘It’s too late,’ said Tom concernedly. ‘You couldn’t get out of here without being seen from the track.’

‘But he saved our boy—he would have died, and he saved him—we must do something, Tom!’ pleaded Nora.

Tom raised his shoulders helplessly. ‘My dear girl, we can’t do impossibilities.’

She went to and fro wringing her hands, and then all of a sudden she darted toward the big bed and commenced frantically rolling back the clothes and mattress.

‘He sha’n’t be taken, whatever he has done; he would have got away in time if it hadn’t been for saving our boy’s life.’

‘What are you doing, Nora?’

The stranger, who had been thoughtfully looking at the priming of his revolver, asked the same thing with his curious eyes.

‘Lie down here,’ she commanded him.

He hesitated. ‘It’s not much in my line. I think I’d sooner get out into the open,’ he said apologetically.

‘Get in,’ she insisted breathlessly; ‘don’t delay. It’s your only chance.’

‘I believe she’s got it,’ cried Tom admiringly. ‘You do what she says, stranger.’

He reluctantly did what they told him, and then she pulled all the clothes back again, and gently lifting the slumbering child from his cot she tenderly kissed him and put him on top of everything and sat down beside him.

‘Now, go,’ she said to Tom, ‘and tell them to come softly because of the child.’

‘The horse—the horse’ll give the whole show away,’ he growled in sudden gloom.

‘Idiot! Can’t the doctor have come on it,’ she said hurriedly.

'Right you are again, old girl.'

So he went out in time to prevent them all clattering noisily up to the hut together.

They dismounted, but only the sergeant and one trooper entered, and they came in quietly.

Nora half rose from the bed and pointed warningly to the baby with her finger on her lips.

They nodded reassuringly and sympathetically.

'We're out after Spindrift Max,' they told Tom.

'What's he wanted for?'

'Nathalia Bank robbery, one of the neatest and most daring affairs ever perpetrated. All the officials were found gagged, and he has got off with eight thousand pounds single-handed as far as we know.'

'And you haven't got a trace of him?'

'Yes; there are indications that he's probably planted the loot and run into hiding somewhere in the neighbourhood until things quiet down; so keep your eyes open'—

'Oh, sergeant, do you really mean to say that he is at large in this very neighbourhood?' asked Nora with well-counterfeited terror, coming hastily toward them. 'What shall I do while Tom is away all day?'

'Of course he doesn't mean that, Nora,' said Tom, winking warningly to the officer, who kindly and instantly took his cue that he wasn't to alarm her.

'I don't suppose so at all, Mrs Fingal, not if he knows what is good for his health. I'm sure I don't know what we'll have to do about old Penderson,' he went on, going over and eyeing the snoring doctor disgustedly; 'he's the scandal and disgrace of the whole district. There'll be a fine old row one of these days when somebody pegs out through his neglect.'

'I can tell you, sergeant, if my boy had gone under this time, there would have been some swinging for it,' began Tom hotly.

'Tut, tut, my boy—but I don't know that anybody would have blamed you.—Well, good-bye, Mrs Fingal; I'm glad the little chap's better.—So long, Tom; keep your eyes open, you know.'

The husband and wife listened until the sound of their departure died away in the distance, and then they helped the stranger from his hiding-place.

'There's not a moment to lose,' said Tom; 'you'd better get away at once. Turn straight down by the gully there, and follow it until you come to the little ford. You will miss them that way, and sooner be out of the danger zone. But I'll come with you a short step and put you on the way.'

He protested, but they both insisted.

'Oh well, my friends—good-bye, and thank you very much,' he said, shaking hands with Nora.

'I reckon we're only quits,' said Tom gruffly,

looking over at his boy, when a galloping was again heard outside.

The stranger had only just time to get behind the door and take out his revolver, as the sergeant strode in again. 'I forgot to tell you, Tom,' he said, looking shrewdly and keenly around, 'that there's a little matter of two hundred and fifty pounds reward out for Spindrift Max.'

'Is there?' said Tom interestedly.

'Yes; you could do a lot with two hundred and fifty pounds, Tom?'

'By Jove, yes,' he said, rubbing his head and feeling very uncomfortable under the sergeant's glance; 'I reckon it would come in handy.—Eh, Nora?'

'Yes,' she said faintly, but she looked rather apprehensively at him until he turned yawningly to the fire again.

'Oh well, keep your eyes open for that two hundred and fifty pounds, Tom—that's all,' and turned rather disappointedly to go, to their great relief, when, with a sudden ponderous creaking stir upon the old couch, which drew the attention of all upon him, Dr Penderson roused up.

'What's that—who's that you want, sergeant?' he called out thickly after him, as he struggled to a sitting position. 'Spindrift Max; why, I saw him only a minute or two ago. I'll bet you anything he's behind that door,' he chuckled, glancing triumphantly at Tom, who glared at him, while Nora gave a little helpless exclamation, as with a sudden movement and a revolver held before him, the sergeant threw back the door; but, to his chagrin and the Fingals' relief, there was nobody there.

Some six months afterwards Tom and Nora were astonished to receive a small heavy packet by parcel post. Inside was a box of two hundred and fifty freshly minted sovereigns, together with a fragment of paper upon which were the words, 'Clean money, a thank-offering from Spindrift Max!'

MY LITTLE PAL.

Two wistful eyes of softest brown
That watch my every smile or frown,
Four eager feet that leap and play
Around my slower steps each day,
A heart of gold for weal or woe,
And that's my little pal, you know.

For him no other form or face
Could e'er, in absence, fill my place;
No queen, returning home, could meet
Such ecstasy of welcome sweet.
With maddest wag of tail unfurled
He says I'm just his doggy world.

Oh, faithful friend, small comrade true!
All stolen joys I'd shower on you—
Bones on the rug before the fire,
The biscuits of your soul's desire,
And may I find, while life endures,
Oh, little pal, a love like yours!

MARY FARRAH.

Chambers's Journal

SEVENTH SERIES

THE HEART OF THINGS.

By HENRY LEACH.

LONDON, *Yesterday*.

MUCH of our British mankind is as a prodigal son; humbled and stricken, it returns to an old Victorianism which in recent years has been held to be stupid and smug, and too conventional for the proper achievement of the possibilities of life, and so has been despised. Yet it had some good qualities; and, sore and unhappy now, realising what sad mistakes have been committed in pursuit of luxury, people practising extravagance only because it was extravagance and beyond the capacity of many others feel that the time has come to return to a simple manner of thought and life. In the new practice of this Victorian virtue a different outward appearance may be presented from that which it bore in the days of its first establishment. It may even be pretended that it is not Victorianism at all, but a system with the recommendation of novelty. We shall be with old Sir John Falstaff anyhow in the suggestion that the fact that one is turned virtuous is not good reason why there should be no more cakes and ale. Dundrearies and other soft whiskers will not again enter into the masculine fashion. Could ever lady return to crinoline? But Victorianism had really some great virtues, and they were chiefly those that were comprised in a proper view of the goodness of human simplicity. The Victorians deserve limited credit for the virtue, because it was natural and subconscious with them; but certainly it was a dominant feature of the British character at that climacteric when the Empire, its construction seeming to be completed, was unveiled, admired, and then taken for granted. The work done, the people went out for luxury and pleasure. Since then, however, an accident has happened, and some damage has been done, so the people begin with a telling instinct to feel that they should go back to some of the ways of thought and action that held them when the gorgeous ceremony of Empire completion was being celebrated. Some wonder that there should be any thoughts of Victorianism when the air is occupied with monoplanes and biplanes, and not a soldier with a scarlet tunic is to be discovered in any thoroughfare. But it is so, and the real tendencies of people are better indicated by the subtle instincts that are not

fully realised than by the most conscious signs that are publicly made.

* * *

There is this new business of thrift which has been taken in hand. In 1870 thrift was understood and practised, in 1890 it was admired, in 1900 it was respected, and in 1913 it was distantly remembered. Now the new Victorianism within the people puts them as far back to 1870 as they can reach. If the times get worse we may indeed go back much farther than 1870; but even now this reaction seems odd. Thrift! the mystery and the wonder of this new cult! It appeared at the first consideration that there was something interesting in it. Its practice included such strange behaviour as might be a form of ritual. A little book in limp leather, with some outside signs upon it, edged in gilt, having ornamental print and rubric pages, seems to be needed for the proper practice of this thrift by a people unhappy and in anxiety, who have come to make a necessary adventure into a great unknown. The other night one among us, with that occasional uneasy foreboding that takes the minds of men in these times, went moodily to a shelf to select a volume for consolation in some lonely hours, something to satisfy a restless state that only knew that it knew not what it needed. Something green on an upper shelf that had been almost untouched for a generation made a suggestion that equalled a demand. Such a book might have been bought from one of the baskets in Charing Cross Road last summer for threepence; it must now be regarded as one of the text-books of life, with numerous examples and exercises. The copy on the upper shelf had come there by some means from an old homestead in the North; it had been to parents, good and wise and excellently Victorian, as one of the best of books, than which possibly there was only one other better. It defined the best virtues and gave examples of how they had been practised; and in the simple Victorian days, when people believed without too much inquiry, the examples seemed convincing, and anyhow were silently absorbed. Perhaps the book was needed for home use, or it may have been that he who now found it on the upper shelf, and to whom its appeal was

quick, may have been too young to understand its full meaning; still he wonders why it was not part of the boy-baggage when first he left the home, why it made no trinity of truth and wonder with the Holy Bible and *Robinson Crusoe*, maternal inscriptions in each of them. This green one was a father's book, and that may have been the reason why. In gilt letters upon the cover is the title *Thrift*, and underneath it 'Smiles,' for the author was Dr Samuel Smiles. May one suggest to Mr Murray, who still publishes it, that he should send this book to press again for the advantage of millions of chastened Britons who now pick among the remains of the old Victorianism for some morsels that may serve them, and are especially inclined, with Government support, toward the doctrine of thrift which they do not properly understand.

* * *

The copy which was taken down on this occasion is dated 1876; and while the author's preface within it, evidently for the first edition, is dated November 1875, the title-page indicates that this book is one of the twentieth thousand. Here in our present vulgar term was a 'best-seller.' Smiles, we conjecture, had a peculiar opportunity after 1875 of doing service to his mistress Thrift for the mere love of such service, and not through any untoward circumstances surrounding him, for riches must have rolled his way. The vogue of his books was quite amazing. They sold by the hundreds of thousands; no home that had pretensions to being well-ordered and well-found was complete without one; possession of a library of Smiles stood for declared intention to succeed in life by the best Victorian means, and they were translated into other languages, so that we Britons with our traditional altruism should not deny to the semi-heathen some knowledge of the manner in which to help themselves, to develop character, to observe duty, to practise thrift, and to shape fine conduct. I wonder why Smiles gave us no secrets, plain candour and truth, from his own exceptional experience, in the form of a last volume, which should have been called 'Success.' For that we might have excused him the *Autobiography* which was published in the year following his death in 1904. You may say that there is something wanting in fervour of appreciation, something too critical in one's reception of the old apostle in the green mantle who in these times of trouble returns to us from the Victorian shades, and is to give us many mindfuls of the best advice. No; but with all his faults we have some sympathy with the returning prodigal who has had his heated life, and is being called upon to suffer, and we shall see to it that in his mood of repentance, with an honest desire to attack the twisted difficulties of this unknown thrift, he is set upon the proper path, and is not made the victim of soft nonsense.

Victorianism, we have openly admitted, was finely virtuous and was very sound; but all was not so real as it seemed. And one may declare at once that Smiles is suspected of having prepared his fine romances of industrial knights by such a process of plot and argument reversed as that employed with such grand success by the distinguished author of the adventures of Sherlock Holmes. Each took a result, and then went back, step by step, to the beginning, with none to hinder. Thus Dr Smiles, with his poor boy become a merchant prince, worked back from the castle to the cottage along paths of his own selection, and found thrift, thrift, thrift for the paving all the way. Not anything mean did he ever see, anything selfish, anything ignoble, in any of his heroes; they were all stuffed tight with the best Victorian virtues, and admirably adapted for pictorial display on the coloured sheet almanacs with which, by grace of the local tradesmen, the kitchens and parlours of northern homes were decorated at Christmas time.

* * *

It is right that we should see that our suffering and fearing prodigal is not misled, and that we should, if necessary, scrape upon the outside of these Victorian idols. If we have sinned we have anyhow gained much in worldly knowledge and circumspection of which we are properly entitled to take advantage; and while we agree that we must and shall willingly return to a half-forgotten simplicity, we shall stand out for reality, and do not intend to be deceived. Ours must be a new thrift which neither the Greeks nor the Romans, neither the Germans nor the Puritan Fathers, nor the good Victorians whom now we again admire, had within their consideration or their practice. Something high-powered and penetrating is needed, something that makes a quick appeal to the mind, and suggests efficiency. If this new move to thrift had come upon us in times of peace—which would have been impossible—the proper thing to have done, had it been a national movement, would have been to appoint a royal commission upon the subject, which in course of time, it is hoped, would have taken the evidence of a hundred of the wives of the workmen of France—the thriftiest people in the world, the backbone of a nation if ever women were—and ultimately, about the time when our grandchildren might reasonably be expected to be terminating the sowing of their wild oats, the people should be presented with majority and minority reports of this commission, which in effect would be stern and unequivocal condemnations of waste in all its forms. A vast appendix in small type would leave no further doubt upon the matter. But these are days of war, when we do not wait, because the Germans will not wait; and so, instead of the royal commission, the Government takes the unprecedented and breathless course of itself

coming forward with plain recommendations about thrift, tells the people how to save their money, shows them how they should not waste, gives them some hints on gardening, and other kinds of things. It tells us to dispense with many things, and if after a moment's thought we discover that they come from foreign countries, to go without them more than ever. The Government exhorts us that before we spend a coin we should sit us down and think; and in the doctrine of hesitation, in the preaching of the value of second thoughts, the Government is tremendously right. Smiles was never inspired so well, for most waste and prodigality comes from mere and absolute thoughtlessness. The Government now suggests that we may grow our own potatoes and cabbages. Only once does the Coalition, or those who speak for it, aspire to any aphorism, or make attempt to achieve a lasting thought. 'To waste food is as bad as to waste ammunition,' says the Government. It is a tremendous thought; hardly anything better has ever come from Whitehall. Even if they are so bare and unadorned, so harshly brief, we like the new precepts on thrift better than the old ones of Queen Victoria's sparing days.

* * *

Let us return from the Government to Smiles. We begin to see that, though we desire the ends of Victorianism, and may practise again some of its methods, its teaching entire will not suit the times; and we do not admit it is anything against our own times that it does not. This 'thrift' of Smiles is in effect Money! money! money!—it is the cry for money, and more of it, and little enough of the good that it might do. It is save! save! save! so that there may be a bulky stocking in the eventide of life. That, indeed, is good advice; it stands for prudence, but it does not accord with all the best virtues of humankind. For sweet charity he gives the uglier name of generosity; and we see his heroes and heroines, become rich through the toil of thousands in their behalf, being exalted for giving a patch of park to their town and laying the foundation-stone of a memorial hall. One of them makes great advertisement of an old vow that the poor should taste of the prosperity that had been achieved. There was no hiding of one's own merit under bushels in those strange times. Modesty and humility are among the noblest qualities of man; but Dr Samuel Smiles knew little of them, and did not demand them in his heroes. Had he forgotten those lashing verses in his Bible in which the humility of the publican was exalted above the pride of the Pharisee? Five or six quoted texts, borrowed from authors of many nations, are at the head of every chapter of Smiles. He tells us that 'Thrift began with civilisation. It began when men found it necessary to provide for to-morrow, as well as for to-day. It began long before money was in-

vented.' And then, opening this solemn exhortation with the groan of muffled drums, he goes on to say that 'Wealth is obtained by labour; it is preserved by savings and accumulations; and it is increased by diligence and perseverance.' Wealth! accumulation! Great things indeed, but not well placed in codes of life-ethics. Even our Government down in Whitehall is not for wealth and accumulations now. And we soon begin to hear and see so much of wealth and accumulations that doubts upon the whole of this philosophy rise in our minds. 'Economy is not a natural instinct, but the growth of experience, example, and forethought. It is also the result of education and intelligence. It is only when men become wise and thoughtful that they become frugal. Hence the best means of making men and women provident is to make them wise.' Profundity! And then we are told that 'Prodigality is much more natural to man than thrift,' and so along.

* * *

One did not realise until now for how little the soul counted in the ideas and schemes of some of those early industrial fathers; and now we know that Smiles makes their infirmities worse than they were. He shows thrift as a soul-killing vice, a terribly vulgar thing. I respect the name of John Crossley, founder of the great Yorkshire firm, and I decline to believe that what should have been the sweetest, most uplifting episode in the life of him or any man was such a dull, material thing as it is represented. John Crossley was a poor but ambitious weaver; Martha Turner was a domestic servant of many virtues, who milked several cows each night and morning. She knew nothing of him; but 'when I went to the gate one evening,' she says, 'there was a young man standing there who asked me if I wanted a sweetheart. I answered, "Not I, marry! I want no sweethearts." I then went into the house and left him. I saw the same young man frequently about, but did not speak to him for years after.' And then suddenly she received a love-letter from him, in which he said there was a house vacant near his works, and it was a great chance. 'I told him that I was going home to spend the 5th of November, and would pass that way and look at the house, which I did. When I got home I asked my parents for their consent.' Her parents objected. She says 'I went in a distressed state of feeling to my bedroom, and opened my book that was the preparation for the sacrament, and the first place at which I opened I read these words: "When thy father and thy mother forsake thee, then the Lord will take thee up." This comforted me very much. I felt that the Lord was with me in this matter, and I could no longer doubt which was the path of duty.' I am not convinced that Martha's confidence of divine support at this crisis was justified on the facts presented.

Yet she and John Crossley, married at the dawn of the nineteenth century, made some sort of a success of it in life, and my doubts about their love-story as it is told increase. If this green book tells me the truth and the whole of it I do not like this theory and system of Victorian thrift. It was a sordid system, it was selfish, it was incomparably mean, and it was murderous to the soul. Life, during the most of the living of it, must be crushed. That philosophy is a curious product of its age. But because we do not like that teaching we shall not practise thrift the less or believe in it less. Indeed we shall be happy in it as the Victorians never were. We in our great present sacrifice shall learn the joy of sacrifice; and the practice of thrift, the little saving for a noble cause, the simplification but not the impoverishment, of life, shall become a real and not an affected pleasure. Much of the late extravagance has been due to thoughtlessness; the happy possibilities of thrift have not been understood. One might work hard for five pounds and spend it unnecessarily and without a thought. Strange that the work gave pleasure and the spending none, and that this should be repeated. The effort and the achievement! It has not been realised that economy means revenue, that this is a simple and real truth, and not one of those lofty and sometimes doubtful moralisings that once were taught the young in copy-books. The thrift pupils of the Government must be brought to realise that the maxim that if they take care

of the pence the pounds will take care of themselves is to be taken literally, and is a practical hint of supreme value. The pleasures of economy are better experienced in the saving of copper than of gold. The mighty truth that drops of water will make rushing rivers breaks upon our mind. And as a matter of the practical thrift with which we are concerned in these last days of the German Empire, is it not the case that a man who has twenty pounds a week often feels that amidst his many expenses he would be justified in buying for himself some little trifle costing five pounds which he has often coveted? He spends it all in other ways. And then by encouragement of Whitehall he cuts out unnecessaries and reduces his expenditure to twelve pounds, limits it severely and inexorably to that, and the joy of effort begins. And lo! he says to himself that if verily he can save again on the twelve pounds it shall be a covenant that the gift to himself so much desired shall be made. In the second month it is made, the man is richer than ever before, and there is satisfaction with the thrift. This is practical thrift, and it is on these new lines that it must be practised in these days when it has suddenly become necessary. We are just simplifying our life and making it easier, cleaner, and better. Spirits will be the more buoyant for it. We shall go on to our grand economy with a good conscience, knowing that 'many a crowded hour of glorious life' is still before us.

THE BRIGHT EYES OF DANGER.

CHAPTER XXXIX.—RED DRUMMOSSIE.

THE *Gannet* did not risk venturing up the Forth, for King's ships were on guard, but she put in at Eyemouth, on the Berwick coast, and there I parted from Bertrand and our good comrade Anthony. The business of the *louis d'ors* was safe in Bertrand's hands. Other things being equal, I should have loved to go with him to fair France; but the settlement of an urgent affair of my own dwarfed all other thoughts; for Charlotte was waiting for me at Lady Hewat's, in Peeblesshire, and when the *Gannet's* brown sails faded, I turned my back light-heartedly on the sea and took the post-road inland. A night at Edinburgh; next day a ride in a light snow into the country; and then my Charlotte at the journey's end. We were married quietly in a little church by Manor Water, the good motherly Lady Jean giving Charlotte away, and in the afternoon, taking Glenira with us, we set out for my house at Darehope, where we have lived since, and where my wife waits me now.

Those were happy days. To be young, to be newly wedded to my heart's desire, to be beside her, in the light of her presence, after racking

separation; to reap quiet joy, peace, and ordered life in the heart of the hills after dark and danger-haunted days; to learn the magic and the fullness of the word 'home;' these things were mine—ours—in the 'Forty-five,' things that might well make a man humble and thankful. Looking back, I see now that I was neither humble nor thankful enough. 'The pride of life.' How often had I heard the parson ask deliverance from it, and comprehended not. The seeds of unrest were in my blood.

The winter of 'Forty-five' crowned its turbulent year. Wild winds hallooed down the ravines, the fells trailed misty pennons in a thousand changing shapes, the sun sulked behind leaden skies, and there were many weeks of snow, with drifts up to our windows. Yet the days passed quickly, chasing each other in a happy round of simple duties and pleasures. A week before Christmas we rode to Durrinston, but there were none of the heartsome festivities that I was used to in Westmorland, for trouble was in the air.

Charles Edward's army had turned back at

Derby, after the claymores had been so near striking distance of London that the frightened citizens called the day Black Friday. But there were dissensions and jealousies in the Jacobite councils, and the gallant, mistaken dreams of the clansmen were shattered. From the moment that Charles Edward was overborne the world held for him nothing but bitterness and disillusion. Those who knew him say that any cheerfulness he showed after the day his officers forced him to turn his back on London was but a mask. Let what might have happened had he pushed on remain a speculation for the historian. For the Prince, the retreat meant a slowly breaking heart. His old buoyancy was gone. The retreat from Derby, begun in bitter mortification, was the first step on the glissade that ended in the destruction of the hopes, the body, and soul of the Chevalier. Sensitive and generous natures pay dearly for temperament.

On our return to Darehope from Westmorland I found a letter from my brother waiting me. He was in London, having just arrived from Flanders, and counselled me to go post-haste to Edinburgh. Duke William was marching on Scotland against the rebels. 'This will see an end of the Pretender,' ran his letter. 'I have the good offices and influence of the Secretary, and you are to receive his Majesty's commission, a cornetcy in Kingston's Horse. So do you be ready to join at Edinburgh, where I hope to be on the 30th. I do not doubt that you must have had private affairs to impede you; but it is not meet for a Layton's sword to hang on the wall when his Majesty has need of it, so set out, Ned, with all despatch.'

I handed his letter to Charlotte, who read it and went pale to the lips; yet, though I knew her heart was torn at the thought of my fighting against the clans, no word of this fell from her. 'You will go, Ned,' she said at last, her head held proudly, but her eyes swimming. 'It is your wish, is it not?'

'I should be the first of my race to lag at home when the King wanted men,' I told her gently.

'You will go,' she repeated. 'You cannot fight for the Prince. The Elector is your King; but I—I cannot call him that. Ah! Next to you, Ned, the Young Chevalier has my heart. No! I cannot call the Elector King! If I could, my own hands should buckle on my husband's sword. But a sword is not a claymore, and no scarlet coat ever shone like the tartan. Yet you are proud of your name, and you—you must go,' and she fell a-weeping.

One morning, with snow on the ground and the promise of more in the dull sky, I threw boot over saddle once more.

I got my old quarters in Edinburgh at the 'White Horse,' and at three in the morning was awakened by a cavalry trumpet and the jingling harness of a troop of light horse, part of the advance guard of the Duke. Two or three hours

afterwards Duke William arrived at Holyrood, having come from London in four days. Edinburgh's reception of him (astounding to one who had seen Prince Charles ride into it but a few short months ago) showed the city's real heart. Joy bells pealed, the freedom of the city was presented to the Duke, and the same hall at Holyrood that I had seen ablaze with the white cockade now heard loyal and dutiful addresses from the Scots great officers of State.

I soon found my brother. Though we had much to say to each other, we had little time together, for the army was under orders to start early next morning, and every officer had more duties than time to do them in. To my great satisfaction, I was gazetted to a cornetcy in Kingston's Horse, my father's old regiment, and was presented along with a batch of recruit officers to the Duke. He was a young man of twenty-five, very obese, and with no personal charm of manner or address. He gave us a few words of welcome, in a strong and unpleasant German accent, and shook hands with us at dismissal. I have heard much criticism of him, so let me here say that if he was ruthless and savage he was of high courage, outstanding military capacity, and consumed by honesty of purpose. Not all his critics can say the same of themselves.

Next morning the Royalist army—fourteen battalions of foot, four regiments of horse, the Campbell militia, and field pieces, in all about ten thousand men—began its march north.

We expected to come to grips with the Highland army almost at once; but the Jacobite leaders decided to retire to the North, where they could hold out until the spring, when a great accession to their ranks was expected, as well as aid in money and men from France. We reached Crieff only two days after Charles Edward had left it. The rebel army was wonderfully mobile, and in consequence other tactics were adopted by us. The Duke is credited with saying that the 'Highland army would be defeated long before a battle,' and certainly events justified the prophecy, for the severe northern winter, exposure, and the short rations of the enemy were our allies. The pursuit was set about without forced or fatiguing marches, by way of Perth (where the Hessian troops joined us), through Angus to Aberdeenshire, by which route the capable Lord George Murray had led his wing of the Jacobites. At Aberdeen snowstorms and biting winds met us, and here the Duke decided to wait for the beginning of spring before spreading his net round the rebels, for the roads were well-nigh impassable for horse and foot, not to speak of artillery. We remained there for six weeks, drilling, exercising, and patrolling.

I have never been quartered in a colder place. Easterly gales off the sea, chilling me to the marrow, shrieked over the old town. The winter died hard; but at long last the snow disappeared; a week of dry weather shrank the rivers; spring

loosened the winter's leash, and much to our content we marched out on the 8th of April, and on a Saturday morning I saw the sparkle of the Spey again. Here we expected a check, for nature could hardly have contrived a better barrier to our advance. Why no resistance was offered to us is to this day a mystery to me. It was a capital error, for the Jacobites could easily have harassed us sorely; but, their batteries retiring toward Inverness, in three divisions we forded the great Highland river. I little thought when the *Gannet* stole out of the Bay a few months before that I should ever see the Spey again; yet here I was, my horse splashing the stream, a bright morning sun sparkling, the shouts of orders and the tramp of an army sounding in the clear air around me. The Spey was normal, vastly different from the brown swirling current when I had last seen it, and the whole army crossed over with the loss of only one dragoon. Not a shot was fired in Morayshire, and on the 15th we rested near Nairn, in good heart for the battle that would on the morrow settle the choice of dynasty for Britain.

Striking camp at five o'clock next morning, and after marching for three hours through heather and bogs that our horses often floundered in up to the girths, I caught my first glimpse of the Highland army, a black line on a moor about a couple of miles distant.

Culloden (or Drummoissie Moor, as the Highlanders call it) is an old story now, described so often and so differently that Jacobite and Hanoverian can have an ample choice of narrative. Mine is a personal statement, wherefore I do not set down all I saw, but only those things which are of intimate concern with my tale. Some things I remember were mere impressions, come and gone amidst the shock of battle, picked up, as it were, with the tail of my eye for a moment, to vanish when the smoke cleared away.

The squadron to which I was posted was lucky to be placed flanking the Scots Royals, who had the right of the first line; and about one o'clock, the ranks shouting 'Flanders! Flanders!' the Royalist army moved forward with the steadiness of seasoned troops.

The day changed from sunshine to dullness, a raw north-easterly wind with snow and rain beating against the Highlanders; who, after trying in vain to manœuvre to windward of us, began the action with artillery fire, and lost heavily by it. Here, I believe, they blundered. Our guns were immeasurably better laid. They knew little or nothing of attack by long-distance guns, for Preston and elsewhere had been won by brilliant *coups de main*. They had nothing to gain by standing in a losing artillery duel. It was foreign to the rank and file, but it was not until the guns had roared for half an hour that they charged. Indeed, the Mackintoshes

took the law into their own hands. Unable to reply, their comrades falling all around, they broke from the centre and rushed through the snow and smoke, followed by the others. The left wing was strangely inactive. I learned afterwards that the Macdonalds, insulted by not having the right of the line, refused to fight. The fire of the three files of our first line of muskets must have been appalling, but the Highlanders never wavered for an instant. Grape-shot swept them like a hail-storm. Wolfe's Regiment raked them on the flank. Yet they pierced our front, and though they came near our second line, not a soul reached the bayonets. I shall never see a more valorous charge, nor a more hopeless one. The whole of their first line was wiped out, and the crux of the fight came when the main body of the Royalists advanced swiftly and steadily. The rebels broke.

All that their system of warfare had taught them had been done. Cold print cannot describe their reckless bravery. Man for man, they might have faced any troops in Europe, but they were ill-equipped, out-numbered, and out-generalled. The last stroke fell when the Royalist dragoons (my troop among them) joined forces in the centre of the moor, and charged the wreck of the clans.

The spine of the rebellion cracked at that moment. The Jacobites, in full flight, split in two, the greater body breaking pell-mell for the open road to Inverness, greatly to their undoing, for the flat ground made easy going for horsemen. I saw scores of them cut down by our troopers. Their cries ring in my ears yet. The road was lined with bodies. Rivulets of blood stained the moor. It was my first sight of war, the horror and the pity of it, stripped of romance, naked and elemental. Never had soldier grimmer baptism!

We had halted for a breathing space. I was looking at my red sword, when an aide-de-camp galloped up with orders. 'Take a dozen men. Swing over to the left, search the moor for stragglers, and join us on the main road.'

I extended my troopers and began to quarter the ground. There was no track in the heather; the moor rose and fell in little dips, forcing us often to dismount and lead the horses over the difficult country. Any fugitives able to run had an advantage, so that I gave orders to swing farther to the left, to head them off toward Inverness. I was on the extreme left of the line, leading. Thus I went for a quarter of an hour until I came to a little ridge set about by fir-trees. Once or twice a pistol cracked in the distance; but the place was strangely silent after the rattle and roar of musketry and field-pieces and the scurry of hoofs.

Standing on the ridge watching my troopers, a line of moving red dots on the brown stretch

of Drummossie, a sound reached me from the clump of firs. I turned swiftly, pistol in hand, and listened. It came again, a heavy groan of some one in extremity. Not ten yards from me was a piteous sight, a man lying with his head on a stone, legs stretched full length, arms wide open, the palms upward on the ground, like a dead man's. He wore the dress of a Highland officer. His eyes were closed, a bloody bandage round his brows. I bent over the haggard black-bearded face.

'Here is water,' I said.

He opened his eyes and stared curiously at me. Instinctively I sprang back. I knew him. It was Philip Macdonell! For all his baseness, a great pity for him stirred me, for it was plain that he had come to his last adventure.

He drank the water greedily, and staggered to his feet. 'It is the meddler!' he said, and stood swaying, one hand against a tree, the other groping for his claymore.

'Let me die decently. Stand up to me, Layton, and draw!'

I put out a hand lest he should fall, but he rallied and lurched forward a step.

'Draw! I—I cannot run away this time.' The words rattled in his throat. His fingers closed on the hilt of his claymore; but he had not strength to draw it, and as he spoke his head dropped and he came slowly to his knees. 'This is the end, Layton,' he said.

I knelt beside him and tried to stanch his wounds, but he shook his head.

'I'm past help, and 'tis little occasion you have to help me. When ye drifted down Spey (ye mind on't?) I thought I had seen the last o' ye. I let ye go then. Did ye wonder why?' 'I did.'

The ghost of his old smile flickered for an instant. "'A work of necessity or mercy,'" I think the Catechism says. 'Twas necessity, and much against my will. Man, my powder ran done. Had it not been for that'— He broke off, eyes fixed on mine.

'Bend, Layton. I have something to say, and not many minutes to say it in. It was the

money, the accursed money,' he whispered. 'I would have begun over again with it, I thought. The Prince! Is he taken?' he asked.

I told him that Charles Edward had escaped.

'Ah, thank God! I joined him at Carlisle. Listen, Layton! Are you listening?'

I bent closer to him.

'I was a man, clean and honest as you are—once. Better had I never left the Strath and gone to France, for there came the cartes, adventures, want of money. Have ye ever been poor? I got out o' my depth, Layton, and I—I sold some Jacobite news to St James's. It had only to be the once, of course; but Master Secretary had me in his hand. He had but to whisper to break me. He got more secrets while I ruffled in Paris, and I got more money. That was the beginning o't. Then Glenira gave me his confidence about his mission to Scotland with the French money. Ye ken the rest. He was honest, and I was a liar—and worse. A black indictment; but I have paid, in part. No that I grudge it, for my heart—my boy's heart—the one that died—was aye for the Stuarts. . . . It is getting dark—the trees. Carry me out. Let me die in the open.'

I lifted him from the shadows of the branches out under the April sky. A lark, high above us, invisible, burst into sweet, piercing song.

He lay quite still, the shadows deepening on his face. His eyes, freighted with a message, sought mine.

'Lift me up, my enemy,' he gasped.

I put my arms about him, and helped him to his feet. He looked once round the wide shoreless sea of the moorland.

'Tell Charlotte that'—but what the message was I can but guess, for at the words his head fell suddenly on my shoulder.

A trooper and I carried the turbulent spirit's shell into the little wood, covered it with spruce branches, and I rode off to my duty, heavy of heart. For the passing of a guilty man, justly considered, is a thousandfold more tragic than an innocent's.

(Continued on page 632.)

THROUGH THE DARDANELLES BEFORE THE WAR.

IN view of the recent operations at the Dardanelles, and the present critical position of Constantinople, a short account of what I saw there on a voyage last year may prove of interest. Although it is now twelve months since I was in that direction, the recollection of every incident is still fresh in my memory, as though it were only yesterday that the events took place. We left Cardiff on 11th March with a cargo of coal for Malta, where four days were spent discharging, and proceeded light-ship to Nikolaiev, an important Russian port on the

Black Sea. After a very pleasant voyage through the Mediterranean, the proverbial blue of which fully justified its reputation, the weather being very warm, we rounded Cape Malia and proceeded northward through the *Ægean*.

When we arrived at Tenedos, which happened in the evening, we were obliged to cast anchor until the next morning, as the Dardanelles was still mined in places, lingering relics of the late Balkan war, the Turks being too leisurely a nation to remove them even though human lives were endangered thereby. The evening was

very calm, with a glorious sunset. It had been blowing a hurricane the whole day, and the relief was great. The setting sun, bathed in golden mists, was speedily nearing the horizon, twilight in these parts being very short. All nature seemed to be at peace with the world, a striking contrast to the tumult now raging round this locality. The mate and I stood on the bridge enjoying the scene: Tenedos, with its little bay and quaint, windmills on the left, the plain of ancient Troy on the right, and the Dardanelles in the distance. It may be as well to say something with regard to the general appearance of the country. To any one who has ever had the opportunity of visiting St Mary's, in the Scilly Isles, Tenedos town bears a nearer resemblance to that than to any other place I know of. The island, covered for the most part with scorched yellow grass and low bushes, presents on the east coast a small deeply indented bay shielded on one side by a hill on which the quaint windmills form conspicuous objects, the little town (more like a dirty fishing village than the gay flat-roofed cities one usually associates with the East) lying at its base. The Asiatic coast bears the same desolate appearance.

Early next morning we weighed anchor and proceeded on our course. Although the shores bordering the entrance to the Dardanelles are for the most part bare and flat, deep-purple hills can be discerned in the far distance. A long line of merchant vessels, most of which, like ourselves, were proceeding to the Black Sea, and had been obliged to anchor overnight on account of the mines, had now started on their course for the Dardanelles, the veritable gate to the East. This remarkable channel, varying in width from about a mile to as much as five miles, thirty-three miles in length, and with an average depth of thirty-five fathoms, is little more than a river, and affords the only means of approach to Constantinople and the Black Sea. The place being of such strategic importance, it is natural that its shores should have been strongly fortified from the very earliest days, for the safety of Constantinople depends very greatly on the efficiency of its defence. Every suitable point along its entire length has been utilised for earthworks, which bristle with guns, most of which can be seen from the ship as it passes, while others are more or less hidden from view, being situated farther off from the shore or on higher ground. As the width of the Straits averages two miles, and in one place only a mile, it will be realised that any ship, however powerful, proceeding up or down, is at a great military disadvantage, as it offers a conspicuous target to batteries concealed on either shore. Except for the fact that modern battleships have reached such a high degree of perfection that they are better enabled to contend with shore batteries than in former days, the position may be compared to that of a man with a revolver on

a narrow staircase who can hold his own against a whole army so long as his ammunition holds out.

Considerably before we had reached the entrance to the Dardanelles we had finished breakfast, and I was out on the bridge. The sky was dull and the purple hills rose in the distance, there was a cold wind blowing down-channel, and the land on each side looked bare and desolate. Nevertheless, the atmosphere was clear, and everything, with the aid of a telescope, could be seen almost life-size.

The ground on the Asiatic shore, just at the entrance, is occupied by the fort of Kum-Kale. About a mile farther south is a high headland on the border of the sea, on which the little town of Yeni-shehr stands, readily identified by a row of windmills near it, and, owing to its conspicuous position, a famous landmark to sailors.

Near Yeni-shehr is a tumulus marking the burial-place of Achilles. Kum-Kale (Sand Castle) is a village adjoining the fort of that name. Near by is the mouth of the river Scamander, draining the celebrated Plain of Troy. Judging from the marshy state of the ground, the stream has evidently changed its course several times. The miasma rising from the swamps is liable to produce fever during summer and autumn, and travellers should visit the ruins at some other period. Excavations in this neighbourhood have revealed the existence of four successive strata, each representing a distinct city, which had been erected one after the other on the same site. The second stratum, which showed signs of having been exposed to intense heat, is supposed by most antiquaries to represent the ruins of ancient Troy. Amongst a heterogeneous collection of remains the wonderful 'Treasure of Priam' was found, comprising vases, cups, and dishes of gold and silver, bracelets, rings, daggers, swords, and various other articles, many of which were fused together by fire.

Immediately opposite Kum-Kale, on the European shore, guarding the entrance to the Dardanelles, is the village and fortress of Seddel-Bahr, with a lighthouse and a modern battery. The village on the sloping hill, the remains of the old castle (very like our ruined castles) with a line of earthworks bristling with guns beneath, and the stony beach, combine to make a most diversified and pleasing picture. The general method of fortification seemed to consist of long 'cops' of earth covered with green grass kept as smooth and trim as a garden lawn, with depressions at regular intervals revealing the bright muzzle of a gun. Some of these guns were uncovered and quite exposed to the influence of rain and weather, others were wrapped up in tarpaulin sheets. Although guns placed behind such an emplacement of earth look most insecure, the recent bombardment has proved that our shells can do little damage beyond throwing up an enormous amount of earth and smoke.

Once inside the channel, progress is similar to

that up a river, and the eye is greeted by an ever-changing panorama. Below Chanak the scenery on the European shore is bare and lacking in interest, whereas the Asiatic side is covered with rich plains and wooded hills, with gay splashes of colour wherever a village makes its appearance, and here and there the numerous batteries along the water's edge.

The current running through the Dardanelles varies from one and a half to four miles per hour, so that it is sufficient to retard vessels considerably. In the present emergency it is important to note that its course is always from the Sea of Marmora to the Ægean, with the result that mines launched by the Turks at the eastern end can easily float down with the current, exposing an attacking fleet to the greatest peril. In the sinking of the *Bouvet*, *Ocean*, and *Irresistible*, the Turks have had an opportunity of testing the damage which they can inflict with the aid of the current and their insidious weapons. It is strongest in the spring, when the immense volume of water, caused by melting ice and snow in the Black Sea, has to find an outlet through the Bosphorus and the Dardanelles.

The first place of interest after the forts at the entrance is Eren Keui, a village situated on the top of a hill, surrounded by woods, vineyards, and orchards full of figs, peaches, pears, and apricots. These villages, with their quaint wooden houses and painted roofs arranged in picturesque confusion, with an occasional mosque with its needle-like minaret and solid dome, all nestling amongst the wooded hills or situated at the very water's edge, are conspicuous features of the Dardanelles. About another eight miles farther up from Eren Keui we come to the famous Narrows, this part of the Strait, as the name implies, being the narrowest, guarded on each side by the 'Castles of Europe and Asia,' Kilid Bahr on the European and Chanak on the Asiatic shore. The fort of Kilid Bahr has a tall keep rising in the centre, and used to harbour eight enormous brass guns for throwing stone shot from twenty to twenty-nine inches in diameter. Close by is the village of Kilid Bahr, and south of it is a heavily armed modern battery.

The town of Chanak is the larger of the two and the more pleasantly situated, acts as a sort of advanced post to Constantinople, and is visited every day in times of peace by vessels of all nations, mostly merchantmen, which are compelled to stop here to show their papers of health, &c., and also to take a pilot on board to guide them through difficult parts of the channel. The mosques and minarets, the houses painted in various colours, the flags of the consuls, and the long line of handsome edifices bordering the water's edge, give to the place a gay and lively aspect. Chanak is the headquarters of the General who supervises the troops defending the Straits and controls the equipment of the forts. There is a considerable store of ammunition

there. Near the town is a massive stone fort with modern batteries armed with Krupp guns. A lovely carriage drive to Abydos enables travellers to visit the site of that ancient city. It was here that Leander used to swim across to visit Hero, a feat subsequently imitated by Lord Byron, the *tekkeh* where he resided being still pointed out.

The next town of interest is Gallipoli, on the European shore, at the inner end of the Straits, the width here being over five miles. From Abydos to Gallipoli, a distance of twenty odd miles, the same features on either shore are to be noticed: the Asiatic shore, low at the water's edge and gradually inclining inland to wooded hills, valleys, and rich plains, diversified with villages, mosques, monasteries, and tall clumps of cypress trees; the European presenting high, yellow cliffs, rising abruptly from the water, of a desolate and arid aspect, hiding the view beyond. It will be readily understood that if the present attempts of the Allies to overrun the Gallipoli peninsula are successful, these high cliffs will be distinctly in their favour, as they will be enabled to dominate from their heights the whole expanse of the opposite shore. On the other hand, the wooded hills and deep valleys on the Asiatic side offer the greatest facilities for the concealment of troops, batteries, and observation outposts, and seem to have been specially designed by Nature to favour the defending party. The town of Gallipoli, the largest on the Dardanelles, is situated on rising ground, and offered a lively aspect from the water. At the northern end was a considerable military camp, companies of Turkish soldiers walking up and down or being gathered together in knots. The men looked lithe and highly trained, and handled their rifles with great skill, but their uniforms were in a wretched condition. The town, in spite of its large population and commercial importance, is a poverty-stricken-looking place, and is, or was, unfortified. The harbour is small but useful, and is generally full of boats.

The voyage from Gallipoli to Constantinople, a distance of a hundred and twenty miles, is comparatively uninteresting, unless one should happen to be fortunate enough to catch the boat at Shar Keui which plies between Constantinople and the chief ports on the Sea of Marmora, passing through the most lovely scenery. During the greater part of the journey land is quite out of sight, or can only be faintly discerned in the distance. Marmora (Marble) Island is passed on the right, and looks like a gigantic bare rock standing two thousand feet out of the water. The northern half of the island consists of white marble, with scarcely any soil; the southern half, though rocky in places, has fertile, cultivated valleys. The celebrated quarries, which supplied most of the ancient towns in the vicinity with marble, are situated in the north-east side of the island, and are still worked.

The day was very hot, without a breath of wind; nothing could be heard but the monotonous throb of the engines as we glided through the oily water. We reached Constantinople late that night, when it was quite dark, but the lights of the city could be seen for miles out at sea like the reflection of colossal furnaces in the sky.

Next morning I found we were moored about half-way between Scutari, on the Asiatic shore, and Seraglio Point. The view from this position is one of the greatest splendour. The water all around is alive with small boats, crowded ferry steamers hurrying between the Horn and Scutari, and in the distance shipping of every description along the quays—liners, huge Turkish ironclads, graceful Greek feluccas, merchant vessels from all quarters of the globe, and little sailing boats dodging in and out amongst the traffic.

Stamboul, situated on a tongue of land washed on three sides by the waves, is one tangled mass of buildings, graceful minarets tapering to heaven, massive domes, terraced roofs, mosques large and small, barracks, towers, and ruined walls all united with the most varied colours, the most gorgeous architecture; and towering above all these the monstrous structure of St Sophia, the pride and beauty of the city and a conspicuous object from all points.

On the north shore of the Golden Horn are the crowded buildings of Galata, and above these the fashionable mansions of Pera, residences of European ambassadors and rich foreigners, interspersed with gardens and sombre cypress groves. Looking northward we see the magnificent white palace and harem of the Sultan, and stretching away beyond this the lovely shores of the Bosphorus, all aglow with palaces, villas, gardens, and fantastically painted houses lining the water's edge. To the east lies Scutari, with its mosques and melancholy cypress groves, and the enormous barracks used as an infirmary by Florence Nightingale during the Crimean war.

This extraordinary diversity of scenery—the blue water, the tangled mass of shipping, the dark cypresses, the palaces, the shining domes, minarets, and terraces—combines to produce an effect unexampled by anything in the wide world. The senses of the beholder are overwhelmed by a scene so magnificent and varied, and his mind reverts to the enchanted cities in the *Arabian Nights*, which used to delight his childish imagination.

A small sailing boat conveyed us from the ship to the quay below Galata, up the Golden Horn, in and out amongst innumerable ferry steamers, and under the towering prows of enormous ships. The quayside at this point is usually alive with sailors and merchants of every nationality, gathered together in knots talking and gesticulating. Strangers who land here are surrounded by a horde of men offering to escort them to the sights of the city.

I have observed that the appearance of Con-

stantinople from the Bosphorus is one of the greatest magnificence. A close inspection, however, reveals the usual characteristics of an Eastern city—filthy, odoriferous streets, ill-paved and narrow, miserable houses of wood and stone in the last stages of dilapidation. These sordid conditions apply mostly to Galata and those quarters of the city bordering the sea. In other parts of Constantinople the wooden houses, swept away by constant fires, are gradually giving place to more substantial buildings of stone; while the splendid situation of the city, unrivalled in the world, helps to mitigate the evil effects of insanitation and crowded living.

Formerly the streets were infested by a motley crowd of lean and hungry dogs. These animals have recently been transported wholesale to one of the numerous desert islands in the *Ægean*, there to meet a lingering death by starvation. The idea that they acted as scavengers was somewhat erroneous, because they contributed in no small degree to the uncleanliness of the streets, while nearly all of them suffered from some disease or were permanently maimed by trams or carriages.

Another wonder of Constantinople is its population. Stand on the outer bridge and watch the people pass. An endless stream ebbs to and fro, a hurrying rush of love, hunger, and hate, human beings with no common tie and no common interest except that of trade: Moslems, Greeks, Armenians, Jews, Bulgarians, and representatives of nations from every quarter of the globe, all keeping strictly to themselves and hating one another as cordially as they all hate the Turks, every one in a sort of perpetual vague dread of everybody else. Constantinople is a city not of one nation but of many; there is no common civic life, no common patriotism, and no common language. There is no loneliness so profound as that felt by a stranger in Constantinople.

I have now, I hope, given the reader some faint conception of this strange city, its dream-like beauty, its fascinating atmosphere like some majestic poem. I must leave the rest—St Sophia, the pride and despair of Byzantine art, the motley bazaars, and the 'Sweet Waters of Europe,' where the Turkish ladies walk. Some things are best left to the imagination.

What is the future in store for the city if the Allies are successful? Will the minarets be shattered and the domes crushed in? Will Europeanism rush in and scatter all romance in a startling garb of modern ugliness and prosaic indifference? Who can say?

It was with a sense of deep regret that I left such a scene where there is so much to learn and admire. The vessel glided through the blue waters of the Bosphorus, past the glittering palace of the Sultan, the shores on each side a blaze of colours. So close were we to the shore that the very backwash from our ship lapped against

the houses which cluster close along the water's edge. Here are the summer residences of the wealthy, valleys and hillsides covered with brilliant foliage in its first colours of spring, while, farther up, batteries similar to those at the

Dardanelles lend a grimmer aspect to the scene. Slowly we forced our way against the current, very strong here, dropped our obliging pilot at Kavak, and steamed away into the dreary waste of the Black Sea.

BETTY GRIER.

CHAPTER XIII.

ONE of my city friends who is interested in the study of phrenology once told me that my bump of adaptability is very strongly developed. He told me more, of which I was sceptical; but the natural ease with which I have taken to and conformed with my present surroundings is proof to me that his interpretation of this particular bump was fairly correct. Words fail me to express adequately the pleasure I have derived from my reintroduction to Nature's home and mine. Everything seems fresh from the hand of the Creator; there is no veneer, no make-believe, and over all there is solace and repose. Happy hours in the domestic atmosphere of the old house, mellowed and sweetened by the presence of Betty and Nathan; the quiet interval spent in the barber's back sanctum, with its window facing the gray-blue Lowthers; the afternoon visit to John Sterling's shop, with its homely smell of roset and bend-leather, and our usual discussion on the Dandie breed and the beauties of Scott's *Marmion*, Aird's *Devil's Dream*, and Hogg's *Kilmeny*; a stroll with Bang and Jip round the Gillfoot or down the 'Coo Road; and solitary meditation on the doctor's 'mound,' surrounded by a medley of vegetation, planted indiscriminately and flourishing under what the dear old man calls his natural style of gardening—such is my daily programme. A homely life this amidst homely folks: the barber in his reminiscent moods; John Sterling with his love of dogs, his charitableness and honesty, and his enthusiasm for what I may call the true poetry of life; Dr Grierson, walking alone, hugging to his heart a sweet secret memory, dreein' his weird, doing good in his own quiet way, and keeping from his right hand what his left hand is doing; Nathan, silent, serious, and preoccupied, deferring ever to Betty, and proud and content to shelter in her shadow; and Betty, my dear, kind, thoughtful Betty, who always carves with the blunt knife and the big heart, whose Bible is her bolster, and whose solicitude extends to all God's creatures great and small—homely folks of a surety; yes, commonplace, if you will, but dear to my heart. It may be—in fact I may take it for granted—that characters like these would make no appeal to my city acquaintances; to them association with such would be boredom, and my mode of living the essence of dreariness; and yet to me, and I say it with all reverence, it comes as near as anything on

earth can come to that peace which passeth all understanding.

Mention of Betty and her Bible in the same breath reminds me that lately she had talked to me almost solely on secular matters. This is not as it used to be. When first I came to her, by a process of manœuvring and meandering peculiar to her she always managed to steer her conversation into religious channels, and the direct way she had of pointing the moral was always original and characteristic. It is not because I have discouraged her or shown any indifference that she has lapsed in this matter; and it would appear that, as our intimacy has ripened, and as our topics of conversation have become more personal, she has meantime allowed the mundane to prevail, with a view to taking up the more serious and essential at a more convenient season.

I wasn't surprised, therefore, when, to-day after Dr Grierson had visited Nathan in the back room, she asked him in an off-hand matter-of-fact way what he thought of yesterday's sermon.

The doctor was fumbling in his pocket for his old clay, and in an absent, abstracted tone of voice he informed her that, as he hadn't been to church, he wasn't in a position to pass any judgment.

'Ay, ye werena at the kirk? I micht ha'e kenned that,' she said. 'Imphm! I'm no' a dead auld woman, doctor,' she continued; 'but I mind o' your faither, an' he was a regular attender at the kirk. It's a great pity when folks break off kin'. Ay, that it is. Imphm! And, doctor, you'll excuse me, it's mebbe nae business o' mine; but I canna help tellin' ye that I often think about ye, an' that ye lie heavy on my mind. We've seen a great deal o' ye lately, mair than we ever saw before, and I've proved to mysel' what ithers said o' ye, an' what I had aye ta'en for granted. It's a' in your favour, an' what ye've dune for the puir God will not forget when ye're bein' weighed in the balance.'

'Thank you, Betty,' the doctor said, as he struck a light.

'Ay, but haud on, I havena dune wi' ye. I havena come to the point. As I've said, ye've come a great deal in and oot among us lately, and in a temporal sense ye've been a great comfort and help to Maister Weelum here. Oh that ye had been able to influence him spiritually, for since he cam' he's never darkened

a kirk door. I've held my tongue, as sae far there's been an excuse for him; but noo that he's gettin' better and able to gang about I juist think that oot o' respect for you, if ye had been kirk-minded, ye could easily ha'e guided his steps Zionward.'

I had the feeling that Betty was rushing in where angels fear to tread; and, not knowing how the doctor was likely to take this, I became very uncomfortable. He puffed spasmodically at his pipe and moved uneasily in his chair. 'It is very kind of you, Betty, to think of me,' he said, 'very kind indeed; and you must not count it none of your business to bring such matters before me. In a way we are all each other's keepers, and it would be churlish of me to resent such interest as you show. For my own part, I live my life according to my light, such as it is. It may be a poor flickering light to other eyes, but it is sufficient to show me the road. As for William here, he has long ago reached man's estate, and he can judge of these matters for himself. If I mistake not, he has a standard of his own, and I feel sure my influence, even though I were kirk-minded, as you call it, would not direct his steps in the direction you indicate.'

'Oh doctor, dinna say that! We can a' be made humble instruments. Example is a great thing, though ye dinna follow your faither's, and I ken what a power for guid ye wad be if the grace o' God was in ye. Oh doctor, I've been he'r't sorry for ye mony a time, for I ken the grief ye've carried, and I've wondered hoo ye could thole it sae lang a' by yoursel', and that ye never accepted the consolation which He alone can gi'e ye. But ye've spurned it, doctor. I don't think that ye're a joined member o' the kirk or that ye gang to the Communion—you that's sic a man i' the toon—everybody's body as you are, and born wi' a sma'er dose o' original sin than ony yin I ken o'. I juist canna understand it.'

The doctor laughed good-humouredly. 'I've my work to attend to, you know, Betty. My patients cannot be neglected for the sake of'—

'If your work permitted, wad ye gang to the kirk, doctor?'

'I—I question if I would.'

'That's an honest admission, and it wadna come frae Dr Grierson if it wasna. And what's your objection, doctor?'

'Oh well, Betty, your question opens up a big debatable subject on which I have great reluctance to enter. I have neither the time nor the inclination, Betty; but this much I will say, we are all heirs to a heritage of different distresses in this life, and as we are not all constituted alike we require different treatment. Now there is one great panacea, one great balm for all our wounds. Some find that panacea in their church, though many go to church who are not aware they require a panacea. Others,

of whom I am one, find a balm for their afflictions in communing with the nature of God's creation we see around us. With such it isn't necessary to go to church in order to feel God's presence or to experience His beneficent power. If it were, we could only commune with Him once a week, when the churches are open. As it is, I can praise Him at all times, and glorify His name under the canopy of His heavens, and among the trees and flowers and fields and woods, which evidence His fostering care and proclaim His loving-kindness.'

'Then, doctor, ye do believe in God?'

A pained look crept into the doctor's eyes. 'Betty,' he said, 'you surely have never doubted that?'

'Weel, wi' you no' gaun to the kirk, and——'

'Ah, Betty, it is possible for a man to go to church and remain in doubt; but no one can stand, as I often do, under the starry firmament, alone in the midst of slumbering nature, or facing the glowing east when the shafts of the sun's morning beams are piercing the shadowy sky, and not feel within himself that God reigneth, and the earth in consequence rejoices.'

'Grand! Man, doctor, I'm glad to hear ye say that! I'm—I'm rale glad.'

There was a wee bit catch in Betty's voice, and a tear trickled down her cheek, which she tried to wipe away unnoticed with a corner of her apron. But the doctor saw, and his face twitched and softened.

'Then, doctor,' she continued, 'of course ye'll believe in the Bible?'

'Yes—with reservations.'

'Which means, doctor?'

'Well, Betty, it means that—— Wait now, I want to make it easy for you to understand; but unfortunately, by doing so, it makes it all the more difficult for me to explain. Well, in a word, Betty, it means there are parts of it I believe, and there are others I cannot.'

'Ay, pairs ye believe and pairs ye canna believe. I notice ye say ye *canna* believe; ye don't say ye *will not* believe. There's a difference, doctor, ye ken. Why do ye say ye canna?'

'Because I have thought out things very carefully, very anxiously, and I cannot entertain what does not appeal to my reason. I must discard what I think is wrong.'

'But, doctor, man, ye maunna exercise your ain judgment. It's human, consequently it's weak. What ye want is faith—the faith which can remove mountains, the faith which sustains. Doctor, ye must put aside your ain vain imaginin's and thochts and become as a little child. Ay, just as a little child.'

'Yes, Betty, I thought you would say that. But you know I am not a little child. I am a man, a responsible, thinking being, endowed by God with a reasoning faculty which is calculated to guide me, and which, Betty, I am expected to exercise. I cannot accept anything temporal

which is diametrically opposed or contrary to my judgment, nor would I in the discharge of my professional duties follow a course or accept a condition which my intellect and discernment told me was wrong. Why, then, should I, in this the greatest of all questions, be expected to lay reason aside and acquiesce in blind belief? No, Betty, I cannot do that. If I did I shouldn't be true to myself.'

'But, doctor, wi' due respect, let me tell ye that cleverer men than you have thoct these things oot for themselves and have been satisfied wi' the Word as it is delivered. Think o' the Reformers and a' oor professors, men who have studied theology a' their days, and '—

'And after all their study, what do they know, what have they gleaned from all their books? I cannot be guided even by professors. They know as much or as little of God's workings as the man who sweeps our village street. Now, Betty, further than this I cannot and will not go with you. As I have said, it is a big debatable subject, and we might talk till doomsday and not agree even then. Besides, it is a very dangerous thing to tamper with any one's belief, especially if that belief affords a solace in trials, and constitutes an anchor in the storm. You have got something within you which calms your fears, and gives you a peace which nothing else can. Stick to it, Betty, and guard it against assault. And I—well, Betty, I also have something within me which gives me peace, such peace as would remain with me even if to-night I was called upon to turn my face to the wall. Ah, Betty, each and every one has a faith. The world has never been without one, and it will have one to the end. But my conviction is we haven't often enough taken stock of our faith, and the consequence is it has become detached from and out of sympathy with our workaday lives. What a different world it would be if we were living our religion instead of professing it! Some say this is impossible. Well, it ought to be made possible, and the best way of going about it would be to strip it of all that binds it to impossible, out-of-date dogmas, clear it of all

that confounds and mystifies, and nail as a motto to its mast-head these glorious words of the great Master, "Thou shalt love thy neighbour as thyself." Betty, the time is at hand when the Church will be forced to consider this text—ay, and to act upon it; and when that day dawns it will herald the Millennium.'

A strange hush had fallen upon the room while the doctor was speaking, and when he ceased it lingered with us like a benediction. Then Betty walked quietly over to the window. 'Doctor,' she said, after a pause, 'd'ye think, at the last, everybody will be—eh—a' richt?'

'Well, Betty, the question often occurs to me. When the boundlessness of God's love comes home to me I think it is possible. There is a verse, the thirteenth of the twenty-first chapter of the Revelation, which '—

At that moment a knock came to the door, and Betty slipped out. In her absence the doctor smoked in silence, and I watched the fire glowing in the grate.

'Doctor,' she said, as she re-entered, 'that's the grocer's boy. Somebody telt him ye were here, and he wants to ken if the bottle o' port wine ye ordered is for Mrs Lawson o' Gillhead or auld Widow Lawson?'

'Oh, it is for Widow Lawson,' he replied, and the semblance of a blush spread over his face. He rose hurriedly, adjusted his plaid, and picked up his hat.

I clapped him on the shoulder as he passed me. 'Doctor,' I said, 'your good deeds are finding you out; and he shook his head, and smiled as if he didn't understand me, but he made no reply.

Betty came into my room later with her Bible in her hand. 'I've been lookin' up that verse in the Revelation,' she said, 'and it reads, "On the east three gates, on the north three gates, on the south three gates, and on the west three gates." I never saw the maitter in that licht before. Ay—imphm. Weel, I trust there may be a gate for me, Maister Weelum; and—and someway I'm sure noo there's yin for the doctor.'

(Continued on page 636.)

THE MONTH: SCIENCE AND ARTS.

THE PENETRABILITY OF 'MATTER.'

FOLLOWING the discoveries of Professor K. Onnes, as described in this *Journal* of February and April last, further investigations have been made into the nature and properties of helium and other rare elements. The universally accepted hypothesis that matter is of a grained structure in its ultimate parts logically carries with it the assumption that there is no true impenetrability. Before the discovery of radio-activity palladium was known to be

permeable to hydrogen; and it had also been proved that hydrogen could penetrate red-hot platinum. A general experimental proof, however, of the penetrability of all kinds of matter was not forthcoming until the discovery of the penetrating power of the Alpha and Beta particles which constitute part of the atomic radiation from radium and similar substances. Since the Alpha particles were believed to be helium atoms, the penetrability of matter to helium was presumably established. But only recently has it been directly proved that the

gases helium, neon, argon, and hydrogen could pass through such substances as gold, platinum, rock crystal, quartz, &c. Fine tubes made of platinum, palladium, quartz, and the like, were filled with helium, hydrogen, neon, and other of the lighter elements, and hermetically sealed, and then placed close to an electrodeless discharge-tube in connection with a cooled charcoal exhauster. As soon as one of the metal tubes was put into a Bunsen flame a discharge passed in the discharge-tube, showing that the helium or other element under observation had passed through the substance of the tube, a most interesting characteristic being that each element under examination had its own distinctive rate of passage, helium passing most rapidly. Reference might also be made to a series of experiments performed by Sir James Dewar in connection with the diffusivity of gases through rubber films, a subject of importance to all interested in aerial navigation. By mounting the rubber film on a shallow cup and supporting it on copper gauze, Sir James Dewar showed that, although (as has been long known) the gases easily pass when the film is at ordinary temperatures, they cannot pass when the film is cooled to the temperature of liquid air. Water-vapour passes, but a film of glycerine stops the permeability. Various gases were experimented with, and it was shown that each kind of gas had its own 'rate of passage.'

STERILISED WATER IN THE HOME.

The electric sterilisation of water intended for domestic drinking purposes has been the subject of considerable attention and development during the past few years; but unfortunately the prevailing type of apparatus for achieving such a desired end has suffered from the disabilities of being expensive and somewhat too complicated for the average household. Now, however, a small British-made domestic ozone steriliser has been placed on the market. It occupies little space, and is completely automatic in its action. The sterilising plant, which is contained within a small, neatly designed metallic case, is attached to the wall and has a certain portion inserted in the water main, while below is a small swivelling tray upon which the jug, glass, or other desired receptacle may be placed beneath the tap. The apparatus may be attached to any water-supply system, and will work efficiently upon a delivery varying from twelve to fifty pounds per square inch. When the tap is turned on the apparatus is set in motion, the water being sterilised as it passes to the tap, while when the tap is turned off the process ceases. Of course, an electric circuit is necessary from which to draw the requisite current; but owing to the simple automatic action incorporated there is no waste of electric energy, the consumption of which is very small. Ozone is

admitted to be the finest sterilising agent it is possible to employ for the purification of water, and upon the Continent it has had an enormous vogue, but in Britain it has been adopted only upon a limited scale.

A COMBINED WATCH AND COMPASS.

The war has been responsible for many expressions of ingenuity, and among these may be mentioned a combined watch and compass. While the watch itself constitutes the most reliable compass it is possible to desire when one knows how to use it, a separate device to this end is advisable. In this particular instance the compass is carried in the end of the watch, and is set at right angles to it. The compass is small, so as to occupy the minimum of space, the watch-case being belled out at the point to receive it. The combination is applicable to either a wrist or pocket timepiece, although possibly it is most convenient in the wrist form, which is that most favoured by officers and soldiers. In this instance it is only necessary to turn the wrist slightly to ascertain one's bearings. In a war such as is now being waged, where the battle front extends over several hundred miles, and where local engagements are the rule, men are apt to become detached from their regiments and to find themselves in strange country. Knowing the position of their own troops, a compass will serve to tell them whether or no they are moving in the right direction to rejoin their friends. The necessity for some means of ready guidance was revealed after a recent engagement. A handful of men became isolated from their regiment, and concealed themselves to await a favourable opportunity to steal back to their own lines. One and all carried a watch, but not one was aware of the means of utilising it in the manner of a compass. The result was that after several hours of tramping they discovered that they were wandering away from, instead of toward, their own lines; and, although they ultimately regained the desired sanctuary, considerable effort and risk had been expended needlessly. The possession of a compass of the most primitive character would have put them on the right track at the moment they decided to make a move.

NITRIC ACID FROM THE ATMOSPHERE.

Although Germany is undoubtedly suffering heavily from the British blockade, and is being hampered in her efforts to obtain adequate supplies for the production of high explosives, this disability will be short-lived. It is anticipated that the atmosphere will yield all the nitric acid that will be required, and an immense plant for this purpose is being completed. The company which received the concession to supply the city of Berlin with electricity for lighting and power acquired an enormous tract of lignite

fuel-fields in the vicinity of Bitterfeld, with the idea of utilising this fuel for the generation of the requisite electricity. But the civic authorities obtained the right to purchase the electrical installation and to operate it for the city. Such a decision, under peace conditions, would have brought the private undertaking to a close; but, the war supervening, a comprehensive scheme for deriving nitric acid from the atmosphere was prepared and carried into execution. Upon the lignite fields which formerly supplied a cheap fuel a huge station has been erected for the fixation of atmospheric nitrogen, and before the close of the current year will be in full operation. This plant will serve to extricate Germany from a double dilemma. Hitherto she has depended upon Chilian nitrates for the fertilisation of her fields, but this source of supply has likewise been cut off. Now it will be possible to kill two birds with one stone, because she will obtain adequate supplies of fertiliser as a by-product in the manufacture of nitric acid from the atmosphere, so that this activity will meet the needs of peace and war simultaneously. This yield of nitric acid is to be supplemented by the quantities obtained in the synthetic production of ammonia, which has likewise been responsible for the creation of huge new works in Baden devoted to this specific purpose. Such is the manner in which the Germans hope to supply high explosives and fertilisers, the demand for both of which at the moment is extremely urgent.

PAPER CLOTHING.

Paper has long been described as the 'world's greatest friend'; and according to recent developments it appears as if it will become more indispensable than ever, inasmuch as it is now being adapted to the production of clothing. This development is due to Japanese activity, because in the Far East the advantages of paper have long been recognised. As is well known, paper is an ideal material for keeping the body warm, and this attribute has led to its application to the manufacture of uniforms for soldiers. Its value in this direction was brought home very emphatically during the Russo-Japanese war, in which campaign many of the Japanese troops were served with uniforms made from this material, which they stated was excellent in battling against the Siberian cold. Japanese paper clothing has received the generic description *kamiko*, and is made from mulberry bark. The paper is slightly impregnated with size, and between the two thicknesses which are used a layer of thin silk wadding is inserted to bulk and to stiffen the material, the whole being quilted. The garment made in this manner is tough, soft, warm, and sufficiently strong to allow buttons to be sewn on. In fact, there appears to be only one drawback to this material—it will not wash. So far as the military application is concerned, this is a secondary considera-

tion, because after some days of hard service in the trenches, or strenuous fighting even, the strongest linen and woollen goods are apt to have become so damaged as not to be worth washing. Owing to the excellence of the paper garment, shirts made of it are being issued to the Russian soldiers, one company in Japan which specialises in these goods having received large orders therefor. The war has imparted a decided stimulus to the Japanese paper clothes industry, which it is stated will undergo considerable development when the advantages of paper become more widely appreciated. Even in the United States to-day paper waistcoats are the vogue, while this material is also being extensively used for towels, handkerchiefs, and similar articles of everyday necessity.

ELECTROLYTIC DISINFECTANT.

From time to time we have drawn attention in 'The Month' to the novel and interesting installation which was laid down by the Metropolitan Borough of Poplar at the suggestion of Mr Frederick W. Alexander, the Medical Officer of Health, for the manufacture of a cheap and highly efficient disinfecting fluid by electrolytic action. This plant may be said to constitute the particular hobby of Mr Alexander, and it has certainly proved one of far-reaching benefit to the community which it concerns, while it has contributed in no small measure to an excellently sustained clean bill of health throughout the borough. When one recollects that Poplar is one of the poorest and most densely crowded boroughs of the capital city, inhabited mainly by the artisan and dock-labouring classes, one will appreciate the significance of the problem confronting the officer of health. The electrolytic system is exceedingly simple, the ingredients comprising chloride of magnesium, common salt, caustic soda, water, and the electric current, all of which are inexpensive and readily obtained. Since the plant was laid down nine years ago, at a total cost of five hundred and eighty-three pounds, it has produced an aggregate of three hundred and eighty-one thousand seven hundred and ninety-four gallons of disinfectant at an average yearly cost of eighty-three pounds. For the three years previous to the above installation the average annual cost of the carbolic disinfectants which were then used was four hundred and thirty-eight pounds, to distribute which, from four depôts, involved an annual outlay of three hundred and twenty-six pounds, whereas the present disinfectant costs only four hundred and seventy-seven pounds to distribute from seven depôts. The total annual cost of this department is approximately eight hundred and thirty pounds, and during 1914 no fewer than eighty-eight thousand four hundred and twenty-five gallons of the disinfectant were distributed. It must be remembered that the municipality

derives no income from this source of activity, because it is supplied free of cost not only to those of the citizens who are prepared to fetch it, but to the public offices of the borough, the various institutions such as schools and asylums under their jurisdiction, libraries, public baths, and so forth. Owing to the low price at which this fluid can be produced, the use of a disinfectant is much more lavish than was the case under the conditions when carbolics were purchased. Since the plant was laid down many notable improvements in the details of the apparatus have been effected as the result of experience gained, so that it is now as perfect as could be desired. The Poplar installation has aroused world-wide interest, and as the outcome of investigation and inspection of the plant at work similar installations have been laid down in Guernsey, Gateshead, Finland, Buenos Aires, and Rangoon. At Portsmouth a novel extension of the principle has been made, this comprising the production of the fluid direct from sea-water. This is somewhat interesting, inasmuch as the plant at Poplar is designed to produce sea-water. The problem, however, is to render the fluid stable, and this constitutes the essence of the Poplar process.

A COMBINED KNIFE AND FORK.

A novelty which will appeal to those who have suffered the deprivation of one arm is a combined knife and fork which has been placed upon the market recently. The knife-blade, instead of being straight as in the ordinary utensil, is curved at its lower end to terminate in four prongs similar to the conventional fork. The outer curve of the bend is given a sharp edge to serve as the knife, and the curve is designed to facilitate cutting. The utensil requires only a partial turn of the hand to convert it into a fork.

CHICKEN HATCHING BY ELECTRICITY.

Some interesting tests in electrical incubation have been carried out by the Poultry Department of the North of Scotland College of Agriculture. The apparatus used is able to receive fifty eggs, and is fitted with a patent thermostat for regulating the temperature. In one test thirty-nine fertile eggs produced thirty-six chicks, while in another test forty eggs produced thirty-one chicks. The incubator is equipped with a hover or foster-mother, and the effectiveness of the latter may be gathered from the fact that out of the sixty-seven chicks hatched sixty-five were reared successfully. The design of the hover ensures an even distribution of heat, while at the same time overcrowding is prevented. The tests may be considered to be highly satisfactory, while the cost of hatching and rearing each sitting was three shillings and fivepence. At the present moment, owing to the stringent economic conditions prevailing,

the development of poultry farming is being strongly urged, inasmuch as eggs constitute an excellent foodstuff; while the fact must not be overlooked that this country will have to depend to a greater extent than before upon native produce. Artificial incubation is admitted to be the only means of raising chickens successfully and profitably, while if due care is exercised the losses can be minimised very significantly. But it is essential that the incubator should be of such a design as to ensure the maintenance of the requisite degree of temperature, while the inclusion of the hover conduces in a very striking degree to first-class results.

A VERY SINGULAR METAL.

A contributor to the *Domenica del Corriere* writes: 'In Central Russian Asia, and precisely in the territory of Ferghana, a local explorer has discovered a new metal even more marvellous and more mysterious than radium. The scientist in question, while handling minerals, put his hand by chance on a soft body, of a considerable weight, of opaque colour. This, being absolutely unknown, readily absorbed his attention. The new metal was carried to the Moscow chemical laboratory, and subjected to minutely careful experiments, which afforded surprising results. In the presence of an acid it developed so intense a cold as immediately to reduce to powder, without gas emanations and without explosions, the receivers of glass, iron, and particularly thick granite into which it was successively introduced. Treated with an alkaline matter, the substance, which has not a name yet, and which remained refractory to all the analytical processes, lost one-fifth of its weight. A sufficiency of it has now been collected for the purpose of systematic observations, which will have to be conducted with great care, and will reveal, it is hoped, the true importance of the discovery, which the Russian scientists incline to regard as superior to that of radium itself. Meanwhile the most surprising fact is the loss of weight undergone by all objects placed in contact with the new metal.'

To Correspondents who wish fuller information regarding new inventions mentioned here, addresses will be furnished, when possible, provided a stamped and addressed envelope or post-card be sent to the Editor, 339 High Street, Edinburgh.

* * TO CONTRIBUTORS.

- 1st. All communications should be addressed 'To the Editor, 339 High Street, Edinburgh.'
- 2nd. For its return in case of ineligibility, postage-stamps should accompany every manuscript.
- 3rd. To secure their safe return if ineligible, ALL MANUSCRIPTS, whether accompanied by a letter of advice or otherwise, should have the writer's Name and Address written upon them IN FULL.
- 4th. Poetical contributions should invariably be accompanied by a stamped and directed envelope.

Chambers's Journal

SEVENTH SERIES

ON GOVERNMENT SERVICE.

By GERALDINE KEMP.

CHAPTER I.

A HUNDRED feet above the level of the swirling river, turret, peak, and battlement clear cut against a stormy sky, stood the ruins of Royden Castle. A flight of worn steps descended directly nowhere, but indirectly to the gruesome cavern within the rock forming the base of the fortress; from thence to a deep, dank pool, where the tidal water flowed no deeper than the surface, and left undisturbed whatever victim of accident, vengeance, or other disaster had, perchance, centuries ago, been hurled mercilessly into it.

Owls had their unmolested habitation in the topmost turret of the keep. Innumerable sparrows built their nests amid the ivy that crept about the gray-green, weather-worn battlements. Their twitterings, and the *caw, caw*, of a colony of rooks in the neighbouring trees, formed the only sound, save when the winter winds swept weirdly around the ruins, and broke the drear silence of the place, once a centre of active life, of the clatter of arms, and everything pertaining to men and matters of an ancient and warlike age.

The rooks were the first to observe something strange one evening on their homeward flight to the rookery. *Caw, caw*, screamed one to the other. 'There are two men talking.'

Men were seldom seen in the vicinity, for the castle, belonging as it did to those who still bore the name of Royden, had never been converted into a show-place for tourists. It was but natural, therefore, that the rooks should take particular notice of the intruders.

The two were seemingly on the verge of a quarrel.

'You came to Royden Castle as a guest of my father,' the younger man was saying; 'and as a guest I was bound, against my will, to treat you.'

'It would have been impolitic on your part,' replied the other, 'to act otherwise.'

'And now'—

'You will consent quietly, Mr Royden, to the terms I have offered?'

'To become your accomplice in what I consider to be a most nefarious plot!'

'The plot, as you call it, is a mere act of

diplomacy. Besides, it will make you free of your debt to me.'

'You forced your generosity upon me before I knew who or what you were, and you have come here this evening not to help me, but to drag me down still farther.'

'You were in a difficulty which, had it been made public, would have practically ruined your name and career. I have heard that the Roydens hold their heads high, and as money was taken which did not belong'—

'Which I honestly intended to replace,' broke in Royden hotly, 'had I had the time. Unfortunately'—

'You were obliged to account for the funds entrusted to your care sooner than you expected,' finished his companion, 'and I came to the rescue. The story goes like this, I think: A certain young man of good birth, a favourite in society, and occupying a position of trust as private secretary to the British Ambassador at Berlin, lost heavily at cards, and, to save his position, helped himself to the aforesaid funds. Then, called to strict account, this young man was in a tighter corner than ever, and appealed to me—as a friend, mark you, not as a money-lender—for advice.'

'Worse luck, Von Muliche, I did!'

'Gently.' The German, on hearing his name, spoke in a reproachful undertone; then added, 'The young man appealed to me as a friend, and as a friend I lent him the sum required to make good the funds and keep him out of the mire. He promised to pay me back when he could, but begged for a year's grace, which I was friendly enough to grant him. The year has gone by; it is now July 1914, and he has not yet squared up. The fact is, he cannot.'

'Not, certainly, at the present moment.'

'Then why not look at the matter in this way?' was the quick inquiry. 'Important despatches are about to be sent to Petersburg. You know where they are, and if you obtain them for me—at once—your debt—five hundred pounds—will be cancelled. More than this, I will pay you down a sum of one thousand pounds. A fair enough offer, surely?'

'An offer I have no intention of accepting.'

'Think that intention well over.'

'It requires no thinking over.'

'You refuse my terms?'

'Absolutely.'

'You prefer to be sued for the money you owe, and the facts spread broadcast among your friends?'

'Yes, I do.'

'That being the case,' said the German slowly, 'only one thing remains—to take the law into my own hands. No one knows that I persuaded you to come here this evening, and no one shall know.'

His meaning was unmistakable; but though the Englishman's breath came in short, hard gasps, he squared his shoulders and did not flinch. What followed was the work of a moment. As the German, however, raised his hand, a gleam of steel caught Royden's eye, and he breathed freer. A revolver at close quarters was the weapon he had thought to face.

Caw, caw, screamed the rooks in the trees. 'There is going to be a tempest.'

A vivid flash of lightning illumined the white, desperate faces of the men. There was the roll and rumble of thunder in the distance. The struggle meant death to one or both of them; and though the Englishman succeeded in wrenching the knife from the German, a still fiercer hand-to-hand fight for mastery ensued. A fight between passions let loose is ill to describe. Royden felt his opponent's grip tighten, and muscular fingers were at his throat. It was all but over for him, when suddenly, out of the darkness, an ear-splitting screech, human and less than human in its sharp intensity, rent the air. In the abject terror of the moment the German made a false move—a move which gave Royden his one and only chance. He recognised the unearthly screech of an owl on the wing; the foreigner did not. Moreover, the young man had not captained a crack football team for nothing. The chance was his; he took it, and first knocking the wind out of Von Muliche by a swift, dexterous lunge of his right knee, he tripped him up in a trice, and had him on the ground, his head coming in violent contact with the stone floor.

For a moment he stood motionless, eye to eye with the inscrutable. The next instant, aided by what was left of the sombre gray evening light, realisation came home to him. Von Muliche the spy was probably dead.

Caw, caw, screamed the rooks, circling low in their agitation. 'The tempest has come.'

Mechanically Royden stooped, and with an effort flung the body of the German across his back. The flight of crazy steps was to his right; and, sliding, scrambling as best he could to maintain a footing, the point of descent at length was reached where the steps led inward. There, by the fitful flashes of lightning, he

rolled his lifeless burden through the cavern, and thence into the waters of the deep, dank pool below. The premeditated fate of the one man had become the fate of the other.

CHAPTER II.

SIR HENRY WHATELEY, British Ambassador at Berlin, but now seated in the library of his London residence, telephoned for his private secretary, who occupied the adjoining apartment. He had an extremely high opinion of Jeffrey Royden, and was not often mistaken in his estimate of those who worked and acted for him on occasions which demanded intelligence, discretion, and courage of no mean order.

Four-and-twenty hours had passed since Royden had fought with Von Muliche for his life. Shortening his official leave of two or three days to one, with feigned regrets to his father he had quitted Royden Castle for London the morning after that memorable stormy evening. What attempts might be made to trace the whereabouts of the spy he never stopped to inquire. In all probability they were of some such secret nature as was thought the most advisable under the circumstances, Von Muliche being the notorious suspect he was, and war with Germany imminent. Although the outer world was not to realise the actual seriousness of the hour until later, the eve of a great national crisis was at hand. Men in high places were straining every nerve to cope adequately with events which threatened to bring about a speedy downfall of kings and countries, concerning which urgent necessity for verbal consultation had brought Sir Henry and his confidential secretary hurriedly from Berlin. If there was rapid and dangerous work to be done, Jeffrey Royden was the man specially recommended by his chief to carry that work successfully through against all odds. As it happened, his services were at once in request.

'It is well you returned when you did,' said Sir Henry as the secretary answered his summons, 'for you must start this evening for Paris with the despatches you already know of. Nicol Rienski, of the Russian Secret Intelligence Department, will await your arrival in Paris, and in his turn convey them to Petersburg and to the Czar. You are to be met by Rienski's detective Stroff, but you shall have fuller instructions in a few minutes. Your hand;' and as the speaker grasped it he added, 'It is cool, and your pulse is regular. Good! The journey will be attended with some danger, but you are fit for the job?'

'Quite.'

'As Mr Thomas Robinson, commercial traveller for the firm of Andrée.'

'With the latest thing in gentlemanly outfits.'

'Right! But mind you steer clear of travellers of any rival firm. It is because of one man in particular—Von Muliche—that disguise for you is a necessity. And, although disguised, he is quite capable of finding you out. Beware of Von Muliche.'

Royden's face twitched slightly. 'I am not afraid of Von Muliche, sir.'

'But I would have you be in deadly terror of him. He is undoubtedly a man—or, rather, a factor—to be feared. Clever, unscrupulous, and intolerant of failure, as he is, his plans are well laid. Each detail is subtly thought out.'

'Surely his movements have aroused no suspicions lately. Report has it that he is singularly inactive.'

'Inactivity that is suspicious in itself. Every German is on the *qui vive* just now, though they don't mean us to find them out. It is unlikely you may knock up against Von Muliche as Von Muliche; but he has numerous personations. He usually does his own dirty work, and his craftiness would match that of the archfiend.'

'An Englishman might possibly outmatch them both,' remarked Royden with quiet but peculiar emphasis.

'Is the Englishman alluded to yourself?'

'I should not be surprised.'

Sir Henry's keen gray eyes lit up appreciatively. 'You are made of the right metal—iron and steel. All the same, the despatches are exactly what Von Muliche wants. Government secrets are of far greater account than flesh and blood. Recollect that.'

He paused, significantly regarding the young man with a marked gravity. 'It is a matter of life and death, Royden, always, when on Government service.'

'The despatches shall either be delivered safely in Paris, Sir Henry, or I shall not be alive.'

'How do you propose to carry them?'

'Will you not leave that entirely to me?'

'Yes; but'—

'I must be allowed to use my own judgment in the matter.'

'Have your own way. My confidence in you is as implicit as any sane man can permit it to be. Here, however, are your final instructions, which you will, if you please, obey without demur.'

'And they are'—

'On reaching Paris you are, as I said, to be met by Rienski's detective Stroff, in the guise of a porter. He is to conduct you to a taxi. The chauffeur, I may assure you, will also be a detective. Whilst he is seeing you into the taxi you must contrive to give the porter the papers'—and Sir Henry handed the secretary a small, flat leather case—'which he will promptly conceal in the pocket of his blouse. You are then to drive to the Hôtel de l'Europe, where Thomas Robinson can with safety become Jeffrey Royden once again. The porter returns to the station, where Rienski will call him to take charge of his luggage. Meanwhile the case containing the papers will be placed in the folds of a travelling-rug. Is everything clear?'

'The usual sign, I suppose, will be given me by Rienski?'

'Certainly; and by Stroff also, who has been in Rienski's employ for some years. All responsibility at an end, you and he should have an enjoyable glimpse of Paris.'

'Is this all you have to say?'

'I think so. Go now and transform yourself into Mr Thomas Robinson. Are you sure you can play your part?'

'I have rehearsed it often enough.'

Sir Henry laughed genially. 'Good-luck to you and your bales, Mr Robinson. All I beg of you is to fear Von Muliche.'

'And all I can repeat is that, dead or alive, I am not afraid of Von Muliche.'

'A man of his calibre never dies,' was Sir Henry's parting warning. Turning with him to the door, he shook the secretary warmly by the hand. 'Good-night,' he said, 'and thank you. Join me in Berlin after your flying visit to Paris.'

Royden bowed and left the room.

(Continued on page 648.)

COSSACK MEMORIES.

By W. BARNES STEVENI.

THE Cossacks have lately been very much in evidence, especially in Austria and East Prussia, where they have been the terror of the population. The first time I came into contact with these wild horsemen was during the manoeuvres at Krasno-Selo, where, owing to my ignorance of the plans of the opposing forces, I found myself, isolated with several foreign correspondents, caught between two opposing bodies of troops, the one consisting of infantry and the

other of Don Cossacks. At first I only observed a faint cloud in the distance; but very soon that cloud took a different shape, and evolved itself into half-a-dozen Cossack regiments tearing down on myself and my companions like an avalanche down a mountain. Flight was out of the question, and had we not stood our ground we should have been trampled into blood and dust under the hoofs of those thousand horses.

A Cossack charge has been shown to be so

overpowering that the Hungarian cavalry, when they see Cossack squadrons advancing, usually open out their ranks and let the horsemen rush through the gap, then wheel round and attack their assailants on both flanks. But this plan is not always possible, and many a gallant Hungarian has bitten the dust, transfixed with the long lance or decapitated with the light curved sabre the Cossacks use with such remarkable dexterity.

Besides seeing the Cossacks at manœuvres, I have been in Petrograd when they have quelled riots. They accomplish this task with the aid of the dreadful *nagaike*—a short whip, the end of which is usually weighted with a bullet—which cuts the flesh like a sword. On the banks of the Volga and the Terek I have also met these wild horsemen as they marched along chanting uncomplimentary songs about the Turks and Beaconsfield, who for many years was a kind of bogey in the imagination of the Russian military. It would take too long to describe the many other occasions on which I have come across these denizens of the steppes. It is sufficient to say that *kazak* is a Turkish word which means 'horseman' or 'freebooter.'

In former times the Cossacks were divided into two sections, one inhabiting the lower reaches of the Volga and the Don, the other the banks of the Dnieper and a considerable portion of the Ukraine, now known as Little Russia the Bountiful. Many Cossacks are also settled in the Kuban Province, in *stanitsas* (or stations) on the fertile plains of the Northern Caucasus. These, who are usually men of substance, are chosen by the Tsar to guard his person on account of their fidelity and loyalty, and are known as the Imperial Cavalry. They are as a rule singularly handsome, owing to the fact that their ancestors were noted for eloping with the most beautiful Caucasian women they came across. The unit of Cossack life is the *stanitsa*, or village commune, each one practically consisting of a small republic ruled on very democratic, communistic principles.

The Cossacks are also divided into eleven *voiskos*, known as the Kuban, the Terek, the Ural, the Orenburg, the Astrachan, the Siberian, the Semerjehensk, the Amour, the Don, the Caucasus, and the Ussuri. Their irregular troops are organised on old Russian military methods, consisting of cavalry, horse artillery, and infantry. As artillerymen they are excellent, and are remarkable not only for the accuracy of their fire, but for the rapidity with which they are able to bring their field-pieces into action. In fact, General Mechenko, the great Cossack General who now commands one of the Russian army corps on the eastern war frontier, is probably more famous as an artillery expert than as a leader of cavalry.

Many of the Cossacks since the Boer war have been converted into mounted infantry, and

in this capacity have proved themselves of great value. In fact, some of the European Cossacks are so highly trained that they can hardly be called irregular troops. The Cossack portion of the population provides troops on the basis of special privileges. According to the military regulations, one-third of the total effective strength serves the State in time of peace. When the army is mobilised each Cossack regiment is brought up to its full war strength, and a certain number of these horsemen are attached to each battalion. In case of necessity, the entire male Cossack population can be called to the colours. It is estimated that the total number of fighting-men is about half-a-million, which includes the *opolchina*.

The armed forces of the Cossacks consist of those who are on active service and the militia (*opolchina*). The effective force of a regiment is divided into three categories: (1) the preparatory, in which the Cossack is trained for active service; (2) the efficient or fighting units, from which the regiments are completed; and (3) the reserves, which are required for making good the losses in war-time. Military service begins at the age of twenty and lasts eighteen years. Of this period the first year is spent in the preparatory department, twelve years with the troops of the line, and the last five years in the reserves. Each man is expected to provide his own uniform, his horse, and equipment when on active service and when he belongs to the fighting units, a regulation which also applies to the Cossacks of the reserves. This means that practically the entire Cossack population must be ready and fit to join the colours when called upon.

During the whole of the time the young soldier is training every effort is made to foster in him a military spirit by relating to him the glorious exploits of his countrymen. When one calls to mind the mighty warriors that the Cossacks have produced, their indomitable energy, their reckless daring, their endless resources, and how they have carved out for Russia a great Asiatic empire, one cannot be surprised that they are proud of their race and history; for where would Russia have been without that living rampart stretching from the banks of the peaceful Don to the shores of the Yellow Sea! Never within the annals of this world's history has any man excelled the exploits of Yermak, who conquered Siberia for Ivan the Terrible with a handful of men as hardy and as daring as himself.

This remarkable man, who was an Avar, was born at Yermakoffva, a small village on the Lower Volga. After many exploits, the account of which is still to be written, he was killed by the Tartars on the banks of the river Obi. He fought to the last with his back to the river and his face to the foe. The place is still shown where he backed his steed into the blue waters

of the Pacific. Many are the beautiful ballads the Cossacks still sing about Yermak, the man without fear, who said to his followers, 'Why, brothers, should we tarry here? Let's set out now for Sibér' (Siberia). So they started, never staying until they had hewn a way through that mighty continent and reached the Pacific. After taking this enormous stretch of land, Yermak presented it as a peace-offering to Ivan the Terrible. In exchange, Ivan gave him a suit of armour and a few valuable shawls—truly a fine return for a country twice the size of Europe! The Cossack still sings:

Like a silver charm,
Sounding in the wilderness,
Sounds the voice of Yermak,
Yermak Timofevitch.
And it says, 'Oh brother,
Winter is now coming on,
And no resting-place have we!'

In my last work, *The Romance of the Volga*, I have devoted several chapters to the Cossacks, who dyed the waters of the Volga red with the blood of battles, generally with the blood of their old enemies the Muscovites and Tartars. According to their own chroniclers, the Cossacks were 'good youths, honest workmen;' although it must be confessed that their work mostly consisted in robbing the rich barges of the Muscovite merchantmen as they lazily floated down the Volga to the Caspian. In one of their most beautiful songs they sing, 'No robbers are we, but builders of churches, churches with seven domes.' Many of the Cossacks are now dissenters—Baptists, Stundists—and bitterly opposed to the Orthodox Church.

A still more terrible Cossack leader was Koodejar, a name still spoken with bated breath in south-east Russia. He was so strong and fearless that it is stated that he once killed a bear in a hand-to-hand fight. He climbed upon the animal's back and gripped it round the neck with both his hands—a feat which was also said to have been accomplished by Vladimir of Kieff. According to Kostamaroff the historian, Koodejar was the half-brother of Ivan the Terrible. This writer states that he was kidnapped by the Tartars when an infant. Ivan, suspecting that he was of royal blood, essayed to make away with him, after having heard of his marvellous strength and ferocity. The terrible Tsar, by his cunning, endeavoured to keep Koodejar near him, promising to return to him his wife—who had been taken from him—if Koodejar would remain in his service. Ivan kept his word, for he invited the poor man to a banquet in a darkened chamber, from the roof of which hung the dead body of his beloved partner. Finding how Ivan had duped him, Koodejar endeavoured to kill the Tsar; but before he could do this the floor opened, and the Cossack hetman was received down into an oubliette. Koodejar, however, was not killed by his fall, and with

the aid of the Crimean ambassador he escaped to the Crimea, where he soon summoned the Crimean Tartars to his aid. Without losing any time, he marched with his army of Cossacks and Tartars to Moscow, and appeared before the city walls. Ivan fled, fearing the fate awaiting him; but the unfortunate country-people, who had fled to Moscow to escape from the Tartars, were caught in a death-trap between the blazing town and the high walls of the Kremlin. The panic-stricken population, swelled by the fugitives from the country, vainly endeavoured to enter the sanctuary. According to the chroniclers, the terrified people entered the Kremlin in three tiers, walking on the heads of one another. It is estimated that seven hundred and fifty thousand people perished on this occasion. Moscow was destroyed, and Koodejar was avenged—that fearful man upon whom none could look without terror, not only on account of his marvellous strength, but also because of his terrible ferocity.

Notwithstanding his crimes, Koodejar, owing to the wrongs he suffered and his hatred of the Muscovites, is still regarded as a hero by the people of the Don and the Lower Volga. In one of their songs he is supposed to say:

Keep silence, oh ye woods so green!
My thoughts must flow in pain,
For ere another day be passed
I front the Tsar's arraign!

Koodejar was loved by the people, for in him was expressed in the fullest measure Russian bravery, strength, and manhood, which have cut out a path for themselves in the free steppes of those vast expanses of territory in Russia and Asia once inhabited by the fierce Tartars, Khirgise, and other Mongol hordes. Not only as a warrior and a freebooter was Koodejar famous; for, according to the traditions of the people, 'in countenance he was extremely handsome, of splendid bearing, of great wisdom, and a giant in strength.' Moreover, 'he rewarded the people honestly; at banquets he was charming, and merry in his cups; to beautiful girls he was endearing, but to young men he would not make way.' Women, according to one legend, were his ruin; although, according to another, which is probably founded on fact, he bitterly repented his sins and became a monk. This was after an expedition to Nishni Novgorod, in which he killed many people and acquired much booty. Tortured by remorse, he fled to a forest, where he confessed his sins to a hermit, and entered a monastery. But one failing remained which he could not overcome—his love for a pretty woman whom he frequently met at church. This difficulty Koodejar finally overcame by running away with his beloved one and marrying her, for which we trust the saints above forgave him, it not being every man's nature to be a recluse.

Another famous Cossack hetman was Stenka Rjazin, who captured Astrachan, Samara, Saratoff,

and Krasnojarsk, and invaded Persia. He also almost overthrew the Muscovite power. He, like Koodejar, was a great favourite. There is a Volga song about him :

Once we had a comrade bold,
Little Stephen was his name.

Between Saratoff and Stolbechi on the Volga, near the small town of Kamishen, which was frequently raided by the Cossacks, is the headland of Stenka Rjazin, who has long since gone to his account. No longer he sits on his ivory throne, watching with eagle eyes the costly freights of the hated 'goats,' as the Cossacks called the Muscovites, on account of their habit of wearing long beards. Concerning this historic spot, the Russian poet Stavrinsky has written a poem beginning with the following verse :

There is a headland in the Volga,
Lonely it stands with moss o'ergrown ;
Changeless from age to age,
Only the wild winds round it moan,
And tempests spend their rage,
While on this headstone eagles rest,
Devour their prey, and build their nest.

The superstitious people of the Volga relate that Stenka Rjazin had a house on the headland, the interior of which was decked with silks and velvet, probably plundered from the Volga merchants. After performing many deeds of valour, which are celebrated in numerous plaintive ballads, Stenka Rjazin was finally captured and taken to Moscow, where he was hanged, drawn, and quartered, according to the barbarous custom of those wild times.

The Volga towns, however, are associated with another Cossack, Pugacheff, who headed the famous rebellion against Catharine the Second for 'land, liberty, and the old faith.' This chieftain is still regarded with affection by the people of the Lower Volga, many of whom would revolt again could they but find a Pugacheff or a Stenka Rjazin to lead them ; for lawlessness, love of adventure, and excitement are still rampant in their blood, as they were in the blood of the old Cossack chiefs. This was shown during the brief career of Father Illarion of Tsaritzen, who caused the authorities so much trouble and anxiety.

Pugacheff was particularly bitter against the princes and nobles, three hundred of whom he hanged at Saransk, boiling down their fat to grease his cannon. This warrior was a true Cossack ; he hated the tyranny of the Muscovite Tsars, and wanted to found again the old republic of Cossacks ruled by a hetman or *voevod* (a military governor). His exploits and those of his followers form interesting reading, and are full of romance. After capturing Astrachan, Kamishen, and many other towns on the Volga, and hanging a great number of officials and landowners, Pugacheff was finally captured by a Swedish officer, Colonel Michelsen, who was in

the service of Catharine the Second, and by him conveyed to Moscow in a cage. He was tortured and then decapitated. Although little better than a robber, Pugacheff was regarded by the people of the Volga as a great hero. Pushkin's story, *The Captain's Daughter*, is founded on his exploits. In order to obtain material for his book, the author travelled all the way to Simbirsk to see one of the Cossack's old followers, who through some oversight had escaped hanging by Colonel Michelsen.

Samara, another Volga city, also suffered from the exploits of Pugacheff, Stenka Rjazin, and other Cossack freebooters, who for several centuries were a source of constant worry and annoyance to the Russian Government. These rovers fought against any one or with any one so long as they were sure of plenty of plunder. Sometimes they would fight against the Muscovites, at others they assisted the Turks and the Tartars ; they were even known to take sides with their most bitter enemies, the Poles. The old type of Cossack was always 'spoiling for a fight,' and cared little with whom or against whom he fought. They were freebooters by profession, and proud of it.

The river Kamish used to be one of their great haunts when they entered the Volga from the Don country by means of this waterway. There is an old song, probably referring to Kamishen, which runs :

He who goes to Kamishen
A passport need not carry.

This exactly suited the Cossack temperament, which abhors red tape, regulation, and restraint. This small town particularly suffered from the 'fearless braves,' as they called themselves, for here they hanged, decapitated, or drowned all the unfortunate citizens, who, in obedience to the orders of Peter the Great, had shaved their beards and put on German attire. The hatred of foreign ideas and inventions was particularly strong among the Cossacks, to whom all ideas of German order, discipline, accuracy, and pettiness were simply anathema. A large number of Cossack heads were lopped from their owners' sturdy shoulders before the race became at all reconciled to the innovations of Peter the Great. There were many revolts, massacres, and wars ere the wild horsemen of the steppes condescended to throw in their fortune with the Muscovites. Who has not heard of Mazeppa, who joined Charles the Twelfth after marvellous adventures, and escaped with the Swedish king to Bender, where he died from grief ?

Then there is Platoff, who led his wild horsemen to the very gates of Paris, and encamped within the walls of that city. Not Cortes, Pizarro, Warren Hastings, or Clive ever excelled the exploits of some of these fearsome men, whose souls were great and mighty like those of old Tarass Bulba, who shouted out orders to

his men, and showed them the way to safety, while he was being roasted alive by the Poles on an elevated cliff, from which he could see and advise his men who were endeavouring to escape from their pursuers, the vengeful Poles. Who can forget the young Cossack leader Ostap, a mere youth, being broken to pieces on the wheel at Cracow, while the beautiful Polish ladies of the Court looked on and laughed at the terrible spectacle? No groan, however, escaped from the lips of the leader, although he was a mere boy. What poetry, what romance, finds a home in the breasts of these fine men! Terrible in war, their songs are full of the love of home, the gentle Don, the steppes, the lovely Cossack maidens. They also continually praise the delights of a free and roving life and the joy of having a good steed. 'First a horse, and then a wife,' explains exactly what a Cossack thinks of life.

One cannot help admiring the Cossack outlaws, notwithstanding the fact that they were capable of great cruelty when their blood was up. They are Nature's children; strong, peaceful, warlike, changeable as Nature herself. Their race was reared and begotten in times of constant strife, danger, and alarm, like the period of the great Napoleon. Although they are of Slavonic origin, there must be a considerable mixture of Tartar, Mongol, and Gothic blood in their veins, perhaps even some Hun as well. In fact, some of them, especially those from Eastern Siberia, have such a large admixture of Turanian blood in their composition that they resemble the Mongolians both in appearance and character; others are half Cossack and exceedingly handsome; but among them all there are many types. Francis M'Cullagh, in his excellent work, *With the Cossacks*, describes what a motley assemblage Mechenko's army seemed. He says: 'It was one of the most composite forces that ever met together in Asia. It contained Buriats, Tunguses, Bashkirs, Khirgise, Mohammedans from Daghestan, Tartars, Cossacks of Orenburg, Cossacks from the Don, children of the men who had won victories in Italy under Souvoroff, who had chased Bonaparte from his throne, who had pitched their tents in the Champs Elysées, Buriats whose race has produced "the most terrible phenomenon by which humanity has been scourged," the Mongol Zenghis Khan.' M'Cullagh writes further: 'However I might try to persuade myself that the Cossack is a thing of the past, I could not fail to be impressed by this great gathering of men who guard the Russian frontier from the shores of the Pacific to those of the Baltic, and whose very designation recalls the great names of Mazeppa, Stenka Rjazin, Pugacheff. I saw dimly the gigantic upheaval,

more Asiatic than European, and heard faintly the footbeats of innumerable horsemen galloping over the steppes. The Cossacks cannot fail to be interesting; for they are the only reminder we have left of the time when the population of Europe was nomadic.' Mr M'Cullagh is right; the Cossacks cannot fail to interest, whether we regard them on account of the great rôle they are playing in the struggle with the Austro-German Empires, or because of their glorious exploits in the East.

In the days of their greatest power it is said that the Cossacks could muster three hundred thousand horsemen, the majority of whom were free men and freeholders. If I am not mistaken, conscription never existed among them as it did in other parts of the Russian Empire, for it was their pride that they were all free men and landowners, and not wretched *kraypostne* (serfs). The majority are still landowners, and among them it is regarded as a reproach if they are *bez-zemelne* (lacking in land). A well-known Cossack reformer once told me that he pitied the English people because they had no land, and in this respect were like the Jews. I told him, to his astonishment, that the English people had so long been accustomed to live in towns that they considered it no hardship to be landless. My friend was very much surprised at this reply, for to him a man who had neither land nor a horse was only half a man. 'Land, liberty, and the old faith' has always been their battle-cry; and woe to the man, Muscovite or Pole, who endeavours to deprive them of what they consider to be their exclusive birthright. As soon as it was known in the *stanitsa* that an attempt was being made on their privileges, all the *kurgane* (outposts, usually a mound of earth) of the steppes were ablaze with bonfires, and before long one hundred thousand horsemen swarmed over the steppes to avenge the insult. Many of the Cossacks were celibates, and lived in camps and settlements on the islands of the Don and the Dnieper. Separated from the softening influence of their womenkind, their martial and bloodthirsty spirits seemed to swell like a torrent; it burst forth in all directions, carrying ruin and destruction to all who withstood it. However, since they have ceased to live in their military camps their warlike spirit seems to have diminished, although there is still plenty of martial fire in their ranks, as the Austrians and Prussians have recently found to their cost. The young Don Cossack, Kozma Krutchkoff, who killed eleven Germans in single combat, and received sixteen wounds, is a typical member of their race, a worthy descendant of the brave men who followed Yermak through the wilds and forests of Siberia.

THE BRIGHT EYES OF DANGER.

By JOHN FOSTER, Author of *On Old Speyside*, *The Bernardine*, *The Ship of Shadows*, &c.

CHAPTER XL.—IN THE HEATHER.

MORE than once I have been tempted to end this tale here, but looking back to the beginning of it, I read: 'I have had but one secret my Charlotte did not share, and I am to tell it to her in these pages, when she may understand—if her Jacobite heart can—why I came to India to help Robert Clive, and, understanding, forgive my leaving her.' So, extenuating nothing, I shall tell it now.

After Culloden the Royalists occupied Inverness for a month, and, leaving the sullen town garrisoned, marched to Fort Augustus, where they encamped. With them went some of Kingston's Horse, a mesh in the net of troops to sweep round the insurgents. Militia guarded the passes to the south; the Mackenzies ranged the Western Isles; Lord Sutherland was in the far North; Mark Kerr's Dragoons were on the east coast. Martial law was proclaimed, for the flame of the rebellion smouldered stubbornly in the heather. *Væ victis!* In 'Forty-six' there were many scenes that I try to forget: fire and sword, starved men, and—the pity of it—women and little children; the burning of brave men's homes, the breaking of brave men's hearts. I saw the torch put to many of the chiefs' mansions—Glengarry, Cluny, and Lochiel among others—with countless farmhouses and cottages; cattle and provisions of the rebels were forfeited; hunger stalked the desolate glens; the scaffold threw its stark shadow over Scotland. A year of coronachs!

The Duke, eager to capture Charles Edward, scoured every glen, while ships of war watched the coast. Now and then rumours would come concerning him; then it was 'Boot and saddle,' and away to Glen Spean, or north to Glen Shiel, or the wild country among the great hills of Lochaber. Many weary days and nights my redcoats and I spent searching these lonely, trackless moors and mountains, but to no purpose. I for one give no grudging recognition to the shining passionate loyalty of the proud hearts that followed Charles Edward in the dark days of his downfall. Not the barrier of the great hills or rivers or the deep woods sheltered him; it was the hearts of men.

Thirty thousand pounds was offered for his capture. Poor ignorant men knew of his hiding-places—men, most of whom we regarded as half savages, without a sixpence among their rags—yet no one betrayed him whom they called the son of their King. These men owned something—an ideal—that was not for sale. To them the last of the Stuarts, a wandering, hunted outlaw, hungry, ragged, often sleeping under the sky in his plaid, seeking shelter and food

where he could—pitiful commentary on wrecked ambition and the divine right of kings!—was still their 'yellow-haired laddie.' I see yet the prisoners we took, sullen Gaelic hillmen, huddled together in fear of their lives, miserably clad, and gaunt through hunger, yet not a word could be got out of them concerning the Chevalier, even under threat of death.

In the long shining days of the northern June I was in command of half-a-troop of my regiment, one day riding through stretches of flaming gorse, on another by green, bird-haunted valleys, bivouacking by night beside Highland streams, escorting prisoners, carrying despatches to and from headquarters, all in the fine summer weather. July, flushed with the early heather creeping to the very edge of the camp, saw me back at the camp at Fort Augustus, and there I remained until the middle of the month, when I was sent with fifty of my regiment to join three companies of the Government militia, part of the cordon along the west coast between Glenelg and Arisaig, a wild, roadless country, rugged towering mountains, girt by seas thrusting long arms, jewelled by the August sun, into the silences of the hills.

The strictest precautions were taken, for it was suspected that Charles Edward was in the neighbourhood. Sentries were posted within hail of each other. By night great camp-fires were lit, and no one was allowed to pass unchallenged. I was on night duty, patrolling the long line of sentries, and I can vouch for the rigour of the movement. No hawks could have kept a keener watch, no bloodhounds quartered ground more thoroughly.

For a month I patrolled the wild west country until I think I knew every hill and corrie by heart, when there came a despatch from headquarters with orders to advance inland. The scheme was to throw a chain of troops between Lochaber and the Forest of Athole, and with this living net drag the country northward.

There were no roads worth the name in that wilderness of trackless moors and mountains. By the time the long line of redcoats swung slowly north, the high tide of summer turned. September nights began to close in as we neared the Great Glen.

On the forenoon of the fourteenth of the month a deserter was caught, a young trooper who had disappeared after Culloden. The case against him was black. Indeed, he made no defence, and at a drumhead court-martial was sentenced to be shot at sundown. He did not look a coward, holding his head up and taking his sentence without flinching. Curious to dis-

cover the cause of his desertion, I asked him afterwards why he was disloyal to King George. He hesitated, but I gradually got his story. He had fallen in love with a Highland lass, who would have nothing to do with him so long as he wore the king's uniform. 'So I ran away and married her, and we were happy in Badenoch, where she lived,' he told me. 'I deserted because my wife was a Jacobite; but, as God is my judge, I did not fight for the Prince, nor even carry arms for him.' The trooper was shot that evening by the side of Loch Ericht. He died like a man, asking the firing-party not to blindfold him, and refusing to give any information regarding his Jacobite home and friends. He was buried where he fell, and the lass in Badenoch, like many another, watched and waited in vain through the long dark winter of 'Forty-six' for the return of her man. The little tragedy is burned on my memory, a haunting, accusing picture in the light of what befell me two nights afterwards.

It fell out that on the same evening I received orders to go forward with a despatch to the Fort, using all speed.

Near the darkening, I took half-a-dozen of my best mounted troopers with me, and struck into the country beyond Loch Ericht, where we halted, and, posting sentries, passed the night in a sheltered corrie. Next morning we were off again by streak of day, skirting the gloomy Forest of Benalder and pushing on by Loch Laggan, intending to strike the Pass of Corrieyarrack before nightfall; but we missed a bridle-path, and at dusk my men, tired with a long day and the heavy going, were halted for the night by the side of a burn.

Behind us, a birch-wood covered the side of the hill, and below it lay a little loch, a thread of a stream trickling out of it, a splinter of steel in the moonlight. The little silver thread was the river Spey newly born amidst her mountains.

To most men, looking back on the fading vista of their youth, the vision of some place haunted by memories out of scale with the rest of the horizon leaps now and then to the mind in a strange and individual appeal. Recalling these days in the North, I have come to think of the Spey as my river of destiny. Her pine-clad valleys, the august neighbourhood of her mountains, her stream's shining claymore in the heather, are to me lodestones of memory, drawing me back to these days of stirrings of the blood, war, and adventure in the dew of my youth. I remembered as I looked at the river's cradle (a premonition mingling with the thought) that thrice before the Spey had come into my life, on each occasion charged with fate. Her music greeted me as the *Gannet* stole into Spey Bay; hers the strong and swift current that had borne me and my comrades with the French money into safety from the lurking death on the trail;

her stream sparkling in the morning sun was the Rubicon I crossed with Duke William's army.

So I lingered that evening in a reverie, looking down on the tiny stream amidst the silence of the moors, wondering if my chance meeting with the river was a portent, until moor, skyline, and hills became slowly obscured on the threshold of night.

With the darkness came a weather change. Clouds hid the moon; the air grew damp and chilly. Posting a couple of sentries on the lip of a cup near the burn, I was soon asleep in the heather, wrapped in my greatcoat.

I had been in the saddle all day, and slept soundly till early morning, when sentries were relieved. They reported all was well, and I lay down again, but sleep refused to return. Every sound, the deep breathing of the sleeping men and horses, the purring voice of the burn, even the silken rustle of the birches in a light air, seemed in a conspiracy to keep me awake. I looked with envy at my men lying in the sprawling inertia of sound sleep, for I had done as hard a day's work as any of them, yet I could not close an eye. Often on the very edge of sleep I started up wide-eyed again, until at last, after an hour of turning and tossing, I gave up the attempt and lay staring at the paling sky.

Perhaps in the silent early morning the sensory organs are at their keenest. At any rate, as I lay there, the faintest sound ruffling the death-like silence sent my imagination galloping. Once a slight stir in the heather made me clutch my pistol. It was only a mountain hare loping past, but my heart knocked for an uncomfortable second or two. I could see both sentries to right and left in the distance pacing with their firelocks. I had lain in the heather scores of times, yet for the life of me I could not shake off the feeling of a child in the dark, as if some one unseen by me might be near. The hours passed slowly, until with a sense of relief I saw the faint glimmer of day begin to pencil the sky-line, and heard the hoarse chuckle of the awakening moor-cock up on the brown slant of the hill.

With the first blink of morning a chill air, as the new day drew a breath, crept along the hill-side, stirring hidden wreaths of mists in the corries, sending them circling slowly to the high tops, weaving and unweaving fantastic hoods, the solid mountains looming vague and unsubstantial behind them.

I got to my feet, shivering. I did not waken the men, for it was full early, and they required all the rest they could get. After a wash in the burn that briskened me wonderfully, I took my fowling-piece on the chance of getting a brace or two of moorfowl, and skirted quietly along the edge of the birch-wood; but I did not get a shot, and after half-an-hour came out on the moor a mile or more to the west of our picket. The mist gathering below me was blurring everything out, filling to overflowing the hollow of a

dip of the ground in front, out of the wind. I could see over its gray roof to the hillside opposite, where columns of mist were deploying, gusts of wind tossing little tatters and wreaths of smoke aloft in aimless convolutions.

The cautious wail of a green plover stole out of the mist, its eerie dissonance startling in its break on the silence. The cry seemed to come from higher up behind me. I wheeled round on the instant, tingling with apprehension, for in a flash I remembered that the peewit's hail is seldom, if ever, heard so late in the year. The sound died away, and another cry stole out, this time from the valley. It was an answering signal, an uncommonly good imitation of the wandering bird's harsh call; but I guessed that dirk and tartan, and no birds of the moor, were hidden somewhere in the heather and the mist. The wearers of them might be watching me. The thought of a blade between the ribs whets the edge of one's wits wonderfully. In a twinkling I had dived into the wood, where a screen of the birches gave me cover. There I crouched down and listened, peering into the mist. Once again the peewit's call sounded, this time much farther away. But thick mist juggles with sound as well as with vision, so I kept still and waited. The call did not come again, but I was uneasy, and started to return

to my picket. The mist was clearing a little as I stole quietly through the wood. I had almost come out to its edge, when I stopped dead. In a trick of the wind the mist had parted like a rent curtain, and revealed a man.

He was standing not fifty yards away, his back toward me, his face half-turned round, showing his profile and short beard. I could see him clearly enough in the growing daylight. He wore kilt and plaid, and was leaning on a great crook-staff such as the hillmen use, his chin sunk on his breast. Once he threw up his head, and the lift of it, like a listening stag's, seemed strangely familiar. Where had I seen him? He gave a glance round and resumed his former listless attitude, motionless in the silence, a statue of dejection, the wind plucking at his shabby plaid. As I stood watching him, a vague irrational sympathy for him touched me. Suddenly he drew himself up, braced his shoulders, and began to walk straight toward me. After the first few steps speculation fled. There was only one man I had ever met with that air. Instantly I recalled the last time I had seen him. The shabbily-clad, dejected wayfarer vanished, and in his stead came a vivid vision of Holyrood, and a bright-eyed royal youth with the kind smile. For the solitary man was Charles Edward!

FRENCH PRISONERS OF WAR.

By the Rev. JOHN VAUGHAN, M.A., Canon Residentiary of Winchester.

AT this time, when a large number of German prisoners of war are interned in Great Britain, it may be of interest to call to mind the early years of the last century, when, during the Napoleonic wars, many thousands of French prisoners were confined in various parts of the country. The contrast, too, is instructive, as showing the improvement in manners, and the growth of the spirit of humanity, in the course of the last hundred years.

It has been calculated that between the years 1803 and 1814 no fewer than one hundred and twenty-two thousand prisoners of war were brought to this country. Of this number over ten thousand are said to have died in prison, some seventeen thousand were allowed to return to France as hopeless invalids, and the remainder were released when peace was proclaimed in 1814. The places of detention for these unfortunate men were situated in various parts of the country. Dartmoor Prison, which had been expressly built for the purpose, received as many as ten thousand captives. A large number were confined at Millbank Prison, near Plymouth. Others were incarcerated at Edinburgh, at Stapleton, at Chatham, at Norman Cross near Peterborough, and elsewhere. A number of warships captured from the enemy

were also converted into prisons, and moored at convenient stations along the coast, such as the Hamoaze at Plymouth, in Portsmouth Harbour, and in the Medway off Chatham. Indeed, over twenty-nine thousand prisoners of war were confined in the neighbourhood of Portsmouth—some at Forton, some on hulks in the harbour, and some eight thousand in Portchester Castle.

The Norman keep of Portchester Castle, rising from the edge of the flowing tide, and standing within an enclosure of nine acres, is a striking feature in the landscape, and well known to all visitors to Portsmouth and Southsea. In early days Portchester Castle was a famous military fortress, and was not infrequently visited by royalty; but after the days of Queen Elizabeth, who feasted in the noble banqueting-hall, the building became unoccupied, and fell into a state of ruin. Toward the end of the eighteenth century it was hired by the Government, and converted into a place of detention for prisoners of war. Large wooden huts, as may be seen in many an interesting engraving of the time, were erected within the great enclosure; and the lofty Norman keep was divided into storeys, which were connected one with another by a steep flight of wooden steps, which occupied the south-eastern corner of the structure. 'It may

be understood,' wrote a contemporary, 'that the prisoners' sleeping-quarters were not luxurious. Some of them had hammocks; but when the press became thicker straw was thrown upon the floor for those to sleep upon for whom hammock-room could not be found. Hard, however, as was the lot of the Portchester prisoners, it was comfort compared with that of the men immured at Forton, where there was hardly room to stand in the exercise-ground, and they lay at night as thick as herrings in a barrel; or with those who were confined in the hulks, which were used as punishment-ships, and where the refractory and desperate were sent, and where half-rations brought them to obedience. At Portchester the prisoners got at least plenty of fresh air, sunshine, and room to walk about.'

At one time, it appears, an arrangement was arrived at between the British and French Governments, whereby each nation was to be responsible for feeding and clothing its own countrymen who had been taken prisoners of war. After a while, however, the Consular Government disclaimed all responsibility, and the cost of supplying the French prisoners in Britain fell entirely on our own Government. As may easily be imagined, the fare was not of the choicest kind. Indeed, many were the complaints as to its coarseness and its insufficiency. On one occasion, we are told, an English officer riding into Portchester Castle, and leaving his horse for a few minutes tied up to a post, found on his return only the saddle remaining. 'The famished victims of English barbarity,' says a French writer who tells the story, 'had devoured the animal, even to the very hoofs.' Rats, it may well be believed, abounded in the dark vaults and underground passages of the castle. Many years ago, when I was vicar of Portchester, I was assured by an old man past ninety, who well remembered the time of the Napoleonic wars, that the French prisoners were wont to catch the rats with baited hooks, and to cook them for dinner. No doubt there was a great deal of sickness among the captives. At Portchester the negroes of the West Indian garrisons suffered severely. During the cold winter which followed their arrival in England some hundreds of them died, and a large number were crippled with rheumatism. Any waste corner of the parish was used as a burial-ground for prisoners of war. The harbour-shore, immediately outside the castle walls, is said to have been the usual place, and now and again human bones are laid bare by the receding tide. In another part of the parish some thirty to forty skeletons were unearthed a few years ago within a few inches of the surface. The village churchyard seems never to have been used for prisoners; but soldiers of the garrison who died on duty were buried there, and their names duly entered in the parish register. Among these were a number of the king's German legion; and sometimes

we meet with the ominous words 'died of small-pox.' In other places, too, the mortality was great. At Forton, near Gosport, on the western side of Portsmouth Harbour, nearly four hundred prisoners died in the autumn of 1794, while in November 1810 no fewer than eight hundred were reported to be dangerously ill.

Among the prisoners were many men of savage and desperate character, and acts of great barbarity were only too common. In November 1796, for instance, as we learn from a contemporary document, 'the prisoners on board the *Hero* detected a thief in their midst. They tied him down to a ring, and flogged him most unmercifully. They then trampled upon him, and the man actually expired under their treatment.' Duels, it appears, were of constant occurrence; no fewer than one hundred and thirty were fought at Stapleton prison within a period of three years. Any rough-and-ready contrivance was made to serve the purpose of a weapon. A piece of iron, or a knife, or the blade of a pair of scissors would be fastened to a stick and used with murderous effect. Now and again an execution took place. Such an occasion, after the hideous custom of the age, would be made a public holiday, and even children would be taken to see the spectacle. One poor wretch, who was hanged at Portchester for killing a fellow-prisoner, begged his son, a little drummer-boy, never, when he got home to France, to tell his mother the real truth, but to say only that 'father died in prison.'

Every effort was made to prevent the escape of the French prisoners. The captives wore strange yellow jackets, with gray-and-yellow caps, to render any attempt more difficult. At Portchester Castle as many as one hundred sentries were always on duty, and the curfew-bell sounded every evening at nine o'clock, when the prisoners were forced to retire to their sleeping-quarters. In spite, however, of every precaution, attempts at escape were not infrequent, especially from the hulks in the harbour. To take but a single instance. On 8th October 1808 'two French prisoners escaped from a prison-ship at Portsmouth at night. One was drowned; the other was found in the mud, from whence he was extricated by a detained American vessel lying in the harbour, and sent back again to the ship from whence he had escaped.' This extract is specially interesting, as the fugitive proved to be one Louis Garneray, an artist of some repute, whose pictures of the harbour may still occasionally be met with in the neighbourhood of Portsmouth. Garneray was afterwards allowed to become a prisoner on parole at Bishop's Waltham, a little town in Hampshire, where he remained until the conclusion of the war, when he returned to France, and eventually became Director of the School of Painting at Rouen.

Louis Garneray was not the only French

prisoner who endeavoured to earn a few shillings by handicraft. Many of the captives were extraordinarily clever with their fingers. Out of beef and mutton bones they would carve the most exquisite trinkets. With only a wretched penknife to work with, they would turn out beautiful little objects, such as chessmen, wind-mills, battleships, spinning-wheels, and the like. Not long since I was offered a finely carved crucifix which had been made by a French prisoner at Portchester. So exquisitely was it executed that the owner asked no less than seven pounds for it. Other prisoners would work in straw, and offer for sale the most dainty little work-boxes or watch-cases. Others would make lace of so delicate a texture that it was widely and eagerly sought after. The manufacture of counterfeit coin, too, was not unknown; and both at Portsmouth and Plymouth large numbers of forged bank-notes found their way into circulation. Indeed, one prisoner was sentenced to death for this offence; but the extreme penalty was afterwards commuted to two years' imprisonment at Winchester.

After a time it seems to have been the custom to place the French officers on parole, and to settle them in various towns at some little distance from the coast. A goodly number were assigned to Winchester. Among other Hampshire towns selected for the purpose were Odiham, Whitechurch, Andover, Alresford, and Bishop's Waltham. It has already been noticed that the marine painter Louis Garneray was placed at

Bishop's Waltham, where there were a number of French officers on parole. They appear to have been generally welcomed by the inhabitants, and sometimes to have been received into the best society. At Alresford they won golden opinions by their endeavours to subdue a fire which threatened to destroy the entire town. In the churchyard of that parish may be seen several tombstones to the memory of those who died in captivity. So too at Odiham, where one epitaph is of touching simplicity: 'He was a prisoner of war. Death has set him free.' Officers on parole were allowed to walk one mile beyond the limits of the town in which they were quartered, and no farther. A mile from Odiham stands a noble oak-tree still known as 'the Frenchman's oak,' beneath which a seat was placed for the convenience of these sojourners in a strange land. It is pleasant to think that they were treated with such simple thoughtfulness and consideration. And there were occasions when prisoners, on their part, showed humanity and heroism. One example, in conclusion, must suffice. In the month of May 1800 the sentry at the gangway on board the prison-ship *Sampson*, moored in the Hamoaze at Plymouth, 'was blown overboard in a gale of wind; whereupon a French officer, whose name was Le Fevre, leaped into the sea and saved him.' It is gratifying to learn that a full passport was granted to the officer, with a certificate testifying to his noble conduct, which was to be presented to the French commissary at Morlaix.

BETTY GRIER.

By JOSEPH LAING WAUGH,

Author of *Robbie Doo*, *Cracks wi' Robbie Doo*, *Thornhill and its Worthies*, &c.

CHAPTER XIV.

IN accordance with the doctor's orders, Nathan has not been to his work these past few days; and though, beyond admitting a 'wakeness about the knees' and a proneness to 'shiverin', he makes no specific complaint, I have noticed that daily he becomes more beholden to Betty, and that he very willingly goes off to bed a good two hours earlier than his usual retiring-time.

There are some who, by their very backwardness and reticence, attract attention and excite curiosity. I have met many such, both professionally and socially, and the breaking down of their reserve has always been interesting; but, than the case of Nathan Hebron, none has more substantially repaid the time and trouble which the process of thawing involved. To outsiders I presume Nathan is an enigma. Not so to us who live with him. I needn't attempt to explain the feeling of confidence which he inspires, or the peculiar power which he unconsciously exerts in our little household circle.

Words cannot convey it—it must be experienced to be understood; and though Betty is always to the fore, always taking the initiative, I know she feels that somewhere in the background, almost outwith her immediate knowledge, but ever in her reckoning, is the force, the power, the quiet, unobtrusive, dependable Nathan. And yet, strange to say, could I probe to the quick of his feelings, I know I should find that, in his 'established estimation, Betty, and Betty alone, stands for everything that the term 'bulwark and tower of strength' conveys.

Of late I have been wondering how best I can advance Nathan's worldly interests and lighten his burden without taking him away altogether from the calling of his choice. Somehow I don't think he would be happy without a spade in his hand and denied access to leaf-mould. He is too old to fit into a new groove, and I must remember that were I, even with the best intentions, carefully to uproot an old tree from amongst the shadows and replant it in the sun-

shine it would surely die. Still, I should like to do something to make his gloamin' life easier. I have often felt sorry for him, leaving his comfortable house on inclement mornings, working his day's darg, and returning when darkness had long settled down. Outdoor work under favourable weather conditions is agreeable enough; but when it is carried on under a cold, leaden sky, amidst frost and snow, and in biting winds, it is stripped of much of its pleasure and poetry. Thinking in this strain, the idea came to me that I might erect glass-houses in our garden here, and encourage Nathan to devote the whole of his time to the cultivation of tomatoes. I have already mentioned my scheme to the doctor, and he approves of it; but I have said nothing to Betty or Nathan. I must see to it one of these days.

I had a long, pleasant ramble this afternoon. The air was clear and invigorating; I was feeling braced up and buoyant; and as for Jip and Bang, I never saw them in a more sportive, energetic mood. We walked through Rashbrigs Moss, past Dabton Loch, and round by Longmire, where I called and spent an hour with Farmer Russell. Bang killed a rat in the stead- ing just before we left, and he wagged his stumpy tail and tried to raise his tattered ear all the way home. The dogs preceded me into the house, and I stumbled after them through the darkened lobby and into the darker dining-room.

'Hello, Betty,' I said as I entered; 'not lit up yet?'

Betty was over at the window in the act of pulling down the blind, which, strangely enough, she always does before she lights the gas.

'Oh, it's you, Maister Weelum,' she said. 'It's that dark I can scarcely see ye;' but she continued standing inactive, looking round to me with the window-blind cord hanging loose in her hand. The firelight was low, and the light which came through the window from the village lamp across the street made the darkness only more visible. I could make Betty out, silhouetted, as she was, against the window; but, though all around was in black shadow which my eyes could not penetrate, I had the feeling that some one else was present. As I peered around, a tall visionary figure moved to my right, and Betty came toward me from the window.

'This is Miss Stuart,' she said, 'the lady that's pentin' wee Isobel Jardine's pictur'. She's been workin' at it a' efternoon. I was tellin' her aboot your new yin, and I asked her in to see it.—And, Miss Stuart, this is my boy—my wean I used to ca' him—Maister Weelum, or rather, as I should say, Maister Russell. Mrs Jardine and me were tellin' ye aboot him. Imphm!' And as Betty breathlessly finished her introduction, and, without further ado, turned to break the fire into a glow, Miss Stuart and I gravely bowed.

I couldn't see our visitor's face, but her figure was strangely familiar to me, and my pulse quickened.

'Miss Stuart,' said Betty, 'will ye please sit here till I licht the gas?' and she wheeled the easy-chair, which sits opposite mine, within the radius of the glow from the fire.

'Oh, thank you very much, Mrs Hebron,' said a voice I knew well; 'but I'm afraid I must be going. I'll—I'll not sit down, thank you. Mr Russell will be'—

'Delighted to see you seated, Miss Stuart,' I interposed. 'I have very few lady visitors these days, and I do assure you you are welcome.'

'Eh! that's weel said, Maister Weelum,' Betty chimed in; 'and it's true too. Ye canna but sit doon, if it's only to please him, no' to speak o' me;' and, as Miss Stuart graciously complied, she bustled out to the kitchen for a match.

In her absence I struck a light and lit the gas, and as Miss Stuart's eyes met mine we both smiled. Nathan on one occasion winked to me, and in doing so he established a paction between us. In the same way, but more emphatically, this smile awakened a feeling of camaraderie, a consciousness that the Fates were playing with us, and that we recognised the success of their manipulations.

'Betty has been talking to me a good deal about you lately, Miss Stuart,' I said as I drew in my chair. 'Somehow, from the first I associated you, the subject of her talk and the painter of Isobel's portrait, with my good Samaritan of Nithbank Wood; and I am not surprised to find that I was right.'

'Indeed, Mr Russell!' she said, and again she smiled. 'Well, I have been hearing about you also of late from both Mrs Hebron and Mrs Jardine; and, like you, I am'— But before she could finish her sentence Betty re-entered with a lighted taper, and in its warm yellow glow her face shone like a radiant moon.

'Ah, Maister Weelum,' she said, 'for aince ye've managed that "perverted" licht. Thae newfangled things are fashious, and it's a cauld-lookin' licht; but there's economy in it, Miss Stuart—imphm! And, my me! excuse me, miss, but it does my he'rt guid to see ye sittin' in that chair.' And in a flash my mind went back to our crack, and I remembered her words, 'It's a gey comfortable-lookin' chair that yin opposite ye, Maister Weelum, and d'ye ken I met a leddy the day that I wad like to see sittin' in it.'

'Betty,' I said, 'Miss Stuart and I are not altogether strangers; we have met once or twice in an informal way; but, now that we have been brought together to-night, under your auspices, don't you think—just to signalise the event—you might offer her a cup of tea?'

'Eh, Maister Weelum! you read me like a book. I was juist gaun to suggest that. The kettle's at the boil, and it'll no' tak' me a

minute. Will—will I bring down the tea-set frae the drawin'-room—your mother's, ye ken?'

'Yes, yes, Betty, if you please; and Miss Stuart will honour us in handseling it. It hasn't been used since I came here;' and before my guest could say 'Yea' or 'Nay,' Betty had disappeared.

I drew my chair nearer the fire, and, pipe in hand, was about to ask my *vis-à-vis* if I might smoke, when I saw her gaze wander round the walls of my room and ultimately rest on my picture.

'Oh, Mr Russell,' she exclaimed, as she rose to her feet—'why, that is surely the picture I painted!'

'It is, Miss Stuart,' I quietly said. 'It's the picture you had just finished the first time I saw you in the flesh, and I assure you I am very proud to be the possessor of it.'

She stood looking up to it, beating a tattoo with her fingers on the table, and I saw the warm blood mounting her neck and cheek.

'I hope you don't mind my having it?' I asked.

'Oh no; but—well, you must have put yourself to some trouble to get it—more than it's worth, I'm afraid, for it was presented to a bazaar many miles away; and, you'll pardon me, but I cannot understand your putting so much value on it. It is really not a good bit of work, though the subject appealed to me so much.'

'Now, Miss Stuart, please do not belittle my purchase—your labour of love, I may call it. I know a little about art; in fact, though I don't paint now, it has always been, and still is, my hobby, and in my judgment you have no reason to be ashamed of this example of your handiwork. As to my motive in buying it—well, I am a native of this village, as Betty has perhaps already told you, and to me it and its environs will ever be my earthly paradise. I know every step of the countryside around. As a boy I hunted in its fields, explored its woods, and fished its streams. During the years I have been settled in Edinburgh, never a day has passed but my thoughts have strayed homeward, and the identical spot on which you sketched this picture is the one, above all others, around which my most hallowed memories are centred. Whenever I thought of my quiet village home my mind meandered down the Gillfoot road, and the view which inspired you to this effort has always been with me, for it is, as it were, photographed on my brain.'

'Oh, I quite understand you,' she said slowly—'quite. But how did you find out where it was for sale?'

'Well, I had very little difficulty in that,' I laughingly replied. 'Talking of sales, though—pardon my introducing the commercial element into our conversation, Miss Stuart—but I would like very much to have a companion picture to this one, something local of course.

I'll leave the price to yourself. There's no hurry, you know; only I should be sorry to miss the opportunity of procuring another, treated with the same loving skill.'

'How much did you pay for this one?' she asked, with a twinkle in her eye.

'Well—I—I really cannot tell you exactly. You see, I didn't buy it myself. I happened to hear your clerical friend say something about the Laurieston bazaar; so I wrote to Ormskirk, my confidential clerk, giving him the few particulars I possessed, and he managed everything to my satisfaction. The price he paid for it will be noted down; he stated it in his letter, but as it was of minor importance, I don't remember the exact figure.'

I had risen from my chair when she stood up to examine the picture; and, thinking she might be tired standing, I asked her to sit down. She made no response, however; and, lost in thought, looked long into the glowing fire.

'Ormskirk! Mr Ormskirk, your confidential clerk!' she repeated slowly. 'The name seems familiar to me. Oh yes, now I remember;' and she laughed cheerily, and gave me a blithe look. 'It is a coincidence, Mr Russell; but I was received once by a Mr Ormskirk of an Edinburgh legal firm. The name struck me as being unusual.'

'Well, Miss Stuart, so far as I know there is only one Ormskirk in our profession in Edinburgh, and he is with us—my firm, I mean—Monteith & Russell.'

'Monteith & Russell!' she repeated. 'And you are'—

'Well, I'm Mr Monteith's partner.'

She looked at me with surprise in her big dark eyes, and then slowly every vestige of colour left her face. 'You—you are Mr Russell! Oh, I am so glad to meet you! I have corresponded with you, and my father very often spoke of you. I—I am Désirée Stuart. My affairs are in your firm's hands. I am the daughter of General Stuart of Abereran. This is very bewildering!' and she smiled feebly through moist, lustrous eyes.

I was too astonished to speak. No suitable words could I utter in acknowledgment of this unexpected information. Never for a moment had I associated Miss Stuart the artist with Miss Stuart of Abereran. Somehow, I cannot say exactly what followed; but I have a dim recollection of hearing her apologising for sobbing, on the plea that I was the first person she had met since her father's death of whom, in his last illness, he had spoken with kindness and affectionate regard. And I welcomed this with avidity as another link which bound me to her.

'Your father and I didn't meet often, Miss Stuart,' I said, after a pause, during which we had both been busy in thought; 'but we corresponded very frequently. I am glad to know he spoke of me with appreciation. Unfortu-

nately I was confined to bed at the time of his death, otherwise I should have been with you; but my partner, Mr Murray Monteith, attended to everything, and has been giving your affairs every consideration.'

'Yes, Mr Monteith has been very attentive. I called at your office and asked to see you. It was on this occasion I met your Mr Ormskirk. Well, Mr Monteith received me, and reassured me on one or two points about which I was anxious. After all, I didn't tell him the real reason of my visit.'

'Indeed! And—and why didn't you?'

'Well, I somehow didn't like. I know it was very silly; but I just couldn't speak of it—at least to him.'

'Oh, I'm sorry to know that!' I said. 'Mr Monteith would have been only too pleased to help you with his advice. Is the matter you wished to bring before me still of consequence?'

'Yes; but it can wait. You know this is neither the time nor the place to talk business. Besides, I oughtn't to bother you about my affairs just now. You are still on the sick list, though I must say you look less the invalid to-day than you did the first time I saw you.'

'Thank you, Miss Stuart. I am glad to know I look better; certainly I feel much stronger, and I trust to be back to business soon. But do tell me now what you wanted to consult me about in Edinburgh.'

For a time she remained silent, and I watched with interest the run and play of her thoughts, as expressed in her mobile face.

'Don't you think,' she said at length, 'that all this is very queer—I mean our previous accidental meetings, the personal and business connection between us, and the fact of our sitting together in this room in this quiet little village? I feel we are known to each other, yet we are not acquainted. Oh, it does seem so strange and unusual!'

'Yes. The whole circumstances are rather remarkable, and I could tell you something—a little story in which you and I figure, which is even more mystifying; but we are wandering from the subject we had on hand. You haven't yet told me what I wish to know.'

'I cannot mention it to-night, Mr Russell,' she said. 'More than ever I feel I ought not to have broached it. Later I trust we shall have an opportunity of discussing everything. You don't mind my deferring it?'

'Just as you wish; but before we dismiss business, may I ask you a question?'

'Certainly.'

'Well, I had a letter from Mr Monteith the other day in which he referred to your affairs. By the same token, he is coming down to see your aunt, so we'll all meet and go into everything thoroughly. Well, what he mentioned in his letter with reference to you set me a-thinking, and I have been wondering since if you are

aware of the fact that you hold four thousand Banku oil shares. Have you received any dividends lately?'

'I know,' she answered thoughtfully, 'that father, some time ago—when I came of age it was—transferred some shares to me, and from time to time he gave me what must have been dividends. I didn't trouble him for particulars; he always hated business chats, but more so after his last visit to India. I am sure he got a touch of sun, although the doctor would never admit it, and I purposely refrained from referring to business affairs, as it only annoyed and irritated him. Since he died I have received no money at all. As a matter of fact'—and she blushed painfully—'that's what I wanted to see you about. Aunt is awfully decent, and grudges me nothing; but surely I ought to have received something. It isn't very nice to be depending on her for every shilling, and—you understand, Mr Russell?—I'm perhaps too independent, and'—

'Oh, Miss Stuart, I am so sorry! This is a most unfortunate oversight. I must rectify it at once, and see that money is sent to you to-morrow. You have quite a large sum to your credit with us.'

'I am glad to know that;' and she smiled. 'But please don't put yourself to any immediate trouble on my account. I—I am all right for money at present. Unknown to my aunt, I sent two of my pictures to Glasgow last week. Yesterday I received—what do you think?—four guineas each for them;' and again the blood mounted to her cheek.

'Miss Stuart,' I said, in consternation, 'have you through our thoughtlessness been obliged to'— I didn't finish my sentence, for at that moment the door opened, and Betty entered with the tea-tray. Maybe it was a fortunate, certain I am it was a timely, interruption, as I was strongly tempted to act unprofessionally, and take a client to my arms.

We had tea brewed in my mother's old Worcester teapot and served in dainty cups of the same ware. The modern gas was extinguished, and the candles in the candelabra were lit. Nobody in Thornhill, or out of it, can bake soda-scones to compare with Betty's; no one can approach her in the lightness and pan-flavour of her toothsome pancakes, the 'gou' of her butter, and the aroma of her home-blended tea. As for her homely, kindly presence—well, only one other possessed its match, and she was sitting at Betty's right hand, admiring my mother's old china, praising Betty's scones, filling my heart with a gladness it had never known before. Ah, Betty Grier—my dear old Betty—I owe much to you! Before life was a reality to me you cared for me and ministered to my wants. When I was cast adrift from moorings of my own making, you took me in, nursed me, and tended me. For all this I thank you; but for

bringing this little tea-party about I'll bless your name for ever and ever. Amen.

So far I have not been out of doors after nightfall. The village streets are not too well lit; the pavements are too uneven for my uncertain steps; but Miss Stuart couldn't go home unattended. Betty was very emphatic on this point, and of course I heartily concurred. Bang and Jip certainly came into the house with me after our walk; but they must have recognised in Miss Stuart a counter-attraction, and slipped away to their respective homes unobserved. Standing in the lobby with my coat and hat on, and thinking they might be keeping Nathan company in his back-room, I called to them several times, but all in vain; so Miss Stuart and I went out alone.

It was a clear, quiet moonlight night, with that sharp touch of frost in the air which makes walking a pleasure. No winter night winds sighed in the bare, leafless limes as we passed down the street; no discordant sounds broke the stillness of the Gillfoot as we wended our way by its shadowy wood.

I had, of course, perforce to walk slowly, and in some unaccountable way my thoughts and speech seemed to keep in rhythm with my steps. This at first disturbed and annoyed me, as I was anxious to be vivacious and animated; but I soon found out that in certain circumstances conversation is not essential to good-fellowship.

When we reached the top of the Gillfoot Brae, and were almost opposite the little wicket to Nithsbank Wood, we halted for a minute, and in silence looked down upon the scene, the natural features of which my companion had with such loving skill transferred to her canvas.

There are times when Nature asserts herself—thrusts herself, as it were, upon us, and emphatically proclaims her glory and power. It is good for us to come under her dominance then, for if we have within us a soul worthy of the name, we cannot but feel our true position and standing in the great Creator's plan.

As I stood, with the woman I loved beside me, on that glamour-haunted spot, amidst scenes grand in their solemnity and hallowed by associations, myriads of twinkling worlds above us, at our feet peaceful howmes all bathed in moonlight, a fuller realisation of the true import of life was borne in upon me. And there, in a consciously chastened spirit, with Nature's sermon in my heart and her inspirations all around me, I turned to my companion, and falteringly told the story of my dream.

In silence, and with wonderment in her eyes, she listened to all my heart bade me say, and when I had finished she slightly turned away from me, and her head was bowed. Then in a flash my mind reverted to her recent bereavement; and when I thought of her loneliness and isolation, the uncertainty of her prospects, and the shame and mental trials she would in all

probability be called upon to bear, reproach came to me, and I felt selfish and mean in adding to her burden of mind.

'Miss Stuart,' I said, 'please pardon me if I have said anything amiss, or if what I have spoken is unwelcome or ill-timed, and a cause of unhappiness to you. If it is so, I am deeply sorry, but I cannot take back anything I have told you. God knows it is true, and my whole life will be devoted to prove to you that it is so. But for the present—well, doubtless you have plenty to think about, so please dismiss from your mind what I have said. If I may, I shall some day speak to you again. Meanwhile let me be your friend. Somehow, I think you need one.'

She looked gratefully at me with moistened eyes. 'Thank you very much. What you have told me is all so strange, so unexpected, and—and I feel it is all true. You are very kind. I do need a friend, and I can trust you.'

I am lying in my old truckle-bed. It is far into the morning, and sleep has not yet closed my eyes. Nathan has not been so well to-night, and his restlessness has kept Betty astir, but it hasn't disturbed me. And, somehow, I am not lonely. 'I do need a friend, and I can trust you;' these words, during the quiet hours, are often being whispered in my ear, and I would rather remain awake and hear them than pass into slumberland and miss them.

(Continued on page 663.)

A HAMMOCK SONG.

I SING the praise of long summer days
In my garden above the sea;
That bit of the wide, wild mountain-side
Sacred to mine and me.

No roof man-made, but the blest pine-shade,
And the sight of the sea below me,
Are mine, while set in my boat of net
With a parasol to row me.

Lost to the ear, to the eye so near,
The great sea sleeping lies;
And far, far away, beyond the bay,
The hills of Yamato rise.

True, we travel not from the one sweet spot.
Where else should I wish to be?
And thus to float in my gentle boat
Is movement enough for me.

Led by the eye, the spirit can fly
To distant mountain ways,
Whose leagues to unravel the foot must travel
For many weary days.

Oh, the dream to be freed from the world of greed!
And willing am I to leave
To those its pleasures who count them treasures,
While I may but receive

From the living earth her sunshine's mirth,
Her wideness, her air of dawn,
Her colours that change with the great sun's range,
The scent of her dews at morn.

LILIAN RAWLINGS.

ROKKOZAN, JAPAN.

Chambers's Journal

SEVENTH SERIES

ALL IN THE DAY'S WORK.

From the Russian of V. Nemirovich-Danchenko, by ALDER ANDERSON.

FIGHTING had just ceased. Officers and men were alike gloomy. Almost every soldier in the ranks appeared to be wounded. One had a bandaged hand; his neighbour, a bullet in the leg, limped painfully, using his rifle as a crutch; the head of the man behind him was bound up in a soiled handkerchief, from underneath which blood was trickling, and his cap was pushed right back to the nape of his neck. There was no sound of singing, as is usual when a regiment is falling back from the fighting-line to rest; there was not even talking; nothing but the monotonous *tramp, tramp* of thousands of weary feet blending into a sort of confused rumble with the metallic clink of steel. The colonel, the adjutant at his side, rode at the head of the regiment. He looked gloomier than anybody. His favourite charger had been killed under him, and he was obliged to bestride a huge, unwieldy artillery horse accustomed to drag heavy guns. Whenever he forgot himself, and relaxed his hold of the bridle, he was treated to a most unmerciful jolting.

Suddenly my eyes fell upon Saharoff, whom I knew to be an officer's servant. He was standing at the side of the roadway, as the men marched past, attentively scrutinising each officer. The man's extraordinary devotion to his very youthful master, Second-Lieutenant Olenine—'Girlie,' as he was called by every one in the regiment—was proverbial, and we all knew whose face it was he was now looking for; a face he would have to look for, alas! in vain.

Saharoff was in every way a unique type of soldier. To begin with, his hideous appearance was notorious throughout the whole force. There was no trace of hair on those parts of his face where you might expect to see hair on a man—the jaws and the chin; but, as if to make up for this, the cheeks were covered right up to the eyes by a thick crop of bristles, which even made a very successful attempt to scale the nose. The ears, too, were completely hidden by a similar abundant growth. Awkward and uncouth-looking beyond words, and lame into the bargain, he invariably walked stooping, as if bowed down by the weight of some terribly heavy, though invisible, burden. With all this, he possessed phenomenal physical strength, combined with the long-suffering disposition of one

of those village dogs which patiently submit to have their ears pulled by every urchin in the place. He was always ruminating and dreamy, and it would have been hardly less difficult to engage a lamp-post in conversation than to extract half-a-dozen phrases from him.

'Your honour, my master, Lieutenant Ol'—Saharoff addressed our lieutenant, who had just joined from Petrograd.

The officer did not answer. He even half-turned away, with an impatient gesture.

In spite of the snub, Saharoff attempted to arrest the attention of the next officer who passed him. Again he received a rebuff. Then he caught sight of me, and gripped my hand. 'Thanks be to God! Where is my master? You can tell me.'

But, like the others, I, too, held my tongue.

'Is it possible? Oh God! Is it possible he is wounded?'

Silence, as before! No one of us was inclined to be the first to give him the bad news.

At last he decided to ask the men, and pushed into the ranks among them. He was soon told all he dreaded to learn. Half-a-score of the men had actually noticed how 'Girlie' had been struck down by a bullet as he was running forward to the attack. After that, no one could recall having seen him again. Perhaps the Red Cross men had picked him up; or, on the other hand, perhaps he was dead! Beyond the bare fact that he had fallen, nothing was known for certain.

Saharoff, reeling out of the ranks as if he had received a blow, seemed to collapse utterly. He sat down right in the thickest part of the mud, an expression of saturnine despair on his face.

The pet dog of the regiment, Muharka, ran up to him and licked his face; but the uncere-monious caress was absolutely unnoticed. Much perturbed by such a reception, Muharka retreated a few steps, and began to bark; but to this fresh demonstration Saharoff remained equally unresponsive. Thereupon the dog, giving the case up as hopeless, put its tail between its legs and trotted quickly after the soldiers on their way to camp.

The evening was cold, gray, and miserable, and the thick putrescent fog penetrated everywhere. Our tent was dimly lighted by a single

candle. As soon as we entered it we flung ourselves down to rest. Now and again, as if grudgingly, we tossed a brief phrase at one another. No one had any desire for conversation.

About an hour had passed in this manner, when the flap of the tent was raised, and Saharoff's massive frame filled the opening.

'Hallo, Saharoff! what's the matter?' I asked.

'I have looked into every ambulance, your Honour. There's nothing—nowhere.'

None of us needed to be told what Saharoff was referring to.

'Well, what do you want me to do?'

'Please, your Honour, a revolver.'

'A revolver?' I had jumped to my feet.

'That's right, your Honour—a revolver.'

'What for? Can it be possible the fellow wants to shoot himself?' was the first thought that had flashed into my mind, though a moment later I found myself laughing at this wild flight of my imagination.

'I am going,' Saharoff said simply.

'Going! What do you mean?'

'To look for my master. To find Lieutenant Olenine.'

'Are you crazy, man? Don't you understand that, even if he has remained there still, the Turks have long ago occupied the hill?'

'That's right, your Honour.'

'How the deuce do you think you can get there, then?'

'Please give me a revolver, your Honour.'

'Don't you understand plain Russian, my good fellow? I tell you again you cannot go there. The Turks occupy the ground.'

'That's right, your Honour; and I am going back. Others have had to remain there. What would it matter if I?—'

This was probably the longest speech Saharoff had ever made in his life. He stopped abruptly. He had noticed the revolver lying on the bed I had risen from. He stepped quickly forward and made a grab at it. 'This is all I want, your Honour.'

I have never been able to recall precisely how Saharoff got out of the tent; although I know that we all looked upon him as done for. But in war death is such a very ordinary occurrence, and everybody is always so ready to meet it, that we speedily fell asleep without, I am afraid, giving another thought either to Saharoff or to his youthful master, Second-Lieutenant Olenine. During our slumbers, however, something very extraordinary took place.

Slowly and deliberately Saharoff made all his preparations. The outposts were held by dragoons who had gone through the whole campaign with us, and therefore knew Saharoff quite well both by sight and reputation. As a matter of fact, however, they did not notice him until he suddenly appeared in their midst and announced his intention of going to look for his master.

However mad and extravagant such an enterprise might have seemed to us, these soldiers apparently looked upon it as all part of the day's work; as obligatory, indeed, in Saharoff's case, though they quite realised how risky it was.

'What a rum old stick you are!' said a dragoon. 'How do you fancy you are going to recognise him in this fog? They are lying about in heaps out there.'

'Haven't I matches? I have ten boxes,' said Saharoff curtly. And without more ado he started on his perilous adventure.

For three hours he stumbled on in the darkness, his ears ever on the alert, to catch the sound of the Turkish soldiers' voices or the moans of the wounded. But he heard nothing but the wind rustling through the maize, for the inhabitants, under military instructions, had fled, leaving the harvest ungathered. Occasionally he was startled, but it turned out to be only a jackal moving in the same direction as himself, towards the battlefield where so many Turkish bodies lay scattered, or a hungry wolf running in and out among the half-rotten maize-stalks.

More than once he found himself at the bottom of a deep hollow, where all the tracks became inextricably mixed, and he would get clear of this only to stumble into a ravine which absolutely barred all farther progress. Then, face downwards in the deep, slimy mud, which afforded grip for neither hand nor foot, he had laboriously to retrace his path, and could get on his feet again only with the greatest difficulty.

At last he was confronted by a steep incline. He began to clamber up, but had hardly made fifty steps when on the skyline he noticed several indistinct reddish blotches, which alternately increased in volume, then disappeared entirely in the drifting fog. These could only be camp-fires, and Saharoff realised that he was now quite close to the Turkish lines.

This was the moment to take his final measures. Very carefully, with infinite precautions, he placed the ten boxes of matches within the breast of his coat to keep them dry as long as possible. Then he lay down once more flat on his face and began to crawl painfully forward. With every step the advance became more and more difficult. It seemed as if the thick, tenacious clay were actually exerting itself to hold him back. At times he was nearly submerged by it. Finally even his great strength proved unavailing, and he felt himself slipping helplessly downward.

The noise of his fall had evidently been noticed, for there was a flash and a report from above; but the bullet flew harmlessly far beyond him.

For some minutes Saharoff lay perfectly still, hardly breathing; but there was no second shot. Then the struggle between a man's grimly patient determination and an accumulation of dangers began anew, and Saharoff at length found him-

self on the battlefield. Through the fog, which had become still more dense, he could just make out dim, shadowy shapes moving to and fro, bending down now and then, as if searching for something on the ground. Saharoff well knew what sinister work was afoot. These were human jackals looting and murdering the wounded! God! would he be in time?

Then he saw that one of the shadows was coming in his direction. He became as rigid as if glued to the ground. Already the ruffian had stooped down; but before he could ascertain whether there was still breath in the prostrate figure, Saharoff had him by the throat in a grip from which there was no release, and the rising cry was strangled into an almost inaudible death-gasp.

There were hundreds of Turkish bodies lying on the field, and Saharoff had to light many a match to examine them before he could distinguish the uniforms. In and out among the heaps he crawled with the cunning of a cat, his eyes everywhere at once. He never gave himself a moment's rest; his courage never faltered. Desperate as such a search might appear to others, he himself did not contemplate even the possibility of failure. And at last he had his reward. His master lay before him, still alive!

Saharoff had come in the very nick of time. Towards the little hummock on which Olenine had fallen helpless, with a broken leg and a bullet in the shoulder, a group of those sinister ghosts was even now making its way. Within ten minutes, possibly in less, the unfortunate young man's groans would, in all human probability, have been silenced for ever, so as not to interfere with the ghoulish work.

In the dim light of early morning our sentries noticed a strange figure stumbling towards them. One man had actually raised his rifle and was on the point of firing, when a hoarse exclamation—a groan rather than an articulate phrase—reached his ears. He was only just able to make out, 'Don't shoot! I am one of you. I am bringing in Lieutenant Olenine.'

A moment later Saharoff reached the lines, and immediately fell down senseless, inert as a log.

Across the whole wide stretch of country occupied by the enemy the brave fellow had crawled on his hands and knees, his master

securely strapped to his back. He had foreseen everything, and had actually taken a towel and strap with him for this purpose. Until well out of range of the enemy's fire he had never once stood erect.

The success of Saharoff's daring exploit aroused as much enthusiasm as it did surprise, but he himself appeared to grow more taciturn than ever. When we congratulated him he seemed hardly to understand what we meant. He never stirred from the ambulance to which 'Girle' had been taken. No nurse could possibly have been more devoted.

On the very first day when there was a respite from fighting, the entire force, of which our regiment formed part, was solemnly paraded. The senior General-in-Command was there in all his glory, surrounded by lesser satellites. He called for Saharoff.

Looking, if possible, more ungainly and ugly than ever, Saharoff slouched forward.

The General motioned to him to come nearer.

Still more embarrassed now, Saharoff obeyed.

'You are a true hero,' said the General, 'and I thank you.' Thereupon, much to Saharoff's confusion, the General embraced him. Then the General continued: 'You have proved that a loyal and devoted heart may beat in every one of us under this gray cloak. What you did was great, both in the eyes of your countrymen and before Heaven. Any man may bear himself bravely in the heat of battle; but to go alone, as you did, and carry off your master from under the enemy's very nose is a deed of which you may be very proud.'

The General fixed the Cross of St George to Saharoff's coat. 'I call for cheers for our brave comrade-in-arms, Saharoff,' he said in very loud tones. 'Hurrah!'

'Hurrah!' roared the troops.

And Saharoff, the new decoration on his breast, shuffled back into the ranks, tears streaming down his cheeks. The thundering 'Hurrahs!' followed him; and 'Hurrah!' was still being shouted long after the object of this imposing demonstration had disappeared again into obscurity, much perturbed in spirit, and greatly wondering why so much fuss should be made about something that to him seemed to be merely part of the work he had undertaken to perform when he became Second-Lieutenant Olenine's servant.

THE BRIGHT EYES OF DANGER.

CHAPTER XL.—*continued.*

HE was within a few paces of the wood when I stepped out into the open. Our eyes met. He halted, and the plaid swung free of the sword-hilt. He was gaunt and hollow-

eyed, his clothes ragged and travel-stained, rough clouted brogues were on his feet, and a short unkempt fair beard changed his appearance, giving him an older and neglected look. For

a tense minute we stood silently facing each other.

'There is nothing so certain as chance! It is Mr Layton!' said the Chevalier.

I bowed.

'I have a good memory. You remember our last meeting?'

'I do, your Highness.'

'I held a Court then, and—now!' The words came quietly, an infinite sadness in them and his gesture.

'I wear his Majesty's uniform now, sir, yet in war I hope that one can recognise and do honour to a gallant and generous enemy.'

'I thank you. Would that I could use your words regarding Duke William! Were you at Culloden?'

'I was.'

'And after it, I presume? My poor people! His voice broke as he turned his head away. 'The Highlands are a shambles! My poor people!' He lifted a haggard face. 'You will pardon my weakness. I have lost my men in the mist, and you have a picket at the other end of the wood. I passed within a hundred yards of a sentry. I could almost have found it in my heart to make myself known to him. I have been an outlaw, hunted for months. I am tired, tired. But this is—the end. Do not hesitate, I pray you, in your duty.'

My duty! I stood inarticulate, with the bitter knowledge that I was his captor. In a swift brain-picture I saw 'the end,' the only possible end—the hurdle to Tower Hill, the scaffold, the gaping crowd.

In the exaltation of battle, the ritual of command and obedience, with comrades falling beside one, and the enemy a concrete and visible menace of death, duty becomes second nature, part of the blood, accepted and unquestioned. But there, in the quiet of the morning, face to face alone with a man who had shown me a kind and chivalrous heart, the thought that I was his captor rang and rang again in my brain, with the despondency and insistence of a passing bell. I was face to face, not with the Pretender, a rebel Stuart and enemy of my King, but with a unit of poor humanity, a youth little older than myself, hunted, racked in body and mind, broken, doomed. Doomed, for I wore King George's uniform! The terror and pity of it all came to me with the suddenness and authority of a blow. I buried my face in my hands.

He laid a hand on my shoulder, and his next words steadied me. 'I understand; but again I ask you, pray do not flinch from your duty.'

From his voice and mien, he might have been holding Court at Holyrood House instead of facing the bitterest moment of his life. 'I am your prisoner.'

He unsheathed his sword and looked at it, a gulp in his throat, and held out the hilt toward

me, with 'Take this,' and for the first time there was a tremor in his voice.

'Your Highness,' I stammered out, 'pray keep your sword. I am but a cornet of horse, and you'—

He bowed his thanks with grave dignity and sheathed the sword. 'I would change places with any cornet of horse with all my heart. I thank you for your courtesy; but the day is past for ceremony. I am your'—he halted on the words—'your prisoner. Let us go hence.'

He turned and led the way. My prisoner! Had any one seen us move off through the heather, assuredly he would have set me down as the prisoner, never the Chevalier; for he strode in front, erect, and I followed him with hanging head, heaviness and a smouldering anger in my heart against the winds of chance that had sent me to the lonely moor above the Spey.

'You are silent, Mr Layton,' he said at length. 'Perhaps I can read your thoughts. Forget them. The fortune of war was against me—against us both. Another of the Elector's officers would certainly have met me had I passed you. This is my last day in the heather. Come. And yet—and yet I was within a day of Glenroy, and freedom.' The last words were not meant for me, but I caught the whisper.

I followed him in dumb misery, remembering Holyrood, and his kind smile when Charlotte and I met in his presence there.—Charlotte! All the glamour and romance of the Stuarts was in her blood, and I heard her voice again. 'Next to you, Ned, the Young Chevalier has my heart.' He was her hero, and here was I, her husband, his guard on the first stage of the poor outlaw's road to doom. For the next few minutes I walked behind him mechanically, like a man in a dream, neither of us breaking the silence.

In the leaden absorption of my thoughts, I had not noticed that the mists were massing again. I felt their chill breath, and, looking up, saw a pall of mist, thick as smoke, creeping swiftly, stealthily forward, its density a merciful respite, for it shut from my sight the Chevalier's drawn face. I could hear his footfall somewhere near me, but the mist closed in and I could not see him. But swift on the heels of the consciousness of this respite came the certainty that with the next lift of the mist he would be beside me again, my prisoner.

Suddenly I went cold and hot by turns, my thoughts alive with a speculation. Would he return? I had not asked for his parole. He was under no obligation to give it. It would be easy, under cover of the thick enveloping mist, for him to escape. There were no signs of my sentries. No one would know—except myself. I stood there, a prey to emotions that I hope I may never face again. The hard world . . . man's judgment on his brother . . .

what remote and futile things they seemed! . . . Then out of the tumult of my thoughts, clear as a bugle-call, the words of my King's commission rang in my heart.

Here, plain as a star, was my duty. I knew it, felt it, and at its behest stepped forward into the mist towards the footstep of the Chevalier. At that moment I had but one resolve, to steel my heart and do my duty. I swear it. But I had not gone three steps when a voice called to me out of the mist. 'Where are you?' it called; and again, 'Where are you?'

Comes there once at least to every man a moment of self-knowledge—the discovery that his blood holds strange surprises; that forces other than his own strong enough to slay the soul may slumber within him, may waken to leap out and defy him, and put honour and duty to shame. A third time his voice rang out, and this time I called in answer, but in a voice that I hardly recognised as my own, '*You are not on parole.*'

I listened, my heart thudding, when the capricious wind cut an avenue through the mist, and revealed the Chevalier not twenty yards away.

He looked at me, white to the lips, his eyes loaded with a question. But it was never put. All I heard was a dry sob. While a man might have counted ten we stood thus eye to eye, and the words came again from my parched throat, '*You are not on parole.*'

He took a step forward, held out both hands to me, and his bared head bent toward me in a silent gesture of farewell. I turned my head away, and when I looked again an Invisible Hand was drawing the curtain of the mists. The solitary figure was dislimned, save where the light touched his fair hair. Another moment, and it vanished. I was alone in the unearthly stillness of the moor.

How long I stood there I know not. The distant sound of a trumpet from my picket, coming down wind, roused me, a strange and dreadful note in the familiar call. For it was more than a summons to the realities of duty. It was a sad and accusing voice, sounding, God help me! over the grave of the honour and loyalty of a Layton. With one glance at the empty moor, I turned and fled the place.

I ran blindly through the wood, and reached the bivouac just as the corporal was sending out a search-party for me. I gave my orders mechanically, and rode off to the Fort with my men, striving not to think, riding like one possessed of devils, as indeed I was. From first to last of that mad gallop a sledge-hammer beat in my brain. The ground spun round under me. More than once I was nearly unhorsed, and when I reached the camp I literally fell out of the saddle.

The last thing I remember was being carried to my quarters.

It was weeks before the fever passed away and I was able to leave my tent.

There is little more to tell. I was invalided home to Darehope, and on the Border uplands, under the care of my dear Charlotte, I regained strength. Once only my wife asked me what my secret was. I put her off with glozing words, and she did not ask me again. For her I write these pages, not as I wish, but as I am able, discovering as I write them the poverty and emptiness of mere written words to tell the bitterness of a soul in defeat. For I have no illusions regarding myself. The poor trooper who was shot for desertion on Loch Erich side failed less in his duty than I; and he died like a man, his burden slipping from his shoulders when he took his last look into the musket-barrels. But I must trudge to the end under the burden of my own making. Time only rivets its load more closely to me. All the casuistries ever spun cannot lighten it by a featherweight. On that September morning I tore up my charter of manhood with my own hands.

I resigned my commission, much to the wonder of my friends, for a career seemed open to me. But the King's uniform was not for me.

I retired to Darehope, the quiet of the hill-country and sweet companionship bringing with them a measure of balm; for until I came overseas the whole of our married life was passed there, and there our little son was born. To outward seeming I was content to turn aside to a backwater and let the great world's current flow past unheeded. In truth, I strove not to hear its voice; but wandering winds of my fancy carried it up the fells, where the echo of it lingered and lingered until the Liddesdale hills—that at first had held for me shelter and sanctuary—became sentinels (almost, I thought, comprehending ones) on the skyline of my gray and limited horizon. But, as the days followed each other like water over a millwheel, the anodyne of routine failed, and every day it came home to me that I, a Layton, had been near the precipice of self-pity; that in action, not in barren regrets and introspection, lay duty to my conscience and my King. Then came news of Britain at grips in Southern India.

One morning, alone on the hillroad, I heard a rattle of harness, and at a bend of the road by Hermitage Water almost rode into a troop of dragoons. On they came, limber-looking youngsters and grizzled sergeants, with the cornet, an eager-eyed recruiting officer, in front. The sight of the scarlet and steel recalled, magically, the past; visions and sounds and scents of it, things I had fondly imagined buried; my old regiment, my comrades; fighting, movement, colour, life. The young officer accepted my offer of hospitality for himself and his men at Darehope. They were, he said, riding to London, there to embark for Southern India, to fight for

Britain; and with no waste of time (for he was forcing his march), he and his men rode off. I went with them for a mile or two of their way, watching them wistfully until the last speck of scarlet faded in the distance, and as I turned homeward I knew that danger's bright eyes beckoned me, and honour's voice called me to the great world beyond the hills, to do something for Britain.

I took a passage at my own charges in The Honourable East India Company's ship *Humber*, and came to Southern India. Since then I have seen many things, and have done much fighting, for though he may have no King's commission, a man can make himself useful. At Augenar I was badly wounded, and here I lie counting the days until I am able to help Robert Clive again.

The *Virgil*, with its chart and dark red stains, lies before me, bringing back many thoughts and faces. One hand I can clasp in the flesh, for Patrick Maxwell, never a drone, tiring of Jacobite exile in France, came out here, having secured a clerkship in the Company. He nursed me like a brother, and his is the hand that carries these writings to my wife in far-off Liddesdale. He wears again the Prince's ring that I won from him, and has earned the right a thousand times by his kindness.

Bertrand, I hear, is in France, wearing the blue and silver of the *Garde Écossais*.

Anthony Brander, well paid for his share in our adventure, owned for a time the 'Baltic Tavern' in Rodney Street, a great 'howff' for Free Traders, but became tired of respectable prosperity and went back to his old business.

Glenira has found 'port after stormie seas.' He lived but a few months with us in Liddesdale, his mind as dark as his sight, and nothing

was gleaned from him concerning the details of his adventure in the North further than I have given in this narrative.

It may be written otherwise, but I pray that some day, when this strife in India is over, I may see again the friends concerning whom I have written, and come home, my duty honourably done, to Liddesdale.

EPILOGUE.

HERE ends Edmund Layton's manuscript. On its margin, faded with the years, are the words, '*My Edmund died in the Carnatic.*' Mistress Charlotte wrote them.

In the room where I have worked, giving his story of old years to such as choose to read it, the portraits of Edmund Layton and his wife hang facing each other. Often (it is a fancy, but I cherish it) I think that her hazel eyes meet his, with understanding and forgiveness.

He may have been right or wrong. The last Great Court-Martial, reading intentions as well as deeds, will deal more justly and gently with the Laytons of this little world than do their fellow-men. If Edmund Layton erred, he chose to atone in his own way—surely of all ways the best—by helping his country, trying in his own plain words 'to do something for Britain,' 'to help Robert Clive.' I wonder if his far-off grave has a name.

Let each choose for himself a standpoint of ethics regarding the collision between warm heart and cold duty on that morning in 'Forty-six' in the heather. Mine must be a gentle one towards the generous heart in dust of the Carnatic.

THE END.

ELECTRIC LIGHT AND ITS PRODUCTION.

THE average man of to-day has a very vague idea as to the means by which we obtain our electric light, and of the technical facts relating to its production. Some remarks on this subject may, therefore, be of interest, particularly to those who do not have technical electrical knowledge, and who manipulate their electric light switches every day.

In order that we may comprehend the facts in respect to the production of electric light, it is important that we should know the principle involved in the generating of an electric current. To produce an electric current a copper wire or conductor is subjected to a movement in a magnetic field; a magnetic field being understood as the field or airspace through which the lines of force (emanating from a magnet or system of magnets) pass from the north pole of the magnet in question to the south pole. The reason why copper is employed is on account

of its offering the least resistance of any metal (with the exception of silver) to the electric current. In practice, electro-magnets are chiefly employed, an electro-magnet comprising an iron core wound with a bobbin of copper wire. This arrangement is adopted to obtain a much stronger magnetic field than would otherwise be the case if ordinary permanent magnets were utilised.

To construct an electrical generator, the actual current-producing machine, it is first of all imperative to decide on the size, speed at which the rotor of the machine should rotate, and pressure of the current, &c., these data necessitating fairly complicated calculations. When the calculations are completed, drawings showing the complete details of the construction of the generator are prepared in the drawing-offices of the manufacturing engineers who are building the machine, and copies of the drawings are distributed to the

various departments of the workshops where the generator will be made.

The generator will consist of two essential parts—the rotating mass or rotor, and the stationary part or stator, in which the rotor rotates. The magnets can be made to rotate and the other part held stationary, or *vice versa*; the essential fact being that a movement is obtained relatively between the copper conductor from which current is taken and the magnets. To bring about this movement the rotor is driven by an engine, turbine, or electric motor, and a speed of about one thousand five hundred revolutions per minute can be looked upon as quite a normal speed even for a rotating mass of about fifteen tons. When the generator is completed in the workshops, it is generally tested there in order to ascertain whether it fulfils the requirements of the clients as regards output, pressure of current, quantity of current, smooth running, heating, &c.; and, assuming that this is the case, it is delivered to the power-station where it is intended to be erected and run for the supply of electric current to neighbouring districts or to districts at a distance of several miles.

The erection of an electrical generator calls for very experienced handling, particularly in view of the fact that all the bearings of the complete generating set must be in correct alignment to the extent of a few thousandths of an inch. It is also of great importance that the generator shall be in a dry condition before it is called upon to give its full output and pressure; otherwise short circuits may occur, resulting in local heating or a complete burn-out of the machine.

Before current can be taken from the generator it is, of course, obvious that conductors must be provided to lead the current to a point of distribution—namely, the switchboard, where this weird energy is harnessed and controlled. There are mounted on the switchboard apparatus for switching the current on and off, automatic devices for preventing the machine from carrying an excessive overload, also voltmeters giving readings indicating the pressure of the current of the machine, ammeters indicating the quantity of current, and wattmeters which show the output of the machine. The switchboard is understood to be the actual marble or slate panel, with apparatus and instruments. A switchboard, with the polished nickel or copper finish of the apparatus and instruments, usually presents an aspect pleasing to the eye, as the power-station engineers or switchboard manufacturers, as a rule, strive to obtain a harmonious appearance of the complete switchboard so far as is consistent with the economical and satisfactory working of the complete plant.

From the switchboard the current is led through insulated cables—the cables being insulated, of course, to prevent the passage of

current to 'earth'—to cast-iron junction-boxes generally placed underground. The object of providing junction-boxes is to enable the branching off of the cables to be made in a satisfactory manner. As the insulation of the cables has to be cut to make a proper branching off and joining of the cables possible, and the copper core of the cable laid bare, it is essential that a covering should be put over the whole of the joining-work, and it is for this purpose that junction-boxes are provided. The cables are led in ducts to the consumer's premises—that is, to the small panel on which the main house-switch and fuses are mounted. A few words may be said in respect to the fuses to the effect that the object of these is, of course, to 'blow' or 'fuse' when the current taken on to the consumer's premises reaches a value slightly in excess of the maximum allowable for the lamps. The fuses are made of a predetermined section, and will melt away when the current reaches this excessive value, thus breaking the electric circuit and extinguishing all lamps to prevent them suffering damage, as they might be burnt-out if an excessive current were permitted to flow. From the house-switch and fuses the current is led to the respective room-switches, and thence to the lamps.

The actual illumination obtained from the glow lamp is due to the glow of a carbon or metal filament having a thickness of a few hundredths of an inch. This filament constitutes, on account of its exceedingly small section, a high resistance-path to the current, and consequently attains an exceedingly high temperature, and produces a yellow-white light. The idea of enclosing the filament in a glass globe is not merely to protect the delicate filament, but to be able to obtain a vacuum around the filament, thus preventing, on account of the lack of oxygen, a burning away of the filament of the glow lamp under normal conditions. The glow lamp is distinguished from the arc lamp by the fact that in the latter carbon rods having a diameter of, roughly, half-an-inch are employed in place of the extremely delicate thin filament of glow lamps. In the case of arc lamps two carbon rods or more are provided, the rods being placed one above the other, and spaced automatically by means of mechanism in the upper half of the lamp in order to form an air-gap between the ends of the carbon rods, across which an arc is formed which constitutes the source of the light produced. Actual burning of the carbon rods in an arc lamp takes place, seeing that the rods are not placed in a vacuum, as is the case with glow lamps.

Thus, in brief general outlines, do we obtain our electric light which is now in such common use, and which is recognised as the most serviceable kind of house illuminant.

ON GOVERNMENT SERVICE.

CHAPTER III.

SOME hours later, after crossing the Channel, Royden, bearded and wearing the more or less typical garb of a substantial business man, entered a smoking compartment of the night express from Calais to Paris, and started upon the more important stage of his journey. With apparent carelessness he deposited a small valise on the seat he had secured, and in the subsequent arrangement of himself in a long ulster saw that it was placed so that he sat firmly upon it.

The compartment was one of a corridor carriage, and his companions for a time were two, a third and fourth eventually joining the smokers as they raced through the pitchy blackness of a July night. Wary watcher as he was, Royden observed nothing regarding the four men to arouse immediate attention. One was a Provençal of an eminently respectable type, and sufficiently bald-headed to do away with any idea of disguise. A barber by trade, he had told the others, a piece of information which provoked a general laugh at his expense; a smile even from the crabbed elderly individual who occupied the opposite corner seat to Royden, and by the aid of a reading-lamp was intent upon the pages of some musty volume. His face was livid, worn, and wrinkled; the locks of hair that straggled from under a purple skullcap grizzled and lank. He wore a fur-lined coat—the air was chilly and damp—and a pair of large fur gloves. It was odd perhaps—for there was nothing really exceptional about them—but Royden had, on consideration, taken particular note of these same gloves.

So much for the Professor—as the party had addressed him, uncorrected, in casual conversation—and for the little, dapper, bald-headed barber. The other occupants of the carriage were, it seemed, equally harmless, the third being a mere lad, the fourth evidently a Parisian, and the French boy's tutor.

Following a lively burst of laughter which the barber had evoked, the conversation between the five became animated. The Professor, in broken English, for the benefit of Robinson, described his recent visit to Oxford and Cambridge, and the wonderful manuscripts he had seen there. The Parisian talked excitedly of politics and the chances there were of war. The barber spoke feelingly of how the law of conscription would impoverish trade, the boy listening and yawning alternately; while the commercial traveller allowed the company to believe that he was the usual stolid Britisher, unaffected either by war or rumours of war.

'A good square meal is what is most important to me,' laughed he bucolically. 'Let war

come if it likes, so long as I get my three meals a day.'

'If war comes it will considerably alter the map of Europe,' said the Parisian, with a shrug that included the tapering waist of his black silk-faced overcoat.

'For the benefit of what nation—eh?' interposed the Professor. There was a suggestion of a malicious chuckle accompanying the question.

'You are a Frenchman, *m'sieu*?' asked the Parisian, looking him loftily up and down as only a Parisian could.

'Cosmopolitan, *m'sieu*.'

'And cannot therefore favour subservience to one empire?'

'Certainly not. But the Germans intend to rule.'

'They've got to try first,' replied Thomas Robinson through his beard. 'I can't just see myself or any other Englishman boosed by a Prussian. I think the Prussian would have the worst of it.'

'Britain—she is at her weakest now'—began the Professor; but he was stopped by an abrupt, 'Beg pardon, Britain's never weak,' from the commercial traveller. 'Where did you lay hold of that cranky idea?'

'What of Ireland?'

'You bet!' was all Robinson dignified to say.

'Britain is not weak, and France learnt her lesson in 1870,' said the Parisian, emboldened by the sturdy attitude of the Englishman on the subject. 'This is how we regard the Germans to-day;' and he made a graphic feint of spitting in Germany's face.

'I should esteem it a privilege to cut the Germans' hair and shave them, free of charge,' volunteered the barber at this point; and the Professor firing up with what struck Royden to be unnecessary zeal, it remained to him to bring the conversation concisely to a safe close.

'At any rate,' he mildly remarked, 'when they *do* come along we'll all have a pot at 'em. They're worth so much honour;' whereupon the barber, with a smiling '*Au revoir, messieurs*,' quitted the compartment; the crabbed Professor extinguished his lamp; and the Parisian, first politely requesting common assent, turned off the electric lights and went placidly to sleep; his youthful pupil soon doing the same. Royden dared not sleep; but, still retaining his position upon the valise, he relaxed his muscles and all but dozed. He was, however, too much on the alert to indulge in the luxury of unconsciousness, and the next instant, for some inexplicable reason, his temporary drowsiness received a sudden check.

Except for the somewhat aggressive snoring

of the purple-skulled Professor in the opposite corner, and the customary rattle of the express, everything was fairly quiet. The Parisian was far too much of a Parisian, born and bred, to be otherwise than unobtrusive in the manner of his slumbering; the boy obviously was tired out. So quiet, indeed, did everything become that the watcher almost dozed again, although on this occasion a peculiar thing occurred, inasmuch as the snores of the Professor abated and Mr Thomas Robinson's grew doubly sonorous. Had he dropped off, at last, in spite of the exceedingly good cause he thought he had for keeping awake? It appeared so. His feet were up, his arms limp, his head low, and his heavy breathing, which gradually subsided, became noiseless and sufficiently regular to satisfy the most suspicious that he slept; slept, that is to say, and was not feigning sleep.

It appeared so—yes; nevertheless the merest movement on the part of the purple-skulled Professor, now strangely passive, did not escape the hermetically sealed eyes of Thomas Robinson. True, little could be seen, little heard even to ears as keen as a redskin's; yet he was positive that under cover of the darkness there were strange happenings. Purposely refraining from turning on the light, in order to court the adventure, he appeared to sleep as tranquilly as a child. When, therefore, a hand stole mysteriously here and there about the folds and pockets of his travelling ulster the incident did not take the supposed sleeper altogether by surprise. Still the deep, regular breathing of Thomas Robinson continued; and, had there been any light to testify the fact, not an eyelash he possessed quivered.

The hand strayed stealthily higher, sought his breast-pocket, and, finding nothing there, strayed on more boldly, till it reached the broad lapels of the ulster. A pause, which seemed an eternity to Royden, ensued, for the faintest rustle of paper indicated, as he had originally meant it to do, that what the searcher wanted was encased between the cloth and stitching of the lapels. Evident perplexity as to the best way of securing the despatches had caused the momentary pause. Before the hand, however, was cautiously withdrawn, Royden acted, and acted decisively. Some super-self-control kept him motionless; but quietly seizing the stealthy hand in an iron grip, lo! to his amazement, it was the ungloved member, soft and slender, of a woman.

An irrepressible, long-drawn sigh issued from the lips of some one—somewhere—and he slackened his grip. Not a word was uttered, only a skilful backward movement made, and

everything outwardly was as peaceful in the carriage as before. Thomas Robinson's head was again sunk low on his breast. His breathing was as though he slept the sleep of reality. The Professor's snores recommenced as aggressively, and when the commercial traveller, the Parisian, and his pupil awoke at dawn to stretch their limbs, there he sat, his purple cap drawn down upon his face, his ample coat drawn up about his ears, his fur-lined gloves clasped serenely upon his knees. There he sat, and there he snored.

Paris was reached about five o'clock. The Professor languidly, sleepily rose; but, behold, in a second, of the four fellow-travellers there were only three! The Professor was gone.

In rising, Robinson had turned a moment to grasp his small valise, the tutor and the boy each to collect his belongings, and it had been then possible for him of the purple skull-cap to slip unperceived from the carriage. Naturally, his disappearance was of no account to the Parisian and his pupil, who, heedless of the passing adventure, went leisurely on their way; but to Thomas Robinson it was of infinite significance. Valise in hand, howbeit, he could afford to treat the matter lightly. Foreseeing, as he did, that an attempt might easily be made to discover the papers on his person, the dummy despatches secreted in the lapels of his ulster had served their purpose well. The valise containing the true despatches was safe—that was all that mattered yet awhile.

On alighting, Mr Thomas Robinson saw a man in a military cloak whom he recognised to be Nicol Rienski. Signs between them were exchanged; upon which a blue-bloused porter approached and conducted Robinson to a taxi. The exchange of signs having been repeated, no one saw how or when the flat leather case from the valise was handed over to the porter.

'Meet me at L'Esparti's at seven o'clock this evening,' whispered Stroff, mentioning a well-known Paris restaurant, and with expressionless faces they had parted. Everything took place exactly as Sir Henry Whateley had instructed Royden it would. He was driven rapidly to the Hôtel de l'Europe by a chauffeur who, like the majority of his kind, was hewn out of rock; and the porter, returning to the station, conveyed Rienski and his baggage, first into the private office of one of the railway authorities, where a certain quick change was effected, and then into a train *en route* for Petersburg, the despatches by preference no longer in their small flat leather case, but in the soles of the Russian official's capacious boots.

(Continued on page 665.)

NAPOLEON LEARNING ENGLISH.

FOR several years Napoleon had commanded the unceasing attention of the European Powers; his name had been constantly on their lips. He had made a great stir, and he was deeply conscious of it; but now, at length, the fatal blow of Waterloo has fallen. Conquered on the field of battle, surrounded by a governing class which is impatient to make terms with the enemy, and obtains his abdication, though he is still acclaimed by the people, after much uncertainty whither to turn, he has thrown himself upon the mercy of the British Government, only to learn with bitterness that captivity at St Helena is to be his fate. It is now, in his hour of defeat, and without hope for the future, that there comes upon him the desire to acquaint himself with the English language, and his attempts to learn it are irresistibly pathetic.

By means of translations Napoleon had been acquainted from youth with several English authors. He was extremely fond of Macpherson's *Ossian*, which he read in an Italian translation by Cesarotti. Its praises he never wearied of sounding, and imaginative work he stamped with his approval as *ossianique*. 'Read again'—such was his advice to an Englishman on board the *Northumberland* during the voyage to St Helena—'the poet of Achilles. Devour *Ossian*. These are the poets who lift up the soul, and give to man a colossal greatness.' A collection of thirty-four books, given him by his sister Pauline to take with him to Egypt, included Bacon's *Essays*, in which he marked in pencil two passages: one in the chapter 'Of Great Place,' from the third sentence, 'It is a strange desire to seek power and to lose liberty,' to the sentence preceding the lines from Seneca; the other in the chapter 'Of Kingdoms and Estates,' from 'triumphs among the Romans' to the end. Patronised by the younger Robespierre and by Barras, he had already exemplified the saying, 'By indignities men come to dignities;' and he was destined also, like Bacon himself, to find that 'the standing is slipping, and the regression is either a downfall or at least an eclipse.' Apparently he never saw acted even an adaptation of Shakespeare, yet on the eve of the rupture of the Treaty of Amiens he surprised his Council of State by diverging from a coinage question into a tirade against both Shakespeare and Milton. Too busy, even if inclined, to study English, he would, had he invaded England in 1803, have taken with him a corps of interpreter guides, which he expected to recruit from Irish and other refugees. One of these refugees, the notorious Lewis Goldsmith, read the London newspapers for him.

Captivity afforded him the requisite leisure.

But Napoleon was prompted to attempt to acquire the English language from no desire to acquaint himself with the literature. No; he was anxious to see what was being said of him, and of the questions to which he had given rise, in the English Press. Accordingly, on the voyage to St Helena he took two lessons from Count Las Cases, who, when himself an exile, had taught French and learned English in London. This personage was one of the four or five faithful adherents whom Napoleon had desired to accompany him into exile. It seems likely that Napoleon had acquired just a smattering of English before Waterloo, if not before Elba; for, having landed at St Helena, while waiting at Balcombe House till Longwood was ready for him, he occasionally spoke English (desiring her to correct his mistakes) to lively Betsy Balcombe, that *enfant terrible* who coolly questioned him not only as to his supposed atheism, but as to the 'happy despatch' of the wounded prisoners at Jaffa and the execution of the Duc d'Enghien. He sent, moreover, for some English books, one an edition of *Æsop*, and, pointing to the picture of the ass kicking the sick lion, he remarked in English, 'It is me and your Governor' (Sir Hudson Lowe). Generally he talked and joked with Betsy in French, though her French was not of the best. He got her to translate to him Dr Warden's account of the voyage of the *Northumberland*; and, though she was addicted to teasing, he had so won her affection that she shed tears on quitting the island.

When settled at Longwood, Napoleon resolved on seriously renewing the study. On the 16th of January 1816 Las Cases writes: 'About three o'clock the Emperor desired me to come and converse with him while he was dressing himself; we afterwards took a few turns in the garden. He observed accidentally that it was a shame he could not yet read English. I assured him that if he had continued his lessons after the two that I had given him when we were off Madeira he would now have been able to read every description of English books. He was perfectly persuaded of this, and ordered me to oblige him henceforth to take a lesson every day.'

Commencing on the following day with a lesson devoted solely to a study of the plan, form, and nature of the subject-matter of an English newspaper, Napoleon now took regularly a daily lesson, spending often five hours at a time at his task of grasping the intricacies of the English language. The irregular verbs taxed his patience, as did much of the syntax; but he persevered, as Las Cases found little ways of circumventing difficulties. Writing later, the

Count says: 'English was now become an affair of importance to him. It was now near a fortnight since he took his first lesson, and from that moment he had devoted some hours every day, beginning at noon, to that study, sometimes with truly admirable ardour, sometimes with visible disgust; an alternative which kept me in the greatest anxiety. I considered success as of the greatest importance, and I every day dreaded to see him abandon the ground gained on the preceding day. . . . The attainment of the English language was a real and serious conquest to the Emperor. Formerly, he said, it had cost him a hundred thousand crowns a year merely for translations; and how did he know whether he had them exact, whether they were faithful? . . . He often asked me whether he did not deserve the ferula, of which he now comprehended the vast utility in schools; he declared jestingly that he would have made much greater progress himself had he stood in fear of correction. . . . He had a quick understanding and a very bad memory; this vexed him much; he conceived that he did not get on. Whenever I could subject the matters in question to any regular law or analogy they were classed and comprehended in an instant; the scholar even preceded the master in his applications and deductions; but as to learning by heart and retaining the gross elements of the language, it was a most difficult affair. He was constantly confounding one thing with another; and it would have been thought too fastidious to require too scrupulous a regularity at first. Another difficulty was that with the same letters, the same vowels as ours, a totally different pronunciation is required; the scholar would allow of none but ours. . . . Besides, the scholar, even in his own language, was incorrigibly addicted to maiming proper names and foreign words; he pronounced them quite at his own discretion, and when once they had passed his lips they always remained the same in spite of everything, because he had thus got them, once for all, lodged, as it were, in his head. The same thing happened with respect to most of the English words; and the master found it best to have the prudence and patience to let it pass, leaving it to time to rectify by degrees, if it should ever be possible, all these defects. From these concurring circumstances actually sprang a new language. It was understood by me alone, it is true; but it procured the Emperor the pleasure of reading English, and he could, in the strictest sense, make himself understood by writing in that language. This was a great deal; it was everything.'

Here we have a picture of Napoleon back again at school, finding, most likely, that with him the mastery of English grammar demanded more skill than the mastery of military tactics, though, as he manœuvred men, he did manage

to manœuvre, as it were, the pronunciation to his own liking. As he progressed he was always anxious to test his skill; and, apart from his efforts at conversation, he grew fond of attempting short letters in English, some delivered to Las Cases for correction under an air of mystery. Three or four times the Count testifies to the Emperor's playfulness in this direction. Often these letters were written during nights when he could not sleep. Below is a specimen preserved by Las Cases, which is generally included in the Napoleon correspondence. Here we can see the kind of work done by the Emperor less than two months after receiving his first lesson. Most likely, seeing that Napoleon's handwriting was often illegible, there has been difficulty in making out some portions of the English, a few words being printed in italics. But both letters (the manuscripts are in the Bibliothèque Nationale, Paris) are given as printed. Which of the two was written first—the English, with the French to follow as a means of showing Las Cases more clearly what he meant to say, or the French, with the English as a translation—we have no means of deciding. Perhaps we are to understand the former, though the context seems to favour translation:

'COUNT LASCASES.—Since sixt wek, y learn the english and y do not any progress. Sixt wek do fourty and two day. If might have learn fivty word, for day, i could know it two thousands and two hundred. It is in the dictionary more of fourty thousand; even he could most twenty; bot much of *tems*. For know it or hundred and twenty wek which do more two years. After this you shall agree that the study one tongue is a great labour who it must *do into* the young age.

'Longwood, this morning, the seven march thursday one thousand eight hundred sixteen after nativity the yors (lord) Jesus Christ.'

The French is as follows:

'*Longwood, ce matin, le sept mars mil huit cent seize après la nativité de Notre Sauveur Jesus Christ.*

'*Depuis six semaines, j'apprends l'anglais et je ne fais pas de progrès. Six semaines font quarante deux jours. Si j'avais pu apprendre cinquante mots par jour, j'en pourrais connaître deux mille et deux cents. Il y en a dans le dictionnaire plus de quarante mille. Disons seulement vingt mille. Cela demande beaucoup de temps pour l'apprendre. Or cent vingt deux semaines font plus de deux ans. D'après cela, vous conviendrez que l'étude d'une langue est un grand travail qu'on doit entreprendre dans le jeune âge.*

Setting aside all thought of the difficulties which doubtless confronted the person preparing Napoleon's letter for the printed page, it is

quite easy to understand the Emperor's English; and the attempt, for a six weeks' pupil, is creditable rather than otherwise. Moreover, basing our judgment on this letter and the fact that every person finds it much easier to translate from a foreign tongue into his own language than *vice versa*, we can believe, making all allowances for the Count's enthusiasm, that Napoleon was well on the way toward a fairly good understanding of the contents of an English newspaper. But it does not appear that the lessons went on more than a few weeks. After April the Count's *Memoirs* are silent on the matter. Probably they ceased long before December 1816, when Las Cases, having committed some indiscretion, was compelled by the Governor to quit the island.

Napoleon's next professor, after how long an interval we cannot tell, was Countess Bertrand, daughter of General Arthur Dillon and Anne Laure Girardin, cousin to the Empress Josephine. She had never visited England, but her father, guillotined when she was eight, had probably taught her his native tongue. Napoleon, disposing of rich heiresses with Oriental despotism, had required her to marry Bertrand, one of his Generals; and though the poor girl was at first in despair, and refused to see her suitor, she speedily became attached to him. One of the children, named Arthur (after the grandfather, not, as one of the St Helena narratives states, after the Duke of Wellington), was born on the island in January 1817, and archly introduced by the mother to Napoleon as 'the first Frenchman who had entered Longwood without a pass from Sir Hudson Lowe.' She was extremely fond of society, and though, with her husband, she had accompanied the Emperor to Elba, she was so averse to St Helena that she stormed at Napoleon for involving Bertrand and his family in his banishment, and even tried to throw herself overboard. This, unlike some of her other antipathies, she never overcame, and at the time of Napoleon's death she was arranging for her return to France, on the plea of attending to her children's education. One of these children, whose ears were bored in Napoleon's presence that he might present her with ear-rings, survived as Madame Thayer, widow of one of Napoleon the Third's senators, till 1890. Madame Bertrand has left us no personal details of Napoleon as a pupil, either how many lessons she gave, or when she gave them. But, apparently, she gave a specimen of Napoleon's work to Madame Junot, whose granddaughter, Madame de la Ferrière, lent it to be exhibited at an exhibition of Napoleonic relics in Paris in 1895. The sheet of paper, yellow with age, contains alternate lines of French and English; but it will be more convenient to give first the theme and then the translation. The words in brackets indicate crossings out:

'*Quand serez-vous sage ?*

'*Quand je ne serai plus dans cet île. Mais je le deviendrai après avoir passé la ligne.*

'*Lorsque je débarquerai en France, je serai très content. Ma femme viendra près de moi, mon fils sera grand et fort, il pourra boire sa bouteille de vin à dîner, je trinquerai avec lui. Ma mère sera vieille, mes sœurs seront laides, ce qui ne leur sera pas agréable, elles seront toujours coquettes, car les femmes se croient toujours jolies.*

'When will you be wise?

'Never [then that] as long as I [should] could be in this isle, but I shall become wise after [have] having passed the line. When I shall [landed] land in France I shall be very content. Mi [wife] wife shall come [after, bef] near me. Mi son shall be great and [fort] strong. He [shall get] will be able to take his bottle of wine at dinner. I shall trink with him. Mi mother shall be olde, mi sisters shall . . . for the women believe they' . . .

The writing is small and cramped, but fairly legible. The pronoun 'I' is uniformly written 'j.' Corrections are mostly inserted above the line, but some are a continuation of the line, showing that the translation was quite probably written in Madame Bertrand's presence. The first sentence, it is possible, had been uttered playfully by her on account of Napoleon's teasing her for being boisterously gay, for it is the question addressed to obstreperous or fretful children, and Napoleon himself used to say to Betsy Balcombe, '*Quand seras-tu sage ?*' '*Sage*' here does not mean 'wise,' but 'good' or 'well-behaved.' Madame Bertrand passed over this and some other obvious blunders, either because her own English was defective, or because she would not discourage her pupil by too many corrections. At one corner of the sheet is a rude drawing of a ship, the imaginary ship, very likely, in which Napoleon was to return to France; and in another corner is a sketch apparently meant for a line of muskets extended for firing. There are also the words, '*Qui vous a apporté cette lettre ?*'

Considering the time which probably lapsed between the writing of these two specimens, Napoleon seems to have made but little improvement; and one is left to conjecture that, after the first outburst of enthusiasm under Las Cases, even if he did not entirely give up the study for some time, he maintained but a feeble interest in the acquisition of the English tongue. Still, the ability to speak English, and, of course, to translate from French into English, the more difficult tasks, were not exactly the Emperor's objective. Putting aside the undoubtedly overdrawn testimony of Las Cases, it is probable that Napoleon did come gradually to be able to translate from English after a fashion which

satisfied himself; and to make out what was being said in the English newspapers was doubtless all that he wished. These two fragments, therefore, bear witness to a mental struggle, a

little known and pathetic struggle, made by one of the world's greatest characters as the clouds of darkness were closing about his eventful career.

BETTY GRIER.

CHAPTER XV.

FOR the first time since I was a boy, Betty had to waken me this morning. As a rule, I lie for half-an-hour before getting up, allowing my mind to simmer over the events of the previous day, and planning how best I may spend the coming forenoon and afternoon. I had no need to make out any programme for to-day, however, as I had that all arranged last night.

I dressed hurriedly, and after spending a few minutes with Nathan, who, poor man, is abed, I sent off a telegram to Murray Monteith, requesting him to wire on receipt one hundred pounds on Miss Stuart's account to the local bank. When I had breakfasted I wrote him a long letter, and asked him to send me particulars regarding her interest in the Banku Oil Company. Then I went up and arranged with Mr Crichton the banker as to her account.

Walking along to the bank, I met Joe on his way down to Betty's. Joe's jacket is always closely buttoned, and he wears his tweed cap tilted on his head at the same angle as he would his glengarry when on parade. His hair is cropped short, the forelock brushed firmly and obliquely across his left temple, and showing prominently under the stem of his civilian cap. His trousers are always carefully pressed; consequently they never show a bagginess at the knees. He is not so tall as Nathan, nor has he the 'boss' appearance; but I fancied that to-day he had more than usual of the same serious Hebron expression; and when he gave me the salute, as he always does in true soldierly style, it wasn't accompanied by the customary cheery smile. He passed me at the regulation step, and from the fact that he was carrying a brown-paper bag bearing the name of John Nelson, Fruiterer, I surmised that Betty was contemplating an apple-dumpling for dinner.

My business with Mr Crichton was soon disposed of; but it took me some considerable time to dispose of Mr Crichton. He has a jocose, affable way with him, a pawky knack of leaving one subject and starting another; and when he is in a reminiscent mood, as he was this morning, he can be very dreich and very entertaining at one and the same time. Long ago, of an evening, he used to play chess with my father. He took snuff in those days—he takes snuff still, and treats others unstintingly, as Betty will know when my handkerchief goes to the wash—and when my father had lured him into an awkward

position on the board his little silver box was seldom out of his hand. My recollection of him at that period is very hazy, and it is so closely associated with this box that it may be if he hadn't snuffed I shouldn't have remembered him at all. I notice he applies the narcotic always to his right nostril, never to the left, and he has a dainty and a stealthy way of conveying the pinch which contrasts strongly with that of Deacon Webster, whose recklessness where snuff is concerned is such that more is distributed on his shirt-front and waistcoat than is sniffed into the nasal receptacle. On the other hand, so cleanly and dapper is Mr Crichton that, were it not for the aroma of Kendal brown which ever lingers about him, you wouldn't know he used snuff at all.

After a couthie crack (which, in spite of my preoccupation, I enjoyed) I said good-bye and walked out of the bank, only to fall a ready prey to the blandishments of Douglas the barber, who inveigled me into his backyard to see a cawie of Wyandotte chickens of which, as prize-winners, he had great expectations. Then, in his draughty lobby, I had to listen to an account of his first and only interview with Thomas Carlyle at Holmhill, of his photographing the Chelsea seer and 'snoddin' his hair; also to a résumé of a lecture he had heard on the Ruthwell Cross delivered by our fellow-villager, Dr Hewison, which pleased him, as he said, 'doon to the nines.' On reaching home I found, to my great disappointment, that Dr Grierson had called and had gone away. I wanted particularly to see the doctor, as I felt he should know that I had taken his advice and unburdened my mind to the lady of my dream.

When Betty came in to lay the table for my homely midday meal I noticed she was not quite herself, and that there was something unusual disquieting her mind. As I have said, I always allow her to unburden herself to me in her own way and at her own sweet will; but somehow I intuitively felt that in the present circumstances my rule should not apply.

As she moved silently out and in I watched her closely, and when she had finished and drawn out my chair from the table I put my hand on her shoulder. 'Betty,' I said, 'there is a sadness in your eyes to-day I have never noticed before. Is there anything worrying you?'

She looked up at me for a moment; then,

putting her arms round my neck, she began to cry, quietly but emotionally. 'Oh, it's Nathan, puir falla, and I'm sairly putten aboot,' she said between her sobs. 'It strikes me he's no' in a very guid way; and, oh Weelum! if—if ocht tak's Nathan I dinna want to live.'

It was the first time for years she had, unasked, called me 'Weelum' without the prefix, and the old familiar way she pronounced it touched a chord in my heart.

I let her have her cry out, and then I did my best to allay her fears. She sat down on my chair, and I drew in another and sat down beside her. 'Nathan's not very well, Betty,' I said; 'but he's always been a healthy enough man, not given to complaining and lying about, and you know you're so accustomed to see him strong and robust that you are apt to exaggerate anything which prostrates him and keeps him in bed. The doctor's not concerned about him to-day, is he?'

'I—I dinna ken for certain. He didna say so to me, but I imagined he looked that way,' she said. 'Mebbe I read his face wrang. I'm trustin' I did, but—but I see for mysel' that Nathan's far frae weel.'

'Yes, Betty, we all know that; but I'm sure there's nothing serious. He's got a bad cold, a very bad chill, the doctor tells me; but with a good rest in bed and careful nursing he'll soon be up and about again.'

'I'm dootin' it's mair than a chill, Maister Weelum,' and she shook her head; 'and it strikes me that Nathan kens it's something mair serious. He's tryin' no' to let on to me; but the mair he tries, the clearer I see it. Ay, him and me have come to that time o' life when we depend a guid deal on yin anither, and lately I've noticed that he's been anxious to do mair for me than he's able. We lippen on yin anither in a quiet kind o' a way, ye ken—never askin' or demandin', but aye expectin', and aye gettin'. Ay, Maister Weelum, aye gettin', and aye gi'ein', and it's through this wee peep-hole that Nathan and me, and ithers happily married like us, get a wee bit glisk o' a heaven on earth.'

I pondered over these words for a moment. 'Betty,' I said, 'that is a beautiful way of putting it.'

'Ay, it may be beautiful—it may be, I say, Maister Weelum. I'm no' a judge o' that; but it's true, *and I feel it's true*; and the best wish I can wish ye is that some day my experience in this will be yours.' And she wiped her cheek with her apron, and smoothed imaginary creases out of the tablecover with the back of her hand.

'And—and, Betty, you must love Nathan very much?'

'Yes,' she said promptly, 'I love Nathan; but no' so much as I have reason to, and no' mair than he deserves.'

'And was Nathan the only sweetheart you ever had, Betty?' I suddenly asked.

She rose from her chair and turned her face to the window. 'Dear me, Maister Weelum, that's a queer question to ask! What put that in your heid?'

'Oh, I don't know, Betty. I've often wondered.'

'Ye've often wondered that, have ye? Imphm!' And she sat down again. 'Weel, as the wean I nursed and the man I'm prood o', ye'll no' be denied an answer. No, Nathan's no' the only sweethe'rt I ever had. I loved anither man before I loved Nathan. I was about nineteen year auld at the time, and if onybody had telt me then that Robert Frizzel wad never be mine I wad ha'e gane demented. Nineteen's a careless, haveral kind o' an age; but the he'rt can be awfu' glad and joyous then, and I must confess I had spurts o' happiness which carried me aff my feet in a way I couldna understand later. The sun was aye shinin'; the birds were aye whusslin'. I gaed to my bed singin', and I wakened singin'. Oh, I mind it a' weel. The mistress—your mother—somewey was against it; but I thocht I kenned best, and mony a sweet bit stolen oor I had up at that same gate at the heid o' the gairden there. He was a nice-lookin' man, was Robert, a bonny singer, and a great toss amang the lassies, and to be singled oot frae amang them a' was in my estimation something to be prood o'. Weel, I heard something about him no' to his credit—something mean and dishonourable. Nathan was comin' about the gairden even then; and, though he had never said ocht to me, I could see, and—and I jaloosed, and it struck me that he wadna ha'e done the same. Weel, the first chance I got I asked Robert aboot it, and he juist laughed and made licht o't. I telt him I never wanted to speak to him again, and—and I gaed to my bed that nicht and grat the sairest greet I ever had in my life. Ay, I juist put him oot o' my he'rt and steekit the door. And then Nathan somewey opened it again, and—Michty me, Maister Weelum, your broth's stane-cauld!' And, without another word, she lifted the soup-tureen and went ben to the kitchen.

I never for a moment suspected Betty of having had a calf-love affair, and her characteristic recital of the episode was as unexpected as it was interesting. I asked the question which led up to it almost without premeditation, and not so much out of curiosity as from a desire to wean her pessimistic mind away from Nathan's indisposition. Poor body, she was always prone to meet her troubles half-way, and I feel so sure that her fears regarding Nathan are groundless that I do not reproach myself for interrupting her brooding thoughts.

After dinner I went through to Nathan's bedroom and had a short chat with him. He was assiduously reading *The Christian Herald*

when I looked past the curtain of his bed, but on recognising me he at once stopped and took off his spectacles. 'Oh, it's you, Maister Weelum,' he said, as he laid aside his paper. 'I—I thocht it might be Betty.'

At the back of the bed, and only partly hidden, was a copy of *The Gardening World*. I looked first at one paper, then at the other, and remembering his predilection for secular literature, I smiled. Nathan smiled also. I made no remark; neither did Nathan; but somehow I am surer now than ever that Betty is wrong in thinking that he considers his condition serious.

With Nathan in normal health and at his own fireside it is a difficult matter to keep the crack going; but with Nathan indisposed and abed it is well-nigh impossible. True, he answers any questions I put to him, but he never introduces a subject of conversation, and at his bedside, talking to him, I have always the strange feeling that he wants to put his head underneath the bedclothes.

When I had exhausted my news, and was wondering what next to say, Joe came in, and he had still the serious expression in his eyes I had noticed on meeting him on my way to the bank.

Joe is of great assistance to Betty at present, and his knowledge of housework, combined with his readiness to help, places him on a pedestal and makes him indispensable. I took the opportunity of thanking him for what he had done, and commended him strongly for his kindly services; and when I was going out, as an inducement to further exertions, I quietly slipped something into his hand that brought him to the salute with a most pronounced jerk.

Nathan was eyeing the stiff-as-starch Joe in surprise, as I gave him a good-afternoon nod. 'What's wrang wi' ye, Benjy?' I heard him say. 'Maister Weelum's no' an offisher; he's a gentleman.'

'That's exactly why I saluted him, Nathan,' said Joe very patly; and I was laughing quietly to myself as I re-entered my room.

Betty was what she calls 'bankin'' my fire; and on looking round and catching the smile on my face, she wiped her fingers on her dust-cloth and smiled too.

'Nathan's a wee bit cheerier noo than he was in the foreday,' she said; and, after a pause, as a second thought, she added, 'at least he's as cheery as a Hebron could be in the circumstances.'

'Oh yes, Betty,' I said, 'he seems to be in a happy enough mood; but I think I have heard you say the Hebrons are not what one would call a hilarious family.'

'No, aith no, except Joe, and him only sometimes—when he shouldna be. Imphm!—Ye never met ony o' Nathan's sisters, Maister Weelum, did ye?'

'No, Betty. I didn't know he had any sisters.'

'Oh, weel, in a way neither he has, for yin o' them lives in Auchensell and the ither twa away in the back o' beyond, somewhere in Glencairn. They come to Thornhill only aince a year, at the Martinmas fair, and of coorse Nathan stays at hame frae his wark, and we've them doon here for their denner. Peasoup's a weakness o' the Hebrons, and they're awfu' keen on pork ribs, so I make my bill o' fare to suit them. And then, the time I'm cleanin' up, they a' sit roon the fire, and Nathan smokes and spits, and his sisters sit strecht up in their chairs, lookin' frae the fire to the window, and whisperin' to each ither. Ye see, Nathan brocht them up. They look on him in a way as their faither, and they defer to him even yet, and aye wait on him speakin' first, so ye can understaun' their tongues dinna gang juist like handbells; no, aith no, they do not. Nathan's fair, but they are dark and swarthy, and they a' wear black dolmans, 'lastic-sided boots, and white stockin's, and they aye come wi' umbrellas in their haun even though the weather's as dry as tinder. Thomasina frae Auchensell is the auldest, and she's the only yin that has a family; and when Nathan does say ocht it's aye her he speaks to, and the ither twa juist sit and mutter to yin anither, lookin' quite pleased and satisfied. I'm used wi' them noo; but the first time I had them here I was at my wits' end. No' a word could I get oot o' them, and Nathan—weel, I didna ken him very weel then either—he could hardly be seen for pipe-reek, and it was only because I couldna do the deaf and dumb alphabet that I didna try it on them. And mair than that, Maister Weelum, here's anither very queer thing. Do you know that their men—their marriet men, I mean—have never been inside this door. I've never met them, no' even seen them; and Nathan—weel, I dare say he wad be at their waddin's, but I question if he wad stop and speak to them if he met them on the king's highway. Oh, I tell ye, they're queer! Ye might marry a Hebron, but ye never get into the family.'

'And what about Joe?' I asked. 'Does he join these annual reunions?'

'Catch Joe sittin' in the hoose on a Thornhill fair-day. No, no, Joe's ower keen on the peaguns, and the Aunt Sally booth, and siclike to ha'e ony time to help Nathan to entertain his sisters. He's a queer, queer mixture, is Joe; but his he'rt's in the richt place for a' that. Have ye seen him the day?'

'Yes; I met him on the street, looking rather melancholy, I thought. You—you haven't put him under the pledge again, Betty?'

'Ye thocht he looked melancholy, did ye? Weel, he's under nae pledge to me. It's no' that that's putten him aboot.—Puir Joe! puir Joe!'

'What is it, then, Betty?'

She hesitated for a minute, and I at once apologised, thinking I was unconsciously prying into family affairs.

'Oh, it's no' that I'm hankerin' for, Maister Weelum. The fact is, it's in a way concerned wi' a friend o' yours, and I don't know very weel hoo to begin; but ye mind me tellin' ye aboot Joe gettin' the awfu' fricht meetin' a lady he thocht was deid and buried? You and me made licht o't; but Joe wadna be convinced, and last nicht he saw the lady again, and—noo, Maister Weelum, this is the queer bit o' the story—the lady was Miss Stuart.'

'How did he know that, Betty?'

'Weel, he was in the kitchen last nicht when I brocht her through frae Mrs Jardine's to see your picter, and he was so putten aboot that he gaed strecht away hame to the Cuddy Lane withoot sayin' a word to onybody. This mornin' he spoke to me aboot it, and asked her name, and when I said it was Miss Stuart he nearly fainted. "Same name," he said, "and the same locket," and that's a' I could get oot o' him; and he was so dazed and bamboozled that he couldna mind my messages, and I had to write them doon on a bit paper. Noo, Maister Weelum, what mak' ye o' that?'

'Same name and the same locket!' I repeated slowly. 'Whatever could he mean by that?'

'I dinna ken. I asked him, but his lips shut wi' a snap like a handbag. If I hadna asked he wad ha'e telt me; the Hebron cam' oot there again, Maister Weelum.'

'Oh, Betty, it must be a foolish fancy. The chance of Joe having met Miss Stuart before has, of course, to be considered; but the lady he knew died twenty-four years ago. Miss Stuart must have been a baby then.'

'Mebbe it was her mother, Maister Weelum.'

In a flash the possibility occurred to me. I looked quickly and keenly at Betty, but her eye challenged my gaze clearly and without flinching.

'Ye're thinkin' I'm speakin' in riddles, and keepin' something back; if ye do, ye're wrang, Maister Weelum. It was the locket that made me think o' her mother; it wad be a very likely keepsake for her to ha'e.'

'Betty, my dear, I don't doubt you. I am sure you are telling me all you know; you have no motive for keeping anything back. I—I am very much interested in Miss Stuart, more so than in any woman I know. There is some uncertainty connected with her affairs which, unless it is cleared up, will be to her disadvantage. I may be thinking too quickly, and the wish may be father to the thought; but it strikes me that a chat with Joe would clear the air. He is in Nathan's bedroom? Do you think he would come in and have a talk with me alone?'

'Oh, I'm sure he'll do that wi' pleesur'. But,

Maister Weelum, if it's ocht ye want to ken, ye maunna ask him questions. I ken Joe; he's a Hebron, and—weel, ye understaun'!'

I quite understood; and when, later, Joe came into my room I was busy examining a pair of old holster pistols which had belonged to my grandfather. 'Oh, it's you, Joe!' I said. 'You're the very man I want. I know you understand more about these things than I do, and I should be obliged to you if you would kindly help me to clean them up a bit.'

'Certainly, sir,' he said with alacrity. 'I'll soon polish them up. But it's a dirty job; don't you bother with them. I'll see to them in the back-kitchen.'

In conversation with Betty or Nathan, Joe employs the Doric as they do; but, thanks to his service in the south and abroad, he is equally familiar with English as it is read, and in speaking to me he doesn't even betray the semblance of the Scots accent.

I hadn't bargained for his taking the pistols off to the back-kitchen, however. This wouldn't suit my plan. Joint operations were necessary for a crack such as I wanted. Accordingly I suggested we should cover the better-lit end of the table with a newspaper, and exercise care; and so it came to pass that in a few minutes Joe and I were up to the wrists in emery and oil, and our tongues going like Betty's hand-bells.

(Continued on page 658.)

A PICTURED FACE.

A PICTURED face in a quaint old setting,

By whom in the far-back years deemed fair,
Ere lines on the brow were graved so deeply,
Or time had silvered the waving hair?

Would she to-night, could the choice be given,
Take up the burden of life again;

Would she pass once more through all its sorrows,
For the joy life brought endure its pain?

What of the roses she stooped to gather?

Did she find with each the piercing thorn?
Was love unto her a gentle master,

Or was her heart by his rough hand torn?
What would she say could she tell her story?

Did she through her failures reach success?
Was she schooled by pain? Did sorrow teach her
That look of infinite tenderness?

Many a spring and many a summer

Went to the span of her earthly life.

What did the passing seasons bring her?

Was she happy mother and honoured wife?

Or did she watch all life's promise wither,

Her hopes like the summer flowers decay?

Did she give in vain of her heart's best treasure

To find it ruthlessly flung away?

Here, as I sit in the twilight dreaming

Of her who had lived ere I drew breath,

I wonder much what she learnt by living,

I wonder more what she learnt by death.

But surely peace past all understanding

On that pictured face is written plain;

And whether 'twere joy or grief life brought her,
To do God's will she would live again.

Chambers's Journal

SEVENTH SERIES

SIMPLE AND SATISFYING MEATLESS MEALS.

By EUSTACE MILES.

IT was a great pity that the Local Government Board circular, requesting people to eat less meat, did not go a step further and advise what particular food-stuffs should be eaten in place of the discarded meat. The negative counsel of the circular does nothing to help the much-harassed housewife or cook to provide satisfactory meatless meals for a hungry family. Hence the following hints and suggestions, which show clearly what are some of the kinds of foods that are satisfactory substitutes for meat, and how such foods may be easily and quickly prepared for the table.

Flesh-food is eaten primarily for the proteid, or body-building and tissue-repairing substance, that it contains. As a fuel-food, or producer of energy and heat, lean meat is inferior to cereals, sugars, and fats. The satisfactory substitution of a meatless for a meat dish in any meal turns, therefore, mainly upon a comparison between the percentages of proteid in the two dishes.

The best non-proprietary meatless foods to displace meat are cheese, red lentils, white beans, dried peas, nuts, and eggs. Of these cheese is the best, because it needs so little preparation and is already in common use. The latter may also be said in respect to eggs. But dried lentils and peas and beans, and nuts, are as yet not commonly used foods in this country.

There are at least two great advantages that these meat-substitutes have over meat. First, most of them are cheaper; secondly, they are purer and more wholesome to eat. It is common knowledge to every housewife that some of these particular foods are cheaper than meat, so I need not stay to labour this point here. But the fact that they are purer is not so generally known.

All flesh-food is, of course, vegetable-food built up into animal muscle and tissue. The animal eats grass, corn, or root vegetables, and from the nourishment that it assimilates in this way it builds up its own body; and it is this body which, as a dead carcass, comes ultimately into the market for human food. But in building up this organic body the animal necessarily incorporates into its flesh certain poisonous matters produced by the free working of its own digestive organs, and by the constant changes of breakdown and repair that its living tissues are continually undergoing. When meat is largely eaten, these poisonous substances often help

to give rise to many of the most subtle and obstinate ailments that at present afflict mankind.

All the foods that I have mentioned as satisfactory substitutes for meat are quite free from this harmful taint. They are purer foods in the highly important sense that they do not contain any of the waste matters which are produced and incorporated when vegetable food is turned into flesh. So much, then, for the all-round economy and the common-sense health value of a meatless diet.

Now as to the ease or the difficulty of its practice. The simplest way to substitute fleshless food for meat is to work out the proteid and energising value of an ordinary mixed meal, and then to plan a menu which will approximate to these figures. In his authoritative work on *Food and Dietetics*, Dr Robert Hutchison suggests as a typical and inexpensive mixed dinner for a man at ordinary work one plateful of potato-soup, a large helping of meat with some fat, four moderate-sized potatoes, and one slice of bread and butter. This meal is not well balanced as regards 'salts' (especially soda), but would probably contain about one ounce and a quarter (or thirty-six grammes) of proteid and eleven hundred units of energy. The easiest way to displace this helping of cooked meat is to substitute for it a rather smaller amount of good cheese, which has a higher proteid value than most cooked meat. But the cheese is richer than the meat by one hundred energy units; so, to restore the balance of the meal, it is necessary to withdraw also all the butter or some of the potatoes used in the meat meal. This will make the new meatless meal approximately the same in all-round food-value as the original meat meal, and much less expensive.

But a far better way in warm weather would be to lighten the whole meal, so that it contained one ounce of proteid instead of one ounce and a quarter, and from seven hundred to eight hundred energy units instead of eleven hundred. A midday meal of food-substances in these quantities and proportions would be at least ample through the summer for a man at moderate work. A woman would be quite satisfactorily fed with about one-fifth less food all round; while four children, ranging from five to twelve years of age, would probably require as much food as two grown men.

Here are some simple meatless meals arranged on this basis. The quantities are sufficient for one man; and, with the figures given above as to the normal requirements of women and children, it is a very simple matter for any housewife or cook to arrange multiple quantities sufficient to feed any number of persons. It must be emphasised that the new American standard of food-requirements (especially when there is thorough mastication) is much lower than the orthodox British standard, especially in proteids. These meals fall into two classes—cold and hot; and they give a fair idea of what can be done in arranging suitable meals for all weathers.

The cold meals are as follows:

	Grammes of Proteid.	Energy Units.
(1) 2 ounces of cheese . . .	16	256
5 ounces of bread . . .	13½	390
½ ounce of nut margarine . .	nil	110
Any simple salad or salad material (e.g. lettuce and watercress) in season . .	small	small
	29½	756
(2) 2 ounces of pine-kernels . .	19	356
2 ounces of raisins . . .	1	200
2 ounces of dry (finely ground) wholemeal biscuits . . .	6	228
	26	784
(3) 2 eggs (hard-boiled) . . .	14	192
5 ounces of bread . . .	13½	390
1 ounce of margarine . . .	nil	220
Any simple salad or salad material (see No. 1) . . .	small	small
	27½	802

Here are two hot meals of approximately the same food-value:

	Grammes of Proteid.	Energy Units.
(1) 2 ounces of lentils . . .	16	210
½ ounce of cheese . . .	4	64
4 ounces of potatoes . . .	2	96
2 ounces of bread . . .	5½	156
1 ounce of margarine . . .	nil	220
Some conservatively cooked green vegetable . . .	small	small
	27½	746
(2) ½ ounce of nut margarine . .	nil	110
2 ounces of butter beans . . .	10	204
4 ounces of potatoes . . .	2	96
2 ounces of bread . . .	5½	156
Some conservatively cooked green vegetables . . .	small	small
Custard pudding (one egg and one gill of milk, and a little sugar) . . .	10½	196
	28	762

For the three cold meals no recipes are needed beyond the quantities of the several food-stuffs given above. But here are two recipes for the hot meals, the first an entrée of lentils, and the second an entrée of butter beans:

CREAMED LENTILS AU GRATIN.

Cook two ounces of lentils in water until they mash. Add one ounce of butter or nut margarine, a little cayenne (if desired), and half-an-ounce of milled cheese. Beat well for five minutes to a cream. Put it into a fireproof dish, sprinkle with milled cheese, and brown under the grill.

BAKED BUTTER BEANS AND TOMATOES.

Soak two ounces of butter beans for twelve hours; then cook for one and a half to two hours in sufficient water to cover them. Melt half-an-ounce of nut margarine in a saucepan, add one dessertspoonful of finely chopped onion, and fry until brown. Add one teaspoonful of flour; stir over the fire for a few minutes; add one gill of water strained from the beans. Cook for ten minutes, and mix with the beans. Put a layer of sliced tomatoes into a pie-dish, then a layer of beans, and so on, until the dish is full, having tomatoes on the top. Sprinkle with bread-crumbs, put a few small pieces of butter on the top, and bake in a moderate oven for forty minutes.

There are hundreds of other equally good recipes for meatless main dishes which the cook may try, so as to avoid any monotony in the diet. Any herbs or other flavourings not liked can of course be struck out, and other flavourings which are liked can be used in their place. The point to bear in mind is that, in discarding meat, the main dish of the meal has to be made up in this way of one or other of these nourishing substitutes, unless proprietary foods are used.

As a welcome change, quite simple dishes of one conservatively cooked vegetable form a satisfactory meal, provided that a nourishing sauce, made with some proprietary proteid food-stuff, to give the necessary body-building substances, be served with the vegetable.

Many easy ways of combining the use of both proprietary and non-proprietary meatless foods will readily suggest themselves as the experiment proceeds. The most important thing now is to begin this patriotic and economical diet on the sensible and safe lines here suggested.

BETTY GRIER.

CHAPTER XVI.

AT length, by finesse and a good deal of circumlocution, I got the conversation worked round from accidental shooting to accidental meetings, related one or two coincidences which

made him pause in his work, and then casually mentioned that Betty had told me of his meeting Miss Stuart, and the shock he had received.

'Yes, Mr Russell,' he said, 'I don't know what

to say about that. I couldn't get to sleep last night for thinking of it.'

'Well, Joe, it seems plain enough to me. The lady you knew died twenty-four years ago. Miss Stuart is not more than twenty-five, so it couldn't possibly be she whom you knew.'

'That is so, sir; I admit that,' and he stopped polishing; 'and it's a far cry from Thornhill to Toledo; but the Miss Stuart I saw last night was wearing a locket which I am sure belonged to a Mrs Stuart who died in Toledo twenty-four years ago. If I'm wrong, then, sir, my name is not Joseph Hebron.'

I was positively tingling with excitement and strangely conscious I was on the eve of a great discovery. A thousand thoughts flashed through my mind; I felt quite overcome and bewildered. Here, 'far from the madding crowd,' in this sleepy little village with its easy-going, unpretentious ways, I had met the woman God made for me; and there, polishing the barrel of my grand-aire's old pistol, stood one of the least important of its villagers, who of a surety held the key to all the mysteries that had baffled our unveiling. It seemed unreal, incredible, impossible, yet it was absolutely true, for clutched to my heart I held the sacred memory of our moonlight talk, I felt the touch of her hand, and her parting words were ever ringing in my ears; and Joe's earnestness and assurance were as a preface to me that the mists would soon be rolled away. Betty's words came to me, 'If it's ocht ye want to ken, ye maunna ask him questions;' but I felt I must put her advice aside. Questions must be asked, and answers must be given willingly, not dragged out; and if I was to obtain these answers Joe must be to some extent taken into my confidence.

'Joe,' I said, 'you speak with a positiveness which carries conviction with it, and encourages me to great expectations. Now I'll be honest and candid with you, and you must be frank with me and answer fully and truly one or two questions I wish to put to you. You admit that the remarkable likeness you see in Miss Stuart to a Mrs Stuart you knew long ago has disturbed your mind, and you are quite convinced that the locket Miss Stuart wears belonged to that lady. There is a probable connection here which, if it can be established, will mean much to Miss Stuart. Her affairs are in my hands, and naturally I am very much interested in this. Now, Joe, you don't know me. Betty does. Will you take her word as surety for my honourableness, and tell me frankly all I may ask?'

Joe looked very intently at me while I was speaking. Then he laid down the pistol and emery-cloth with a suddenness and determination which plainly told me that 'his yea would be yea, and his nay, nay. 'Mr Russell,' he said earnestly, 'I have always sworn by Nathan's Betty; she swears by you in everything. If any information I can give will be of service

to Miss Stuart you're welcome to it, and I'll answer truthfully whatever you ask.'

'Thank you, Joe. I know you will. Well, first of all, who was Mrs Stuart?'

'She was the wife of Major Stuart of my old regiment, the 25th.'

'Do you remember his full name?'

'Yes, sir. It was Major Sommerville Stuart of Abereran, Perthshire.'

'Where did they live together as husband and wife?'

'Well, sir, it was like this. You see—eh—well, perhaps I had better tell you what I know in my own way—some pointed questions are not easily answered.'

I nodded. 'All right, Joe; just as you wish,' I replied.

'Well, we were stationed at Gibraltar when the Major was married. I was his orderly at the time, and he took me with him to a town called Toledo, where the marriage took place. I saw the lady—a French lady she was—only once before she was Mrs Stuart; she and the Major were on horseback, and a fine-looking pair they were; and I saw her twice after they came back to Toledo from their honeymoon. She was then wearing the locket I saw last night. It was one of the marriage presents he gave her, and I remember seeing it on his dressing-room table in the hotel, and thinking he was lucky to be able to buy such a nice gift. I was courting at that time—not Sally; another girl who died—and I—well, I would have given a whole year's pay to be able to buy my girl one like it. That's how I remember it so well. The Major stayed in Toledo for about a week after his honeymoon trip, and then he went to headquarters, taking me with him, of course; but Mrs Stuart remained at Toledo. She never came down to Gib. that I know of, but the Major went back once or twice. Then about a year after their marriage she died. The Major got the sad news at mess, and left that night, and I followed next day with his luggage. We returned the day after the funeral, and—and that's all I know, I think.' Then he picked up his emery-cloth and resumed his polishing, as if the story he had told was of ordinary import.

'Joe,' I said after a pause, 'what you have told me is most valuable information, and I thank you very much indeed. Were you present at the marriage ceremony?'

'Yes, sir, as a spectator, of course. I had nothing particular to do, and was in a strange town, and I was anxious to see what a foreign marriage was like.'

'Naturally! Then the marriage was in a church in Toledo?'

'Yes, sir; but I don't remember the name of the church.'

'Ah, Joe, that's a pity, now. Could you describe it to me? I know Toledo, and might be able to refresh your memory.'

'Well, sir, it was a very old-looking place, built of brick, and one part was newer-looking than the other. There's a big bridge at the entrance to the town'—

'Yes, Joe, the Bridge of Alcantara.'

'That's the name, sir. Well, I think I could go from the bridge right up to the church even yet. If I had a piece of paper and a pencil I could show you.'

I readily supplied him with pencil and paper, and after a little cogitation and a good deal of muttering, 'Forward, right turn, left wheel, steady now, forward,' he handed me the diagram of what he judged was the route. As it wasn't drawn to a scale, and no streets were noted, it was quite unintelligible to me; but it proved Joe had it in his mind's eye, and so far this was quite satisfactory. 'Thank you, Joe,' I said. 'May I keep this?'

He nodded, and I put it in my pocket. 'Now, just two questions more. Was Mrs Stuart buried in Toledo?'

'No, sir. She lies in a cemetery a few miles out of Toledo.'

'You don't remember the name of the place?'

'Well, sir, I do—sometimes. It reminded me, when I heard it first, of the old home name of Dalgonnar, but it wasn't that—very near it, though.'

'Dalgonnar—Dal—— Ah, Joe, was it not Algodor?'

'That's the name, sir—Algodor. I see you've been there. Well, sir, Mrs Stuart's buried at Algodor.'

Unknown to Joe, I had taken shorthand notes of the gist of his information, and when he was again busy with his emery I went over them carefully. 'By the way, Joe,' I asked, 'did you ever hear anything about the birth of a child?'

'Yes, sir. Mrs Stuart died in childbed, but the child lived. I don't remember hearing whether it was a boy or a girl. Mr Trent, our chaplain, could tell you about that. He went up with the Major and baptised it.'

'And where and how can Mr Trent be found now?'

'Well, sir—strange—last time I came up from Brighton I had an hour to wait at Carlisle,

and I met him in the street when I was taking a stroll between trains. He's not changed much, and I knew him at once and saluted. He stopped me, and asked me my name and regiment, said he was in a hurry, but that he lived at Stanwix, and if at any time I was in the locality to be sure and call on him.'

'Joe,' I said, 'you're a brick, a most invaluable friend to me just now, and I cannot tell you how much all this means to Miss Stuart and to me. There is much yet of which we shall require proof; but it is a fact, Joe, that Major Sommerville Stuart of Abereran, your Major, was her father. It may be necessary, in fact it will be imperative, that we should send some one out to Toledo. I know it is asking a good deal, but would you accompany any one we may depute to go? Your presence is very essential, and your good service will be amply remunerated.'

'Well, Mr Russell, I'm not of much use here, and I'll not be wanted elsewhere till July. If I can be any good to you, I—I don't mind going. In a way, I'll be in the Major's service again.'

I never drink whisky during the day; but somehow I felt that a compact such as Joe and I had made was sufficient excuse for breaking any rule. We drank success to our undertaking, and when Joe had left me I sat down, and, after thinking things over, I came to the conclusion that Providence, in a most wonderful way, was making the crooked path straight; and that, with the exception of Nathan, Joe had the most extraordinary by-nature of any man I ever knew.

I stayed Betty's hand when she came in to light up for the night. I knew she was just dying to know how I had got on with Joe; and, as his story would be meaningless without the prologue, I told her everything. The flickering firelight fell on her dear old face, and the glint in her eye quickened as I unfolded my love-story. And when I had finished she came over, and, bending down, kissed me.

'The Lord's your shepherd. He's leadin' ye by the still waters,' she whispered. 'And, oh, Maister Weelum, Joseph Hebron's a prood, prood man this nicht.'

(Continued on page 676.)

NEW WORDS IN WAR.

By HEDLEY V. STOREY, Author of *Home Once More*, *Britannia Poems*, *Britannia Goes to War*, &c.

THE present war is adding new words to the English language, as other wars have done. Some of these words will stay with us; others look more like visitors who will pass and become strangers. This happens in every big war. A book might be written to show that many useful and picturesque words have come to us from the battlefield through popular emotion in time of war.

We will not go so far back even as the wars of Henry the Fifth or to Shakespearian warology, not so far as the Marlborough campaigns and Addison's classic humorous protest against the invasion of foreign war-words. We will begin with the Indian Mutiny, which gave us 'khaki' in 1857-58; not a new word therefore, yet one that has come to full power in this war.

This little Persi-Urdú word, that everybody

knows means 'dust colour,' is having such a career among us now that its first use in British annals is worth recording here, for it has been almost forgotten. Colonel G. B. Malleson, in his short history, *The Indian Mutiny, 1858*, writes: 'In Mirath and the adjoining districts to the east the subversion of British authority had not been so complete as might have been expected. In June the energetic magistrate, Mr Wallace Dunlop, had organised a troop of volunteers, composed of officers without regiments, of members of the Civil Service, and others who happened to be at Mirath. Major Williams, Captain Charles D'Oyley, and Captain Tyrrwhitt, occupied the positions of commandant, second in command, and adjutant. Styled, from the colour of the uniform adopted, the Khaki Risala, this troop, from the end of June to the fall of Delhi, scoured the country, retook villages, punished marauders, and did all that was possible to restore and to maintain tranquillity. The Risala was often assisted by regular troops, cavalry as well as infantry.'*

These brave irregular Empire-savers of the old Khaki Risala deserve a passing glimpse and tribute in 1915, for have they not clothed the new Empire-savers of to-day, or at least *coloured* their clothes; coloured London, Paris, Cairo, Capetown, Pretoria, Bombay, Delhi, Calcutta; and even coloured the uniform of the United States army? And will they not give Berlin a touch of khaki?

Many years later Field-Marshal Lord Roberts, in a letter shown at the Imperial Services Exhibition, Earl's Court, told a friend that he had been consulted by the War Office as to the adoption of a new colour of active service uniform. It was khaki. But 1900 was the year when the new colour became imperial for war. And now in 1915 khaki is sacred to British military patriotism, valour, honour, victory, and death. 'On fair lips the phrase "khaki-man" has become something sacrosanct. It is pronounced with a reverent affection which red coat never won. It implies at the present hour the whole sum of womanly devotion. Khaki has become the outward and visible symbol of the patriot volunteer who has seen a clear duty, and is doing it. It is the badge of a great conviction, and of the courage of that conviction. And it suits the soldier, so lately a citizen, with a peculiar graciousness. There is in khaki no suggestion of the martial popinjay.' This was in the *Times* not long ago. A different newspaper (the *Passing Show*, No. 1), in another spirit, has told us that 'Mayfair is all khaki and

pretty women.' This war has given the word its free place in the language.

'It's a long way' from khaki 'to Tipperary'; but this phrase must come next, for it insists. The song was written and was popular before the war, as we all know; but the war made it national, almost imperial and international, and may put it into English proverbial speech. The tune is not heard in England so much now as in the early stage of the war; but the seven words are already nearly a proverb, like 'It's a long lane that has no turning,' or like the older song, 'You've got a long way to go.' Certainly it is common enough in the sense, 'You'll have to wait a long time before you can get this or that,' and it may in time become literary.

Another phrase, 'Are we down-hearted?—No!' is not so much heard now that the many street-marching regiments in their first excitement have left us; but it is still a running candidate for the popular honours of usage in public meetings, like 'He's a jolly good fellow,' and more so as a call and answer in street processions. Mr William Le Queux seems to claim to have been the cause of the phrase. He says in *German Spies in England*: 'My earnest appeal to the nation met only with jeers and derision. I was caricatured at the music halls, and somebody wrote a popular song which asked, "Are we down-hearted?"' But its true origin must be Mr Joseph Chamberlain's speech at Smethwick, on 15th January 1906, during the General Election, when he said, 'We are not down-hearted, but we cannot understand what is happening to our neighbours.'

Then there is a rather large group of words that have come at us with a rush, and cannot be classified; such words as Tommy Atkins's nicknames for the German bursting shells: 'Jack Johnsons,' 'Black Marias,' 'the Woolly,' and others; and the journalistic words 'super-guns' and 'supermania,' 'Press Bureau,' that seem old now; 'moratorium,' which jumped from Latin into English at the beginning of the war; 'searchlights,' not new of course, but very much a word of this war to inlanders; 'wirelessing' and 'wirelessed'; and that fine phrase of Mr Lloyd George's, 'the potato-bread spirit.' Other general words are on the way, so that we may say with Horace, 'New and lately coined words will obtain currency if they come moderately distorted from a Greek source,' only we must say from a war source.

That is true of the famous word 'jingo,' once a very new war-word, but silent in this war; which word, whatever its etymology, has had so many adventures since the sixteenth century that they cannot be followed now, though its first use in London is now well known. The late Professor William Knight, in his brief sketch of Professor Minto, tells how, 'while living in London, Minto took a prominent part in political controversy, especially in connection

* This was written months ago. Since then two correspondents in *Land and Water* have tried to find the first use of the word, and one of them, 'Indicus,' refers to Dunlop's Risala, of which his father was a member; but no one seems to have noticed or quoted Colonel Malleson's paragraph. 'Indicus' says: 'Khaki, of course, is Hindustani for "dust." But is not "dust" really *khak*, and *khaki* equal to 'dusty' or 'dust colour'?

with England's relations to the East and the war in Afghanistan. He was one of the first to use the term which soon became current coin in political writing—the term jingo. As he once told his students, "I am under the impression that I was first to give the currency of respectable print to the chorus of the song, 'We don't want to fight, but by jingo if we do,' and so forth, which was first made use of in an editorial article in the *Daily News*." And Mr P. Chalmers Mitchell, one of Minto's pupils, has written of his master the following, which fits well into the present subject: 'In Professor Minto's hands the derivation of words was so treated that a dictionary became a pageant of history, showing here the Crusaders, dusty from the Holy Land, bringing with them some new idea, some strange animal or plant; or there the prancing Normans introducing the graces of chivalry or the subtleties of law.' Perhaps our descendants will study the new words of this war-time in the same spirit. We have given them a great occasion.

Lastly, Gladstone's 'bag and baggage' phrase can be seen and heard more now, when Turkey is in danger again, than for many years; and, as the near context of the phrase has not been quoted lately, here it is: 'Let the Turks now carry away their abuses in the only possible manner—namely, by carrying off themselves. Their Zaptiehs and their Mudirs, their Bimbashis and their Yuzbashis, their Kaimakams, and their Pashas, one and all, bag and baggage, shall, I hope, clear out from the province they have desolated and profaned.'

Another old phrase has taken a new turn, it seems. According to a letter from an officer at the Dardanelles, Carlyle's 'the Unspeakable Turk' has become 'the Unspeakables' in the navy there.

Now we have done with general words and phrases. Let us get closer to the war, and look for new words and phrases that can be classified. The first is one word that is a host: 'Petrograd.' The full meaning of the dramatic change that Russia made in the name of her capital at the beginning of the war will not be known by other nations for many years; but we do know that it signifies in general a break from the Germanising influence not only of the Germans in Russia, but even of the national hero, Peter the Great. The change was made suddenly, and it seemed to be done easily; but there must have been a struggle. Mr Stephen Graham will help us to understand: 'As Merejkovsky wrote: "The life of St Petersburg is the death of Russia, and consequently the death of St Petersburg might be the life of Russia!" But old St Petersburg is dead. Petrograd has taken its place. As the poet Aksakov wrote:

Its name was a foreign one;
That's why we never remember it.

The name of St Petersburg sounds sinister,

grown old in sin; nothing sounds more child-like, young, and simple than Petrograd.' And the headline to Mr Graham's page is 'St Petersburg' printed through, and 'Petrograd' put there instead. It is impossible for us to imagine Great Britain changing the name of its capital; but Russia changed hers in a moment, in the first shock of war, and gave us a new word for our maps, our geographies, gazetteers, histories, newspapers, and conversations.

So far the military side of the war has not given us many new words, and we need not repeat Addison's protest, for we cannot show yet anything like the list that he gave, and many of ours are of British coinage.

The French *piau-piau* has been used often in the newspapers, but only of the French private soldier. It has no chance to oust 'Tommy Atkins' or 'Thomas Atkins' as a nickname for the first-class British fighting-man, as 'Fuzzy-wuzzy' might have done. Perhaps it will stay with us for a year or two, as now used. It may be noted here that the Germans have a phrase for our Highlanders which means 'Ladies from Hell,' and that they call their forty-two cm. gun *Meine liebe Bertha* and *dicke Bertha*, after Baroness Bertha Krupp, the present owner of the Krupp Arsenal.

The 'Bantams,'* for battalions of small-sized soldiers, is already popular; so are Kitchener's Army, and National Guard, the name given to the new defence force of the City of London, though the phrase is big enough, and ought to be used, for all the similar defence forces in the country. But of this class, the new word Second-Lieutenant, celebrated in Sir James Barrie's new play, has become for a time the most interesting.

Mr Belloc has been using the word 'embrigade,' not as a new word, of course, though it is unusual in the ordinary channels. Mr Belloc writes: 'You do not pour new levies into a field unsupported. It would be fatal. You mix them with, and embrigade them with, make them fight side by side with, men who have already formed themselves to war in action.' But surely either the 'em' or the 'with' is not needed there; is not 'brigade them with' complete?

The French *communiqué*, so long used in diplomacy, has become common in military despatches. Sir John French uses it often. 'Since my last *communiqué* of 11th March,

* Anything written on this developing subject of war-words must receive fresh examples to the last moment. The latest about Bantams is the best—namely, in Lord Rosebery's Edinburgh speech, 15th April, at the first parade of the Rosebery Bantam Battalion of the Royal Scots Regiment, when he said, 'There was at one time an idea that the War Office frowned to some extent on Bantam Battalions; but on my mentioning this to Lord Kitchener I received a reply which began: "If any one says that I am opposed to Bantams he is a liar."' Lord Kitchener championing the Bantams, with Lord Rosebery for audience, would make a painter's battle-scene!

operations in the neighbourhood of Neuve Chapelle have been continued,' he telegraphed on 15th March. This too seems not to be needed. Why not 'since my last despatch'? Information given officially or semi-officially by a Foreign Office is a *communiqué*, no doubt, though we might find a better word of our own, in spite of French being the language of diplomacy. But a Commander-in-Chief's long notes or letters from the battlefield are called despatches. If Sir John French's little twice-a-week telegrams are not long enough to be called despatches, why should they not be called reports? They have been called 'bulletins' unofficially in some newspapers. Let us hope that our gallant Field-Marshal will not be worried by this attack!

'Espionage' has been used in this war as never before in its history, and with it an awkward phrase that seems new to a layman—'contra-espionage': 'I refrain, because such statements might reveal certain things to the enemy, including the identity of those keen and capable officials who have performed so nobly their work of contra-espionage' (*German Spies in England*, by William Le Queux, p. 8). This is not elegant, and perhaps 'anti-spying' and 'anti-spy' are not better. We need a compound like spy-catching, spy-watching, spy-tracking, or spy-hunting—which has been used already as a newspaper headline—unless this war kills the spy system.

'Periscope' is not war-new, but the instrument has added a new part of speech to the language. In a letter home, an officer of the R.F.A., lying in a dangerous forward observation-post, wrote: 'Our periscope was "souvenired" later on with a rifle-bullet clean through the tin sides;' and by using quotation-marks he signals to us the suggestion that the word is being used in the trenches. Probably the trenches are ringing with strange words. We civilians will hear some of them in England soon, and learn the full meaning of 'Piccadilly,' 'Oxford Circus,' 'The Strand,' 'Bond Street,' and hear the great epos of 'Plug Street,' Thomas Atkins's name for the famous defences at Ploegsteert Wood.

The airmen have given us a few more words; not so many as might have been, because before the war they had made a dozen or two which have become quite homely now. But we can all say 'Zeppelin' and 'aviatik,' and explain to the children that 'Taube' is German for dove.

'Aerofoil' is in use. 'The Flying Machine, the Aerofoil in the Light of Theory and Experiment,' was the title of a lecture by Mr Lanchester on 10th March. 'Air-craft,' 'air-fleet,' 'air patrol' are common now; and so are 'air-raid' and 'air-attack,' two things quite different; likewise 'anti-aircraft guns,' 'anti-aircraft service,' two heavy phrases that ought to be dropped. The detachable 'anti' and

'contra' are often lazy nuisances in English, because they save us from the trouble of finding the true word. The new adverb 'aerially' was bound to come; and we may get even 'aerialistically.' But that already done-to-death phrase 'ascendency over' was not so inevitable. Some one blundered into it. 'Our airmen have gained a great ascendency over the enemy's airmen.' What does 'ascendency over' mean? We know what it is intended to mean; but what is its own meaning? 'Supremacy' might be better: 'We have gained supremacy over the enemy's airmen.'

The airman's bomb is wording itself in various ways. Sir John French's despatch of 2nd February reported: 'A number of aerial combats have been fought, raids carried out, detrainments harassed, parks and petrol depots bombed, &c.' The *Daily Mail* placard of 14th April had: 'Airmen Bomb Hamburg.'

But that is nothing. An odder word is on the way, and such a careful writer as Mr Stephen Graham has used it already: 'Warsaw is certainly a city that can be terrorised. On the whole, there was more to fear from the running crowd than from the German "bombists." And, 'These single exploits are merely thrill-producers. The "bombists" killed and injured fifty-four people in one day last week' (*Russia and the World*).

Of course, the Zeppelin, giving us a word that will never die, at least not in history or in fairy tales, must give us other words with its freights and its frights. This has been read in actual print:

Enough! John Bull took out his pouch
To fill his pipe anew;
And, putting on his hat aslouch,
He took a bird's-eye view.

He scoured the German Ocean, but
No German ship was there;
Their Brobdingnag, turned Lilliput,
Had Zeppelined the air.

This was written by a Briton Overseas in a poem called '*Am Tag*.'

Last of all we want a word that divides ordinary mortals on the earth below from the superhuman airmen above; and we had it from Mr J. L. Garvin in the *Observer* of 28th March: 'Words are useless to express the courage and skill of the flyers, who can now fling their bombs with that wonderful precision of aim. By comparison with these winged creatures, we ordinary "earthmen"—we suggest this as a term corresponding to 'landsmen'—'feel like worms.' But the next week the *Observer* gave the honour of a previous use of the word in this sense to another writer, in 1912. Mr Garvin has used also the compound 'man-hawks.'

The navies have done better. 'Carry on' has come to its own in the war, and is used not only in the navy—where its full meaning links

our sailors of to-day with the men and with the glory of Drake, of Blake, of Nelson, of every age, of a thousand fights—but is used also in the army. A Territorial officer at Felixstowe, for instance, last August, after giving the men of his company a rest from their trench-digging, called out 'Carry on, men!' as naturally as could be; when up they jumped, and away they ran to their picks and spades, and began to 'carry on' dreadfully!

'T.B.' and 'T.B.D.' are used by every school-boy now; the word 'oiler,' like 'steamer,' for oil-driven ships such as the new *Queen Elizabeth*, is coming into use; and we have a past participle from submarine, 'submarined.' It was on the *Daily Chronicle* placard, 10th March: 'Three British Ships Submarined,' sunk by a German submarine. Shall we get the word 'subsequences' for consequences of submarine activity? 'Submarinism,' the policy of fighting with submarines in naval warfare, is now in use, and probably 'submariner' and 'subnavigation' will come. The *Hamburger Fremdenblatt* suggests that a torpedo should be called a 'Weddigen,' in honour of Captain Weddigen, who sank with the U 28. The *Fremdenblatt* thus tells how to use the new word: 'Henceforth we shall "Weddigen" in order to put an end to the shame of the Island Empire.' The Amsterdam telegram of 19th April, that gives the great news, says that 'the suggestion has been enthusiastically received throughout Germany.' Britain's one and sufficing answer will be 'Holbrook;*' but the difference will be that a 'Weddigen' will always imply murder, while a 'Holbrook' stands for war.

Early in the war Mr Churchill put an adverb into current English, in his famous interview with the Italian journalist, when he wanted to distinguish between the political and the naval condition of the Mediterranean. He said in effect that 'navally' he was quite satisfied with the state of affairs. It is not a new word; but it has not been used much, will be useful, and will pair with 'aerially' or with 'militarily.'

With us, 'navalism,' as a counter to 'militarism,' is from the German: 'Like the sword of Damocles, English navalism hangs suspended over all peoples possessed of the coast or trans-oceanic colonies possible of attack.' It was 'the great Bernhardi' who wrote that to America;* and it reminds us that we shall never again in British maps or school-books find the phrase 'North Sea or German Ocean,' though we may whisper that it was to be seen just before the war on three large German maps of the world used in London as background of a lecture on the British Empire by a well-known British patriot and member of Parliament. 'German Ocean'

will probably disappear like *Mare Nostrum* of the Romans and Spanish Main of the Spaniards.

Now we come to the last section of the subject, the words given to us by our German enemies, or words that are being applied to them. Of course everybody now knows the meaning of *Der Tag* and *Am Tag*. Probably they will live in jest. Then we are getting 'Kaiserism,' 'Junkerism,' 'Prussianism,' 'Prussianisation,' 'Kruppism,' 'Bernhardism,' with all their meanings; while the jocular use of *verboten* ('forbidden') may be noticed any day, and may be compared with 'veto.' The name of Krupp may become English, in a way: 'If we are to overthrow for ever the whole stupendous system of aggressive militarism, to which the name of Krupps is almost as the name of the god Thor,' said the *Observer* of 21st March.†

Then we have 'Supreme War Lord' and all the playings with the word Hun. 'Hun-employment no longer exists in this country,' was seen in a serious newspaper lately, and it meant that Germans cannot get work in Britain now. The pun 'Germ-Hun' is popular; but it is doubtful if this will stick, or only remain for a time in use against vulgar and brutal men of any kind—never seriously.

But the 'Boches,' the French nickname for the Prussians, that comes from *Caboches* (the 'Hobnails' of 1870), is new to us, and looks like a word to stay and be used in various shades of meaning. It is already being used as an ordinary word in English: 'There was nothing that the Boches counted on so confidently when they entrenched themselves on the Aisne, and for some months afterwards, than that they would wear down the French. They will never do it' (*Observer*, 21st March 1915).

Deutschland über alles is almost certain to become part of the language as a jest or catchphrase, especially if the joke can be turned against Germany by her defeat. It is already being used in that way: '*Deutschland, Deutschland, über alles—über alles in der Welt!*' The whole of it may be used in Britain as a jocular inversion of 'Rule, Britannia.' Poor Germany! '*Deutschland über alles—1915!*' All in vain. Vanity, vanity, all is vanity! Will not that be how we shall often use '*Deutschland über alles*' in the after-victory days?

Finally we have the *Kultur* group, with 'kult,' 'kulturing,' 'kultured,' &c. They are a decided acquisition, and nothing in this study of new words has been a greater surprise than the way this 'K'-ing of culture has caught the public fancy. Everybody seems to know that there is a difference between culture and *Kultur*. Many definitions have been given: 'The Kaiser is reported to have recently said . . . that *Kultur*

* In a later utterance he or his translator uses the phrase 'naval militarism,' and 'sea militarism' has been used likewise.

† 'It would be interesting to know what enormous profits Kruppism' (to use H. G. Wells's expressive term) 'has already made out of this world-madness' (*The Healing of the Nations*, by Edward Carpenter, p. 48).

means "to have the deepest conscientiousness and the highest morality. . . . My Germans," he added, "possess that" (Preface of *German Culture*, by W. P. Paterson, 1915).

The *Times* of 30th March said: 'Prussian *Kultur* does stand for the opposite of *Bildung* (which is culture in the English sense). *Kultur*, in fact, has become the exact opposite of culture. The one is the education of free and thinking men, the other the stoking of a machine that shall turn out as much work as possible *per diem* of one kind only.'

The *Times Literary Supplement* of 4th March referred to 'the rare and delicious fruits of German *Kultur*. It is the popularity [in Germany] of all this sham erudition, sham *Kultur*, sham feeling, sham patriotism, which is significant.'

The *New York Herald* of 30th March, in an article entitled '*Kultur* at its Meridian,' said: 'There is great joy in the halls of *Kultur* that over a hundred non-combatants, some of them women, have been ruthlessly murdered on the high seas. It is "The Day."'

A character in a forthcoming play, translated from the Flemish, cries out, 'He little knows of culture who only *Kultur* knows;' and some one has made fun of the two words in this way:

They spell their *Kultur* with a K
(Perhaps you've heard the wheeze, sir);
The reason is, I've heard folk say,
'Cause Britain rules the Cs, sir!

Let us hope that Britain will continue to rule the Cs, and rule with real 'C'-brand culture. So long as *Kultur* means Louvain we shall 'go for it' morally, navally, militarily, aerially, and satirically.

Then he proceeded to explain
The cares that racked his *kultured* brain;
and:

'War to the knife!'—this was the cry
That moved the ancient Huns;
But '*Kultur* to the knife!' inspires
Our mightier modern ones.

That is how the satiric poets are writing of the Kaiser and of his *Kultur* just now; and who can blame them so long as the Kaiser and *Kultur* mean Prussia and Prussianism, Kruppism and Bernhardism, mean devastated Belgium and 'sub-marined' merchant-ships crowded with civilian men, women, and children?

These are not all the new words on their way to or from 'the man in the street.' Some have been left and others overlooked. We may be sure that this terrific war of the Empires will hammer out many more words and phrases, and give them to us bright, strong, terrible. Perhaps great words of vast meaning and significance are coming, and will become as much a part of English as *victim* and *victory*, *Empire* and *Imperial*, *conqueror* and *triumph*, *defeat*, *catastrophe*, *despair*, and '*Rule, Britannia*.'

ON GOVERNMENT SERVICE.

CHAPTER IV.

A FEW minutes after seven o'clock a dark, squared-jawed young man in evening clothes strolled into the vestibule of L'Espart's restaurant, and had not long to wait before he was joined by Jeffrey Royden, who had discarded the beard and wardrobe of that worthy Briton Thomas Robinson, but still wore the commercial traveller's long ulster. Some feeling too strong to be gainsaid had prompted him to bring it to the restaurant that night; and Stroff, by dint of an authoritative manner and a seductive coin, having procured a private table, he had managed to elude the polite endeavours of the *garçon* to wrest it from him, and hung it over the back of his chair as he seated himself. Stroff eyed the garment with a derisive side-glance.

'Robinson should purchase a new one,' said he in fluent English. 'Why did you insist upon bringing it into the *salle à manger*?'

'It has a part to play; that is all I can tell you,' replied Royden. 'Put it down to aberration of the cerebrum if I am wrong.'

Stroff looked mystified. 'A part to play?'

But Royden vouchsafed no more, dismissing

the subject with a light laugh. 'We have come to dine; let us dine well,' he said, 'and enjoy ourselves.'

'Agreed,' said Stroff, only too ready to be festive. 'Paris after seven o'clock begins to be worth seeing, and L'Espart's is one of the most popular restaurants.'

'Every nationality seems to have met in it this evening;' and Royden's quick glance around was comprehensive.

'It is our best hunting-ground,' said Stroff. 'There is seldom anything we cannot ferret out here, if we choose.'

'You mean in the detective line?'

'Yes. There are several of our special force amongst us at this moment.'

'On any particular job?'

'No doubt.'

'Point them out to me,' said Royden, slowly commencing his *crème de riz*.

'The presence of one man alone is exciting.'

'Who is he?'

'Do you see that big fellow on your right? Do not turn your head, merely your eyes. He has his back to us; but'—

'Sitting with a lady clad in diamonds principally?'

'They are possibly going on to the Opera together. That is Polesk.'

'Polesk?'

'Polesk the great, the immense,' explained Stroff. 'He is looking for some one,' he proceeded confidentially, 'who is too clever to be caught.'

'That has a dramatic sound.'

'It is always drama and red lights when Polesk is about.'

'On whose track is he?'

'You have heard of Von Muliche'—

'Oh, of course.'

'And that he has disappeared—is dead perhaps, though of that fact no one dare be sure. He has died once or twice before, you see. But whether dead or not, Von Muliche has a wife, and it is the wife for whom Polesk is on the hunt.'

'A spy too, I presume?'

'As dangerous to the Russian Government as to the British, and Polesk is determined to track her to her doom.'

'You are merciless, you Russians.'

Stroff took the remark as a compliment. It was as though he and his compatriots had been called courageous. 'A large reward is offered to the person who either traces or captures the woman for him,' he said; 'a difficult task, for she is as quick-witted and has as many aliases as Von Muliche himself.'

'I should like immensely to meet Von Muliche's wife,' Royden observed dryly. 'Introduce me when you can.'

Stroff laughed a trifle noisily, though he had the good sense, or, rather, habitual caution, to speak in a monotone. 'You must ask Polesk that favour,' he said. 'She has been seen in Paris quite recently, and that is why he is here to-night. She could not deceive him. He is the most reliable man our Government has.'

'Who is the lady he is with?' asked Royden, critically surveying the ponderous shoulders of the 'most reliable' of the Russian Secret Intelligence staff. 'And no doubt the most cruel,' was his mental reservation. The lady had also undergone scrutiny through discerning but half-closed, sleepy eyes that apparently saw nothing.

'Madame la Comtesse de Charneuse—*une grande dame*, and well known in Parisian society. Polesk is always fortunate.'

'A rival?'

'Scarcely that,' with a deprecating gesture.

'Does Madame la Comtesse believe as firmly as you say your Government does in the reliability of Polesk?'

'As a detective or a man?'

'A man, my dear Stroff; a man;' and a grim little smile hovered round Royden's lips. 'What would so great a lady have to do with him as a detective?'

'Nevertheless she has very often to do with him as a detective. When he is in any extra difficulty, it is madame who invariably helps him out of it. I have no doubt that he is consulting her at present about Von Muliche's wife.'

At the repeated allusion to the German spy whose body lay at the bottom of the pool beneath the ruins of Royden Castle, the Englishman drank a glass of champagne thirstily. And yet no harm could come from that quarter; he knew that. It was Von Muliche's wife who was the disturbing element of the moment. 'A touch of melodrama,' he muttered.

'What do you say?'

As Royden was himself again in an instant, Stroff did not notice anything different in his companion's speech or look.

'These cutlets with oyster sauce are delicious,' Royden replied. 'I should quickly become a gourmand if I stayed long in Paris;' and he continued to talk carelessly on various subjects throughout the remainder of dinner.

'You will never be a detective, that is certain,' Stroff said, after making two or three futile efforts to lead the conversation back to its former topic.

'Do not sweep me completely out of the running. Why not?'

'Because you cannot concentrate. We were talking of Polesk, Madame la Comtesse, and drama, and you suddenly spoke of cutlets and oysters. From cutlets and oysters you leapt to French falconry; from falconry you went on to fire-engines, and from fire-engines to criticise the aristocrats, gamins, and sewerage of Paris.'

'There is surely no law against detectives knowing about such subjects?'

'I object to the habit of desultory conversation.'

'Pardon me if I bored you, Stroff.'

'It was I who possibly bored you, but I imagined you might be interested in Polesk and'—

'Madame la Comtesse? Well, I confess I was.'

'You are not easy to understand, you Englishmen,' laughed Stroff. 'That is the reason of your success all the world over. But come—as we want no sweets, and I have an hour to spare before following Rienski to Petersburg—let us order coffee, cigars, and liqueurs to be served on the veranda;' and, rising, they crossed the *salle à manger* together, Thomas Robinson's shabby ulster slung conspicuously upon Royden's arm.

For a quarter of an hour they sat alone on the veranda, Stroff in the full enjoyment of a choice havana and liqueur brandy. He presently sauntered into the gardens attached to the restaurant; and Royden, smoking too, but having refused coffee and liqueurs, was somewhat thankful for the quiet interval. It gave him an opportunity to collect his thoughts, shape

his suspicions, qualify his doubts, and gather his forces together for some fresh event he instinctively felt was about to occur. Never in his life before, perhaps, so keenly on the alert, he kept watch and ward on the veranda, and waited, not even then prepared to admit definitely for what or for whom. He was under the impression that if only his patience would not give out, and he did not lose his head, the second act of the drama in which, for the service and honour of his country, he had been called upon to take part would be played out. So he watched; so he waited.

A soft *frou-frou* of silken skirts, a sweet, rare perfume, and a minute later the lady of the diamonds, Polesk's *vis-à-vis* at dinner, appeared upon the veranda. The man who watched and waited neither moved nor spoke, but within himself he said, 'As I thought.'

'Do I intrude?' asked Madame la Comtesse gently. 'The heat has made me faint. Ah! a thousand thanks, *m'sieu*'—as Royden assisted her to the divan he had vacated, upon which lay the ulster of Thomas Robinson.

'Here is brandy, if madame wishes,' said he courteously. This, however, was refused.

'*M'sieu* speaks perfect French, but he is an Englishman, I think?' and he was conscious that a pair of eyes scanned him narrowly. Very beautiful eyes they were, the property of a very beautiful woman, her natural charms enhanced by the consummate skill of a Parisian *modiste*, daintily applied cosmetics, and some really superb diamonds.

'Yes, madame, an Englishman.'

'In July Paris is hot—unbearable. I am, as *m'sieu* doubtless is, a mere bird of passage.'

'Does madame fly to the provinces?' he answered her evasively by inquiring.

'To Cherbourg.'

'*Alors?*'

'*M'sieu*, you are too inquisitive,' she cried, protesting prettily with her eyes.

'I am interested.'

'In me?'

'Is not every one who has the pleasure of meeting you?'

'*M'sieu* is now a flatterer.' Due perhaps to indisposition, a nervous trembling of her lips attracted his attention.

'Pardon me, madame,' he said, 'but are you sure you will not have the brandy?'

Again waving the liqueur aside, she begged him, with an upward beseeching look that partially dispelled his doubts, to fetch her a glass of water.

'*M'sieu* will also ask an attendant to come to me, if he will be so very kind?' she said as, with an alacrity that was genuine, he went to do her bidding. And had it not been for a hasty, backward glance his suspicions for the time being might have lain dormant. They were, instead, fully roused, for madame having altered

her position in reclining her elaborately coiffured head upon the broad lapels of Robinson's ulster, he saw protruding from the clasp of one slender hand the point of a small stiletto. The glimpse of that stiletto gave him the truth. He wanted no further proof.

'Snoring, purple-skulled Professor, and fair lady, one and the same!' he said; and before he returned with the glass of water another quick flash of truth had crossed and enlightened his mind: Von Muliche's wife! The woman Polesk the 'most reliable' was hunting down, and did not mean to spare! The woman who, powerless, it was said, to deceive the great detective, had in spite of this been dining *tête-à-tête* with him in a public restaurant; the admired, the enviable Comtesse de Charmeuse! Whatever her sins, she was neither fool nor coward, and there was that in Jeffrey Royden's heart which cried out against its better judgment, 'Well done!'

Bringing her the glass of water, he pulled out his watch and saw that there was not a minute to lose if Stroff was to catch the night express for Petersburg. He had but the hundredth part of a second to decide what course of action he should follow. It was important that Stroff should leave Paris at the hour appointed. Imperative? No. And with Polesk on the scene, his denouncement of the woman spy for whom he was looking, and did not mean to spare, would hasten the drama to a triumphant and thrilling close. It was clearly his duty to expose her, clearly his duty to prevent further treachery; but for the life of him he could not fulfil that duty. The blood of a human being—this woman's husband—was upon his hands, and he could not fulfil it. A stronger man might have disregarded the horror of the fact of having done a fellow-creature to death; a weaker, on the contrary, might never have played so strong a part in the tragedy, for it was nothing less. She was a woman, moreover—a beautiful woman—and since the despatches were safe—

'A life for a life! So let the death of Von Muliche be expiated,' he cried; and, instead of denouncing her, he warned her of the desperate straits she was in, resolved at the same time that she should understand his share in the game. So much right he claimed.

'Polesk is on your track, Madame von Muliche,' he whispered. 'You are extraordinarily clever, and but for this ulster and your evident interest in it I might not have found you out. A word from me, Professor, and'—

She understood, and to his dying day he never forgot the expression, not of fear—for her courage did not permit of that—but of agonised appeal in the face he searched so pitilessly. Her white lips moved. 'Do not betray me, for the love of Heaven!' were the scarcely audible words they framed; and, assisted by the attendant, she struggled to her feet. Even at the

eleventh hour he might have handed her over to a life drawn out and degraded in a Siberian prison, but he could not. There was a rustle of silken skirts, the slight pressure of a hand in his, and she was gone.

Stroff then luckily appearing on the scene, he thrust his arms into the ulster, the lapels of which had been cut and the dummy papers taken, bade the *garçon* call a taxi, and with more energy than politeness armed the amazed

young Russian from between the swinging doors of L'Espart's to the cab.

'In the name of the Little Father of All the Russias, why are you in such haste?' Stroff demanded, and he spoke as good-temperedly as a hustled man could.

'The Petersburg express,' replied Royden, 'leaves Paris in seven minutes.'

'I shall catch it in five,' said Stroff.

THE END.

A TRAVELLER ON BATHS.

WE have baths at home: the joyous basin of infancy; the compulsory tub of school-days, when we kept the bath and its water all night under the bed, imagining it might thus be warmer in the morning to thaw the frosty sponge (then we felt we were heroes, doing as lesser nations do not); and the sober adult bath which comes by nature, unless it be sought for in a foreign inn.

The traveller sees many and strange baths. Confronted with a gallon of fresh water in a steamer bathroom, he remembers regretfully the cool stone tanks of the Antilles, square and deep, where an hour may be spent in comfort, and where there is room to stretch his legs; the water of the ship's bath flaps about to the roll of the ocean, and in port may exhale the perfumes of the East, many and varied. Off the mouth of the Orinoco it resembles dirty peasoup. When the ship is coaling there floats a scum of best Welsh to match the dimness of the closed port, through the grimy veil of which may be seen the occulted figures of the workers of Port Said toiling songfully up exiguous planks to fill the gaping bunkers.

It is always pleasing to see resource displayed. One day the traveller was puzzled to observe a bucket of water standing in the tropical sun behind his kitchen. It was his cook who had adopted this method of getting a hot bath and of saving firewood.

In the bow of a sampan a bronze figure may be seen baling up water in a pail and pouring it over himself. The captain of the vessel has the water poured over him by the cabin-boy (if sampans have cabin-boys), thus saving trouble to himself and increasing dignity. Some native races seem seldom to wash; but when the Koran has instructed them they are assiduous in ablution, often washing their clothes (such as they are) at the same time by the simple process of keeping them on, promenading afterwards in the sun till all is dry.

The camp-bath is not a success, though it may be a necessity; the wise man on *safari* will, if possible, bathe in natural water. To avoid crocodiles he will cause all his porters to bathe with him, encouraging them to sing and to splash.

Though this may seem little to scare a crocodile, yet it does scare him, just as a crocodile never touches the crowds of Taos who are pushing a stranded steamer over a mudbank on the Shire River, under the grave inspection of solemn raw-necked marabouts and snowy egrets. But if bathing has to be done alone, and in a tropical river, it must be in a staked enclosure, and the shore must be examined first to see that there is no stranded log which may afterwards come to life and join the bath. The Somalis on the Juba River first taught the traveller this. Years after, in the Straits of Singapore, it was very interesting to recognise the same knowledge utilised by the Malays in excluding the crocodile's cousin, the shark.

The canvas bath in camp is merely a means of getting wet; collapsible baths do collapse and slop over, resembling in this respect the india-rubber baths of the economical Swiss tourist, who empties his water-jug to get an inch of wash, thus avoiding scandalous tariffs. But a Neapolitan hotel tariff was once circumvented. All the bedrooms were full, and the latest arrival was given a couple of planks over a bath, the plug of which had judiciously been removed by the management. By an ingenious combination of soap and sponge, the plug-hole was stopped, and the latest arrival was the only person on his *étage* who bathed that night and next morning.

After tennis on the equator, when a man can hear himself sweat, a hot bath after a long drink is real heaven. The cook has a kerosene-oil tin—the universally useful by-product of some oil trust, what should we in the bush do without it?—in which he boils the water over a couple of bricks between which is the fire. The black cook always affects this mode of heating. Once an enterprising district officer brought out a cooking-range, at great expense, all the way from England to the middle of Africa, and presented it with pride to his cook; but a few days later he found that craftsman with two bricks (the fire between) on the top of the patent range. He gave it up.

The baths in the Farther East are Siamese or Chinese. Some parts of the East may be called

Greater Britain; but they are overrun by Greater China. These baths are great earthenware jars, from which water is drawn in a little tin bucket and poured, the water going off on a smooth cement floor; or a large bowl is used, porcelain-lined, fierce dragons adorning the outside, and the seal of the maker stamped on the rim in strange characters. In this a large man can easily sit up to the shoulders in water, meditating on the attainments of the thermometer.

Many stories of baths occur to the memory: the little black frog that swam bravely through the upheaval; the centipede on the sponge; the lizard that could swim, but didn't like it; the *la belle* firefly (surely the most wonderful beetle ever made) that lit up the water at night with soft green; the snakes that enjoy the coolness; and the grazing hartebeest that was shot from the bath placed in the tent-door early one morning.

Mud-baths and sulphur-baths do not (fortunately, so far) come within the knowledge of the writer. He knows only the natural bath, has looked at Roman baths, and has disliked the Turkish bath. Strange—is it not—that so many nations should delight in getting wet, and, having attained this delight, should at once seize a towel to get dry!

And now the traveller's desire is to go farther and to see more baths; to have the Norwegian quartermaster play the icy hose on to shining passengers, or at any rate to see him doing it; to enjoy the annual bath of the Arctic explorer; to stew in the superheated baths of Japan; respectfully to experience the expensive delights of the American bathing-chambers; and finally to return home again, where baths shall still seem to be what baths ought to be.

A WOODEN CROSS.

By ROBERT AUGUSTIN.

CHAPTER I.

LIEUTENANT OTTO SCHUGT had the honour to command the largest and most modern submarine of the whole Imperial Navy. He had just been promoted to this command, and was fully conscious of his privileges and responsibilities. This boat, according to the latest official ruse, had no allotted number; but, like the evasive road-hog, varied its number to escape detection.

There was a certain depression of demeanour about Otto as he made his way along the wharves at Cuxhaven toward the headquarters office of his flotilla. He was back safe, torpedoless, and almost without food and petrol, after his first trip in supreme command of a submarine. It was an occasion when most young men would be feeling proud and joyous; but not so Otto. He had an inmost foreboding that the interview at headquarters might not prove pleasant. The newest submarine had not been so frightful as the authorities had reason to hope.

'Lieutenant Schugt,' said the armed janitor of the office, 'this way. His Excellency's secretary gave orders that he would see you himself. I shall inform him that you have arrived.'

His Excellency's secretary was a naval captain, secretary to the admiral commanding the port. This man, Captain Stahl, had charge of the submarine flotilla based on Cuxhaven. It was he who gave the special secret instructions known only to the commanders; it was he who apportioned praise or blame; it was he who made the recommendations for the Iron Cross—a man of influence and power. Captain Stahl was notorious throughout the service for his severity and the rigid application of the letter of the

law; he had all the German love and respect for the absolute letter of the law. The secretary's private life had been embittered by difficulties with his wife, who was the only inferior in the whole of his world who dared to dispute his authority. In his early youth he had committed the imprudence of marrying a woman who had in her a strain of British blood, and this woman had left him on the declaration of war. Consequently the captain, who had always privately wished for The Day as an opportunity for increased domestic tyranny, felt balked of his prey; he gave vent to his spleen by the frightfulness of his submarines; he would have his toll of lives. All this was well known to the officers of the flotilla, so Otto faced the prospect of the interview without any joy.

Lieutenant Schugt rose and smartly saluted when Captain Stahl came into the room. The captain, without taking the slightest notice, sat down at the table and glanced over some documents in silence.

'Hand me your report, lieutenant,' he exclaimed abruptly.

The rigid Otto unbent slightly to give over a neatly written document, which was swiftly read by his superior.

'Too long,' commented the latter. 'The admiral does not wish to be burdened with details as to the weather. It appears that you have sunk only one ship and two trawlers. I see that when you left Cuxhaven a fortnight ago you had six torpedoes. How do you account for them all?'

'I used two for the ship,' replied Otto.

'Why two for the ship?' interrupted Captain Stahl.

'One of them failed to strike the ship; she dodged and tried to get away.'

'An insufficient explanation,' remarked the admiral's secretary. 'Go on.'

'One torpedo for each trawler. The two other torpedoes missed their objectives.'

'Highly unsatisfactory,' observed the captain. 'Your military knowledge should have made it clear to you that it shows negligence and waste to use torpedoes on trawlers. Your quick-firing gun would have sufficed to sink them.'

'They were large trawlers, sir,' imprudently interjected Otto.

'Silence!' thundered the formidable martinet. 'I have further questions. Did you jam the mechanism of the torpedoes, so that in the event of missing their mark they would become floating mines?'

'No, sir.'

'Why?'

'I forgot, sir.'

'Lieutenant Schugt,' resumed the captain in a bitter, calm voice, after a period of tense silence, 'you appear to me to regard your duties with intolerable laxity. However, I am prepared to allow you one more voyage in which you may redeem yourself. You must replenish stores immediately, and be ready to leave Cuxhaven in thirty-six hours from now. Report yourself to me for instructions to-morrow night before you start.'

Thirty-six hours is a short time in which to recover from the nerve-racking strain of avoiding British destroyers, especially after a first voyage in command of a submarine. In addition, there was no doubt that he was disliked by Captain Stahl, who made the recommendations for the Iron Cross, that coveted decoration with which both Otto's mother and Elsa, his fiancée, could plainly see him adorned. At the moment, he was the only submarine commander in the Imperial Navy without an Iron Cross. He grew hot with shame at the thought, and determined to increase in frightfulness. God punish England!

As Otto left the building he scowled at the petty officer at the door, just as an earnest of his newest frightfulness. The petty officer saluted an extra time by way of propitiation. Otto made his way back to the boat, gave the necessary orders with violence, and forbade any shore leave for the men, so they were deprived of the chance of seeing their families. Otto felt bitter, and sent off a telegram telling his mother and Elsa to come to Cuxhaven that evening. He began to realise that the interview with Captain Stahl had been a moral tonic; he was able now to act up to the best traditions of the Imperial Navy.

Otto strolled into the town to pass away the time in a café before the arrival of his mother and fiancée. He impressed the waitress with his Teutonic forcefulness when giving his orders for food and drink. Smoking a long, thin Dutch

cigar, of the once cheap variety, he settled himself down to examine the weekly papers, which he had not seen. Naturally he turned to the many pages of naval exploits, and more especially to those of the most efficient submarines in the world. He examined dates carefully to see what ship it was that he had sunk; even the lying British Press admitted that a boat had been sunk on that day. In the excitement of his first blood he had omitted to note the name of the destroyed vessel; luckily the redoubtable Stahl had forgotten to ask him. *Himmel!* it seemed that the ship was not English, but neutral American, carrying cotton. He did not mind—no one minded—for the Americans were admittedly pig-dogs; but he remembered that his instructions stated that his primary objective was British unarmed vessels. Those stray neutral ships, when sunk, caused much vexatious correspondence and extra work to high officials. The Emperor himself had once to be bothered about an incident, the sinking of a notorious armed merchantman called the *Lusitania*, merely because there were a few Americans on board. He did not care to be worried with such petty trivialities.

At the station Otto met his mother and Elsa, and drove with them to an hotel. With more tact than is common in mothers of German officers, Mrs Schugt left Otto and Elsa together to discuss plans in their private sitting-room. The subject was an old one.

'Let us get married secretly to-morrow,' pleaded Otto.

'You are so daring, Ottochen!' whispered Elsa, laying her fair golden-haired head on his shoulder. 'My lieutenant, my submarine commander! with what joy shall I pin the Iron Cross to your breast!'

This had always been an unfailing method of changing the subject, leading the talk to the deeds Otto was to accomplish. This evening, however, Otto did not respond, but pressed for an answer.

'Say you will, dearest Elsa.'

'But you have no official permission.'

'Secretly was what I said,' replied Otto. 'Not even my mother need know. I want you badly. This is war-time; irregularities are overlooked. Besides, one may die.'

Elsa, true to her nationality and sex, burst into tears, which were soon dried. 'Very well, darling,' she answered. 'I consent.'

'Good!' said Otto with business-like finality. 'Meet me to-morrow morning at eleven at the post-office by the dock gates. I shall make all arrangements. We shall not worry mother with the news; we can tell her that we have gone for a day in the woods. I shall hire a carriage for our honeymoon.'

'You are wonderful!' exclaimed the ecstatic Elsa.

Elsa was an orphan, befriended by Mrs Schugt, who was lonely as a widow, as her only child,

Otto, was at sea. Elsa had become a daughter of the house; it was inevitable that Otto, on leave, should begin to notice her. She was placid in disposition, admirably domesticated, and not nearly so buxom as she might have been. She sentimentally adored Otto, and would make him an adequate wife. The only obstacle was that she had no income; the bride of an officer is required by law to have a certain dowry. Otto, however, did not propose to ask permission to marry only to be refused. He needed Elsa's softness, for it was really only in her presence that he felt himself to be the ideal submarine commander, stern and ruthless. He would have liked to take her with him on his cruises.

The next morning Otto, like most men, even Germans, was nervous and irritable, because it was his wedding-day; the feeling is intensified if it be the day of a secret wedding. He was disposed to be sharp and short in settling the various questions that had arisen in connection with his craft.

'With the greatest deference, lieutenant,' said the senior petty officer, a faithful subordinate with many years of service, 'I wish to bring to your condescending notice the case of the seaman Kurt. His wife gave birth to a son, their first child, during our last voyage. He craves leave of absence for two hours to see them. He is a native of this town.'

'It cannot be permitted,' replied Otto, feeling a strong man.

'Very good, sir,' said the old sailor. 'I shall inform the man of your highly seaworthy decision.'

The words were not said in sarcasm; cast-iron system had touched the man's brain, and it was the only thing he understood.

Seaman Kurt took the refusal without flinching; he knew his duty to the Fatherland. True, it seemed hard; he had invariably given satisfaction in his duties as special lookout-man, he was the expert at identifying hostile warships, and such treatment would make a man of a race less virile than the German lose heart. Kurt observed his commanding officer leaving the boat and going off in the direction of the town.

Jauntily Otto set forth, and arrived only a quarter of an hour late for his appointment with Elsa. Seeing him spruce and brushed up for the ceremony, she felt herself to be truly fortunate to be the mate of such a man. In her dreams she saw him Admiral, say, of the Channel Squadron of the Imperial Fleet. They would have a charming house in the Isle of Wight, so beloved by the august Emperor. The Imperial Submarine Service alone led to advancement; the remainder of the Navy only did exercises and received wireless messages. Sometimes one of the ships was sunk.

Their day of bliss came to an end; it had

been a perfect spring day which brought with it an aftermath of melancholy. Otto's heart was heavy when he kissed Elsa farewell in time to arrive punctually for his instructions from Captain Stahl. Elsa, for the first time, had a non-national but world feeling: why was there war? Their enemies, they too, had women in their midst, women who had hearts that could be broken, even as herself. She brushed away these thoughts as unworthy of a German woman, the wife of the commander of the most powerful submarine in the world.

Captain Stahl was in his office when Otto arrived. He wasted no time. 'Lieutenant Schugt, in a further examination of your report I find that you have sunk a neutral ship, thus throwing extra work on our already overworked officials. Had I known this before I should have relieved you of your command; but I allow you this one chance, as I have given you my word, and a German cannot go back on his word.'

'Thank you, most gracious sir,' stammered Otto.

'As you leave Cuxhaven to-night,' continued the captain, 'I may as well give you some words of encouragement. I have it on the authority of the All-Highest that any submarine commander who sinks an enemy battleship will receive an Iron Cross of the first class. In your zone of operations this should be quite possible. Here are your instructions in cipher, to be opened just before you quit the shelter of our mine-field, and to be burned as soon as you have mastered the contents. Good-evening to you, lieutenant, and God punish England!'

'Amen,' said Otto reverently. He saluted with confidence, and withdrew to join his boat.

Written instructions are, as a rule, the easiest to carry out, but not so when couched in ambiguous language. There is a class of men in authority who constantly fear for their own skin, men who always leave themselves loopholes so that any blame may be thrown on others. Such a man was Captain Stahl.

The instructions were: 'Cruise in North British waters. Sink all hostile craft. Act toward neutrals in accordance with the best traditions of the Imperial Germanic Navy. Extend your zone of operations to the Scandinavian coast if necessary, but do not give undue offence. The Imperial High Seas Fleet is still operating in home waters. Kill and die, if need be, like a true German.'

The instructions were all right, but vague on points where diplomatic questions might be involved. Otto understood them to mean that the High Seas Fleet was remaining in the Kiel Canal; therefore all warships encountered would be hostile. The word 'operating' conveyed a slight doubt; still, he knew Stahl's reputation.

This time Otto was out for blood. On the

way across he attacked a small trawler with his quickfirer. The trawler, however, was very recalcitrant; the crew had the insolence to shoot at his lookout station with ancient firearms; they actually succeeded in cracking the glass of his periscope, which made the submarine myopic when under water. Furthermore, the trawler managed to escape under cover of the early morning fog. Otto sent off no wireless message about the affair.

For a whole week he lay about the east coast of Scotland without even being able to fire at so much as a rowing-boat. To his annoyance, the wireless operator picked up a message from Captain Stahl: 'Reported from Scotland that British know where you are. They joke about you, and call you Harmless Hermann. Proceed in a north-easterly direction, and be frightful.'

Otto was furious; he could never endure the frivolity of the enemy, who even joked about death. The message, anyway, seemed to indicate that he should move into Norwegian waters. He determined to sink anything and everything. He would satisfy Stahl at all costs.

In mid-sea—away from witnesses—on a warm May evening, he fired without warning a torpedo at a Swedish tramp steamer. The first one missed, but the second sank her in seven minutes. Though Otto knew her to be neutral, he was past caring; she was steaming within a hundred miles of the British Isles, and must take the consequences. 'Sank armed merchantman' was the laconic wireless message to headquarters at Cuxhaven.

Early the next morning two more torpedoes were used to sink a passenger-ship which was flying no flag. The ship happened to be in Norwegian territorial waters, but so much the worse for her. The sight of drowning women and children did not unduly affect Otto, as he had been well and carefully trained; he had been on board, under instruction, the submarine which had so neatly despatched the *Lusitania* to the bottom. To send a suitable wireless message about this affair was a more delicate matter. However, he knew the dangerous nature of the Norwegian coast, and gambled on the probability that the few who did manage to get into the ship's boats would be drowned. Accordingly the following report was sent in cipher, which of course the operator could not understand: 'Observed British light cruiser at' — (he indicated a spot within four miles of the coast of Norway). 'Saw cruiser sink neutral passenger-ship. Regret failed to sink cruiser.' Otto felt the last sentence to be a touch of the true Teutonic humility.

'Excellent!' came back as answer from an unknown source. Otto could not make it out exactly, but was gratified. His mind was more at ease, and his thoughts turned again to the Iron Cross, and even to Elsa. He still had two torpedoes; he might yet sink a British battle-

ship, at dusk or even at night. The cruise up to date had been quite a success; there only remained to be added a crowning achievement.

An evening mist enveloped the waters, obscuring the light of the setting sun, and by blurring outlines made everything more mysterious. Several times Otto made certain that he could see ships of the line, which proved only to be phantoms, but in the end Fortune gave him his opportunity. Without doubt a battleship, a Super-Dreadnought, was steaming at some twenty knots with sublime impudence through neutral territorial waters. 'Curse their British hypocrisy!' thought Otto. 'My God, they shall pay for it! No longer shall they call me Harmless Hermann.' He had but to wait stealthily under the waves, for the monster vessel had no escort of destroyers; with luck it would be easy to hit her. Although the periscope was cracked, it was serviceable enough; the lookout expert, Seaman Kurt, had looked through the instrument at the approaching ship, and had expressed an opinion that all was well. So they waited.

(Continued on page 681.)

THE FISHERMEN'S CHURCH.

So old and gray, the tiny church above the ocean
stands,
A flight of steps, a shingle reach, between it and
the sands,
And the berried buckthorn bushes from the wind-
swept higher lands.

Those sturdy arches, low and wide, nine hundred
years and more
Upheld this church of fisherfolk above the shelving
shore;
And the moaning of a turning tide comes through
the open door.

The sea-pinks and the poppies grow on many a
grassy grave,
The seagulls fold their snowy wings upon the
crested wave,
And swallows flying in and out skim up the quiet
nave.

Here down the ages mothers came to bring their
babes to God,
And many a trusting man and maid that dim-lit
chancel trod,
Those humble ancestors who sleep beneath the
spray-dashed sod.

The incense of unnumbered prayers from folk of
lowly lot,
The lives of nigh a thousand years, unknown and
long forgot—
They sanctify the very stones, and fill the holy
spot.

A woman rests within the porch, her baby on her
knee;
A fishing-boat, with man and boy, is sailing in
from sea;
The peace of God is everywhere. God give that
peace to me!

SEVENTH SERIES

THE HEART OF THINGS.

By HENRY LEACH.

LONDON, *Yesterday.*

THE new problems of economy and thrift with which we are engaged become increasingly difficult of proper comprehension. The path of duty is indistinctly marked. Conscience has not sure conviction for its assistance. Public advisers hesitate and revise their directions, as it is perceived that such as have been put forth lead to negations and absurdities. Never were the intricacies of political economy so tantalising. Actions in effort and expenditure provoke reactions, and effects unsuspected expand from a little, something done, like the rings enlarging round the place where a stone was thrown into a pool, yet not so evenly, but by devious ways of in and out. The wise men of Whitehall begin to have their doubts. Amid the speculations on the future simplicities some memories arise. We gather that there are some hundreds of thousands of fearing people who are perplexed about the place of their future living, doubting whether they can afford to live any longer in London or the other great towns, provided always that work or other considerations do not necessitate their doing so. It is an accepted principle that life is more expensive in towns than elsewhere in the country; new necessities are made, temptations toward expenditure which is not necessarily extravagance are held out every hour. The general cost of things is more. In the country, where there is sunshine and green fields and health—and a wearing monotony to those who are not friends with Nature and do not know her—there is opportunity for fine economy. No ‘appearances’ need to be sustained; the clothes of yesteryear will do even for Sundays still. It is not like that in town. Yet London is the most marvellously adaptable place in the world. Her possibilities for variety are inexhaustible. Since the war began she has added many great works to her gallery of contrasts; and if it is true that to those who have conventions and systems forced upon them by friends, and various obligations made upon them, the capital is an expensive place in which to live, it is also true that it may be quite the cheapest, and that with a fine appearance put upon things continually. For all that has been written and pictured of the odd ways of life in town, the world knows nothing,

I am sure, of the best achievements in the city of contrasts, and the possibilities are being well explored at the present time. Nowhere is it so easy and so agreeable to live the life of absolute simplicity, and yet make a fine show upon it, as here. Did a fine gentleman walk bareheaded and barefooted, yet otherwise well attired, through the lanes of Devonshire or over the Grampian Hills, the folk of the countryside and the mountain dwellers would be amazed, and perhaps the police would interfere. But, though it is not a custom to do such things, one might perhaps walk in such a way down Piccadilly with no great embarrassment or inconvenience. And now one who, in many years and with much change of circumstance, has exploited many different ways of existence in London recalls a period when common cause was made with a class of people whom we may call the Solitarians. London is the world to them, and with no possessions save healthy bodies, strong hearts, good spirits for adventure, and a fine regard for the simplicities, they come to exploit it. It is a way of life, honest and real, that is excellent for a man alone, earnest and determined, or one with a sympathetic companion, but not a thing for members of families and those who respect systems and conventions. Here one may start in life as a Robinson Crusoe of the town, and make a success of it as well as that lonely hero did. In the very heart of this throbbing city the exquisite delights of perfect solitude may be enjoyed. They are gathered by thousands, and, with a certain instinct for their own conveniences, they live in proximity to each other. These are the room-dwellers, isolated, adventurous, and yet generally most respectable and conscientious people, who feel that four walls may make a home, and that the joys of simplicity are great. In the locality of Bloomsbury there are hundreds of the old Georgian houses, fronted on the universal model of the basement with railings and the tradesmen's gate, the two steps to the plain door with the semicircular fanlight, the iron balcony railings before the long first-floor windows—whence, in the old days of more romantic and cleaner wars than this, maids would tip kisses to the passing lines of soldiers—the three smaller windows for the floor above, and smaller ones again for the topmost storey, all the

panes of glass of equal size and small, and perfect uniformity maintained along what may be half a mile of straightest street. These houses in various quarters are not held by only one or two occupiers, or by proprietors of boarding establishments, but are let out by the landlords by room and room unfurnished at a very few shillings a week for each. Crusoe comes and sees, agrees to take an empty room, is given a rent-book and the key, and enters then into full joy of possession—the most lonely possession. He has a home in London, and is beholden for regulation of manners and conduct to no person in the town. None has a right to address him; he need answer none. Nobody knows him. He is one of fifty thousand Bloomsbury mysteries.

* * *

In each of these houses there may be eight or ten of them, each with separate room, all unknown to each other. They have but a thin common interest in a caretaker in the basement—who will in emergency perform some little service for them at a modest price—and in a water-tap in the garden, and some such-like conveniences. With that accommodating law of the world and life by which supply comes with every reasonable demand, London has made a little market street for these room-dwellers who take possession of four walls only, a floor scrubbed by the caretaker, and a cracked ceiling to complete the enclosure. Perhaps until the situation mends the master of this home may find it convenient to sleep on an overcoat. More probably, however, he has some shillings, perhaps a pound or two, to spend, and with such money he then goes into the special street of shops belonging to the quarter. Here in Bloomsbury it is Marchmont Street, right in the middle of the part, within a few yards of a fine hotel, near to where in the old days, when this was a centre of higher life and even fashion, statesmen, painters, poets, and all upon whom London and the world looked most kindly lived, and within but a little distance of the great throbbing thoroughfares of Holborn and Oxford Street. So near to fine display and to the open life of London is the market street of the Solitarians, which is unique. There is another which has some of its qualities and rarities, but is not so comprehensive, and is meant for a slightly different class, and that is Strutton Ground, in Westminster, only a few hundred yards from the Abbey. Marchmont Street is alone in its utter wonder. It is not a long street, and none could be less imposing, being composed mainly of shops with small and often mean frontages, in which are sold all things that are strictly necessary to the making of reasonable comfort within these four walls of solitude and the maintenance of life by the occupier, and few things that are not so necessary. All things here as nowhere else are sold at the smallest margin of profit, and with the

tradesman's honest and sympathetic desire to be of assistance. He knows the new Solitarian, shy, hesitating, doubtful, but yet with an abounding hope secret within him. The dealer in second-hand furniture sells him a folding bedstead and a table with no other than the essential qualifications of a flat top and four firm legs, and then directs him to another modest warehouse where he may procure something for the floor, a basin for washing, some modest pots and pans, and a few other articles of which the new Crusoe had hardly heard in the easy days of the paternal home. These simple goods, so willing to serve, seem to transform the space within those four walls into a delight of comfort and convenience. The oil and colourman's! Only the Solitarian knows his magnificent functions, his wide outlook upon life, his amazing comprehension of the diversity of nature and circumstance, and of the varying necessities of cases. Oil and colour, indeed, have little to do with his occupation. His business is to supply nearly all things that do not come within the more specialised departments of the other small stores in Marchmont Street. Long bamboo poles, tied in a big bundle, are generally reared by his door. They are a sign of the business, as the coloured pole slanting above the doorway tells of a barber within, and the three shining balls indicate the *mont de piété*. And this reminds me, as a good and healthy token, that I have seen no *mont de piété* in Marchmont Street. Until you become a Solitarian, with four walls of your very and exclusive own, you do not realise the virtues of bamboo poles. Curtains will hang upon them; they will stretch from wall to wall and make the skeleton of divisions; and they have many uses besides. Screws and nails, hooks and eyes, a thousand little things from Birmingham and elsewhere, all kinds of fastenings and fittings and means for conveniences specially selected for these four-walled homes of the Solitarian, all to be adapted and fixed by the master, are here. The drapers, with cloths and tapes, will do nearly all the rest; and as young Crusoe goes from store to store, wonderment increasing, it does seem that here—with everything conceivable for his needs and new surprises in conveniences at a few pennies each being shocked upon him by every merchant—veritably the resources of the British Empire are stacked for his advantage, that Marchmont Street has gathered the riches of the Indies for these poor beggars in Bloomsbury. So soon the home is made complete.

* * *

In this street of wonder there is a good show of excellent dairies. Food values were finely understood long before the war by the Solitarians here. Milk and eggs and good butter, with bread and fruit, are no better in Belgravia than in this market street of the lonely dwellers who eat to live, and rarely by way of mere pleasure; though the man of twenty-five may discover for

the first time in his life the joy of eating that which his own hands have partly prepared. With his spirit-stove and his pans for boiling and frying, he is tempted to vast experiments. He has been known to venture upon a sixpenny cookery-book. Fine have been the results, glorious the relish that was stimulated; and so have the mysteries of the kitchen been dissolved, the pretence of the housewives of almost sacred rites that only women might dare upon has been destroyed, and in essential features this Solitarian has acquired some of the methods of life of the lonely backwoodsman. The theory of the indispensableness of women is indeed injured hourly in this land; though women, thinking and working, live here too—good and conscientious women. A little butcher's meat may be bought, but it is not in great demand. It is troublesome, expensive, and messy. The grocers have the most comprehensive stocks of all tinned things, from soups to sweets. The smallest quantities of all necessities may be purchased. Here, in the happiness of completion and in the contentment of solitude, a lord of all he sees about him might sing that a little tea, some milk and fruit, a pot of jam, and an egg or two were all that man demanded. With candles, a little ink and paper, and a pen industry may begin, and on it may go until, after a lonely prow for air and exercise through the shining streets of night, the young settler makes his bed and sleeps on it. There are two other kinds of shops in Marchmont Street to which special attention should be called, and they must be explained lest they be misunderstood. There are several laundry establishments, more than would appear to be the proper proportion of such to other shops and the population. In the same way there seem to be more establishments for the pressing and repairing of men's clothes than there need be. Not vanity has called them here; but these earnest Solitarians, living the simplest lives, fending for themselves, yet have a dignity and a pride; they like to go out to London looking fit and suitable for it, able to hold up their heads with a consciousness and look of worth as they walk into the rich Square Mile or saunter by the stone Achilles in the Park. More than that, they have been taught the value of appearances in London, where they count for more than anywhere else. The simplicities of solitude are for themselves alone; no mark of them must remain on the man who walks abroad to wrest from London something he needs from it.

* * *

The transformations! Here are contrasts in life for you, such differences as the great hotels and the river Embankment can hardly show. Each house of rooms and homes contains in this way many mysteries. To one who in young and adventurous days lived for a season in such a room that was hardly more than twelve feet square, and yet seemed a commodious and well-

appointed residence, the other denizens remained much of a mystery despite the workings of curiosity. A man who undoubtedly belonged to a successful City business was lord of the only other room on the same floor. He suffered from heavy sorrows. An actress who played good parts was in the house. Sometime in the day a strange and weary-looking man of middle age, very unkempt of appearance and generally disordered, might occasionally be seen to wander down the stairs, and, having but a tattered dressing-gown over his sleeping-suit, would mutter a half-excuse as, with face averted, he hurried by any one who by unhappy chance he encountered in this way as he went shivering to the garden-tap to fill a can with water. 'Poor wretch!' the novice in solitude might sigh; but at seven o'clock his stupidity would be exposed to him if he waited in the shadows near the bottom of the staircase. Then he would see something new of the romance and mystery of life in town. It might be November, a cold, chilly evening, with opal mists and a glow among them that—in peace-time—makes an invitation out. There are footsteps on the stairs, and the treading is regular, decisive, firm, with the whisper of a creak from patent leather. From the turning on the second floor, as the sounds come nearing on, there is a lordly cough, which is less a cough than the guffaw of dignity. Scent of Corona or excellent Upmann tobacco streams with this dignity down the stairs; and now, as you crouch in the shadows wondering, you see descending a fine gentleman with a great majesty of appearance and deportment. He has a black frogged coat, which carries a collar of Astrakhan and a lining of brown fur; the ends of trousers that show below it are in perfect press and crease; the silk hat is newly ironed, and is immaculate; the deep white collar, with the big black bow, and the white shirt-front holding a diamond which is small enough to be in good taste, are what they should be. A keen gleam is in the eye; a black moustache extends to fine points; the set of the features bears strength and decision. Oh, but this fine man has a manner about him! He must surely be a Count. 'Can Park Lane produce anything finer?' the enraptured novice in solitude asks, as he hears the great gentleman call for a taxi-carriage, in which he is sped away into romance and mystery.

* * *

In the room above there is company hardly less sympathetic for being unseen and all unknown. Here is the veritable romance of solitude and simplicity. According to builder's rule, this upper chamber, like the one below it, is twelve feet square. Novice, after adventures in Marchmont Street, had imagined that in the precious patch of London that was all his own wonders of arrangement and economy had been accomplished as never before; but

pride was shattered and a deep humility fell upon him when the truth of the higher room was gradually revealed. Here a young man with a fine face and bright, keen eyes lived and cultivated his sweet mistress, Solitude, as never more earnestly had she been. He loved her. In no other company was he contented. Through her and with the little simplicities he gathered riches from existence. He worked through the day in an office in the City—in Cannon Street, I think it was. As soon as the desk released him he hurried home to his room of twelve by twelve, and made a meal for himself. Then there was a cleaning up and a silence, as he gave himself to the 'king's treasures,' his books. And later in the evening, lo! a piano was always heard in this upper room. There might be a lively introduction to some old ballad or a lusty love-song, and then such a bursting forth of human melody! Singing, full-throated and not so much with enthusiasm as because it seemed to be a matter of life and nature with the singer, was this, and of its kind it was unmatched. For the much that was lacking in the qualities of the voice and in its management, the life that to the melody was given, and all the happiness that seemed to spring from it, were ample recompense. On and on he sang from song to song, until the night advanced, and then there was a shuffling on the floor, a moving of things, and, last, a silence unbroken until the morning came again. Twelve feet square, and home with a piano! There is another mystery here, and greater than you suspect. One day an inquisitive person peered into this musical home, and gained an information. It was not the piano only that made the wonder. There were a bed, a table, a chest of drawers, a dressing-table, a washstand, and various other conveniences. There seemed to be everything that man in completeness could desire, and there was still space enough for any little treasure of furniture that might have been discovered in Oxford Street. Some things folded upon occasion, some seemed to disappear and be replaced by others, yet they were always the same. It was an increasing mystery, and the singer in solitude was not unsuspected of some wizardry like the possession of a product from alchemy such as might accomplish universal transmutation, change a table to a flowering

plant, and a bed into a bookshelf, and back again when wanted. The singer kept his secrets. Here in this wonderland of Bloomsbury there is now the perfection of simplicity, of economy, and of thrift.

* * *

I have been thinking of Jack Senhouse, the high-bred, fine-thinking, gipsy-like gentleman whom Mr Hewlett thought of, who went wandering with his cart and his bed over the countryside in such mere simplicity as was barely tolerated by his wondering friends, breaking away from all standardised and ordered life, and living all the more. 'London,' he once said, 'is the most romantic place in the world. I don't know anything like it for stimulating the sense. Think of those miles of shut doors, blank windows! Think of what may be behind any one of them—what prayers, what watching for a sign, what love, what speechless misery, what beginnings, what endings.' Yet, country for him. Do you remember how he explained his view of salvation in this world? He said it is 'the power of using every faculty we have to the full—every available muscle to the highest tension, every ounce of brain to the last drop, every emotion to the piercing and swooning point, every sense to an acuteness so subtle that you are able to feel the hairs on a moth's underwing, separate the tones on a starling's neck, smell like a hare the very breath of the corn, see like a seabird, hear like a stag.' This *Open Country*, now done as a sevenpenny, is a good book to read for war-time thought and cheerment. Mr Hewlett's romance is an invariably stimulant. Jack Senhouse wanted 'the sky if he was to see God!' and he roamed over the country hills and through the lanes with his independence and his philosophy and fine senses, but his solitude and simplicity were splendid things. It is different, but yet there is something like it in the solitude and the keen life that comes with it as practised by the lonely men of London. They are freed from many of the mean trappings of convention, and they sharpen their senses. And there it is. I know that the simple life of true thrift, and good work, and fine adventure can be tried as well in the heart of London as in the rare wilds of Western Canada. There are little differences, but principles are much the same.

BETTY GRIER.

CHAPTER XVII.

OF late it has truly been a time of startling events with me. One surprise has followed hard on the heels of another, and possibilities new to my horizon are looming before me, bidding fair to alter—and may I trust perfect?—

my whole line of life. And yet I am not unduly excited or exercised in mind. I wonder is this because my drama is being acted on staging of God's own making, and amidst scenery painted by His own hand? I know how strongly we are

all influenced by environment. A thunderstorm over the busy city, raging around crowded haunts and lighting up with its pointed fire all of man's handiwork, is to me appalling and menacing; in the country, among the echoing hills and sombre woods, it is grand and inspiring. When I think of it, it is not unlikely that a closer acquaintance with Nature and an insight into the marvellous laws which govern her have brought to me a keener sense of the true proportion of things. The pulsing sap in a February sprig of hawthorn is wonderful and mysterious, more wonderful far than Joe's acquaintance with Toledo or my meeting Désirée Stuart in Nithbank Wood.

Accompanied by Bang and Jip, I walked out to the station yesterday to meet Murray Monteith, and when I saw him step from the train to the platform I felt what Betty calls 'a ruggin'' at my heart, for very emphatically he appeared as a link binding me to a life which I know I must soon re-enter, and which I have lately ignored and well-nigh forgotten.

Monteith is one of the aristocrats of our profession, a gentleman by breeding and nature from the crown of his head to the sole of his foot. Quiet, reserved, well knit and well groomed, he fills the eye and takes the heart wherever he goes, and as I shook hands with him I felt a secret pride in the knowledge that he is my partner.

I welcomed him warmly to the strath of his forefathers, and assured him that if his knife and fork happened to be reversed at dinner, or if any one offered a left-hand shake, he must just count it an accident, as we had long ago ceased to remember the disreputable part his namesake played in pre-Bannockburn days.

We had a twelve o'clock dinner: broth—not the kind everybody or anybody makes, but Betty's broth—boiled beef, with potatoes in their skins, followed by a jam-roll, of which Monteith had two liberal helpings. I told him that long ago it was usual to finish up a dinner with another plateful of broth, and he assured me that had he not partaken of the jam-roll he would gladly have revived the custom. I didn't forget to tell Betty of the appreciation, and I know it pleased her, for when we drew in our chairs for a smoke I heard her voice from the back-kitchen raised, as timmer as of old, in the lilting strains of 'The Farmer's Boy.'

Then through tobacco-reek we talked business—at least Monteith did, and I listened. He had much to tell me, and he talks well. After disposing of some private matters, we broached the all-important object of our visit to Mrs Stuart, and it was only when we came to the unpleasant part of Miss Stuart's affairs that I told him of my wonderful discovery and the astonishing part that Joe had played in it.

Dressed in his Sunday best, Joe was awaiting

his call in the kitchen, and on being brought in he was closely questioned by Monteith. Not only did Joe confirm all he had told me before, but he added to our knowledge by giving us the exact date of the baptism of the Major's baby. It synchronised with the date of a black day in Joe's life, when a girl died of whom he was very fond. When I was thinking sentimentally of his tragedy, and making allowances for much remissness that Betty deplores, Monteith, with arched eyebrow, was staring at him through a monocle, thanking Providence for having so opportunely sent him our way, and counting him a means to a successful end.

Long after Joe had left the room, Murray Monteith sat lost in thought. Monteith cannot leave a fire alone when he is thinking anything out. His room in our premises in Charlotte Square adjoins mine, and if I hear through the wall a vigorous poking and smashing going on I know he is tackling a ticklish problem. Yesterday, in five minutes, he 'bashed' Betty's fire out of recognition; and when for the tenth time he had lifted and dropped the poker, he turned to me suddenly and said, 'By Jove, Russell, this will be a bitter pill for our friends Smart & Scobie!' I told him I didn't care a rap for that; what gratified me beyond measure was the fact that a sweet, sensitive girl had been spared humiliation, and that instead of being a nameless lassie, she was Miss Stuart of Abereran.

I spoke very feelingly, and Monteith wasn't slow to notice it. He focussed me slowly through his monocle. 'I share that sentiment with you, Russell,' he said. 'I am not unmindful of her, though I give voice to my feeling of exultation in scoring a point. I trust Miss Stuart has no inkling of what has been standing in our way to prevent a settlement in her affairs. You—you haven't met her yet?'

'Oh yes; we are a small community here, and I have spoken to her once or twice.'

'Then you've been visiting at Nithbank House?'

'Not since I went under my mother's care twenty years ago, when the Ewarts lived there.'

'Oh;' and again he fixed me through his monocle. But he saw I was disinclined to go into details, and his good breeding made further questioning impossible. 'Well,' he said, after a pause, 'Mrs Stuart will be delighted to know all this. Her stepson, Maurice Stuart, has been at the root of all this trouble. I understand he wanted to marry Miss Stuart; but she would have nothing to do with him, and in retaliation he has done his level best to turn the mystery of his uncle's marriage to his own account. He it was who instructed Smart & Scobie. He's an awful waster, I believe, and his stepmother long ago cut him adrift.'

This was news to me, but I feigned indifference, and as adroitly as I possibly could turned the subject of our conversation to Joe and the

part he had yet to play. 'I think, Monteith,' I said, 'we ought to take him with us to-day to Nithbank House. Mrs Stuart will be interested in him, and wishful, no doubt, to see and talk with him.'

'Oh, certainly,' said Monteith, as he snipped the end off another cigar; 'and if he's still about, you had better call him at once. The carriage is at the door, I see.'

Mrs Stuart had very kindly sent her brougham for us; and so it came to pass that when we left the door Joe was sitting on the dicky beside the coachman, arms folded and eyes front, conscious, however, I felt sure, that Nathan's Betty was approvingly watching him from behind the dining-room curtains.

We were received very graciously by Mrs Stuart in the library. I introduced Monteith to her, and she at once apologised for having put him to the trouble and inconvenience of travelling so far. Then she inquired in a very kindly way after my health, and told me that when first her niece had informed her of my residence in the village she felt annoyed that the firm had not advised her; but that, after all, it was perhaps wisely kept from her, as she would only have worried me about business and made herself a nuisance.

I laughingly said something in reply about doctors being autocrats, and thanked her for her inquiries and consideration, and, to my great relief, the subject was gradually and agreeably changed to something else.

The Hon. Mrs Stuart is tall and angular, and she dresses in stern black, as becometh a sorrowing widow. She has, for a woman, a very square, assertive chin and a somewhat determined mouth; but the effect of the hard, firm chiselling of the lower part of the face is discounted by the kindly expression of her mellow, blue-gray eyes. Her hair is streaked with gray, and she has arrived at that time of life when, for preference, she sits and talks to visitors with her back to the light.

As Monteith had surmised, the important business she had referred to in her letter had to do with Miss Stuart's affairs, and as this was causing her great anxiety we went into the matter at once.

She explained to us, as she had done privately to me before, that she really didn't know, or, rather, that she had never had opportunities of knowing, her late brother-in-law, General Stuart. 'He was queer,' she said, 'very queer; lived in a bleak part of Cornwall most of his time, preferring it to Abereran in Perthshire; for years kept his marriage a secret, and made no mention of a daughter; and then, when we were looking forward with reasonable certainty to some day seeing Maurice laird of Abereran, a handsome girl of eighteen, an undoubted Stuart, was brought home from a Continental school, and, as his daughter, Désirée Stuart, installed mistress of his house. Personally, I had not a doubt of Miss Stuart's status or right of birth; but Maurice—well'—and she shrugged her shoulders and looked thoughtfully away down the avenue.

I asked my partner to tell her what we had learned from Joe, and he did so in that easy, off-hand, taken-for-granted style which we men of law sometimes affect, and which is intended to impress our clients with our astuteness and perspicacity. At first Mrs Stuart looked indifferent; but as the story was unfolded, and Joe's part established, she sat forward in her chair in utter amazement. 'Remarkable! remarkable!' she exclaimed. 'I never heard of such a wonderful coincidence.'

After we had discussed it in all its bearings, and settled on a definite plan of action, Joe was brought in. As my presence and advice were no longer necessary, I asked that I might be permitted to see Miss Stuart with reference to her Banku shares, and to this Mrs Stuart readily agreed. When we were passing through the hall to the drawing-room she asked if it was my intention to acquaint her niece with the news we had learned. I replied that as Miss Stuart had not been made aware of the nature of the difficulty which had so long confronted us, it wouldn't be advisable to tell her all we knew; but, with her permission, I would take the opportunity of informing her that certain knowledge we had acquired lately was likely to hasten a settlement. She agreed with me in this, and it was with a beating heart I entered the drawing-room.

(Continued on page 695.)

B A G H D A D.

By J. NIVEN.

TO most people Baghdad is but a name recalling vague memories of childhood, and of hours spent in poring over the tales of Ali Baba and the Forty Thieves, of Bluebeard and his murdered wives, of Aladdin and the Wonderful Lamp. It presents to the mind no image of an actual geographical town, with actual inhabitants who work and travel and trade as do the

inhabitants of cities which are better known, but have less romantic associations.

Baghdad is built on the two banks of the Tigris, about four hundred miles north of Basreh, and lies in the fertile plain of Mesopotamia. All around it are landmarks and ruins of ancient civilisations which are of interest to the archaeologist. A day's caravan journey over the desert

brings the traveller to the ruins of Babylon, of Nineveh, of the Tower of Babel.

In the days of the Calipha Baghdad was at the height of its prosperity; but since 1638 it has been under Turkish rule, and has lost much of its former trade and activity. However, even yet it is a prosperous and wealthy town, and a busy forwarding centre. Goods brought from Europe and India are carried by steamer from Basreh, and then forwarded upriver by *dhows* to Mossul and the smaller towns lying on the upper reaches of the Tigris; long caravans of mules and camels bring to it the rich silks and embroideries of Damascus, and these are again sent on to the various towns of Persia; while from Persia itself shawls, carpets, dried fruits, drugs, and dye-stuffs are carried over the desert to its bazaars. It is of some political importance to us, being the key of the desert route to Damascus and the cities of Asia Minor, and the entrance to the waterway leading to Mossul and the hills and plateaux of Armenia. But for the ordinary traveller its chief interest lies in itself; for in it we find an unchanged, untouched picture of the East of ancient days; manners and customs have been passed over by the moving finger of time, and remain as they were thousands of years ago. The fields are still irrigated in the most primitive fashion (the water being drawn from the river by means of water-wheels which are turned by a team of mules or horses), the patient ox still 'treadeth out the corn,' we still see the women sitting at the house door grinding the wheat between 'the upper and the nether millstone,' the shepherd still 'leads' his flock 'in green pastures,' the servant still removes his shoes before entering the presence of his master, the master still eats from the same dish with his whole household, the traveller still comes down the upper reaches of the turbulent Tigris on a raft of inflated goat-skins, and the passenger is conveyed ashore from the steamer in a coracle built to the same pattern as those used in the days of Moses. We find everywhere scenes to remind us of the pictures in the illustrated Bibles which used to delight us in our childhood's days: the Arabs (with floating headgear) who ride past on graceful ponies, the Jews in long caftans and with patriarchal beards, the goatherd in cotton dress surrounded by his flock, the money-changers plying their trade in the streets, the donkeys with dark-browed Eastern riders seated sideways on their backs, the camels with their swaying gait pacing slowly over the sands, the conical brick-kilns rising up like toy hills on the yellow-brown soil of the desert—they are all there before us, part of the everyday life of the modern Baghdad, as they were of the ancient city when the Caliph Haroun al Raschid used to visit his people in disguise.

The traveller who has just arrived from Basreh misses the soft, fertile beauty of canals and date-gardens; but he finds a quaint charm in the old-

world city, with its suggestions of mystery, of wonder, and of romance. He has exchanged the soft wash of the river, the hum of insects, the croaking of frogs, the singing of birds for the myriad noises of a town, the raucous cries of the water-sellers, the clatter of vehicles driven at headlong speed, the pattering trot of innumerable water-donkeys, the echo of sandalled feet on the unpaved streets. To arrive as the sun is setting is to see Baghdad glorified, irradiated. 'Towers, domes, and pinnacles' stand clearly outlined against a background of pale translucent blue; far away on the horizon glows a deep flush of crimson light which bathes houses and minarets, palm-groves and orange-gardens, in a sea of fiery splendour; the river becomes a stream of liquid fire, a highway of romance, running between old faerie palaces whose cold, gray, expressionless walls seem to enclose a world of unknown mysteries.

Most of the important public buildings are on the river-front and on the left bank of the river. Approaching the town from the southern end we first reach the British Residency, an imposing erection which some nine years ago replaced a somewhat ramshackle but more picturesque building. It stands in a large compound, and a short distance off are the public offices and the houses of the sepoy guard. In the compound itself stands the doctor's house, a very pretty red-roofed bungalow, with wooden verandas, and bright-coloured creepers trailing over the graceful pillars. Farther upriver are the military barracks, the military and civil hospitals, the custom-houses and stores. The Russian and American Consulates, half-hidden in gardens of orange-trees and palms, look down at us from the river-bank. Higher up a bridge of boats connects the two parts of the town, and is the link between the modern Baghdad and the ancient city, which seems to transport us to the time of the *Thousand and One Nights*. The houses rise sheer out of the water, and the waves break with a low, continuous murmur against their bare, expressionless walls; there is scarcely a window to vary the monotony of the rough, colourless brickwork. The spirit of the past seems to enfold them, and to bring vividly to the mind old Eastern tales of faithless wives and jealous lovers; and we seem to hear again the despairing shriek of the drowning Fatima, flung forth to perish in the waters of the rushing stream.

Leaving the river and turning inland, we come upon a town of narrow lanes, of high houses with overhanging balconies, of dusty, unpaved streets, of countless mosques and minarets. Most of the houses look bare and ugly, as it is really the backs which are turned toward the street, while the gardens and courtyards are shut in by high walls and jealously guarded by great wooden doors. But if we go through one of these doorways, and the

house belongs to one of the wealthier natives, we shut out a world of dust, of noise, and of glaring heat, and enter a fairyland of cool, green silences and quiet shade. Balconies and doorways are made of wood delicately carved in the old Persian style; tall palm-trees raise their gray-green fronds to a heaven of deepest blue, flowering creepers cling to the veranda-pillars, and flowers in pots bloom and quiver in the golden air. The living-rooms open on to an inner courtyard, and it is in this jealously guarded privacy that the women of the household breathe the air, for they seldom go out into the streets, and then only when muffled to the eyes in cloaks and veils, and generally in closed carriages with closely drawn blinds. The rooms seem to us bare and comfortless. There is no fireplace, and four or five high windows rise from floor to ceiling on at least two sides; and, as the woodwork shrinks during the heat, wide gaping seams let in the hot air in summer and the cold winds in winter. The floors are covered with a coarse straw matting, the walls are rough and unfinished, but the ceilings are often inlaid with a mosaic of coloured glass. High mirrors or priceless Persian rugs cover the bareness of the walls, and costly carpets are laid on the floor. A divan or two at one end of the room, and a few inlaid tables, complete the furniture. Cushions and pillows are hard and uncomfortable, for a soft stuffing of down is unbearably hot when the thermometer stands at one hundred and twenty degrees Fahrenheit in the shade.

The houses are flat-roofed, and a very steep staircase with steps of varying height leads to the housetop. Each roof is surrounded by a high wall to secure it from prying eyes on the neighbouring dwellings. Here the family have their evening meal, and here they sleep during the hot months of the year. This roof-life has a charm peculiarly its own. As the sun goes down, and the walls begin to give off the heat which they have been absorbing all day, the upper rooms become intensely hot, and everybody is glad to leave the darkness of the *sirdabs*, or underground rooms, where the hottest hours of the afternoon have been spent, and to climb to the open spaces above. The heat is still oppressive, the thermometer registering a shade temperature of one hundred degrees Fahrenheit, and there is no prospect of any greater coolness even at midnight; but there is a feeling of liberty and light after the imprisonment in the darkened cellar below.

As the sun sinks below the horizon the burning blue of the sky pales into a soft pearly gray, except at the rim, where flames of tawny gold and burning orange melt slowly into pale primrose-yellow. A silence falls upon the town. A thousand fires are kindled for the evening meal, and slow spirals of pale smoke rise into the silent air; herds of goats and sheep follow their shepherds to the river's edge, and as they

go there is a pattering as of falling rain; the tinkle of mule-bells comes in softened cadence in the evening air, as the incoming caravans reach their resting-place for the night; and the call to prayer sounds clear and compelling from every minaret and tower. As the short twilight dies away the stars appear, and shed a silver light over tower and turret, over palm-gardens and orange-groves, and over the rushing waters of the river. Should there be a moon, the scene becomes one of almost unbelievable beauty. Every frond of the trees is silhouetted against the blue background of the sky, towers and minarets stand out in delicately pencilled beauty in the clear purity of the night, the carved prows of the passing *dhows* rise high out of the silvery waters, and far beyond the close-huddled houses stretches the long yellow plain of the desert.

There are over one hundred mosques in Baghdad. Most of them have domes and minarets inlaid with white and coloured glazed tiles which gleam in the bright sunlight, and in two or three of the older ones are to be found remains of cuneiform inscriptions and delicate stone carvings. There is also a Latin church, a Roman Catholic convent, and a school kept by French nuns. The *serai*, or pasha's palace—a long, irregular building with no pretensions to beauty—is in the centre of the town, and is situated in a narrow street.

There are numerous open spaces throughout the town, and many of the activities of the people are carried on in the open air. Here you come on the silk-weavers stretching the delicate threads of silk over their primitive looms; there you find a Jew sitting cross-legged at his doorway, busy with embroideries of gold and silver on fine net; and again you find some five or six men weaving carpets to intricate designs on ancient handlooms. Sometimes you come upon a coffee-garden—a collection of rough wooden benches placed under the shade of wide-spreading acacia-trees. The merchants meet here to discuss business, to fix prices, to note the rate of exchange; and everything is done in the usual leisurely Eastern fashion. They sit cross-legged or recline lazily on the wooden seats, smoking long water-pipes and drinking coffee. The coffee is quite thick, but simply delicious in flavour, and is served in tiny cups without handles. Only a very small quantity of absolutely boiling liquid is poured into the cup, and the recipient cools it by turning the cup dexterously in his hand before drinking.

Leaving the glare and dust of the open streets and entering the covered-in lanes of the bazaar is like leaving the hot noonday and plunging at once into the cool dimness of the twilight. The roads are narrow and roughly paved, and there is little room for vehicles to pass each other. Great herds of water-buffaloes may bar your progress, or long strings of water-donkeys rub

their greasy water-skins against the shoulders of the unwary ; but you soon learn to wait at some wider corner till such obstructions are past and the way is clear once more. The bazaar is quite a famous one, though it does not compare with those in the richer towns of Turkey and Asia Minor. It is divided into different sections, and provides a feast of colour and of striking fullness of life. The gorgeous dyes of the East make vivid splotches of colour ; embroidered goods from Damascus gleam with silver and gold ; trays and goblets and pitchers reflect the glowing tones of copper and brass ; and boots, shoes, and saddlery blaze with rich reds and yellows. The soft colours and exquisite designs of Persian rugs meet the eye at every turn ; and the air is full of scents from the spice merchants' stalls.

Beyond the town stretches the desert, and here a golf-course has been laid out and a little club-house erected. Out on the desert, too, is a little spot of vivid green, enclosed by high, gray walls ; it is the cemetery in which are buried those Europeans who have ended their lives in this far-off land, and now lie in the silence of the plains, the waving trees sheltering them from the fierce rays of the sun and the whirling sand-storms of the desert. At the southern end of the town stretch date-gardens and orange-groves, and to these the Europeans often drive or ride in order to picnic in the shade of the trees.

On the right bank of the river, a little way inland, is the town of Kasmain, which has a sacred mosque whose golden dome is famous throughout the land of Mesopotamia. The bodies of devout Mohammedans are brought here to be buried under the shadow of the sacred towers. The people of Kasmain are very fanatical, and it is only with great difficulty

that an infidel may come within sight of the holy building. During Moharram it is not safe for a European to approach the town, and the end of the fasting-time is a signal for the most frenzied outbursts of religious fervour, the dervishes slashing and cutting themselves till faces and bodies are torn and besmeared with blood.

The population of Baghdad consists of Turks, Arabs, Chaldeans, Jews, Armenians, Persians, Greeks, and Levantines. The climate is on the whole a healthy one. The heat is often more intense than in Basreh, but it is drier and less trying. The nights are cooler ; and as there is no moisture in the atmosphere, it is possible to sleep on the roof without any awning or covering overhead. There is less malaria than in Basreh ; but there is much greater danger of contracting other diseases, as the Europeans live actually in the midst of the natives, and there is always more or less cholera, typhoid, and smallpox among the inhabitants. The forty or fifty European residents have quite a gay social life. There is an English club, and there was a German one. Dances and dinner-parties bring the British together in the winter ; but, as there is always a scarcity of ladies, men have to dance with one another. In spring and autumn many people camp out on the desert, the men riding morning and evening to and from their offices in the town. In summer the heat is tropical, and the life is very shut-in ; but even then riding, driving, rowing, tennis, golf, and badminton can be enjoyed in the early morning or in the evening. The winter is perfect. There is little or no rain, the skies are bright and cloudless, the atmosphere is clear and smokeless, and there is none of the bustle and hurry which characterise life in the cities of the West.

A WOODEN CROSS.

CHAPTER II.

THE first torpedo struck her astern, not a mortal wound ; but Otto's last torpedo gave the death-blow amidships ; her doom was sealed beyond the help of mortal man. The gay little submarine dived well away, and sent forth the famous message which brought joy to so many German hearts : 'Torpedoed British battleship of latest type, name unknown. She sank in twenty minutes.'

Justifiably was Otto filled with pride ; he had accomplished a brilliant (and legitimate) exploit of naval warfare. He had sunk a ship which the mighty vessels of the High Seas Fleet would never have engaged. Slowly he made toward Cuxhaven, as he wished the fame of his deed to spread abroad, so that his reception should be fitting. He had visions that the Emperor himself might greet him on landing, with Iron Cross in hand.

Captain Stahl, in his office, was overjoyed, and told the news to his admiral.

'Schugt is an excellent officer,' remarked Stahl. 'I have noticed him favourably for some time. He carried out my instructions to the letter.'

'He will, of course, be decorated with the Iron Cross of the first class,' said the admiral. 'The All-Highest will be delighted.'

The good news was sent immediately to the Emperor and to the Admiralty. By official bulletin it was communicated to the newspapers and to the whole world. The news rejoiced simple hearts in the trenches ; it cheered the officers serving with the Turkish army ; it heartened Hindenburg.

'God has helped you in this, Schugt,' wired the Crown Prince.

'I rejoice in your prowess, Schugt,' came from Ruprecht of Bavaria.

'Due punishment has, with God's aid, been given to the perfidious English!' was Karl of Württemberg's contribution.

'Good for you, Schugt. Damn England!' was bluff Hindenburg's comment.

Over a thousand private persons, mostly women, sent telegrams with the following novel wish: 'God punish England!' There seemed quite a likelihood of a strike among the deities in the German heaven.

The Emperor's commendation was of too sacred and holy a nature for publication. Admiral Tirpitz bore it himself by special train from the Army Main Headquarters, which he had been visiting in the hope of being permitted to see some fighting. All this honour and these many messages awaited the arrival of Lieutenant Otto Schugt and his submarine at Cuxhaven.

Berlin celebrated its hundredth joy-day since the beginning of the war. There were scenes of indescribable enthusiasm; old men, women, and children paraded the streets; feeling ran high, and everybody's spirits were at the zenith; even the temperature of the sick and wounded went up. Strange stories were told of the extent of the emotion; for instance, a gas-operating sergeant of the special service section, a well-known Berlin chemistry professor in peacetime, died of heart failure from excitement at the news in the front trenches in Flanders. Shortly afterwards the British, unfortunately, captured the trench containing his body, on which, it was feared, were technical details which revealed the secrets of the powerful poisonous gas. Lieutenant Schugt could hardly be blamed for this misfortune, which was likely to bear dangerous consequences. The story was, without doubt, true; that was the fly in the unction of their success.

The maritime towns of Germany—as behoved them—were especially jubilant. The thought of the mourning homes in the enemy's seaports gave peculiar zest to their rejoicing. Hamburg, Bremen, Kiel, even Danzig, had public holidays. The 'Hymn of Hate' was chanted in ceremonious procession through the streets; the churches had solemn thanksgiving services; all children with the Christian name of Otto were presented with a free bread-ticket. Likewise, all the male babies who were about to be baptised received the glorious name of Otto. Cuxhaven, as the base port of the hero's submarine, was more modest in her transports; she reserved herself for his actual arrival.

Mrs Schugt and Elsa had gone to Cuxhaven and waited.

'I hope,' said the practical Elsa, 'that dear Otto will not have his head turned.'

'Of course not,' replied the indignant mother. 'Our Otto will take everything with true German modesty—even the Iron Cross.'

'I have a confession to make to you, little mother,' hesitatingly spoke Elsa. 'Otto and I were secretly married just two weeks ago.'

Mrs Schugt was surprised and annoyed. She knew that Otto's social value had now increased; he could do much better for himself than by marrying Elsa. She felt that her son would realise the fact; it was most provoking of him to have been so hasty.

'We must tell no one at present,' said Mrs Schugt with finality.

Foolish little Elsa wept because she could take no public part in the reception of her heroic Otto.

In time Lieutenant Schugt's interesting news reached even the British Admiralty. A pessimistic private secretary at once laid the message before the First Lord. Urgent questions were forthwith despatched to the admirals commanding the various fleets. Similar replies came from them all: 'No battleships missing.'

'Count all your ships,' said the Admiralty.

'All present.'

'Any missing?' asked the Admiralty.

'No.'

'Are you quite sure?' queried the Admiralty.

'Yes.'

'Count all your battleships, cruisers, destroyers, torpedo-boats, submarines, oil-tugs, auxiliary ships, steam-pinnaces, and rowing-boats. Report if any absent,' ordered the Admiralty.

'None absent.'

'Anything unaccounted for?' was the final question of the cautious British Admiralty.

'Nothing at all,' answered all the admirals with one accord.

The situation had already been correctly diagnosed by a small boy selling evening papers. 'German official!' he cried. 'Another damn lie!'

The British Admiralty published without delay an official contradiction *in toto*, so that the All-Highest himself realised that there must be some sort of explanation somewhere. Admiral Tirpitz took another special train to rejoin his Emperor.

Lieutenant Schugt's submarine came slowly into Cuxhaven harbour, which was the signal for a terrific hooting of steam-whistles from every craft in token of congratulation. Flags were dipped in honour of the gallant commander. Otto was radiant and joyous alone in the watch-tower of his noble boat. Suddenly, to his astonishment, the whole hullabaloo ceased before they had reached their berth. Otto did not know that the order for silence was given by Captain Stahl, who had the direct verbal command from the admiral of the port, the result of a private telegraphic communication from the High Admiral, who was known to be in audience with the All-Highest. What could it mean?

The admiral of the port, as well as Captain Stahl, was waiting in the office when Lieutenant Schugt entered with a light heart.

'Lieutenant Schugt,' inquired the admiral, 'did you send a message reporting an enemy light cruiser in neutral waters?'

'Yes, sir.'

'Your message was picked up by our newly completed Super-Dreadnought battleship, which was carrying out trials in those waters.'

'Was it, sir?' stuttered the pale Otto.

'Yes. She answered, "Excellent," and steamed immediately to the place indicated with a view to engaging the light cruiser. Did you see anything of this ship?'

'N-o, sir.'

'Nothing has been heard of her since then,' continued the admiral. 'Destroyers have been sent out to reconnoitre, and have discovered a variety of débris, life-belts, bits of furniture, all identified as belonging to the missing ship.'

'I must have sunk her,' was the only thing that Otto could find to say.

'Quite so. The fortune of war. I may add that one of our destroyers, which was out on this duty, was sunk by the British; so you are, indirectly, responsible for that loss as well.—Captain Stahl, you will be so good as to deprive Lieutenant Schugt of his sword, and arrange for his immediate removal to the naval prison. You will also consider yourself under open arrest.'

'Very good, your Excellency,' said Captain Stahl.

The admiral, when alone, thought gloomily

of an historic British admiral, Admiral Byng, of whom Voltaire wrote: '*En Angleterre, on tue leurs amiraux pour encourager les autres.*' The Imperial temper was uncertain, and might at any moment indulge in a similar form of vicarious encouragement at the admiral's expense.

All the national experts of Germany—of a department in which they were admittedly untouched—had much ado to give a plausible explanation. 'A perfidious British trick'—the good old phrase—was able in some measure to account for the tolling for the dead which gave place to the ringing joy-bells. The people cried aloud for more British blood. 'Give us another *Lusitania*.'

Elsa never quite knew all the details, for little was made public. She was a widow without having been an acknowledged wife; she had not been allowed access to Otto before his death.

Mrs Schugt—by an act of kindness on the part of the admiral, who had only been reprimanded—was permitted to erect a small wooden cross over the place where they laid Otto's body. Otto had been shot in accordance with the sentence of a court-martial which lasted a quarter of an hour.

Captain Stahl was dismissed the service.

Seaman Kurt, the observation expert, got shere leave to enable him to be present at the funeral of his wife and son, neither of whom had been very robust.

THE END.

FREITS AND FEARS.

By LAUCHLAN MACLEAN WATT.

WHILE superstition is in itself a manifestation of the human mind entrancing in its general appeal, certain aspects of it are of more than trivial interest. Why, for example, thirteen should be considered unlucky, while the voice of proverbial wisdom declares that there is luck in odd numbers, is a fact extremely difficult of explanation. It is quite clear that good fortune does not go with all odd numbers, and popular fear leaps wild-eyed and almost with a shriek from the number thirteen. One can understand three and seven having mystical religious associations wrapped about them, and holding, with Christians at any rate, a dominating place. The Trinity, the seven days involved in the work of creation, with the idea of completeness which accompanied the thought of these numbers, gave them an abiding retreat within that antechamber of religion in which superstition has its dwelling.

The association of ill-luck with thirteen has a specific application. It is connected almost solely with that number of people sitting down at table together. It is, however, by some extended to the numeral itself; and people who

are born on the thirteenth day of a month, or who live in number thirteen of a street, or who may happen to be the thirteenth of a family, walk in trembling anticipation of coming up against the blighting shadow of some unspeakable misfortune. Since early Christian times the source of this fear might be attributed to the Lord's Supper, a fact which was constantly impressed upon the medieval mind by the universal representation of that sacred event in altar-pieces of the great churches. The superstition holds that the first in a company of thirteen who rises and opens the door will die within the year, and this seems very plainly to point to a reflection of the act and fate of Judas, the betrayer of Christ.

It is, of course, impossible for a good-going superstition to escape additions and improvements; and, with some people, the ill-luck of the combination is confined to the banquet occurring on a Friday. This is, however, unnecessary; for Friday was already in itself considered sufficiently unfortunate, and especially in connection with the initiation of any enterprise. The fact of the

crucifixion having taken place on a Friday marked out that day first as a day apart, and then as one to be avoided for any ordinary venture. It was on a Friday, for example, that the Sinclairs, clad in green, crossed the Ord of Caithness on their way to Flodden, from which only one man of the name returned; with the result that, according to tradition, Friday was ever after avoided by the clan, and the green tartan discarded for the red. Here, however, there is an overlapping of superstitions; for not only was an unlucky day chosen, but an unlucky colour worn, it being well known that the fairy world resented humanity daring to assume garments of the hue especially favoured by themselves. This was a remarkable idea in the Highlands, for the great clans which prospered at the cost of the others were in reality those who wore the green tartan. Indeed, in the later risings, especially in the Forty-five, it is astonishing to think that the Government clans—like the Campbells, Sutherlands, and Mackays—were predominantly green; while the Jacobite tartans, from the Stewarts right through great clans like the MacLeans, MacLachlans, and Camerons, and on to the smaller sept, were almost predominantly red.

For the most part the shadow of the fear of thirteen applies to any day. It is remarkable to observe a hint that even before Christian times this superstition held its own, apart from the notion of rising from the table; for it was at the banquet in Valhalla that the evil god Loki appeared, completing the fateful number, and at his instigation Balder the Beautiful was slain.

In illustrating this superstition the following, in consequence of the outstanding note of the parties concerned, may be of interest as showing the strength of coincidence. When Victor Hugo's *Angelo* was revived in 1850, a dinner was held in the author's house to celebrate the fact. There were thirteen at table—namely, the host and hostess, with their sons Charles and François (the future translator of Shakespeare), Rachel the actress, her sister Rebecca Felix, Madame Arsène Houssaye, Madame de Girardin, Jacques Pradier the sculptor, D'Orsay the ex-lion of London society, Gerard de Serval, Alfred de Musset the poet, and a young person named Peree, who made the thirteenth. Rachel the actress, who was very superstitious, did not conceal her fears; and the dinner certainly made a record in its way, for within a year the Hugo family were in exile, in the second year Pradier died of apoplexy and D'Orsay of meningitis, in the third year Peree went, in the fourth Rebecca Felix, next Madame Houssaye, in the fifth year Madame de Girardin died and Serval hanged himself; while in the seventh year De Musset, and finally Rachel herself, cleared the boards. '*Et riez donc!*' she wrote; '*et moquez-vous du Numero Treize!*' Of course in this case every one of the party was looking for something to happen, and was ready

to attribute anything whatsoever to the malign influence of the unfortunate numeral. Nevertheless it is noteworthy that no death occurred within the first year.

Another notable experience took place at the house of Millais the painter, when certain members of a dinner-party were horrified to discover that the ill-omened number were seated around the table. Matthew Arnold the poet, who was present, said, 'The idea is that whosoever rises first will be dead within the year. Now let us see if we cannot circumvent Fate.' Pointing, therefore, to a couple of fellow-guests, he said, 'I propose that these two strong young men and myself should, with our combined constitutions, take the risk; and we will rise together.' They acted accordingly, and then the ladies left the room. Now the remarkable thing is that within six months Arnold himself was dead, struck down in the prime of his manhood. One of the two who had risen along with him was found shot in a New York hotel, but whether it was a case of murder or of suicide has never been determined. The third seemed likely to defy the freit, and to live the year through. He had gone to Australia in ill-health, and on his voyage home he took his passage in the *Quetta*. That unfortunate vessel fell among the reefs skirting the New Guinea coast, and not a soul on board of her was ever seen again. Now it could not be a matter of surprise if what was at least a tragic coincidence confirmed that little coterie in their dread of the fatal number.

It may well be said that in this matter of the fear of the number thirteen the superstitious have very frequently been in first-rate company. A recent writer drew attention to the fact that in Austro-Hungary the superstition is paramount, carrying even the authorities, it is said, the length of changing the number of 'Box 13' in the Imperial Opera House and in the Court Theatre to number '12A,' as the public would not sit in a box marked with the unlucky numeral. In the Austrian hospitals the number '13' is avoided on pavilions, blocks, wards, and stairs; while it would be a daring surgeon and a desperate case that would face operation on the thirteenth day of a month or on a Friday.

Of course it is only the misfortunes that are recorded, though a very interesting field of inquiry lies open to the statistician in connection with the other side of the story—the record of projects begun and voyages started on the thirteenth of the month, being also a Friday, which have had good fortune smiling all the way, and brought success and happiness to those involved in them.

Some superstitions and lucky omens defy explanation. For example, certain Eastern races believe that the luckiest objects one can meet on awaking from sleep are a married woman, a dancing girl, a mirror, and an ass. If the mirror were at hand there might be little difficulty in

beholding the ass; but why such a collocation should be considered lucky seems entirely arbitrary. At any rate it is not easily explicable. Sometimes an attempt is made to evade the omen by playing a curious trick on Fate. For instance, for a Hindu to see a male and female crow together means the death of the onlooker unless he remember to write to some friends at a distance that he is already dead. It is, in fact, an amusing thing to observe how superstition and legend always seem to consider that destiny and the devil are idiotic in their simplicity and in the ease with which they may be deceived! It carries also, with some races, a risk of enmity between host and guest to feed a guest for the first time on Sundays, Tuesdays, or Fridays; while for some it is unthinkable to sleep with the head lying toward the south, as the god of death lives in that quarter, and the only hope of evading his designs is to lie east or west. There is thus no international uniformity in the attachment of ill-luck to days; though, beyond doubt, in Christian countries the culmination of the Christian tragedy on Friday had the effect of overshadowing that day especially. And yet who knows what primitive ghost of prehistoric fear had holy baptism bestowed upon it herein?

The idea of antidotes against the passing on of an ill-omen to its fulfilment is also somewhat difficult to trace. The gambler is notoriously superstitious; and I have seen a man whose luck at cards was going against him rise and turn three times the way of the sun, and be convinced that thereby Fortune's wheel had birlled in his favour!

I remember a Fife schoolmaster telling me how, in his youth, which was spent in a fishing village, the name of the enemy of mankind was considered fraught with evil chance, and that he had seen the fishers, whenever the minister mentioned the devil by name, grope hastily along the pew for the head of an iron nail, contact with which, it was believed, at once averted the threatened misfortune. To touch cold iron was always the clue to safety. In fact, iron and steel were universal prophylactics. A row of nails driven into the front of a bed, or a steel poker laid across a cradle, or even an iron horseshoe, made an impregnable outwork line against impending

ill. This probably had its root in very primitive times, when the man who possessed metal held a talisman whereby he dominated his fellows. The association of iron with fire, that mystic medium which differentiated man from beast, may also, of course, have something to do with the matter. But another element may have been associated with this, as with the security attained through touching wood. This last may have arisen from the association of the manifestation of the World Spirit in the forest tree. But there is little doubt that it had also, and probably most of all, to do with the habit of carrying a bit of the true cross; and the nails of the crucifixion would be efficacious relics. The Christians used the cross as a magical medium for warding off all sinister spirits. The cross in the iron hilt of the crusader's sword had this at the root of it.

The myths regarding the cross were, in fact, multitudinous. It was looked upon as having a kind of magical vigour within itself. The legend narrated that Seth planted on the grave of his father Adam a slip of the tree of life, which supplied Moses with his necromantic rod and gave Solomon a good deal of timber for the temple, finally affording the material for the cross of Christ. Having been buried on Golgotha, it was rediscovered by the Empress Helena, and passed into the possession of holy people, having the power to heal diseases and to ward off evil. With something almost like humour, the legend wisely explains that it had the power even to reproduce itself and to multiply exceedingly—a very necessary explanation, for the bits of the true cross in the reliquaries of the devout throughout the ages might, if gathered together, build an ark for Noah of much more comfortable dimensions than that ancient mariner knew!

The fear of passing under a ladder has reason in it even to-day, lest something undesirable fall upon the passenger. But in earlier days the sinister connection of a ladder with a phase of the rope industry in our nation gave it a very dire meaning; and many a family in Scotland of quite good ancient name found the gallows ladder a sufficiently grim mnemonic to justify them in avoiding, with deepest earnestness, contact with its blighting shadow.

THE MONTH: SCIENCE AND ARTS.

ARTIFICIAL RESINS.

DURING the past few years considerable advance has been made in the discovery of artificial substitutes for bone, ivory, celluloid, amber, and so forth, for which there is a pronounced commercial demand. But recently a discovery of far-reaching importance has been made which it is anticipated will result in the

more extensive utilisation of substitutes, inasmuch as the new product is non-inflammable, immune from softening under normal climatic conditions, insoluble, and far easier, simpler, and cheaper to produce than the old; while it may be employed for any of the purposes to which celluloid and other substances are applied. This new process is described as a 'dry,' as distinct from the conventional 'wet,' method of producing

synthetic substitutes. Two ingredients are employed—namely, phenol or carbolic acid, and formin, which has the unwieldy technical name of hexamethylenetetramine. The two materials are weighed out in the required proportions, the formin in its dry condition resembling table-salt in appearance, and being of the same colour. The mixture, without any water, is placed within a flask fitted with a glass air-condenser, and is gradually heated. Under the action of the heat the ingredients melt to form a golden-coloured liquid. After the boiling operation has been carried to the requisite point the molten mixture is poured into a mould, which varies according to the character of the article required, such as a pipe-stem, knife-handle, or what not. Then the mould is transferred to an open oven to undergo further heating. Afterwards the mould is permitted to stand until the contents have solidified, although the condition remains gelatinous. This enables the article to be bent to the desired shape, which is a simple task, owing to the softness of the material. The article is now returned to the oven and subjected to a further prolonged heating, which causes the substance to harden and to assume permanently the desired shape. The resultant product is intensely hard; in fact, it excels nickel in this respect. After it has set or hardened, the material may be cut, ground, polished, and further shaped if required. In its natural colour, a deep golden hue, the synthetic substance resembles the finest amber; but any colour can be obtained by the addition of the desired colouring matter. This synthetic resin can be employed for beads, knife-handles, combs—in fact, practically every purpose for which celluloid and its kindred substances are utilised. It also makes an excellent glue, for which there is a great demand, owing to its insolubility. Even alcohol does not dissolve it. Varnishes, paints, and lacquers can also be made therefrom; and as the material is impervious to water, it constitutes an excellent paint for metallic structures. The resin has also been utilised for coating paper bags and coverings, which are thereby rendered greaseproof. The process is generally conceded to represent the most noteworthy advance in the realm of non-inflammable substitutes for celluloid, and a widespread commercial development is anticipated.

COOKING HARICOT BEANS—A WARNING.

A correspondent of the *Pharmaceutical Journal* gives a warning concerning the cooking of haricot beans. Some beans were being prepared for the table, and as a preliminary operation they were steeped in warm water in a vessel which was placed on the kitchen stove for the night, the lid of the vessel being in a completely closed position. Upon opening the vessel in the morning a peculiar pungent odour was detected, which, on further examination,

proved to be that of hydrocyanic (prussic) acid. The beans were cooked and eaten without any ill effects being experienced; but the discovery prompted the correspondent to make an experiment. Some beans were ground and macerated with water at one hundred and thirteen degrees Fahrenheit, and from one gramme weight of the beans 0.16 of a milligramme of anhydrous hydrocyanic acid was obtained. Thus one ounce of beans yielded poison equal to twice the minimum and three-quarters of the maximum dose of the *Pharmacopœia*. The investigator points out, however, that such a quantity could scarcely be produced in cooked beans in any circumstances. The condition most favourable to the production of the acid is digestion in warm water. On the other hand, the enzyme responsible for the acid is destroyed by boiling water. Any free hydrocyanic acid which may be produced during cooking volatilises and escapes. But the correspondent draws attention to the danger of adding any alkali to the dish. The average cook invariably adds a small pinch of carbonate or bicarbonate of soda to the food either preparatory to or during cooking. By so doing a certain danger is courted, inasmuch as the alkali fixes any free acid which may be present. He suggests that the safest way to cook such an edible is to steep the beans, if required, in cold in preference to warm water, particularly if alkali is added, because, although cold water will produce the acid, it is done at a very slow rate. It is advisable to refrain from adding any alkali; but if such is desired, it should be added toward the end of the boiling, because, should any acid have been produced, it would be dissipated by that time, so that no ill results would be likely to occur.

IS THE RIFLE USELESS?

The war has been responsible for the refutation of many theories, and has upset innumerable calculations. One of the burning questions of the moment concerns the modern rifle. This arm has undergone wonderful development, and has been brought to a high standard of perfection. But the method in which warfare is now waged renders it of doubtful utility. At all events, it has not played such a prominent part as was expected. Soldiers were carefully trained in its manipulation, while the velocity of the bullet was increased to such a degree as to permit of firing point-blank at considerable ranges. Has this effort been wasted? Upon the western front the protagonists are facing one another at distances varying from twenty to fifty yards—the point-blank range of a modern pistol—and each line of trenches is virtually a fortification, with its ramparts, embrasures for light guns, funk-holes, and overhead wire netting as a protection against grenades. It is difficult, if not virtually impossible, to bring the rifle into profitable use except for sniping tactics; while the

magazine ensuring rapidity of fire appears to be a superfluity, for the simple reason that there is a lack of opportunity to turn it to full account. One great objection to the dependence upon rifle-fire is the large number of men required to hold a certain position. On the other hand, the machine-gun, properly disposed, is able to perform the work of a hundred rifles, and with far greater effect. A machine-gun will hold up a massed attack from the fact that it is able to deliver some six hundred shots per minute, and can be trained with far greater ease. When Germany entered the arena she possessed a round fifty thousand machine-guns, and at the moment it is estimated that this force numbers over one hundred and ten thousand weapons. The practice was to attach two machine-guns to each company of one hundred men, but to-day the proportion is about one gun to twenty men. The extraordinary Teutonic dependence upon this arm was brought home vividly during the capture of a German trench. Within a length of fifty yards eight of these weapons were found, and they had been manipulated by a mere handful of sixty men. The one useful office for the rifle at the moment appears to be as a handle for the bayonet, which it was confidently asserted in certain circles would be useless in a future war, because it would seldom be possible for the antagonists to clinch. But 'cold steel' is proving more useful than the cartridge, and indeed is the only effective weapon in a spirited attack after the hostile position has been battered by high-explosive shells. In some quarters it is stated that the rifle as it is known to-day will disappear from warfare. While this is undoubtedly an exaggeration, it is certain that it will undergo considerable modification, which may result in the production of a combined rifle and machine-gun.

THE NEW ANTISEPTIC.

Coincidences in scientific research are extremely rare, but probably the most extraordinary is the simultaneous discovery of the new antiseptic. Considerable interest was aroused by the announcement telegraphed from Paris that Dr Alexis Carrol, the eminent investigator of the Rockefeller Institute, in conjunction with Dr H. D. Dakin, a British chemist, had succeeded in producing a neutralised sodium hypochlorite solution which possesses wonderful germicidal properties. The discovery turned upon the means of neutralising the irritant alkalinity of the solution, which was achieved by its treatment with boric acid. Dr Carrol and Dr Dakin carried out their work in the laboratories at Compiègne, some of the materials having been prepared in the laboratories of the Leeds University, where Dr Dakin studied and graduated. But the publication of the discovery revealed the remarkable circumstance that simultaneously a group of British patholo-

gists had been pursuing an identical and independent line of research in Edinburgh, and had likewise met with success; although probably the distinction of anticipation must be awarded to the Edinburgh workers, because their discovery has been in practical, if limited, use for some time past. This antiseptic is one of the simplest known, comprising a mixture of bleaching-powder and boric acid, which are intimately associated. The Edinburgh investigators gave this specific the generic name of eupad, and to the solution of free hypochlorous acid the term eusol. So far as the tests therewith have gone, this undoubtedly represents the most powerful and effective germicide at present known to medical science. It may be used either in the form of a solution or as a gas, the latter form being utilised when it is desired to penetrate deeply into the wound to effect the sterilising action. With this antiseptic all dangers of poisoning are removed. Its action is purely local, the products of decomposition in the wound being freed from all poisonous matter. Another noteworthy feature is that this sterilising agent attracts a flow of healthy body fluid toward the wound, this fluid permeating the decomposed flesh, so that the flesh is forced toward the antiseptic and thus brought under its action. The antiseptic is ideal for service in the field, for the reason that it may be used as a powder in the field-dressing, whereas other germicides demand the solution form. If water be obtainable the powder can be dissolved, and thus a lotion be made instantly available. Owing to the low cost of the ingredients this antiseptic is cheap, it being possible to make a gallon of the solution for about a penny. The rapidity with which it performs its specific duty is another recommendation, while the fact that it is virtually painless renders it an ideal agent for sterilising wounds in children.

COLOUR PHOTOGRAPHY FOR AMATEURS.

Colour photography possesses as irresistible a fascination for the amateur as it does for the scientific investigator, and the kodachrome process offers a means of enabling the former to realise his ambition. This system has the advantage of being probably the simplest available at the moment, and is ideal for portraiture. Two exposures are made (panchromatic plates being used for the purpose), one being taken through a red and the other through a green screen. The two plates are developed in the usual manner. The negatives are then taken and immersed in a bath, which has the effect of removing the black silver from the base, so that when subsequently held up to the light the two plates appear like two colourless sheets of gelatine. The plates are now immersed in baths containing red and green dyes respectively; but the red plate is treated in the green dye and the green plate in the red dye bath.

Immersion in this solution causes the dye to penetrate the film in proportion to its former silver content. Thus in the high lights the dye enters far more slowly than it does in the deep shadows. The treatment to which the plates are subjected causes them to be turned from negatives into positives. When dry, the two plates are bound together to make the complete picture in the form of a transparency. The results are decidedly artistic; and although the colour values cannot be true, inasmuch as only two-colour filters are employed, the deficiencies are not emphasised. What may be termed the essential tints in portraiture—that is to say, the flesh gradations—are excellently rendered, as well as the grays and blacks. While the process is effective for portraiture, it is not adapted to landscape photography, because under the latter conditions the blues and greens—in which the colour effects are weak, if not distorted—predominate; but it would be difficult to offer a more pleasing and fascinating process for amateur portraiture. A special camera has been designed for this phase of photography which is not more difficult to use than the ordinary snap-shotting instrument. The process cannot be used for the production of paper prints; but if duplicates are desired, they can be made in the manner of lantern-slides by contact printing upon additional plates, and then submitting each of the latter to the dye treatment. By this duplication process retouching, both on negative and positive, may be carried out if desired.

CAN SMALL-ARMS AMMUNITION BE DETONATED?

It will be remembered that the German Government has persistently maintained that the rapid destruction of the *Lusitania* was brought about mainly by the detonation of munitions which she was carrying, these exploding as a result of detonation by the torpedo which was fired against the liner. It is a specious argument, but it is absolutely untenable in the light of the recent experiments which have been carried out by the American Government to determine whether such a result could be produced. At first sight one might imagine that small-arms ammunition, in view of the fact that smokeless powder or cordite enters into its composition, would be a highly dangerous cargo to carry on board ship; but the American experiments have proved conclusively that there is no greater risk attending the conveyance of such ammunition than in carrying a shipload of butter. The experiments were very varied and searching in character. In one instance a box full of cartridges was dropped from a height of twenty-five feet. The box was badly knocked about, but that was all. In another test a shot-gun was discharged against the laden box. The latter, as well as the cartridges within, was riddled, but there was no explosion. In a third test a blow-pipe was brought to bear against the box. The

wood was speedily burned away and the cartridges within were ignited, but no explosion resulted. In fact, directly the blow-pipe was removed the cartridges refused to burn. Other equally striking tests were carried out, but in each instance a negative result was obtained. Thus it is impossible to detonate ammunition in this manner. As a result of these experiments the American Government is advised that there is no necessity to introduce special legislation or regulations concerning the carriage of small-arms ammunition by water, and that it is superfluous to rule that such shall be carried in a magazine. In the face of these conclusive data it will be impossible for the Germans to maintain any longer the fond belief that the munitions, if there were any, aboard the *Lusitania* contributed to the liner's fate.

To Correspondents who wish fuller information regarding new inventions mentioned here, addresses will be furnished, when possible, provided a stamped and addressed envelope or post-card be sent to the Editor, 339 High Street, Edinburgh.

WAR—1854, 1899, 1915.

YEARS ago, they tell the story
Of the unforgotten dead,
How they rode the path of glory,
Through a blazing lane of lead.
To the guns—and past—they thundered,
All undaunted, facing hell,
Whilst the watching armies wondered,
And the best and bravest fell.
And they tell
How a whisper rent the air,
'*C'est magnifique! Mais pas la guerre.*'

Stood the changeless heavens unshifted,
Swept the changing earth beneath,
Till again the sword was lifted,
Somewhat rusty in its sheath.
Love and pity clogged our going,
Shared the bivouac and the tent,
Reaped the harvest of our sowing
On the uncertain way we went.
Justice leant,
And held the scales with jealous care;
But *à la guerre, comme à la guerre!*

Now they tell another story
Of a new and splendid day,
Up the steep ascent to glory,
Youth and valour lead the way.
Rings the challenge swift, compelling,
Gray and silent goes the fleet;
Whilst the shaken earth is telling
Of the tramp of marching feet.
Winds repeat
That whisper in the startled air,
'*C'est magnifique! et c'est la guerre.*'

* * TO CONTRIBUTORS.

- 1st. All communications should be addressed 'To the Editor, 339 High Street, Edinburgh.'
- 2nd. For its return in case of ineligibility, postage-stamps should accompany every manuscript.
- 3rd. To secure their safe return if ineligible, ALL MANUSCRIPTS, whether accompanied by a letter of advice or otherwise, should have the writer's Name and Address written upon them IN FULL.
- 4th. Poetical contributions should invariably be accompanied by a stamped and directed envelope.

Chambers's Journal

SEVENTH SERIES

THE STRANGE AFFAIR OF THE CHANCELLOR.

By CHARLES EDWARDES.

CHAPTER I.

THE nation was in for a shock—brief, but notable.

Hubert John Gurford, the Lord Chancellor, magnate of the Woolsack, was missing; had disappeared from the face of England as completely as if a heavenly and unseen chariot had descended and carried him away with it; or, more conceivably, according to some who hated him (and they were not a few, for in his time he had been a ruthless antagonist), it was as if the earth had opened and shut upon him in a single sudden second, settling him for all eternity in a climate as warm as his temper.

These were one or two ways of interpreting the mystery. But there was scope for other interpretations, as may be surmised from a report of the half-hour or so immediately preceding the 'Good-night, my lord!' which Mr Beamstock of the Cloubury Arms Hotel breathed respectfully from his porch to his lordship, striding by with angry mien. The day was Saturday, the month September, and the time 6.45 P.M., with abundance of daylight at that hour. The Chancellor vouchsafed neither word nor look in response; and, having watched the great man to the bend in the road, Mr Beamstock re-entered his inn. Casually, yet valuably, he glanced at the clock just inside the doorway. It was exactly a quarter to seven.

No one had seen the Chancellor since; that is to say, no one was willing to confess to that effect.

Beyond the inn were but two houses in the next half-mile of road toward Chelcote, the nearest town to Cloubury Hall, the Chancellor's Warwickshire seat, whence he had thus come forth for his vanishing. The one dwelling was an old cottage of stone and thatch inhabited by a deaf widow named Cheese and her son Samuel, the latter a harmless booby man known as Peg-top Sammy because of his persistent passion for pegtops in season and out of season. The other dwelling, about two hundred yards farther on, was Lilac House, a small red villa, tenanted by an elderly couple named Murphy, with whom lodged the Reverend George Leven, the Cloubury curate.

No evidence of the Chancellor's passing this Saturday evening was obtainable from either of

these houses. Mrs Cheese was in the village at the time, gossiping and what not with a hand to her bettermost ear; it was no use interrogating Sammy for any serious purpose; Mr and Mrs Murphy had not stirred from their back-parlour between six o'clock and eight; and George Leven, the curate, said that it was seven o'clock when he let himself into Lilac House with his latch-key. The curate remembered noticing a motor-car speeding for Chelcote when he reached the main road from the Hall by a public footpath through the park; but he certainly did not see the Chancellor. So he said on the Tuesday, when inquiries began to be made, and again on the Wednesday. It was only on the Wednesday that the probing into the mystery began to be as deep and official as Scotland Yard could make it.

Lady Geraldine Gurford, the Chancellor's motherless daughter, and mistress of Cloubury, was not alarmed, scarcely even disturbed, when her father did not return to dinner on the Saturday. She and her learned father were both strong-minded persons, although at times impulsive and whimsical.

'We had a little disagreement, and I can imagine how he would feel about it. There were circumstances which would have made me do something erratic myself if I had been in his place. I should want to get away and think it over alone, and I quite supposed he had walked to Chelcote, scarcely meaning to, but going on and on until he found himself near the town. That would give him the idea of catching the eight-fifteen express to London. It would be such a relief to him! He often says that problems smooth out for him astonishingly in the train. I fully believed he had done that, and wrote to him at Half-Moon Street, on Sunday, to hope he had not gone supperless to bed, and was—well, not so vexed as when he left me. I was not greatly surprised when I did not hear from him on Monday, but yesterday I began to get excited. Then I telegraphed to him twice, and a third time to Mrs Cardigan, our London housekeeper. That is how the truth came out, inspector. People who do not know him as I do will think it an extraordinary occurrence anyway; and, although I'm not worrying, I'm glad now that Captain Rampney communicated

with you folks in town. It was the thing to do, to satisfy the public.'

Such was the Lady Geraldine's almost introductory speech to Inspector Clapton of Scotland Yard on the forenoon of Wednesday in the Hall library.

George Leven, the Cloudbury curate—tall, thin, handsome, pale, and apparently much more anxious than Lady Geraldine—was with her ladyship.

Captain Rampney, Chelcote's chief constable, having brought the inspector to Cloudbury, had returned to the village with a puffy chest and fierce eyes. The Lady Geraldine didn't want him, she said. "'Too many cooks," you know, Captain Rampney; and I prefer to confide my private affairs to one clever mind instead of two. . . . You must forgive me,' she said further, so graciously that the captain concealed his annoyance until he was in the Hall drive. He was, of course, astonished as well as annoyed. Astonished also was the Scotland Yard man himself, yet secretly gratified; and not unreasonably, under such treatment, both men jumped, yet not equally fast, to the startling and stormy assumption that the Chancellor's daughter had something up her sleeve about which, if she were not so masterful a young lady, it would have been well, on behalf of the nation, to challenge her forthwith. Captain Rampney made an uncomfortable but polite exit without any such attempt to challenge. Hitherto, in the few minutes of his acquaintance with this lovely gray-eyed daughter of the highest legal personage in the land, Inspector Clapton had had no opening for anything of the kind.

The Lady Geraldine dashed headlong at the problem. She seemed to give the inspector credit for a superhuman amount of imagination—she took so much for granted, and was so calm, even almost smiling, about it. All she had said so far about the good-looking, but nervous and pale—yes, distinctly pale—young clergyman who stood by the hearth fingering an ivory paper-cutter, and, as it were, spell-bound by her in spite of his nervousness, was this: 'I should like Mr Leven to be present during our interview, inspector. He is interested in the case.'

Interested! Powers above! then how about Chelcote's chief constable, who had been wallowing in the case since Tuesday morning, and was now dismissed with red ears?

For a few moments after the Lady Geraldine's narrative the inspector could only babble rather stupidly, and wipe his brow. 'Really, my lady—will you allow me to sit down?' he asked, as if that might help him.

'Oh, do. How thoughtless of me!' exclaimed the Lady Geraldine. 'Let's all sit.' She signalled to the curate; herself took the Chancellor's own well-padded library throne, and, elbows on desk, looked straight at the inspector. 'Ask me any questions that occur to you,' she

said. The curate, however, had not moved, and she addressed him persuasively: 'Please don't stand, George. We've got to face it. Inspector Clapton is a sensible man; I could tell that in a moment by the shape of his forehead. He has got to know, dear, and the sooner the better.' The inspector now stared as he seldom stared in the exercise of his calling. The curate crimsoned; he did not budge, but dropped the paper-knife, and let it lie. His hands clasped each other convulsively and he trembled from head to foot as his gaze met the inspector's (which was hardening), and quickly transferred itself to the Lady Geraldine, who shook her head at him as at some fond but frail object. He seemed about to speak, but the Lady Geraldine spoke first.

'Leave it all to me, George.—And do hurry up, inspector!' she said. 'You are quite sharp enough, I'm sure, to see how Mr Leven and I stand toward each other. He thinks people will suppose he has murdered my father when the facts are generally known. At present no one knows about our relationship except you and my father himself.'

'Is that so, my lady?' murmured the inspector solemnly.

'Yes, that is so,' she replied.

The inspector drew a longish breath. 'Am I to understand that Lord Gurford and Mr Leven'—

But the Lady Geraldine interrupted him. 'For goodness' sake don't look at Mr Leven as if you wanted to handcuff him this very minute!'

'May I speak?' then entreated the Cloudbury curate, with wild eyes upon the Lady Geraldine.

'No, you may not, dear,' she answered. 'You'll only make a fool of yourself. Leave everything to me and Mr Clapton.—Well, inspector, you were about to—understand something or other. What was it?'

In fair possession of his business faculties at last, the inspector put his query bluntly. 'Was there a quarrel between this gentleman and Lord Gurford, my lady?'

'Yes, I suppose so. That's the point I want to get into *you* and no one else. Yet no; it takes two to quarrel—doesn't it?—and here it was all on one side.—Wasn't it, George?—But perhaps I haven't told you enough, inspector. It was like this. My father came down from London unexpectedly on Saturday about six o'clock, and Mr Leven happened to be at the Hall—we had had tea together, in fact—and on the spur of the moment I told my father of our engagement without giving him time to compose himself. I ought to have seen he was tired, and—well, he has some of the customary prejudices. You see what I mean?—I'm afraid too, George, that I didn't stop to think whether you would like it or not.—Anyway, it was a shock to my father, and he told Mr Leven to leave the Hall, and never dare'— She

stopped, shrugged her shoulders, and the inspector filled the gap.

'Set foot in it again, I presume?' he suggested automatically.

'Yes, more or less that. How brilliant of you, inspector!' The Lady Geraldine laughed faintly. 'We're coming to the tiresome part now, as Mr Leven thinks it.'

'The fatal part!' commented the curate woefully.

'Rubbish, my dear George! Not to those who know you, as I do, and as I wish Inspector Clapton to.—He imagines that because he left the Hall at about half-past six, and didn't get to his lodgings until seven, people who know all about us are certain to declare he lay somewhere in wait for my father, and—— You grasp it? Did you ever hear anything so fantastic?'

The inspector nodded non-committally. He had had to do with criminals of all aspects, even the Clodbury curate kind.

'You know my father by sight, I dare say?' continued the Lady Geraldine.

'Only by his portrait in public prints, my lady.'

'That's near enough. You've some idea of him, then. He weighs about fourteen stone. I'll admit that he is not tall; but would any sane man, even a constable, suppose that Mr Leven could—oh, it's crazy nonsense!—and hide the body afterwards, if you please, all in that little half-hour?'

The inspector had known more unlikely deeds done, but nodded again. The case, the Lady Geraldine, and the curate were all gripping him well by this time—especially the Lady Geraldine. From a professional point of view he was most mightily struck by the cool—even amused—way in which this lovely young lady alluded to her father's bulk, dead or alive.

'Why, you wouldn't hurt a mouse of your own free-will, would you, George?' asked the Lady Geraldine cheerfully, in quick corollary.

That mouse question was not answered. It was scarcely put when a knock at the door ended the interview. A card was presented to the Lady Geraldine, who at first frowned, and said, 'I'll see no more of these irrepressible young reporters,' and then cried, 'Splendid! Splendid! Oh yes, Johnson, I'll see Mr Lampson at once, when these gentlemen have gone. Wait in the hall till then.'

Rising, the Lady Geraldine, with great ardour, explained Mr Lampson to the inspector. 'He's my father's solicitor—Lampson, Tomkins, Askew, & Brice—I dare say you know them—of Lincoln's Inn. I ought to have told you. He wired that he would be here by an early train. It's about offering a reward mainly. I should have liked to show you his letter of last night, inspector; but there's no time now.—You can tell him about it, George.—What I want you most particularly to do is to set Mr Leven's mind

at rest about himself. I suppose you will go over the ground again with Captain Rampney afterwards, though I don't see what's to be gained by that now. Anyhow, I do hope I've convinced you that just because of the—*the obviousness* of it all, Mr Leven is the most improbable man in the world to—— You see what I mean, I'm sure, and—and I think that must be all for the present.'

She smiled the inspector toward the door, but intercepted the following curate, and, holding him by a button of his coat, said caressingly, 'Why *didn't* you go away on Monday, George, as you had arranged? Then you would have been spared all this bother. And yet I don't know—perhaps it's for the best. But you are not to be so down-hearted. You simply *must* not be. It's so unwise, if nothing worse. Come and see me again soon, dear.'

From the corridor ahead of them the inspector listened intently for George Leven's reply to these immense words, but heard none. With quickening pulses he led the way to the hall, took his hat, peered round for his companion, and aligned his descending footfalls on the porch-steps as nearly as possible with those of the curate. Passing the motor-car which had brought Mr Lampson to the Hall from Chelcote, they faced the double avenue of tired-looking old limes and elms in a broad grass border, on either hand, about half a mile long. The inspector's lips tightened. The Lady Geraldine had made a jesting allusion to handcuffs. For the next ten minutes or so the Clodbury curate was sealed to him as surely as if they were attached by steel links. In that time he confidently hoped to turn him inside out as simply as a practised housewife skins a rabbit.

Preamble: a significant silence for fifteen or twenty paces. Then, 'Well, Mr Leven, this is a strange business. What were you to tell me about the letter of Lord Gurford's solicitor?'

The curate's hands were behind him, and his head was bowed. He was very pale again, and after a quick and troubled glance at the inspector his gaze settled upon a parting in the avenue to the left, not far from the Hall door.

'Ah, yes,' he sighed. 'Mr Lampson thinks Lord Gurford may have been abducted—kidnapped, in fact—and held for a ransom. It is, as you say, all very strange and terrible.'

'Oh, come, sir, it's early to talk of "terrible,"' said the inspector beguilingly. 'Not a gentleman to be kidnapped without resistance, I should say, from her ladyship's account of him.'

'Oh, it's fatuous, of course,' assented the curate hopelessly. 'And yet, do you know—— But I can't talk about it—to a stranger. There's one thing, though, that I wish to ask you as a personal favour, Inspector Clapton; and I may say that I believe Lady Geraldine Gurford would have made the request herself if she

had had time to remember it. It's about our engagement.'

'Yes, sir!' prompted the inspector.

'I would so much prefer that no public mention of it was made. Really, it has nothing to do with the trouble, and yet'—The curate halted by that little side-track and smiled—for the first time in the detective's experience of him—a wan, desperate smile. 'Inspector,' he went on, in a changed tone, 'I'll be perfectly frank with you. I was indiscreet last Saturday. Lady Geraldine wished to screen me when she said I had no part in the disagreement between her father and myself. He charged me with being a fortune-hunter. We were both hasty. I have Celtic blood in me. I lost control of myself. I said he should repent such an imputation. Worse still, I behaved audaciously, considering our relative positions in the world. But she is so wonderful—she diffuses courage and strength so amazingly—that I can account for it in no other way. On the Sunday she said I had shown just the right kind of spirit; but it was not so. It was a wrong spirit; a devil possessed me. I felt so mad and furious that I could have struck him in his own house, great man though he was, and her father!'

'Was?' suggested the inspector casually.

'Was—is—what does it matter?' cried the curate, with a passionate gesture. He sobered as suddenly as he had boiled up. 'All this is between ourselves, inspector, please; and I must leave you here. I generally go home this way, across the park. It cuts off a considerable corner. Well, you know the worst about me now, I am glad to say.'

'Thank you, Mr Leven,' said the inspector dryly.

'You don't suspect me now, I hope?' asked the curate, with a simplicity the inspector had never seen matched in similar circumstances.

Seemingly the inspector was equally ingenuous as he smiled and replied, 'It's much too soon to talk about suspecting any one, sir. As for suspecting *you*—a clergyman!' He held up his hands as if shocked. 'By the way,' he added,

'something was said about your arranging to go away on Monday.'

'Ah, yes.' The curate welcomed the opening. 'My holiday was due. I was going to Brighton for the inside of two weeks—the parson's fortnight, as it is termed. But I couldn't go after what had happened. Well, I mustn't keep you, now that I have said what I intended to say. Thanks so much, inspector. You have lifted a hideous weight off my mind, if only for the time. Good-bye.'

He took a long step swayingly into the side-path.

The curate's reply had suggested to the inspector immediate other questions; but they were withheld. The inspector eyed the curate's receding back steadily, then continued his course down the avenue. He blew his nose loudly in a furlong or so, and then carried his head stiffly until he rejoined Captain Rampney—looking extremely cross, and smoking a cigar—in the porch of the inn. His mind's eye could already see the Clodbury curate with a rope round his neck, or in penal servitude for life; also, himself burnished with glory, for the affair promised to be one of the *causes célèbres* of the young century. His mind's eye glimpsed something else, which led to breath-holding and ejaculations, internal only, and awesome. There was but one thoroughly accommodating key to the Lady Geraldine's remarkable behaviour during his recent interview. She was an accessory to the murder—of course after the fact. Great Heaven, what a girl! An unnatural daughter, perhaps; but what a sweetheart, no matter whose daughter! The inspector had noticed that the sleeves of her delightful gray morning-gown (with scarlet ribbon-work) were close-fitting at the wrist, but wide above the elbow. There was room for much in them above the elbow. What an actress it seemed probable that she was! And what fine, unusual dust she had blown at him, while simultaneously releasing just enough of her sleeves' (that is to say, her heart's) treasure, as it were, to side-track him!

(Continued on page 714.)

TRENCH WARFARE ON THE WESTERN FRONT.—I.

By NIMROD.

IT was a glorious summer afternoon; the sun shone from a cloudless sky, and the fields of waving corn and long grass, interspersed here and there with poppies and blue carnations, bore an aspect of peace and calm which was enhanced by the song of the skylark as it soared upward in the heavens from the zone between the contending hosts. One would not have associated war with a scene so pastoral and sylvan but for the intermittent crack of a rifle from the sand-

bagged parapet, or the wailing scream of a shell as it flies past overhead, to burst with a dull crash in the distance. We might term this quiet July day the lull before the storm, for this evening we are to attack the advanced line of German trenches, and carry them with the aid of bomb, grenade, and bayonet. All is quiet along the front; but ere the sun has set pandemonium will hold full sway, and the eventide be made hideous with the rattle of rifle and

machine-gun fire, shattering bombs, and the shouts and cries of the struggling masses who will contend for the mastery.

Let us view the scene of operations and gain a mental picture of the work in hand. We are in the front line of trenches, which has a solid parapet built up of earth and sand-bags, and traversed at intervals of every ten or fifteen yards. Embedded in the parapet are steel plates, each with a small sliding-door over an opening four inches by two inches. Through this every few minutes the sentry on the parapet takes a cautious peep. It is well to do so with care and circumspection, for less than forty yards away is the German line, and there is a sniper there awaiting his opportunity to spot the least glimmer of light through the loophole, or any such tell-tale movement as will afford him the chance he seeks. Occasionally the ubiquitous sniper puts a bullet clean through the loophole, for at so short a distance it does not call for any great display of marksmanship. It, therefore, behoves us to be watchful, for this morning the sentry from this loophole was laid low by a bullet in the head, whilst but a few minutes later another was killed as the penalty of momentarily exposing his head above the parapet to the fleeting view of an uncommonly vigilant foe.

At this hour of the day matters are somewhat quieter, and we are able to examine the ground in front. The space between the opposing lines is a tangle of barbed wire and *chevaux-de-frise* erected by both sides. The ground is everywhere pitted with huge shell-holes, mounds of earth, and débris thrown up by the bursting of high-explosives; whilst dotted here and there are the bodies of friend and foe who have fallen in mortal combat. They lie in various attitudes, some face downward, some upturned toward the blue skies, and some lie huddled up in a heap where bomb or bullet has caught and flung them to the ground. All are blackened by exposure to the sun, and emit an odour that is pestilential, bringing in its wake a host of buzzing flies which the efforts of creosote and phenyle cannot overcome.

Just in rear of the German line is a row of tall trees which graced the edge of a field hard by a farmhouse. The house has been levelled to the very ground by shell-fire; in fact, it may be truly said that not one stone rests upon another. The trees are cut and blasted, and only bare stumps remain, gaunt witnesses to the shelling which goes on unceasingly.

We pass along the trench, examining the ground in front at intervals by means of a periscope, and trying hard to define the object of a small portion of the German trench that has been built outward in our direction and covered with sandbags. Possibly it holds a machine-gun, so placed that it traverses the zone and sweeps all approach to the German parapet.

All save the lookout men are either sleeping or preparing a meal, for in the trenches the latter is irregular, and one must needs eat as opportunity offers. The afternoon wears on, and presently comes the rush of a howitzer-shell from far in rear of the British line. It bursts with a crash behind the German line, and indicates to the gunners that their aim requires but little correction. A call on the telephone linking up front line and battery enables the necessary alteration in range to be made, and the next shot is a direct hit on the hostile parapet, sending a mass of earth and sand-bags, mixed with splinters of woodwork, high into the air. The guns relapse into silence, and, having been carefully adjusted, are awaiting the moment to concentrate their fire on the given point, sweep the enemy trench, and open a way for decisive attack by the infantry.

In the meantime support-trenches in rear and communication-trenches leading up to the advanced line are silently filling with men taking up their positions in successive lines. At the given signal the first will scale the parapet the moment the artillery have completed their preliminary bombardment, and make a dash for the hostile front. It might be an ordinary relief that is being effected, or the arrival of a ration-party, so well is the assembly carried out, and so striking the order and regularity prevailing as the leading lines file into the advanced trenches. They ease off to their left, all moving in a crouching attitude so as to obviate detection from the sand-bagged line less than fifty yards away, where lies the hidden but ever-watchful enemy. With this leading line is a bombing-party, and a plentiful supply of those deadly hand-grenades which play so prominent a part in this trench warfare along the western front. The boom of a gun in rear, the hissing scream of a shell overhead, and a crash in the German line tells us that the preliminary bombardment is about to commence. The men in the forward trenches have been withdrawn whilst the artillery fire is in progress, in order to avoid casualties from the 'blow-back' of the heavy guns, or the possibility of a short burst. In rear the support-trenches are full of men, armed to the teeth, ready to move forward the instant the guns cease their fire on the enemy's advanced line to open with a curtain of shrapnel on the trenches in rear, where the Germans will be massing men to meet the expected attack. The great shells roar and scream overhead, landing with a terrific explosion in parapet and trench. Clouds of black and yellow smoke, intermingled with dust, obscure the landscape, blotting out the lines in rear and limiting the field of view to a score of yards or less. Anon rifles and bits of equipment are mixed with the upheavals, signs indicating that the guns are doing their work to some effect.

For twenty minutes this concentrated rain of fire continues, moments that are passed by the

storming-parties in putting the final touch to their preparations. The bomb-throwers are there, each with his canvas belt containing a number of the deadly grenades, whilst others with boxes holding more will follow to keep them well supplied. There is nothing to surpass a bomb for clearing a line of trench, for the high-explosive of which it is composed will spread death and general havoc where it falls, and the bombing-parties cast several into each section of trench before rushing it with the bayonet. At a prearranged moment the guns lift their fire, lengthen the fuses, and switch on to the rear of the German lines. From the British trenches the leaders of the storming-party spring forth; the line surges forward like a wave on the sea-shore, swings with a rush over the parapet, is through the barbed-wire entanglements, now cut to shreds by the artillery fire, and with a wild leap is into the German trench. There is a fierce hand-to-hand struggle with the bayonet as the stormers reach the crest of the German parapet, and meet the defenders face to face, who have hardly realised that the enemy is upon them. Valiantly they stand their ground, making a desperate endeavour to stem the onrush; but the surprise and élan of the attack have been complete, and the British have swept up in an irresistible charge. The stormers fling their bombs and hand-grenades ahead of them as they all rush in, and so the first line is carried.

But the attackers do not rest content. There are communication-trenches, leading off to supports and reserves in rear, and they must be blocked and reinforcements prevented, as far as possible, from coming up to the captured zone. The attack has so far succeeded, and the defenders have been driven out of their forward stronghold; but it is not to be expected that they will be quiescent as the result thereof. Before the night is out a counter-attack will have been launched, and much hard and desperate hand-to-hand fighting will eventuate for the final possession of this section of the great battle-front.

Time passes quickly in such work as this, but already the Germans have rushed up reinforcements and are making every endeavour to stem the victorious onslaught. The bombers on the British side have blocked communication-trenches, and others have thrown up hasty barricades at either end of the captured line; and now the work of consolidating the ground won commences in earnest. Supports have been pushed up, parties of men are dashing over the ground between the opposing fronts carrying sand-bags and material to erect new breastworks and create a fresh front, for the hail of shell has deprived it of all semblance to a defensive position. From the British trenches on either side of the newly won line a sheet of fire proceeds with the object of keeping down the German fire, which has

already assumed a character that tells us we shall not be left in undisputed possession.

In the second line of German trench, less than a hundred yards distant across the open fields, the enemy is concentrating his forces for a counter-stroke, so it behoves all to work with uncommon haste and energy. Eager spades are hard at work clearing a way through the débris, opening the trench where it has collapsed, and building up the parapet to meet the impending storm. Sand-bags are rapidly filled and placed in position, and the work of consolidating goes on with a regularity born of ten months of experience in this form of warfare. Presently the conquered ground has changed in appearance; parapet and breastwork have been built up, the ways and communications cleared, the wounded removed to the cover of dug-outs and sheltered spots, there to await the coming of night before removal to the aid post in rear of the main British line.

In the meantime the Germans have been registering their guns on the lost trenches, and now they open a devastating fire, in which the 'whiz-bang' plays a prominent part, a shell of the highest velocity, possessing the disadvantage—to those who are shelled by it—of descending in their midst without its coming being detected, so high is the velocity; a lightning 'whiz' and almost instantaneous 'bang' is all one hears. From end to end of the line bursts of fire from the German guns break over the attackers; but no time has been lost in throwing up the new defences, and consequently the casualties are comparatively slight.

Night has now closed in, but it brings with it no cessation of the inferno. Rather it ushers in a weirder and more eerie period of work and watchfulness. All along the line there is a rattle of rifle and machine-gun fire, the incessant 'zip' and 'ping' of bullets as they race overhead, and the cracking 'thud' of those that strike the parapet. Very lights and star shells shoot heavenward and illuminate the surrounding country with a lurid glare, throwing ghostly shadows along the hostile front, and revealing to the lookout men on our side the forms of the German riflemen silhouetted against the skyline. With the advent of darkness has come a renewed spell of activity, and now it is a pandemonium of trench mortars—the *Minenwerfer* of the Germans—throwing bombs that explode with a shattering crash, hand-grenades flung with vicious zest from either side, the crackle of musketry mingled with the 'tok-tok-tok' of that most formidable of weapons in this war—the machine-gun. Those brilliant flares, turning night into day, reveal a scene of wondrous energy behind our parapet. They light up the faces of the workers toiling with might and main, filling and placing sand-bags here, piling earth on the parapet there, clearing, revetting, and literally digging themselves in. From out of the dark-

ness of a communication-trench appears another band of workers, laden with coils of wire of a new pattern they are going to put out in front to serve as an obstacle in stemming the tide which will surely come rolling toward us from that sand-bagged line so close at hand. In the slight intervals between the rising flares they slip over the parapet, and lie low and motionless in the grass on the far side. Snake-like they creep along; the wire is opened out and fastened down, the while a hail of bullets is above and around them; bombs tear gaping holes in the ground; the German shrapnel lashes the zone of action, bursting with that peculiar 'woof-woof' that so closely resembles the growl

of an angry bear. It is altogether a nerve-racking confusion of sound which might well appal the stoutest heart. At last the task is completed, and the workers in the deadly zone regain the cover of the parapet, all except one, who will never return, for he lies out there shot through the head, a victim to this desperate work. The marvel is not that a man returns unscathed, but that any return at all.

Amidst such scenes the night speeds on, and in that hour before the dawn comes a burst of fire from the German artillery. We know full well its meaning. The counter-attack is about to be launched.

BETTY GRIER.

By JOSEPH LAING WAUGH,

Author of *Robbie Doo*, *Cracks wi' Robbie Doo*, *Thornhill and its Worthies*, &c.

CHAPTER XVIII.

MISS STUART was sitting before an easel in the large oriel, and, as her aunt briefly announced me and withdrew in her eagerness to talk to the wonderful Joe, she rose and greeted me warmly. 'Oh, Mr Russell,' she said, 'I am glad to see you. Somehow I can't paint to-day; the inspiration is wanting;' and she put her brushes in the jar and laid aside her palette.

It was a large room lit by two windows, one facing the south, the other to the west overlooking the wooded banks of the winding Nith. The flush of sunset was tingeing the sky and flooding the room with a subdued light which mellowed and softened the deep black of the Indian furniture against the pale-gray walls and the deeper-gray carpet. A large fire, crowned with a halo of short blue flame, glowed in the grate, and a 'megilpy' odour, mingling with the faint, indescribable perfume which ladies carry with them, lingered around and reminded me of a reception afternoon in a Queen Street studio of long ago.

I was conscious of these details in my surroundings, although my eyes had never wandered for a moment from the sweet face of my dream-lady, and followed her greedily as she walked forward to the firelight.

I explained to her that my partner, Mr Monteith, was engaged with Mrs Stuart on business, and that I had taken the opportunity of having a word with her on a similar subject.

She smiled, wearily I thought, and seated herself. 'I don't like business talks, Mr Russell,' she said. 'Neither did father. It must be a family trait. Still, I dare say they are incumbent on us sometimes. I trust it is pleasant business you wish to talk over.'

'Oh yes, it is pleasant enough,' I said, and her face brightened. 'Sitting here,' I continued,

after a pause, 'and seeing you in such a perfect setting, I am strongly tempted to talk to you on a subject nearer my heart; but—well, I have already promised you to put my feelings into the background for the time being, and, hard though it may be, I will be true to my word. You remember I talked to you about your interest in the Banku Oil Company? Well, the last dividend was paid to us, one hundred pounds of which has been lodged in the local bank, and I have here a cheque-book which you can use from time to time as you may require.'

'You are very thoughtful for me, Mr Russell,' she said softly, 'and I thank you very, very much. One hundred pounds is surely a lot of money. I could do with less, you know, if'—

'Not at all, Miss Stuart. The money is yours; use it as you like, and just let me know when you need more. You—you don't mind asking me!'

'No,' she said promptly, and as she trustfully looked me in the eyes her mouth retained the form of that little word long after it had passed her lips. She was sitting in profile against the firelit background, leaning slightly forward in her chair, her elbow on her knee and her chin resting lightly on the tips of her fingers. Her pose was so easy and graceful, and her dear face, in its beauty of feature and earnestness of expression, so bewitching, that I could not conceal my longing and admiration. I would have given the world to be allowed to kneel down beside her, and there, in the mystic glamour of the firelight, worship silently and reverently at her shrine. My steady gaze disconcerted her, and I cursed my temerity when I saw a blush spreading over her half-averted face.

'Socrates has many disciples still, Mr Russell,' she said, without any sign of displeasure in her tone; and her eyes again sought mine.

'Yes. How so, Miss Stuart?'

'He sought the truth in doing good; so do you. Since father's death, and until—well, very lately, I haven't known what it is to have a joyous mind. I seem to have been walking among shadows, and a dread has always been knocking at my heart. You, by your kindly attention and your sympathy, have lightened my burden and brought a ray of hope to me; and, do you know, Mrs Jardine's little children every evening of their sweet young lives ask God to bless you for being kind to their dear daddy.'

Our line of business conversation had got a twist somehow, and I didn't very well know what to say in reply, or how best, without breaking away at a tangent, I could get back to the subject I had in my mind. 'I am sorry to hear you have had your troubles, Miss Stuart,' I said after reflection; 'but I am glad to know that even to a small degree I have made your burdens lighter. I have promised to be your friend; you'll not find me wanting, I assure you. Doubtless your affairs have worried you, but daylight is showing through now, and in a few weeks I trust everything will be settled to your satisfaction. Do you know, we have with us to-day some one who knew your father, and who was present at his marriage ceremony.'

'Some one who knew my father, and who was present at his marriage ceremony!' she repeated slowly, as if she couldn't at once realise what it meant.

'Yes;' and as I noted the colour gradually leaving her cheek, it came to me in a flash that I had erred in mentioning the fact in conjunction with a satisfactory settlement of her affairs. Even to an obtuse mind the inference was obvious, and I felt I had blundered grievously. Her agitation was unmistakable, and to relieve the situation I was about to make a remark, when she interrupted me.

'One moment, please;' and she turned her face away from me. 'This man, you say, was present when my father and mother were married, and you mention it as if it had a special significance. Does this affect me—I mean, would it make any difference to my name or prospects—my name particularly?'

'Oh yes, it would, Miss Stuart,' I said feelingly.

'Can you rely on what this man says?'

'Most emphatically, and we shall at once take steps to prove it.'

'When did you hear about this?'

'Quite lately.'

'Was it before you spoke to me, and—and promised to be my friend?'

'I didn't know about it then. It was only the day before yesterday it came to my knowledge.'

There was silence between us for a time, and the ormolu clock on the marble mantelpiece ticked loudly.

Then she rose to her feet and looked toward me, smiling through tear-dimmed eyes. 'You have made me very happy, Mr Russell. I don't want to know anything further. I leave myself confidently in your hands. You'll find cigarettes on the table behind you; you may smoke here;' and she crossed the room and sat down at the piano. She struck a few chords, deep as her own feelings; then she rose and came toward me. 'Mr Russell, do you know I have never known the joy of a mother's caress or the blessing of a mother's good-night kiss. Such memories of childhood are not mine, and my past is empty—empty. My father, for reasons of which I know nothing, never mentioned my mother's name to me. I was brought up among strangers, kindly enough, but still strangers. I never came in contact with other children. In a way, I was isolated from everything heartfelt and human; it is only since I got to know your neighbours that I have had a glimpse of what is surely the truest, sweetest, and happiest side of life. I like your nurse, your Betty. She once put her hand on my arm, and it had such a motherly touch that I wanted to kiss her. Perhaps you are thinking that this has no connection with anything that has passed between us. Well, you may be right in thinking so; but it is on my mind and in my heart, and I just wanted to tell you now, as I feel my future is hanging by a thread—a very slender thread—and I may not have another opportunity of saying it.'

I understood her mood, and made no reply; but I took her hand, raised it to my lips, and kissed it.

We were standing together in the oriel, watching the sunset splendour through the leafless trees, when Mrs Stuart and Murray Monteith joined us. Once or twice I caught my partner admiringly following Miss Stuart's movements, and he looked several times at me with a mark of interrogation in his eye. I had a feeling that he 'jaoused,' as Betty would put it, and it set me a-thinking; only for a moment, however, and I soon dismissed him and his monocle from my mind.

We had afternoon tea and a pleasant chat on current topics, and then our carriage was called. Just before we started, when we were standing in the hall, Miss Stuart asked me, in an undertone, if she could see, just for a minute, the man who had known her father. I called Joe inside, and Miss Stuart took him into the drawing-room. When he joined us again there was a glad look in his eye, and I knew his heart was proud within him, for he had shaken hands with his old Major's daughter.

I sat quiet and preoccupied in the corner of the brougham when driving home.

Just as the first twinkling light shone out ahead from the Gillfoot turn, Monteith turned to me. 'Russell,' he said, 'pardon my interrupting the flow of your pleasant meditations.

You're a queer fellow in many ways; you—you don't say much till it suits you; but I can see as far through a brick wall as any one, and it may be—I say it *may* be—agreeable to you to know that Blackford Hall in Morningside will shortly be in the market. I've heard you say that if you ever settled down to married life you would like to live there.'

'Thank you, Monteith, for your information,' I said. 'It is agreeable to me to know this.'

Nothing further was said on the subject till we were seated at my cosy fireside. Then Murray Monteith, blowing clouds of fragrant smoke above him, and glancing round my clean, well-furnished walls, said, 'By Jove, Russell! you're a lucky fellow; an old doting nurse there,' inclining his head toward the kitchen, 'who loves you almost with a mother's affection, and who wouldn't allow the wind to blow on you if she could prevent it, and the love of a girl like—like'—and he hesitated and looked at me.

'Go on, Monteith; you're doing all right.'

'Go on! Hang it, man, *you* go on! Can't you speak, you—you dungeon, and give me a tag on which to hang my congratulations?'

'You don't require a tag, Monteith. A gag would be more suitable in the circumstances.'

'Now, look here, Russell,' he said, as he flung his cigar-stump into the fire and fixed me through his monocle, 'you're not honest with me when you say that, and you know you are not. You and I are not strangers to each other, and there's no occasion for secrecy. If you have no matrimonial news, I have. I thought, perhaps, if you had taken me into your confidence, it would have been a good opportunity for me to acquaint you, in a gradual, chatty way, with my plans. As you haven't—well, all I shall say now is that I am engaged.'

'My dear Monteith, I'm delighted to hear you say so, and I heartily congratulate you. You're the very best fellow I know, and you're marrying a lady in every way worthy of you. Miss Playfair is a'—

'Miss Playfair!' he exclaimed, in astonishment. 'How do you know?'

'Oh, well, the last time I visited you, before leaving Edinburgh, I, like you, was confronted with a brick wall, and I saw a little way through it. But that's neither here nor there. What we have to do now is to signalise the event; and for the second time within two days I tasted a liquid element at an unusual hour.'

'And when does the great event come off, Monteith?' I asked.

'Well, Russell,' he said, 'that is a matter which in a way depends on you. You see, I shall need to wait till you are quite recovered and back to business again. A honeymoon would naturally follow the ceremony,' he laughingly said, 'and it wouldn't do for both the principals of Monteith & Russell to be away at the same time.'

Dr Grierson and Mr Crichton joined us later at supper. Monteith is a keen devotee of the chessboard; and while he was trying conclusions with the banker, Dr Grierson and I went upstairs into my own little room. I told him all that had taken place—of my meetings with Miss Stuart, and the turn in the tide of her affairs—and he congratulated me and gave me much encouragement. Then I asked him when he thought I should be sufficiently well to resume business. 'Well, William,' he said, 'you have to see Dr Balfour and get his permission before you can go back to town. Personally, I cannot give you even an approximate date. You are making splendid progress, and unless there are very urgent reasons for your return I should advise you to keep free from worry on that score. Leave yourself in my hands, and before long, with Dr Balfour's concurrence, I shall be able to say when you may with safety receive marching orders.'

Murray Monteith had to leave me without being able to arrange a particular date for his marriage. I am very sorry; but, after all, his great day may dawn sooner than he expects.

(Continued on page 707.)

THE PURSUITS OF PRIMITIVE PAPUANS.

By Mrs C. F. RICH.

PAPUA has been called 'Papua the Mysterious' by a recent lady-writer; it might with equal truth be called 'Papua the Primitive.' It is largely even yet a *terra incognita* to the world generally. Since the transfer of government from the Old Country to Australia in 1901, Australians have naturally increased their knowledge of the territory; but that even now is far from complete. It must be so when a fairly well-educated colonial asks a white woman if she is a *native* of

Papua—the question addressed to me some time ago.

In the parts of Papua outside the few trading centres the people are at present in the Stone Age, and their weapons are all of stone or bone. I suppose primitive and limited are synonymous terms; at any rate, the Papuans are decidedly limited in knowledge, pursuits, possessions, morals, and clothing. Their pursuits are mainly fishing, hunting, feasting, and fighting. To these might be added sago-mak-

ing. Speaking generally, the food-supply of the Papuan gives him but little trouble. The soil is everywhere fertile, and the native knows better than any one how to make a garden with the least possible outlay of labour. Economy of effort is a strong point here; but should there be anything like a shortage of native vegetables the people at once fall back upon sago, and this needs considerably more labour and preparation than the usual foods.

The pursuit of fishing is naturally limited to the coast villages. In some villages inland, however, the natives fish for small fry in the streams with a net woven for them in a prepared loop of cane by big spiders, but the most general way of fishing is by spearing. The fish-spear has a handle five or six feet long, with four or five pointed sticks bound to it at the end, so as to spread slightly. The fisherman wades out into the water gently and cautiously, with the spear poised in his hand. When he sees a fish, away goes the spear, to good purpose generally. In some villages one sees small platforms erected in the sea a little way out from the shore. These are for catching fish by bow and arrow. A man takes his stand upon the platform, peers into the water, and the fish bent on investigating that platform is likely to suffer. Some villages own a net. It usually belongs to a number of men in the village, and is woven from a strong fibre found in a species of pandanus-tree. At certain states of the tide this is set, and as the tide recedes it is drawn up with more or less success. During one part of the year dugong come to this coast. This fish, if fish it can be called, resembles a whale, and is exceedingly good eating. It frequently measures from six to eight feet in length, so that one of them is a real 'catch' to a Papuan village, where flesh food is seldom eaten. Dugong is much more like flesh than fish. A dugong-net is a huge affair, and a rare possession. If the dugong are known to be in the bay, the people go out in their canoes and form a sort of bar across the part in which the dugong may be expected. The net is stretched, but it is not expected to do more than entangle the 'big game.' As soon as they find by the movement that the dugong is entangled, a man from the nearest canoe drops overboard and slips a rope over the head and body of the dugong, and it is hauled away to shore, as its weight would capsize any two of the canoes employed in catching it. The excitement over this event is intense. The men shout and rattle their wooden paddles in the canoes, so there is no danger of any one missing the feast.

Seeing that Papua is largely a jungle country, hunting might be supposed to be followed to a great extent. As a matter of fact, however, the country is singularly poor in wild animals. Only two provide any hunting—the wild pig and the wallaby. Any one seeing a Papuan village pig

would take it to be the last word in ugliness, yet the wild pig goes one better, or worse. With its long legs, long nose, long lean body, wicked beady eyes, and vicious-looking tusks, it is anything but a pleasing object. The natives catch them either by traps or drives. An enterprising village, which is a great rarity in this country, will make a pig-net, a huge affair of heavy pandanus-fibre cord, and this is carried to some locality where the pigs are known to be. It is drawn out into a wide semicircle, and natives armed with spears take their places at short distances from each other along its length. Other natives make a wide detour and drive the animals toward the net, where they are despatched by the spearmen. These wild pigs are exceedingly fierce, and I have seen some terrible gashes inflicted by their tusks. The traps for the taking of these creatures vary; and two of them often used may be described. One of these is made by the natives as a sort of alleyway with strong saplings. Across this is fixed a very heavy slab of wood, balanced carefully by slight supports underneath. The pig comes into this alleyway, runs against one of the supports, and the slab falls down upon it. Another trap is rather more ingenious. A branch of a young tree is bent, and to it is tied a cord with a noose. This noose is fastened down to the ground by small wooden pins. The pig sets its feet in the noose and loosens the pins, and the branch of the tree flies back, holding the animal securely a prisoner. Wallaby are found chiefly in the grass country of Papua, and are generally speaking of a small size. They, too, are caught by nets in the same way as the pigs. Often, as a means of making the capture of the wallaby more sure, the long grass is set on fire. There is something very unsportsmanlike about this method; but were there a method still more so, I am afraid the Papuan would use it, so very keen is he on the economy of effort.

I suppose head-hunting should be mentioned. That pursuit is fortunately not so much in evidence as formerly; but there are still head-hunters in Papua, and in some remote districts the young gentleman who wishes to impress the fair—no, other—sex must have a head or two to his credit. The weapons used in this gruesome hunting are now becoming curios. They are loops of cane fastened to long handles. At the end of the handle, projecting into the loop of cane, is a sharp spear-head. The hunter chased his victim, and, slipping the loop over its head, pushed the long handle forward so that the wooden spike, entering at the base of the skull, caused sudden death.

The feasting of this race of Papuans is a very real hindrance to their advancement. The occasions are almost invariably connected with superstitious beliefs and ceremonies, so that the people have the very comfortable feeling of com-

binning duty with pleasure. Many of the feasts are held at times of death, burial, the ends of various periods of mourning, and betrothals; and at all of them pigs are the middle and both ends. The success or non-success of a feast depends on the number of pigs brought to it. These are not always all killed, and many travel from feast to feast; but woe to the man who does not 'show willing' by presenting his animal! When his time comes his feast will most surely suffer. When a feast is in preparation one might imagine that the village was about to be stormed by a horde of enemies. It is etiquette to make as much noise as possible when approaching the village *en fête*. Some of the arrivals blow conch-shells, others yell, and others prod the poor pigs to induce them to add their note to the general uproar. Every party bringing more than one pig is entitled to wave a green branch as a sign. Needless to say, these parties are greeted with a mighty outburst of enthusiasm. The food provided—pigs, native vegetables, fruits, and sago—is seldom eaten there and then. When all the expected visitors have arrived, a distribution takes place. The head of the feast decides how many and whose pigs shall be killed, and these are all cut up and placed with the heaps of other food. Then a master of ceremonies takes his place by these heaps, generally upon a raised platform. He chooses a portion of food and a piece of pig, holds the latter aloft, and shouts out the name of some village in a chant-like tone, with a long-drawn 'Oh!' at the end. Some representative of the village named rushes out, perhaps catches the piece of pig, perhaps picks it up from the ground where the master of ceremonies throws it as he finishes the 'Oh!' and, gathering up the rest of his share, retreats. This goes on till all villages represented are named; after which they disperse to cook and eat the food at home. These feasts move from village to village all along a coast, and labour-recruiters know that it is of no use working in a district where they are in progress, for it takes a very good story to induce a native to forgo them. Dancing is sometimes a part of these festivals, but not always.

The fighting of the Papuans is now of but little account. The spread of Government and mission influence has put an end to it, except in the interior and in a few coastal regions still rarely visited. Time was when one village dared not move half-a-dozen miles without the probability of providing a cannibal feast for a neighbouring tribe. In the known parts cannibalism is now rare; of all the hinterland one can only guess. True, the country has now been crossed and recrossed, but only in a few directions. There are huge tracts where no white man has penetrated. In the old days of constant attack and treachery the braves of the

village slept on an uneven pillow of stones, lest their sleep should be too sound.

Sago-making in Papua is the one pursuit somewhat approaching a trade, for people in whose villages sago is plentiful make it and use it as barter to obtain cooking-pots, arm-shells, and other articles of value—to them.

A sago swamp is at once one of the loveliest and vilest places in the world. Above, the fern and creeper-clad trunks and tremendous waving fronds are things of beauty; below, the sluggish streams, rotting undergrowth, and vile-smelling mud are not. To make sago, the native needs little more than the tree, just a stone adze, a few stone wedges, and water. This last, as though to encourage the native in his natural laziness, nature generally provides on the spot. There are few sago swamps without a stream of some sort, and about the 'sort' perhaps the less said the better. No one could accuse the Papuan of being too careful of his water-supply.

A tree chosen, the natives fell it about a foot from the ground with stone axes. Then, clearing it of creepers and ferns, many of which are rare and beautiful, they proceed to split it open. An opening is made, and a wedge inserted; a little distance along the trunk another is inserted, and so on for the length of the tree. Hammering on these splits causes it to open in very fair halves lengthways. The inside is a tightly packed mass of pink stringy fibre. Sitting astride the trunk, men chop away at this fibre, breaking it up quite small with their stone adzes. Meanwhile the women are preparing the washing apparatus. The tough sort of scales which fold one over the other on the trunk of the sago-palm are bent to form three troughs, and these are arranged upon crossed sticks at three heights, one running down into the other. At the end of each trough is a little partition with holes in it. The women fetch the sago as the men chop it up, and then put it into the first trough with water. Here they wash it thoroughly, and let the water run into the next trough, carrying with it the sago substance washed from the fibre. In this second trough they wash it again, and let it run through smaller holes into the third trough, where, after a final wash, the water is carefully drained away and the sago left in a long firm block. Freshly made native sago is as unlike the sago of commerce as can be. It is more like the sweet-meat called *fondant* than anything else. It is of a pale pretty pink colour, and melts in the mouth. The natives wrap it up in long, round, leaf-covered bundles, exactly like small bolsters; and, so made and wrapped, it will keep for a considerable time. They cook it by mixing it with water, and form small balls; and after wrapping these in leaves, they steam or boil them.

CURIOSITIES CONCERNING ANTELOPES.

By H. A. BRYDEN.

THE antelopes belong to the great family of hollow-horned ruminants, or *Bovide*, which includes also goats, sheep, and oxen. The dividing lines between the different species of these ruminants is often extremely slender, and the various animals blend and are connected with one another in a manner which is often truly remarkable. Thus the gnus or wildebeests, although classed among the antelopes, and having most of the characteristics of that group, bear a strong family likeness to cattle and buffaloes, especially about the heavy head and horns. The Boers of South Africa, when they first encountered them, promptly named them *wildebeeste*, which means, of course, wild oxen. The Rocky Mountain goat, again, although nearly allied to the antelope, is in some of its characteristics strongly reminiscent of the goat, and may be looked upon as a connecting link between the two races.

All antelopes have in one or other of the sexes, often in both, horns void of branches, which consist of an under core of bone covered by a hollow sheath of horn, which, except in one remarkable instance, is never shed. This exception is afforded by the singular and very handsome prongbuck or pronghorn of North America, which is classed as a distinct family, and is remarkable not only as having two tines or points to the horns—borne usually only by the males—but for the curious fact that, like the deer, it sheds these horns annually, their place being renewed by new sheaths which develop beneath the old ones.

The hartebeests are a large group of antelopes comprising many species. They are famous not only for their speed, but for their wonderful staying-powers, and in a tail or end chase they can usually gallop away from the stoutest hunting-horse. The shoulders are high, and the hind-quarters droop in a remarkable manner. The eye of the Cape or red hartebeest (*khama*) has a fiery-reddish hue, and the tail-tuft, although apparently black in colour, will be seen, when held against the light, to have the same curious red tinge. Towards the pairing season male hartebeests fight a good deal, though from the conformation of their horns they cannot do one another much harm. Hartebeests are pretty wide-awake animals, as I have found to my cost on various occasions. Mr F. J. Jackson, the well-known East African sportsman, writes thus of the species known by his name (Jackson's hartebeest): 'I remember once coming suddenly across a good-sized herd lying down, but was seen by the sentinel, and they were up and away before I could do anything. . . . On following them up I found them in a position

which under ordinary circumstances would have entailed a stalk of sufficient difficulty to make it pleasurably exciting, had it not been that there were no less than four sentinels all standing on one large ant-heap with their heads towards the four points of the compass.' Needless to say, the attempt to outwit them was a fruitless one.

Near allies of the hartebeest are the tsesseby or sassaby, known to the Boers as bastard hartebeest, and its northern cousin the tapi or tiang. The tsesseby, which is even fleetier and more enduring than the typical hartebeest, and may be characterised as the finest galloper in all Africa, is notable also for the wonderful satin-like iridescent sheen to be seen on the surface of the rich chocolate-brown coat. Then follows the curious Hunter's hartebeest or herola, having horns which somehow suggest a connecting link with the fleet and supremely graceful impala. This hartebeest has, like some other African antelopes, a singularly restricted habitat, ranging only from the south of Somaliland to the northern bank of the Tana River. The herola has hitherto seldom been shot by European sportsmen. The bontebok, a species not distantly connected with the tsesseby and hartebeest, is an antelope notable as possessing a curiously narrow range, being found only during the last one hundred and fifty years in a small tract of country near Swellendam, in the south of the Cape Province. The bontebok, or pied antelope, is handsomely marked with purplish brown and white, the darker colouring having a rich iridescent bloom even more remarkable than the shining coat of the tsesseby. This antelope is now, unfortunately, very scarce, and is found only in the protected state on two farms between Bredasdorp and Cape Agulhas. Very closely related to the bontebok in shape and coloration is the beautiful blesbok, once to be found in tens of thousands on the northern Karroos of the Cape Province and the plains of the Orange Free State, Transvaal, and South Bechuanaland. The coat of the upper part of this animal has a curiously glazed appearance.

In much-reduced numbers the blesbok (or blaze-faced antelope) is still found in the Orange Free State, Transvaal, and occasionally in British Bechuanaland. When galloping this fleet antelope carries its head very close to the ground, imparting to the whole troop a very singular appearance, so much so that they have been well compared to a pack of harriers in full cry. Next to the tsesseby I should rank the blesbok as the fleetest and most enduring antelope in Africa.

The gnus or wildebeests are assuredly among the most odd and even grotesque of nature's most

curious creatures. The white-tailed gnu, or black wildebeest of the Cape Dutch, is the more extraordinary of the two. With the dun or chocolate-coloured body of a pony, it has the slimmest and finest legs, neat hoofs, a long and flowing white tail, the head of an ox covered with much shaggy and bristling hair, and a thick, upstanding mane. The cry is a loud, bellowing, metallic snort, from which the Hottentots obviously took the name 'gnu,' which they bestowed on this quadruped. Possessed of great speed and staying powers, these weird antelopes were in the old days found on the plains of the Cape Province and the Orange Free State in immense numbers, associating much with ostriches and quaggas. They are now found only in the protected state on a few farms in the Orange Free State, and their numbers, all told, cannot exceed two thousand head. When disturbed or approached, often even when at rest and unmolested, the antics of these singular beasts afford the strangest of spectacles. Prancing, jumping, tearing up the ground with their sharp hoofs and horns, lashing their long flowing tails, darting in all directions, striking fiercely at one another, sometimes dropping on their knees in mimic combats, these weird antelopes displayed and still display the maddest and the most incomprehensible antics. They are savage, treacherous, and vengeful, and many dangerous and even fatal accidents have happened with them. The late Mr Cecil Rhodes had a narrow escape from one of them in his park at Groote Schoor, near Capetown. The beast knocked him down, ripped up his trousers with its hooked horns, and assuredly would have injured him severely if it had not been driven off.

The blue wildebeest, or brindled gnu, has a much wider habitat, and is found over large portions of the African continent. As the black wildebeest loved to associate with the ostrich and quagga, so its blue cousin makes enduring friendship with the Burchell's zebra, which may be termed the zebra of the plains. These animals have been well styled the Damon and Pythias of the brute creation. In the vicinity of these two species may also frequently be seen, in the wilder parts of Africa, ostriches which seem during long ages to have cultivated the friendship, or at all events the vicinity, of both species of these strange antelopes. Brindled gnus are nothing like so restless or so unaccountable as the white-tailed species, and are of a more sedate and less fiery temperament. None the less, when disturbed by the hunter they display certain antics, kicking up their heels, lowering their heavy heads, and whisking their long black tails. Then settling themselves into a longish line, they gallop off at what looks like a lumbering canter, but is in reality a very fast pace, raising a cloud of dust. The great, shaggy, buffalo-like heads, with their Roman profiles, are carried very low, and the appearance of a big squadron of these large antelopes is sufficiently impressive. Blue wilde-

beests, even among African antelopes, which are all extraordinarily tenacious of life, will gallop right away from the hunter under wounds that would instantly crumple up a red deer stag. With a broken leg, or a bullet through lungs or vitals, they will press on for miles, and easily make good their escape. The hunter ought, therefore, to be especially careful in aiming at these antelopes. The flesh of neither of the gnus is at all good eating.

The waterbucks, lesser and greater, include a large group of fine and very interesting antelopes all resident in Africa. The true waterbuck, found from South Africa as far north as the Shebeyli River in Somaliland, is typical of the group. It is a big, strongly built animal, having a long rough coat; and they are found in small troops, always in the vicinity of water. The males are fine sturdy beasts; they carry handsome horns, and when wounded will occasionally charge fiercely. The flesh is very poor eating, and these animals, which are possessed of a strong and somewhat goat-like scent, are often winded by the hunter at a considerable distance.

Among the lesser waterbucks, or kobs, the lechwre is remarkable for its water-loving characteristics. It is found almost invariably in flooded country, and is constantly to be seen grazing middle-deep in shallow lagoons and vleis, often in herds numbering several hundred head. When alarmed, these beautiful antelopes run bounding away in huge leaps, driving the water on either side in showers of sunlit spray, and affording a magnificent spectacle. They seek shelter in dense reed-beds, from which they are hard to dislodge. From ages of existence in a watery habitat this species has developed curious hoofs, which are very elongated and well adapted for progression over soft and muddy places; the under-parts, from the heel to the false hoofs or dew-claws, are quite naked, a characteristic peculiar to these antelopes and the situtunga. Among others of the lesser waterbucks, Mrs Gray's kob, found in large herds in the swamps and flooded regions of the White Nile and its tributaries, is remarkable for its great beauty and curiously pied appearance. For many years, owing to the closing of the Sudan regions during the tyrannic rule of the Mahdi and Khalifa, this waterbuck, although discovered in 1855, was quite unknown to European sportsmen. Since the battle of Omdurman and the overthrow of the Khalifa's power it has become more familiar, but its trophies are still looked upon as among the prime rewards of the hunter's skill. The general colour is a rich, dark-reddish brown, diversified by very singular and spotlessly white markings about the head, neck, and shoulders, and the lower parts of the body. A curious, snow-white, Y-shaped marking runs from the back of the ears down the nape of the neck, broadening out into a saddle-like patch upon the withers. Grazing in huge herds over the flooded

marshes of the desolate regions in which they have their habitat, these lovely waterbucks yield to the eyes of the fortunate sportsmen who have the chance of seeing them one of the most wonderful of all African pictures.

Among other water-loving antelopes the very curious *situtunga* ought not to be omitted. This animal is allied to the koodoos and bushbucks, but for some reason or another has, in ages of the past, betaken itself to a strange semi-amphibious mode of life. Never quitting the swamps, lagoons, and mighty reed-beds amid which it thrives, it is the very shyest of all creatures, and the most difficult of all to circumvent by the wandering sportsman. When hard pressed it will sink under water, exposing only the nostrils for breathing purposes. From this singular trait, no doubt, the Portuguese traveller Serpa Pinto obtained his strange conception of the habits of this antelope; he reported that the *situtunga* had actually the faculty of being able to live and even to sleep under water! The coat of this antelope, which is long and silky, is grayish brown in hue, the young animals being striped and spotted like bushbucks. Only the males carry fine spiral horns. Although few Englishmen have had the luck to shoot these strange water-loving antelopes, the Africans occasionally slay numbers of them by firing the reed-beds and thus driving them from their sanctuaries. The bewildered animals then betake themselves to the water; and the natives, following them in canoes, spear them in scores. The horns of the *situtunga* have some resemblance to those of the koodoo; and the Trek Boers, when they first encountered these animals in the Lake Ngami country, at once dubbed them water koodoos. The horns of this antelope are, however, although good, not so fine as those of the koodoo, but approximate more to those of the nyala, one of the largest of the bushbucks. All these animals may be termed cousins.

One of the most elegant and most active of all the antelopes is the lovely impala, or pallah, still found in the Transvaal, and thence northward through many parts of Africa. Wonderfully graceful in shape, standing about thirty-seven inches at the shoulder, the impala is of a bright fox-red colour, and, in the male, carries long, slender, and lyately curving horns, which occasionally reach as much as two feet six inches in length. These animals, which run in troops of from a dozen to as many as two hundred, are very bush-loving, and are seldom found far from the vicinity of rivers or water. Their speed is immense, and their leaping powers are unexcelled by any antelope in the world. I have seen them, when startled and in flight, cover enormous distances, and can well credit the statement that a ram of this species has been proved to clear at a bound thirty-five feet. Mr F. Vaughan Kirby once measured three bounds of an impala, which yielded twenty-six feet, sixteen feet, and twenty-

eight feet—in all, seventy feet. The impala, in truth, shares with the springbuck the title of champion jumper of Africa.

Turning aside for a moment to Asia, we come to the saiga, an antelope which, from its hideous and almost deformed appearance, is in strange contrast to the graceful impala. The saiga, inhabiting the dreary steppes of southern Russia and southern Siberia, may from its grotesque appearance be regarded as a very clown among antelopes. This is caused by the extraordinarily swollen nose, which amounts to a kind of trunk, as in the elephant seal, and utterly disfigures its unfortunate owner. The coat of this antelope is yellowish white, in winter entirely whitish; the horns are about a foot in length and not unlike those of the springbuck; while the ludicrously short ears add to the uncouth and comic aspect of the creature. The chiru, or Tibetan antelope, a near ally of the unfortunate saiga, is also the unhappy possessor, in the males, of a swollen nose. It carries, however, long and extremely graceful horns, which are much prized by sportsmen. These measure in good specimens as much as twenty-seven inches.

Two gazelles which suffer from somewhat similar malformation are the goitred gazelle and Speke's gazelle. In the males of the former species (as with its cousin the Mongolian gazelle, both found in western Asia) the larynx is very curiously swollen, and forms an unsightly prominence on the upper part of the throat. This swelling appears to be present only during the pairing season. Speke's gazelle, a Somaliland species, although in other respects a most graceful and well-made animal, is also deformed by the presence of a strange swelling of the nose, formed by loose, flabby, and corrugated skin, which is found in both sexes. This skin has a cavity which can be, and probably is, inflated during life at the will of the owner.

The springbuck, a South African species, may be looked upon as a connecting link between the true antelopes and the lighter and more delicately formed gazelles. Its name was, of course, bestowed upon it by the Boers by reason of its extraordinary leaping powers. Not only is this antelope a magnificent long jumper, clearing a broadish road easily at a bound, as it invariably does in crossing such tracks, but it has the trick or habit when excited or alarmed—often even at play—of leaping straight upwards into the air to a height of eight or ten feet, as if propelled by a catapult. The springbuck is distinguished from all other antelopes and gazelles by a blaze or crest of long, stiff, snow-white hair, which at ordinary times lies neatly folded beneath a kind of pouch in the cinnamon-coloured coat at the top of the back. When the animal is excited or disturbed it erects this curious fan-like crest of hair, arches its back, and begins that wonderful series of high leaps from which it takes its name. The bound is taken off the ground straight up

into the air, the slender legs being held very rigid, and the leap is often repeated several times. When a whole troop of these antelopes are thus leaping, as they often will do—'pronking,' or 'pranking,' as the Boers call it—the display is simply wonderful. The springbuck is a most fleet and graceful creature, and furnishes the best venison in Africa. It is still very abundant in the Cape Province and other parts of South Africa; and in the desert region known as Bushmanland, just south of the Orange River, the *trek-bokken* or migration of these animals still takes place. These migrations seem to be caused by drought and lack of food, and perhaps from the desire of the ewes to drop their fawns within the limits of the rains, where pasture is rich. On these occasions not merely tens of thousands but literally millions of springbuck move eastward, devouring everything before them. The last great *trek-bokken* took place in 1896. It extended far eastward into the heart of the north of the Cape Province; tens of thousands of buck were shot by the farmers, and the space of country occupied by the moving *trek* measured about a hundred and thirty-eight by fifteen miles. Over this area literally millions of springbucks were in movement; competent and very careful observers computed that they could see within the purview of their own eyes half-a-million antelopes at one moment. Springbuck are to be reckoned among those antelopes which can exist for long periods without drinking, yet occasionally they seem to be overtaken by an appalling thirst. Not many years ago millions of them moved from Bushmanland westwards, and reached the sea. They rushed into the waves, drank the salt water, and died in tens of thousands. 'The bodies lay in one continuous pile along the seashore for over thirty miles, and the stench drove the Trek Boers, who were camped near the coast, far inland.' This extraordinary incident is vouched for by Mr W. C. Scully, formerly Civil Commissioner for Namaqualand and Special Magistrate, a gentleman whose admirable writings on South Africa are well known.

Gazelles are to be classed as peculiarly slender and delicately shaped antelopes, found for the most part in the open deserts of North and East Africa and parts of Asia. They are of many species. Both sexes usually carry horns, and they are as a rule wonderfully well adapted by nature to the sun-scorched and sandy habitats in which they live, their usual coloration being fawn or a sandy rufous of varying shades. One African species, the gerenuk, or Waller's gazelle, is so singular in its appearance and habits that it may be briefly referred to. This very aberrant form, found in Somaliland, Abyssinia, and East Africa, stands from three feet to three feet six inches in height at the shoulder; it has on a minor scale, in the extraordinary elongation of the neck and the long stilty legs, a marked resemblance to the giraffe. Even the head and

face, though they are surmounted in the males by shapely horns, are strikingly reminiscent of the giraffe. On the other hand, the general coloration is very different, being a rich rufous-fawn. It would seem almost as if this singular gazelle were trying, in the course of long ages, to develop the characteristics of the giraffe, a consummation to which it has as yet only partially attained. The eyes, as with the giraffe, are large, dark, prominent, and melting. Between the eyes, on the middle of the brow, is a singular prominence with a central aperture, from which exudes a black liquid secretion which stains everything it comes in contact with exactly as does ink. The purpose of this curious secretion is as yet unknown. The gerenuk is, like the giraffe, a browsing creature, and for the purpose of reaching foliage to which it cannot ordinarily attain it stands on its hindlegs, supports itself with its forefeet against a branch or trunk, and thus devours food apparently quite out of reach. It is possible that through these high-browsing proclivities this singular gazelle might, in the space of another few thousand years, if it could remain free and unmolested, develop into something like a genuine giraffe. The gerenuk is believed to be quite independent of water during the dry season.

Two of the handsomest and most remarkable game animals in Africa are the magnificent sable and roan antelopes, big and powerful beasts, which attain in stature at the shoulder from four feet six inches to four feet nine inches. The coat of the adult male is a rich, deep rufous-brown, becoming glossy black in the older animals. The under-parts are spotless white. The face is handsomely marked in brown and white, while the neck carries a full upstanding mane. These noble antelopes run in large herds, and a good troop affords one of the most magnificent spectacles of wild life to be found even in that home of natural wonders, the continent of Africa. Sable antelopes are bold and courageous beasts, and defend themselves vigorously against the carnivora, dogs, and hunters. A wounded animal is distinctly to be treated with caution, and its fierce charge and the lightning-like stroke of its strong, scimitar-shaped horns render it very formidable. The roan antelope, a sort of first cousin of the sable, is an even bigger and more formidable animal, capable of inflicting severe and dangerous wounds when at bay.

In the remarkable gemsbok, or Cape oryx, we have again one of the noblest and handsomest of horned animals. Its long, spear-like horns, which attain a length of close on four feet, vinous-gray body-colouring, notable head-markings, which much resemble the appearance of a head-stall, and the very long sweeping tail and gallant port render this antelope one of the most splendid ornaments of the dry deserts amid which it roams. Like the eland, the hartebeest, giraffe, and other thirst-resisting animals, the

gemsbok is practically independent of water, and is capable of existing for long periods without drinking. With its long and formidable horns it can offer dangerous resistance to its attackers, and there is a persistent tradition in South Africa that this antelope occasionally slays even the lion. It is certain that the skeleton of a gemsbok and of a lion, the latter impaled on the horns of the former, have been found rotting in the veldt. It seems to be more than probable that the unicorn of heraldry was originally derived from the oryx of North Africa or of Arabia, which belong to the same group as the gemsbok. It is certain that the figure of the unicorn found upon Persian and Egyptian monuments closely resembles an oryx with the horn set forward instead of back. It has been supposed that the Crusaders may have introduced the figure of the unicorn into heraldry after their wanderings in the East and in North Africa. And it is a remarkable circumstance that John of Lancaster, Duke of Bedford, used as one of the supporters of his coat of arms the figure of an antelope which could only have been intended for an oryx. Certainly in its own native deserts, where I have watched it closely, the gemsbok of South Africa is one of the most martial and gallant figures to be seen in the veldt, well worthy to be chosen (as it is) as one of the supporters of the coat of arms of the Cape Province, the other being the black wildebeest. Among other remarkable members of the group of oryxes are the leucoryx, or white oryx, and the addax, both denizens of the waterless regions of Nubia and the Sudan regions.

Of the considerable family of the bushbucks, the nyala, a splendid and remarkable antelope, found chiefly in the heavily bushed country fringing the littoral of South-East Africa, is the most remarkable. The males carry long, sweeping coats of coarse grayish-brown hair, the neck hair being almost black. The bright tan face is marked with a white chevron, and there are other white spots and markings upon the cheeks, chin, and gullet. White stripings appear upon the body, and the lower part of the legs are tan. In the males a white crest appears along the back. The females are bright orange-chestnut in hue, with white markings. The horns, carried only in the males, are stout, spiral, and sharp-pointed, and attain in good specimens a length of two feet seven inches. A good ram nyala stands three feet six inches, and weighs three hundred pounds. These large and elegant bushbucks harbour in the densest covert, and are extremely difficult to obtain, venturing into the open to feed under cover of night only. They have the sonorous bark peculiar to the family, and when followed up with dogs, or wounded, charge with great courage, their horns rendering them very formidable.

Ex Africa semper aliquid novi is a saying that has held good from Pliny's time to the

twentieth century. Only recently two sportsmen, Messrs Ivor Buxton and C. Albright, shooting in Gallaland, near the border of Abyssinia, lit upon an entirely new species of antelope, a large animal of the bushbuck type, carrying splendid horns remarkably like those of the nyala. This fine animal, which is intermediate in size between the greater koodoo and the nyala, was found inhabiting a tract of mountain country known as Sagatu, to the north-east of Lake Zuay in north-west Gallaland. Mr Buxton has presented a good specimen (head and horns) of one of these remarkable antelopes to the British Museum, where it may now be seen. The horns are very fine, and measure thirty-seven inches; in another specimen they attain as much as thirty-nine inches. This grand bushbuck has a dark-brown coat faintly spotted and striped, white markings about the face, throat, and chest, and a crest of longish white-and-black hair running along the spine. It has been identified as a near congener of the nyala of Zululand and Amatongaland, although separated by a distance of at least two thousand five hundred miles, and has been named the mountain nyala (*Tragelaphus Buxtoni*). How and when the remote ancestors of these now far-sundered bushbucks broke away from one another and set up varying types is one of those mysteries of the Dark Continent which no zoologist can now pretend to solve.

Many other antelopes have developed curious traits and habits which surely deserve mention. The number of these interesting animals, however, is so large, and my present space is so restricted, that I must here reluctantly conclude these notes.

VANITAS!

THE passing bell proclaims,
With melancholy toll,
An end to all the hopes and aims
Of some poor human soul.

The minute-gun's dull roar,
Booming o'er sea or land,
Tells us one fellow-creature more
Has crossed the borderland.

The ensign flying low,
In sympathy, doth say:
'Another pilgrim from below
Has gone upon his way.'

Vain outward sounds and sight!
Hollow, and nothing worth!
Mere symbols of the crowning flight
Of spirits from the earth.

Methinks retiring woe
More seemly than display.
I hope there'll be no empty show
When I am called away.

JAMES T. JOHNSTON.

Chambers's Journal

SEVENTH SERIES

THE WOUNDED AT MALTA.

By CLAUDUS PEDE.

A DECK-HAND bestirred himself suddenly. 'Governor's coming aboard!' he halloed, and the Principal Medical Officer beside me shouted heatedly for his helmet.

We were aboard ship in the Grand Harbour of Valetta, in the early warmth of a June morning.

A few minutes passed; then the P.M.O., crowned with helmet, khaki, all proper, marched round to me, a tall, alert, ruddy, distinguished-looking soldier, who might have been old had one listened to the calendar instead of to his vivacious, keen conversation.

'Good-morning, sir,' I said.

'Good-morning,' he answered. 'Well, you're coming ashore with us, aren't you?'

I fear my face fell. 'I hope 'not, sir,' I returned, a little ungraciously perhaps.

'Why not?' he asked. 'Why, don't you want to?'

'Oh, well,' I said, 'now that I've been so badly smashed up, I was hoping I should be sent to the Old Country to mend.'

The Governor smiled good-naturedly. 'Oh no,' he said, trying to make it sound a personal matter; 'I've made all arrangements. I've got a beautiful place for you some miles away—St Andrew's. And we've the cleverest surgeon from London to look after you—what's his name?—and you'll just come along, and I wager you'll never regret it. I'll come to see you.'

Dear man! I groaned with disappointment and distrust. Was the General the most smoothly sarcastic man on earth? I longing for a very special and intimate welcome in the homeland; he offering instead a burning, arid island, plus a formal visit, sometime! But I was wrong, and his Excellency was right. In a few days I was ashamed of my lack of faith.

St Andrew's proved splendid, the distinguished surgeon proved splendid, and the Governor *did* come, and come early and often, too. How he did it all Heaven knows. But in addition to his military and administrative duties, his motor-car was never idle. He knew practically every Sister in every hospital in the island. He popped in and out of camps and men's wards and officers' wards at all hours of the day. Sometimes he brought his staff, sometimes ladies of his household; sometimes he walked in alone; he attended convalescents' concerts; he dined in countless

messes. You had only to hint at some little deficiency—the absence of billiard-cues, the slowness of mails—and he had it rectified. The wounded soldiers haven't a better friend in the island than Lord Methuen.

Nor could St Andrew's disappoint even the exacting. A barracks consisting of many detached blocks, it had been transformed into a hospital, where staffily inventiveness had conquered almost every drawback. It stood high on the eastern coast, enjoying all the breezes, and from it one could obtain many wonderful views (when one was strong enough) of the cities of Sliema and distant Valetta.

St Andrew's was not the only hospital. There were literally dozens of others, if we include the beautiful private villas placed at the disposal of the authorities by generous owners. One especially I recall, placed on a little rocky peninsula and almost surrounded by the blue Mediterranean, near St Andrew's; a princely home of Roman design, with Roman courtyard, arcades, and statues. There were also, for example, the Royal Naval Hospital, the Royal Military, the Blue Sisters (sometimes affectionately corrupted into the 'Blisters'), Imtarfa, and St George's. One single ward in Valetta contains, or did contain, to the wonder of the visiting world, nearly four hundred beds. The cases which could least stand transit are, of course, kept in Valetta itself. Others pass at once to the more distant hospitals, and thence to convalescent quarters and rest-camps. From these the cured and capable men go back to their regiments, and the disabled sail for home.

From June onward is the hot season in Malta; but remarkably little discomfort could be averred, particularly by men who had been enduring the terrors of Gallipoli. True, there wasn't always wind, and there was pretty nearly always dust; and the sun, which leaves so unmistakably his mark on the swarthy Maltese, did not sympathise by refusing to shine. The mosquitoes and sand-flies, too, are certainly Huns. They creep out in the darkness and attack the poor nurses and the more helpless invalids. One gentle Sister had her faith in Providence shaken because the mosquitoes were allowed to bite poor Lieutenant N., who had one arm off and the other in a sling.

This hot season is, of course, the time that the comfortable residents in Malta choose for their annual holiday. Then all the fathers and husbands who can afford it pack their wives and children off to Italy or to the British Isles for two or three months. This year the reverse has happened. Malta is fuller than usual. The home-country residents there are remaining, and many wives of sailors and doctors have gone to the island to be near their husbands. The wounded have profited mightily by this devotion. These additional ladies swell the ranks of the Maltese and homeland women who so splendidly minister to the comfort of the sufferers. Whenever a ship discharges her load of wounded on the quay (and this sometimes happens for days in succession), these ladies, in relays, are present with their own contributions of lemonade, oranges, tea, buns, fans, flowers, cigarettes, and every other comfort.

The Maltese are no whit behind the British-born in their generosity and sympathy. When I landed, one enthusiastic Maltese tradesman set himself to help a pale officer lying on a stretcher. The poor officer was too weak to accept or appreciate the kind fellow's courtesy; and, after various comforts had been offered in vain, the Maltese seized the officer's hand and kissed it piously, and I believe prayerfully. It was the least—and the most—he could do. The intention, at any rate, was sublime.

These organised attentions do not stop on the quays. Under the Red Cross and St John's Ambulance Associations ladies are told off to visit every ward and room of every hospital constantly, and I know from experience how thankfully such visitors are welcomed. The man is ill indeed who cannot be brightened by them; and it would be impossible to estimate how many books, papers, flowers, games, sticks, and pipes, and sometimes (rather in defiance of rules) eggs and cakes, are sent to soothe the hours of helplessness.

As the patients make progress, the numbers who are met with in the gardens or by the seacoast testify to the liberty they enjoy. At certain times these resorts are simply crowded with every type of nondescript warrior—Australians, New Zealanders, and Indians, as well as homeland soldiers. They lounge and loll under the trees, or they band together and indulge in drives in those open *carrochios* which add to the grace of picturesqueness the virtue of inexpensiveness.

Strange are the meetings that take place. It is not surprising that friends who have travelled out on board the same troopship, and have been separated to different regiments, should meet again in some hospital. What is surprising is the way old acquaintances of schooldays or 'varsity carouses, one of whom has perhaps settled in the Antipodes and the other on the Western prairies, should find themselves cot

comrades in the same hospital ward or ship. But these things are heard of every day. So the old friends and the new bask together, viewing the island where East and West meet so majestically; where the form and strength of European architecture, including the distinctiveness of its churches, combine with colours of Asia, vivid, striking, splendid, under those clear skies born to sharp contrasts. Here they see the mules and donkeys with high-peaked, brass-studded saddles drawing creaky carts; and comely Maltese countrywomen in great black hoods which seem half-umbrella and half-cloak (and wholly picturesque and sensible); the eternal diving-boys in the harbours; and the flocks of placid goats, sometimes a dozen or two in number, that follow their owner through the residential streets, realising their position in the scheme of things, and consenting to be milked whenever a housewife shall nod.

One kindness which the Maltese showed the convalescents must not be forgotten—the concerts and entertainments they organised. These were often made the more piquant by being rendered in Maltese—such as, for example, the repeated performances of the *Geisha*, given in the Royal Opera House at Valetta. That was quite beyond criticism. No London company from a West End theatre could have given greater satisfaction. It was a memorable pleasure to the wounded guests. Of another kind was the attention shown to many of the soldiers, that of being welcomed to the homes of Maltese and British families, where many warm friendships were made. Another thoughtful act was to stop the numerous church bells in Valetta. The bells have slept; so, we trust, have the wounded.

There is one thing no writer on the subject can leave undone, not at least without incurring the wrath of every soldier that has suffered wound or sickness. He cannot but pay a tribute to the wonderful work of the healers, and in that doctors, nurses, and orderlies must share. In overcoming difficulties, improvising equipment, labouring long hours under harassing climatic conditions, and always working their cures with the accuracy of an astronomer and the patience of an ambassador, these healers surely bear the palm; and their reward is not so much in the unforgettable gratitude of their patients as in the miracles that they have done in making the paralysed to walk, and the blind to see, and the all-but-dead to enjoy life again.

Almost as wonderful is the happy spirit of the men. Everywhere you find them jesting over their troubles, and stifling a groan to exchange some husky chaff with a nurse or a neighbour. The Gallipoli joker who, advancing in the open under a mad hail of bullets, cried out to his comrades, 'Now I know how it feels to be a grouse,' is typical of the breed. Occasionally the humour runs to something subtler. In a ward where a Presbyterian and a strict Methodist

were mates, a delightful young lady came in to talk with the invalids. She sat between the two, and the talk turned for a moment on snakes. There were no venomous snakes in Malta, the visitor explained, the legend being that the venom had all disappeared when St Paul shook off the snake into the fire.

'You know the story of his shipwreck in Malta,' she began.

'Yes, thank you, I know,' interrupted the Scot hurriedly. 'But tell it to Mr R. He's a Wesleyan.'

To finish with, here is a copy of a genuine letter written from one sufferer labelled by the authorities 'dangerously ill.' It is to his brother in London, and the only alteration that has been made is in the names.

'ST ANDREWS, MALTA,
10th June 1915.

'OLD THING,—Short letter—more soon—apologies—just to reassure you—possible errors in casualty lists—lots of Johnsons—excellent fellows, but vain, dam vain!—might desire to die as Johnson H.C.—censor's vigilance no proof against human ambition.

'Note the change of address—regrettable, but temporary—St Andrew's once barracks, now hospital—fighting on June 4th—Dardanelles—out previously two nights—bullets singing, whistling, slaying—no harm—no fighting then—big battle 4th—heavy losses—I in attack—supporting second attacking line—head of platoon—murderous fire—Turks swarming two hundred yards—bang! bang! Hell! Hell!—unrefined sights—every one tumbling back—gore—sand—smells—bullets—shells—shrapnel—lyddite—many dead in our trenches—sinking of heart—first "Good-bye to Old Home"—but men willing to leave trenches—seized rifle-bayonet—hopped over trenches—almost the first—storm of lead—not

shot—miracle—rushed forward twenty paces—lay still—crowds of killed—too few comrades to advance—looked for Turk to shoot at—difficult target—waiting—captain tumbles down, saying "I'm hit"—look around for minute—suddenly bullet advances sixteen hundred miles an hour—put my arm in front of it—checkens pace—grisley—second "Good-bye to Old Home"—faint—helpless—try to look round again—shrapnel on back of head—third "Good-bye" proves unimportant, but discouraging—throw off equipment—nothing to be done—creep back to trench—tumble in—Reserves there take me up—care for me devotedly—cut up clothes—stick on bandage—more gristle. "Water!"—"Water"—stretcher-bearers, heroic, after hours got me through trenches at immense risk to them and me. Patched up in Red X station, in ordinary circumstances a place of grave peril from bullets, then elevated into haven of immunity—carried on board ship—brought to Lemnos, thence here—most officers killed or wounded—hardly a man out of my platoon untouched—greatest possible kindness—everybody—soldiers, sailors, stewards, doctors, orderlies, nurses, townspeople—now resting, making good recovery—arm still on—slow—uncertain—moderately comfortable—home in a few months—probably no more active war possible—cheerful—might have been so much worse.—Love to all, HARRY.

'On field three days—exposed to danger three times—actually fighting about three minutes—wounds—three. Doctor on morning afterwards said, "Well, you haven't stayed long on the Peninsula." I answered, "No, but I am leaving it with some excellent impressions."'

The form of that letter may be unique; but if you think the spirit is, just ask any Red Cross nurse you know.

BETTY GRIER.

CHAPTER XIX.

MARCH came in like a lion, and, true to its proverbial reputation, it is going out like a lamb. Nature is waking from her long winter sleep, and is beginning to clothe herself anew. The hawthorn hedgerows, which only three weeks ago were hidden in piled-up wreaths of drifted snow, are covered now with a blush of green, and already in their bielled clefts the sparrows and yellow-yoits are preparing to build for themselves 'an house wherein to dwell.' There is a kindly warmth in the sun's rays as they lie on the upturned brown fields, and a soft genial breath is stealing through the woods and lingering lovingly round the ash and the chestnut, those early risers in the first dawn of spring. What a boldness and assertiveness there is in

the big black bud of the ash, and how promising is the bulging pink-brown bud of the chestnut! To those who have eyes to see and ears to hear, how wonderful is the story they tell! If I were a preacher of God's gospel, I question if I could confine the selection of my texts to the literal words from His holy book. Of late I have been lying much in Nature's lap; I have listened with greedy, receptive ears to her song and story; I have felt the throbbing of her great mother heart, and learned in her workings many of the wonderful ways of her great Controller. And I am leaving her knee, creeping out of God's own sanctuary, humbled and chastened, yet gladdened and relieved withal, to think that into the city life, which I must soon re-enter,

I am carrying with me that heaven-sent faculty of finding 'tongues in trees, books in the running brooks, sermons in stones, and good in everything.'

And these lanes and solitary bypaths which have been my schoolroom are becoming daily more interesting, more insistent in their appeal. They are now providing something fresh and pleasing every day. I must walk slowly and quietly, so that I may see and hear every titbit of their store. A country walk at the rate of four miles an hour is very invigorating, to those in good health very pleasurable; but such is not possible on my byway at this season of the year, except to the Philistine. Even Bang and Jip do not exceed the half-mile limit; and as for myself—well, Dr Grierson has oftener than once accompanied me down the Gillfoot road, and I know he doesn't gauge the progress of my recovery by my rate of locomotion. No; if I must see and hear aright I have to walk slowly, and when the mavis is singing at close o' day I must halt altogether if I would listen as I ought.

For many mornings past a blackbird from the top of the apple-tree in our garden has been challenging Tom Jardine to a trial of song; and, much as I love to lie and listen to my neighbour's pure tenor voice in 'The Lea Rig' or 'Flow gently, sweet Afton,' I have not been sorry when, as if acknowledging defeat, he has stopped to hearken to his feathered rival in the old apple-tree.

Now that Tom has got over all his worries, and the sun is rising earlier, his heart is becoming attuned, and the familiar old Scots airs are accompanying the different items of his morning duties just as they used to do when first I came to stay with Betty. I hear the gray mare's whinny, the turning of the key in the stable door, the lid of the corn-bin creaking on its rusty hinges—these are all as they used to be. But, alas! all is quiet in Betty's kitchen now, and I miss the cheery sounds of the early breakfast preparations, for Nathan is lying prostrate in the back-room, and poor Betty's rest is too much disturbed to permit of her rising with the dawn.

Every Friday evening since I came here I have given Nathan an envelope enclosing my weekly contribution toward the household expenses—this is, of course, in accordance with the arrangement I made with Betty; and at first I often used to wonder if she had fully explained the matter to him, because he always took the packet from me in a hesitating, doubtful way, very much as a debtor would accept a summons. Later he just smiled, and without a word put it in his trousers pocket, looking sideways at me and inclining his head toward wherever Betty happened to be at the time.

Last Friday night, when I was at his bedside, I handed him the envelope as usual. He didn't hold out his hand for it; so I laid it down on the

coverlet, and nothing was said for a time. Then, nodding toward a wooden box in the corner of the room, he said, 'Maister Weelum, will ye open the lid o' that kist, if ye please, and bring me the wee tin box that's lyin' at the left-haun side?'

I did as he requested. It was an old, battered, black japanned receptacle without a lock, and only secured against accidental opening by a wooden peg inserted through the catch. Withdrawing the peg and placing it between his teeth, he took off the lid, and there—some clean, others crumpled and dirty—was every envelope I had given him, and all of them unopened, as I had put them into his hand.

'Maister Weelum,' he said after a pause, 'I mak' nae great shape at speakin' or explainin'; but I've been thinkin', as ye've been idle and aff yer wark sae lang, ye'll mebbe no' ha'e muckle comin' in the noo, and—and—Auch! I was gaun to say something mair, and I've forgot it; but ye can tak' it a' back if it's ony use to ye.'

'Nathan,' I said, in astonishment, 'I—I don't quite understand. Why should you offer me this?'

He gave a wee bit quiet laugh. 'I dinna ken what kind o' a job ye ha'e, Maister Weelum. Betty never telt me, and I never asked; but wi' us yins doon here it's nae wark, nae pey. Ye've been idle a lang time, as I've said, and I thocht mebbe it micht come in handy. Of coorse, if ye dinna need it—weel, there's nae hairm dune.'

I didn't know very well what to say, but I thanked him, and assured him that I didn't require money, explaining that it came to me whether I was working or not. This last bit of information roused Nathan's interest.

'Comes in to ye whether ye're workin' or no! Imphm! Ye maun be connec't wi' meenisters somewey, then,' he said.

'No, Nathan; I'm connected with law.'

'Oh, imphm!'

'I'm astonished that Betty never told you I was a lawyer, Nathan.'

'Mebbe she wadna like, man. Betty's very discreet.' Then he added by way of sympathetic encouragement, 'Dinna think ocht aboot it; there maun be fouk for a' kinds o' jobs, ye ken, Maister Weelum.'

Nathan is capable of unconsciously starting many different emotions. I was touched by his kindness and unselfishness, and amused at his reflection on my profession. But I couldn't find words to thank him for the former, and I daren't laugh at his serious remarks on the latter. Then I bethought me of my plan to relieve him of his long, weary walks, and to find something to take up his attention nearer home. I asked him if he wouldn't give up his present work and take to the cultivation of tomatoes, and I outlined my little scheme as clearly as I could. Somehow, I didn't succeed in making it plain to him, for

after I had finished, and when I asked him what he thought of it, all he said was, 'It has nae attraction for me, Maister Weelum, for I never could eat a tomato a' my life.'

'But, Nathan,' I said, 'you needn't eat them unless you like. You've to grow them, and then you sell them. There might be money in it for you, and for your goodness of heart in offering me all these envelopes I want to pay for the putting up of the glass houses and stoves and piping; that will be a small return for all your kindness to me. You know all about the growing of tomatoes?'

'Ay, brawly.'

'And what do you think about it, then, Nathan?'

'What would Betty say, think ye?'

'I don't know,' I said, 'but we'll soon hear.'

Betty was baking soda-scones, and when she was free to leave her girdle she came in, and I told her all I had told Nathan. She looked from me to Nathan, and then, answering a sign, she went up and leaned over his bedside. I heard a throttled sob and a whispered word or two. Thinking they wished to talk it over by themselves, I slipped into the kitchen.

In a minute Betty was with me. 'Maister Weelum,' she said, and her lip trembled, 'Nathan, puir falla, broke doon there. He didna want you to see. He says he's obleeged to ye, but—but—it's no' worth while.'

I laid my hand on her shoulder in silent sympathy. Without a word she turned to her bakeboard, and I went into my room and quietly closed my door.

Last night, just after I had lit my gas and settled myself down for an hour's perusal of M'Crie's *Vindication*, Betty opened my door and came quietly in. 'Maister Weelum,' she said with a trembling lip, 'Nathan's a wee mair relieved. Him an' me ha'e had a closer he-rt-to-he-rt crack than ever we had in a' oor lives. I'm gled, in a wey; but—but I canna help thinkin' it'll be oor last.' She wiped her cheek with her apron. 'Hoots! hoots!' she said as the tears continued to flow; 'it's—it's no' like me to be a' begrutten like this; I'm gettin' awfu' soft-he-rted; but, oh, Maister Weelum, I'm awfu', awfu' sair-he-rted!'

I was at her side in a moment. 'There noo,' she said, 'I've dune;' and she choked down a sob. 'What I wanted to tell ye was that Nathan's very anxious to see ye; he wants to speak to ye aboot something. It's the first time he's speirt for onybody, and I'm gled it's you. I ha'ena to gang in wi' ye, for he wants to see ye your lane.'

I pulled in my big chair nearer to the fire, put my mother's kirk hassock in front of it, and after I had seated Betty comfortably I went ben to Nathan's back-room.

A week or two ago, at his request, we had

turned the bed round so that from where he lay he could see into the garden. I was present when Joe and Deacon Webster made the alteration; and when Nathan and I were alone and he had looked his 'e'fill' on the scene of his lifelong labour of love, he said, 'I'll no' weary noo, Maister Weelum. The flo'ers and the yirth ha'e aye a hamely look to me.'

And to-night, when I approached his bed, his eyes were fixed on the darkened shadowy plots outside. I didn't speak for a minute, and neither did he. Then, thinking he was unaware of my presence, I said, 'Nathan, I am here, beside you.'

'Ay, I ken.'

'Shall I bring in your lamp? It's getting dark now.'

'No, no, if ye please, dinna licht the lamp. I want to see—to see oot as lang as I can.'

I sat down beside him, and together we watched in silence the shadow of night's wing creeping around bush and tree. And when everything was shrouded, and nothing was visible through the blue-black window-panes, Nathan's head turned on the pillow toward me. 'Man, Maister Weelum,' he said, 'it's quiet, quiet wark that.—I'll never see it again—no, never again.—Ye dinna mind sittin' in the dark?'

'No, Nathan.'

'Ay, the licht hurts my een; and—and I've never said muckle a' my life, but I've often thoct oot lang screeds in the darkness, and mebbe it'll help me oot wi' what I've to say to ye the noo. Ay, the Hebrons dinna speak muckle, Maister Weelum, but this is a forby time wi' me, and I've something to ask o' ye. I hardly expec'it the ca' at this time o' the year. The back-en's the time o' liftin'. I aye thoct, someway, that when my time cam' it wad be when the growth was a' by, the aipples pu'd and the tatties pitted; and it seems awfu' queer that I should ha'e to gang when the buds are burstin', and—and the gairden delvin' on—imphm!—but it's His wull. "The young may, the auld must."—Imphm!—Ay, are ye listenin', Maister Weelum?'

I rose from my chair, and I stroked the gray hair back from his forehead. 'Yes, Nathan, I'm listening; but you must not give up hope; you're really not an old man, and'—

'No' an auld man! Himph!—I've—I've been an auld man a'my days. I canna mind o'ever bein' young. I was ten—only ten—when my faither was ta'en away, and I had to mak' the handle o' his spade fit my wee bit haun. Ay, I had to, for the weans had to be brocht up, and—and, thank God, I managed it! But it killed the youth that was in me. Ay, and as I was gaun to say, I'm seein' things differently lyin' here. Coontin' the times ye've been at the kirk'll no' quieten your fears. Thinkin' o' the guid ye've dune or tried to do nicht, an' my crap o' that's a very sma' yin. Still, I maun ha'e pleased the Almichty in some wey, or He wadna

ha'e been sae kind to me; He wadna ha'e gi'en me Betty. Oh, man, Maister Weelum, I wish I could tell ye a' that Betty's been to me! I'm vexed I canna. I'm a Hebron, and I needna try; but ye ken yoursel' in a sma' way. She nursed ye—ay, and—and noo this is what I want to ask ye—when I'm away, Maister Weelum, will ye see that my—that Betty's a' richt—eh? Is that askin' an awfu' lot?'

'Oh, Nathan,' I said, and I knelt down at his bedside and took his softened hand in mine, 'Betty is to me a sacred trust, and if it be God's will that you must leave her, I will be with her till she goes out to meet you again.'

He pressed my hand. 'Thank ye, Maister Weelum. I—I thocht ye would; but I juist wanted to mak' sure. That's a', I think—a' at least as far as this world's concerned. There's a lot—an awfu' lot I should do, but I canna. I doot I've been careless. I've left the want to come at the wab's en', and I ha'e nae time to mak' it guid noo. I maun juist leave it to Him. Guid-nicht, Maister Weelum, an' ye'll tell her—ye ken whae I mean—that I was gled a Hebron was o' service to her. Guid-nicht. God bless ye, man! Guid-bye.'

'Guid-nicht!—God bless ye!—Guid-bye.' These words kept ringing in my ears as I sat by my fire, and during the quiet hours my sorrowing thoughts strayed again and again into that wee back-room where Betty sat watching, and where Nathan lay dying.

Long after the village folks had gone to bed I heard the street door open quietly, and the doctor's shuffling footsteps in the lobby. He went through the kitchen into Nathan's room; then he came in and sat down in the big chair opposite me. 'I told Betty I would be here if I were needed, William,' he said, and he took out his old clay pipe and smoked in silence.

Just when the night was on the turn he opened the door and went quietly across to his patient. I followed him into the kitchen, and there, by a cheerless fire, sat Mrs Jardine in Betty's chair, and, poor, hard-working soul, she was asleep, with her head resting on Tom's encircling arm. I put my hand on his shoulder and thanked him for his presence. Then I went back into my room, and, sitting down in my chair, closed my eyes, for their lids felt heavy and weary.

'William, Betty wants you.' The voice seemed far away. I rose hurriedly and rubbed my eyes. The sparrows were twittering in the lime-tree, and the gray light of a March morning was lying cold in the room. The doctor was standing with his hand on the handle of the half-open door. 'Betty wants you, William,' he said in a whisper; and I passed him without a word, and with a heavy, apprehensive heart.

On the little round table was an open Bible

which I knew well, and a pair of spectacles lay across the flattened-out leaves. Betty was standing at the bedside, her dimmed eyes fixed on Nathan's long, wan face. She didn't turn her head when I came in, but she held out her hand to me, and together we watched. Suddenly he raised his head from the pillow and his sunken, sightless eyes turned toward the window. 'Ay, imphm!—weel, Betty lass, it's aboot time I was daunerin'.—It—it's a nice mornin' for the road; the birds'll be whussalin' bonny in the Gillfit wood, and—and the sunshine will be on the hawthorn.—No, I'll no' mak' a noise. I'll open the door canny, and I'll no' wauken Maister Weelum. I'll—I'll juist slip oot quietly. Ay'—

And Betty and I watched Nathan slipping out quietly—oh, how quietly!—into the sunshine of God's own everlasting morning.

CHAPTER XX.

HARVEST-TIME in Midlothian. Golden corn in golden stooks dotting the stubble-fields, yellow leaves on the ash and russet nuts on the beech, a beautiful panorama of multi-coloured landscape stretching hazily away southward and cuddling tranquilly between the Moorfoots and the Pentlands; bird song in the woods and laughter in the fields, mingling with the jolting of iron wheels and the cheery rhythmic *craik* of the levelling reaper. Little wonder Old Sol lingers long this afternoon above Castlelaw. Gladly, I ween, would he stay; but his times of rising and going down are set, and slowly but surely the shadows deepen at the base of Caerketton, and steal upward to its sheltered crown behind Allermuir.

My wife and I drove round by Roslin to-day, called at The Moat, and, after having tea with my old friend Mrs Pendriagh, whose soda-scones are almost as good as Betty's, we returned 'in the hush of the corn' to Blackford Hall, *via* Woodfield and Fairmilehead.

This is all strange, unfamiliar country to Désirée. To-day she saw it for the first time and under the most favourable auspices, and already I know, from her looks and words of appreciation, that it has made its appeal. She thinks, with me, that it very much resembles my own home-land scenery, from its undulating fields and bosky woods to its velvety grass-grown hills, so sleek and rounded, she said, that she wanted to clap them. As we drove homeward, quiet thoughts of Thornhill came to us, and we wondered what Betty would be doing, and how she was getting on. For a month she had been with us, our first guest, and the most honoured and most welcome we shall ever have under our roof. Two days ago she returned to what she calls her ain auld hoose, and when Désirée and I saw her off at the station she told us in a shaky voice that 'mebbe she wad be back in the spring,

when she had the hoose seen to and the gairden delved.'

We miss her cheery, motherly presence in the house; and, though it was looking far ahead, we planned a future for Betty as we drove along.

When we reached Blackford Hall I found more than a kenspeckle countryside to remind me of homeland. In the hall was a carpet-bag which I recognised as a Hebron heirloom I had often seen in Nathan's back-room. Two large pictures, indifferently packed and tied round with rope line, were placed against the hat-rack. One, from the corner of the frame which was uncovered, I knew to be the oil painting of my father and mother; and the other, from the new brilliancy of the gold, I recognised as Désirée's painting of Nith Bridge. Nathan's old hazel walking-stick, which daily he carried to his work, was lying along the top of the carpet-bag, tied securely to the leather handles.

'Désirée, my dear,' I said, with a happy flutter in my heart, 'I do believe Betty's come back.'

She looked at me with a wondering smile on her face, as much as to say, 'Too good to be true;' and, acting on a common impulse, we rushed upstairs like expectant bairns.

There, in the little room facing southward, which we already called Betty's room, on a low chair before an empty fireplace, sat the dear old

soul with her chin on her breast and fast asleep. Her bonnet-strings were loosened and lay over her shoulder, and her hands were tucked underneath a Paisley shawl, which was folded across her knees.

We tiptoed in and stood quietly beside her, Désirée on her right and I on her left. Slowly she opened two wondering eyes, and in a bewildered gaze she looked around her. It was Désirée's hand she grasped. 'Oh, weans,' she said, 'I'm awfu' sorry to bother ye; but I'm back! I juist couldna stey away, and ye maunna be angry wi' me for'—

My wife had knelt down beside her. Betty's face nestled into her neck, and the rest of the sentence was lost to me in smothered sobbing. And I waited beside them in silence till the solace from one kindly heart had crept into the other. Then I left them, and quietly closed the door.

Betty, my own Betty Grier, as long, long ago you prepared a place for me within your big, warm, loving heart, so have you sanctified to yourself a place in mine; as you sheltered and cared for me in my spring of life, so will I shelter and care for you when your winter comes, when the cold wind tirls the leaf and it falls.

THE END.

THE ROMANCE OF MODERN EXPLOSIVES.

By JAMES H. YOUNG.

IT will probably never be satisfactorily proved who first invented gunpowder; there really is not sufficient solid evidence on which to pin down its invention to one man, just as it is still a debatable point which nation first used it. One thing, however, is indisputable, and that is that until a comparatively few years ago gunpowder was the only propelling agent in use for arms of all kinds. Various—one might well say numerous—inventors tried to add other ingredients to gunpowder, but for long no substitute which gave satisfaction from any point of view could be found.

A considerable impetus to the development of explosives was given by the invention of the so-called nitro-compounds. Probably the pioneer in this direction was Braconnot, of Nancy, who in 1832 discovered that starch, woody fibre, and similar substances could be converted into highly combustible bodies by the action of concentrated nitric acid; a few years later Pérouze extended this discovery to cotton and other organic substances. But no practical result followed these discoveries until, in 1845, a German chemist named Schönbein, having hit upon a better method of treating cotton with nitric and sulphuric acids, announced the discovery of gun-cotton, which he proposed as a substitute for

gunpowder. He claimed for it that the advantage it had over gunpowder was that it burned without leaving any residue, and consequently without smoke.

This development acted as a great stimulus to increased activity from an experimental point of view, and eminent chemists in nearly every country in Europe enthusiastically devoted themselves to the question of utilising the new explosive for military purposes. The measure of success achieved by some of these experimenters was none too encouraging, and the fearful risks which the nature of their work incurred were often all too apparent. In this country, for instance, it was first manufactured by Messrs Hall & Son of Faversham; but, in addition to minor accidents, a terrible explosion at their works so unnerved everybody that its manufacture in England was discontinued for several years. Inability to trace the cause of these accidents, and the then imperfect knowledge possessed of the subject, accounted for this step.

To the well-known chemist of the War Department, Sir Frederick Abel, then Mr Abel, was due the solution of the problem which had so persistently baffled the efforts of his predecessors and contemporaries—that is, a process for the purification of gun-cotton. Indeed, its

utility as a disruptive agent may be said to date from Sir Frederick's discovery in 1865, a discovery by which gun-cotton is thoroughly purified, and the material converted into thoroughly compact, homogeneous masses. This did not necessarily eliminate the risks of manufacture—at the Stowmarket factory, in August 1871, twenty-four employes were blown to atoms—but it certainly did a tremendous lot to minimise the perils with which gun-cotton manufacture was environed.

In his experiments with gun-cotton the great chemical expert not infrequently took his life in his hands. The story goes that, apparently in the most cheerful mood, Sir Frederick bade his wife good-bye one morning and set off. He had been commanded by the War Office authorities to make some experiments with gun-cotton. It was dangerous stuff. None knew this better than the man whose business it was to experiment with explosives. The question that occurred to him was: 'When I take the cover off the iron boiler in which I placed the gun-cotton with the acids I poured on it yesterday, shall I be blown to pieces?' There was only one way of solving the problem—by lifting the cover. He lifted it, to discover that his experiment had been a huge success.

With Professor Dewar he spent months in seeking how to render cordite safe to handle. Sir Frederick and the professor, having surrounded themselves with it, began to experiment. When some of the head officials visited the laboratory to hear Abel's observations on it, he nearly startled them out of their wits by thrusting the lighted end of a cigar into a lump big enough to send the whole party heavenward, 'just to show you that we have made no mistake, gentlemen,' he remarked.

Cordite is much more powerful than gun-cotton, and is composed of nitro-glycerine, gun-cotton, and vaseline, which are dissolved by so many parts of acetone. These are mixed together until they form a soft, putty-like paste. It is then forced through holes in a metal plate, and emerges in long strings, whence its name 'cordite' comes.

A smokeless powder, cordite is commonly used in firing our big guns. How the huge shells, weighing in some cases nearly a ton, are thrown distances varying from seven to twenty odd miles is one of the marvels of modern munitions. The shell, which is filled with a high explosive, is loaded into the gun, and behind it is placed a big charge of cordite. The breech of the gun is then locked, the cordite is exploded, and the power generated by the explosion thrusts the shell forth from the gun at terrific speed to its mark. The shell itself is filled with lyddite—so called because it was first tested at Lydd, a little place in Kent where many of our 'lads in khaki' have been trained in the art of marksmanship.

Lyddite is an explosive of truly awful power—probably the most powerful known to man—and was invented by M. Turpin, a French chemist. He sold his invention to his country in 1886; but in 1891 it was alleged that he and a captain in the French army had been supplying information respecting his invention to foreign countries, and the pair were sentenced to imprisonment, exile, and fines. In 1888 the patent was bought by Messrs Armstrong of Elswick, and sold by them to the British Government.

The wonderful properties of coal-tar are well known to most people; but to the great majority it will probably come in the nature of a surprise to learn that this terrible explosive, lyddite, is largely composed of one of the derivatives of this extraordinary by-product. We refer to picric acid, a substance extracted from coal-tar, and greatly used for dyeing materials yellow. Picric acid was being utilised in this manner, when a tremendous explosion occurred. It was afterwards discovered that the picric acid was the cause of the explosion. To convert and develop the explosive properties of this new discovery to the purposes of war was only a matter of time and experiment for the expert chemists. They did not labour in vain, for they found that by melting the picric acid crystals until they turned into a fluid of the consistency of cream, and then combining this fluid with gun-cotton melted in alcohol, they got an explosive more terrifying and tremendous in its destructive powers than anything else known before or since.

If the names of Nobel and dynamite are not synonymous terms they certainly ought to be, for we seldom speak of the one without suggesting the other. It was the great Swedish inventor who took the first practical step toward the dynamite of the present day, and gave it the name by which it is everywhere known. Like other workers in the domain of research and experiment, he had more than one perilous adventure before he 'made good' with his big discovery. A catastrophe, as a matter of fact, led up to it. Prior to 1868 Mr Alfred Nobel was, comparatively speaking, in a small way of business as a manufacturer of nitro-glycerine; but in that year his factory was blown to pieces by an explosion of this highly susceptible concoction. This awful accident, which would have been sufficient to convince most men that they had better seek fields and pastures new, only incited Mr Nobel to further experiment, and he discovered that by mixing nitro-glycerine with a certain kind of earth called kieselguhr he could make a solid substance which possessed terrible explosive powers, and which was yet quite safe to handle. He called his discovery dynamite.

Men were extremely chary of handling dynamite at first. As it is largely composed of nitro-

glycerine, which explodes at the slightest shock, they not unnaturally imagined that dynamite was bound to be equally dangerous. The famous Swedish expert accordingly felt that it was 'up to him' to prove to the world that his new compound, under ordinary circumstances, was quite safe to handle. One day several of his men found that they could not remove some dynamite from the receptacle in which it was packed. The explosive had all amalgamated and formed into a solid mass. The matter was explained to Nobel, and he was asked what was to be done.

'I'll show you,' he said; and, leading the way to where the dynamite was packed, he seized a big knife, and started to dig and hack the dynamite piecemeal out of its case. The men drew back as far as they could, expecting every moment that a terrific explosion would take place, but none did.

'Now perhaps you will realise that what I tell you is true,' said Nobel. 'There is nothing to fear.'

In spite of all that has been said and written to the contrary, many people still have the idea that dynamite is exceedingly dangerous stuff to take any liberties with, and that it will explode at the least shock. This is a mistake. Nothing less than a tremendous shock will make dynamite explode, and this shock is obtained by exploding a mixture of nitric acid, mercury, and alcohol, which in turn explodes the dynamite. Fulminate of mercury is the name of this mixture, and by its aid many of the high-powered explosives are detonated. The wet gun-cotton in the war-head of the torpedo is exploded by a little of this fulminate, which goes off upon striking anything that the nose of the torpedo happens to hit. When fulminate goes off it develops a tremendous heat and exerts a terrific pressure. If it is placed in the middle of a quantity of gun-cotton, it is this great heat which makes the gun-cotton instantly explode. It acts with dynamite in precisely the same fashion.

Mr Hudson Maxim, the celebrated inventor of explosives, lost his left hand by having it blown off at the wrist by a fulminate compound with which he was experimenting. In connection with his experiments in the development of motorite he has also had some pretty close calls. Motorite is a compound consisting of about 70 per cent. nitro-glycerine and 30 per cent. gun-cotton, and forming a somewhat rubbery substance.

Speaking of his early experiments, Mr Maxim says: 'When my first motorite apparatus was tested a couple of sticks burned all right, as these happened to be flawless. The next went off with a noise like a ten-inch gun. Three of us were standing around the machine, and for the instant we all thought we were dead; but the machine had not actually exploded. The material had blown out through the safety-valves, slightly

burning a young man who was assisting me. I then tried another place to conduct the experiment, as the above episode had placed the machine under suspicion at the first place. I was soon again ready to repeat the test. I thought I had discovered the trouble; but I had not, for I had not yet found out that the trouble was due to longitudinal flaws in the material. There were two of us in the room when the test was made—a young Irishman and myself. He said he was not afraid if I was not. Ready! The button was touched to ignite the motorite. There was a flash and a terrific bang. The machine was blown to fragments, which were hurled in all directions about the room, making deep dents in the walls; but fortunately neither of us was hit. The windows were blown out, sash and all. I then went away from that place, and built a laboratory especially for the purpose of making further tests. Provision was made for touching off the machine from a position outside the room and behind a barrier. My wife and I made the new test alone. The button was pressed, and a fearful explosion followed. One fragment of the machine came out at the door, embedding itself in the barrier in front of us.'

But the ultimate triumph belonged to Hudson Maxim. The loss of a hand and the daily risk of losing his life did not put the indomitable inventor into a fever of frightfulness. No, not by a long way. To him these 'incidents' were 'all in the day's work,' and merely acted as a spur to the splendid achievements which followed.

One man gave up his life in the search for a new explosive a few years ago. He was a scientist named Wartenberger, and the lure was one of two hundred thousand pounds promised him by the Government of the United States if he succeeded. Wartenberger had spent years of his life in the midst of awful perils in search of a new explosive. He found one at last which the experiments of the Government experts satisfied them was even more powerful than dynamite. The Government offered Wartenberger two hundred thousand pounds for his invention, providing he could perfect a method of firing the fearful stuff by means of electricity instead of a fuse. While he was engaged in these experiments an explosion occurred which killed the unfortunate inventor.

How science has gradually stripped the manufacture of high explosives of many of the terrors which it once so supremely possessed is, nevertheless, one of the most remarkable features in connection with this great and vitally important industry. Men now cut, carve, and handle with impunity compounds which at one period only experts, backed by scientific knowledge of what they were doing, dared to touch. Gun-cotton, for instance, whilst in a stiff pasty state, may be cut, moulded, or pressed into any desired shape without danger of ignition. In fact, gun-cotton

in the colloid state may be hammered on an anvil, and as a rule only the portion struck will detonate or fire. The end of a rod of cordite may be struck a moderately heavy blow on an anvil without exploding or igniting. The rod will first flatten out. A *sharp* blow will then detonate or explode the portion immediately under the hammer, the rest of the rod remaining quite intact. Bullets may be fired through a bundle or package of cordite without detonating or inflaming it.

Dynamite, as already pointed out, will explode only when subjected to a tremendous shock. It can be dropped on the ground, just as you

would drop a handful of sugar, and nothing will happen. Miners often pitch sticks of dynamite at each other in fun. Men of science sometimes make their visitors thrill with horror by setting fire to a stick of dynamite, and lighting their pipes from the flame. They even cut it and saw it to prove how harmless it is.

As Mr Hudson Maxim once said: 'The greatest source of danger in working with explosive compounds is not carelessness, at least conscious carelessness; but it is due to the fact that in every occupation there is a tendency for voluntary acts gradually to become automatic, and therefore unconscious.'

THE STRANGE AFFAIR OF THE CHANCELLOR.

CHAPTER II.

EVENTS moved encouragingly for the inspector. The Chelcote chief constable approached him glowering. An elderly clergyman with a newspaper followed him.

'Well, sir,' exclaimed the captain, 'I venture to prophecy that you are no wiser than the rest of us. What did she tell you?'

'Very little! very little!' answered the inspector.

'Exactly! All the same, what I want to know'—A touch on his arm made him swing round impatiently to the clergyman.—'Yes, yes, Mr Duckworth. This is Mr Clapton, the gentleman they have sent us from the headquarters of genius.—Mr Duckworth is the Vicar of Cloudbury, Clapton.'

'Your servant, sir,' said the inspector, bowing.

The vicar would have spoken, but Captain Rampney cut in: 'No use my wasting time up there, Clapton, after what you tell me. I thought I'd wait and see you, and then—But who was that in the car just now? I see it's coming back.'

The inspector looked, nodded, and enlightened the captain about Mr Lampson, but not about the special purpose of the solicitor's visit.

'What I was going to say, sir,' then said the vicar tremulously to the inspector, 'is that I cannot believe any resident in my parish would lay the hand of violence'—

Captain Rampney checked him with an indulgent, even patronising, touch upon the shoulder. 'Don't distress yourself, Mr Duckworth,' he said. 'We shall see what we shall see, all in good time.'

'Naturally we shall do that,' resumed the vicar; 'but as I was remarking to Mr Beamstock—ah! I see he has gone in—I was saying, Mr Clapton, that it was a singular coincidence that the text of the sermon which my curate preached on the Sunday morning, when, for anything we knew to the contrary'—

'Don't see where the singularity, or the co-

incidence, comes in,' interposed the captain rather rudely.

'What was it, sir—this text?' asked the inspector, his thoughts elsewhere.

'"Judge not," Mr Clapton, "that ye be not judged,"' replied the vicar, with a grave emphasis that deserved (and from the inspector obtained) more respectful acknowledgment than the laugh which burst from the captain.

'"Judge not, that ye be not judged!"' echoed the inspector softly. 'Mr Leven preached it, I think you said, sir?'

'My good man,' boomed the captain, 'what's there in that? Every sermon must have a text, and presumably every Sunday its sermon—more's the pity sometimes. What the—Here, I'd better be into my dogcart and off.'

But Mr Lampson, the solicitor, was now on the scene. The Chelcote car which had brought him to the Hall pulled up a few yards from the group, and he alighted.

'Captain Rampney, I believe?' he said, with accurate aim, and the two drew aside.

Given a couple of minutes, the inspector would have questioned the vicar diplomatically about the curate's sermon on that appropriate text; but the opportunity was not afforded him. The vicar himself began a sort of eighteenth-century-tombstone eulogium of the Chancellor—verbose and charitable—and the inspector let him go on with it. His attention drifted to the solicitor and the chief constable. Captain Rampney had snorted '*What!*' as to something preposterous, and the London solicitor had replied, 'It is her desire, and we must conform to it, Captain Rampney. She inherited a great deal of money from her mother, and has entire control of it. I agree that the sum is imprudently large, but I am to request you to see to it at once.'

'Putting a premium on that kind of crime, unless she has an idea whose pocket it is likely to fall into!—that's what I call it,' said the

chief constable next; and then, 'Oh, very well, Mr Lampson. I'm talking at random, of course. I'll have the bills printed.' This said, he turned to the inspector, who was ready for him.

'You're in luck, Clapton, or may be,' he announced, irately ironic. 'I am instructed to offer a reward of ten thousand pounds—ten thousand pounds, sir—for information that may lead, &c.—alive, not dead. Lady Geraldine Gurford declines to entertain the supposition that his lordship's life has been endangered. I've nothing more to say. Go ahead and make your fortune in a day, if you can, Clapton.—Good-morning, gentlemen.—I'll be in Chelcott almost as soon as yourself, Mr Lampson.'

He pranced toward the inn stables—really pranced. The London solicitor returned to his car, which whisked him away. A little nettled by the London solicitor's almost pointed disregard of him, Inspector Clapton abruptly left the vicar. 'This is a new departure, sir,' he said, 'and I have my hands full.'

Two young men with note-book eyes, whose motor-cycles were outside the inn, now shot from the house. The inspector had seen them at the window, and was prepared for them. 'Go away! go away! You'll get not one syllable from me; so give it up, boys,' he urged with generous self-restraint.

They clung to him nevertheless for many yards, coaxing, pleading public benefit, his and their own. Then his obstinacy beat them. The one ran back toward Captain Rampney and his dogcart; the other pursued the vicar down a side-road.

Thus relieved of them, almost mechanically the inspector drew from his pocket a sketch-plan of the village, the grudging gift of Captain Rampney. Nine-tenths of his mentality was engaged with the Lady Geraldine and her lover, the curate; the other tenth reminded him of the paper. It was a neat piece of draughtsmanship; but, upon his soul, he could have crowed, if crowing as an expression of triumph had been one of his gifts! Pure professional triumph, with not a pound-piece of other profit attached to it, now. It seemed to him that the Lady Geraldine and the young clergyman between them had given him every key in the bunch, now. This ten-thousand-pound move for the recovery of the living Chancellor, not his dead body, was surely the master-key of the lot. The Chelcott chief constable and the London solicitor might think what they could about it. *He* understood. She might as well have offered a million while she was about it. Of all young ladies!

The chief constable passed him at fifteen miles per hour. 'See you later, Clapton,' he shouted.

Just in front a droll figure of a young man in the garments of a boy was whipping a top in the middle of the road. He cleared out of the way of the dogcart in the very moment of

fate. The captain swore at him. The oddity mouthed lumpishly after the vehicle, mouthed next at the inspector, then retrieved his top, and was muttering over it, with his back to the ivy-covered ruins of an old pigsty appurtenance of the adjacent cottage, when the inspector reached him.

'Well?' said the inspector, as to a canary or a parrot. He believed he knew all there was to know about the cottage and its tenants, but there were always chances.

'Eh?' responded Pegtop Sammy blankly.

'Not quite all there, are you, sonny? But never mind. That's no fault of yours. See here.'

'Eh?' said Pegtop Sammy as before, but suspiciously this time.

'What I want you to do, sonny,' continued the inspector, exhibiting a shilling, 'is to try to remember last Saturday—Saturday evening. Four days ago.' He used the coin as a counter on his fingers. 'One, two, three, four.'

It was time thrown away, of course. This brawny youth with the bared hairy chest might have posed to an artist as a model of his unfortunate kind—vacant, watery-eyed stare (a trifle querulous), loose lower lip, large-fingered dangling hands (whip in the one, top in the other), the big toe sticking out of his left boot, slack-jointed, and the rest of it. But he couldn't stand cross-examination. Wouldn't, anyway. At 'three—four' he snatched the shilling, bolted round, and nimbly scrambled over a broken part of the wall. On the other side was a wilderness of nettles and overgrown outbuildings. Waist-deep in its weeds, he soon waded out of sight.

Those two 'Ehs?' made up the total of his information.

'Artful young kipper!' chuckled the inspector, with a friendly smile for the lad's back that did him credit. Then he advanced to the cottage and the village idiot's mother, who was ironing, and proved as futile a subject as her son. He had to shout at her, and all she could tell him in return was that she didn't get back home on the Saturday until nigher eight than half-past seven, thankful that nothing had befallen her Sammy in the meantime, seeing what a peck of troubles had since come to the great folks at the Hall.

'*E will* play about in the 'orseway, sir; nothin' 'll stop 'im. It's no use talkin' to 'im, the poor dear; an' some day'—

'There 'll be a funeral in the family,' said the inspector, a trifle grimly. 'Quite so! quite so! Good-day to you,' he shouted in conclusion.

This over, he braced himself for his hope of the morning, perchance even its realisation ere he returned to the inn.

The Chancellor's park on the opposite side of the road was shut in by a high wall; but a walk of half a mile brought him to a fine old hammered-iron gate with a side-wicket, through

which he promptly clanked. A moment later he returned and peered up and down the road. No one was visible. There was evidently not much general highway traffic between Chelcott and Cloudbury. So he had been given to understand.

Then, with his hand on the wicket, he viewed the footpath, which meandered through the well-nibbled grass in and out among trees and sheep, toward the hidden Hall. Nothing in this.

But to the right of him, in front, was something—something desirable. It was just what he would have asked for in that vicinity, and for the next three harassing hours he was lost to the world in the tangled coppice which climbed from the road-level some fifty yards only beyond the gate.

There were many acres of it. It was disgustingly primeval in its undergrowth upholstery of brambles, tall russeting bracken, rabbit-holes, and black mud in the hollows with accommodation for the successful concealment of a dozen dead bodies.

Before and while he groped and poked, the inspector had the tragedy well reconstructed in his mind.

They had met by the gate, these two—the curate after his slow passion-nursing walk through the park, and the Chancellor coming angrily by the road. Inevitably a further scene had followed, and then the end. Quite possibly an apoplexy had helped the great man to his fate. He was built for such a mischance. Probably, however, there was a previous blow, or blows, and afterwards the curate became like most men when confronted with the stern consequence of an unpardonable misdeed. The common law of self-preservation would scream itself at him, and he would at once drag the body through the gate. A few or more minutes, and in the supernatural strength of a panic terror he might transport it to a secret part of the wood.

The inspector sweated himself rank at his task, but it was only when he had had his fill of it for one day that he hit upon the very spot of his, and the curate's, requirements.

A funnel-shaped sink of black water and mud, four or five yards in diameter, hemmed in by brambles, almost utterly screened from the sun, and so near the parkland that it was an irritating marvel that he had missed it at the outset of his hunt!

Midshin-deep in its rotten margin, he probed it, without result, with a sapling. Its depth and area both beat him; and presently he returned to the wholesome sunlight and green of the park as 'done' as he had ever felt in his life.

He was a dirty object, glad to get back to the inn unobserved. And here his plans for the afternoon were thoroughly wrecked by an attack of heart trouble which forced him to his bed in the middle of a well-earned luncheon, and kept him there.

Mr Beamstock had already obliged him with a change of boots and trousers. He obliged him further by undertaking to say as little as possible—or even nothing—about his calamitous breakdown.

'You understand, old chap, one gets discounted at headquarters badly if one's known not to be A1 all through. It's the second turn of the kind I've had. See what I mean?' asked the inspector painfully, in bed.

Mr Beamstock saw, and promised; and when night fell the inspector, much to his chagrin, was still in bed.

But he would be all right in the morning. He didn't doubt that. And then—a drag for that noisome puddle in the wood, a tactful engagement with the curate's landlady about the state of the curate's clothes and boots on the Saturday, &c.

His brain was scarcely sounder than his heart for this residue of the Wednesday, but it was firm on these two points.

(Continued on page 724.)

WITH THE FIRST BRITISH FIELD-HOSPITAL FOR SERBIA.

By ALICE and CLAUDE ASKEW,

Third Hospital, Skoplje, Serbia, May 12th, 1915.

A CRY came ringing out from Serbia some months back, the cry of a brave little nation which needed help for her sick and wounded, who were perishing in thousands; and Britain, to her honour, made haste to answer that cry and do what she could.

The steamer on which we travelled out to Salonika a few weeks ago was provided by the Admiralty for the various hospital units wending their way to Serbia. The ship was crowded

to her utmost capacity, and the passage differed in a great many ways from the ordinary sea-trip. First came the grave risk of being torpedoed by a German submarine during the early days of the voyage. The danger we were running was vividly brought home to us when we were all called up on deck for life-belt drill, and then had tickets allotted to us informing each passenger by which lifeboat he was to take up his position when an alarm-whistle blew on deck. A con-

siderable amount of exchanging was done with these tickets after their distribution, for the various units all wanted to keep together in the different boats as far as possible; but, as very heavy seas prevailed, considerable difficulty would have been experienced in launching the boats, and few would have got off safely.

The captain took every possible precaution, however. We were forbidden to remove our outdoor clothing during the two nights when a torpedo attack might be expected. All lights had to be put out at nine o'clock, and we were asked to have our life-belts close at hand. Notwithstanding the serious danger we were all in, the greatest cheerfulness prevailed on board; we gathered round the piano on both evenings and sang patriotic songs till the time came to extinguish the lights. It was fine to hear the way the National Anthem rang out; but it gave one a queer, creepy sensation to know that the steamer on which we were sailing was liable to be attacked at any moment by a ruthless foe. The loud howling of the wind and the angry lashing of the waves sounded very sinister; there was the chill of death in the air for some days and nights.

Our steamer reached Salonika safely, however, and the various hospital units who had travelled on her in happy fellowship bade good-bye to each other, departing to join their hospitals; for hospitals have been organised all over Serbia by now, with the fine result that the terrible typhus epidemic which threatened a little while back to devastate the entire country has been successfully coped with. But, unfortunately, other epidemics have to be expected when the hot weather sets in. Still, it is good to know that so many British doctors and nurses are at their posts, and most certainly Serbia will never forget the heroic dead who have died on hospital service, for not all the hospital nursing-staff who came out from Britain will go back.

Our unit stayed only a few days at Salonika, and we were very glad when we got orders to proceed straight to Skoplje, for we were all of us anxious to start work as soon as possible. We imagined we should make a very brief stay at Skoplje, but we had not been in the town a day or two before we were asked to take charge of the Third Hospital, where we are now. Directly fighting starts again we shall, of course, take the field with the army, for we are first and foremost a field-hospital, and our place is with the troops.

Our unit numbers twenty-seven, and includes surgeons, dressers, nurses, chauffeurs, a cook, and a laundress. Five Ford motor-ambulances accompany the field-hospital, and a small scouting-car; and, in view of the urgent need we find for further transport, our commandant, Dr Hartnell-Beavis, cabled home for six more motor-ambulances, which are due to arrive in a week or ten days.

The General in command of the new Serbian army is particularly anxious that we should get our new ambulances out as soon as possible; nor is this much to be wondered at, for the sick and wounded soldiers who are so often arriving by train here have to be conveyed to their respective hospitals, often a drive of several miles, either in bullock-wagons with a rough basket cover of wickerwork, or else in little rickety victorias drawn by thin horses. The patients must suffer terribly as they are jolted over the rough roads and uneven streets in these springless bullock-wagons; also the little victorias are a sure means of spreading disease, for soldiers suffering from infectious diseases have often to be conveyed in them, and the same carriages, without any attempt having been made to disinfect them, are plying for hire half-an-hour later.

We have many patients to look after, mostly surgical. In one ward alone lie two poor fellows who have lost both their legs; in fact, it would be difficult to find a hospital containing a higher percentage of amputation cases than are to be seen here; and the tragical part of the matter is that had immediate surgical attention been available on the field a large proportion of these amputations need never have taken place. In our daily work here we realise more and more the value of field-hospitals, which are able to render that prompt assistance that not only saves so many lives, but is the means of preventing the condition the brave soldier dreads so much—namely, that of the helpless cripple.

During the half-hour that our train stopped at Strumitza, a station some miles south of Skoplje, we made a pilgrimage to a green field just outside the station, the burial-place of the Serbian soldiers who lost their lives during the raid that took place on Easter Sunday. Great hills tower above the burial-field, keeping motionless watch over the dead—hills that have stood there from the beginning of time; but the little wooden crosses which mark each grave are pathetically new.

It was here, at Strumitza, that the Bulgarian comitaljis behaved with such abominable cruelty to the unfortunate wounded Serbian soldiers who fell into their hands after the raid; for these savage barbarians cut off the noses and ears of their victims, and then burnt them alive. It seems almost incredible that such a deed should have been done on Easter Sunday, of all days in the year; but this war is bringing out the brute in man as well as revealing his more noble qualities.

It must be stated that the Serbians are really most humane to their prisoners, treating them with quite extraordinary clemency and generosity. A young officer told us a striking little story the other day—a story that reflects very favourably on the Serbian soldiers.

'Our men have good hearts,' he began, 'and we are by no means the savages we are made

out to be. Why, only in November I was with my regiment. We had been retreating all day before a foe which was vastly superior in point of numbers—and every one knows what a strain a slow retreat is upon soldiers—when, during the night, the order was given to cease retreating and to attack at dawn.' The speaker paused a second and smiled at us proudly. 'We attacked the Austrians at dawn. They were more than twice our numbers; but, by the blessing and the help of God, after a desperate struggle we dislodged our foes and regained the ground we had lost on the previous day. It was then I entered a trench with my men which the Austrians had abandoned, leaving several of their dead and wounded behind. I turned to give my regiment a command, but what a scene met my eyes! My brave fellows had put down their weapons and were assisting the wounded and the dying, giving them water and food from their own scanty store, and binding up their wounds as well as they could. I confess my breath was taken away by this quite unexpected sight; but it was necessary to continue the assault, and here were my men occupied in attending to the needs of their enemies. "What are you doing, my fine fellows?" I demanded; but my brave boys had their answer ready: "Leave us alone, sir. These poor men bleed to death; suffer us to attend to them for a moment."'

The same generous spirit prevails in the hospital wards here. Austrians and Serbians lie side by side, and the wounded men all try to talk to each other; they might be the best of friends instead of foes. A very wonderful and beautiful thing is the pity of the wounded for the wounded; patients often quite forget their own serious injuries as they commiserate with another sufferer, or try to persuade some nervous comrade to consent to an operation.

There is romance in the wards. A young soldier brought in a few days ago suffering from some slight injury has produced a photograph of his pretty sweetheart. The portrait has been passed from bed to bed and generally admired; and the young lover's shy smile as he listens to the eulogies of his beloved is very naïve and charming.

Romance in one ward, but poignant tragedy in another. A poor Serbian soldier—such a nice fellow—heard from his native village yesterday, and learnt, to his infinite distress, that his wife and two children had succumbed to typhus. He lies on his bed heart-broken; no one can comfort him—he mourns for his dead.

There is a Serbian gipsy lad amongst the patients. The other men are very fond of the olive-skinned, black-eyed lad, for he wanders in and out of the various wards and dances to the music provided by the gramophone. He has lost an arm, but this calamity does not seem in the very least degree to have damped his spirits, for he is as merry as possible, and presents quite

a gay appearance in his pink woollen stockings and red jacket. When he can get a rose to tuck into his cap over his left ear he is the happiest man in the ward.

It was a splendid thought of our commandant, Dr Hartnell-Beavis, to bring out a gramophone. The patients most thoroughly appreciate the instrument; they are always begging to have it played in the wards. The Scottish and the Irish airs seem to appeal to them most, and they all try to sing 'Tipperary.' They do this partly as a compliment to Britain, for the Serbians are simply overflowing with gratitude to the country which has come to their help, and also because they like the lilt of the air.

A striking instance of the affection in which the British are held was afforded during Lady Paget's recent illness, when the greatest sympathy was manifested throughout the whole of Serbia for the sufferer. The Jewish population kept up continual prayers in their synagogues during the course of her illness, and we do not exaggerate when we say that even little children knelt for hours at a time praying for the noble woman who had done so much for Serbia.

A most affecting farewell took place when Lady Paget left Skoplje last week *en route* for England, the whole city turning out to wish her God-speed. The convalescent and her party travelled to Salonika in the royal coach, which was placed at her disposal by King Peter. The officer commanding the Serbian army of the new territory saw her off at the station with a guard of honour, the regimental band played as the train steamed out, and little children threw bunches of flowers; but it was an old gray-haired peasant woman who voiced in one shrill cry the national feeling. 'Do not leave us,' the old woman wailed as the train was about to start. 'What shall we do without you? You have been Serbia's good angel!'

Truly, the Serbians do not lack gratitude, and their hospitality is marvellous. A poor, hard-working, struggling little nation—a nation that has had to fight for over five hundred years for its sheer existence—they entertain the stranger in their midst with the very best the land affords, and in proof of their perfect hospitality they make their guests feel absolutely at home. But there is great poverty in the land, a poverty which, though unobtrusive, is plainly to be seen by those who, like ourselves, have so recently come from a land of plenty. Serbia needs help in every way, the abundant help which one wealthy ally can offer to her less prosperous comrade. Serbia needs even the most ordinary hospital supplies; Serbia's wounded soldiers lack boots and clothing. Mr Alexander M'Connell, treasurer of the First British Field-Hospital for Serbia, will gladly give readers of this article further information with regard to Serbia's great and pressing needs if they will write or call on him at 61 Chancery Lane, London.

A fortnight ago we were the guests at a most interesting function—a Serbian peasant wedding. The bride, a handsome young brunette, was dressed in white brocade; her rich wedding-robe was doubtless one of those which are handed on from mother to daughter for generations. She wore a veil and a wreath of orange-blossoms, also a heavy cloak of pale-primrose-hued brocade edged with dark-brown fur. The respective mothers of the bride and bridegroom wore old heirloom peasant dresses of stiff yellow and crimson satin; their aprons and kerchiefs were one mass of rich embroidery, and they were adorned with any amount of peasant jewellery.

The bridal feast was spread on a long table out of doors, under the protecting shelter of the gray wall of the monastery of Gratchanije, a famous Serbian shrine; and this old gray wall made a fine background for the wedding guests in their gay and varied apparel.

Dancing started fairly early in the afternoon, the bridegroom leading out the bride. A gipsy band played wild, exhilarating music, and in brief intervals between the dances glasses of the red wine of the country and pieces of hot roast-lamb were pressed lavishly upon the guests. What did it matter if we had to help ourselves to meat with our fingers? All the other wedding guests were doing the same, and no words can describe the generous hospitality with which we were treated and made welcome. Just as we were driving away in a motor-car a tall lad came running up with a bottle of wine in one hand and a large joint of lamb in the other, a parting gift from the father of the handsome bride—refreshments which we were expected to eat during the journey back to Skoplje.

We were given an equally hearty welcome at a very interesting fête in honour of St Jerome, held at one of the newly formed colleges of agriculture. This college stands a few miles outside Skoplje; and here young Serbian lads of fifteen to eighteen are given a thorough grounding in the rudiments of agriculture, followed by the advanced course, which, we saw, was a thoroughly practical one. We were impressed by the fine strain of cattle on the farm, and greatly admired the stable of magnificent Arab horses. An interesting religious ceremony preceded the lavish feast offered to the guests, for the archbishop of the province prayed that this year's harvest would be bountiful, and blessed a good wheaten cake, pieces of which were subsequently distributed. Speeches were delivered during the course of the long repast which followed the religious function, and we felt quite moved when a special tribute was paid to Great Britain.

'Here is a country,' cried the eloquent Serbian speaker, 'which, having nothing to gain by plunging into war, drew the sword in defence of an outraged and defenceless little nation; for Britain, when she leapt to the help of Belgium,

had no desire to gain territory or batten on the spoils of victory. She fought for conscience's sake alone. Nor must we forget the very special debt that Serbia owes Great Britain. If it had not been for her and the help she has so generously bestowed, our sick must have perished in their thousands, and this land of ours would have become a land of dead bones.' The toast to Britain was drunk with the greatest enthusiasm, and our commandant, Dr Hartnell-Beavis, replied in a few well-chosen Serbian words. The gipsy band sent in a message to him to say that they would like to play the British National Anthem in our honour; but as they did not know it, might they play the French Anthem instead? Our commandant immediately replied that Britain and France, fighting for the same cause, were as one, and that their anthem was our anthem too; so the 'Marseillaise' was played with immense spirit.

It was quite a difficult matter to tear ourselves away from our kind hosts, they had so much to show us, so much to explain, and wanted above all to discuss their plans for the future. 'Imagine it!' cried the prefect. 'This college has only been in existence seven months, but now we are starting agricultural colleges all over Serbia. For five hundred years we have had no chance to do anything toward the improvement and development of our country and our people; but at last we have gained our national freedom, and now we cannot work hard enough for our land, for it is the ambition of every Serbian to do something for his country. We live for Serbia. We die for her.' He spoke, he looked, like one inspired; and we knew that it was a true patriot who addressed us, a man consumed by a divine fire. 'We must not waste a minute; that is how we all feel,' the prefect continued. 'Serbia has been neglected long enough; but once this war is over, ah, we shall be able to do great things for our land, a country that has been watered with the blood of our sons and nourished by the tears of our women! Yes, the wilderness shall blossom like the rose; Serbia shall arise from the dust adorned as a bride.'

The prefect voiced the national sentiment in these words—the great national dream; for what the Serb longs to do now is to develop his country to its utmost capacity. And Serbia is indeed a land of promise; only a little capital needs to be spent upon the country to ensure a magnificent return. Acres upon acres of splendid arable land simply require cultivation, and there is abundant scope for all kinds of commercial enterprise—soap, jam, canned-fruit factories, breweries. The country needs all these; but, though labour is both cheap and plentiful, fuel is scarce and costly. Still, the swift rivers which water Serbia's green plains would provide more than ample motive-power, and there is little doubt that, commercially speaking, Serbia's day is near at hand. Great things have been done

already; schools are being opened all over the country for the better education of the young generation, public gardens are now laid out in the towns, and the sanitation is vastly improved; but Serbian enterprise has been cruelly handicapped by the present war and the ravages wrought by the typhus scourge. Nevertheless, when a whole nation is bent on the improvement of their land national progress will surely come, and it is splendid to see all classes of the community united in one great aim. Here in Serbia the old Roman sentiment prevails which is embodied in Macaulay's famous line, 'When all were for the State.' But it is impossible to disguise the fact that poverty extends its skeleton fingers over the nation. The houses, even of the better classes, are most barely furnished, the shops stock only the cheapest goods, and the peasants go about poorly clad; but the independence of the Serbs is a thing to be admired. They do not think of asking for charity; all the help they require at the present moment is for the sick and wounded, for they are a self-supporting community, a nation of honest husbandmen. And they have accomplished miracles, for surely it was nothing short of a miracle for Serbia to beat back the Austrian invader a month or two ago, fighting and conquering a vastly superior force—fighting as men fight for their wives, their children, their homes.

'It was God who gave us the victory.' That is what the Serbians murmur reverently when talking of the heroic deeds of their heroic army; and in saying this they are only following the example set them by their king, for the day the old monarch made his triumphant entrance into Belgrade he stopped in his progress through the city, went into one of the largest churches, threw himself down on his knees, and gave God thanks for victory.

A dramatic moment this, a great moment. Austrian cannon rumbling in the far distance; Austrian soldiers being swept out of the town at the point of the bayonet; women and children throwing flowers from the windows and loudly acclaiming their heroic army, blessing and thanking the soldiers who saved them from dishonour and death; the entire population of Belgrade delirious with joy; bells ringing madly; and the sobbing cry of thanksgiving sweeping through the town, 'The king is praying! The king gives thanks! The Lord has been on our side in the battle!'

Later on in the day King Peter's heart must have swelled proudly as he trod the Austrian banner under his feet, the flag pulled down by a loyal hand from his palace as he drove up, and now spread out like a carpet in his path; but the king knew, as we all know, that great victories have to be paid for in blood and tears and sweat. He was aware of the ravages wrought by recent wars upon his country—deep red scars which it will take years to heal; he

had heard of peaceful villages destroyed by the Austrian invaders; it was no secret to him that women and little children had perished by the sword, and that many thousands of brave Serbians had fallen in the last few weeks, fighting for their beloved country—soldiers the land could ill afford to lose. Yes, victory has been dearly bought, and doubtless the king realised this, just as he recognised the fact that Serbia has strenuous days ahead of her; she will most certainly have to meet the Austrians on the battlefield in the near future, and fight this battle to a finish, for the Serbs cannot rest upon their laurels; they must pursue the invader, carry the flaming torch through the enemy's country, and descend in a wild torrent upon Austria. The Serbs know this; they are aware that not yet can their land find rest. They are preparing, as we write these words, to make another supreme effort; train-loads of soldiers are passing daily through Skopje station. A number of young recruits left the town yesterday afternoon. Roses were freely showered upon the lads by the crowd, and a scene of the wildest enthusiasm prevailed at the station; but how many a mother's heart ached as the train steamed out, for not all these boys can return unscathed to their homes—war will demand of many the supreme sacrifice!

Hail to Serbia! a single-hearted little nation struggling for its independence, indeed for its very life, but a nation that commands the respect of the whole world; for Serbia has fought her battle alone through the years, asking alms of no man; and to-day she desires neither purple nor fine linen, gold nor silver; merely that all her sons should be united under one flag. This is the national dream, the great Serbian prayer.

THE WIND'S CALL.

'Tis cosy here by the inglenook when the wild nor'-wester's blowing;
But there is a cry in the wind for me, and I must be up and going.
I am tired of the warmth of the sheltered vale, of the still and breathless places,
And I must be off to the upland plains, to the wide and windy spaces.

I love the valley at noon of day, when my heart beats calm and even;
I lie in the shade of the hedgerow elms, and gaze at the broad blue heaven;
But when the shadows are closing in, and the evening wind pipes shrilly,
There's a call that comes in its rising cry from the distance wild and hilly.

Oh, stay me not when I rise to go! I know you would cherish me ever;
But joy for you would be pain to me—the anguish of stilled endeavour!
The storm may buffet me on the heights, the rain and the sleet be driving;
But I die for the wide and windy plains where the souls of men are striving.

SEVENTH SERIES

THE GOLDEN YEARS OF AUSTRALIA.

By F. A. W. GISBORNE.

PART I.

STATISTICIANS have calculated that within the period intervening between the year 1849—the date of the first great discovery of alluvial gold in California—and the close of the nineteenth century more gold was extracted from the crust of the earth than had been obtained altogether during the preceding four centuries. Many economists of repute to-day view with serious concern the still increasing output of the precious metal each year. Within the twelve months ending on the 1st of January 1913, gold to the value of over ninety millions sterling was added to the world's supply of monetary raw material; and there is grave reason to fear that the gradual exhaustion of the Transvaal mines will be accompanied by an enormous expansion of the industry in the Congo basin and other parts of Africa. Still, inexorable economic laws must always check the overproduction of gold when it is derived from quartz and other such material, since its acquisition then entails the employment of much labour and machinery, and the application of costly scientific processes. The restraints referred to, however, operate in but an infinitesimal degree when rich deposits of alluvial gold are found. Such deposits will attract hardy adventurers to the most inhospitable or pestilential regions, such as Alaska and the jungles of Papua. If, as M. Huc long ago declared, vast quantities of virgin gold lie scattered along the beds of the icy torrents that flow through the abyssal gorges of Tibet, some day, no doubt, the rugged solitudes of the great Asiatic plateau will be invaded by thousands of treasure-seekers. Only a minimum of capital and labour is required to obtain the precious metal in such circumstances; and the digger, in his eagerness to secure riches, thinks little of the operation of economic laws, or of the widespread destitution he may be instrumental in creating. The silver flood poured forth from the rocky bosom of Potosi in response to the stroke of the enslaved miner four centuries ago depreciated the white metal to such an extent that within a comparatively brief space of time, it is said, the worth of money in Europe declined to one-fourth of its original value, and the cost of living increased correspondingly. Untold privation and misery followed among the ignorant

toiling masses and those who had to live on fixed incomes, while crafty financiers and selfish employers of labour accumulated gigantic fortunes.

It is proposed in this article to recall a few of the incidents connected with the last of the great gold-rushes in modern times, if we except that to the Klondike not many years ago, a much smaller affair. The events which 'precipitated Australia into nationhood,' as some one has phrased it, occurred with dramatic suddenness. Never before did a community spring more suddenly from adversity to unbounded prosperity than did the settlers in Victoria between the years 1850 and 1855. Midas, indeed, was the colony's godfather. On the first day of August 1850 the Bill separating the region south of the Murray from New South Wales was passed by the Imperial Parliament; and almost exactly a year later the famous ridge afterwards known far and wide as Golden Point was visited by three prospectors named Brown, Merrick, and Turner, who found along its slopes particles of gold scattered among the grass, and on digging a hole a few feet deep in the lower ground struck auriferous deposits so rich that, as one of the fortunate finders declared, looking down the shaft was 'like looking into a gingerbread-basket, it was so yellow with gold.' So great was the excitement caused by the news of the discovery that by the end of October there were about eight thousand persons congregated on the spot, and hundreds were pouring in daily. Golden Point was the parent of the flourishing city of Ballarat.

To go back a little, it may be mentioned that more than three years before the event just described virgin gold was brought to a Melbourne jeweller, the finder, a station hand, declaring that he had gathered it at the roots of a tree torn up by the wind some fifty miles distant from the city. Apparently the occurrence attracted little notice. But at intervals within the next three years other small parcels of the precious metal in the raw state were brought in by outside settlers for disposal. A shepherd named Chapman thus sold on one occasion twenty-two ounces of dust and nuggets, and then fled in terror to Sydney, fearing punishment for stealing what

was then protected by law as Crown property. Gold-poaching at the time was a risky business, meaning, if the offender was detected, loss both of booty and liberty. But when news arrived in 1849 of the great discoveries in California, observant men began to think that possibly gold could be got in places nearer than America; and systematic prospecting was commenced, with results that must have astounded even the most sanguine.

Apart from the significant incidents just narrated, clear proof of the existence of gold in Australia had been found at a much earlier period. The Government assistant-surveyor, James M'Brien, officially reported the discovery of alluvial gold near the Fish River, in New South Wales, early in the year 1823. Twenty-eight years later Hargreave made his memorable discovery in the same locality. In 1839 the explorer Count Strzelecki announced the finding of gold in the Vale of Clwydd, near Lithgow; but the Government of the day in each case suppressed the information, fearing a convict mutiny. A story, believed to be authentic, is told of a Mr Campbell, the nephew of a squatter who, some years before the discovery of Golden Point, occupied a sheep-station at a place called Forrest Creek. One day, while the young man was superintending the washing of his uncle's sheep in the creek, he noticed at the bottom glittering particles, which he at first took to be mica. On his collecting a few, however, their weight betrayed them to be gold. Delighted with his discovery, the finder half-filled his pannikin with the precious spoil, and hurried home to tell his uncle of his good fortune. The old gentleman, however, being afflicted with a double share of Scotch caution, so far from offering congratulations, strictly enjoined his nephew to keep the discovery a close secret, 'lest,' as he said, 'the people should come and turn up the soil, and the shepherds abandon the flocks.' The dutiful young man actually gave the required pledge. He, too, seemed to think a sheep in the hand better than many nuggets in the ground. But in spite of all precautions, the riches of Forrest Creek not long afterwards became known, and then the soil was 'turned up' with a vengeance. So busy and fortunate were the diggers there assembled that, for a considerable space of time, the quantity of gold conveyed thence to Melbourne by the armed escort averaged one ton a month. On a certain occasion, when the lieutenant-governor, M'Latrobe, was visiting the locality, a digger, whose operations he was watching, threw up at the distinguished visitor's feet a lump of clay 'as large as a man's fist, studded thickly with nuggets as big as peas and beans,' and begged the astonished dignitary to 'take it home to the missus.' Naturally the governor demurred, pointing out the value of the proffered gift, which the generous donor was only with difficulty persuaded to take back.

But Victoria's golden sunrise was preceded by the darkest hour in the colony's history, and weird traditions of the 6th of February 1851, the Black Thursday of evil fame, are still fresh in the Antipodes. Devastating flames swept across the land on that woeful day, devouring indiscriminately parched pastures, forests, fences and homesteads. Dense masses of smoke rolled across Bass Strait to the shores of Tasmania, rendering navigation difficult and suffocating thousands of birds. Cattle, horses, and sheep perished in thousands; seven thousand sheep were summarily converted into roast-mutton on one station alone, and the charred remains of the victims were in places piled up in hecatombs. Human beings, too, in no few cases shared the same pitiable fate. One settler lost his wife and five children, and he himself suffered terrible burns. In Melbourne the thermometer registered one hundred and thirteen degrees in the shade at 4 P.M., and the smoke and dust were so stifling that all business had to be suspended. But only a week later the dawn broke radiantly. Intelligence of Hargreave's discovery of payable gold at Summerhill Creek, near Bathurst, in the adjacent colony, created a buoyant spirit of hope. A 'gold discovery committee' was at once formed by a body of enterprising citizens; a substantial reward was offered for the discovery of a payable goldfield in the colony, and well-equipped prospecting parties were sent out in all directions. On the 16th of July following it was officially announced that gold had been found at the Deep Creek on the Yarra and the Deep Creek at the Pyrenees, the latter locality afterwards receiving the name of Clunes. Less than a month later followed the famous discovery at Golden Point, and the founding of Ballarat.

The excitement aroused by reports of the good fortune met with by the first-comers at this new El Dorado was prodigious. Thousands of men hastened to the spot, the fortune-seekers including 'slim shopmen, stout-calved butlers, Government clerks, doctors, lawyers, runaway sailors, deserting soldiers, self-ordained divines, and strong-minded females in ultra-bloomer costume.' Unfortunately a considerable sprinkling of newly liberated jail-birds might be added to the list. A temporary reaction, however, occurred within a few months, when all the superficial deposits within reach had been worked out, and the place was deserted by all save some three hundred diggers. The belief then prevailed that a layer of pipeclay found to lie a few feet below the surface of the ground was the true 'bottom'; only the thin covering of auriferous gravel or clay, immediately overlying the pipeclay, was washed for gold. At length, however, an experienced miner, not long arrived from California—Cavenagh by name—determined to sink through the so-called 'bottom,' and prove whether or not gold was attainable beneath it. Selecting for the experiment an abandoned claim which had

yielded exceptionally rich returns, he deepened the shaft left by the first proprietors, and after passing through a barren stratum of pipeclay only a few feet thick, struck a marvellously rich deposit of auriferous gravel intermediate between the fake and what afterwards proved to be the true bottom, directly below. In an hour or two Cavenagh picked out nuggets worth eighteen hundred pounds, and the quantity of metal obtained by him on the first day following the discovery was so great that he could hardly carry it single-handed to his tent. Naturally a second and yet greater stampede to the locality followed, and deserted claims were resecured with feverish haste. Soon the famous Eureka, Red Hill, and Canadian Leads were discovered; and claims along the 'gutters,' or main channels of the ancient streams, proved fabulously rich. Although each claim was limited to the very moderate area of twenty-four feet square, one alone on the Canadian Lead returned gold to the value of fifty-five thousand two hundred pounds, while several others gave from thirty thousand to forty thousand pounds sterling apiece. Where the Canadian and Prince Regent's Leads met, the surpassing richness of the claims gave them the name of 'Jewellers' Shops.' Fifty-seven pounds weight of pure gold was sluiced from a single tub of wash-dirt taken from one of these treasure-pits; and nuggets weighing up to ninety-two pounds were discovered in profusion. Within three years the population of Ballarat increased to nearly thirty thousand souls, a number exceeding by about three thousand the population of Melbourne at the time of the first discovery of gold at Golden Point. The actual history of the 'Jeweller's Shop,' which is believed to have contained more gold than any other claim about Ballarat, may be given. This precious fragment of ground, eight yards by eight yards in extent, was first taken up by a party of eight men, all novices at mining, who managed to dig a shaft ninety feet deep, at which depth the gold-bearing material packed together in the 'gutter' was met with. Want of technical experience prevented the amateur miners from sinking their shaft vertically downwards, and they also lacked the skill necessary to enable them to timber the sides securely. Fearing quick burial at any moment, these favourites of Fortune therefore hastily collected all the spoil they thought it safe to remove, and realised from it wealth to the extent of twelve thousand pounds. They then sold the claim to another party of ten experienced miners, who paid for it only the very modest sum of seventy-seven pounds. The new owners forthwith set to work, and raised gold to the value of two thousand pounds on the very first day—a 'living wage' sufficient to satisfy even the modern trade-unionist. An additional eight thousand pounds rewarded them for their labour during the two following days; and then, desiring, rather prematurely, to cele-

brate their success with due spirituous rites, they let the property for the term of one week to another party at a very low rate. The tenants, twelve in number, prudently devoted the first four days of their term to securing the sides of the shaft and opening up the still untouched auriferous deposits by means of drives, and then worked with such energy that during the remaining three days they raised wash-dirt sufficient to yield them no less than fourteen thousand four hundred pounds. A profitable tenancy indeed! The owners resumed possession, got another nine thousand pounds worth of gold, and then sold both claim and plant for one hundred pounds. Treasure to the value of five thousand pounds rewarded the efforts of the new proprietors during the first fortnight; but then one of their number, an ex-convict, designedly knocked out the props supporting the timbering, and caused the shaft to fall in. The claim was thereupon abandoned by the party, but immediately resecured by the rascal guilty of the deed, who was aware of the existence of a corner of very rich wash-dirt still untouched. Hiring men to help him, the crafty rogue opened and timbered the shaft afresh, struck the desired spot, and out of the contents of the first four buckets of wash-dirt obtained no less than sixty-three pounds weight of pure gold. The remaining material yielded an additional eleven hundred and sixty ounces. Roguery certainly did not receive poetic justice in this case.

The prodigious increase in gold production that followed the developments at Ballarat may be gauged by the fact that whereas in the month of September 1851 only one hundred and twenty-one ounces four pennyweights of the precious metal were officially recorded to have reached Melbourne, the quantity received during the December following exceeded seventy-two thousand one hundred and fifty ounces. These figures, however, represent only the quantities conveyed to the city under escort; the amount of gold brought by the diggers themselves was probably much greater. The official estimate of the total value of the gold produced in the four months following the first discovery at Golden Point was close on nine hundred thousand pounds.

Within less than three years the shallow workings at Bendigo, the scene of the next great rush, yielded gold to the value of ten million pounds; and later operations of a more systematic and scientific kind were even more abundantly rewarded. At first, indeed, the ground had but to be tickled with pick and shovel and it laughed with a golden harvest. But rich gleanings were left by the first tillers of the soil. The vast accumulations of tailings and refuse scattered about the diggings were afterwards found to contain very large quantities of fine gold, which the rough appliances first used for sluicing purposes had failed to intercept. Companies were formed to take up numbers of the deserted claims; well-

equipped puddling plants were erected, and great fortunes realised by the treatment of the discarded material. Even at the present day numbers of 'fossickers,' by re-sluing wash-dirt already twice treated, contrive to make a fair living; and occasionally some fortunate individual stumbles across a nugget overlooked by previous searchers for wealth.

That the uses of prosperity are not always sweet, however, was conclusively proved by the misfortunes that followed sudden accession to affluence in the case of many lucky adventurers. One man, it is recorded, on an auspicious day found a nugget weighing twenty-eight pounds, and was so overcome with joy that he forthwith lost his senses, and had to be conveyed by his comrades to the Gold Commissioner's tent for medical treatment. On recovering the use of his faculties, the fortunate one hastened back to his claim, only to find that it had been raided during his absence by cool-headed opportunists, and completely stripped of its precious contents. This was too much for the poor victim of Fortune; reason again forsook him, and did not return. A man named Johnston secured a claim in an entirely new locality known as Woolshed Valley, and decided to expend the few hundred pounds he had previously made in sinking a shaft deep enough to reach the auriferous deposits he believed to lie beneath the surface. Engaging six men to help him, he accordingly set to work.

(Labour, by the way, was expensive. A muscular Methodist minister, in narrating his experiences later, declares that he received five pounds a day for driving a cart—remuneration which a modern colonial bishop might envy.) The party soon struck—not gold, but water, and found the continual inflow so great an impediment that, after a few weeks, the enterprising prospector had to tell his men that the attempt to reach 'bottom' must be abandoned, as his means were quite exhausted. Being decent fellows, however, all six offered to give him another week's work free; and in four days superlatively rich wash-dirt was struck. Within a few months Johnston made no less than seventy thousand pounds, paying his friends in need wages on the most liberal scale so long as they worked for him. The result of a single week's work was gold to the value of fifteen thousand pounds; and its owner celebrated his success by 'shouting' twenty dozen bottles of champagne, costing one pound a bottle! When the claim had been quite worked out, its proprietor was supposed to have extracted from it altogether no less than two tons of gold! But these riches were quickly dissipated. Within a few years Johnston was an ordinary miner again, a castellated mansion built by him in his days of prosperity, but soon transferred to more thrifty hands, remaining the sole monument of his short-lived grandeur.

(Continued on page 741.)

THE STRANGE AFFAIR OF THE CHANCELLOR.

CHAPTER III.

SURE enough, he was his normal self the next morning, and came down looking like it; went outside and opened his mouth and eyes at one of the Chelcott 'Ten Thousand Pounds Reward' bills already plastered on the inn wall; then returned and rang for his breakfast.

This he was discussing thoughtfully, and the maid had just brought in more toast, when an eager, indeed joyous, voice in the hall caught his attention. It seemed a familiar voice, but he couldn't put a name to it.

'Ah, good-day, Beamstock!' it said. 'I want you to send your fly round to my place not a minute later than a quarter past nine.'

'For Chelcott, sir?' inquired the landlord.

'For the Chelcott railway station, Beamstock.'

'Right, sir. It shall be there,' said the landlord.

This was all until the inspector questioned the maid about the speaker.

'It's Mr Leven, sir—our curate,' the girl told him.

In a moment or two the inspector was out of the room. The Cloubury curate was rehang-ing a railway time-table on the inn's hatstand, and welcomed him with a bearing as different

from that of the previous day as light from dark.

'Hallo, Mr Clapton! How are you?' he cried, with a smile of astounding vivacity. 'Sorry, but I'm in a melting hurry. I've a train to catch. Hope to see you again, though—some day.' He waved his hand and made an impetuous exit.

'Mr Leven,' called the inspector, following.

'Can't wait. I've some packing to do,' shouted the curate over his shoulder. But he waited nevertheless, and whispered confidentially, 'I say, what an ass I made of myself to you yesterday! Forget it, please. You fellows are a bit frightening to us country bumpkins, you know. I was off my balance too. But I'm all right now, thank goodness! So long.'

He offered the inspector his hand, and it was taken and held fast. 'Where may you be going, sir?' asked the inspector frigidly.

'That's none of your business, my friend.' The curate laughed and released his hand. Muscularly, he was fully as strong as the inspector, during his prowlings in that coppice, had given him credit for being. 'But, look here, I tell you what,' he added, suddenly con-

templating the Scotland Yard man as if he were a fellow-creature whom he would like to help if he could; 'they're sending me a cab from here in about an hour. Come with it if you like, and part of the way to Chelcote. You're raging to put me in the mill again, I can see, and I'll do what I can for you. That suit you?'

It had to suit him, unless he chose to hunt the curate to his lodgings there and then.

He resumed his breakfast, with scant appetite for that kind of food, but a ravenous imagination.

'Don't let that fly of yours go without me, my friend,' he said first to the landlord; and he was assured upon that point.

The minutes passed, and he was consulting his watch for the third time, when a woman flurried past the window and into the house. 'Mr Beamstock!—Where's Mr Beamstock?' she cried shrilly. And then, 'Oh dear a-mussy! there you be, sir! His lordship's found, an' you're to send the fly down the road this instant, Mr Leven says. Oh dear! oh dear!'

She sobbed for breath, and by that time the landlord and the Scotland Yard man were both engrossed in her.

Mr Beamstock bent and shouted, 'Do you know what you're saying, Mrs Cheese, about his lordship being found? Where is he?'

'Sittin' drinkin' a cup o' tea in my kitchen with Mr Leven as quiet as any lamb, poor gentleman! That changed 'e is! Not one 'ard word for me or nobody, yet, though 'eaven knows'— She raised a workworn hand to her eyes. 'It were my Sammy's fault, seemin'ly. Oh, if 'e'd only spoke—if 'e'd only spoke o' Saterday! But you'm to be quick, Mr Beamstock. I'm that moithered I dunno what I'm doin', but I was to tell you that.'

She shed tears and trembled, and continued to do so when, at a word from the inspector, Mr Beamstock hastened into the yard to do her bidding.

'Now then,' said the inspector, alone with her, and with a soothing hand on her shoulder, 'don't cry, mother, but let's hear *all* about it.'

He repeated his request, successfully this time.

'As true as I'm standin' ditherin' 'ere, I'd not so much as me little finger in it; nor Sammy 'isself, so far as meanin' to do wrong goes,' began the distressed soul. She calmed and proceeded: 'E'd fell into the old dead-leaf-an'-rubbish pit right back in the orchard that they'd started for a coal-mine years an' years ago, where nobody couldn't 'ear 'im screech, if screech 'is lordship did, which I can't think, for 'e'd whacked 'is 'ead on one of them old timber balks that was drawed across it. Sammy, dear simple lad, was whippin' 'is top in the road, 'e says now, when 'is lordship came by on the Saterday, an' kicked it out of 'is way, an' called

'im a name; an' it was puttin' 'is finger up to 'is poor nose that riled 'is lordship so that 'e mounted the wall after 'im an' tried to lay 'old o' 'im, chasin' of 'im all that distance. That's 'ow it 'appened—must 'a bin, from what I can get out o' Sammy. The unfort'nate thing was that if Sammy even saw as 'is lordship fell into the 'ole, 'e forgot all about it till not an hour ago. Acshully 'e covered the 'ole up again—the poor innercent, meanin' no wrong in 'is 'eart—that I'd swear if it was my last word, I would. It was after breakfast just now, when 'e was out wi' 'is top again, that 'e stopped Mr Leven in the road, an' nothin' would serve 'im but Mr Leven must come an' see what 'e'd found in the 'ole, says 'e. "Somethin' big an' alive!" 'e called it; an' though terrible pressed for time, Mr Leven went wi' 'im, an' come runnin' back for the ladder; an' that's the whole truth, as true as I'm standin' tellin' you, sir. Twelve foot deep the 'ole is, an' not one crumb or drop 'as 'is lordship 'ad in all that time. But 'e don't look so much amiss in the face, barrin' 'e's so quiet-spoken, though perishin' thin to what 'e'd used to be afore'—

The inspector left her abruptly. He heard the curate's voice outside, and now, for the first time in his active life, came face to face with the Lord Chancellor himself in the flesh. The curate had given him his arm. They were both worth looking at. Though reduced and pale, there was an unmistakable air of eminence about the Chancellor; and his elation made the curate even handsomer than an hour ago.

The fly stood ready to the left of the inn, and the curate had called to Beamstock to bring it along.

The fly and the inspector reached the great man almost at the same moment. The Chancellor gazed at the inspector mildly, but without inquiry; and then, with similar indifference, observed the furtive flight to her home of the Widow Cheese. The curate frowned and shook his head at the inspector warningly, yet pleasantly and—comprehensibly; and, receding a pace or two, the inspector watched the Chancellor being put into the fly. He was far from helpless, yet gave his arm to the curate as if already habituated to that kind of support.

'Thank you, Leven—thank you!' he whispered.

'There's one thing you must have, my lord, before we go,' exclaimed the curate. 'I insist upon it, sir.—Stay with his lordship, Beamstock. I'll get what I want.'

He swept the inspector with him in his rapid return to the inn.

'You're like Othello, old chap—your occupation's gone here, and I don't want him yet to have any inkling of all this fuss that's been going on,' he said quickly on the way. 'Isn't it glorious, though? It would have killed most men, but I verily believe it has done him good

—body and soul. A mouthful of cognac—that's what I want for him.'

He shouted for it at the inn bar, then turned and smiled at the inspector. 'It was a very near thing, Inspector Clapton,' he observed.

'Yes, sir,' said the inspector; 'so I make out.'

'Only fancy, if'—the curate lowered his voice—'if I had gone off to Ireland first of all, as I was about to do this very hour! Ah!' he laughed, 'that's a puzzle to you. We were rather undercutting you there, to tell the truth. It was Lady Geraldine's inspiration. Lord Gurfurd has a little bungalow on the Kerry coast, with just room for himself, and she thought—indeed, she more than thought—he might have gone there; for he had done it once before, after he had been badly upset about something, without a word to any one.—Ah! thank you, Mrs Beamstock.—Well, let them know at Chelcott, will you, inspector? Good-bye.'

The inspector was left in the porch of the inn, and he stood there until the fly was in the Hall drive. Six or seven villagers and others had assembled by this time. They raised a rather shy cheer when the vehicle moved.

'Well, sir?' ejaculated the inn landlord, now returning excitedly to the inspector. Then he noticed the reward bill on his wall. 'We'll rip this off as a start. Luck for somebody—*perhaps*—eh?' he asked, with sudden new excitement.

His tongue was heavy with other communications, but the inspector did not wait for them. He made a husky statement about having to send a telegram, went in for his hat, and then out to the village post-office. And so absorbed was he afterwards with his thoughts that he walked straight away to Chelcott and took train to London without paying Mr Beamstock his bill at the time.

Of course, for the nation's sake, Lord Gurfurd's own, and his family's, he was glad that his lordship had been found, even in such queer circumstances; but it seemed to him (although, of course, it was not really so) that he had been fooled in more directions than one.

It surprised him less than others, a few weeks later, to read in his morning paper that a marriage had been arranged between Lady Geraldine Gurfurd and the Reverend George Leven.

THE END.

THE HARBOURS OF PORTUGUESE EAST AFRICA.

By G. DE H. LARPENT.

THE Boer war accomplished miracles in the teaching of South African geography; yet there is reason to believe that not a few eminent and excellent persons are even now convinced that Johannesburg, Nairobi, and Bulawayo are as close together as Sheffield, Stafford, and Birmingham, and that all three are connected by telephone. Therefore, to obtain the right focus for the consideration of our subject, it may not be inexpedient to mention that the Portuguese dominions on the East Coast of Africa comprise an area ten times the size of Portugal, with a population of over three million natives, and that the coastline extends for a distance of fifteen hundred miles, equivalent to a straight line between London and Constantinople.

Four hundred years have come and gone since Vasco da Gama rounded the Cape of Good Hope. The spirit of adventure was at that time abroad. The highway lay open to the East, that enchanted land of uncountable riches and golden opportunity. Conquest and Christianity marched hand-in-hand. Priest and warrior were alike intoxicated with the romance of empire-building and consumed with zeal to accomplish the conversion of the heathen to the Christian faith. Clad in the panoply of martial and religious enthusiasm, and fired by rumours of the traditional wealth of the interior of South-Eastern Africa, the Portuguese pioneers determined upon the subjugation of Sofala, an Arab settlement situated on a small

river about thirty miles south of the present town of Beira. Sofala is mentioned in *Paradise Lost*, and in Milton's day popular opinion associated the district with the Land of Ophir, that mysterious source whence flowed the streams of gold that filled to overflowing the coffers of the kings of the ancient world.

The Arabs did not surrender their lucrative trade in gold-dust without a struggle; but the Portuguese, having eventually established their supremacy, found themselves confronted by two great natural barriers to progress. Beyond a fringe of low-lying, unhealthy country, where the conditions of primitive life proved deadly to European existence, towered an almost unbroken range of mountains inhabited by fierce native tribes. Victory, therefore, assumed the guise of a vampire eager to suck indiscriminately the life-blood not only from the victim but also from the conqueror. Anæmia set in. Trade dwindled away. The goose that laid the golden eggs was gradually strangled. Expeditions into the interior failed. Religious enterprise proved equally abortive. To-day a ruined fortress yielding year by year to the inroads of the sea, and a solitary weather-worn pillar erect among the wind-swept sand-dunes of Sofala, bear silent witness to the dissolution of a once prosperous community, and to the strange mutability of human affairs.

Reviewed in the light of modern scientific discovery, it is less surprising that the Portuguese

failed to achieve the impossible than that they contrived to maintain even a semblance of power. After that first conspicuously great pioneering effort their settlement lingered on without stability, and, except on the seaboard, without influence. Confined within the limits of island fortifications, rendered impregnable against attack by native forces, the Portuguese enjoyed a partial immunity from the malarial dangers of the mainland, and clung like limpets to the rocks that represented the outward significance of ineffectual authority. Generations passed away in apparently purposeless occupation, until with the nineteenth century and the age of steam came a change of conditions. Natural barriers are now no longer insurmountable, development on the mainland no longer an impossibility. By the partition of Africa, Portugal has been confirmed in the possession of a vast colonial empire. The dreams of her virile pioneers may yet be realised, and their expectations yet rewarded. It were niggardly to withhold a tribute to the inherent pride of race and national pertinacity of those visionaries of long ago, who, imbued with the traditions of Henry the Navigator, and inspired with the songs of Camoens, endured discomfort, danger, and disappointment undismayed in the seemingly hopeless endeavour to make Portugal great among the nations.

Of their island strongholds, the most famous was, and still is, Mozambique, once an important port of call for sailing-vessels on the Indian trade route, the centre of executive administration for the coast, the pivot of religious organisation and commercial activity. The Mozambique of to-day has begun to assume the part of the spinster aunt, faded, jealous, soured in temperament. Time was when, as a brilliant *débutante*, her sway was indisputable, and to her acknowledged ascendancy was accorded the homage of submission to her whims and caprices. The haughty old lady, in spite of, and perhaps because of, her age, still wears traces of remarkable attraction; but she has been spoiled in her youth. The habit of having her own way for so long has made her petulant of competition. Power is slipping from her grasp, and an inward consciousness of waning authority breeds envy of the upstart modern harbours and spite at their successes. This is, however, not the only rift within the lute. Mozambique is a lady with a past, a ruined victim doomed to endure the penalty of the selfish European policy of colonial penal settlements. Mozambique is the Botany Bay of Portugal. The proud fortress of San Sebastian, no longer invulnerable against modern naval armament, has been degraded to serve as a state prison. Military glory has departed; obsolete cannon rust upon the bastions; the frowning parapets have lost their terrors except as inner barriers to freedom for the desperate wretches within. At the foot of the towering walls, in the foam of the waters, lurk a host of sharks,

hungry, watchful, relentless, an outer ring of warders to preclude the possibility of a prisoner's escape to the mainland. The horror of a sentence of two years at Mozambique hangs like the sword of Damocles above the head of every undetected criminal on the East Coast. Rumour, in all probability sedulously exaggerated, assists as a wholesome deterrent to crime.

To the casual traveller, the fact of Mozambique being a convict settlement adds to, rather than detracts from, the romance of his visit. He regards every person he meets as a malefactor momentarily let out on good behaviour, but liable to commit murder on the slightest provocation. The man in the wine-shop who, by his order, uncorks a bottle of Collares or No. 4 Vinho do Porto becomes in imagination a desperate criminal. The sombrero, the bearded face, the fierce moustache, the swarthy complexion, and dark flashing eyes heighten the delusion. Only a curved scimitar and a brace of pistols are required to complete the picture of the conventional pirate of our nursery tales, and to transform a perfectly harmless, law-abiding individual—in reality a gay-hearted troubadour who would spend his evenings dancing round a water-butt, if there were such a thing handy—into a villain of the deepest dye.

Mozambique is already supplanted for the first place on the coast by Lorenzo Marques, better known to us as Delagoa Bay, to which progressive port the seat of coastal government has of recent years been transferred.

Delagoa Bay is the Cinderella of the Portuguese East Coast. Before modern science made European settlement possible, no place possessed or deserved a more evil reputation. Wedded, however, to wealth and progress, this magnificent harbour has outstripped all her rivals, and controls the main shipping business for the Transvaal. The development of South-East Africa has proceeded stage by stage from south to north. Capetown and Port Elizabeth, a few years ago, were the only ports of importance on the seaboard. Capetown's value as a place of call still remains, but her valuable trade with the interior of the Union has mostly passed beyond Port Elizabeth to Durban and Delagoa Bay. Beira stands next in order to Delagoa Bay to profit by British expansion. For this progression Beira holds an undisputed monopoly.

It is as true of harbours as it is of human beings that the child is father to the man. Parents and schoolmasters study a child in the endeavour to discover whether he is possessed of brains and likely to make his way in the world, or is dull, devoid of intelligence, and bound to be a failure, or at least an encumbrance to the family. In earnest conclave the question is anxiously debated whether the promising boy should have a public school education. Is it worth while that the family resources should be strained to the uttermost in order to send him

to Oxford? As often as not it is the decree of destiny that the youth shall be buried in oblivion behind a counter in a bank, or do something mysterious in the City. Phrenology, so far, has failed to predict the future for the human being in the early stages of childhood. Fond nurses, it is true, are wont to prophesy great things for babies in the cradle; the devoted mother dreams at the christening of a career of greatness; while the eagle eye of the proud father seldom fails to detect the Senior Wrangler in his perambulator. The fact remains, however, that the child has to grow almost to manhood before any final decision can be taken.

Harbours have this advantage, that the germ of greatness can be detected at the very beginning. Some are born great, like London; some achieve greatness, like Glasgow; and some have greatness thrust upon them, like Beira. Rightly to be great, the modern harbour must possess a deep channel, mighty ships must be able to cross the bar, the anchorage provided must be safe, geographical position must assure a bulk of trade over a wide area and eliminate competition.

Delagoa Bay and Beira are the only two Portuguese harbours on the East Coast that can ever aspire to anything more than local importance. Like the bank clerk and the office-boy, the others may, and possibly will in time to come, enjoy no small measure of local success; but their outlook is necessarily limited, their ideas and ambitions are stunted, their influence can never be felt beyond the limits of their own comparatively small spheres. Massasima, Quilimane, Ibo, Inhambane, and Parapat are ranged under this category. The public know little of Massasima, though sailormen speak highly of its natural advantages.

Pemba Bay, a magnificent landlocked harbour, is dangerous for ships in certain weather, and, like Mozambique, lies within the cyclone belt. Besides, if and when the railway from Port Amelia arrives at the shores of Lake Nyasa, it will find itself forestalled by an established trade route to Beira across the Zambesi River.

Delagoa Bay has won its position, and will always enjoy a share, and so long as the gold-mines last probably the lion's share, of the trade of the Union territory. Delagoa Bay, however, will always have to combat with keen competition from southern ports, and can only maintain her position by keeping abreast of modern scientific improvements.

Beira, on the other hand, as the natural gateway to Rhodesia, possesses a germ of greatness which, if unspoilt by lack of acute competition and fostered by an alert progressive policy, will outdistance even Delagoa Bay in commercial importance. The town is situated on a tongue of sand at the mouth of the river Pungwe, whose broad estuary forms a safe and spacious harbour for ships of large tonnage. Already a railway of standard gauge connects Beira with

Rhodesia. By the terms of the contract under which this railway came into existence neither import nor export taxes can be levied. Beira, therefore, is the free gateway to Rhodesia. In the earlier stages of her development organised opposition was of course inevitable; recognition of her monopoly of commercial advantages has been reluctant and tardy; vested interests and political jealousy had to be reckoned with. The older established British ports were quick to recognise a rival upstart whose geographical position would eventually challenge, and was inevitably bound to wrest from them, the major portion of their trade with the northern provinces. The Cape Government strained every nerve to maintain its hold on the Rhodesian trade by juggling with railway rates, and until recently it was possible to bring certain classes of goods into Rhodesia from Port Elizabeth at the same cost as from Beira. Beira was boycotted as being Portuguese, vilified as unhealthy, and every misfortune or delay that befell the young competitor in its struggle for existence was reported and magnified. Geographical position, however, triumphed in the end, and Beira has held for several years her rightful place as the declared official port for Rhodesia, and over 70 per cent. of the Rhodesian goods traffic now passes over the Beira Railway. Trade over eighteen hundred miles of railway is now gravitating toward Beira. A main channel is being hollowed out, down which a steady broadening stream of ever-increasing strength is descending to the coast. In course of time tributaries will swell the flood. The British Government has realised that development of Nyasaland depends upon railway communication with a deep-water harbour, Chinde being altogether inadequate for the growing export trade in coffee, cotton, tobacco, and other tropical produce.

The railway from Zomba has been extended to the banks of the Zambesi River, where it will be met by a line authorised by the Mozambique Company from Beira. The consequence of the building of this line will be the gradual transference of the present business at Chinde to the town of Beira. The further extension of this railway to the shores of Lake Nyasa will bring north-eastern Rhodesia within the area to be served by the outlet of Beira. The already considerable activity in sugar-planting on the Zambesi will receive an additional impetus, and thousands of tons of existing commerce will be diverted from the Zambesi transport service to the harbour of Beira. Local trade is increasing. The province of Manica and Sofala, for which Beira is the port, shows remarkable development in the last few years both in mining and agriculture.

As a port, Beira occupies an unassailable position with regard to the development of a total area equivalent to France and Germany put together. Geographically, Beira is the only

deep-water harbour for about eleven hundred miles on the coastline of Eastern Africa, from Delagoa Bay, five hundred miles to the south, and Mozambique or Pemba Bay, six hundred miles to the north. Therefore Beira may be compared with the great harbours of the world, such as Hamburg or Liverpool, which owe their trade expansion to geographical position.

The business quarter of Beira lies on a sand-bank protected from the inroads of the sea by a massive sea-wall, which forms a marine parade. This sandbank is a peninsula separated from the mainland by the creek of the Chiveve River, over which has been constructed a substantial swing-bridge to enable trucks to run right into the Custom House. Hitherto ships have been loaded and unloaded in the open bay by means of lighterage; but wharves will in course of time be constructed, where goods in transit can be handled, and copper, chrome iron, and other ores loaded direct from the railway trucks, thereby effecting considerable saving of labour. Business is confined to a space hardly half a mile square; consequently land commands larger prices than in towns where expansion is more feasible. Near the Custom House land has changed hands at as high a figure as one pound per square foot freehold.

The town is clean, compact, and well ordered. The tides sweep through the Chiveve Creek and encircle the business quarter on three sides. The residential suburb straggles for nearly a couple of miles as far as an open stretch of beach facing the Indian Ocean, from which, even in the hottest days, a grateful breeze springs up in the afternoon. The absence of general vegetation is welcome as a beneficial safeguard against mosquitoes; yet, here and there, as a concession to the amenities, the eye is relieved by neat, tastefully laid-out gardens, where feathery palms luxuriate alongside the rampant hibiscus, the gaunt cactus, and the dark-green foliage of the orange, all blending agreeably with the red tiling of the houses.

Beira possesses another advantage which adds enormously to its value as a port: that of possessing for six months of the year a climate that, for the tropics, is quite agreeable. As a seaside resort for Rhodesia, Beira is becoming deservedly more and more popular. The importance of this can hardly be exaggerated in estimating its effect on trade, and on the value of residential and hotel property. A thoroughly cosmopolitan flavour pervades business and social life, and may the day be long distant before the community is doomed to lose its delightfully democratic character.

In the yachting contests, on the golf-course (allowed to be second to none in South Africa), or on the tennis-courts at the Amateur Sports Club, all nationalities meet on an equal footing. Social cliques are cemented by the common bond of language and national custom. Frenchmen

forgather at sundown over their *apéritif*. Dutchmen dine together and hold high revelry on the birthday of Queen Wilhelmina. The Swiss Club is reputedly on the verge of dissolution for the reason that its members find it impossible to yodel at an elevation of four feet above sea-level. St Andrew's Day is worthily observed with heels on the table, and the strains of 'Auld Lang Syne' hurtling through the evening air is the signal for the guardians of law and order to dissolve discreetly like shadowy ghosts, compassionately indulgent of British foibles.

While the railway was being built, and the British represented the bulk of the population, the problem of maintaining order oftentimes presented a distinct difficulty. On the occasion of the first cricket match, when the railwaymen were invited to contest with Beira the championship of the East Coast, a general holiday had been proclaimed, and the story is current that the British Consul repaired with some trepidation to Colonel Machado's office to take counsel for the prevention of any disturbance against the public peace. Here he found the Governor, sitting at his table twirling his magnificent moustache, quite unperturbed at the prospect of a British invasion. The Consul was about to unfold his tale and suggest various elaborate precautionary measures, when, to his surprise, Machado greeted him cheerily, and said, 'It's all right about Saturday, Consul. I have given orders that the police shall be confined to barracks for three days.' The common-sense tradition of mutual forbearance and comprehension thus worthily begun has been tactfully sustained. That harmonious relations prevail between the component parts of the medley of nationalities composing the population of Beira is in a great measure due to the felicitous choice of able officials to regulate the affairs of the province.

The Portuguese colonial service appears to attract the best men. Beira is a stepping-stone for promotion, the nursery for ambition, the lists where political knights can win their spurs. A goodly proportion of Beira's distinguished men have attained to Cabinet rank at Lisbon. Society is consequently permeated with a leaven of talent which tends to adorn and elevate the social life of the community. To the superficial observation of the passing visitor the merits of Beira are not so apparent. Nine out of ten travellers dislike Beira; they find it dull, and they complain that there is nothing to see, nothing to do. Professional amusements are certainly spasmodic. An occasional visit from a touring theatrical company or a band of strolling musicians constitutes an event. Besides, Beira is so unexpected. In the soundless sandy streets one misses noise and movement, the rumble of the wagon, the hoot of the motor, the racing rickshaw 'boy.' 'Why should these things be?' growls the querulous globe-trotter. After a

brief stroll up the principal street and a peep at the Banyan quarter he retires to his hotel. Stretched in a long chair on the veranda, in close proximity to the bar, he yearns for the

hour of departure. His one impression of Beira is that everybody is thirsty. To do him justice, he is quite right as far as he goes. They often are.

A MAN OF IDEAS.

By ARTHUR O. COOKE.

IN a spacious apartment of the presidential palace in the chief town of a certain small Central American republic two men were lounging at their ease one torrid afternoon upon a date which may be vaguely specified as being within the memory of living men. There are some reasons why that date should not be definitely stated; and the curious reader will gain little from the further information that a revolution had but lately taken place—within six months, indeed. For the history of that small republic will, when written, be found bristling with such incidents; and the readers of that history may be fairly certain that the volume will require the insertion of yet others if it is to be brought fully up to date.

The room was a most pleasant lounging-place on sultry afternoons. The presidential palace faced north, and thus overlooked the bay, receiving the advantage of what breeze blew from the sea; while the tiled roof of a broad paved veranda kept the sun's rays at a respectful distance from the walls. The view across the presidential garden, the hot sun-baked town, the dazzling waters of the bay, the cloudless sky, added materially to the contrasting coolness of the dim and shady room.

The low cane chairs in which the two men sat were placed at an angle which, while making conversation easy, did not force upon their occupants the need of looking one another squarely in the face. This small arrangement may have been intentional, or it may not; but a glance at the eyes of one of the couple might have suggested that he at least would hardly welcome a straight look. For the dark eyes of Señor Pedro Martinez, the president, were undoubtedly shifty in their nature; they were placed close together, and the eyebrows were much arched. The *señor's* hand—a rather coarse, broad hand—played often with his flowing black moustache. His skin suggested half-breed blood.

His companion and guest was one David Callum, captain—some said part-owner, but the captain would not have admitted this—of the Newcastle tramp steamer *Ibis*, at that moment lying in the bay. The captain was a round-faced man, and fair of skin. His small blue eyes impressed a stranger pleasantly, and possibly might do so for some little time. Not until danger, difficulty, or a hint of opposition threatened would he be aware of the hard, steel-like coldness of their depths. The captain, too,

wore a moustache—a fair one; but he was a trim and tidy person, and he kept it very short. Nor did he finger it. He was a man of but few gestures; when his hands moved it was in useful action—swift, decisive, irresistible. It may be added that the captain's native place was Aberdeen.

Between the two men stood a little table, and the president had at his elbow a tall glass of some straw-coloured liquid, which he now and then replenished from a crystal jug in which ice chinked. The two ingredients of the seaman's beverage were plain for all to see; a bottle marked 'Talisker' and a siphon with the brand of Schweppe upon it flanked his chair. Both men smoked long cigars.

Their attitude and talk suggested that unusual ease prevailed in the relations of the Tyneside skipper with the president of a well-known, if small, republic. The captain, though by nature quiet, was quite unconstrained. But in addition to the fact that the manners of Señor Martinez were rarely of a severely ceremonious nature, there were good reasons why he should not try to awe with any show of dignity this plain, blunt seaman from the granite city on the Dee.

They had met more than once before, the first encounter being in that very bay on which they now looked out. It was a moonlight night, and Captain Callum, who had visited the port to call for letters and take in fresh stores, was just weighing anchor when he heard a shout and sounds of splashing on the steamer's starboard bow. First a rope, then a rope-ladder, had been thrown across the rail; and presently the gentleman who was now master in the presidential palace, in the town below it, and in the whole republic, scrambled up the ladder, dishevelled, dripping, rather breathless from his swim, and stood on deck.

While he was giving somewhat hazy explanations of his unexpected visit, Captain Callum had looked shoreward, and had seen for himself at least one pressing reason; a police boat, driven at the best speed of its motor, was close in pursuit. Police, whatever their nationality, were not a class on which the captain looked with any great benevolence. Besides, he was short-handed in the cabin, having failed to find a steward.

'I'll take you, but you'll have to work,' was his brief answer to the dripping figure at his

side ; and with that answer Pedro Martinez had been content.

Forthwith the captain turned his back on the approaching boat, ordered the engine-room 'Full speed ahead,' and steamed away. He did not expect to visit the port again for some little time ; and anyway no one could swear to his having taken the fugitive on board.

So the president put on no airs with the plain seaman who had once been his master, and was now his guest. On the other hand, Captain Callum assumed no offensive familiarity with his host. He was a man of the world, rarely feeling surprise, and still more rarely showing it. There were ups and downs in life, especially in life in Central American republics. The man beside him had once hurried to and fro between the galley and the cabin of the *Ibis*, and had called him 'sir ;' he had been 'down,' and now was 'up.' The presidential palace was a pleasant place ; the whisky—which the captain drank with moderation—was extremely good. Besides, you never knew when you might need a friend. Therefore the captain did not dwell, even in his own mind, upon past relations with his host, and spoke to him, if not as to a superior, at least as to an equal.

'And so,' the captain said, drawing slowly at his long and very excellent cigar, 'you've put down the revolt.'

For it is regrettable to be obliged to state that, although the revolution which had placed Pedro Martinez upon the presidential chair was only six months old, another outbreak had come to a head and burst a month or less before this story's date. It will be noted that Captain Callum was not without a measure of tact. He could distinguish the successful 'revolution' from the abortive 'revolt.'

'And so you've put down the revolt,' he said.

'I have checked it, captain—for the moment,' was his former steward's reply.

The captain turned round slightly in his chair and looked at his companion. 'That so?' he said. 'I gathered from the chat down town that you had got the leaders—every one.'

'The town may think so ; but, unhappily, my friend, it is not so. I have the seeming leaders only—smugglers and muleteers and fishermen—leaders of those who chose to think themselves oppressed. But the man who was, and is, behind it all—Garcia, who would have come to power if the rising had succeeded—him I have not got.'

The captain nodded comprehendingly. 'That's bad,' he said. 'Then there's the possibility of it all breaking out again.'

'That is the case. The man is in hiding, and till he is in my hands I am not likely to have rest.'

'Cannot you find him?'

'It is most difficult, if not impossible. He has escaped to the interior, and is lying there.

He can hide there for months—a year perhaps—till the time is ripe again.'

'The fellows that you have got, don't they know his haunts?'

'They know them, most undoubtedly. They will not speak.'

Any one looking at the captain at that moment might have seen the cold, hard gleam in his blue eyes. He did not turn them on the president, but looked out quietly across the bay.

'You cannot—well—persuade them to tell what they know?'

The president spread out his hands. 'I know of no way. In former days the Fathers of the Inquisition would have made them speak, undoubtedly. Those days are now long past—most happily, of course.'

'How about threatening them with death?' the seaman asked.

'The five men whom we hold are under the death sentence—naturally,' replied his host. 'But I feel a difficulty in putting the sentence into execution. To speak frankly, I would rather not.'

The captain nodded. 'Yes, I understand,' he said. He knew that under the president's predecessor executions had been frequent and free ; knew too that his host was anxious, for obvious reasons, to make the opening period of his rule a pleasant contrast to the one that had just passed away. 'I understand,' he said again.

'You see,' the president went on, rather as though in quest of sympathy, perhaps even of advice, 'I can most certainly condemn to death and execute the five ringleaders that I hold. In fact, they are already condemned. But as to execution, what will that execution do for me? I have but little hope that the threat of it will make them speak, and it will assuredly alienate public opinion from me. That, *señor capitán*, I do not want. The five will all go silent to their death, uttering no word of where I may lay hands on Ramon Garcia. I well know the class of men.'

Captain Callum leaned back in his chair and was silent for some minutes, as if considering. He had no particular respect for Pedro Martinez, and certainly no affection ; indeed it is doubtful if he had affection for any living creature except the little motherless daughter at a Scarborough boarding-school, for whose sake he meant to die a wealthy or at least a well-off man. But he respected iron-handed discipline ; he had quelled more than one mutiny himself. Martinez, it was true, had risen in revolt against the previous president. Well, there were times when even mutiny was needful. He had once assisted a much-suffering and exasperated crew to overpower a drink-maddened skipper, and to fasten him securely in his room. Garcia he knew for a most wily scoundrel, a fit man to make a good example of and shoot. Moreover, it might prove a not unprofitable thing to render service to a president, even although he were but ruler of

a small and unimportant state. Martinez seemed at his wits' end; he, David Callum, had never yet found himself at the limit of his resources, though he had been in many a tight place.

'I remember a curious tale that I once heard in Lancashire,' he said at last. 'Water burst through into a coal-pit, and the workings were flooded. One fellow—he was a chap of twenty—ran before the flood into a blind working, and was cooped up there; the water left him just a yard or two of good dry rock on which to lie. He hammered on the wall, and he was heard; men worked hard to cut through it and so save his life. It was a biggish job, and took two days; and when they found him he was dead.'

'Drowned?' asked the president, who had been listening politely, but apparently without great interest, to the tale.

'No, he had not been drowned.'

'Foul air, no doubt.'

'No, sir; the air was pure, and there was plenty of it; for, you see, the water was not quite up to the roof. Nor was he starved, for he had bread and cheese with him; besides, men do not starve inside of eight-and-forty hours. No; doctors said that he had died of fright.'

'Of fright!' Martinez smoothed his dark moustache with a contemptuous smile.

'Of fright, and yet the fellow was no coward—not in any ordinary way. He had formed one of a courageous rescue-party in that very mine twelve months before. But in this cut-off working he was alone, and he saw the water rising on him—rising inch by inch. He wondered which would win—the water or the rescue-party; and the fear that it would be the water was too great.'

The captain paused and looked at his companion.

'Curious!' the president remarked.

'Put a man alone, Señor President—a young man, to whom life is sweet—put him alone within sight of a slowly, surely coming death, or within hearing, say. Keep him uncertain of the time when death will seize him, and depend upon it that man will do almost *anything* for life. That miner could do nothing, and he died.'

Martinez turned and looked at his companion with admiring eyes.

'You are a man of ideas, Captain Callum,' he said.

'That's how I get my living,' said the captain, rising from his chair and taking up his hat from where it lay on the floor beside him. 'There's very little money in the British mercantile marine to-day unless you have ideas.'

'A young man, did you say he was, the hero of your interesting little tale?'

'Yes, young.'

'One of the prisoners that I hold is young—not more than eighteen, I should say. The other four are rather older men.'

'Well, usually, young men are fond of life; they haven't learnt what a rough-and-tumble business it mostly is,' replied the captain. 'And now, Señor President, I'll be getting away. We sail with to-night's tide. I shall most likely call in here on the return trip, and shall quite look to find you well fixed up by then. Good-bye.'

After the captain left him Pedro Martinez sat thinking deeply for a time. Then he despatched a message which called to his presence the commandant of the prison, and the two conferred together until dark.

If it was cool and pleasant in the presidential palace, it was neither in the small cell of the prison where Antonio Goma was confined alone. One wall faced south upon the prison-yard, and the noon sun smote down through the square opening in the vaulted roof—sole aperture besides the door—barred on each side into the thickness of the stone. Antonio had been brought there on the morning following the day on which the president and Captain Callum of the *Ibis* had sipped cooling drinks and smoked their long cigars upon the hill above.

He and his four companions had been taken in arms, had suffered a brief, speedy trial, and had been condemned to death. But, as already said, executions had been many during the last president's régime; had been so many and so frequent that they had become excessively unpopular. Pedro Martinez was most anxious to get on without them, if he could. He had, if we may so put it, 'billed' himself for the rôle of the deliverer, the one who was to rule by graciousness and peace. When he struck he wished to strike at leaders, not at followers. These were only followers he held; for Ramon Garcia, the true leader, was still free.

Antonio, like his other fellow-captives, had been interrogated as to Garcia's whereabouts—publicly first, and then in private. But, like his fellows, he had steadily refused to speak, though he well knew the hidden rebel leader's haunts, and also those who were most likely to be sheltering him. So he had gone back to his cell, the fear of death upon him as he went. But he had carried that fear bravely, just as he had fought with an unflinching courage till he was disarmed. He and his fellow-prisoners had encouraged one another, had all sworn to die before they would betray their leader; for at first they were confined together in one cell. Then on the morning following Captain Callum's visit they were separated, and henceforth Antonio found himself alone.

A jailer visited him night and morning, bringing food and water, but would give no information of his friends. The burning days gave place to hot and stifling nights; each stifling night was followed by another burning day; and, night and day alike, Antonio was alone—

he who had lived his eighteen years of life amid the pleasant lazy gossip of his fellow-men.

He was to die—of that he had no doubt. A rebel, taken arms in hand, he had no hope of a better fate. He would have chosen rather to fall in that one brief furious battle which was fought and lost for the insurgents in a little over half-an-hour; but, as his lot was otherwise, he must put up with it. Only, he wished they would not be so long about it. It gave him too much time to think—to think of things that he would see no more: of the white beach beside the sea (for he had been a turtle-fisher in a village of the coast), of moonlight nights among the islands, and of pretty, dark-eyed Magdalena, with her cigarette poised daintily between her pouting lips.

He tried to banish all such thoughts of things that were beyond him now, of pleasures he would know no more. But it was useless; the hot, stifling cell seemed full of pictures of the life he used to lead. He could not shut them out.

Sentries were in the prison-yard, and sentries in the corridor behind the door. But, listening attentively to the advancing and retreating footsteps of his jailer, he could gather that his four companions were confined in the long row of cells of which his own was one. And one day, after he had been thus alone a week, something occurred which made his heart stand still and then beat furiously.

There came the measured rhythmic tread of many footsteps past his door, past others in the corridor, until they stopped before the last. He heard the door being unlocked, heard voices speaking, then a word of sharp command. The footsteps, pacing slowly now, came past his door and died away.

But presently again he heard them, this time in the prison-yard outside. Yes, they were pacing slowly, very slowly. What were those words that he heard spoken in a mumbling monotone? Latin! Then it must surely be a priest who spoke them. Slowly the footsteps came below his small roof-window, and he heard the murmuring voice more clearly, heard the words. It was the office for the dying!

He caught his breath in sharply and a new look came into his eyes as voice and footsteps faded in the distance of the yard. The time had come at last, then; he too, presently, would die. Whom had they taken? Would it be Filippo or Diego, Pepe the woodcutter or Juan the muleteer?

His thoughts were interrupted by a crackling crash of musketry that rang across the square. Juan or Pepe—some one—had stood up with bandaged eyes for a few seconds with his back against the wall, and had been shot.

Antonio sat down quickly on the narrow wooden bench, for he felt sick and dizzy—he who had felt nothing but a cool indifference in the fight.

Death in a battle—that was nothing; but this death was horrible, coming so slowly and inexorably toward its man. Would that death take him next?

'Who has been shot?' he asked abruptly when, that evening, his food was brought in. But his jailer only shook his head.

Antonio passed a sleepless night; it might be the last night he had to live. Nor did he sleep much more the next night or the next; yet the days came and went, and there was no more tramping of footsteps in the passage, no slow-paced march, no murmured Latin words. A week went by, and still there was no change. Death was unhurried, so it seemed.

And then, upon the tenth day, came the sounds again; this time from a cell nearer to his own. Again there was the tramp of feet within the corridor, the bustle in and round the victim's cell; then the slow march across the yard below his window, and the murmured words. And finally, as he sat rigid, breathless, waiting, came the rifle-crash.

Would it be Juan the muleteer, the man who had first tempted him to join in the revolt? But it was Juan who had perhaps been first to die. Oh! it was terrible, this waiting there for death, knowing nothing, knowing not who lived or who had died; above all, not to know when his own turn would come.

Three days he had to wait until another man went out to die. Well, his own turn must come soon now; two only, he and one other, still remained. Which would go first across the prison-yard and stand with back against the wall?

There was no mirror in the little cell, and it was well. The boy had aged in face by twenty years; his eyes were wild and staring, his round cheeks were sunken, and his swarthy skin beneath the unwashed prison grime was tallow-pale. This death that moved inexorably toward him with such slow and lingering feet had conquered him before it came in sight.

One question racked him: was it that other or himself who would be taken next? Three days and nights he bore it, till at last the cruel tension reached its breaking-point.

'I want to see the president,' he burst out hurriedly when, on the fourth morning, he was brought his food. 'I have something to tell him.'

Half-an-hour later Antonio stood before Pedro Martinez in the presidential palace, bargaining for life against another man's. Yes, he should live, he should go free, if he would tell where Garcia might be found. He named the hiding-places and the shelterers he knew of. Garcia was taken two days later in a cave among the hills. Judgment and execution followed swiftly on arrest.

Free, but with heavy heart and conscience, Antonio, a week later, made his way toward

home—home and Magdalena. As he passed through the town he met a gang of convicts coming from the harbour where new quays were being built; for Martinez, if not a perfect moral character, was an enlightened, enterprising ruler of the state. Shuffling along the dusty road, their ankle-irons clanking, there among the gang were Filippo, Diego, Pepe, Juan the mule-teer! All four men saw him; but they gave no sign of greeting save a scowl.

All four alive! Antonio could not understand it. Who, then, were they who had died, those who had paced so slowly underneath his window, those for whom a priest had mumbled Latin prayers? Puzzled exceedingly, his brain in turmoil, Antonio made his way toward home.

Some twelve months later Captain Callum again sat in that cool, pleasant chamber of the palace, and this time the face of Pedro Martinez was quite serene.

'And so, Señor President,' the captain said, 'all is going well, I hear. And Garcia is—dead. You laid your hands on him all right. From information received, I suppose?'

'Yes, captain, from information received, as you say. One of the prisoners, a young man of whom I think I talked to you a year ago, gave the clue needed to lay hands on him.'

'Ah, he did, did he? Yet I thought you found them all too staunch?'

'At first that was the case; but happily it is sometimes the unexpected that happens, captain. This particular prisoner was quite young, and his nerves appear to have been shaken by certain circumstances. These circumstances were as follows: The four other prisoners proving intractable, and declining to afford me any useful information, I gave orders that the death sentence should be carried out. Three of the men were led forth to be shot—not all together, but at intervals of several days. The request of one of the three for the ministrations of a priest was, of course, granted by my orders; in fact, a priest went with each one. Then, literally at the last moment, captain, I relented. I have faults, doubtless; very many detractors will point them out to you with great pleasure; but bloodshed—wholly useless bloodshed—is detestable to me. In each case a reprieve met the condemned man at the place of execution.'

'Very creditable to you, Señor President,' said the captain, removing the ash from his cigar with a care which apparently demanded the entire attention of his eyes.

Martinez gave a slight wave of his hand in acknowledgment, and continued: 'Rather curiously, it—happened that in each case, just at the moment that the reprieve was handed to the officer in charge of the intended execution, soldiers were going through rifle exercises in another portion of the prison-yard, which forms a military exercising-ground as well at times. These soldiers were being practised at "concerted

fire." Thus listeners might have thought the executions had really taken place. One listener, indeed, did jump to this somewhat hasty conclusion—Antonio Goma, the young man of whom I speak. He had heard each prisoner being marched out from a cell not very distant from his own; the route across the prison-yard led past his window, and he had perhaps heard the priest recite the office for the dying. He did not, of course, know of the reprieves, and he *did* hear the concerted fire practice. Putting these coincidences together, he drew the conclusion that his friends were paying the penalty of their misconduct, and that his own turn would come. It was too much for him; he gave the information that I needed. In return I gave him life and liberty. I trust that he will make a better use of both.'

'And the four others?' asked the captain, without looking at his host.

'They are now well employed, at work as convicts on the harbour quays, which, as I need not tell you, captain, have long needed improvement.'

'That's so,' said Captain Callum with some emphasis.

The Aberdonian felt considerable admiration for Pedro Martinez. The president was not, perhaps, the man with whom he would exactly care to 'bed and board' for life, but he was smart, and he knew well how to act upon a hint. It was a cruel trick, perhaps, this one that Martinez had played upon his prisoner; but what then? The world is a cruel place for weaklings. And if the captain felt a momentary qualm of conscience for the hint which he had dropped before the president a year ago, he quickly swept it from his mind. As a result, the rebel Garcia had been taken and had died. By all accounts, he was a man who well deserved to die.

All this swept through the mind of Captain Callum in a moment, but was followed by a thought that lingered. He had rendered service. Would there be a *quid pro quo*?

Martinez did not leave this little matter in suspense, though he now rose, with a polite excuse of public business calling him away. 'Always look in to see me, captain, when you come this way,' he said as they shook hands. 'My door is ever open to my friends; also my ears to anything that they may have to say. And if at any time, captain, you find yourself at all incommoded by the harbour or customs authorities of this place, I beg that you will come direct to me; though for the most part well-meaning, some of them are now and then a little dense. A thousand compliments. Good-bye.'

The captain smiled as he walked toward the harbour, keeping on the shady side of the hot street. The precise meaning contained in the president's hint would need too long an explana-

tion to those unacquainted with the republic and its capital and port; to those who know them little explanation is required. Captain Callum saw a rosy future opening before him. Mary should have a year at school in Paris if things went as he foresaw.

But in a fishing-village of the coast Antonio Goma was an outcast, for his treachery, now half-suspected, would in time be definitely known. Already Magdalena, when she passed him, took her cigarette from her red lips and spat upon the ground.

THINGS CHINESE.

By F. CARTWRIGHT.

THIS scribe, though he has not actually lived in China, has passed many months among communities of that race expatriated in foreign lands—in the United States, Hawaii, Australia, Canada, and elsewhere. All those who know bear witness to the fact that among the older Chinese—that is, original settlers—once a Chinaman, always a Chinaman. John keeps his ancient habits, customs, and religion green in his new home just the same as if he were still in Peking or Canton, and he hopes to be laid to rest in the Fatherland too. An examination of the bills of lading of the many shipping-houses trading with China would be fruitful in the constant recurrence of the word 'coffin,' or its equivalent. John may not be shipped eastward immediately after death, but the time surely comes when all that is left of him finds its way home. There are exceptions to this, of course.

But whatever the old may think, young China is not going to follow blindfold. Not having been born in the old country, the young Chinaman is growing quite satisfied with the land in which he lives, from which comes his education and, later, his sustenance. The former brings light, enlarges his reasoning powers, and in general tends to produce a keen and practical satisfaction with things as they strike him. What his father thought, or thinks, is not the youth's concern at all. Having once tasted the sweets of learning, young John cannot be kept on the leash, for he simply revels in text-books and the thousand and one aids to knowledge placed in his path.

Consequently, in the considerable Chinese colonies which are met with the world over, we find their young manhood discarding the typical picturesque dress of their fathers, and the order of the day comprises what we are fain to call civilised garb, with its natural corollary of an increased self-respect. Being placed on an equal footing in the classroom with the white man, young John soon discovered that he had to live up to it outside as well as inside the school walls. He scoffs at the ancient type of abode, fourteen inhabitants to the room, and plans higher things, even if it means cutting adrift from the parents that bore him. 'Nothing but the best' is his motto, for he is daily proving that he is at least the equal of the white man,

that erstwhile superior being. What eventually will be the outcome of this is a problem which will settle itself in the future.

The writer has had experience as a teacher of Chinese boys abroad, and can speak with sympathy of their stupendous keenness for education. In fact, so eager are they that this desire for knowledge is apt to become a veritable trial to the pedagogue who wishes for rest from his labours. In tramcar and train, in field and path, young Li Chung carries his book, for he finds that a day of twenty-four hours is all too short for what he has to do. In this there is just a suspicion that the end does not justify the means; but doubtless, as time goes on, things will right themselves, and Li Chung become just as ripe for the rod as his British prototype.

If the young Chinaman has the defects of his qualities, he, with all his sledge-hammer methods, has a fixed purpose shining like a beacon ahead. He has well assimilated the question of what a good education means to him in the race for existence; consequently those at whose feet he may sit have nothing but respect for him. He certainly will do anything for his mentors. The writer on one occasion was of use to an ambitious youth in obtaining a post for him in a bank, and thought nothing more of it. Much to his surprise, the next Christmas there arrived a huge box of Chinese delicacies—which to the ordinary buyer would have meant an outlay of several pounds—'From your faithful pupil.'

Though they may be following—some say aping—the lead of the white man in matters of dress, we never noticed that our young friends gave up attachment to rice as their staple article of diet. That one item never changed, and as a rule it was quite safe to provide nothing but rice for the consumption of those pupils or friends who were entertained to a meal. People who kept boarding-schools were quick to note and profit by this preference for rice.

A somewhat too slavish reliance on the text-book is apt to produce such replies as the following to the request, 'Name the five great races of mankind.' 'The five chief races of mankind are the hundred yards, the hurdles, the mile, the quarter, and the three miles.' The explanation of 'Out of sight, out of mind,' found

expression in 'Invisible, insane;' while 'Mention any great towns you have visited' was sufficiently answered by one sage youth with 'Downtown.' So much for the budding youth who will one day be a force to be reckoned with.

For good, sound, practical sense we think the Chinese modern business man, be he merchant, builder, or shopkeeper, hard to beat; and, in addition, his word is his bond. While adhering to lawful ideas of what constitutes a fair profit on any transaction, John is always anxious to please, to do good work, and to give due money's worth in whatever he contracts to do, whether over the counter or with spade and shovel. The charge of undercutting falls when it is considered that his mode of living enables him to perform whatever he has to do for a client or customer. Even the modern young and ambitious Chinese have not yet attained the sumptuous ideals of comfort which are the vogue among white people. So long as the claims of the inner man can be satisfied at a cost of a few pence daily, so long will the Chinese reap the rewards of their frugality, which is natural to them. This is one reason why the Chinese market-gardener, duck-rearer, or house-builder is able to hold his own and a little more. From time immemorial he has been a successful gardener, with methods of his own, while he laughs to scorn the eight-hour day as he trudges to his melon-patches what time the sun is peeping over the hill.

Here is a fairly faithful rendering of the reply made by a Chinese hotelkeeper to two Yankee 'drummers.' After devouring a chicken, and then four alligator pears apiece, the twain asked mine host for his tariff. Looking through the list of charges, they found that three dollars per day covered bed and three meals for each guest. This was not unreasonable, considering all things. The couple immediately began to wax eloquent in their own tongue as to the iniquity of the charges, which grumbling the Chinaman at once countered with, 'S'pose you no like my plice, you get out of here. You go down to the warp [wharf] and sleep to-night flee, no charge anything. You no like my meal, you go down to the store, buy one tin sardine ten cents, and five cents crackers; he nuff for your breakfast tamalla. I think you fella cheap guys. When I go town last week hotel charge me one dollar supper, and all I got chicken wing and half one potata, and ice-cold tea, nothing more an that. Here you two fella kaukau one whole big rooster! I go city and stay at the Conal [Colonial] Hotel. You savvy that place is. Missie Johnson he is manager. Big lady, he charge me two dollars half for loom one night. I no kick about that; his hotel no better than mine, all same bed and spring little soft. Missie Johnson got more water than me, that all difference can see. You like take a bap, you go down one big pool in yard; here, hard up no lain, I give you one

bucket, all I can spare, one bucket each man. I no charge for this flee. Down the warp you fella get water for nothing, jump off warp and swim all day, and when you sleep no maskia. Very cheap living for guy like you. I am Aiona, I merchant man. I see plenty men come for board, but this first time I see my life man try jew me down. Now no use talk any more; you know my style, and I like hold him one plice like Missie Johnson. I no want cut hotel business, no pay have two plices. S'pose you single man you pay one loom; but you all same mallid man, two fella stop one bed, but I charge same plice, make no difference.'

Making a call among the Chinese is a distinctly intricate ceremony. Your visiting-card must be red, for white is the sign of mourning. Tea is brought forward, each dainty cup covered with an inverted saucer. Now you may be frightfully hot, and, in hackneyed phrase, 'simply dying for a cup of tea.' But no; it is etiquette to ignore the fragrant Oolong till the hostess desires you to partake. Then, before sipping, you must raise the cup in both hands and offer it to her. She will decline, and you are free to drink. If you are able to converse in Chinese, the following may be the course of discussion. 'Which is your honourable country?' you are asked. You reply, 'My inferior kingdom is England.' 'And your honourable age?' The gentleman replies to this. Perhaps you query, 'How many distinguished children have you?' and you are told that one or more 'puppies' is the tale. So the ice is broken. On bidding adieu you say that it is to be feared that your company has been a trial for the household; which is met with, 'Our despicable conversation must have been dishonourably boring.' Passing out, you bow about forty times till the outer gate is reached, and the conveyance (strictly necessary according to etiquette) takes you home—on the opposite side of the street!

THE SOLDIER'S WIFE.

MY man was colonel in the line,
Her man a sergeant in the Greys;
And, while I nursed this grief of mine,
To her I listened with amaze.

'We can't complain that we have lost
The men that counted more than life,
For we had reckoned up the cost
Demanded from a soldier's wife.

'For we could only claim a lease
Of those brave lives we could not buy;
We paid the rent of love in peace,
The lease fell through when war came nigh.'

While I had failed my balm to find,
With lettered thoughts and gifts of speech;
With native wit and bookless mind,
She grasped a truth beyond my reach.

A. STODART WALKER.

Chambers's Journal

SEVENTH SERIES

THE NET.

By HAROLD BINDLOSS.

HARDSHIP and trouble, perhaps to an unusual degree, are the portion of the independent 'longshore' fisherman; but Marshall felt that he had more than his share as he walked home to the village beside a shallow bay on the Scottish coast. To begin with, he had lost his brother in a torpedoed cargo-boat, and had heard nothing from his son in the navy for some months. Then his seven-ton trawler went ashore on Balhourie sands in a sudden gale; and, though Marshall had got her off, the boatbuilder had estimated that it would cost forty pounds to make the damage good.

In peaceful times he might have borrowed the money in the little town a few miles inland, where he was known as an honest man; but just then its inhabitants had other matters to think about. They had sons in Flanders, war-funds were being raised, and rumours went round of strange lights being seen upon the coast and wireless installations working among the hills. Consequently Marshall was glad to take charge of a salmon-net in return for very small wages and a share in the catch; but misfortune dogged him yet, because there was no 'run' of salmon on that part of the coast. Now he was returning from a visit to the boatbuilder, who had declined to repair his boat except for payment as soon as the work was done.

It was getting dark, and the moors across the bay rose in blurred, dark masses against the sky. In the foreground several miles of wet sand glimmered in the fading light, with a paler streak that marked a river-channel running through their midst. The deep, monotonous murmur of surf upon the outer shoals filled the keen air, and a dim white line in the distance showed the edge of the advancing tide. When the wind comes fresh from the southward the bay is a dangerous place, and strangers take risks in entering it at any time, because the channels wind and the strong tide is apt to capsize the boat that runs aground.

On reaching the village, where the low white houses rose straight from the wet street, Marshall found his wife sitting by the fire—which somewhat surprised him, since Kate was generally busy. The little room was dark except for the red glow of the peats.

'Will I light the lamp?' he asked.

No. 256.—VOL. V.

'Ye will not,' said Kate. 'It's no' that dark yet, an' oil's goin' up. What had ye in the net?'

'Naething,' Marshall answered gloomily.

'An' what's your share o' the week's tak'?'

'Ye micht ca' it half-a-croon.'

Kate did not answer for a minute, but Marshall thought she had something on her mind. She was a managing woman, but of late her activity had relaxed. Her stern courage was still unyielding, but rheumatism racked her joints.

'It winna do, my man,' she said. 'Gavin, the agent, was here, an' telt me a stranger had bought the hoose. If the back rent's no' paid, he has orders to pit us oot.'

Marshall grappled with this in silence, for when trouble came he was silent and grim; but by-and-by he said, 'Weel, there's twa three bits o' gear I micht get a pound for. Then ye'll bake less, an' I'll maybe leister a few flounders on the sands.'

They let the matter drop, and sat with heavy hearts in the dark, for it is easier to economise in oil than food. After a time Marshall remarked, 'Ill news spreads, an' I'm wonderin' if Woodhouse kent we would be turned oot. I had hopes o' his pittin' the boat richt an' gi'in' me time; but he said the day he couldna touch the job except for money doon.'

'It's queer!' Kate answered thoughtfully. 'He's no' a hard man, an' trusted ye afore; but there's a hoosefu' o' bairns yonder, an' meat's gettin' maist ower dear to buy.'

One night, a week or two later, Marshall stood beside the big salmon-net, which he had been mending. Rising high above his head, it ran between the cliff-foot and the channel, which curved toward the beach just there. There was a half-moon in the sky, and the wet sands glistened. Oyster-catchers were screaming on the flats, and a fresh wind brought the sound of the surf inshore; but the night was mild, and Marshall, who carefully cut off a very small piece of tobacco, lighted his pipe. This was an extravagance, but it helped reflection, and he had something to think about.

He had paid his rent, though he did not know where the next was to come from, and then asked who had bought the house. The agent

[All Rights Reserved.]

OCTOBER 23, 1915.

only knew that the purchaser came from Glasgow, and spoke like an American. Marshall next inquired if he had bought any more houses, and the agent had said he thought not. He was frank, and seemed as puzzled as Marshall, for the latter could not understand why his cottage, which was old and very small, had been singled out when there were better ones for sale. He could find no explanation, and was about to return to the beach, when a dark figure appeared beside the net.

'The fishing seems poor,' the stranger remarked.

'It might be better,' Marshall agreed.

'Well, I expect you make good, taking things all round. You'll get flounders when salmon are scarce.'

'I canna say that's true.'

'Then times are bad!' said the other sympathetically. 'How do you meet them?'

'By eatin' the less'

'That sounds pretty rough. Now, I expect you'd be open to take a paying job?'

'I'll hear what it is,' Marshall answered cautiously.

The other came out of the shadow, and Marshall saw he wore rough shooting-clothes and carried a gun. Somebody had told him that a sportsman, who went out at night after wild duck, had been staying at a small inn in the neighbourhood.

'It's quite easy. I want a buoy or two moored at the bends of the old channel.'

'The new deep's the better. We dinna use the gut; it's siltin' up.'

'So I understand; but that's not the point. I'll pay you five pounds for putting down the buoys; a ring of net corks will do.'

Marshall looked at him in astonishment, but the man was obviously serious.

'I'll ha'e them fixed next ebb,' he said.

'Very well; but there's another matter. You're down here at night when the tide suits, and there's nobody else about. I want you to say nothing if you see a launch pass.'

'What for will she be goin' up the gut at night?'

The stranger smiled meaningly, and explained that he was a naturalist, and was making a collection of the wading birds. The close-time had begun, but he was determined to secure the specimens he was short of. Then he mentioned a reward that the fisherman thought extraordinarily liberal, and added, 'I guess that ought to satisfy you.'

Marshall was puzzled and suspicious, but he took the sovereign the other gave him, and presently went home. Next morning at breakfast he told his wife, but she did not show the satisfaction he had expected. After asking him a few questions, she said, 'It's a pity, but I'm feared yon money is no' for us.'

Marshall waited. There were matters—not

many of course, but some—about which Kate's judgment was better than his.

'What for is he collectin' birds noo they're protectit, when he had a' the winter for shootin'?' she resumed.

'It's queer!' Marshall admitted.

'Then ye say he talked like an American; so did the other wha bought the hoose, an' gave Gavin orders to pit us oot.'

'Dinna mak' difficulties, woman, if ye're no' sure they're real!' Marshall exclaimed. 'I canna get the boat sortit; I canna earn enough to feed us an' pay the rent.'

Kate pondered, glancing gloomily at the coarse but very clean tablecloth, the bright hearth-irons, the brass candlesticks and preserving-pan, and the shining china in the rack. These common things were her pride, and had cost stern self-denial; but it looked as if she might have to give them up. For all that, her wrinkled face was unmoved and her eyes were steady.

'Mr Herries was tellin' me they had a wheen o' them in the United States,' she said.

'A wheen o' what?' Marshall asked.

'Gairmans!' Kate answered dryly.

Marshall started, but she signed him to be quiet. 'Ye see hoo things fit in. It's kent ye're no' doin' weel; ye canna pay for the boat bein' mended, an' a stranger who must ha'e his rent to the minute buys the wee hoose. Ye'll need to watch he doesna buy mair than that, my man. He kens that an empty stammick mak's a willin' mind.'

Marshall, who saw a light, clenched his fist. 'When I'd taken his pay for keepin' quiet I'd ha' been in his poo'er. Yon deevils drowned my brither; an' there's nae word fra the lad!' Then he flung the sovereign on the table.

'Ha'e! I've nae use for't.'

He seized his old oilskin coat and went off to his work; but Kate was satisfied, and after redding-up the house sat down to think. It was plain that a sacrifice might be demanded from her, but she must not hesitate. More costly sacrifices were being made, for there were many young widows in the countryside. By-and-by she roused herself with an effort, and, although her hands and arms ached with rheumatic pains, got out her wash-tub.

When the next tide was ebbing, Marshall launched a punt and carried off a heavy stone with some chain round it. The chain had a rope and bunch of net-corks attached, and on reaching the right spot he threw the whole overboard. The corks would mark the entrance to a channel the fishermen no longer used, and he moored another buoy or two at the bends. After this he waited a week, and then, one night when the tide was flowing, sculled the punt to the end of the salmon-net, where he made her fast. It was a wild, dark night, with heavy showers; but Marshall was not surprised when he heard the throb of an engine between the

gusts. Then a swift, dark object swept out of the rain, drove past the net on the white stream of the tide, and vanished among the sands.

Marshall's eyes were keen, and he made out that the object was a motor-launch. She was plainly a powerful craft, or she could not have made a passage along the coast that night. Desolate marshes surrounded the head of the bay, but a fairly good road wound through them to the waterside, along which the river had scooped out a channel. It was very cold and wet in the plunging punt; but Marshall waited until the launch came back, forging with a white wash about her bows against the last of the flood. He wondered very much what she had on board.

Next day he walked eight miles to a coast-guard station, which a naval detachment had lately reinforced, but unfortunately saw a petty officer from a distant part of Britain, who did not understand the Scottish character. Moreover, the detachment had been turned out on several false alarms, and obviously absurd warnings were brought to its officers. Consequently he was short with Marshall, and smiled in a superior way that angered the fisherman, who trudged home without telling him much of what he had meant to impart.

At dusk next evening he was busy fixing another buoy, when a man walked along the edge of the channel, carrying a net. He stopped on seeing how Marshall was engaged. 'Ye're makin' a good job, though I canna see the reason for't,' he remarked.

Marshall, who knew the other could be trusted, looked up with a dour smile. 'I'll better it by-an'-by.'

'What way? Wha's comin' up the gut that needs a leadin' mark?'

'I dinna ken; but yin o' they nichts he'll no' come doon again.'

Now the Scottish longshore fisherman does not, as a rule, say all he thinks, and often prefers a hint to an explicit statement; and the other, who nodded as if he understood, suggested, 'Ye'll ha'e been to the coastguard?'

'I ha'e,' said Marshall dryly. 'They'll maybe mak' a note o' what I telt them; but noo I've fixed the buoys as I was ordered, I'm goin' to run a flounder-net across the gut.'

The other looked hard at him in a puzzled manner, and then laughed with grim enjoyment. 'Man, I'll help ye! We'll stiffen the heid, and fit ropes wi' a strand o' wire fra the auld sheep-fence; I'm thinkin' she'll need it.' Then he added in a different tone, 'They ha'e drooned an' pushioned over mony o' oor men!'

They carried out the work next low tide in a very conscientious manner, and when night came and the flood began to race across the flats, launched a punt near the salmon-net. This was difficult, because the wind was blowing in from the sea, and an angry surf broke upon the beach.

When, after wading knee-deep, Marshall got on board over the stern, they had hard work to keep the punt from being swamped, but found smoother water on pulling round the end of the net. They were now to leeward of the wall of mesh, and the rows of tall stakes that framed the pocket of the net broke the sea. Marshall's companion made a line fast round a stake, and the punt rode to it safely, lurching up and down as the surge washed through.

It was a cloudy night, but now and then a flash of watery moonlight shone out and showed the foam upon the thinly covered sands and the breaking waves in the deeper water. The tide was about three-quarters flood, which meant that any craft likely to come up the bay would arrive in the next hour or so. The end of the long net commanded the channel, which, a little farther on, ran outshore between banks of surf-beaten sand. They waited an hour, lying for shelter in the bottom of the punt, and then Marshall raised his head.

'Heard ye oucht, Jock?' he asked.

Jock listened. The wind wailed among the net-stakes, the growl of the surf filled the air, and a great black-backed gull screamed overhead. This was all for a minute, and then his keen ears caught a faint throbbing sound.

'Ay,' he said, 'yer friends are comin'!'

Shortly afterwards a ray of moonlight travelled across the sea, sparkling on the crests of the combers and the white wash on the sands, then faded and flashed into greater brightness. A low hull, half-buried aft in leaping foam, drove across the glittering track, and vanished when the light was suddenly cut off by drifting cloud.

'She's rinnin' hard,' Jock remarked. 'I wouldna say but she micht break oor gear.'

'It will haud her best when she's pairtied it,' Marshall rejoined with a chuckle.

The net they had stretched across the gut lay some three hundred yards ahead, and when the moonlight shone down again they saw, as they had expected, that the launch had swung across the stream of tide. She was hove well down, but the foam washed across her lifted side, which was nearest the fishermen, and the frothy patch round her stern showed that the screw was running.

'The net canna stand it,' Jock remarked, and added after a few moments, 'It's pairtin' noo!'

The launch broke through the obstruction, swung off on her course, forged ahead slowly, and stopped. Then, coming round broadside to the current, she began to drift up-channel. The watchers knew she would not drift far, because the channel curved, though the tide flowed straight across a dangerous shoal. Nor could she restart her engines with some yards of mesh and a quantity of wire firmly wrapped about her screw.

Marshall watched her with grim satisfaction.

He knew that Kate was right. The man who had offered him money was an agent of his country's foes, and no doubt employed in smuggling supplies or information for their submarines. Moreover, he had cunningly plotted to force him into the enemy's service, because if he had taken their pay he could not have denounced his employer without implicating himself. Marshall thought of his drowned brother and the lad in the navy from whom no news had come, and his eyes were hard as they followed the helpless launch, which steadily drifted toward the shoal.

Then his satisfaction got less pronounced. He had fought the sea from his youth up, and now and then saved his own life and the lives of others by daring skill. It was an instinct of his to snatch a victim from the destroying waves when he could, and now the drifting craft began to make a forcible appeal. The moon kept out; he could see her drive nearer the surf-swept sand, and knew what would happen when she struck. Presently Jock got up and commenced to loose their line.

'She'll no' stand the hammerin' she'll get on the horseshoe tongue,' he said. 'The punt would maybe cairry twa or three o' them.'

'We'll try it,' Marshall agreed. 'The tide'll tak' her up, but I dinna ken hoo we'll pu' her back.'

They left that to chance, and, steadying her with the oars, were swept away; but it was fortunate that the rescue was taken out of their hands. Another launch came plunging out of the dark astern, with red sparks streaming from her funnel and her bows lifted above a mass of curling foam. She was a navy pinnace, and soon after they saw her she raced past the punt. There was a crash as she ran alongside the motor-launch, and then a shot; but next moment thick clouds drove across the moon, and all was dark. The fishermen swung the punt round and headed for the net, but although they pulled savagely, could make no progress against the wind and sea.

A few minutes later they were hailed, and saw the steam-pinnace stopping close astern. Obeying the order given them, they let the punt drift alongside and got on board, where a lantern was flashed into their faces.

'They're not in the job, sir. The short one's the man who brought me word,' somebody remarked.

Then the light was turned, and Marshall saw a young officer in oilskins at the helm, and two handcuffed men sitting in the well.

'Where were you going?' the officer asked.

'To try to take them off.'

'You'd have lost your punt. This craft's powerful, but we couldn't tow them clear of the surf. Their engine wouldn't run. I suppose you saw it had stopped?'

'We did, an' expectit it,' Jock replied. 'Ye see, when Marshall had pit the buoy where he was telt'—

'Then you fixed a buoy to lead them in?' the officer exclaimed.

'Just that. But we ran a net across the gut ahint her, as weel as an auld fence. Ye'll find a wheen fathoms o' mesh an' wire tangled round her screw if there's oucht left o' her on the ebb.'

The officer laughed. 'I'll come and see; but you're an illogical lot. First you make a very neat plot to drown the rogues, and then go to their rescue in a punt that would certainly have got swamped.'

'Weel, that was the wey o' it,' Marshall said.

The officer informed them that they must come with him to the coastguard station; but Marshall objected that their punt would fill and break adrift before the pinnace had towed her far. 'I'm feared the Government wouldna pay for her,' he observed.

'It's improbable; they're not remarkable for generosity,' the officer agreed. 'However, I expect you to meet me on the beach here to-morrow as soon as there's water enough for the pinnace.'

He towed them to windward of the net and let them go; and they kept the appointment he had made. After carefully noting down Marshall's story, and examining the wreck of the motor-launch, he said, 'You may be required to give evidence, but as the trial will be kept quiet, that's not certain. There's another matter that will, no doubt, interest you. It has lately been decided to offer a substantial reward to fishermen and coast-watchers who communicate any news of value, and I'll try to see that you get your share.'

Marshall was satisfied when the reward arrived; and not long afterwards Kate and he visited the small inland town on market-day. Their troubles had vanished, and they had heard from their son.

By-and-by Kate stopped in front of a shop where household furnishings were sold, and taking out the sovereign her husband had given her, regarded it doubtfully. Then her expression grew suddenly resolute. 'Na,' she said, 'it's no' clean money; I canna spend it.'

There was a Red Cross collecting-box close by, and she quietly dropped the sovereign in.

THE GOLDEN YEARS OF AUSTRALIA.

PART II.

ONE can well imagine the furore created in all large centres of population when reports of astounding gold discoveries arrived almost daily. It was hard indeed for the most phlegmatic and sober-minded citizen to stay at home when he heard how, at Bendigo, a couple of diggers had shovelled up seven hundredweight of pure gold from a single hole a few feet deep; how a man strolling through the bush struck with his pick by chance what seemed to be a moss-covered boulder, but proved, when the dull sound emitted excited interest and prompted closer examination, to be a monstrous nugget, which the enraptured finder had to wheel away in a barrow, as it was far too heavy to carry; how a carter driving a dray along a well-beaten track observed, after a sudden jolt, the seductive gleam of gold in the fragment of stone broken off from a large mass; how new chums arrived by a vessel, hurried off to the diggings, made substantial fortunes within a few weeks, and sailed home rejoicing in the ship that had brought them out; and so on. The jails were left without turnkeys, and the lunatic asylums without warders. No doubt some of the lunatics turned diggers as well as their ex-keepers. Of forty constables stationed at the time in Melbourne thirty-eight resigned, leaving only two to keep order in a city containing twenty thousand inhabitants. Compositors fled from printing-offices, and civil servants by the score abandoned their posts, although the Government raised their salaries by one stroke 50 per cent. as an antidote against the fascinations of the goldfield. More than half the seamen belonging to fifty-nine vessels in port rushed off also, leaving their vessels harbour-bound. In some cases, by tactful management, the men were kept within the bounds of discipline. One captain, finding his men determined to try their luck as miners, prudently offered to lead half of them himself to the nearest diggings, spend a month there, and then send the remaining half on a similar mission under the guidance of the chief officer, all the gold obtained to be equally divided among officers and crew. After the expiration of the full period the men were to return to duty and work the ship home again. The bargain was duly made. The two parties secured and divided, as agreed on, gold to the value of several thousand pounds; and the lucky seamen, satisfied with their experience, faithfully fulfilled their share of the compact.

It is not surprising that, at a time when large quantities of virgin gold could be extracted from auriferous gravel or clay by the use of the simplest sluicing contrivances, little attention was paid to the numerous quartz-reefs in which

the precious metal was known to be plentifully embedded. Fragments of quartz studded with gold were frequently picked up by the diggers and kept as curiosities; but no special notice was taken of the massive outcrops which really concealed the chief accumulations of treasure. Oddly enough, two boys first set the example of crushing quartz for gold at Bendigo. Having discovered the famous reef outcropping on Victoria Hill, where Cleopatra's Needle now stands, the youthful experimentalists constructed an ingenious 'battery' out of a long sapling, a block of iron-bark, and an iron bucket, and with these simple appliances succeeded in winning large quantities of gold. From thirty pounds of selected stone they on one occasion obtained gold worth six hundred and twenty-four pounds; and the German to whom they afterwards sold their claim made forty thousand pounds by the transaction. Eleven tons of quartz taken from the mine proved to contain gold of the value of two thousand three hundred pounds. What would not the astute company promoter of to-day give for opportunities such as were passed by with indifference for months at Bendigo and elsewhere sixty years ago? Not many modern gold-mines, however, would return dividends were the ordinary charge for crushing quartz (very imperfectly) eight pounds per ton, as it was then. How vastly Bendigo has contributed to the world's supplies of gold is proved by the fact that between 1851 and 1909 that district alone yielded, according to official records, no less than fifteen million nine hundred and three thousand and ninety-nine ounces of gold—a quantity, nevertheless, falling short of the entire amount produced by fully two million ounces, in the opinion of good authorities, as during the first three years of the period the annual returns were very inaccurate. In but few spots on the earth's surface has Nature stored wealth to the value of over seventy million pounds within so small a space.

Probably the greatest gold 'rush' to a single locality that ever took place in modern times was that to Ararat in the year 1857. A large body of Chinese, who, to evade the poll-tax payable on landing in Victoria, had been put ashore at Guichen Bay in South Australia, crossed the border and travelled in a direct line for the nearest known diggings. One day, while the Celestial trespassers were resting at noon beside a small creek, one of their number espied some particles of gold in its bed. Immediately picks and shovels were at work on each bank, and soon rich auriferous deposits were exposed. Within a few weeks the fortunate discoverers of a new goldfield had secured three thousand ounces of

gold; but as they were then obliged to recruit their supplies of provisions at the nearest settlement, the secret, hitherto kept, became known, and hordes of white diggers quickly invaded the preserves of the yellow men. The bed of payable wash was proved to be half a mile wide in places, and so rich here and there that from one claim alone six Chinese took one hundred and thirty pounds of gold. Within a month no fewer than sixty thousand persons were congregated on the spot, and frontages along the main street of the new-born town were selling at many pounds the foot. Unfortunately friction soon arose between the yellow pioneers and the unwelcome intruders, with the result that serious rioting took place. Indeed, the strong antipathy felt by white miners all over Australia to-day against the Chinese may be said to have first arisen at Ararat. Some years ago the present writer, when staying at Herberton, in north Queensland, observed that the Chinese were not only entirely precluded from engaging in mining, but were even forbidden to sell vegetables. The manager of the local bank was boycotted for some weeks because he employed a Chinese cook; and that useful functionary had at last to be dismissed, as his retention would have meant the loss of all profitable business. At places so remote as Pine Creek, in the Northern Territory, the same racial feud prevails. Ararat may claim the doubtful honour of being the birthplace of 'White Australia.'

As might be supposed, at a time when enormous quantities of portable wealth—of a kind, too, that was quite untraceable—were being carried from place to place every day, either directly or under armed protection, theft and brigandage were rampant. Birds of prey hovered about the various mining-camps, ripping open tents after dark and stealthily removing bags of gold-dust from under the sleepers' pillows; making nocturnal forays on unguarded claims and carrying off quantities of rich gold-bearing material; and not infrequently adding murder to robbery. Clever tricks were often played by these marauders with success. On one occasion four young men, lately arrived on a certain goldfield, by chance struck an amazingly rich pocket of alluvial wash. A few minutes later a couple of well-dressed and most genial strangers appeared on the scene, and offered congratulations. After a while the delighted quartette imprudently accepted an invitation to join their new acquaintances in celebrating the event at the nearest saloon. What followed may easily be guessed. The four lucky revellers were soon helplessly intoxicated; their treacherous entertainers quietly slipped away, and, with the aid of several confederates, thoroughly ransacked the treasure-chamber before its foolish discoverers had regained their senses. The ringleader in the business proved afterwards to be an ex-captain of a crack English cavalry regiment, a reprobate who combined the qualities

of Lord Chesterfield with those of Dick Turpin. In another case, a party of four diggers, fully armed and known to possess a large amount of gold, heard while proceeding along a lonely bush-track the most heart-rending cries issuing from a thicket not far distant. Hurrying to the spot, they found a couple of men tightly bound to two trees, and were saluted with a piteous tale of robbery and violence. The kind-hearted but simple Samaritans thereupon laid down their weapons and proceeded to liberate the distressed vocalists, who when free gave a signal which immediately brought several of their friends, hitherto lying in ambush close by, to the spot. Taken unarmed and by surprise, the unlucky four were soon overpowered, and in their turn accommodated with four trees, and a genuine grievance to make known to the next party of benevolent wayfarers. Their pockets were emptied, their camp looted, and they were left destitute alike of gold and faith in the goodness of human nature.

Artifice, however, was as much employed in defence as in attack. On one occasion some gentlemen of the road stopped an innocent-looking individual travelling alone with a horse and cart. No resistance was offered, and both the cart and its owner were thoroughly searched without result, amid loud protests against the unjustly suspicious disposition shown by the investigators. Just as the latter were going off, perhaps feeling ashamed for having treated an honest stranger with such disrespect, one of their number, attracted possibly by the drooping posture of the quadruped attached to the vehicle, or by a movement of its eyelid, drew his knife and slashed open the lining of the animal's collar. A shower of nuggets and fine gold followed; indeed, to the thieves that one lucky stroke meant a substantial fortune. The horse is recorded to have smiled; the owner did not.

Another time a poor cripple with one arm and one leg heavily swathed in bandages, resembling in appearance elongated sausages, was painfully limping along a track, when suddenly three compassionate strangers, each provided with surgical instruments in the form of knife and pistol, accosted him. After a brief conversation, a kindly offer was made by one of the party to tend the victim's injuries and rearrange the bandages in a manner more conducive to his comfort. The service was courteously but strenuously declined. Nevertheless, the charitable strangers insisted on bestowing 'first-aid,' and succeeded so well that in a few moments the cripple, completely restored to bodily soundness, and relieved of his encumbrances, but filled with sentiments of bitter ingratitude towards his benefactors, was hurrying along the road, like a Marathon runner, towards the nearest police-station; while the amateur surgeons were hilariously dividing among themselves the precious contents of the bandages.

Travellers had plenty of tales to tell in those wild days. The ingenious blacksmith who shod

his horse with four golden shoes and rode safely into Melbourne must have had some anxious moments by the way, and might be awarded the distinction of having shown in the most forcible manner a contempt for riches.

Fortune's chief prize in the great Australian lottery was not drawn until the 5th of February 1869, when the famous 'Welcome Stranger' was brought to light at Mount Moliagul, a few miles from Dunolly. This, the largest recorded mass of virgin gold ever discovered in the world's history, weighed when found two hundred and sixteen pounds troy. After several knobs had been broken off, the rest, weighing two thousand three hundred and two ounces, was sold for nine thousand three hundred pounds. The fortunate finders had for two years worked their claim with very poor results before the gigantic nugget was found buried beneath only four inches of earth. Strangely enough, one of the partners recalled to mind after the discovery that when the claim was first secured he had tried to drive a peg into the ground at the particular spot where the nugget lay buried, and had been unable to do so through the resistance of what he naturally supposed was a stone. Had the peg been driven inside instead of outside the obstruction, the 'Welcome Stranger' would probably be still reposing in the bed where it had been laid by Nature, as no doubt some of its brethren still are. Ten years afterwards the famous 'Queen's Birthday' reef, discovered in the same locality, yielded returns so abundant that for two years shares in the property which shortly before were sold for five shillings apiece gave their owners fortnightly dividends ranging from seven shillings and sixpence to twelve shillings and sixpence. At a depth of five hundred feet, however, the quartz ceased to be payable, and the mine was then abandoned.

The general results to Australia of the great discoveries of gold made in the feverish period known as the 'fifties' have been both good and bad. The goldfield attracted the best and the worst representatives of our species. The energetic and hardy pioneer hastened to the diggings, made his 'pile,' and then in many cases usefully employed his money in founding a home and clearing and tilling the land. Prosperous farms soon dotted the country, and the ravages committed by the miner's pick were healed by the cultivator's plough. Cities sprang up, and a flourishing trade was developed. But many of the adventurers were men of a low type, either lazy or depraved—mere parasites preying on their industrious fellows. Crime, drunkenness, and even poverty were rife at a time when gold worth hundreds of thousands of pounds was

pouring forth weekly from the great Victorian treasure-fields. When the general prosperity had reached its very zenith, and when the most indifferent and unskilled workman could easily earn a wage of one pound a day at Ballarat or Bendigo, the 'unemployed' in Melbourne were clamouring for State relief. Unhappily those 'sturdy beggars' of bygone days have left a numerous progeny behind them in the large cities of Australia; and echoes of their unmanly supplications may be heard in the demand made by a considerable section of the trade-unionists in the modern Commonwealth that the length of the working-day should be limited to six or even four hours. To these poor degenerates labour is the supreme evil of existence; limited work and unlimited wages constitute the objects of their highest aspirations. It is not improbable, also, that not only did the miner's cradle rock nascent political trade-unionism and its unpleasant twin-brother State Socialism, but that the spirit of levity, extravagance, and reckless experiment which marks Australian legislation to-day arose from the same source. The rush to Utopia has succeeded the rush to the goldfield, the impelling causes, discontent, impatience, and an inordinate eagerness for improved material conditions, regardless of all moral considerations, being the same. Thus the unstable, improvident digger was the parent of the Jacobin, the demagogue, and the successful popular politician of after times. Class and racial hatred, too, for the first time in the history of the continent assumed violent manifestations during those ten golden years. The riots at Ararat and Buckland left behind them a legacy of bitter antagonism between the white and the yellow invaders, which has been transmitted with increased virulence to their posterity. At Bakery Hill the forces of lawlessness and authority came into open collision, and militant trade-unionists and strike leaders in the Commonwealth to-day may trace their ancestry to the infuriated miners who offered armed resistance to the powers of the Government behind the Eureka stockade. Feuds also arose between the miners and the graziers on whose pasture grounds they trespassed in search of gold; and when many of the trespassers settled down permanently as farmers on the squatters' domains, those feuds were intensified and perpetuated. The jackals of the mining-camps, too, left behind them a numerous brood of criminal descendants. Moral loss, therefore, must be weighed against material gain in computing the real value of the goldfields to Australia. It were best, perhaps, for her, as it most certainly would be for every other civilised country in the world, that no new Ballarat or Bendigo should hereafter be born.

THE BEAUTIFUL WITCH.

By W. F. BATTEN.

IT was the height of the mad Boxer uprising in China, and a veritable reign of terror had set in for all Christians, native and foreign alike; whilst one of 'China's sorrows'—not the Hoang-ho (Yellow River), but the other, the Manchu Empress—was secretly subsidising the movement in the hope of getting rid of both the foreigner and his religion. The poison had already spread from Peking to the Yang-tze valley, and was just then threatening the two Kwang provinces and the southern capital, Canton. Now, at the time all this happened a large district lying between the last-named place and the second port of the British Empire, Victoria, Hong-kong, had been selected by the secret agents of the Boxers as a suitable 'jumping-off place' from which to stir up risings against the Christians in southern China. This district was known as the Hakka country, and had been the cradle of the terrible Tâiping rebellion which had devastated half of China, and was believed to have led to an enormous sacrifice of life before 'Chinese Gordon' succeeded in suppressing it; hence, doubtless, the Boxers' choice of this particular locality. Then, too, the great stone quarries within it, which supplied granite for the fine buildings of the beautiful 'Queen of the Far East,' employed armies of able-bodied Hakkas as stone-cutters. The largest and most powerful of these communities was the Yu clan, which could muster over five thousand remarkably able-bodied fighting-men, armed with muzzle-loading rifles and spears, and possessing a number of serviceable six-pounder smooth-bore guns. As a consequence, this clan was generally left severely alone by the provincial authorities. Besides, their walled villages of stone houses and their great quarries in the mountainside were known to be veritable strongholds.

Now the *citow* ('head' or 'master') of the Yu clan, a man then in active middle age, was a magistrate who possessed a mandarin's button of one of the lower grades, by virtue of which, or of his five thousand armed clansmen, he held the power of life and death in his own district; but though he was in consequence feared by these, they dreaded his lady infinitely more. Her word was said to be law even to the magistrate himself; but, if so, it was consistent with a strong attachment that increased rather than diminished with the passing years. The fact that Madame Yu was notoriously 'a woman with a past'—and such a past!—did not in the least lessen the clansmen's respect for her. They, being Hakkas, were willing to forgive almost anything to a born leader of fighting-men; and madame—or, to give her the

name bestowed upon her in a country where nicknames are universal, the Beautiful Witch—had certainly 'given her proofs' when scarcely more than a girl, albeit in a most unholy cause. For the secret society whose most dreaded and successful leader she had been simply had plunder for its aim and massacre for its method.

The clansmen's fear of their *citow's* lady, however, by no means arose from that, but from a cause that the men seldom, and the women never, cared even to whisper, the Beautiful Witch being generally believed to owe her unbroken series of successes to a compact with the Evil Spirit; for these continued till the unlucky day when she fought the 'foreign devil,' whose magic was superior to her own; which, being translated, meant that his men were better trained and armed. Be that as it may, Madame Yu might very well have earned her sobriquet by her physical attractions alone, supplemented as they were by a strongly wayward and imperious nature. Half-caste as she was, she had inherited from her 'Dago' (Spanish or Portuguese) father a tall and graceful figure without embonpoint, yet sufficiently rounded for symmetry, regular European features, fine if fierce dark eyes, and a skin no darker than that of many a southern European belle; whilst from her Chinese mother had doubtless come the great coils of jet-black hair, the broad plaits of which reached to her waist. Now though scandal said openly that it was the heavy bribe which the head of the Yu clan had paid down in sacks of silver that had rescued her from the death penalty, it was only secretly hinted that the *citow's* having met the Beautiful Witch at the critical moment, and fallen in love with her at first sight—like his marrying her directly she was free—had been brought about by 'the evil influence.' But as she was barely three-and-twenty at the time, and 'as handsome as paint' at that, 'Western barbarians' will doubtless fail to see the need of any such supernatural intervention in the case.

Even at the period of this story, when she was about nine-and-thirty, she was still a handsome woman, and might even have passed for her only child's sister—a daughter having been the only issue of the marriage—who was a favourite pupil of the good Sisters. The conversion of the girl to Christianity had greatly pleased the Hakkas, for most of the clan had been brought over to the Christian faith by the missionaries who had thrown in their lot among them; a fact, this, which the Boxers' secret agents had either overlooked or been unaware of. Ah Looey, too, had just been promised in

marriage to a young student at the British College in Victoria, whose father, a wealthy Hong-kong merchant, was a British subject.

One beautiful morning in autumn—a time when the climate of southern China is ever at its best, and at an hour when all nature seemed to breathe an air of Sabbath peace—a little procession was winding its way along a narrow road between bamboo thickets in the heart of the Hakka district toward a distant white stone chapel that was just visible on its border. First came two tall clansmen carrying presents for the Sisters in covered baskets slung on each end of their long steel-headed spears, which they balanced on their shoulders like carrying-poles. Then came six coolies carrying a mountain-chair somewhat similar to the ancient 'sedan' of our great-grandmothers, but built of the very lightest materials. The green bamboo blinds were up, and the Beautiful Witch, who was riding in it, was using a large and handsome fan; though, as the breeze was quite perceptible in the gap they were then in, the desire to hide from her chair-coolies the anxious expression her face bore as she glanced back at her daughter probably prompted her action. Indeed, she presently ordered the coolies carrying her daughter's chair to close in nearer to her own.

Before Madame Yu started, her husband, the magistrate, had strongly remonstrated with her for allowing their daughter to continue to attend the chapel services whilst the present dangerous excitement lasted; but this masterful lady, resenting his interference, promptly announced her approval of the girl's attendance at the chapel, and added that she intended to accompany her, 'so that for the first time in her life she would be able to hear a Christian service.' The magistrate's wayward and imperious partner, however, took the precaution to place a heavy British revolver and some cartridges in the chair, and to order all the coolies to lash their long spears to the sides of both chairs, whilst the other six Hakkas were to place their Chinese double-barrelled pistols in the sashes they wore under their jackets. Finally, four clansmen, carrying more presents for the mission in similar fashion to their comrades in front, were to follow the chairs closely.

The view from the hillside just then was a very beautiful one. The sapphire sky was cloudless, and so smooth was the blue water beneath it that sky and sea seemed to blend in one upon the horizon. Below the winding road the light green of the bamboo and sugar-cane clusters that bordered the paddy-fields harmonised well with the hue of the dark red earth in the great quarries that had eaten away the mountainsides up to their very summits. Here and there, too, just peeping out from small clumps of trees, were the houses of rich stone-quarry owners, their quaintly decorated outside walls and queer-shaped roofs

being most fearfully and wonderfully embellished with marvellous monsters in coloured porcelain.

But the young girl, as she rode in her mountain-chair, saw none of these things. Her thoughts were evidently of other matters, perhaps not entirely unconnected with a certain youth in the neighbouring British colony; for her eyes were fixed on the highest peak of the mountainside, up which, in terraced tiers, rose the beautiful city of Victoria, then just dimly visible in the clear atmosphere of that brilliant day. Perhaps the young student's thoughts were occupied in similar fashion just then, for Ah Looey was as handsome as she was good and gentle, having inherited her mother's beauty without a single trace of the fierce ambitious nature that went with it; though, where her affections were engaged, she could show some of her mother's high courage. Hence the thought that the good Sisters were in danger had only made her the more intent on going to them, quite ignoring the risk to herself which this involved.

Another quarter of an hour at the steady pace they were then travelling sufficed to bring them to the plain stone building, surmounted by a cross, in which the Christian services were held, just as the bell was ringing for the early celebration, its loud summons unfortunately reaching other and less friendly ears.

The Beautiful Witch had meantime entered the sacred building, and, seating herself beside her daughter, seemed most unusually quiet and subdued when the service commenced; listening, too, with close attention to the white-haired priest as he exhorted his flock to be faithful unto death—a way of alluding to the danger all present were exposed to in those perilous times that seemed to compel her respect. Then a singular thing happened. The Beautiful Witch seemed most strangely fascinated by a fine representation in pure white marble of the Virgin Mary, with the Infant Saviour reposing in her arms; and so evident was this that the worshippers whispered to each other that a miracle was being wrought before their eyes, and that 'the Witch' was being converted! Be that as it may, at any rate her demeanour was undoubtedly a most strangely altered one on that fatal Sabbath morning during the solemn calm that then seemed to pervade the House of God. But the officiating priest had hardly pronounced the parting benediction when loud shouting in the distance, and other ominous signs of the approach of an angry mob, reached the ears of the still kneeling congregation. Then, as all hastily rose from their knees, the old fierce light leaped once more into the Beautiful Witch's eyes. Nearer and nearer came the uproar, swelling into a perfect pandemonium of yells, howls, and threats. The old priest, bravely maintaining his position at the altar, exhorted his terrified hearers to remain tranquil and meet death calmly, trusting to find in the mercy of God a refuge from the cruelty

of man. But as he finished speaking the Beautiful Witch sprang to the porch and summoned her spearmen; then, turning to the priest and the now trembling Sisters, 'Quick!' she commanded. 'Take the old people and the children, and hurry out through yonder half-hidden door to the bamboo thickets; then run down between them to the shore, where one of my husband's large stone-junks lies at the jetty. Tell them to steer her for the nearest of his villages and bring help. I will hold your chapel and keep the Boxers busy till you are all safely away. Quick!' she repeated as the good old man hesitated to accept safety at the probable cost of her life and that of her little party. Then, finding that all remonstrance was useless, he and the Sisters led their frightened flock down to the great stone-junk alongside the jetty, which, after some delay, got safely out to sea.

But Ah Looey had broken away from the Sisters, and run back to her mother's side. Nor could she be induced to leave her again. The sixteen armed Hakkas who had come with their mistress to the chapel were then joined by half-a-dozen more who had been amongst the congregation, and these, by her orders, hastily armed themselves with axes and iron bars from an adjoining stone-cutter's mat shed, and commenced to break down the woodwork and rails of the interior of the chapel to form a barricade behind its closed doors. They had hardly completed their task when a mob of many hundreds of Boxers and bad characters from all parts of the province reached the front of the chapel. The doors, however, were firmly secured, whilst the chapel bell was swinging madly backwards to send an alarm to the distant Hakka villages, which would sooner or later bring many hundreds of armed men to the rescue of the little party within.

Meantime 'the strangers' who—in the long silk gown of the trader or the short cotton jacket of the coolie—had so mysteriously spread themselves over the province were now seen in their true character as leaders of the Boxer movement, and were openly directing the operations of the mob. Very soon realising that the stout teak doors could not be forced by any weapons or tools they had with them, they ordered some of their followers to drag up a heavy tombstone from an adjacent burial-ground, while others were despatched to bring down three stout wooden posts from the mission house. These posts were then fixed in the ground in a slightly slanting position, and lashed together at the top, while the heavy gravestone was suspended from them by a stout rope so as to hang in a rough sort of tripod that would permit the stone to be swung backward and forward, and, when suddenly let go, to crash against the chapel doors with an impetus that even stout teak and iron bars could not withstand. As there

had been neither time nor suitable tools available to loophole the chapel walls, the Boxers were able to carry out their plan with perfect impunity.

The heavy stone was no sooner in position than fifty eager hands seized the rope, swung the stone high in the air, and then suddenly quitted their hold, so that it struck the doors at the rebound and instantly sent them crashing inward, mere fragments of splintered teak. But the strategy of the Beautiful Witch immediately scored, the mob's onrush being brought up by a strong barricade of closely packed woodwork. Thereupon four of the fanatics, who firmly believed that they had been rendered bullet and steel proof by the Boxers' spells, sprang toward it, but only to find that something had gone wrong with that particular brand of spell, for when the Witch woman's heavy English revolver had spoken four times these 'invincibles' were lying before the barricade writhing in their death agonies. The rest, checked for the moment, hung back; whilst that part of the *Punti* mob which had only come to gloat over the torture and massacre of the venerable priest, the good Sisters, and their helpless converts, before assisting to plunder the mission house, slunk away, cowed at the sight of the dreaded Witch woman and her armed Hakkas. The rest of the mob, who had been recruited from the banditti, water-thieves, and desperados of the Delta, raising shouts of 'Kill the Witch woman!' made a most determined attempt to rush the barricade; but the heavy revolver in the hand of that expert markswoman, and the Chinese double-barrelled pistols which six of her Hakkas used, continued to spit venomously, and again checked the assailants, who left a track of dead and dying behind them as they recoiled.

Then for a time it looked as if the Beautiful Witch would succeed in holding her own till succour came; for the mob, repulsed from the barricade, turned to the less dangerous and far more profitable work of looting and firing the mission house, though not before another desperate attempt to tear down the barricade had been made by the fiercest of the Delta desperados, which had resulted in their leader, whilst on its summit, being promptly shot through the head by the Witch woman, those of his followers who had reached the other side being impaled on the long steel points of the Hakkas' spears.

Yet, strangely enough, the firing of the mission house, which at first seemed to be a helpful diversion of the mob's fury, was ultimately to prove the Beautiful Witch's undoing. As the flames roared and crackled along the great wooden verandas, and then spread to the building itself, a Boxer leader got an inspiration, and, with loud shouts of '*Foh! foh!*' ('Fire! fire!'), carried some of the ignited woodwork toward the chapel porch; but, mindful of the Witch woman's deadly shooting, he and his followers were care-

fully screened by doors, shutters, and mattresses carried in front of them, the last-named having been previously drenched with lamp-oil to ensure their burning fiercely. Nor did the few cartridges the defenders had left suffice either to stop the Boxers' advance or to prevent them from flinging the whole mass into the chapel porch. Then several bunches of fire-crackers were exploded, and, despite the toll taken by the last pistol-shots of the Hakkas, very soon afterwards flames and smoke were darting and rolling through the porch toward the wooden barricade behind it, the smoke filling the chapel in suffocating volumes. Hidden behind this screen, and protected by the now blazing barricade, the Beautiful Witch, seizing her opportunity, flung back the half-concealed panel of the priest's private entrance, a mere slit in the thickness of the wall, and sallying out, the Hakkas with their spears quickly accounted for the Boxers left to watch it.

The little party then succeeded in reaching the road between the bamboo thickets which led to the seashore. Ah Looy was clinging to her mother's arm, who in turn was ringed round with the spears of her men, so that they seemed even then likely to reach in safety and seize the three or four small craft that lay at the end of the jetty. But the evil fortune that had overtaken the Beautiful Witch since she left the chapel culminated in a final disaster.

The breeze blowing freshly from the shore seaward suddenly fell, and then failed altogether. The Boxers—who by then had been enabled to enter the chapel—on discovering the open back entrance, pressed through it and rushed down between the bamboos in hot pursuit. At first their swords could make no impression on the compact body of spearmen, until, with devilish cunning, some of the hired assassins contrived to crawl and wriggle snake-like amongst the thick bamboo stems between which the road ran, and, passing beyond the group of spearmen, hamstrung from behind those nearest them. As these fell the crowd of Boxers made a final rush, and overwhelmed the remainder by weight of numbers.

But while the clansmen were making their last stand the Beautiful Witch and her young daughter had contrived to reach the end of the stone jetty, where, anchored in deep water, lay several large sampans (boats with mast, sail, and oars). Springing on board the nearest one, they dragged her anchor in, and were getting out two of the long oars, when, the last of the spearmen having been hacked to death, the Boxers swarmed down the pathway and crowded into the other small craft lying a few fathoms nearer the shore. The chapel bell had then ceased to give its alarm, for the ringer lay dead beneath it, with the rope still grasped in his clenched right hand, his work accomplished.

Far in the distance, but as yet too far off to reach the scene in time, were many swiftly pulled boats crowded with armed men, the sun glittering, as if in mockery, on hundreds of rifle-barrels and spearheads. The Beautiful Witch, as she measured the distance with her practised eye, saw plainly that all hope of a rescue in time was gone. So, turning to Ah Looy, she bade her repeat 'the Christians' prayer'; then, after tenderly embracing her, she first kissed her on the temple, and next, placing the muzzle of her revolver to it, pulled the trigger. Afterwards, with set and stony face, she gently lowered her daughter's body from her arms to the deck, and, attaching it to the anchor, let both sink into the clear blue waters, watching her daughter's corpse till it was out of sight, with a look of triumph in her eyes at having been able to preserve her pretty and innocent young child from outrage and torture at the hands of the bloodthirsty miscreants then closing in on her. As, however, she again raised her pistol with its last cartridge reserved for herself, a foul threat and taunt from the first Boxer that sprang into her boat caused the Beautiful Witch to change her intention, and the next instant the ruffian leaped high into the air, shot through the heart. Then, as she sprang to the side to throw herself after her daughter's body, the Boxers, exasperated at the fall of their leader, buried their weapons in her body, which quickly sank out of sight, and was never recovered.

The weird explanation given by the dwellers on the shore of the bay was that during the awful typhoon that broke over it and the adjacent coast that very night, the Spirit of Evil had borne the body off! In proof thereof they adduced the story told by the affrighted crew of a wrecked stone-junk, who declared that they had seen a dense black cloud, as the whirlwind passed, carrying some object along with it. This indeed might very well have happened; but whether or not it was likely to have been the Spirit of Evil with the body of the Beautiful Witch that the half-drowned junkmen saw, readers must decide for themselves. Albeit, the memory of her innocent young daughter is still cherished by the good Sisters and their former pupils. Every soul of the congregation that the mother had saved from torture and massacre, at the cost of the life of her idolised child as well as that of her own, always declared that the miracle they firmly believed they had witnessed (the conversion of the Beautiful Witch whilst kneeling beneath the carved representation of the Virgin Mary and the Holy Child) had delivered her from the power of the Evil Spirit, who, enraged at being baffled, and unable to compass her destruction in the sanctuary, had brought it about at the hands of his Boxer servants as soon as she quitted the sacred place. Be that as it may, the manner of the Beautiful Witch's death certainly seemed some atonement

for her early life, for it was that of a gallant leader fighting in a good cause; whilst the vengeance the infuriated husband exacted for her murder and the death of his only child caused

the Boxers to shun that part of the Quangtung province as they would a plague centre, and this spelt safety for all the other scattered Christian communities within it.

THE ARMAMENTS TRADE.

THE MAKING OF ARMOUR-PLATES.

By E. T. GOOD.

THIS terrible war has invested the armaments industry with a new significance, and a few particulars about the trade, especially the making of armour-plates, may not come inappropriately. It may surprise many to learn that the aggregate productive capacity of our British armament works is about three times as great as that of the German concerns. For this circumstance we have to thank the enterprise and patriotism of our private companies rather than any encouragement given by our Government. Krupp's, of course, is the biggest of the world's armament producers; but the combined capacity of the Krupps, Siemens-Schuckerts, and Schichaus for the production of ships, guns, armour, and ammunition is much less than half that of our Armstrongs, Browns, Cammells, Firths, Hadfields, Vickers, and the other British companies engaged in this business. Roughly, our British armament firms are capitalised at forty million pounds. This is exclusive of our Government dockyards and arsenals. The aggregate capital of the German works is about fifteen million pounds. It is quite probable that the superior capacity of our works and the quality of our products will prove the dominating and decisive factors in the war, for there is much evidence to support the idea that the long and loudly advertised German works are failing to furnish the German army with adequate supplies of arms and ammunition.

Chief among our armament companies are Vickers Limited, capitalised at more than eight million five hundred thousand pounds; Armstrong-Whitworth's, at eight million five hundred thousand pounds; Cammell-Laird's, at four million pounds; John Brown's, at nearly four million pounds; the Nobel Dynamite Company, at four million pounds; Beardmore's, at over two million pounds; Kynocks Limited, at nearly two million pounds; Birmingham Small Arms, at over one million five hundred thousand pounds; and so on.

The Barrow shipyard and naval construction works of Messrs Vickers Limited cover more than one hundred acres, and employ in ordinary times about twelve thousand men. The same company's River Don Steel Works at Sheffield occupy about eighty acres and employ about seven thousand hands. It was here that the first 13·5-inch guns were completed, while the

usually well-informed technical press was declaring that the Admiralty would not employ guns larger than 12-inch. The latest types of ordnance and the heaviest of armour-plates are produced in the Sheffield works. Here are to be seen the newest electric steel furnaces, cranes of two hundred tons lifting capacity, hydraulic presses capable of exerting eight thousand tons pressure for shaping big guns and armour-plates, and rolls for dealing with plates forty feet long, twelve feet broad, and two and a half feet thick.

At Elswick-on-Tyne, Newcastle, are the famous works of Messrs Armstrong-Whitworth and Company, stretching about two miles along the river-front, and comprising a shipyard, steel-works, gun-shops, and electrical engineering plant, and employing about twenty thousand hands. This firm has armour-plate works at Manchester, and a huge new shipyard at Walker-on-Tyne.

The John Brown Company, of Sheffield and Glasgow, is another of our big self-contained armament firms. All kinds of iron and steel products are made at the Atlas Works, which cover fifty acres in Sheffield, and the largest battleships are built at Clydebank, where the plant occupies about eighty acres. This company, besides being one of the pioneers in the armour-plate industry, claims to have been the first firm to demonstrate the commercial value of the Bessemer steel process. Briefly, the principle of this process, which revolutionised the world's iron and steel trade, is to blow air through molten iron. The heat is intensified, the impurities are burnt out, and the metal becomes steel.

The Cammell-Laird Company, of Sheffield and Birkenhead, is a similar concern. The annals of this enterprise furnish a pretty accurate history of the development of the modern armaments industry. The founders, Mr Charles Cammell and Mr Thomas Johnson, set up in business in a small way in 1837. Little but railway iron was made until the 'sixties, when the Bessemer process was adopted, and steel became cheap enough for general heavy purposes. In 1863 Cammell's manufactured iron armour-plates. In 1865 it made steel-faced armour by the Wilson process; but it was not until ten or a dozen years later that the Government definitely decided to accept steel plates.

Now this firm, besides its one-hundred-acre shipyard at Birkenhead, possesses the great Cyclops Steel Works in Savile Street, Sheffield, a thirty-acre steel and armour-plate mill at Grimesthorpe, Sheffield, large blast-furnaces at Penistone, and ironworks at Workington, in Cumberland. Besides all manner of general, marine, and naval work, the company manufactures a special bullet-proof steel which is used for breastplates, gun-shields, and armouring motors, trains, aircraft, and light vessels. Rolled into plates only about the eighth of an inch in thickness, this steel has a wonderful resistibility.

Another notable Sheffield armament firm is that of Messrs Thomas Firth. Although this is a little-advertised concern, it has made more projectiles for the British Government in the last fifty years than any other company. It also manufactures enormous guns and castings for war-vessels.

Then there is the world-known Hadfields steel plant at Sheffield, covering ninety acres, and turning out the very highest-class steel for military and naval purposes, including projectiles which have pierced the latest Krupp armour.

Armour-plate making is, no doubt, the most spectacular branch of the steel trade, and one of the most important lines in armaments. It is little more than a century since the employment of armour-plate, as at present understood, was even suggested. It is little more than half a century since the first armour-plated vessels were employed. It appears, according to the *Encyclopædia Britannica*, that the first proposal to use armour for war-vessels was promulgated by Sir William Congreve. That was about 1805, for in the *Times* of 20th February in that year reference is made to Sir William's 'designs for an armoured floating battery.' The inventor claimed that this would be proof against artillery fire. It seems, however, that the idea was not taken up by the British Government. No greater success attended the efforts of one John Stevens, of New Jersey, who submitted plans of an armoured vessel to the United States Congress in 1812. Stevens's family nursed the idea, and in 1841 they exhibited an armour-plate of wrought-iron which could not be pierced by the best projectiles then in use. It was also in 1841 that General Paixhans urged the necessity for protecting ships with armour. Still nothing was done by any Government, though many experiments and demonstrations were made in America, England, and France between 1827 and 1854. In 1845 Duprey de Lome made designs for an armoured frigate for the French Government. On 30th November 1853 the Turkish fleet was destroyed by shell-fire at Sinope. That prompted the Governments of Britain, France, and the United States to build 'armoured floating batteries,' and

in 1855 the French employed three of these with great success at the bombardment of Kinburn. These vessels silenced the Russian forts in four hours, and although frequently hit, they were practically uninjured. The value of armour was then fully recognised, and battleships became 'ironclads.'

Both for ships and forts armour was made of wrought-iron in the early days, but a change followed the introduction of the Bessemer process of steelmaking in the 'sixties and 'seventies. Gruson, of Magdeburg, introduced chilled cast-iron armour for land forts in 1868. This was too hard to be perforated by any projectiles then in use, but it was liable to destruction by fracture; and the armour for ships continued to be unchilled wrought-iron down to 1876. In that year Schneider, evidently quick to see the virtues of Bessemer steel—just as Napoleon III. had recognised its qualities for gunmaking, and had given Bessemer practical encouragement when the British Government had turned a deaf ear to him—introduced steel armour-plates. Eleven years previously the Cammell firm, of Sheffield, had produced steel-faced armour-plates; but our Government stuck to the all-iron ones. In 1876 a series of important trials was made at Spezzia, and the superior resistive power of steel over iron was clearly proved. Still, however, the steel showed a tendency to crack, and it was this defect which led Messrs Cammell to introduce a 'compound plate' in 1877. This, in plain terms, was a steel surface welded on to an iron foundation, the molten steel being run on the white-hot iron. It was known as the Wilson process. About the same time that Wilson invented this process, Ellis, of Messrs John Brown's, also of Sheffield, conceived the idea of cementing a steel plate to an iron one by running molten metal in between. In both the Wilson and the Ellis compound plates there was still a weakness—a tendency on the part of the steel to crack and become detached from the iron. But improvements were effected both in the manufacture of steel and in the making of plates. In 1887 Captain T. J. Tresidder patented a method of chilling the hot surface of armour-plates; and in 1891 Mr H. A. Harvey, of New Jersey, introduced a method whereby an all-steel plate could be face-hardened in such a way that the advantages of the compound principle were obtained in a homogeneous plate by keeping it for about a couple of weeks at a high temperature in contact with finely divided charcoal. Meantime Schneider had introduced nickel into armour-plate steel in 1889. A little later the St Chamond Works employed chromium, and the chief processes were united in the Harvey-Krupp patents. From then (1893) until a year or two ago the Harvey-Krupp processes held the field. Now still better processes have been brought into use, and the patents controlled by the Harvey United Steel Company have lapsed or

are no longer used, and the company has liquidated.

Each of our five armour-plate makers—Armstrong's, Beardmore's, Brown's, Cammell's, and Vickers'—have their own particular pet method of manufacture, as well as their special steel compositions; but, roughly, it may be said that all armour-plate steel now consists of 3 or 4 per cent. of nickel, a metal which comes almost exclusively from Canada, about 1 or 2 per cent. of chromium, .25 to .5 per cent. of carbon, and a still smaller percentage of manganese. After the composition is cast in the form of a huge ingot it is heated up to a uniform temperature, and then forged down into a kind of slab under a powerful hydraulic-press exerting as much as eight thousand tons pressure. The slab is again heated, and then passed through huge steel rolls until it is a plate; then it is subjected to delicate thermal treatment; next it is cut to size by immense shears, surfaced, and planed; then it is 'soaked' in a 'cementation' furnace for a few weeks in contact with carbon, the heat being brought gradually up and then gradually down; next it is intensely heated and suddenly plunged

into a huge bath of oil, which makes it tough. Again it is heated, but not so intensely, and chilled with water by a specially contrived sprinkler; yet again it is slightly heated and passed to the bending or shaping press, where it is given its final form; drilled and machined; and then sent to the ship.

The manufacture of big guns is also a highly interesting process, or series of processes, and in this, of course, the quality of the steel is of vital importance. The huge ingot is bored, then a mandrill is inserted, and round this the tube is forged by hydraulic pressure. Then the gun, in this rough shape, is heated, and next tempered in oil, much as an armour-plate is. The tube is strengthened by jacketing or winding. For the winding process a high-class steel ribbon is used, and on, say, a 12-inch gun more than a hundred miles of this is wound, its weight being twelve or thirteen tons. Then on the top of this an outer tube is solidly shrunk. Some guns are strengthened with a number of rings. In every process, from mixing the steel to the final machining of the gun, extreme care must be exercised.

THE GERMAN INVASION OF ENGLAND.

SINCE the time when Von der Goltz wrote that 'the way is short, and, to an enterprising admiral, not difficult,' the idea of an invasion of England has been an obsession in German military minds. And we have recently been told that a number of Hamburg liners are being held in readiness in the Elbe in order to be used as transports when the time comes for putting the plan to invade England into execution. Circumstantial accounts have even reached us of the necessary alterations to these great ships having been carried into effect.

But Hamburg and the Elbe are not the only jumping-off points for a German invasion. There are three other rivers which should also be taken into consideration—namely, the Weser, on which Bremen is situated; the Ems, with Emden, the nearest port of all; and the little-known river of the Eider, in Schleswig-Holstein. It has, too, occurred to some of our military prophets that the great liners laid up in the Elbe might not be used for transport purposes after all; might, in fact, be deliberately sacrificed in order to engage the attention of our submarines and older warships not forming part of the Grand Fleet, and that a swarm of trawlers and similar boats might convey the real invading army to our shores while the attention of our coast defence vessels was thus being occupied elsewhere. If a few of the smaller boats were sunk the loss of life would not be so great as in the case of a great liner, and numbers would give a margin of security. Moreover, German shipbuilding re-

sources are better able to cope with the rapid preparation of a fleet of unarmed small craft than with warships. There is also another fact to be remembered. Though the greater shipbuilding yards of Germany in the North Sea equal in number those in the Baltic, yet those in the Baltic are almost entirely used for the construction of warships. This, of course, is the case with the Imperial yard at Kiel, and with Krupp's and Howaldt's works at the same port. The Vulkan Works at Stettin, too, are of the first importance for the German navy. Next to these rank Schichau's works at Danzig and Elbing, and the three smaller yards at Flensburg, Lubeck, and Rostock. It may be taken for granted that all these are now working exclusively and at their utmost capacity for the German navy.

In the North Sea there are, apart from the Imperial yard at Wilhelmshaven, only Blohm and Voss's yard at Hamburg and the Weser yard at Bremen which carry out a great amount of naval work for the fleet. Blohm & Voss's yard carries out an immense amount of commercial work in addition, for it has been in existence for thirty-seven years, and is the most important yard on the North Sea. There are also three other great yards on the Elbe, those of Reihersteig, of Heinrich Brandenburg, and of Janssens. None of these last build warships.

On the Weser, the Weser shipyard at Grope-lingen, near Bremen, with its large ironfoundry, ranks next to that of Blohm & Voss. This

yard was founded in 1844, and was converted into a company in 1872. Rhine monitors, mine-layers, floating cranes, and steam-dredgers of enormous size are among the craft in which it specialises, and recently Dreadnoughts have been built by it.

Nearer the mouth of the Weser, at Vegesack, where the Wümme runs into the Weser, are the Vulkan Works, founded in 1893 by the purchase of two smaller yards previously in existence. These works have about one thousand six hundred yards of water frontage, and have had a career of almost unbroken prosperity, rarely paying a smaller dividend than 12 per cent. The writer (who was at one time engaged in teaching the very large staff of engineer apprentices here) can testify to the thoroughness of the training given to their men by the works; and considering the minute care given to the equipment of the yard, it is curious that the Vulkan Works of Vegesack have attracted so little notice. The workmen's houses at Vegesack, built for these works, are model dwellings of their kind. Each house is surrounded by a garden.

At the very mouth of the Weser are Tecklenborg's works at Geestemünde, founded in 1840—a very large yard, which does not build warships—and Seebeck's, which makes a specialty of constructing trawlers, and possesses five dry docks. Seebeck's became a company in 1895, and Tecklenborg's in 1897. Ruckmer's yard at Bremerhaven, in addition to building ships for other firms, possesses a large trading fleet of its own.

The Ems, on the other hand, has but two large yards, both of recent date. These are the Nordseewerke at Emden, and Meyer's yard at Papenburg. Both of these build small steam and sailing vessels.

Thus the great majority of the larger shipyards on the Elbe, the Weser, and the Ems, under normal conditions, do no naval work at all. And though the Ems has the two smallest yards of all, yet it is extremely well fitted for the assemblage of a fleet for invasion. It is too often forgotten that in past centuries Emden was of far greater commercial importance than either Bremen or Hamburg. Mary Queen of Scots concluded a treaty of alliance with the town on 26th September 1557, and a splendid silver-gilt *Nef* (or salt-cellar in the form of a ship), presented on her behalf, together with a handsome loving-cup given by the Merchant Adventurers of London, in Queen Elizabeth's days, still form part of the town's *Silber-schatz* (or silver treasure). Marlowe, in his *Tragical History of Dr Faustus*, alludes to Emden as one of the wealthiest ports in Europe. Since these days Emden declined. Its harbour was neglected and silted up, and its inhabitants now number only about seventeen thousand.

But after the completion of the Ems-Dortmund Canal in 1898 work was carried on at Emden with literally feverish haste. Up to the year

1900 five million marks had been spent on the harbour, and in that year the Government allotted another seven millions and a half for the same purpose. The Alte Höft, a great obstacle in the channel of the Ems, was dynamited out of existence in 1895, the cost of this and of other works in the vicinity amounting to another two million marks; and since then quite five millions more have been spent in dredging the Ems and in building sea-walls. The harbour is now capable of accommodating fourteen of the largest liners at one time. From Emden runs the Ems-Jade Canal to Wilhelmshaven, completed in 1883. The Ems-Dortmund Canal, in direct communication with Krupp's at Essen, has a depth of over eight feet, and can carry steamers of two hundred and twenty feet in length and of seven hundred and fifty tons burden. And there is a third and smaller canal which links up the Ems with the Weser, and brings it into communication with the shipyards of Vegesack and Bremerhaven. This is the Hunte-Ems Canal, starting near Potshausen on the river Leda, which joins the Ems at Leer-Ort, and running into the Hunte to the south of Oldenburg. The Hunte runs into the Weser at Elsfleth, between Vegesack and Bremerhaven.

Least known of all the German North Sea shipyards is the great yard and foundry at Tönning, on the west coast of Schleswig-Holstein, diagonally opposite the mouth of the Weser. Near its mouth the river Eider widens and deepens very much. At Tönning it is over one thousand three hundred yards wide and two hundred and thirty feet deep—facts which are rather surprising to those who know the immense mud-flats and shallows of this coast. Since the year 1900 the works of Schömer and Jensen, located here, have comprised large boiler and engine works in addition to the original shipyards. This firm specialises in tug-boats, and claims to have built the largest tug in existence—the *Roland*, one hundred and sixty-eight feet in length, thirty feet in width, with a total of one thousand five hundred horsepower.

If one who is in no sense an expert may venture to hazard a prediction, it is that the real invasion, if it comes, will come from the mouths of the Eider and the Ems, if only because they are at the extreme ends of the German triangle in the North Sea. A glance at the map will convince any one that the wide bay of the Dollart will suffice to screen preparations at Emden from the notice of (possibly) unfriendly Dutch neighbours, and that the mud-flats and undiked small islands, termed Halligen, near the Eider, will also prove a sufficient protection from too curious eyes in that neighbourhood. The waters round Sylt, Amrum, Föhr, and the other Frisian Islands would provide abundant hiding-places for a fleet of trawlers.

WHAT RUSSIA AND POLAND OWE TO THEIR WOMEN.

RUSSIA and Poland are now more interesting to us than ever, although life there has become harder and more difficult. We can see and feel what the people are able to do. Life has become absolutely changed in both these countries—less pleasure and more toiling. People have begun to realise that the situation is more serious, and have started active work. Petrograd and Warsaw used to be far distant from each other, not only in actual mileage, but in the very spirit of the nations. Now, however, the war has brought the two countries into closer contact with one another, and Polish soldiers are standing shoulder to shoulder with their Russian comrades against a common enemy. Nor is this the chief point of interest for us in the changed condition of affairs. The war has brought the people of Poland into direct and personal contact with the people of Russia, into a contact which has never been known in the past. Hitherto the Pole has looked upon the Russian as the source of his unhappiness; he has hated him because he has not known him as a man and as a comrade in distress. Now that Poland has become the battle-ground of the northern armies, the misery occasioned there has drawn forth a spirit of humanity and aid from the Russian which has changed the Pole's idea of his character.

Nor is it the men only who have caused this change in the attitude of the two countries. The women, by their courage and their mutual sympathy, have introduced a new spirit and a new ideal. The despair and the misery of Poland at the present time have called forth the work of sympathetic Russian men and women. Red Cross parties for the Polish and Galician fighting-line have been started in Russia, composed largely of Russian women; while much has been done by the Russian people to alleviate as far as possible the civil distress in the Polish territories.

Russia and Poland have always owed much to their women. Russia has in her fighting-line what no other European nation possesses—women struggling against the Germans in the trenches, side by side with the men. Foremost in every social advancement, Russian and Polish women have stood out conspicuously. They have been equal with the men, if they have not taken the lead, in culture and art and courage. The character of Cossack women is a fighting one; they are usually trained from childhood in horsemanship and manly pursuits, and it is not surprising for us to find them in the fighting-line to-day. What does come to us as a surprise is to find in the fighting-line intellectual women, like teachers and others educated for a profes-

sional career. In the Russian firing-line, up till now, are to be found four hundred women of all classes and professions. Russian women have had the courage and have had the liberty to go into the trenches; they have had the courage and the desire to go as nurses to help in the fighting-line; they have had the sympathy and the desire to go to the help of their distressed comrades, the starving and the helpless in Poland. By all these things they have raised up a new ideal and a new conception in both countries, which were formerly so much at enmity. The courage and the sympathy shown and the aid given by the Russian women at this and at every other crisis in their country's history have done as much to change the idea of the Poles toward the Russian people as the actual declaration of freedom to Poland made by the Grand Duke Nicholas at the commencement of the war.

IN MEMORIAM.

DEAD? Nay, not so. Sleeping? Ah! surely not,
When summoned forth from fairest earthly lot.
God doth not rust His valiant sons of earth,
But bids them hence to greater, mightier birth;
His life—deep dipt within the fount of love,
Pure symbol of the noblest above—
Was wanted of him, and his gracious parts
Required for other shrines than human hearts.
Life was in love with life, but God's bright wing
Fanned the immortal impulse from within.
Through unfulfilled renown his joyous youth
Took little heed for aught save right and truth.
Ofttimes a look, full strange to his short years,
Dawned in his eyes; the light of holier spheres
Stirred their unkindled fires within his breast,
And promised him eternity's bequest.
Another hour-glass runs its final sands,
Deep in the twilight of war-riven lands.
Leaf of love's tree blown down the vale of tears,
Whose name is writ in heaven's own book of spheres.

Glory and wealth are worthless to the wise,
Life holds for greater souls another prize,
A higher guerdon far than man's estate.
Mightier he who is than seemeth great.
Who are those souls of light above whose bier
We earth-bound dreamers claim to shed the tear?
They are the living for whom tears we shed;
Thrice happy souls are those whom we call dead.
He knew his lot, and straightway calmly went
His heaven-inquiring way; and, thither sent
By Him who breathed into our souls life's breath,
Undaunted faced the gorgon mask of death.
Strange that his earth-reft spirit still should waft
A potent sway, a benediction soft!
Spirit of love, that watcheth o'er love's rest,
Ray from the one celestial Father's breast!
Dead? Nay, not so. No monument he needs,
Nor flower-decked tomb that time would mock
with weeds;

The white rose of an honourable name
Alone upon his grave shall speak his fame.

VIOLET TWEEDALE.

Chambers's Journal

SEVENTH SERIES

THE HEART OF THINGS.

By HENRY LEACH.

LONDON, *Yesterday*.

ONE of the most interesting countries in the world at the present time is Spain. In these warring days that must appear to be a somewhat startling and doubtful proposition, so let us establish it at the beginning if we can, and proceed, if it is agreeable, to a glance at some of the points that make the old land of the Iberian peninsula the most attractive for an hour's consideration. Some may say that with the world in the crucible no country that is not engaged in the great war can be what we call interesting, unless, indeed, both subjectively and objectively, it is concerned with the war, and there appears an imminence that its guns may begin to shoot, and ought to do so. Yet even the vague expression that a thing is interesting indicates one special and definite quality, which is that it has elements of peculiarity. Alas! most of the good countries of the world are without peculiarity now in the chief respect in which they are considered. Look on a war map of the world with the parts that are engaged in the great struggle marked in blotches of black, and it will be seen that there is little enough of white remaining, and that much of it hardly seems to matter anyhow. In times of peace there may be strong contrasts among these lands and peoples, accounting for more than half the population of the world, that are marked in black, but there is an awful sameness about them now. They are at war. The world is at war. What is not engaged in the war does not matter at all, some may say; but that is not true. The case of Spain, then, is peculiar, and you will realise at once that of all the nations of past greatness that have been an influence on the development of the world, Spain is the chief outside the prevailing war. Yet it may seem that she has forgotten the world, and has been forgotten. Looking over the maps as we do morning, noon, and night, sometimes the eye falls on the south-west corner of this unhappy continent, and there is a moment's wonder as to whether Spain is of any account, or may be, and why we hear so little of her. She gains no publicity in the newspapers. Not every day on behalf of Spain is there breathed a threat against any of the warring Powers; she does not continually declare herself to be very angry about the things

that happen; she is contented to be in a large measure ignored, even though the reason why the newspapers have so little to say of her is chiefly because they do not understand. But pusillanimity has little or nothing to do with this attitude; nor is it by any means a matter of Spanish lazy indifference, arising, as might be suggested, from the instinct of this old people that it is pleasant to lounge in the sun, and the *mañana*—the convenient morning of the next day—will serve for such thought and work as cannot even then be postponed until the next rising of the sun. I do not think that since the war began a full total of ten columns about Spain has appeared in all the British newspapers, and I know that much of what they have contained has been misleading. The French journals have been paying a little attention to her, and some of the American also. Yet by some means the idea seems to have been established in Britain that Spain need not be discussed, that it does not matter, and is not 'interesting.' And at the beginning of this war it was as if it were a part of diplomatic etiquette that Spain should be ignored. She was a neutral, in regard to which there were certain possibilities, and that was some justification for the attitude. But these possibilities have to a large extent disappeared; yet it is still considered in some of the chancelleries that for the time being Spain does not exist. It happens that the writer knows this country and her people well—knew them well before the war, and has had more intimate acquaintance with them since; and as a study in neutrality having an object that is far from mean, he has decided that Spain is quite fascinating now. She indeed has no ambition to be reported in the newspapers to the extent of columns daily; but it is not that she could not supply them with sufficient matter of an occasionally sensational kind. The truth is that in her own way she is most immensely concerned with this war, and she believes, not without reason, that she has as much to win or lose by it as any other nation. Even when you walk along the Alcala in Madrid you may be made to feel the war intensely, and Spain is already changed in consequence of it. If you had been in the habit of reading her newspapers regularly for years past you would

realise that. Spain now finds herself in difficulties, but has a great ambition and a firm determination.

* * *

'Spain, indeed!' It is with a curl of the lip that some in a phrase like this will speak the name of Spain if she and her people are mentioned in association with the present upheaval of the world. But you will find, on a close and reasonable analysis of circumstances, that the prospects of Spain being a material factor in the future organisation of the world are appreciable. This is a world of actions and reactions, of reversions and revivals; one in which atavism is a definite and continuous principle. The simple idea of change and regular progress as it is generally entertained is, of course, not merely historically unjustified, but is impossible, and would in the long-run be for little good. That seems paradoxical. But mere science and invention do not make for the greatness of the world or the splendour of life. The world was farther from perfection at the outbreak of the war than it had been ages before that, and it showed too little promise of approaching nearer to the ideal. No assumption could be more unsound than that if the Germans, in their madness, had not broken loose, the world would have gone on steadily and surely to the state of the millennium. There was no evidence to justify any such fancy; the facts that are witness to the contrary are of overwhelming weight. In this there need be no undue reproach upon ourselves. How dare we now consider the world to be better than it was in some of the brilliant epochs of the past? And when the war is over there will be a disposition to ransack history in every department for suggestions and examples, so that life may be fashioned anew on the best principles of ages gone. All the great artists who paint new pictures, sculptors who shape the finest models, the writers of the greatest stories and poems study the examples of the past for their teaching and their inspiration; and so it is with life and in general. Most of the broad features of ancient history will be lived again and again before the weary planet comes to an end. History seems fond of its own creations; it turns plagiarist upon itself continually, and no old model of the past, good or bad, is exempt from revival. Less than two years ago, murmuring stupidly to ourselves that we were marching on in civilisation and greatness in life, we regarded it not so much as impossible that the cruelties of the early barbarians, the atrocities of Attila, the horrors of the Inquisition, and others of the red and black pages in history, could ever be repeated now that we have reached the heights of electricity and motor-cars and wireless telegraphy, as that it was too silly to think of such a possibility. Can you recall how, when the great *Titanic* sank after striking an iceberg in the Atlantic, that that disaster was felt by the world not so much

because of the loss of life as that it seemed such a terrible reflection on our progress? It was the kind of thing that we felt ought never to have been possible, and should not be permitted to happen again in this perfected world. And now here are the Germans, in one of the mad and hideously fantastic freaks of history, making a record before which those of the old savages and the medieval tyrants pale to extinction. We have before us now the most amazing and realistic example of the working of the great world law of atavism and reversion that has ever been presented; and after witnessing it, one, even with high faith and great hope for the beneficent working of human instinct, could not reject a suggestion as utterly impossible that the human Europe could crumble back to a raw, rough simplicity such as was its state before the time of the Romans.

* * *

Do not, then, curl the lip at the mention of Spain. Recall her past, consider her potentialities, and then, if you will think again upon these mundane laws of atavism and reversion, it is not unlikely you may come to decide that when history falls to picking up the old threads of its past again, it may select its once famous creation of Spanish greatness as some of the best possible material for new work. Remember that Spain has had many periods of greatness in the past; she has been frequently brilliant. And then in the time of the second Philip she rose to the loftiest heights of empire; on her dominions the sun shone always without setting, her tongue was spoken in the new worlds across the seas which her sons had established, and she sailed the ocean in the lordly way of ownership. It seemed then that Spain was the proudest nation that history had ever known. She fell. It does not matter to the argument how or why. Nations, like the men of whom they are made, fall into grievous errors, and they pay for them. Spain has paid in full. Deeper and deeper did she fall. A Spanish friend in Seville wrote a letter to me the other day, in which he laid a long, sad trail of historical reflection, in the course of which he murmured that his poor Spain had twenty-six million kilometres of foreign possessions in 1600, only thirteen millions in 1668 (Portugal and her colonies gone), ten millions in 1713 (Treaty of Utrecht), only six hundred and fifty thousand in 1820, when South America fell away, and but three hundred thousand or 'nearly zero,' consisting merely of the Spanish Sahara and Spanish Guinea, in 1898 as the result of the war with the United States. There is hardly any other tale of such sure and steady fall of a great nation. Bottom was reached at the beginning of this century. Spain believes fervently, and not without reason, that this was the darkest hour, and that the dawn already glows on her horizon. She believes that she will rise again, and that present circumstances

favour her prospects. Thinking, then, of her past and the obvious strength of her people, and reflecting also upon the atavistic tendencies of history, do not consider Spain with contempt. No greater or more foolish mistake could possibly be made. A little while before the war began I had the satisfaction of talking of the past, present, and the future of Spain with one of her greatest statesmen, the Count de Romanones, the late Prime Minister, at his mansion in Madrid. He is one of the few strong men in Spain to-day; but he will tell you, with no affected modesty, that Spain has no man strong enough for her demands and her desires; that what she craves for is one great strong man, and then she will rise. But even without such a leader she struggles gallantly, and with fervency the count told me the story of the great modern awakening of his country as he witnesses it. In every department of national life a new energy is springing up—the sense of power is in the souls and bodies of the Spaniards again; patriotism glows once more; the roads, the railways, and the steamships bear good witness to the advance of Spain in the way that nations advance most surely in these days. Feeling her feet firmly again, she believed the time had come for her to emerge from her isolation and take her part in Europe along with the other nations that are held of most account. Negotiations of a diplomatic kind were then progressing with this object, and I was made aware that the clear tendency of Spanish policy was in the direction of increased association with France and Britain, as against any such extra friendliness with the rivals of her northern and western neighbours. Then the world broke with the war, and many fine dreams came to an end. All plans, schemes, and diplomatic arrangements dissolved. Spain in her remote corner of the continent, awe-stricken and a little nervous, watched the great blaze of Europe, and shuddered as she saw its horrors and its mad destruction of the best results of its thought and work. She was incredulous when she heard of the spoiling of Louvain; but nothing has more affected her since the war began than the smashing of Rheims. The pity and the sin of it! She looked tenderly then on some of her own ancient cathedrals, of which she has such a glorious collection. On one of the most magnificent of them, that of Burgos in the north, she determined to lavish money and labour in some necessary work of restoration. While the rest of Europe was smashing, Spain began to rebuild again. That is the key to her present thought and policy and general idea for her future. Now I will relate some of the broad features of what has been happening in this country since the war opened, and if some of it should appear like the news of newspapers, let it be said that it comes from one's own knowledge, and that, for the reasons

set forth at the beginning of these notes, it has not yet been printed in Britain.

* * *

After the first shock of the war Spain settled down steadily to the strange necessities of neutrality, which her leaders determined should be strict and impartial. There was to be no doubt about that, although some of her foremost men were inclined to fancy that there was hardly any necessity for a declaration of neutrality at all, that Spain might have kept her hands free, and that her interests suggested that she should be benevolent towards the Allies. Her military people for the most part were obsessed at the beginning with a great admiration for the German war-machine, and, believing that it would prevail, were largely pro-German. So were some, but by no means all, of the aristocracy. The more enlightened classes were decidedly for us and our friends—enthusiastically so, indeed; and it may be said that, in spite of enormous German efforts in seduction, the cause of the Allies ever since the war began has been winning steadily in the heart of Spain, and is now in an overwhelming mastery over the opposite cause. That will answer a question that is often asked. While the Allies preferred to leave Spain largely to herself, and allow her to come to her own independent conclusions, the Germans resorted to every form of intrigue. It was found at the beginning of the war that the country was swarming with German agents, that German wireless installations were set up in monasteries, that officials were bribed by Germany, and that the ugly German machine was a great power in the country. Spain strove honestly and fearlessly to ungear this machine and make it impotent. Germany became more active than ever. Impudently, her consul at Barcelona demanded the exclusion from that city of the French newspapers, because, in his judgment, things were said in them that were disrespectful to the German army! He was snubbed. The German embassy at Madrid at once commenced to pour out all over Spain pieces of official news of an imaginary kind, representing the progress of Germany in the fight. Then one of the German newspapers, the *Hamburger Nachrichten*, printed a special edition in Spanish, pretending that it was just the same, except for the language, as the German edition; but, of course, its columns were fitted up specially for Spanish consumption. At the same time, the Berlin authorities informed all the leading Spanish municipalities that they would send them regularly large bundles of the German daily, weekly, and illustrated newspapers, in the hope that they would be placed where the people might be able to read them. The German official explanation of the war was translated into Spanish, and most extensively distributed throughout the country long before the Allies took any similar step. Business men

and people of all classes found leaflets advocating the German cause enclosed in their letters in the most mysterious way. Some of the Spanish newspapers were obviously subsidised, and misrepresented the facts of the case to the favour of Germany; and one of them, *El Correo Español*, which has been the organ of the Carlist, or Jaimist, party, the party of the inevitable Pretender, became very violent, its conductor, Señor Vasquez de Mella, being almost ridiculous in the blatancy of his pro-Germanism. Yet the Pretender, by one of the anomalies of which Spain and only a few other countries are capable, has strong sympathies for the Allies, which, whatever their political advantages and disadvantages, he cannot repress, and for a long time he has been working hard in the war hospitals of France. He has withdrawn his interest, so it is reported, from the leading organ of his own party in consequence of its pro-German excesses. A curious speech that De Mella at last made in one of the theatres of Madrid to a large party of his followers, in which he drew a fantastic picture of Spain, with the help of her children in South America, owning nearly all that was left of the world after Germany had taken what she wanted, led to a governmental suspension of free speech, which still prevails. It is not now permitted to refer to the war and Spain's neutrality in regard to it in any public or semi-public speech in the country, and there are severe restrictions on the Press also. But shortly before this speech was made by the strange De Mella, other great speeches, neutral indeed, but yet with an obvious partiality for the Allies, were made by some of Spain's best and clearest-thinking men. One of her greatest statesmen of the past, the old Conservative leader, Señor Maura, to the surprise of his followers, who were largely pro-German, spoke for the strengthening of the Spanish bond with Britain and France, the only way for Spanish progress. That made a most profound impression throughout the country. It brought him into some new agreement with all the strongest political forces. The Count de Romanones and he found themselves at one, and that seemed strange enough. Little by little it seemed that all the responsables had a common feeling; and so it happened that, despite occasional outbursts, the violence of Spanish party antagonisms and the bewildering ramification of the country's innumerable parties subsided and disappeared as no living Spaniard had ever known them to do before. The different parties gave pledges of support to the Government, led by the Conservative Señor Dato, a wise and tactful man, who had not been in office long when the war began; and so it has come to pass that in a limited sense it is a national Government that is in power at the present time, an achievement that in Spain seems like a miracle. Parties have been the curse of Spain; their factions, their stupidities, and their jealousies more perhaps than any other

cause have kept her down. The European war has stilled them for a time as nothing else could ever do, and the lovers of Spain see abounding promise in the circumstance.

* * *

The Radical leader, Señor Lerroux, has dared much in his bold advocacy of the cause of the Allies, with which he would have Spain directly associated. He has made speeches in which the Government injunctions have been defied. At Barcelona he made one such speech, and the walls of the building in which he made it bore placards with the words, 'Neutrality is cowardice.' The intellectuals of Spain, including practically all the chief writers, artists, sculptors, and professors, addressed a ringing manifesto to their brothers in France, in which they said: 'Modestly and soberly we raise our voice to utter these words as Spaniards and as men. It is not fitting that in this, the greatest crisis in the history of the world, the historian of Spain should say that she was inarticulate and indifferent to the course of events; that she stood on one side, a barren and insensate rock, or turned her back to the future, to reason, and to morality. It is not fitting that at this moment of profound gravity and intense emotion, when the human race is racked with intolerable suffering in giving birth to a closer and firmer fraternity of mankind, Spain, in her blindness, should remain unmoved by the pain with which the world is torn. Worse still would it be that her part should be to stir up the bitterness of voices inflamed by unreasoning passion and the insults of mercenary writers and newspapers. We have no title to speak, except that given by quiet lives devoted to the pure activities of the mind; but we feel that in order to serve our country by being honest and useful citizens to her, we must be honest and useful citizens of the world; and so we are confident that we are doing our duty as Spaniards and as men by declaring that we share with all our heart and soul in the conflict which is shaking the world to its foundations. We stand firm on the side of the Allies, inasmuch as they represent the ideals of liberty and justice, and therefore their cause coincides with the highest political ideas of the nation. Our conscience reprobates all actions which detract from the dignity of mankind and the respect which men owe to one another, even in the fiercest moment of the struggle.' There was more of this manifesto to the same effect, and the men who signed it belonged to all parties. Therein is represented the feeling of Spain. She sees a clear vision of herself, when the fires of Europe have burned low and the smoke has cleared away from the battlefields, rising, almost unharmed and with her resources unimpaired, to a place in the world that she could not have reached in warlike centuries. That idea she steadily maintains, and she is working hard upon it.

THE OPAL BUTTERFLY.

By Sir GEORGE DOUGLAS, Bart.

ONE Christmas morning, John Eden, coming down to his solitary breakfast somewhat later than usual, found beside his plate three letters and a minute parcel. Eden was a solicitor and estate-agent, and as a rule his correspondence was voluminous. But at this season of the year it might be said to fall off in quantity and to gain in quality or interest. So to-day's letters were all of them private or personal.

Noticing the package whilst pouring out his coffee, Eden smiled inwardly, remarking to himself, 'Some one has sent me a Christmas present. I wonder who it is.' But when his eye fell on the handwriting of the address his countenance instantly lost its cheerful look, and he muttered, 'Ha! I think I know what that is now. I suppose I must have somehow missed the announcement. Yet it isn't usual to send bride-cake to a bachelor; still less, I should suppose, to a rejected suitor. But, after all, it is quite of a piece with the rest of her conduct toward me.'

There was bitterness in the tone in which the last words were pronounced, and asperity in Eden's action as he drew a pen-knife from his pocket and cut the string which fastened the wrappings. A neat cardboard box was disclosed. But when he came to open this, it revealed, not the regulation slice of heavily iced plum-cake, but, nestling among cotton-wool, a delicate feminine ornament. It was a butterfly, cut in shimmering opal and poised upon a wire, to be worn either in the hair or on the *corsage* of a gown.

Neither by temperament nor training was John Eden addicted to strong language. But for once the shock betrayed him, and he used a more forcible expression than I feel inclined to reproduce here. Beneath the judicial bearing which had become a second nature to him, John's feelings at nine-and-thirty remained warm and strong; and, under the present circumstances, his warmth was perhaps excusable. For here, returned upon his hands, was the dainty wedding-present which, with infinite care and many self-torturing thoughts, he had selected for a 'friend whom he held dear.' That had been a year ago!

Turning impulsively to his letters, he selected and opened one which was addressed in the same handwriting as the parcel. Its contents were brief and formal. Addressing him as 'Dear John,' the writer, who signed herself Elsie Mayne, explained that she and Mr Ivor Leigh had come to the conclusion that, though very good friends, they did not care for each other enough to have a reasonable prospect of happiness if married. They had therefore de-

cided to break their engagement, and hence she (Elsie) was returning the pretty present which he (John) had so kindly, &c. In all of which there was no touch of character. But at the foot of the page was the postscript: 'We are quite of one mind about it,' and the word 'quite' was underlined. Ah, how well John knew those postscripts! How well he understood those underlinings! He, in his day, had received his share of them; and, though a truthful man himself, he thought no worse of the writer because he was convinced that they were generally insincere. Not, perhaps, deliberately so; but, at least, the utterances of a woman, a girl, whose speech was instinctive and impulsive rather than the result of calm deliberative thought.

As he read John crumpled the paper in his strong fingers, and an expression of sheer pain, not pleasant to witness, passed across his homely features. At that moment he presented the somewhat rare spectacle of a man who resents the wrongs of another more acutely than he resents his own. For decidedly Elsie had not used him well. She had flirted with him; but what of that? He could not blame her for that. Surely a girl is within her right in flirting with a man of twice her years. And, if she at nineteen has the sense to realise that this commits her to nothing, surely he at thirty-eight should also be equal to grasping a fact so elementary. No, John Eden had not blamed Elsie for leading him on. Had he not received her assurance, her explanation, that she had merely intended to be kind to, and never dreamed of 'encouraging,' him? That was not his ground of offence. But the manner in which she had dismissed him had been cruel—quite deliberately cruel, as it seemed; for she had allowed him to proceed with the statement of his case until he had made everything plain, and then—she had laughed outright! Though it had not happened to him to be refused before, John knew from books and plays that there were other ways than this in which a gentle woman may decline an honest man's love—ways more tactful, more considerate, less humiliating to the rejected. It was true that Elsie had apologised for what she feared must have hurt his feelings, yet her very apology had been interrupted by a fresh burst of mirth.

It may be that, as the only child of a widowed mother, now deceased, John had been somewhat spoiled in his upbringing, and was unduly susceptible. Be that as it may, the manner of Elsie's rejection of him had left a lasting soreness behind it. But that rejection was not the only thing of which he had a right to complain.

In one so young and inexperienced as Elsie, a single act of tactlessness might be condoned. Her inconsiderateness, however, had been so prolonged, so oft repeated, that against his will he had been forced to regard it as systematic. In vulgar phrase, she had appeared to him to aim at 'rubbing it in.'

Let me give one example. Though an old friend of Elsie's aunt, with whom she lived—for whom, indeed, he acted as man of business—John might well have made the course things had taken an excuse for reducing the number of his visits at the house. He was a fairly busy man, and pressure of business might easily have been alleged to account for the change; but by Elsie's express desire he had abstained from making any change. Yet, when he had taken the trouble to visit Agilthorpe, the neighbouring and rival town where Elsie lived, what topic would she choose to entertain him with in their tête-à-tête conversations? She talked almost incessantly of 'Mr Leigh' or 'Ivor,' and of his numerous advantages.

It was apparent, without insistence on the fact, that Ivor was a much more showy and dashing personality than John. A subaltern officer in a regiment of the line, he had come to Agilthorpe for the hunting (John did not hunt), had met Elsie at a ball, and three weeks afterwards was engaged to her. For some reason known to themselves but not to us, the girls of Agilthorpe thought it much more brilliant to marry a stranger than a townsman, and when that stranger was also an officer, and *ipso facto* irresistible, nothing whatever could stand against him. This perhaps explained why the pleas for delay of Miss Cerisa Mayne, the aunt, were so very quickly set aside. John Eden's opinion of Lieutenant Leigh, with whom he was slightly acquainted, was not high; but professional prudence, combining with more obvious reasons, prevented his going farther in the expression of it than to remark that Ivor seemed to him a somewhat 'unsubstantial fellow.' And, as a matter of fact, that definition might be held to hit the mark.

Whenever John now called on Miss Cerisa, Elsie's talk would be wholly of Ivor: where Ivor had been staying, what Ivor had been doing, what Ivor had been buying. 'Has he paid for it?' John once interjected dryly.

Elsie at once assumed a manner of serene and chilly superiority. 'He did not say,' she answered placidly. 'Probably he thought that would not interest me.'

'I can quite believe it,' was John's reply. But he was sorry afterwards for having spoken so tartly.

At last things reached a climax. On being ushered into Miss Cerisa's drawing-room one wet afternoon, he had found Elsie alone. Enforced confinement to the house had evidently bored her, and her somewhat doll-like prettiness

showed to less advantage than usual. She was also rather overdressed. But John did not notice any of these things. In his eyes she was at all times the perfect princess of dainty beauty.

Regarding her somewhat wistfully, he had taken a stiff-backed chair, and had opened the conversation with a hardy British commonplace. But Elsie was inclined for something more piquant. *A propos de bottles*, as our neighbours say, she introduced the subject of Christian names, asking John if he had ever noticed how exactly some men's names seemed to suit them.

He had never noticed it.

'Do you mean to say that you have never noticed that a person with an uncommon name is never commonplace; and *vice versa*? What is your favourite name, John—your favourite man's name, I mean? I admire Leonard, Everard, and Felix; but Ivor is just as pretty and more uncommon than any of these, so Ivor is my favourite. Is it not a lovely name?'

Possibly the weather had affected John's temper. It was, at any rate, less long-suffering than usual. 'I consider Ivor a perfectly detestable name,' he said. 'I never wish to hear it again; and what is more, I don't intend to!' And, rising from his chair, he left the house, leaving Elsie to account for his absence to her aunt as best she might.

After that his visits had become much rarer, and had always been prearranged by letter with the elder Miss Mayne. Yet the gray eyes, the rose-pink cheeks, and the golden curls of Elsie had never ceased to haunt him. Outwardly, in the world's eye, he had continued his normal life of business routine, had given his clients full satisfaction, and had added to his reputation as a man of sound judgment and good professional ability; but inwardly he had been visited by moods of bitterness, of longing, of deep sadness. Perhaps such visitations are less rare in offices and chambers than one might think. He had heard news of Ivor and of Elsie incidentally, but never as the result of inquiries of his own. He had heard, for instance, that Elsie had been unduly uplifted by her engagement, and had done and said some rather foolish things in consequence; but he had found excuses for her. And he had heard that Ivor was spending more money than he ought to; that his assiduity in attentions to his intended was by no means conspicuous; and he had been rather hard on Ivor. Then he had heard that the wedding had been postponed. Now he heard that it was not to take place; and the little tremulous butterfly, which had been his offering to the bride-elect, had come fluttering back to settle on his bachelor breakfast-table, where it seemed so sadly out of place!

For the first time since his childhood, John did not go to church that Christmas Day. It was not that he was in any way overcome by the

news he had heard so unexpectedly—not that; but that he felt the need to be alone, to think matters over, and to let the turmoil of his feelings settle down. He had no engagement till the evening, when he was pledged to eat his Christmas dinner at the house of friends. So, as soon as the church-bells had stopped ringing and the streets were clear, he sallied forth to take a country walk. The weather was hardly Christmas-like or ‘seasonable;’ for, though there had been frost for some days past, and the roads were hard, there was little whiteness on the ground. The sky was dull and the sun obscured, and in his present mood John felt that he preferred to have it so. He directed his steps toward a neighbouring height, which was a favourite walk of the townspeople, but which at the present hour and season he was pretty sure to have to himself. Having reached the summit, he paused, drew breath, and looked down on the adjacent town of Agilthorpe, lying at his feet, shrouded in its own smoke, less than two miles away. A day would come, perhaps, when the two townships would unite; but meantime they were separate and distinct, and infinitely more opposed to each other than places that lay farther apart and knew each other less. The train of thought into which he had fallen made John sigh, he could scarce have told wherefore. Then, mechanically, as he had often done before, he sought through the haze for the whereabouts of Elsie’s dwelling.

Poor dear little girl! he *was* sorry for her. For, bravado notwithstanding, he knew how intensely she must feel the humiliation of her present position—she, whose foible had been admiration, of which she could never have enough, and who had been betrayed, it was said, into boastfulness—into telling over her chickens before they were hatched! His heart ached for the pain, if not of unrequited love, at least of humbled pride, which he knew she must be suffering; she, who was so little fitted to bear pain of any sort, whom to shield had once been his dream!

Then his thoughts returned to the opal butterfly. His first impulse on receiving it back had been to grind it beneath his heel on the hearth-stone. But a variety of reasons, not all of them romantic, had induced him to think better of that. For one thing, the ornament had been for a considerable time in Elsie’s possession, and had perhaps been worn by her. It was a relic. Secondly, it had cost him a good deal; he had not forgotten that; for, even in life’s most thrilling moments, our thoughts are seldom purely poetical! He drew it from his waistcoat-pocket, looked at it stealthily, and put it back again.

All at once, as he did so, a change came over the spirit of his mood. As if a light had broken on the past, he saw where he had erred. He had overdone unselfishness, had effaced himself overmuch, subjected himself too entirely to

Elsie’s every whim. Doubtless it had been with an object of his own in view that he had acted thus, and so to act had been a pleasure to him. So, on that ground, he could not claim the crown of an entire self-sacrifice. But none the less, as he now saw, had his conduct been mistaken. What unselfishness, what self-sacrifice, had his rival ever shown? Could it be, he asked himself—and he was not the first man who had done so—that selfishness is what women in their secret hearts admire in a man, and unselfishness what they despise? It will be seen that his view of the situation was but a partial one; but, so far as it went, it was plausible enough. Manhood and unassuaged passion, at the thought, asserted themselves, and he resolved that Elsie should yet wear that opal butterfly, and should wear it as his wife! A more delicate mind might have formulated the resolution differently, preferring that there should be nothing in the anticipated future which should recall the past. But the good John was less particular. For him the pretty toy had become a symbol of the sway which he intended to impose on Elsie. He had heard of hearts being ‘caught on the rebound;’ being captured, that is, whilst still demoralised and with defences weakened after disappointment. The John Eden of that morning—the John who was the creature of habit and preconceived notions—would have contemplated any such capture with suspicion and distaste. It would scarcely be fair to the girl, he would have said. But the John Eden of this afternoon was another man, one in whom both sympathy and indignation were aroused as they had scarcely been before. Though not given to introspection, he himself recognised the change; and, though normally even less fanciful than introspective, in the present turmoil of his emotions a whimsical fancy suggested itself. Half mechanically he had kept on fingering the little box containing the butterfly. Could it be, he now asked himself, that the jewel was a talisman invested with mysterious virtue, a medium of telepathy between souls that were sundered, estranged, and in need of each other? Long ago he had heard of such marvels, and had naturally disbelieved in them. Nor did he believe in them now. Yet, scepticism notwithstanding, he derived a sentimental pleasure from dwelling on the fantasy; and, as he dwelt upon it, it developed automatically and allegorically, some of his long-forgotten school-learning coming back to him to take part in the process. The butterfly, *Psyche*, had it not been the Greek symbol for the soul? If so, then just such a pretty dainty soul as this which he held in his fingers might be the soul of Elsie; and that soul had been his gift to her; she had not had one before. He again drew forth the box and opened it; and now for the first time he noticed that, perhaps as the result of rough and careless handling, the butterfly had sustained damage. Alas,

poor Psyche! one of the delicate iridescent wings was broken. Who had done this? Was it he, John Eden, or another? He looked closer. One of the antennæ, too, was gone; the creature was a wreck! Still, it could be mended. How much better, surely, to repair than to crush it, as in his heedless fury he had been about to do! How much better, even supposing that it could never again be quite the same beautiful butterfly that it had been before!

A mist was swimming before Eden's eyes. Surely the atmosphere was growing darker? Yes, a great soft snow-cloud, borne by rising wind, was shutting out the distant landscape and the sky. The town of Agilthorpe was being swallowed up, Elsie's abode and all. John must turn homeward—ay, and quickly too—if he wished to elude the storm; and yet he lingered on. His mood had changed again. And all that had been human, charming, all that had appealed to his affection and his manhood, in his ancient intercourse with Elsie was resuscitated in his memory, and stood out as in relief. The rest was blotted, as if it had never been. So his purpose changed, veering and swinging round as unrestingly as a vane before the wind. He would go to her now, in the hour of her need; would go to her, not as the lover, for that would be importunate, only as the friend, the stand-by and support, the ever-present help that should not fail her. Oh, he had been wrong just now to speak, to think, as he had done, about his own unselfishness! Selfishness and unselfishness, let women appraise them as they would! There was but one course open to him in love; he knew it, and that was to put Elsie first, Elsie's happiness first, and himself and his own happiness nowhere. Nay, was not *that* in itself his happiness?

John moved impulsively, as if to descend from the height in the direction of the rival town. But as he did so the first outlying flakes of the oncoming storm swirled round him. He paused. He did not fear the weather; but it was the *man* in John who had been for acting upon impulse. The solicitor in him entered a caveat; and the solicitor, helped by the storm's increasing fury, gained the day. John descended from the hill by the road by which he had ascended it.

Yet the solicitor didn't have it all his own way either. As soon as the shops reopened after the holidays, an amalgam of man and lawyer approached a jeweller, and gave accurate instructions for having Psyche repaired. His solicitude might have betrayed the fact that to him it was a case of more than the mere repairing of a jewel.

'Never you fear, sir!' replied an immaculate person, who looked like a masculine fashion-plate come to life. 'I will make it so that the damage shall never be detected.'

John sceptically shook his head. But three

weeks afterwards, when the toy was returned to him, he was obliged, in his own despite, to acknowledge that the jeweller had accomplished wonders.

He put the little cardboard box in his pocket, and betook himself to Agilthorpe. Miss Cerisa and Miss Elsie were at home. Elsie's manner, he noticed, was more subdued than when he had seen her last, and yet not quite so much subdued as he had expected it to be. Nor did this seem the result of an effort, or of any attempt to play a part. Was it possible that that postscript to her letter had been sincere, after all? John's steady-going heart beat slightly faster, and as it did so he half-fancied that the butterfly in his left-hand breast-pocket fluttered its wings responsively. Had Elsie ever looked more lovely than she was looking now?

The short day was already drawing to a close, and Miss Cerisa had carried her work to the window, so as to make the most of the last remains of daylight. To all intents and purposes, John and Elsie were alone in the room. Then, all at once, John seemed to see that, after all, his first view of the postscript had been the true one; and he said—as one does say once in a lifetime—just the very thing which he would have sworn by all his gods that he would not say.

'Tell me about it, dear,' he said very softly. The lover in him was no more; only the friend, the consoler, or would-be consoler, survived.

Elsie was not a bit offended, not a bit taken aback. Quite simply, without pose and without false colouring, she did tell him about it. She did not blame Ivor. His tastes were extravagant, and seven hundred pounds a-year was barely enough for himself, let alone a wife. There was a pause.

'Did you care for him very much?'

Her large gray eyes, full of distress, looked up to his. 'A good deal,' she replied.

Poor darling! But there was nothing to be said.

'Oh John! I know now,' she went on, 'how badly I behaved to you. I am sorry, John.'

There was no doubting her truth. He took her hand. 'Never mind that now,' he answered gently. 'You have troubles of your own.' Then, scarcely realising what he was doing, he drew Psyche from his pocket.

Miss Cerisa still sat working at the window, bending low to see the stitches, it was growing so very dark.

'I want you to keep my present, if you will,' said John; and then, coming to himself, he added, in his own familiar well-meant but blundering way, 'It is of no use to me.'

Oh John! how ungallant! And it isn't a bit what you mean either. But Elsie had passed through an experience lately which had made her less intolerant of bluntness. She smiled through unfallen tears.

He had removed the lid of the box. The fire-light caught the opal, suffusing it as with a sunset glow, and the delicately poised creature shimmered and trembled almost as if endowed with life. Elsie had always loved pretty things, loved them perhaps too well.

'It was by far the prettiest present I received,' she said. And she took it in her hand, and, having done so, could not let it go again. John watched her, doubting, hoping. But she showed no repugnance. Could it be that the tricky elf had sloughed off, like a chrysalis-shell, all associations of the fickle Ivor, and that henceforth it would recall to Elsie's mind no thought of any one but John—the steadfast, loyal John?

Now the chink of a teaspoon striking upon crockery was heard without, and a maid entered, bearing a light and the tea-tray. Instinctively John and Elsie drew apart, and the butterfly found harbour, safe and warm, somewhere on Elsie's breast. It was at home again, in its new character, and would, I think, take flight no

more. And John, forgetful of his hour of bitterness upon the hill, thought of it there as of a delicate anguished spirit which had turned to him, which he had sheltered, succoured, and restored.

Then, just at first, Elsie avoided facing the light. But presently the three old friends were gathered round the tea-table again, and were just as friendly together, though not just as happy, as in the old days more than a year ago.

When the time came for John to leave, he did so not displeased with the progress made that day; for, on the whole, John Eden was a patient man. He had that best—and, in these modern days, that rarest—strength, the strength which can wait and work toward an end. Meantime he had seen Elsie smile once more. I think that he will call again—not once, but many times, until at last, perhaps, he will have no need to call. For he will have Elsie always with him, in his home, and Psyche too.

MINE-SWEEPING.

By G. B. BARHAM.

A FLOATING mine had washed ashore at the feet of an astonished Sheppey coast-guard. The big policeman of the sea, anchored in the Warp between the Mouse and Shoeburyness, read the news by semaphore from the beach, and instantly flashed wireless orders which closed the West Swin, Barrow Deep, Knob Channel, and Black Deep, and held up all the little cargo-boats between Sheerness and the Foreland. Later there was talk of newly formed shoals and channels, and the authorities provided pilots to take the ships, one at a time, through the danger-zone, in order that they might go safely about their business; and old Bill Hills lurched over to me and whispered, and I gripped his hard and sea-corned hand, and hurried back that I might snatch a little sleep.

The tide made at 3.30 A.M., and long before the half-hour chimed I was waiting on the beach for the men of the *Emma and Eliza*. The 'two o'clock in the morning courage' is said to be a rare thing. Anyway, I had but little of it. There, behind the old oyster-sheds, was the little cottage I had hired, and there was bed and warmth and sleep. Here there was more than a suspicion of rain in the air, and there was also a chilliness that set my teeth chattering.

The February night was peculiarly dark. The water was inky; and out there, where the white searchlights stabbed alternately the water and the clouds, were lumps of floating death. There might be many; also, there might be but few. It was possible—I rather clung to the idea—that there were none, and that the Warden Point

mine was the only one that had been sown. I hoped so.

We got into the boat with much clattering of sea-boots and packing away of oilskins and wicker hampers of food; and, putting the thole-pins in place, we pulled out, or, rather, the men did. I was packed aft with the spare clothing and other things of minor importance. At first I shivered and saw no beauty, and was sick at heart; but as the oar-blades dipped and picked up silver drops to let them fall like gleaming opals, they loosed the Spirit of the Waters that is a friend to all the English, and it crept into my heart, and gave me full courage, so that I stepped aboard the trawler as cheerily as any of the taciturn men who were going out to try to catch Death napping.

Whether they be going oyster-dredging or spratting or catching the little pink shrimp, the men of the trawler, as soon as the anchor is weighed and the sails hoisted and the sheets pulled taut, make tea. It is one of the sacred rites of the longshoreman, and, like himself and everything he does, is simplicity itself. The kettle is rinsed in the swirling smother beneath our stern, and filled with fresh-water from a stone jar guarded from damage by a wickerwork casing. A big handful of tea is thrown in, and the kettle placed on the little stove which is poisoning the sweet morning air with its thick, greasy reek.

The jam-jars are washed out with sea-water and filled with the steaming brew, and old Hills passes me the first jar, and hands across the blue paper bag of sugar. Hills and I are old friends.

Years ago, when a long-legged lad in short knickers and well-patched blue jersey, I was given the Freedom of the Back Beach and all that pertains to it. I have it still, and it has opened me many doors. I drink the tea, salt and smoky as it is; and as our prow cuts the water with a soothing swish we smoke peacefully until the gray east says it is time to get ready the trawl.

I may as well say at once that we did not catch any mines. But we might have done so. We had all the excitement, and apparently none of the risk; but all the time we never knew what the next minute might bring forth. We worked with Long John Corstorphine, of the *Marie Elizabeth*, and trawled up the Cant, and the Four Fathoms Channel, and round the Great Nore to the Warp, and through the shallows of the West and Middle Oaze into the Deep, and round the Red Sand to the Flats; then up, past the Pan Sand and the Girdler to the Alexandra Channel, and round again through the Knob to the Warp. But never once did our trawl rope tighten and hum like steel wire, and give that momentary jerk to the boat that tells so eloquently of the capture made.

In mine-sweeping, the trawlers or drifters work in pairs. A stout hawser is passed from one boat to the other, with a heavy weight of triangular shape in the centre, which is for some reason called a kite. When the distance apart is properly adjusted the cable floats at the correct depth, and every inch of the fairway can be searched.

The Germans at that time were setting their mines some seventeen or eighteen feet below the surface. Deeper than that many of our ships might miss them altogether; shallower, they would explode comparatively harmlessly against the heavier armour of a battleship instead of hitting her where her armour is thin, and where damage could be done to magazines, bunkers, and engines. Later the Germans have been setting mines at varying depths, so as to be a danger to boats of the lightest draught. The

other day one of our local trawlers pulled up her trawl, and when it was close to the surface it caught a mine, which jammed between the trawl and the hull, one of the detonators being actually in contact with it. To free it, the men got out the dingy, and passed a rope from the mine out seaward. They had almost released it, and returned alongside to bend on another rope, when either the trawl or the mine slipped, and the consequent explosion blew boat and trawler literally into fragments. Another of our trawlers struck a mine that could not have been more than three feet below the surface, with disastrous results. But at the time I went out with old Hills there were no shallow mines laid, and mine-trawling was not nearly so risky as it is to-day.

When a mine is caught, the trawlers are instantly thrown up into the wind, which allows the cable to lie slack. It has done its work, and the momentary jerk has torn the mine from its moorings. Instructions are bawled from skipper to skipper through a megaphone, and the steam-drifters toot on their sirens to call up the attendant warship, and every eye scans the surface of the sea. Suddenly a shining sphere bobs up and floats peacefully a hundred yards away. One would not think five hundred pounds of gun-cotton could look so harmless.

All at once there is quietude, and a dozen arms point to where a long, lean torpedo-boat is bearing down on the trawlers. The men on board are doing something forward—one cannot quite see what; but one can make out the boy in charge—they all seem to be boys in the T.B.D. service—looking through his glasses. The destroyer's siren shrieks a warning to the scattered trawlers, and there is a vivid flash. Even in the bright sunlight one can see the flash of that gun; but before one can hear the shriek of its shell there is a roar that is like nothing else on earth, and the sphere vanishes as the sea rises up in a column which bursts even as it forms, and the decks of the wildly tossing trawlers are swamped with the salt rain.

MY ADVENTURE.

By A. J. DAPLYN.

THE news of the passing of the islands of Samoa from the possession of the Germans to that of the British brought to my mind a few incidents that occurred more than twenty years ago, when, as the guest of the late Robert Louis Stevenson, I was on a visit to the islands. At Stevenson's house of Vailima one led an almost ideal existence; life passed like one long summer day. As an artist I found it a perfect paradise, with *motifs* for pictures in every direction; and then there was the library, filled with books to suit all tastes, horses to ride, birds to be shot,

and for the idler, hammocks slung in shady corners of the wide verandas, inviting to repose and the consumption of tobacco and liquid refreshment. The master of the house was rarely visible till the luncheon-hour, when, the troubles of authorship being left in the study, he gave free play to his high spirits, and abounded in wild fancies and quaint conceits. Literary topics were occasionally discussed, but more often the conversation turned on local politics and the news of the war.

The war was also local, being confined to the

natives, led by two rival chiefs, the prize being the throne of Samoa. The people had nothing to gain and much to lose, but they flocked to the standards and fought with savage energy. Why this indolent and generally amiable people should suddenly fly at each other's throats is only to be explained by the great popularity of war with all sorts and conditions of men, savage or civilised.

Samoa at that time was nominally governed by a native king, Malietoa, a mere cipher in the hands of the representatives of the three Powers, Britain, Germany, and America. Opposed to him was Mataafa, the rebel chief, who, with his army of several hundred men armed with rifles and hatchets, was encamped a few miles from Apia. Religion also played its part, as Mataafa was a Catholic, and King Malietoa a Protestant. Stevenson favoured Mataafa, and, much to the disgust of the Germans and others, had paid a visit to the rebel commander, from whom mysterious messages sometimes came to Vailima, asking advice and assistance. It was a time of great excitement, and hearing so much of the war gave me a desire to see some fighting. Accordingly I bade adieu to my host and his family, and went to lodge in Apia, the chief and only town, a straggling village inhabited by two or three hundred white men and many thousands of natives.

The white population was divided between Germans and British, many of the former being employed by a Hamburg firm, owners of a large warehouse and many plantations. Coffee and cotton were grown, but the cultivation of the coco-nut palm and the making of copra was the largest industry.

These plantations were worked by labourers collected from other islands, who were little better than slaves. The Samoans will not work for the Germans; in fact, they object to work of any sort, and, strange to say, manage to do without it. In their happy land nature has liberally provided for all their wants; coco-nut palms grow everywhere, and the nuts provide both solid and liquid refreshment; there are groves of the succulent banana and other fruit, and, last but not least, that stay of the South Seas, the bread-fruit tree. With fish from the sea, various nutritious roots, and the flesh of the pig, their larder is abundantly furnished. For clothing the bark of a tree is used, made into a stuff called tappa; a little of this goes a long way, as the dress of a Samoan consists mainly of a *lava-lava*, or waist-cloth, and a few beads.

From this it will be seen that the maintenance of an army in the field in Samoa is not the difficult problem that caused a great European commander to say that 'an army marches on its stomach.' The Samoans take care to fight near a village, and if defeated take to the bush; and as there are no roads, pursuit is impossible.

In Apia the state of war was very apparent; bands of armed natives paraded on the sea-front, and wounded men carried in litters were seen on their way to the improvised hospitals. But the most dreadful sight was when a warrior fresh from the field of battle, accompanied by a drummer, came dancing down the street holding at arm's length a bleeding human head. A dozen of these grim tokens of prowess were deposited before the king's house; and more would have been added had not the representatives of the European Powers succeeded in putting a stop to the horrid practice. Like the Germans, the Samoan, who in time of peace is quite harmless, in time of war develops all the murderous instincts of the savage; and to decapitate an enemy and exhibit the result brings him great kudos among his friends. This dreadful spectacle was witnessed by many white women, who became much alarmed in consequence, though without cause, the Samoan confining his murderous instinct to his own race. Stevenson tells of a man who brought in a head in great glory. On the black paint that disguised it being washed off, behold! it was that of his brother. It soon became known that a great battle was taking place about twenty miles up the coast, near the village of Mataafa, the rebel chief, and I made up my mind to see some of the fighting. A young fellow whose acquaintance I had made, named Charley Brown, was equally eager, and after some difficulty we chartered a small boat and got away.

My companion, Charley Brown, was a strange fellow, possessed of ample means. Having passed through Eton and Oxford, he had come to the South Seas, as he said, to seek adventures. But adventures nowadays are not to be had for the asking, and the only thing in the shape of adventure he had encountered was a matrimonial one, having married a so-called native princess, who turned out to be no princess and not much good, as she ran away with a native a month or two after.

Our voyage up the coast was unduly prolonged, owing to our inexperience and the perverse current, and we did not arrive at the field of battle until the fighting had ceased. The rebels had lost the day; their chief Mataafa was in flight, and their village a mass of smoking ruins. At the foot of the tall coco-nut palms dead men slept their last sleep, and pools of blood indicated where the fighting had been fiercest. We found shelter for the night with some friendly natives, and in the morning witnessed a grand march past of the victorious army of nearly a thousand men armed with rifles. On they came, divided into companies, ten men in a line, and before each company danced the 'maid of the village' in her dress of ceremony, consisting principally of flowers and beads; the warriors' well-oiled bodies glistening in the sunshine being their only uniform.

There being nothing more to see, I proposed returning to Apia, but Charley Brown would not hear of it. To return without anything happening in the shape of adventure could not be thought of, and he proposed a walking-tour along the coast, stopping each night at a native village. This was agreed upon, and leaving our boat with a friendly native, we set out, reaching a village about sunset, and being received with the proverbial hospitality of the Samoans. Brown was in fine form, causing it to be known that he was a great 'medicine-man,' and in order to impress the crowd by his profound knowledge he performed a few cheap conjuring tricks. He then invited all who were sick to approach and detail their ailments. This was quite superfluous, as Brown understood very little of what they said, and whether the patient suffered from a cold in the head or a broken arm, the remedy was always the same, consisting of two antibilious pills, or a seidlitz powder, and sometimes both. This farce was enacted at every village, for Brown took his function as medicine-man very seriously, and was highly indignant when I suggested it was humbug. 'The ordinary mind thinks everything it cannot understand is humbug,' he exclaimed. 'Was Livingstone a humbug, or Stanley, or all the other great explorers? And surely I cannot do wrong in following their example.' It was perhaps for the best that, as we moved on every morning, we did not see the results of my friend's practice of medicine.

In this fashion we journeyed half round the island, and at a large village a poor man suffering from that scourge of the South Seas, elephantiasis, consulted Brown. As the man's legs resembled those of an elephant, even Brown felt that pills and seidlitz powders would not suffice. He explained, however, the diagnosis of the case, and was convinced that with surgical assistance and careful nursing the man could be cured. 'And he shall have it!' cried Brown. 'We'll start to-morrow for Apia, crossing the mountains where no white man has ever trod, and this poor fellow shall act as guide, and we'll meet with no end of adventures.' To travel forty miles over unexplored mountains, with a cripple for a guide, was not at all to my taste, but Brown overruled all my objections by saying, 'What's the good of being an explorer if there are no hardships to endure or difficulties to overcome?' The next morning the rain came down in torrents, a regular tropical downpour, and I hoped our journey would be postponed; but my companion laughed at the idea of explorers being stopped by rain, so we started, and after tramping three miles through the deluge, being wet to the skin, I called a halt, and announced my determination to turn back. Brown, much to my surprise, made little objection; like other explorers, he perhaps was averse to sharing the glory to be obtained by his

discoveries. As I turned back I saw Brown rushing up the steep path, singing at the top of his voice, 'Excelsior!' Returning to the village a sadder and wetter man, I learned that four natives were starting by sea for Apia the next morning, and was duly accepted as a passenger.

When the time came to embark in the old whale-boat, its appearance was far from inspiring confidence; but the sail being hoisted, with a fair wind, all went well for several hours, and by that time we were half round the island. The crew slept or smoked cigarettes, and paid very little attention to the navigation of the boat. This was typical of Samoans; for, though the original discoverer called the land the Navigators' Islands, from the supposed expertness of the people in that art, the present inhabitants are considered the worst boatmen in the South Seas. I was sitting at the head of the boat, wrapped in a railway-rug, having discarded my clothes, which had been soaked in yesterday's down-pour, when, turning my head, I saw coming toward us an immense breaker. I called to the boatmen, but most of them being asleep, no notice was taken, and in an instant the gigantic breaker was upon us. We seemed to glide up its steep slope, to be balanced an instant on its summit, and then cast with a crash into the boiling waters.

When I regained consciousness and found myself struggling in the sea, with the heavy rug clinging round my limbs and dragging me down, I gave myself up for lost; but just then a big wave burst over me, and, enraged at the buffeting, I struck out, and, as luck would have it, managed to seize some floating wreckage—a portion of the boat, which, of course, had been smashed to pieces. With a despairing effort I at last succeeded in freeing myself from the heavy rug, and as I mounted the summit of the waves, I could see standing on a reef, about a quarter of a mile away, my four companions, making frantic gesticulations. As they could swim like fishes, the mishap was of no great importance to them; but it was otherwise with me, as my swimming powers were of the smallest, five minutes in a bath being about their extent. Luckily, I still clung to the piece of wreckage, and pushing it before me, made slow progress toward the reef. I called to the natives for assistance, but no doubt my voice was drowned by the noise of the waves, for they did not respond. When at last I reached the reef, I found that my troubles were not nearly over, for great seas broke on its edge, forcing me against the sharp coral; and the rock overhanging like the flap of a table, I could find no purchase, and made vain efforts to secure a footing.

But at last the natives succeeded in dragging me on to the rock, and no sooner was I there than a huge wave broke and sent me sprawling on the sharp coral. As I was without clothes, I received several very severe wounds, which

caused me much pain ; in fact, I was nearly done for, and had just strength, leaning on two natives, to reach the house of a chief, when I collapsed. On coming to, I found myself lying on a bed of mats, with the chief by my side, who pressed me to drink a shellful of hot coco-nut milk. Then the 'maid of the village' came in, and by a primitive sort of massage gave great relief to my aching limbs, causing me to fall into a deep sleep, which lasted till late the next day. When I awoke, my host informed me that a party of white men on a shooting expedition were camped a mile or two away. This was welcome intelligence, and I sent a messenger begging for assistance. He returned shortly afterwards with a box of cigars and a bottle of whisky, and an invitation to their camp. So, bidding farewell to my kind host, I, being unable to walk, was carried on the backs of the two natives, and on arriving at the camp, found there my friends Mr Lloyd Osbourne, Stevenson's son-in-law, and Mr Bassett Haggard, the brother of the well-known novelist. Mr Bassett Haggard, the British Commissioner, travelled in style, and his camp was a model of comfort. After a few days' repose, I was well

enough to return to Apia, and the whole party embarked in Haggard's boat, the *Union-Jack* flying, as became a representative of Great Britain, and six sturdy Samoans pulling at the oars, singing their native songs.

For two or three weeks I was confined to the house, as I had injured my back, and the wounds from the coral refused to heal. Plenty of visitors came to cheer me up, among others Baron Cedarcrantz the governor, Robert Louis Stevenson, and the editor of the local paper.

Then one fine morning Charley Brown rushed in. 'By Jove!' he cried, 'you are a lucky fellow.' 'How's that?' I replied. 'Is it lucky to have been half-drowned, and to be laid on your back covered with bruises?'

'What of that?' he said. 'You've had an adventure, a thing that I've tried for ever since I came, going round the island in a boat, exploring mountains, &c., and nothing has ever come of it; while you, after only a few weeks in the place, experience this delightful adventure. Everybody on the beach is talking of it, and the newspaper devotes a column to you, headed in big letters, "A Close Call."'

THE MONTH: SCIENCE AND ARTS.

THE DRY PRESERVATION OF FRUIT.

IN this country the dry preservation of fruit has not attained the vogue which prevails in the colonies and America, but at the same time it is the simplest and cheapest way of preserving it. Recently the Government has drawn attention to the necessity of carrying out such preservation, and has mentioned an ingenious and simple, as well as inexpensive, apparatus whereby it may be done. This dryer and evaporator, as it is termed, comprises a series of superimposed trays disposed in a frame, which, in the case of the domestic application, may be set upon the kitchen stove. If required for drying upon an extensive scale, such as in conjunction with an orchard or farm, the apparatus is fitted with a special chamber for carrying the gas-burner, or it can be utilised in connection with coal, coke, or wood fuel. The apparatus is so designed as to be capable of extension upon the unit system, a small plant suitable for domestic use being capable of meeting any possible requirements by the mere acquisition of further trays, which are obtainable for a nominal outlay. The fruit, or vegetables such as French beans, peas, carrots, onions, potatoes, and mushrooms, require a little preparation before being placed in the dryer, such as paring, coring, slicing, steaming, or salting, as the case may be; but full instructions are given concerning the necessary preliminaries, according to the article to be treated. Apples, for instance, should be peeled

and cored if required in the dry whole condition; and if apple-rings are preferred, they should be sliced. The fruit is then placed in salted water or exposed to sulphur-fumes, because otherwise the fruit will assume an unappetising brown colour. After this treatment the apples are placed in the trays. All the trays are placed in the dryer, with the charged ones at the top, the latter being the first to be filled. The whole of the trays disposed in a nest can be raised by means of a lever to facilitate the removal of the uppermost tray from the top to the bottom position. The temperature of the dryer ranges from 180° to 210° Fahrenheit at the start. In the drying the trays are moved successively from the topmost to the lowest position, being left in the latter place for about a quarter of an hour, so that drying and evaporation is carried out uniformly throughout the whole layer of the trays. The time required in the drying process varies according to the ripeness and the character of the fruit, apple slices or rings occupying less time than whole fruit. While drying is in progress little attention is demanded, it only being necessary to examine the fruit at intervals, and to remove the dry fruit to the top and the less dry nearer the bottom, where the heat naturally is greatest. After evaporation has been completed, the fruit should be exposed to the air for a few days, when it may be packed in boxes or any other suitable receptacles. The fruit does not suffer the slightest damage from exposure to the air, and if properly dried it will

keep almost indefinitely. Naturally, drying causes the fruit to shrink and to lose weight, one hundred pounds of raw apples yielding approximately twelve pounds of the dried article. When required for use, it is only necessary to subject the fruit to a preliminary steeping in water in the usual manner to restore its bulk. The preliminary treatment of the fruit varies slightly, stoned fruits of course demanding the removal of the stone. In drying plums, the sugar content is preserved, while there is less risk of deterioration or decay if the dried fruit gets damp. The Government has recommended the process as being economical and applicable as much to the domestic circle as to the small-holder. Indeed, any one boasting an orchard, irrespective of its pretensions, should undertake the drying of the fruit, inasmuch as thereby an adequate supply of a nourishing comestible is assured during the winter. Moreover, such fruit comes as a welcome change to that which has been bottled. The outstanding feature of the process is the low cost of the initial apparatus and the packing of the dried article, air-tight bottles, such as are indispensable in ordinary preservation, not being necessary. The application extends to vegetables and other foodstuffs.

AERO-BALL, A NEW GAME.

A novelty in recreation has recently crossed from France to this country. This is 'aero-ball,' a game which demands a quick eye, keen judgment, and dexterous movement of the hand. The necessities of the game are a bat and an ordinary ball of the tennis pattern. The bat is of special shape, being curved in the manner of a sickle, and having a groove capable of carrying the ball, extending from the handle to the point. At the handle is a small basket. The essential feature of the game is to place the ball in the grooved channel of the bat, and to jerk it in such a manner that it flies off at the point of the bat into the air, the final task being to catch it in the basket before it has bounced. It appears a very simple and easy task, but a little experience will reveal the fact that it is much more difficult than it looks, especially if the ball is moving with any velocity. Once one has mastered the art, however, infinite amusement may be obtained, while very dexterous feats in ball throwing and catching may be performed. For instance, an expert is able to induce the ball to describe a perfect circle in the air, and to perform the operation with such speed that the ball is scarcely visible during its flight after leaving the point of the bat until it falls into the basket. It is a game in which one or more players may participate. A single player can obtain great amusement and exercise as well in playing against a wall. The varying angles at which the ball strikes the wall and its fluctuating speed impose a supreme task upon quick movement and rapid eye judgment. Two or

four players may indulge in a game reminiscent of tennis or badminton, marking out courts in the usual manner, but dispensing with a net. Such a game, when played fast and furiously, demands great activity. In this instance the method of scoring is preferably to start with so many points, say one hundred, and to deduct points for every mistake which is made, such as failure to catch the ball in the basket, or an erroneous return. The advantage of this game is that it can be played anywhere providing sufficient open space is available, where the courts may be marked out distinctly. The command which one is able to obtain over the quaintly shaped bat and ball as a result of diligent practise is astonishing. Diabolo created a furore, but aero-ball is described by those who play it as far more fascinating; and they even declare it to be more attractive than badminton.

AN IMPROVED STRETCHER.

A distinct improvement upon the conventional improvised stretcher has recently been placed upon the market. It comprises two hickory poles, two ash-wood traverses or crosspieces fitted with metal brackets and provided with locking-pins, together with a foot to facilitate lifting. In addition there are two lengths of rope each nineteen feet long. The stretcher has the advantage of being extremely portable, inasmuch as it can be packed within a small space, each bearer carrying one of the side-poles, a traverse, and a length of rope, the pole being merely a staff such as is used by Boy Scouts. To prepare the stretcher for use it is only necessary to fit the traverses into the brackets of the side-poles, and to make them fast by slipping in the pins, when the frame of the stretcher is completed. The mattress formed by the ropes is produced by carrying each of them diagonally from pole to pole, and as the opposite ropes cross, a wide mesh lacing, taut yet elastic, is obtained. The stretcher can be prepared ready for use in two minutes, while it can be dismantled and packed in approximately the same time. The outstanding features, in addition to those already mentioned, are lightness and portability, as well as interchangeability, since each half-section of the stretcher is complete and a duplicate of its fellow. Consequently when any two members of the aid detachments come together they can prepare a stretcher from what they are carrying. The device has met with the approval of those concerned with Red Cross work, and has been recommended for use by voluntary aid detachments.

AN INGENIOUS POLISHING-MOP.

The mop has undergone a remarkable revival, a development which is due to the vogue of parquet and polished flooring. But the cleaning and polishing of these, owing to the area to be treated, is a tedious and protracted task when

carried out by hand, while the orthodox mop is scarcely satisfactory. The new mop has been designed especially to overcome the drawbacks of the circular-shaped utensil. This latest mop is of triangular shape, with the result that the front point can be thrust into corners. The white yarn forming the mop is attached to an unbreakable steel frame, the yarn being carried over the upper face of the frame and covered with canvas in such a manner as to form a soft cushion. The result is that no possible damage can be inflicted upon furniture or other fittings from accidental knocking. The handle is attached to the mop by means of a flexible spring socket, which causes the mop to lie flat and evenly upon the floor, no matter at what angle the handle is held. This arrangement ensures an automatic self-adjustment, with the advantage that the whole of the surface of the mop is brought to bear upon the space under treatment. Furthermore, this novel form of attachment enables one to clean beneath gas-stoves, baths, and other fixtures having very little clearance with the greatest facility. The yarn is treated with a special polishing-oil which cleans and polishes the surface perfectly, and yet does not impart such a face to the flooring as to cause it to be slippery and dangerous. The success of this utensil in connection with floor-cleaning operations has been responsible for a modification of the idea to meet the necessity for dusting walls, ceilings, and so forth, a duty which formerly had to be carried out with the brush. This application of the mop is precisely similar in its essential details to that used for cleaning floors, and the dust is not stirred up to settle elsewhere, but is collected or absorbed. The mop is of light construction and flexible, owing to the spring socket fitting.

THE CHILD'S DOLL EXERCISER.

The doll has ever been regarded as a mere toy for children, but a recent invention imparts a more utilitarian purpose to this inanimate playmate. The new doll is designed essentially for the purpose of acting as an exerciser. It resembles the conventional cloth toy, thereby being virtually indestructible, but its arms are really powerful spiral springs, capable of considerable extension. If desired, the doll may be used in the usual manner—that is, purely and simply as a toy; but it may also serve as an exerciser for the development of the infantile muscles, chest, arms, back, and so on. The springs forming the arms are of substantial construction, so that they are not readily broken or impaired by ordinary childish rough usage; while the fact that they are elastic imparts a new joy to the playmate. Altogether there are twenty-one games which may be played with this doll, each of which is a distinctly valuable health-giving exercise. While the average youngster would spurn the idea of carrying out exercises with

the orthodox apparatus, to this end it will perform the same duties with the new doll with great zest.

A WRIST-WATCH PROTECTOR.

Although the wearing of a watch upon the wrist is convenient, there are certain drawbacks which militate against its use. One of the most aggravating is the susceptibility of the glass to breakage. In order to overcome this an ingenious protector has been devised. It is merely a metallic outer case which slips over the watch, and through which the leather wristlet passes in the usual manner. The case is extremely light, although of great strength, and it flies open with a single movement. The encasing of an ordinary watch within this protector virtually converts the timepiece into a miniature hunter. The glass is protected from breakage under ordinary use; while even if this calamity occurs the watch is not rendered inoperative, because the outer hinged metallic cover protects the face and the hands. While such a protector is especially recommended for use by soldiers, it is invaluable to any one who wears a watch in this manner. So far as the service conditions are concerned, the dull-finished case adequately prevents the watch being unconsciously turned into a heliograph, thereby inadvertently betraying one's position.

A HANDY RANGE-FINDER.

This latest pocket instrument which has made its appearance has received the approval of the War Office. It is an extremely small device, comprising merely a rectangular case with the requisite glasses and calibration, the whole measuring only three inches in length, so that it will slip unobtrusively into the tunic pocket or belt. By means of this handy little instrument the distance of any object with a base of a predetermined length may be ascertained; it is possible to determine, by merely one observation from a single position, the distance of an object the size and height of which is known. Also one is able to calculate accurately the distance between two inaccessible points. The instrument is handy and simple to use, while its intricacies can be mastered within a very short space of time; and as facility is acquired it is possible to carry out with striking accuracy the difficult work for which it is designed.

PHOTOGRAPHING METER-READINGS.

A difference of opinion concerning a meter-reading is inevitable where gas, electricity, or water is purchased from public supply companies. Moreover, it is quite possible for an official meter-reader to make a mistake, although, at the same time, such an error is very rare. Still, in order to satisfy the customer, and to offer indisputable evidence concerning the read-

ing of the meter at a certain date, a novel camera, known as the 'Factograf,' has been invented, and is now being extensively used in America. By means of this appliance the meter-reading official is converted into a photographer, the instrument comprising a small camera, the opening of which is held against the dial-plate of the meter. The operator presses a lever which causes the shutter to open for a pre-determined period, while at the same time four small battery-operated electric lamps come into activity to illumine the meter-dials. After each exposure the shutter is locked, and cannot be operated again until the film has been moved forward a certain distance to permit the succeeding exposure to be made. The manipulation of the camera is virtually automatic, and tampering or erroneous photographic recording is absolutely impossible. By pressing a lever the camera may also be used as a lantern in dark passages, thereby dispensing with the electric torch light, which is now generally used to this end. A single roll of film is sufficient for seventy-five exposures, each of which costs about a sixth of a penny, while two extra rolls may be carried, thereby enabling two hundred and twenty-five exposures or meter-readings to be completed. The film consists of an emulsion upon opaque paper, which is backed with white paper; consequently details of the meter-reading stand up with admirable clearness and definition. The record is read by reflection in a mirror, which reverses the film record, which naturally has become reversed in photographing. It is impossible to dispute the record, because, in addition to the actual meter-reading, the customer's name and the meter number are on the dial; while the actual date of reading may also be incorporated. The records are filed, and in the event of a complaint are produced to satisfy the customer that the meter showed such-and-such a reading upon a certain date. The camera is useful with electric meters which operate upon the maximum demand principle, although in this country this practice has disappeared in favour of the more convenient flat-rate system.

MOISTURE-PROOF CEMENT CONCRETE.

Bulletin No. 230, issued by the United States Department of Agriculture, consists of a contribution on the subject of oil-mixed Portland cement concrete, from the office of Public Roads, of which Mr Logan W. Page is director. The production of Portland cement has been increasing in the United States; for 1913 it amounted to some ninety-two million barrels. Combined with sand, gravel, and water, the resultant product, concrete, is being largely used for foundations for heavy machinery, for dams, walls, or bridge-piers, and when reinforced with steel is widely used for construction of buildings, water-conduits, farm buildings, and fence-posts. Its weak point

has been a tendency to crack, and it has not been moisture-proof. While experiments were in progress in the office of Public Roads in an attempt to develop a non-absorbent, resilient, and dustless road material, it was found that when a heavy mineral residue of oil was mixed with Portland cement paste it entirely disappeared in the mixture, and did not separate from the ingredient after the cement became hard. Further tests showed the worth of oil-mixed concrete for damp-proof and water-proof structures. It was found that oil is not detrimental to the tensile strength of mortar composed of one part cement and three parts sand when the oil added does not exceed 10 per cent. of the weight of the cement used. It requires longer to set than plain concrete, is almost non-absorbent of water, and as tough and stiff as plain concrete. For a bag of cement weighing ninety-four pounds some two and a half quarts of oil are required. For roof-slabs, and also for reinforced tiles, cement mortar mixed with mineral oil and reinforced with steel wire mesh is used. The system has been adopted for damp-proofing the concrete base of roads against the action of ground water. It has been found that oil-mixed mortar and concrete containing 10 per cent. of oil have very little absorption, and under low pressures both are water-proof. A public patent has been granted in the United States for mixing oil with Portland cement, concrete, and hydraulic cement, giving an alkaline reaction, and therefore any one is at liberty to use this process without payment of royalties.

To Correspondents who wish fuller information regarding new inventions mentioned here, addresses will be furnished, when possible, provided a stamped and addressed envelope or post-card be sent to the Editor, 339 High Street, Edinburgh.

FLANDERS—1915.

The men go out to Flanders
As to a promised land;
The men come back from Flanders
With eyes that understand.

They've drunk their fill of blood and wrath,
Of sleeplessness and pain,
Yet silently to Flanders
They hasten back again.

In the low lands of Flanders
A patient watch they keep;
The living and the dead watch on,
Whilst we are sound asleep.

MARGARET SACKVILLE

. TO CONTRIBUTORS.

- 1st. All communications should be addressed 'To the Editor, 339 High Street, Edinburgh.'
- 2nd. For its return in case of ineligibility, postage-tickets should accompany every manuscript.
- 3rd. To secure their safe return if ineligible. ALL MANUSCRIPTS, whether accompanied by a letter of advice or otherwise, should have the writer's Name and Address written upon them IN FULL.
- 4th. Poetical contributions should invariably be accompanied by a stamped and directed envelope.

Chambers's Journal

SEVENTH SERIES.

FORTUNE COMES TO SUNNYMEDE.

By W. E. CULE.

CHAPTER I.—IN WHICH GRACE CHALLENGES FORTUNE, AND MRS HOBBS ARRIVES.

IT may be taken for granted that a really honest and conscientious author will never declare in his title more than he is prepared to prove in his narrative. For this reason I have considered my present title with much doubt and uncertainty, being strongly tempted to replace it by something less provocative of expectation. Yet in the end I leave it, confident that every fair-minded reader will admit that I had excellent reasons for using it. These reasons will be found in the appearance of Mrs Hobbs at Sunnymede, the circumstances that immediately preceded that appearance, and the remarkable developments that followed it.

The last meeting of the committee of ways and means was held in the dining-room on Monday, 16th July, at three o'clock in the afternoon, while Slater was angling on the pier, and while Bertram was still in the City. Mrs Lanyon and Grace, finding themselves together in the dining-room on different duties, had begun to talk, and then Hester, their business manager, had joined them from the kitchen.

It was not a cheerful meeting, though the element of humour was not entirely absent. The courageous Hester, the heart and soul of the enterprise, had at last given way, and was frankly pessimistic. She admitted that the experiment had failed, and that there seemed to be nothing to do but await its inglorious end. Nor was there any real cause for surprise at this conclusion.

'We might have known it from the first!' she said sadly. 'How could we three hope to succeed with a seaside boarding-house? Consider what a tragedy it has been. Family after family come, and look, and go away—or, rather, the heads of the families come and look, and then the families never come at all. When the heads are wise, they will not bring their boys to a house where there are two girls; and even when they are stupid, they are not so stupid as that. There were the Arnoldsons, who came for a month, and left in a week because Denis Arnoldson—the little booby!—wanted to sit next me at dinner one evening. Then the Trescotts and the Harveys—it was just the same with them. Charlie Harvey made Grace play one

game of cricket with him in the garden, and that was more than enough.'

'His mother bowled him out the very same day,' said Grace mournfully. 'And I only played the game at all because it was our principle to entertain our guests. Charlie was a wretched little nuisance!'

'The only people who would come were people with little children,' proceeded Hester; 'and then, of course, all the other kinds of people must keep away. One child sitting in a front window is fatal to the success of any boarding-house. But, after all, *we* are the chief obstacle. If your daughters were only ugly and deformed, mother, Sunnymede might be a great success.'

'Would that be success?' asked the mother, with a sad little smile.

'Well, this isn't, anyway. Here we are past the middle of July, and no one else booked. And we have only two young men in the place!'

The business manager had had her say, and her facts were beyond dispute. There were other facts that she did not mention, but they were upon the minds of all—the disappearing capital, the imperative need of paying the rates, and the difficulty of selling the house when there were so many similar houses for sale. So the mother said nothing, and it was left for Grace to bring another element into the discussion.

As a member of committee Grace was a forlorn hope, or something even less hopeful. She was only twenty-one, and though Hester was no more than twenty-three, the one possessed her father's very useful business capacity and practicality, while the other was by nature something of a dreamer. Now she spoke according to her disposition, for the dreamer will always see Hope at the end of the road.

'It doesn't matter so much about booking, does it? People often come without booking in advance. Mr Slater came like that. Why, some one may come by the three-fifteen—this very day!'

'And this very hour!' said Hester, with rueful directness. 'I do wish you would be practical, Grace. As for Mr Slater, he has no head

of the family to look after him. He came because you smiled at him when he knocked, and he only stays because you still smile at him—a little.'

'For the sake of Sunnymede,' protested Grace.

'Oh, of course!'

Grace blushed. Slater was a rackets youth, with a weakness for perfumed pomade and a strong disinclination for work, and he was entirely out of his element in this quiet circle. Yet he held on persistently, in the hope of softening the obdurate heart of the younger daughter of the house. She did not, however, give up her argument.

'Mr Bertram came without booking, too,' she said. 'And it was you that opened the door to him.'

This was so true that for a moment Hester had no word to offer. Then Mrs Lanyon spoke, always the peacemaker, and always eager to interpret these diverse dispositions: 'So he did—so you did, Hester. That is quite true.'

'I don't know why he came,' retorted Hester, recovering. 'But we all know why he stays. It is because the house is so quiet, and he is quiet himself. If Sunnymede were a success, he would have left long ago to find a quieter place. So there!'

Mrs Lanyon looked at her elder daughter admiringly, though there was despair in the admiration. Then she suggested that perhaps another advertisement in the *Daily Telegraph* might be tried. Grace, however, took no part in the discussion that followed, for the mention of young Slater a few moments before had given her a new train of thought, in which Slater himself—poor fellow!—had no part. The world of happy fancy was always within her reach, and now, though she was sitting in the dining-room at Sunnymede, looking down Aylmer Avenue toward Station Road, her thoughts were far from Eastgate-on-Sea. Her lashes drooped; her eyes were veiled; her bosom heaved behind the neat print apron in which she did the 'dusting.' She was returning from an autumn visit to an aunt at Richmond, and was in a busy, crowded street near the Bank, struggling along with a wicker dress-basket that was far too heavy and bulky for her. She was hot and tired, lonely and breathless and dispirited. But suddenly another hand seized upon the dress-basket, and when she looked up she met the laughing but sympathetic gaze of two dark eyes in a face that was as gentle as it was manly. And those marvellous eyes said as plainly as the clear young voice, whose note she would never forget, 'May I help you? Where do you want to go?'

What a splendid voice! What wonderful eyes! What a fine figure! What glorious strength! How simple! How graceful! How natural!

'Thank you very much!' she said softly; and then she woke.

'Grace!' cried Hester. 'What are you dreaming about? Look, mother, she is at it again! We cannot keep her to business for five minutes at a time!'

Grace returned to the committee. She had actually spoken those grateful words aloud, breaking in upon some remark by her mother. For a moment she was confused, feeling that she had betrayed to Hester's searching eye a closely cherished secret. Then, recovering, she changed the subject with really creditable neatness. She even took the war into the enemy's country.

'Well,' she protested, with unusual courage, 'I don't call it business to go on despairing as you are doing, Hester. There is no business in it. What good does it do? It is better to think of something pleasant, even if it is impossible, than to keep talking of things that are horrid.'

This was rank rebellion—nothing else. The gray eyes of the business manager opened to their widest, and the mother looked at her younger daughter in plain surprise. And spurred by her own courage, the younger daughter laid down her own secret principle of faith and action once and for ever.

'And I'm not going to give up—on the 16th July, when the season is only half-over! I'm going to hope and believe. I do believe that some one will come by this very next train!'

'Who?' asked Hester, recovering her breath.

'I don't know who. It may be Dame Fortune herself. Why shouldn't it be? It isn't impossible.'

'She hasn't booked rooms here, anyway,' said Hester, with a gleam of kindly-caustic irony; and it was at that moment that Mrs Lanyon interposed another remark, intended to calm the storm.

'There are the passengers from the three-fifteen.'

People were indeed crossing the end of the road—two men first, one with a kit-bag and one with a Gladstone; then a boy alone, a couple of girls, and two or three family groups in straggling order. The committee watched with keener interest than ever before, but possibly not with firmer faith. And never one of those passengers turned into Aylmer Avenue.

They waited until the last had definitely gone. Then Hester spoke, but without looking at her sister.

'Not this day, Grace,' she said. 'Nor this hour. I am sorry'—

'Look!' said Mrs Lanyon. 'What is that?'

Something white appeared on the pavement at the end of the road, and paused there, fluttering and irresolute. Then the brisk breeze from the sea caught it again, and it came five or six

yards up the avenue. A moment more, and an old lady followed it from Station Road—an old lady flustered and blown, and burdened with two other parcels, an umbrella, and a reticule. That something white was a draper's paper bag which she had dropped, and which the breeze was keeping just out of her reach. It contained a trifling purchase which she had made on her way from the train.

'What an absurdity!' said Hester. 'Why will people carry all their belongings in small parcels?'

And Grace? Grace made no remark; but the glamour of her day-dream was still upon her, and she acted under that influence. In one half-minute she was out of the room, the front-door, the gate. In another she had crossed the road and was bearing down bravely, relentlessly, upon the runaway property. She picked it up just as its owner came within reach.

'Here it is,' she said.

The old lady was breathless, and for a moment could not even smile. She took her property, and in trying to accommodate it, dropped her handbag. Grace had always sympathy for the distressed, and now her sympathy had a special quality.

'May I help you?' she asked, in a sweet and far-away echo of that other and unforgotten voice. 'Where do you want to go?'

The old lady was recovering her breath, but not her composure. With flushed features, bonnet awry, and awkward hands, she gave her answer plaintively.

'I don't quite know where to go. I was looking for rooms, and the stationmaster recommended me to a house in Station Road. But he said it was at the top of the road.'

Grace, looking at her again, was conscious of something more than a warm sympathy. Perhaps it was the disordered bonnet, perhaps the helpless note, perhaps the colour and glance of her eyes. They were kind, true eyes.

'I'll take you there, if you like,' she said. 'But we have rooms to let just here, across the road. Would you care to see them?'

The old lady was a little suspicious at first. She glanced across the road, and then she looked searchingly at Grace, who, having taken the first fateful step, must needs do her best. When Grace did her best her dimples crept into view most becomingly, and her eyes displayed effects entirely marvellous. At such times it was only possible to gaze and wonder.

'Do come!' she pleaded. 'We have some very nice rooms, and I will make you very comfortable. I was really hoping that some one would come by this train.'

The old lady gazed, and possibly wondered. Then she surrendered, and made to cross the road to Sunnymede. Immediately Grace seized two of her parcels, and began to lead the way.

But when they were exactly in the middle of the road a halt was called.

'Have you a feather-bed?' asked the old lady, in a tragic undertone. 'I must have a feather-bed. I won't come inside the door unless you have one!'

It was very comical. Grace laughed merrily. 'Why, we have two!' she cried. 'And nobody ever wants them. You can have them both if you like.'

The journey was resumed. By this time Hester, still in the window, realised its purpose.

'Oh mother,' she cried, 'she is actually bringing her in! Why, all the avenue will think she went out purposely to waylay her! And such a quaint old thing, too.'

Mrs Lanyon watched the scene with mingled feelings. 'She may be quite respectable, after all,' she said gently; and there was no time to say more, for the new-comer was already at the threshold.

The rest was very easy. The old lady was tired, out of patience, and not ungrateful for the prospect of a speedy settlement. After making sure of the feather-bed—she felt it critically, to see that it was the genuine thing—she selected a room, and arranged the terms. Her name, she said, was Hobbs, and the length of her stay was uncertain. Yes, she would be glad of a cup of tea, if she might have one—but it must not be China. Then she took possession of her room, deposited her various parcels upon the feather-bed, and sat down to cool herself after her exertions.

An hour later, after the tea, she set out to view the sea-front before dinner—a somewhat portly and motherly old person, whose general appearance suggested neither style nor fashion, and whose manner was a curious combination of assurance born of experience, nervousness born of natural humility, and a desire to please, the flower of a kindly disposition. She was a widow, probably the widow of some London tradesman in a fair way of business, possibly of some obscure professional man; and she was about sixty years of age. When she had gone Grace joined Hester in the dining-room, and was surprised to find that young lady in a state of laughter.

'What is it?' she asked quickly.

'Oh Grace, do you remember what you expected? It was to be Dame Fortune. And she calls herself Mrs Hobbs!'

Grace had forgotten the little argument, but she stood up bravely for her position. 'Of course, she can call herself what she pleases,' she said.

'And I called her a quaint old thing!'

'You can call her what you please, dear.'

'And she insisted on having a feather-bed—she wouldn't come into the house until you had promised her one!'

'It was a case of "Look before you leap." She was very prudent.'

'And mother said that she might prove to be a really respectable person, after all!'

'Well, we'll just wait and see,' said Grace, with unbroken good-humour; after which Hester, her gray eyes still smiling, went away to consider dinner.

It was a crushing catalogue of unhelpful facts. Yet, Hester, practical, business-like, far-seeing, sagacious beyond your three-and-twenty years, hear my urgent question! If Fortuna should indeed leave for a time the uncharted islands

where the old gods dwell, and walk once more among men; if she should set out laden with the old gifts, her showers of gold, her sudden streams of sunshine; if indeed she came, who could presume to guess how strange her guise, how deeply veiled her glory? And if she came seeking a sign to guide her untrammelled feet, what sign would be most likely to win her as a guest? Would it not be the gentle welcome of a young maid's voice, the sunny faith of a young maid's fancy, the kindling light of a dawning love in a young maid's eyes?

(Continued on page 786.)

PARLIAMENT IN WAR-TIME.

By MICHAEL MACDONAGH.

PARLIAMENT has undergone extraordinary changes as the result of the war and the establishment of a National Government. The transformation is to be seen outwardly in the disturbance of the traditional seating of members of both Houses, and in the regroupings of parties; and inwardly in the different atmosphere and fresh spirit and purpose of the assembly.

One of the general effects of the war is its belittlement of such of our national institutions as in time of peace derive their strength and influence from the sway of moral and intellectual ideals. It is the same with living beings. The young man, as the embodiment of physical force, is alone exalted. With the nations of the world in death-grips it is inevitable that the soldier should be the only man who really matters; and it is natural also that those institutions which are concerned with equipping him most efficiently for his work should be thought of most account. All else has shrunk and shrivelled in importance.

Even Parliament, one of the most ancient and renowned of English institutions, and certainly the most powerful, has shared in the common fate. It is to a great extent overshadowed and dwarfed. It remains the organ through which the policy of the National Government is announced to the people. Any measures which the National Government may think necessary for the security of the realm have to be passed by it. It is from whatever Parliament may do in that way to help in the successful prosecution of the war that it derives such interest and distinction as it still possesses. But as the grand council of the nation it is a pale shadow of what it was only a year and a half ago. Procedure, manners, customs have been modified; and the most remarkable change of all has occurred in the spirit of its members—in their ways of feeling, thinking, and acting as politicians. In short, the English Parliament, that for seven hundred years—since 1213, when the idea of representation first became associated with the

central assembly of the nation—has been the arena of conflict between the two main tendencies of political thought in government, the progressive and the conservative, has suffered an eclipse in the black shadow of the European catastrophe. One cannot help wistfully putting the question, Will it ever be the same again?

Some outward signs of the change that has come over Parliament is visible to those who pass by the Palace of Westminster, in which it meets. There is Big Ben, the great clock up in its high tower, by which the people of London are accustomed to set their watches. On its four immense dials the passing of time is still recorded, but the familiar musical chimes that marked the quarters and the resonant bell which struck the hours are both silent. At night-time the clock is no longer illuminated. The brilliant light on the top of the tower which, seen for miles around, used to tell London that the House of Commons was sitting late is no longer lit. Over the mighty Victoria Tower, however, the Union-Jack flies predominantly in the day-time mast-high. It is the truest symbol of the unconquerable temper of the country in this time of crisis.

The first thing that must strike the visitor in both the House of Lords and the House of Commons is the absence of youth, ever the pride and hope and promise of the assemblies. This is particularly noticeable in the House of Commons. All are vanished, those bright and ardent spirits, whose voices were loudest in the approving cheers or defiant cries that marked the passionate debates on the Union but yesteryear. Two hundred or so are on active service in the army and navy. Some are dispersed among the ships of the Grand Fleet, which, silent and invisible, yet constitute an impregnable wall of steel and fire against invasion. Most of them are in Flanders or at the Dardanelles, those grim arenas of conflict between divergent principles of statecraft and government, where the only speeches on both sides are the roar of cannon.

sending forth the one common argument of a high explosive. Several have been wounded; others are prisoners of war; some have died on the field of battle. It is in connection with the issue of new writs for the election of members for the constituencies of those who have fallen that the first change in old customs caused by the war is observable. As an old parliamentary journalist, I have always wondered at the seeming indifference, if not callousness, with which the House of Commons as a body hears that a member has been struck off its rolls by death. A new member is brought into the House amid the cheers of his party. He may sit at the deliberations of the House for a quarter of a century or more, but unless he attains to the highest rank as a Minister, no notice is taken when he passes away. The writ to fill his vacant place is moved for by the Whip of his party; and though, no doubt, the reading of his name awakens in the minds of his intimate friends a thought of kindly remembrance, the House as a whole is unmoved. Not a hat is raised by way of respect. This insensibility to the visits of death to the House has been brought to an end by the war. On the moving for a new writ for the election of a member in room of Lieutenant Gladstone, 'killed in action'—as the motion said—every member simultaneously uncovered at the mention of the gallant officer's name.

One effect of the absence of all the young members at the war is very remarkable. Probably never since the Witenagemot, the ancient assembly of wise men that was the governing body of the nation under the Anglo-Saxon kings, have there been in Parliament so many gray-beards or—as hair is scarce or has gone out of fashion—so many bald heads. It is a Parliament of seigniors, the 'most grave and reverend' of the Shakespearian quotation, but hardly the 'potent,' for in this time of war it would seem as if potency were the attribute of young manhood alone. Still, a few members are always to be seen in the brown of the soldier or the blue of the sailor. Occasionally an officer home from the Front, wounded, or on short furlough, appears in his active service uniform. For the most part, the soldiers and sailors are those in training in home camps or engaged in administrative duties. But the importance of this spectacle of members in uniform is that it marks a breach with a long-established custom. Hitherto there has been but one occasion when the wearing of uniforms, or any other dress but the civilian, was allowed in Parliament. That was at the opening of a new session. In both Houses, the mover and seconder of the Address in reply to the King's Speech are required to attend in uniform or levee dress. Once only has this rule been dispensed with. That was in the case of Mr Fenwick, the workman representative of a coal-mining constituency, who one

year seconded the Address wearing his ordinary attire. On any other day but the opening day of the session, a member would not be permitted to enter the chamber in any clothes but the clothes of a civilian. I have seen Lord Haldane, when he was Mr Haldane and member for Haddington, refused admittance in the gown and wig of a barrister. Appearing as counsel before a Royal Commission sitting in the precincts of the House, at the sound of the division bells he hastened to the chamber to vote, and was stopped at the threshold by the doorkeeper, who told him that he must disrobe before he could pass in. Nor would a member in wig and gown be given admission to-day. The custom prescribing civilian dress is suspended only for soldiers and sailors, and, no doubt, only for the period of the war.

Even so, it marks a striking departure from tradition. Those who have seen new members introduced wearing the khaki service dress of a soldier or the blue uniform of a naval officer have seen a thing that is without parallel in the long annals of Parliament. It is also the case that until the war broke out khaki has never been worn in the House of Commons; and very conspicuous it is now, despite its supposed 'invisibility,' in that assembly of civilians, though it does not tend to the easy identification of those who wear it. It is to be noticed, too, in all parts of the House—in the Nationalist and Labour quarters, as well as on the benches of the two main political parties, Liberal and Conservative. Until recently the wearers of it, with one exception, were commissioned officers. That exception, it is interesting to note, was Lance-Corporal Sir Herbert Henry Raphael, Baronet, Liberal member for South Derbyshire, who is reputed to be one of the wealthiest men in the House, and who, the story goes, had made to his wife the usual allowance of two shillings and sixpence a week from his pay as a private soldier. But in the midst of all these relaxations of ancient rules which the war has brought about in regard to uniforms, there is, curiously enough, a rigid adherence to one kindred and closely allied custom. Even in this time of war, no weapon of war can be taken into the House by a member. Swords are worn by the uniformed mover and seconder of the Address at the opening of a session. That, again, is the only occasion when any symbol of the lethal duty of the soldier is permitted to affront the gaze of the unarmed representatives of the people in Parliament assembled. A revolver is an essential part of the service equipment of an officer. Yet one member in khaki who displayed this weapon in its lanyard was stopped at the door, and required to leave it in his locker outside before he could go to his place in the chamber. Nevertheless, a sword is to be seen in the House of Commons at every sitting. The Sergeant-at-Arms carries it at his

belt; but, then, the Sergeant-at-Arms is the chief executive officer of the House.

More remarkable still are the signs one sees of the change in the atmosphere and temper of the House of Commons as the great arena of political controversy. The truce that was declared between the two sides at the commencement of war has become an alliance. The party system, which in time of peace is the very breath of our constitutional form of government, is suspended. Political forces that for centuries have been antagonistic in their very nature and composition have coalesced, as if by a miracle, in defiance of all the fixed principles of political strife. Evidence of this amazing fusion is to be observed in all parts of the chamber—in the appearance of familiar faces in strange places among the general body of members to the right and left of the Speaker, and still more in the juxtaposition on the front bench on both sides of the table of party leaders who were lately in bitter antagonism. Liberals, Unionists, and Socialists sit cheek by jowl in unity as Ministers on the Treasury Bench. For the first time in the history of Parliament, the 'Front Opposition Bench,' as the appellation of the corresponding bench on the other side of the table, is a misnomer, because for the first time in the history of Parliament it is filled with partisans of widely different political opinions who are united in supporting the Government.

The one great and distinctive feature of the House of Commons which has struck all visitors for many a year was the Government and the Opposition seated facing one another on rising tiers of benches, and, in moments of high party excitement, shouting challenge and defiance across the estranging floor. That picture has been turned to the wall. Party conflict has been stilled, metaphorically speaking, by the roar of the guns. The floor has lost its historic

political significance. To cross it no longer means, as it would have meant for a member but a little while ago, so tremendous a personal revolution as a change in party convictions—a passing from one political camp to the other. Now members take their places on one side or the other without reproach. No longer do they blaze across at each other with fiery eye from under clouded brows. On the contrary, one calls the other 'my honourable friend' in the true coalition spirit. During the long time of international peace, but of domestic party strife, it was as rare as summer snow for a member to refer in debate to a member on the other side of the floor as his honourable friend. By the etiquette of the House the leaders on each side of the table were 'right honourable gentlemen' to one another, no matter how intimate might have been their personal relations outside. Now it is a common thing to hear the term 'my honourable friend' and 'my right honourable friend' exchanged across the floor by erstwhile political opponents.

Still, it would not be quite correct to say that criticism of the proposals of the Government is no longer heard in the House of Commons. There are in the House too many minds representing divergent interests and opposing points of view for that, perhaps, ever to come to pass. There are even a few members, in a pettish kind of humour, disposed to fret and tease the Ministers. But anything like censorious or merely factious criticism would so grate on the sensibilities of the assembly that any member attempting to indulge in it would be overwhelmed in a storm of indignation. What is over and done with for the period of the war is party controversy, or the discussion of public questions in the light of party principles. In the deep peace which broods over the House of Commons the division bells are practically silent.

THE MUTINY.

WHY DID IT TAKE PLACE IN THE YEAR 1857?

By Lieut.-Colonel Sir HENRY SMITH, K.C.B.

BEFORE answering the question I have asked it may be of interest to look back on the chief struggles which Great Britain and Ireland have been engaged in since the beginning of the nineteenth century: on the war with Napoleon, culminating in the glorious victory on the field of Waterloo; on the war in the Crimea, when cholera and frost-bite were nearly as fatal as the shot and shell of the enemy. Russell of the *Times*, the first correspondent with an army in the field, in his story of *The Great War with Russia*—though he encountered difficulties in the closing days

of September 1854 which, notwithstanding his determination to do his duty, *coûte que coûte*, to his employers in Printing-House Square, he found almost insurmountable; though he was not 'on the strength' of any department, commissariat, surgical, civil, or clerical; though he ran a very fair chance of being ignominiously hanged by a certain gallant General from the Emerald Isle before he had put pen to paper—did yeoman service. But for Russell, who would have known at home what happened in those days? Who would have heard the many tales—tales which, had they not been tragic, would

have been exquisitely comic! How, when the 'Tommies'—a word, by the way, not in vogue in 1854, unless my memory is at fault—were limping about in the trenches in their 'stocking-soles,' a ship loaded from stem to stern with boots for the right foot, and another similarly loaded with boots for the left, lay in Balaclava Bay for a week so close together that you could have chucked a biscuit from one ship to the other; how it did not occur to the captains of the vessels in question to communicate with each other; how the vessel with the 'rights' foundered in the terrible storm of 14th November; how the vessel with the 'lefts' was driven ashore the same night with her cargo in admirable condition. I must admit that this 'yarn' would in present times be labelled 'From German sources, and consequently unreliable;' but that a ship loaded with boots lay in the Bay for quite ten days, and sailed back to Malta, boots and all, is an absolute fact.

When the Allies landed on the coast of the Chersonese, what a state of affairs revealed itself! As often happened, not one article was there that should have been. The *Times* correspondent was appealed to by every one. Truly he had enough to write about. 'Mr Russell, Mr Russell,' exclaimed a certain commanding officer, 'tell them at home we've been massacred. No supports.' 'Russell, look here,' exclaimed another, 'do make a note of this! By God, they have landed this army without any kind of hospital transport, litters, or carts of any kind! Everything was ready at Varna! Now, with all this cholera and diarrhoea about, there are no means of taking the sick down to the boats!' Then we were fighting for the Turk; now we are fighting in a far more arduous struggle, but under what different surroundings! We read of the Apostle Peter's dream, how he 'saw heaven opened, and a certain vessel descending unto him, as it had been a great sheet knit at the four corners, and let down to the earth: wherein were all manner of four-footed beasts of the earth, and wild beasts, and creeping things, and fowls of the air.' Had the vessel in question descended on the right honourable gentleman the member for East Fife some eighteen months ago it could not have contained a more heterogeneous mass of disintegrated material than that of which the House of Commons was composed; but how nobly, when the Empire was in danger, it recognised its duty! English members, Scottish members, Irish and Welsh, sank their differences, and joined hands for the defence of hearth and home.

In 1854 curses both loud and deep were hurled at that miserable Government—Lord Aberdeen's*—which had espoused the cause of

the Turk. What had we got to do with the Turk? He was, and is, always sick. Let the Muscovite annihilate him. Those days, for the reasons I have given, were terribly dark and gloomy, and there were many predictions that the world was coming to an end, and the millennium, long looked for, was at our gates. So convinced was one eloquent preacher of the gospel, the Rev. John Cumming, of the Presbyterian Church, Crown Court, London, of the impending termination of the world and all that was therein that, as *Punch* felicitously put it, he had begun 'to take his coals by the sack!'

There was another disturbing factor in the Crimea. It was stated that the officers in command of the Cavalry Brigade, Lords Lucan and Cardigan, were not on speaking terms; and that Captain Nolan, who carried Lord Raglan's orders for 'The Charge of the Light Brigade,' was hated to such an extent by Lucan that he, taking stock of the situation, was delighted to see that the annihilation of the Brigade was inevitable. But this Lord Lucan indignantly denied. All this seems so utterly despicable that one blushes to think such reports could ever have got into circulation, or that any one save a knave or a fool could have given credence to them.

It was not till the month of June in the year 1865—when the gallant 4th Queen's Own Light Dragoons (now the 4th Hussars) lay in Piershill Barracks—that all those events were made clear to me; and to enable my readers to see now as plainly as I saw then, and to sift, as far as possible, truth from falsehood, I will lay before them an account of an evening spent with one who had ridden in 'The Charge' on the 25th of October, Colonel George Brown, of the regiment in question.

Jock Kennedy, the senior captain, was a great friend of mine, and I dined with him some five or six times that summer, but never had the good fortune to meet the colonel, who had been absent on leave. At last I got a note from Kennedy: 'The colonel's back. Come down to-night. You will be the only guest, and I'll see that you sit next him.' Too good an offer to refuse. The colonel, I had been told, was the only officer then in the regiment who had been in the Crimea; and I found him certainly the most unassuming, not to say shy, commander of a cavalry regiment I had ever come across. He said very little at first, but after the champagne had circulated once or twice he became more communicative. 'What a funk I should have been in,' I said, 'before the bugle sounded the advance!' 'Oh no,' he replied; 'you would have been thinking of your men;' adding, 'But there was no bugle sound.'†

* Lord Aberdeen belonged to the party of peace at any price. Moreover, he was so nervous that he precipitated the calamity he was so eager to avert.

† In spite of this fact, a certain bugle was sold, only a few years ago, at Christie's, for fifty or sixty pounds.

The Voltigeur needs no trumpet sound,
No bugle has he to cheer him on;
Where the fire is hottest there he's found—
Hurrah for the Faubourg of St Antoine!

As the men of the Faubourg threw themselves against the serried columns of the Russians at Auerstadt, so did the Six Hundred advance in solemn silence into the valley of the shadow of death. The French could not endure *le terrible silence*, and on many occasions in the trenches, when the British were absolutely silent, would talk and shout one to another, even as the Allies are doing in and around Ypres at the present moment, though they do so at the risk of their lives from the 'sniper.'

But to return to the messroom at Piershill.

'Paget,' continued the colonel, 'had left the regiment on promotion, and the man who led us that day was Alexander Low. Something momentous, we all knew, was impending; but what we had not discovered. Fifty yards off, with his horse's head turned up the hill, sat Lord Lucan. Presently Captain Nolan* of the 15th Hussars, then on General Airey's staff, galloped up to him full speed. What Nolan said we could not hear; but Lord Lucan, in the evening, gave the purport of what had passed between them: "Lord Raglan's orders, sir, are that the cavalry should attack immediately." "Attack, sir! Attack what?" "There is your enemy, my lord—the guns in front of you."

'Calling up Lord Cardigan, Lord Lucan repeated to him what Nolan had said. Then, without a moment's hesitation, sorely against his will—for to charge along the valley about a mile and a quarter, against guns in position, seemed to him absolute suicide—Lord Cardigan exclaimed, "The Brigade will advance." Low, placing himself some few yards in front of the line, gave the words in rapid succession, "Trot! gallop! charge!" No one spoke but himself, and every word he uttered was distinctly audible during the silence which prevailed. "Steady there, men! Steady on the right! By your centre! Steady, Corporal Jones! You'll have your work to do soon enough! Steady!" Then a round shot would meet us, accurately fired, and a couple of saddles would be emptied. "Close up, men! close up!" Trying work this for young soldiers. The majority of the regiment were lads of nineteen or twenty, but not one of them wavered or turned his head to the right or left. All rode grimly forward, straight for the guns.

'Now the silence, as we got among the Russian gunners, gave place to shouts in English, Scotch, and Irish. Men severely wounded would fall from their horses and call to their comrades for help. This *mêlée* seemed to last an age; yet from the time we started till the men fell in to answer to their names,

some mounted, others dismounted, was barely twenty minutes.

'When the one hundred and ninety-five men—for that was all that remained of the six hundred and seventy-three composing the Light Brigade—were being looked to by the surgeons, Lord George Paget noticed Lord Cardigan, and exclaimed, "Halloa, Cardigan! weren't you in it, after all?" The bystanders smiled as Cardigan answered, "Wasn't I though?" And, turning to Captain Jenyns, he said, "Here, Jenyns, did you not see me at the guns?" Jenyns replied, "Yes, I did, sir." Cardigan,' said Colonel Brown, continuing his story to me, 'I certainly saw when we started; but after we had advanced a short way the smoke became so dense that he might—I don't say he did—have turned up the hill and ridden back again.'

That indeed was a memorable evening at Piershill; and—whatever may be said or believed of bugles sounding or not sounding, and of officers who were 'in it' or officers who were not—I pin my faith to that thrilling narrative told me by one who was present—the gallant and unassuming colonel of the 4th Queen's Own Light Dragoons.

After the colonel had gone to bed, Kennedy, a true Scotsman, and a man who would never go to bed if he could get any one to sit up with him, told me a tale of the 2nd (Royal North British Dragoons) Scots Greys and their adjutant, Jock Miller. The Heavy Brigade, in their charge, lost, comparatively speaking, few men, the enemy bolting incontinently. It was all over in far less time than the charge of the Light Brigade. In five minutes the Muscovite Horse, pierced by Greys and Inniskillings, broke up in disorder. No one did greater execution or accounted for more of the enemy in that five minutes than Jock Miller, who, when the survivors were answering to their names, stood—his charger was terribly slashed and cut about—his handkerchief saturated with blood from a deep gash in his forehead, and half-blinded, endeavouring to see his colonel—Sullivan, I think it was—who was addressing him. 'Well, Captain Miller, have you had enough fighting for the day?' 'No, colonel, I have not,' was Jock's reply. 'I would like to ride back to the guns. There's a wheen o' they beggars livin' yet.'

Jock Miller, originally a Gilmerton carter, was a most extraordinary man. Though terribly severe, he was popular with the old soldiers. He understood them, and they understood him. It was the recruits who actually shook in their boots when he fixed his eye on them—the recruits, not the boots—an eye that nothing could escape. 'They mauna be properly entered,' he would say, as Dandie Dinmont said of his terriers. Anything like slovenliness drove Jock wild. On one occasion he halted in front of a newly joined lad, having seen a spot which few could have discovered without the aid of a microscope.

* Nolan was the very first man killed in the charge.

'Ye'll mak a grand sodger,' said Jock, 'when ye learn to clean yersel,' looking the shaking youth in the face for eight or ten seconds; 'there's eneuch muck on yer belt to grow a caubitch.' When Jock returned to his native village from the Crimea he was received with enthusiasm, and asked to fight his battles o'er again. The charge of the Heavy Brigade was, of course, the *pièce de résistance*, and one old lady, seeking to improve the occasion, remarked, 'I suppose, Captain Miller, you had barely time to offer up a short prayer.' 'Prayer!' said Jock contemptuously. 'I wasna thinkin' aboot prayin,' wi' ma horse's heid amaist cutted aff.'

But what has become of the Mutiny all this time? *Revenons à nos moutons.*

In the year 1897, the year of Queen Victoria's Jubilee, I used, in company with Sir Edward Bradford, to ride in The Row every day of the week bar Sunday. A number of Indian princes, Rajahs and Maharajahs, were always to be seen, arriving earlier and staying later than all other equestrians of the Liver Brigade. Bradford introduced me to several of them; and with one in particular, now—unless I have been misinformed—fighting gallantly side by side with us and our Allies in the lovely plains and orchards of France and Belgium, I became very intimate. An introduction from Bradford was sufficient for those turbaned warriors, who lived in the saddle. Forty long years had he spent in the gorgeous East. He knew their language and he knew their country as well as they did themselves. Moreover, he was a most consummate horseman, second to none.

Bradford had told me why the Mutiny had taken place in 1857, and this is the sum and substance of what he said: that the greased cartridges—greased with the fat of pigs—had created great resentment in the regiments to which they had been issued; that the rumours which had been circulated all through Hindostan had created still more resentment, those rumours being that the British Government had determined to destroy the caste of the native army, and, moreover, to introduce a General Enlistment Act, by which a regiment, or regiments, or the whole army if necessary, might be sent across the seas, nearly all Orientals having a great dread of the ocean.

About forty years previous to the greasing of the cartridges and the rumours of impending and unwelcome changes, the Honourable East India Company annexed the Mahratta States, paying in compensation to the Peshwa, who took up his residence at Bithur, near Cawnpore, a sum equivalent to something like eighty thousand pounds per annum. When the Peshwa died, his adopted son, Nana Sahib, expected that this allowance was to be continued to him, and was both disappointed and indignant when in-

formed that it was only during one life that the allowance was to be paid, and that he had no claim to it. His request for a continuance of the pension having met with no success, he sent his agent, Azim-Oollah Khan, to England to lay the matter before the Board of Directors. The case, as to whether or not the allowance was to be continued, was argued in London, Azim-Oollah Khan, assisted by English counsel, holding a brief for the claimant. It went against the Oriental, and Azim-Oollah made arrangements to return home. While in England, I should mention, he was most popular, especially among the fair sex, and had the entrée to many of the best houses in the Metropolis. He was treated as a friend. Men spoke openly before him, and he learnt what was going on in the Crimea, and how the Russians were withstanding the armies of Britain and France. That decided him on visiting the Crimea and seeing for himself whether or not what he had heard in London was true. The next we hear of Azim-Oollah was in Constantinople, where he expressed a keen desire to see 'those great Roostums, the Russians.' Subsequently he was found in the advanced trenches at Sebastopol, and was heard to say—if I mistake not by Russell of the *Times*—'I think you will never take that strong place.' Satisfied with what he had heard and seen, he hastened back to India. 'Now is the time,' he said to Nana Sahib, 'not only to regain possession of our own province, but to regain possession of the whole of India, and drive every cursed Feringhee out of the country.'

Sir Edward Bradford was not given to make mistakes; but I said to myself, as the Oriental officer and I were cantering round Hyde Park, 'How interesting it would be to have corroboration of all Bradford told me by a native of the country!' And I had corroboration to the full, but it took me that morning and the next to get it.

I should explain that, well as my informant spoke English, I am putting words into his mouth which he did not use, and of which possibly he did not know the meaning. He spoke under deep emotion and with loathing of Azim-Oollah Khan. 'Every word of what Sir Edward Bradford told you is correct. Azim-Oollah was a scoundrel and a traitor. But for him the massacre at Cawnpore would not have taken place. Bad as the Nana was, he was merciful compared to his Prime Minister. God knows I did not wish to speak of such things to an Englishman. The native army is now as loyal to the great Queen Victoria as her own soldiers at Windsor and London. May we have an opportunity of proving it!'

His wish has been granted.

'And may we meet again! Farewell!'

L'ÉCORCHEUR.

A STORY OF THE WILD.

By F. ST. MARS.

THE paying-off pendant curved out in the breeze and trembled and rippled from mast-head to bladder at its end dancing on the cold waves. It was the only moving thing, except the glittering waves, in all that watery expanse. True, the great warship from whose masthead the paying-off pendant floated was moving, but so steadily, so majestically, and her towering gray sides merged so into the seascape, that she seemed at a distance rather to be part of the scene than anything of man's creation moving upon it.

It was the streaming, fluttering pendant that caught the eye. It was the same thing that flashed to the eye of the bird. And instantly the little flying thing turned and headed straight toward it.

Drifted by a steady east wind far out to sea, he had missed all known bearings, was clean out of his reckoning, and flying about helplessly, now high, now low, till, utterly exhausted, he realised, with that sickening dread which must assuredly be the nightmare of all migratory birds, that he was lost, lost completely on the face of the waters.

No one knows, or could realise if he did, the full horror of that last grim struggle to make the great ship, when eyes and brain fast dulled to a misty agony of growing darkness; when madly pounding heart, driven to the last choking, sickening beat, seemed as if it must burst and wrench that whole delicate, seven-inch bunch of feathers apart; when the gasping, wide-open beak and labouring lungs appeared to be closing, closing, closing for ever irresistibly; when the aching wings beat slower and slower, wildly and more wildly, and seemed to be shrinking by inches from their eleven-inch spread; and when, long after to him, ages after to him, eyes and brain and all sense appeared to have ceased work for ever, and the muscles of the wings marvellously carried on the last telegraphed instructions from the brain, and beat and beat blindly, no longer directed, but following the course set by the eyes when they last saw.

And then he came to one of the greatest fighting-machines in the world. He, one of the smallest fighting-machines in the world, came, fluttering blindly, to the rails, gripped, fell back, down, down almost to the seething, snowy cauldron of the wash overside, rose, struggled up again, hung 'twixt life and death, blindly fluttering, collapsed suddenly, and fell headlong and inert—just simply a ball of feathers.

And there you have it. So light was he, so powerfully affected by wind are even small

feathers, that a sudden eddying gust, swishing round the curved steel flank of the forward superimposed 13.5 gun turret, caught him, as it were some great invisible hand, and drew him inboard.

No man saw the boarding of that little bird in the shadow of the mighty, grinning 13.5-inch twins. None heeded him as he lay there—a splash of rose-tinted cream and white and red—hour after windy hour.

Men talked of 'Home' and 'leave,' of 'th' Hard' and 'Commercial Road' (not the London one), of 'th' Town Station' and 'th' Harbour Station,' of the 'Brighton train' and 'Waterloo train,' and swore by their strange gods, 'The Railway Tavern,' 'The Jolly Sailors,' 'The Duke of Something,' and many more; and—that was an officer's voice from the 'high and lofty bridge'—one cried, yawning, 'Ah! who'd sell a farm and go to sea?'

Followed hours of wonderful, salt-laden darkness, through which the steady push of the screws and the swish of the seas overside played like an unending lullaby, that seemed to have put the little bird to sleep. He had fluttered to the shelter of a coiled rope, and lay there like one dead.

But his sleep must have been light, and he by no means dead, for when suddenly a bell struck eight times, cutting the great silence of the sea-girt night, he removed his head from under his wing and opened one eye. And when, instantly, there followed a long-drawn, trembling pipe, summoning 'A-a-all the starboard watch! Seaboats' crews, and reliefs, fall in!' he raised his head completely and opened both eyes.

The great ship seemed to turn over and mutter in her sleep as the watch changed, and there was the sound of talking on the bridge up above him. Then all settled down again to swishing, throbbing, quivering silence; and, almost in the same instant, two things happened at once. There was a rustle of wings in the air over his head, and he became aware, almost by 'feeling' as much as by sight, I fancy, that there were other birds who ruffled their feathers around him.

Dawn, pearl, and gold, and rose, and crude red, came striding westward over the face of the waters, and the little bird stood up, shaking his feathers vigorously. He stretched a wing, clean and crisply; then the other; then a leg; next his neck, shook his head, and, with a final ruffling, closed all his feathers down with a clean, close movement. He was ready to face

Fate in the fight for existence for another day.

He scowled across the deck with his masked eyes, that, in spite of his otherwise beautiful, innocent, and attractive get-up, gave him a rather villainous appearance. And he was not alone. He saw that at once.

Apart from the big-chested blue men, whose existence he seemed to ignore, there were other voyagers on board too, and they were feathered like himself. The wind that had carried him out to sea from his course had also drifted them, it seemed, and, like himself, they had been glad enough to come aboard and save, at any rate for a time, their tired lives.

But our little bird knew nothing about their troubles, and cared considerably less. It's a case of 'All hands on deck, and every man for himself,' so to speak, in the wild, and our little bird was hungry. It was certain, anyway, that all must eat, even a stowaway on a battleship, or perish. Moreover, to feed meant strength to fly away.

My! but this bird conducted his breakfasting after a strange and surprising fashion. Who'd ha' thought it, to look at him?

Quite close to him, not more than three feet away, indeed, the delicate, five-and-a-quarter-inch, brown-yellow-green form of a wood-warbler crouched, huddled against the curve of the towering steel gun-turret; another lay a little farther off; by the rail across the deck the white wing-patch of a whinchat showed plainly on the brown feathers of its owner, in the new, raw light; and above, just showing over the sleek curve of a 13.5-inch gun, was the tail of a preening turtle-dove.

But our little bird had eyes only for the little wood-warbler nearest to him. He gathered himself together, bent forward, half-flew, half-tripped over the space between them, and, before one could wink, was upon the little warbler's back, their two pairs of wings creating a tiny commotion in unison, as he more or less scientifically hammered the other's skull in.

'What the'—

The sudden human exclamation behind him might have been calculated to upset the murderer, but it did not. He calmly, though not over-quickly, completed the foul deed, and no more than glanced round to see what might be the maker of the long shadow that had suddenly fallen across him and his prey.

Then he breakfasted, albeit somewhat clumsily, as if hardly yet perfected by Nature for such grim work; while the lieutenant, who was also a keen ornithologist when he wasn't perfecting himself for the slaying of men, muttered under his breath, 'Red-backed shrike, by Jove! The blood-thirsty little beggar!'

But it was a young French officer, attached to that ship for reasons that do not matter here, who, coming along the deck at that

moment, and catching sight of the bird, clinched the matter, and, in a word, as it were, pinned the bird down.

'L'Écorcheur!' he exclaimed.

L'Écorcheur? Yes, l'Écorcheur, the flayer, *alias* butcher-bird, *alias* flusher, *alias* horn-match, or, if you like him officially, *Lanius collurio*, that is to say, the red-backed shrike—reddish back, gray helmet, black half-mask, black-and-white tail, white and rose-buff waist-coat, hooked bill, needle talons, an appearance of gentleness and innocence and suspicion in one, with the harmless bearded tit and fly-catcher as nearest relations, with the voice of an angel and of a fiend, and a reputation to make you blink—all complete in seven and a quarter inches. That was he, upon the deck there, then.

An hour later he was not upon the deck there, nor upon the very tip of the port side of the two forward 13.5-inch guns, nor on the capstan, nor on the great chain of the starboard bowers anchor, to which he had variously flitted, quite restored to perkiness after his meal. He was a dot, a speck, dipping and rising to the curves of the waves, flying steadily, low above the water, north-north-eastward, to the coast of Spain, which, but for the wind, he would have hugged after crossing the Strait of Gibraltar. And the great battleship, she was no more than a smudge of smoke and a half-guessed something behind it, drifting and fading away to the northward.

And in England, far, far England, the thrushes and the blackbirds, the chaffinches, robins, hedge-sparrows, and wrens were singing, the peewits were executing weird love-dances above the open fields, the blackthorns foamed on the meadow grass, the primroses shone like fairy lamps through the dim woods, and the bats were weaving squeaky mazes among the gnats over the haze of the bursting buds at even.

Very still it was in the early clear morning air, still, and dull, and hazy.

A big, speckless, raking herring-gull or two worked slowly backward and forward off-shore, patrolling the coastline; but, save for them, the face of the waters, like curving smoked glass, was empty. From where they flew, above the ceaseless, cold, following heaves of the sea, they could hear the wonderful dawn hymn of the birds on land rising from the curtained green, for miles, a single, mighty, pulsating chorus, that would have done an atheist good to listen to, from their vantage-point, just once before he died.

Away to the westward, far out over the lifting sea, Night was slowly withdrawing her beaten sombre army corps. The southern horizon was already ashimmer with the hurrying lance-tips of the victorious Sun armies, harrying

Night's retreat, in whose wake the sacked and pillaged east smouldered and smoked like cities afire.

Then, out of the south, dipping and rising over the swell of the undulating sea, came flying a little bird, hurrying perceptibly, with an odd, slightly flustered air of being rather late. It was such a little bird, and it looked so lone and forlorn and helpless in all that vast expanse of sea and sky and land, that one wondered how on earth it could have attempted, and, still more, performed, such a hazardous flight across the hungry waves from the 'other side,' which lay fifty or more miles to the southward. But he—it was a male—had, albeit rather late; and here he was, to prove it, and—oh, help! He must have feared that, that little, hurrying, tired bird, and it was why he looked as if he knew he was rather late.

One of the poising, tacking, drifting big gulls saw him, and heeling over, effortless and full of grace, slid on rigid vans, but with increased speed, out and down toward him, as a man might slide down a drawn wire. It looked like a welcome to the hospitable shores of fair Albion, but it was the welcome of the ancient Saxon sea-rover—a welcome of death.

It was about this time that the lieutenant came down, from the stately home of his ancestors, hidden among the massed and billowing trees, to the golden sands to bathe. The sheen of his pink skin flashed to the eye of the little flying bird. It was the only thing that moved along the whole expanse of the lonely beach, and the bird altered his course a little, so as to place his hooked beak pointing straight toward the moving figure.

The great slashing gull came sliding down, canted, and was left behind, heeling over on a violent slant as he turned. With slow, shallow flaps of the wings, he rapidly overhauled the little voyager heading straight toward the bather. But that apparently artless little traveller was not there. He was below. No; he was above him—below—above.

The great sea-rover banked, and canted, and swung, and tacked, and backed, and veered, and sheered, and curved, and swerved, and got left behind again and again. And all the time the tantalising little bird kept on, and all the time the distance between the two and the man, now immersed to the waist, grew shorter and shorter.

The fact of the matter was, that frightened small feathered one was executing a flight which, as the wagtails and several other diminutive ones have discovered, is, by its very simplicity, peculiarly disconcerting. It consisted of describing a series of inverted arches in the air, flying, that is, an invisible switchback, so to speak, which, against an over-canvassed craft, if one may so put it, like the herring-gull, very largely compensated for the lack of speed and power

consequent upon the tired voyager's small wing-span.

In the end the pirate swayed aside and drew off in face of the splashing man-form, and the little bird toppled, rather than alighted, upon the beach, within easy gunshot of the swimmer.

'By Jove!' spluttered the young lieutenant, lifting on the lap of a grounding wave. 'A red-backed shrike!'

He might truthfully have added that the last time he saw one was on board a certain battleship off the west coast of Spain, what time she was returning home from 'Gib.,' some few weeks previously; but he didn't. He might also equally truthfully have added, addressing the bird, 'We are fated to meet under strange circumstances, my friend;' but he didn't. He didn't know, you see. Nor did the bird, and would not have cared if he had.

After a time, when the risk of immediate palpitation, or of bursting from overworked heart, had become a little less threatening, the red-backed shrike rose, and flew slowly inland to an old target stop-butt. There are many such along the south coast, relics of the days when men, fearing invasion, were allowed not only to carry rifles, but actually (think of the wickedness!) to learn how to use them, with the purpose (what brutes! but they were not so highly 'civilised' in those days!) of killing the gentle, tender-hearted, chivalrous invader, should he land and start killing them. Wonderfully well have these grass-grown 'targets,' as the ranges are still called in the vernacular, withstood time and the weather. Upon the top of this one, then, the red-backed shrike perched, and sang—that is, threw out his challenge to all whom it might concern.

He had arrived.

And next instant a big, fat fly, droning past on the lap of the soft, salt-laden south breeze, knew it.

The song—it was quite a pretty little vocal effort, too—shut off almost with an audible click, the bird swooped out, there was a tiny snap in mid-air, and the bird was back again, motionless as an Egyptian carved bird—and very like one—thoughtfully dropping the wings of that insect from out of the sides of his suspiciously curved beak.

Birds, however, in most, but not all, cases, are far greater eaters than many people realise. This is only to be expected, if you stop to think of it, in creatures who, flying apart, squeeze more intense life out of each passing minute than almost any other living things on earth.

The shrike began his song again, but stopped half-way through to scowl and stare under his black half-mask at the cause of a violent interruption. Their respective devils had prompted two cock meadow-pipits to select that precise moment and spot in which to settle a blood-feud

of long standing. In and out of the stop-butt, over it, round it, fluttering, battling, beating, and 'cursing' shrilly, they whirled, and the red-backed shrike watched them with precisely the same thoughtful regard that he had evinced when the wings of the fly had fallen lightly—like mother-of-pearl shavings—from his oddly shaped beak. There was something peculiarly sinister in that stare of the bright eyes in the scowling black band.

In a minute or so the combatants parted. The great fight had been fought and won—and lost. One of the meadow-pipits rose into the air, as if drawn up by an invisible wire, on little fluttering wings; then, with wings up and tail fanned, came down again on a long slant, singing *Seeing! seeing! seeing!* as he came. He was the victor, and no affair of the red-backed shrike's. Still, that did not prevent that same shrike from copying the song with wonderful success, just in case the singer should be such a fool as to come and see who it was.

The other meadow-pipit had flown some fifteen yards, and settled, where you could just see its head, motionless among the grass.

Then, before you could call out, the red-backed shrike slid down. It was just as if there had been a greased plank from the top of the stop-butt to the bird, and the shrike had gone down it.

Followed instantly a tiny, tenuous scream, choked as soon as uttered; a momentary confusion of feathers; and the shrike had passed on, flying low and heavily toward the nearest hedge, carrying with him the twitching body of the luckless meadow-pipit—headless! But lest any feel inclined to censure our shrike, one may perhaps be permitted to add that he had only done the meadow-pipit a kindness—in his own peculiar way. There is no sentimentality about Nature; the meadow-pipit had injured his wing in the process of settling that blood-feud, and it is better to die swiftly, if one is a bird, than to face the wild with an injured wing—far, far better. *Vae victis* is the law in the wild, remember, which none can evade, and remorselessly does Nature enforce it.

A heavy heat, a hot, blue-gray heat-haze, a filmy white-blue sky, and the unblinking stare of the sun over all.

Bird-song languished at last. There was no clashing dawn hymn to greet the day, but a brazen song-thrush sang at intervals, a black-bird was fluting now and then, there sounded the tumbling bars of a chaffinch serenade occasionally, and from time to time the 'fizzle' of an apparently newly emancipated male starling, the carol of a lark, and quite often the little lilt of a hedge-sparrow, who seemed determined to be heard now or never, before the great summer

silence shut down over the heavy green face of the land.

Now and then the soft, lazy call of a cuckoo pealed abroad; late swifts, hurrying in from the far South, screamed wildly as they tore across the sky; and the gentle, sensuous *C-r-r-oo* of the turtle-dove filled the woods with a new note.

Young birds were blundering about all over the place. Goodness and themselves knew if their parents were with them to keep an eye upon them. If they were, they managed to hold themselves singularly well screened from the public gaze.

Then, suddenly, the quietness was sawed across by a harsh, rasping *Wark! wark!* and a vision of rose and red and white and brown shot out across the field, over the waving poppies and the long grass that was always sighing, twisted, shot upwards, and returned to the old tottering railings with a fat, fawny moth in its beak.

Instantly there was another *Wark! wark!* as a second vision, only less beautiful, fell upon the first, and they fought like fiends over the prey for perhaps ten seconds, only to break off without warning and snap to attention, each bolt-upright and as impassive as a wax candle, on its perch, as if they had never moved for a month. And that, if you please, represented the ordinary loving greeting and domestic felicity of our friend the red-backed shrike and his new wife. It didn't seem to strike them as anything but correct. The young thrushes, that sat about and squawked eternally with frog-like beaks, didn't appear surprised; the turtle-doves crooned on dreamily, unshocked; the little parties of hobbledehoy hedge-sparrows that went by didn't seem to mind, and I am sure I don't. It was all in the programme, apparently.

Then Fate, who must have wanted something to do, chose that very moment to set two male shrews at one another's throats, somewhere down in the shaded realm of mystery of vegetation along the hedge-bank. Being male shrews, they *had* to fight when they met—Heaven knows why. Being shrews, also, they 'said things,' awful things, in thin, high screams, so high that the sounds stabbed the heat like pin-points.

The two shrikes said nothing; but each bird, with head on one side, regarded the spot with that thoughtful, rapt attention peculiar to their kind. Then, as if impelled by a single lever, they slid down.

Only the watching bank-voles and the lurking spiders saw what followed, and they were afraid. The shrews fought with the courage that comes of a body less than three inches long and a seventy-inch temper, slashing upwards with their little *red* needle teeth, still screaming with rage. One managed to get home on the hen-bird's leg, so that she squawked and let go, and he tumbled

head over heels backwards into nowhere. The other managed to get his skull cracked like an egg-shell, and tumbled into the abyss of death with a squirm. Both together the shrikes returned to the rails, where they promptly hurled themselves at one another with harsh screams to match, and only discovered when it was too late that the prey had rolled off the rails into the long grass below; and the cat, who had been planning to circumvent them, but had accepted the shrew instead, was sneezing fit to warn any keeper thirty yards away over the prize, which she had picked up, but dropped again as if it was a red-hot coal.

In an instant the shrikes agreed on an armistice, to swoop at, and yell at, and so thoroughly advertise that feline to all the world that she removed on her belly, pausing only now and then to look back over her shoulder with those inscrutable, yellow-green, sinister orbs of hers, first at the shrew, then at the shrikes, as if they had had a hand in making the obstreperous little beast smell so horrible that no one, except by accident, would bite it.

The shrikes were hardly pleased at this episode, and a small blue dragon-fly passing, like a flower-petal broken loose, at that moment got the benefit of it. A shoot out, twist, turn, and the cock-bird was away, looping over the waving grass—blood-stained where the poppies grew—to the hedge on the far side, the dragon-fly accompanying him.

Here, out in the open, in the middle of the field, many strange little whirling specks of white, which were the white rumps of birds, grew into house-martins. He realised the fact too late, and increased his speed. He knew what was coming, because house-martins appear to have found the shrike out, and behave accordingly. And it came.

He arrived at the far hedge at last, looking somewhat tired and worried, in a dancing, half-demented halo of house-martins, whose personal feelings he was doing his best to dodge without stopping. One house-martin he might successfully argue with, two or three could be held off by bluffed ferocity, but half a hundred! Look here, you get mobbed by half a hundred lusty and naughty children, and you will know how he felt.

Having cleared himself of the incubus of the martins by darting into the great old tangled double hedge—'shaw' they call them in some parts—and incidentally clearing a few dozen twigs, and spikes, and thorns, and what not, which could impale a bird as easily as a spear, and doing it at high speed, too, he fetched up in a perfectly awful thorn-bush of ferocious, bristly aspect.

For a moment he scowled round at the chequered shadows, wondering who was watching him, for there are always watchers in the wild, and then, calmly and coolly, jabbed the

dragon-fly on a big thorn, just for all the world as a man jabs a bill on a file.

But that was not all, for he chose that moment to jump into nowhere—vanish, that is, with startling suddenness. Most birds, if not too flurried, contrive to visit and to leave their nests with about as much advertisement as ghosts, but this was doing the thing handsomely. If one adds that he had merely dropped a foot and slipped through a screen of leaves, to stand scowling at his mate—she could not have tarried much on *her* way home—sitting on their nest, sphinx-like and silent, it rather spoils the effect.

That home which he had come so many hundreds of miles to make, risking death by sea and land and the air above in the process, was of some ambition as to size. Roots, stems, moss had all gone into the building of it, and hair and wool to the furnishing; and you can take my word for it—since Mrs Shrike looked as if she didn't care whether she came off this week or next—under the hen-bird were some gems of eggs, whose background was of the palest green, clouded and figured with bluish-gray, and in the eyes of the owners all the big round world wouldn't buy those little round treasures.

And in that instant it was that the cuckoo stuck her hawk-like head through the leaf-curtain, and with her evil yellow eyes stared at them—a long, leering stare.

There was dead silence in that bush.

For about as long as one takes to aim a rifle slowly and squeeze off the trigger, those two reprobates regarded the third—thoughtfully, and with their heads a little on one side. Then they—*moved*.

Perhaps there had been a mistake somewhere; they ought to have been merely helpless little fools of insect-eaters. I don't know, but the cuckoo did. She came away from the vicinity of that big nest, seven feet up in that unspeakably pointed bush, like a thing hunted by devils. She was, too; and it wasn't the male shrike, more or less on and about her—all claws, including claw-like beak, at work—or the female, who screamed with terror.

The sloping sides of the arena were tastefully decorated in brown plush and gold; the carpet of the floor of the arena was green, scattered with white confetti; and the roof was of rich pale blue.

What an amphitheatre of the fairies!

But it was a man of anything but fairy-like aspect, and not even an elf, that strode down through the crackling golden furze, and set out his nets upon the daisy-carpeted grass of the bottom of the hollow, glancing now and then up at the blue sky to note the weather.

He took a linnet, and put it down, tethered to a peg—Judas! In cages, several times too

small for any bird, he set out some more linnets. They twittered, and moved about the inch or two the cages allowed them, like one o'clock. Then he removed to what he considered a good distance, and I like to think that he didn't know what this was, or how best to wait, and I'm not going to tell him.

Time passed, and so did far too many linnets—into cages. Ah, but heaven must have had a grudge against some of these little birds, else why make them such several kinds of fools as to be taken by the dozen, in this soft fashion?

The man laughed. Well he might. There must be fools in the world, or there would be no fun. Then he didn't laugh.

The laugh was echoed from the furze, only in a sinister and derisive fashion. *Wark! wark!* and a pale-gray and reddish-white-flecked line drew itself from there to—Judas. There was the beginning of a yell, the hint of what might have been a flutter, the pale-gray and reddish-white-flecked line drew itself back over the furze again, and—Judas had gone!

Only the peg was there, the string, the thong, and—oh, horror!—the head of Judas. The rest had sauntered into spookland, and never more returned, and the language of the man would have made a bargee's hair curl.

Flying heavily and low over the almond-scented, golden blooming furze of the common, badly handicapped and weighted with the burden of the headless linnet, captured for her six fine big children, reared now to within a day of taking flight on their own account, the hen red-

backed shrike never had an earthly chance against the waiting, watching, vibrating shadow hung aloft. The shadow fell almost with a hiss, and, with its spurred heel held straight, knocked her literally into the next world. But the kestrel falcon had swooped in an evil moment. The cock red-backed shrike, hurrying home, attached to a fine lizard, to throw into the bottomless pit of his family's mouths, beheld the murder from afar.

He came like a little red meteorite, and he screamed and fought like a little red devil. Moreover, his pestilential, harsh, rancorous voice aroused the wild. Everybody rushed up at his call—linnet, chaffinch, wagtail, robin, wren, meadow-pipit, they all came after their kind, and they all mobbed that kestrel falcon. But what was worse, from his standpoint, the Hibernian riot attracted the rascally roving eye of one out of five passing rooks, and he threw in his weight on the side of the small allies. And that did it. The kestrel falcon discovered 'it was time and time to go,' and he went, rook and little birds streaming after him like the tail of a comet.

Ten minutes later the cock red-backed shrike was feeding Judas to his great, big, wallowing, lolloping children, and next morning they all left the nest together.

The task that began in the brazen glare of the African sun had been completed there under the tempered amber sunshine in the Sussex 'shaw.' The red-backed shrike had 'done his bit.'

TOUCHES FROM OLDEN WARFARE IN OUR ANCIENT CHURCHES.

ON entering many of our ancient churches we come into instantaneous touch with tokens of olden warfare. As the eye ranges along the pale vistas of sturdy or stately pillars and arches—as the case may be, according to the century of their erection—it falls upon sculptured figures of departed warriors, disposed on monuments enriched with heraldic devices that indicate the last resting-place of those they represent, or on other relics still more intimately associated with them, such as portions of the armour they wore in battle array, or banners that blew out over battlefields in which they had been engaged. In several instances the armour has probably been a complete suit (as we may assume from that of the Black Prince in Canterbury Cathedral, or from that of Henry the Fifth in Westminster Abbey, or from examples in Wimbledon church and St Mary Redcliffe's, Bristol), but has dwindled in the course of centuries to a helmet or a corslet, or to a pair of spurs, or a pair of gauntlets. In Witham church there are four helmets; in many more there is only one. Dagenham church has

a helmet and a pair of gauntlets. Some north-country parishes provided armour for such of the inhabitants as performed military services, and frequent reference to it occurs in the books kept by churchwardens. In 1599, for instance, they set down in the books kept at Houghton-le-Spring: 'To the armerer for dressing the armer belonging to the parish, vj s.' Later, in 1624, they set down: 'For dressing a sword and a new scabbard, 1s. 6d. ;' and in 1638 there is another entry of a sword that cost one shilling and sixpence, of a bandolier that cost three-pence, and of a scourer and a worm that cost one shilling. Sometimes a sword is the only trophy placed to the memory of a hero, as is the case in St Leonard's, Bridgnorth, where a gallant soldier met his death in the churchyard in the defence of the town in the Parliamentary wars.

There are still more striking items in some churches, consisting of bullet-marks on doors and doorways, telling of flight from pursuit by enemies. In Caldecote church, in leafy War-

wickshire, there is an oaken door so completely riddled with bullet-holes that it has been thought well to line it for its preservation. This damage was the result of an attack by the Royalists in the Civil War. Frequently these marks are in the stonework of the doorways, as though fugitives who were making for shelter in the sacred building had a volley fired after them, as at Warkworth. In the ancient parish church at Alnwick there is a cluster of bullet-marks about the height of a man from the ground on the exterior of the wall of the south aisle, which conveys the impression of an execution having taken place there, as was the case in St Paul's Churchyard when Trooper Lockyer was shot, and in Burford churchyard, where a cornet and two corporals met the same fate. The churches at Ledbury, Alston, Pembridge, as well as St Sepulchre's, Northampton, among others, have bullet-marks on them. There are marks, too, in some edifices where the sharpening of weapons has taken place. Yardley church has some; Chedzoy church can show where the rustics sharpened their axes and scythes for battle; and farther north there are deep indentations on pillars in Elsdon and Ponteland churches, where weapons were made more deadly for foes at Flodden and elsewhere. A few church-towers show traces of cannonades, as in York, Hastings, and Tockholes. In some northern churches the towers were made of a special strength to afford refuge from attack, and some were furnished with beacon-turrets which gave access to the roof, from which the beacons could be lighted and signals could be easily made, as well as observations taken.

Looking upon the spaciousness and calmness of so many of our old churches, and upon the sculptured figures (images they were sometimes called in old wills) that have been placed in them, we are reminded of the interpretation folklore has given to the various attitudes of the recumbent knights. Those having their legs crossed at the knees are supposed to have differed in some respect from those whose legs are crossed at the ankles or midway between the ankle and knee, such as in the number of journeys to the Holy Land undertaken by the departed; and the treatment of the sword is supposed to indicate either death in action or peace after victory, according to whether it is drawn, or half-drawn, or sheathed. The will of the fourth Earl of Shrewsbury mentions his desire that a tomb should be made for his burial, with three images on it, one of himself in his 'mantell of garters;' one of his first wife, in her robes, on his left hand; and the third of his wife that then was, on his right. To mention another example: Lord Montague, we learn, directed that his helmet and arms should be set up in the chancel of Hornby church, and an image of copper gilt placed on his tomb.

The custom of 'laying up' the colours of

regiments in churches brings a sense of warfare very close to them. At the present day it has suffered no diminution in practice. Before a thousand Territorials left Blackburn for Egypt recently, they deposited their colours in the parish church; and the colours of the ninth battalion of the Durham Light Infantry were laid up in Gateshead church only a very short time ago. Norwich Cathedral, Hexham Abbey, Beverley Minster, and Durham Cathedral have also recently received similar trophies with all reverence and circumstance commensurate with their association. Not only are they thus housed in sacred edifices, but they are sometimes buried within their precincts, as was the case with those of the King's Own Scottish Borderers at Newcastle-on-Tyne, and those of the Thirtieth Regiment at Winchester, not long ago. Sometimes they have been removed from one place to another, as in the case of those of the Durham Local Militia, which had been kept in the Tower of London since 1816, till they were brought with a ceremonial escort and deposited on the altar in Durham Cathedral in the present year. In opposition to this general feeling of devotion, sanctity, and fidelity, we may mention a record reported in the *Times* of the sale of the old colours of the Third Company of the Coldstream Guards in 1907, when the price that secured a purchaser was twenty-one pounds. On this relic were the arresting words, 'Egypt, Talavera, Barrosa, Peninsula, and Waterloo.'

A sword-rest and a mace-stand may be sometimes noticed in churches when the mayor and town officials attend the services; the current of our thoughts, however, carries us to the contemplation of such items as are associated with warfare nowadays.

E. M. B.

(Died of wounds received in action at the Dardanelles.)

FADE, arid waste, swart foes, war's devilment;
Rise, mirage green of fields where once he trod,
That fades in turn; for, lo! the veil is rent,
The Last Post sounds; he lies in alien sod.

What recompense for those still bound in grip
Of life—unwelcome life—that dear voice mute;
Craving from eye to eye, from lip to lip,
Response accustomed? Oh, who can compute?

Deep human love? Impotent yet to keep
Him of the gods beloved; they claim his days,
His bloom of youth and athlete's grace. Why weep
A shield unsullied; grudge the hero's bays?

'Twere better so. Why murmur? Who would
choose
The hollowness and fret of life's long lease,
Its sordid aims, its tendency to lose
High dreams in self? He wins eternal peace.

Yon craggy heights, the lowland pastures lush.
The dim blue line where ocean meets the sky,
The ferny glen whence silver cascades rush—
All echo to a soldier's eulogy!

THE SPADE IS MIGHTIER!

IT is night. In the room men lie sprawled on the stone floor. Their blankets and greatcoats are wrapped round them, for the wind whistles through the cardboard and wood that long ago replaced the glass shivered by the shock of the guns. Braziers are alight in the room, for it is cold lying on a stone floor in the early part of February.

The light flickers on the walls and roof. Most of the men are asleep, but one or two lie reading; one man is writing on a pad resting on his knees. Their candles chase the shadows cast by the braziers. There is no space unused. The whole floor is covered. And on the walls hang equipment and rifles.

The door opens, and suddenly a voice rasps out, 'Fall in in five minutes! Light fighting order without haversacks or water-bottles.'

Roused from their peaceful sleep by the voice, they lie still for a minute, till the voices of the N.C.O.'s break into their momentary reverie: 'Come on! Come on! Show a leg, there! Fall in in five minutes!'

In a moment all is confusion. Before there is time to grasp its meaning, order is restored and the men are filing out into the darkness and the rain. Quickly they form up and number, and, in obedience to a few sharp orders, they are off. An officer falls in at their head.

They have marched for perhaps two miles. The column halts at a wagon drawn up in the deeper shadow cast by the trees at the roadside. The men without shovels move silently up to the wagon, shoulder a bundle, and silently return to their places.

Sandbags! Forgetful is he who spent the winter soldiering in France and does not shiver at that ominous name.

A low command, and once again the column files off. The rain drives down with the wind, cruel with the remorselessness of nature. Ahead, where the splatter of rifles breaks out occasionally, a flare goes up, its weird incandescence showing up the column of men trudging steadily onward. By the roadside appears a row of poplars, uncanny in the half-light.

Tramp! tramp! Oh! the weariness of it, the monotony of it. And not a song or a whistle to cheer them, for they are nearing the firing-line. Houses loom ahead, their shapes

distorted by the darkness and the rain. Men stumble over bricks and stones; an involuntary curse is heard.

'Halt! Who comes there? Advance one to be recognised!'

The officer halts the column and goes forward to satisfy the sentry. Then on again past the disconsolate, sodden figure standing with fixed bayonet.

'Sandbags again, Jock! Bleeding murder, ain't it?' Thus the sentry voices his disgust.

The column turns to the right through the village. Flares glimmer in the rain, lighting up the ruined convent, the shattered houses; the pathetic appeal of a curtain fluttering heavenward through a paneless window, throwing into relief the barricaded, shell-holed road. A light shines from a partially roofed cottage, and a snatch of song is heard. The misery of the men marching past becomes more acute; the discomfort of their own billet is forgotten; in contrast it becomes a place of rest and contentment.

They turn to the left down a road leading straight to the enemy lines, past the machine-gun guarding the approach. They proceed cautiously now. They slither over a muddy plank spanning the roadside ditch. They sniff the tainted air. Huddled 'things' lie on the roadway; they step carefully past. A flare shoots above them, and they crouch down. The sudden light exposes a huddled figure on a stretcher, three others lying round it. The flare dies out, and the men slough onward through the mud with hearts beating faster.

Men suddenly appear out of the darkness—the Engineers. The workers are paced out and quickly get to work. Sandbags are filled to the accompanying 'slough-sloughing' of the shovels in the mud. Bag follows bag across to the Engineers who are building the breastwork. The bags, rising steadily higher and higher, glimmer in the darkness. With a suddenness that is startling, a flare bursts into light; the men flop down in the mud. What does mud matter? They are already wet through. But the horror of lying face downward in inches of mud with the rain trickling down one's neck!

Have they been too late? Have they been seen? They are five hundred yards out from their own lines. They are in No Man's Land!

A machine-gun splatters. The bullets whistle overhead and 'phut-phut' into the mud behind. Thank Heaven! they have not the range.

The racket dies down. The work goes on. Backs are aching; eyes are sore straining in the gloom; hands are blistered; faces, could they be seen, are hard and distorted with the heart-breaking misery. It seems years since they left their billet. The rumour passes from mouth to mouth that some of their comrades are hurt, some killed. Will the hours never pass? Oh God, for a bullet and—Blighty! Blighty! The magic word that means home. Home! A touch of relief comes when he thinks of those behind him there. After all, this is for them; better he than they.

A 'slough-sloughing' makes itself apparent. It comes nearer and yet nearer. The men know what it means—their reliefs have come. It is one o'clock. They have been working for three and a half hours. They collect their shovels. Then backward they go the way they came; another night's work over.

They scarcely glance at the 'things' as they pass. Their senses are numbed. They care for naught save that they reach their billet. They are too tired to think. They stumble down the road; no longer is the steady tramp, tramp heard; they shuffle along, swaying slightly from side to side.

At length the miles are covered. The shovels are returned. They unload their rifles, and at last are dismissed to their pitiable billet. The fires are out. A few candles are lit. They take off their greatcoats, kick off their boots, and, too tired to do more, wrap their blankets round them and lie down. The candles are blown out and the room is in darkness.

A man moves uneasily in his sleep. In the room is the sound of deep, heavy breathing. The draught whistles through the window; the rain patters outside; but tired nature claims her own, oblivious to all else.

MUSIC IS MIGHTIER!

There was quite a pretty little touch one night recently in the trenches. We were in a fairly quiet spot between two hotbeds. On our left trench-mortar bombs were bursting with a terrific crash; on our right liquid-fire bombs were being thrown by our side in return for huge mortar bombs. An occasional rifle would crack with a fussy report. Shells were coming over at regular intervals, heavy ones searching for the German mortar guns. You can imagine the din! The flashing of the guns and bombs, the sparkling flare of star shells.

Then into the medley of sound crept yet another—a cornet was playing march tunes, and its beautiful notes floated downwind from our rear, giving a whimsical touch to the whole proceedings. The bombing stopped; not a rifle cracked. Both sides were silent, listening to the distant cornet. It was perfect! A still, starry night, and not a sound save a distant and unwitting musician playing marches. For a quarter of an hour the cornet-player held supreme place—until he ran his melody into 'Rule Britannia,' when the 'Allemands' opened fire with their rifles and the mortar guns began again.

It was one of our stretcher-bearers, a bandman, who had just got a new instrument. A divisional band was being formed, and he was one of the selected. He was practising, and held some five thousand to ten thousand men listening to him. A good audience!

FORTUNE COMES TO SUNNYMEDE.

CHAPTER II.—MRS HOBBS TAKES A HAND IN THE AFFAIRS OF SUNNYMEDE.

ON Thursday afternoon Grace went to join Mrs Hobbs on the Promenade, the appointment having been made at that thoughtful old lady's request. She found the new boarder seated in a deck-chair overlooking the sands, watching the children at play. There was something so entirely benevolent in her regard, something so regal withal, that the girl was irresistibly reminded of the curious conversation that had preceded her arrival. While she was still smiling at the suggestion, Mrs Hobbs perceived her.

'So you have finished your dusting,' she said. 'As you see, I have kept a chair for you. There, that's right. Now let me see the title of your novel.'

Grace blushed as she revealed the book.

'Green's Short History of the English People,'

read Mrs Hobbs, in natural surprise. 'And why, if I may ask?'

Grace wondered how this alert old lady could ever have seemed stolid and sedate. Few people are at their best when travelling, she reflected, recalling her own experiences with her dress-basket. Then she explained, haltingly, that at the time of Dr Lanyon's sudden death she had been doing very well at a high school. That disaster to the family fortunes and affections had definitely closed her education, and since that time her share in the Sunnymede enterprise had called for all her attention. And so—

'And so you read history instead of novels now and then,' said Mrs Hobbs placidly. 'But may I ask what his name is, my dear?'

Grace started, and looked up so appealingly

that the shrewd old lady was finally conquered. She laughed very heartily, very kindly.

'Oh, my dear girl!' she said. 'Why am I so old if I have not learnt anything? Still, you must not tell me unless you wish to.'

Thereupon, of course, Grace told her, unveiling her shadowy little romance with broken sentences that were all the more effective for their incompleteness. Possibly the portrait she drew was not true to any young man's life or appearance; but Mrs Hobbs, having heard, sat looking out to sea with something in her eyes that was neither ridicule nor criticism. Under her breath, perhaps, she murmured, 'Poor little girl!' but there was nothing so hurtful as pity in her spoken comment.

'So, having a picture of a gentleman before you,' she said—'an educated man, you believe, and extremely clever, of course—you make preparation for his coming, instead of simply wishing for it. Well, it seems to me, though I am not an authority, that that is the faith that moves mountains. I think—I am sure—that he will come again. Just one more question, now. Hadn't you been thinking of him on Monday, when you ran out to help an old woman who was bothered with parcels?'

'Oh yes, I had!' cried Grace, astonished. 'I was thinking of him when you came in sight. How could you guess?'

Mrs Hobbs laughed. "'Tis love that makes the world a round,'" she quoted merrily. 'When my dear husband became fairly well-to-do, he gave up the City and took me with him to see the world, and to get so much wisdom that I should not any longer carry my small belongings in many paper parcels. I found it a very good world on the whole, though it was painful to find so many places where there were no feather-beds to be had. Well, I learnt some new things, perhaps; but at the end some of my old beliefs remained as firm as a rock. I still placed the first value upon the kind word to a stranger, the helping hand to any one in distress. And when we see that, my dear, we generally find that it does not begin where we see it. There is always a first chapter somewhere else. But let us get on to another subject. I have been wondering whether I can help your mother a little with her boarding-house. I have already decided to ask my young nephew Horace, who is at Haileybury College, to come and spend a week here with me. His holidays will soon begin, and then he will make one more boarder. But now I think I can see another, if only we can secure him. I have been watching him for some minutes.'

Grace followed her glance, and saw that it rested upon a middle-aged gentleman who occupied a chair below, on the sands. 'My eyesight is not infallible,' said the old lady pleasantly. 'But I am almost sure. Go to him, my dear, and ask him if he is Mr Denton of

Durban. If he is, tell him that I should like to speak to him.'

Grace rose, without hesitation, and descended the steps to the sands. A moment later the middle-aged gentleman in question awoke to the fact that a very radiant girl was standing at his side.

'Are you Mr Denton of Durban?' she asked sweetly.

'I—I believe so—that is, yes,' stammered the stranger, taken completely by surprise; for he had been under the impression that he had no acquaintances at all at Eastgate-on-Sea.

'Then there is a Mrs Hobbs on the Promenade who would like to speak to you.'

Mr Denton of Durban extricated himself, with some difficulty, from his chair. He plainly recognised the name of Hobbs, but at the moment it was Grace that attracted him, and he scanned her face with evident appreciation. Then, realising that she waited, he murmured a hasty apology and followed her up to the Promenade.

Though the gentleman was just past his prime, his clear eyes and alert manner showed that his faculties were in full vigour. At the first glance Grace had liked him; at the second, her liking was mingled with distinct respect. A moment more, and he was greeting Mrs Hobbs with manifest pleasure.

'This,' he said, 'is better fortune than I could have hoped for. I called at your address in London, only to find that you were away.'

'That was very nice of you,' said the old lady, who was equally pleased at the meeting.—'Mr Denton,' she said, turning to Grace, 'comes from Natal, and when Mr Hobbs and I visited Durban a few years ago he showed us much kindness.—When did you come, Mr Denton, and where are you staying? How long will you be here, and are you alone?'

'I am alone, and I reached England a fortnight ago,' said the colonial genially. 'I am staying now at the Eastgate Hotel. I do not know for how long, but possibly a few days.'

'All the more reason why you should spend them happily. If it is possible, I suggest that you transfer yourself to Sunnymede, where Grace will dust your room for you, and where you will be able to compare notes with me. Can you dine with us this evening and make arrangements?'

Mr Denton was considerably amused, but he was also pleased. Clearly he knew and appreciated both Mrs Hobbs and her hospitable philosophy. He admitted, indeed, that he found his solitary state quiet enough, and after another look at Grace, intimated that a transfer might be practicable. He made a note of the hour and the address, and then he brought up another chair and sat beside them. A very pleasant half-hour was spent in general talk and in the exchange of reminiscences, some of which

Grace found so interesting that her *Short History* made very little progress; and when Mr Denton went away at last, it was very evident that he would keep his appointment for the evening.

'I took it upon myself to invite him to dinner,' said Mrs Hobbs, as she led the way home to tea. 'I hope your mother will not mind?'

'She will be very glad,' said Grace sincerely; and her heart warmed to this old lady, whose chief purpose in life seemed to be to find feather-beds for herself and to provide them for other people. Nor was her expectation falsified, for the mother only rejoiced when she heard that her new boarder had picked up a friend. During the last three days, indeed, the once unpromising Mrs Hobbs had assumed a place of much favour in the Sunnymede circle, even Hester being obliged to admit that she was an acquisition. On closer acquaintance she proved to be kindly, shrewd, and well informed, despite her peculiarities, and possessed of a gift of tact that enabled her to make herself agreeable to all alike. Mrs Lanyon had found her helpful and sympathetic, while Grace had evidently gained a firm footing in her regard. George Bertram, the somewhat staid and reserved young architect who remained at Sunnymede because it was 'so quiet,' found much enjoyment in her good-humoured philosophy and observations, while Slater gave her the highest praise possible when he declared that she was 'a ripping old girl.' Altogether, her coming had greatly lightened the Sunnymede atmosphere, though even now no one guessed that she might be more than she seemed.

Mr Denton made his appearance in good time, Grace opening the door to him and taking him to join George Bertram in the drawing-room. In three minutes they were chatting quite freely, and the colonial had even got so far as to explain the reason for his present visit to England.

'The fact is,' he said frankly, 'I have come to see a young relative of mine, a nephew, who has, I fear, no particular wish to be seen. He is the son of my only sister, who, when she died two years ago, left him a small fortune, and asked me to look after him. Of course I invited him to visit me, because I could not come to England just then. But though he answered my letters, he did not mention my invitation. So I had to make the journey.'

'And have you seen him?' asked Bertram.

Mr Denton smiled humorously. 'Not at all,' he said; 'though I have seen traces of him. He hasn't been to business for a long time, and there is every evidence that he doesn't mean to go. He left his London rooms some time before I landed, and I have a suspicion that his neglect to leave any directions there was

not exactly an oversight. I came down here in despair, to consider what I should do next. What would you advise?'

'It' said Bertram, taken unawares.

But at that moment Roderick Arthur Slater stepped gaily into the room, neatly groomed, light-hearted as ever, and proud of the fact that he was for once punctual. 'Here we are again!' he began in his characteristic fashion; and then, aware of the presence of a stranger, he became very much subdued. 'Oh, I beg pardon!'

'This gentleman is a visitor,' said Bertram quickly. 'Mr Denton of Durban.'

Slater looked at Mr Denton of Durban, but could not find words wherewith to greet him. For a few moments he was much too surprised to speak, and then his expressive face reflected a whole series of emotions. His one exclamation told everything. 'Uncle!' he cried, in dismay.

Mr Denton of Durban was equally surprised, but he had no reason for dismay. 'Well, upon my word!' he said. 'This is an unexpected—er—pleasure. Eh, Roderick?'

Slater recovered his presence of mind. He was also quick enough to get a fairly correct impression of his much-avoided relative, and of the best way to meet a rather difficult situation. He sat down heavily in the nearest chair, and the pathos of his look might have melted the stoniest of hearts.

'There!' he said. 'I've known it all day! When I woke up this morning I found the word "Work" somehow in the air. It came again and again, in spite of all I could do. I told myself that there was really no Work on my horizon. "Why," I said, "you've got quite a thousand pounds left, and it ought to last at least two years—if you can only keep clear of persistent and well-intentioned relatives!" But all through the day the thing has lingered about me—the curious feeling that my holiday was nearly over, and that there was Work somewhere in the vicinity. Never tell me again that there's nothing in presentiments!'

The company laughed, and it was clear that even Mr Denton of Durban appreciated the position.

Slater went on feelingly: 'Allow me to say, uncle, that I am glad to see you—looking so well! More you could not expect me to say, could you? But I should like to know to whom I am indebted for the honour of this visit.'

He looked at Grace, and it was Grace that answered. 'Why, we found your uncle on the beach,' she said. 'At least, Mrs Hobbs did.'

'Oh! So it was Mrs Hobbs, was it?'

He looked thoughtful for a time, trying to reconcile his previous opinion of Mrs Hobbs with this manifestation of her influence. Then

he gave up that problem to deal with the more immediate one.

'Well, uncle,' he said, 'I suppose we'd better make the best of it, eh?'

Mr Denton smiled. 'It is very nice of you, Roderick,' he said genially. 'Perhaps it will be enough to say that I am sorry my coming should have given you such a shock. And we'll discuss other matters some other time.'

Then the gong was heard, and they prepared to go in to dinner. But the day was not in any sense over, for as they entered the dining-room Mrs Lanyon, followed by Mrs Hobbs, came into it by the other door. Up to this time the mother had not met the visitor, and, as it happened, neither had she heard his name. Now they came face to face, and Mrs Hobbs hastened to introduce her friend.

'Mr Denton—Mrs Lanyon.'

For a moment poor mother stood bewildered, incredulity and amazement struggling with definite recognition in her mind. Then she stepped back, with an instinctive appeal to her elder daughter. 'Hester! Oh Hester!'

Mr Denton was equally astonished. 'Good gracious!' he ejaculated. 'It is Edith—Edith Gardener!'

He stepped forward as if to assure himself, and, once assured, again held out his hand.

'Oh!' said mother, to some degree recovering her presence of mind; and in a moment more they had realised that a very surprising meeting of old friends had taken place. After the first greeting, it was Mr Denton who gave the explanation to the others.

'You will excuse my incoherence,' he said, with considerable emotion. 'Twenty-five years ago, when I left England, Edith Gardener was, I think, the dearest friend I had. From that day to this I had never held any direct communication with her, and I did not dream that I should meet her here.'

Mrs Lanyon herself assisted in the process of pacification. Her first pallor had given place to a flush that became her well, and in that hour it was easy to forget that she was forty-five, and the mother of the self-possessed and capable Hester.

'I was so startled at first,' she said. 'Of course the name startled me—and then it was so strange to see the old face appearing through the beard. There was no beard, you know, when you left England! I think I was very clever to identify you so quickly.'

'Yes,' said Mr Denton. 'More clever, perhaps, than I, for I saw you this afternoon, in your daughter. She has your eyes, and I remembered them without recognising them.'

Looking at mother as she smiled upon him, he saw again the Edith Gardener of a quarter of a century ago, maternally indeed now, and with deep knowledge of the grayness of life as well as

its sunshine. But she was still a very charming Edith nevertheless, and he found that her eyes were the eyes he had never forgotten. So it was in high spirits and with romance in the atmosphere that the party settled down, the new guest facing his hostess from the foot of the table, and Mrs Hobbs and Bertram nearest to him. It was to Mrs Hobbs that Mr Denton of Durban unfolded the earlier chapters of the story.

'We were more than friends,' he said; 'at least, I would have been. But I was young, and hot-headed, and impatient—and there was another person in the field. She clearly preferred him; so I disappeared. A year later I heard that she had married, and naturally concluded that she had married that "other person." Now I understand that Dr Lanyon came upon the scene, and defeated every other rival. In coming to England now I did indeed hope somehow to see her; but I did not dream of such good fortune as this. I owe it to you!'

'Oh uncle!' cried Roderick Slater. 'I protest with all my heart. You owe it to me; for if it hadn't been for me, you wouldn't have come to England at all.'

'Hm!' said Mr Denton, somewhat taken aback. 'I should certainly take that into account.' And he looked at his unabashed nephew with a distinct increase in the measure of his appreciation. Whereupon Mrs Hobbs made a remark which appeared to have no immediate bearing on the situation or upon the conversation which had preceded it.

'"'Tis love that makes the world a round,"' she said.

They received the dictum in silence, knowing that it is the habit of elderly people to fall into reverie and to interject remarks which have their origins beyond. But Grace noticed it more particularly, for she had heard it before. Her attention thoroughly arrested, she looked at the innocent old lady intently, recalling her share in the extraordinary incidents of this fortunate day; and as she did so a sudden question came to her lips: 'Can it be that she is really'—

Then she smiled and dismissed the subject. The idea was so nonsensical. A kind-hearted, wise old lady who had a pretty habit of reflection, a lively interest in the welfare of other people, and a favourite proverb—that was all.

And yet, Miss Grace of the radiant eyes, why should you disdain the suggestion as mere nonsense? If Dame Fortune should indeed come and move once more among men, if she sought to give them some maxim to guide them in their affairs and help them to solve the riddle of the universe, tell me, what maxim should she choose? Could she find a better than that which Mrs Hobbs had already uttered twice?

(Continued on page 804.)

ANCIENT SCOTTISH SMUGGLING.

By HENRY ATTON.

FEW branches of research are more quaintly interesting than the condition of the Scottish Customs during the greater part of the eighteenth century. The first thing that strikes a student of the mutilated records is the amazing smallness of the Scottish returns to the British Exchequer. This was chiefly due to the fact that during the first half of the century at least one-third of Scotland was Custom-free, for there were no ports on the northern and western coasts between Helmsdale and Kintyre, while in the 'customed' portion of the country smuggling was almost unchecked. The Highlands were without revenue control, and two-thirds of the goods imported into the Lowlands passed free of duty.

From the date of the Union the Dumfries letter-books display reports of extensive smuggling, principally from that ancient depot of contraband, the Isle of Man, and of violent assaults upon Customs officers. In 1710 the Dumfries collector reported to the Commissioners at Edinburgh that there was little legitimate trade at his port. Early in 1711 he wrote that he had searched many suspected houses, particularly the house of the laird of Arbigland, at which place he found several casks of brandy, one of which the laird's servants destroyed to prevent seizure. 'We are heartily sorie that the Gentelmen of this Countrie give so much Encourigment to these Rogues, for if they had not their countenance they would not dare sutch Insults.' He observed that a cargo recently run was solely for use of the local gentry. 'No Marchants are Concern'd therein.' A few weeks later he reported a seizure near the Border, and the rescue of the goods from stowage by a number of women, who, 'breking open ye Doars & windows, & Committing Severall Abuses upon ye Officers, Forsably carried away ye Brandy.' Later, a seizure being made at the Water of Nith, a crowd of women rescued the goods. The seizing officers, being reinforced, recovered one bale of tobacco, and brought it to Dumfries, although set upon near the town by another mob of women armed with clubs and pitchforks. Later in the same year the Customs warehouse at Dumfries was entered by means of false keys, and rifled. During the following year the collector submitted a highly suggestive question to the Edinburgh Board: 'We beg to be informed what shall be don when we have reasons to believe goods are Lodged in a Nobleman's Cellars, and att the same tyme on pretence that the keyes therof are not to be found we are denyed entrance.' In 1720 the Dumfries Customs men, assisted by the military, made a large seizure of brandy and tobacco, and lodged the goods in the king's warehouse. The soldiers were sent to their quarters to sleep, 'to fitt them for mounting

guard.' Two responsible citizens 'and a parcel of Idle Fellows' broke into the warehouse in broad daylight and carried off the goods. A few casks were recovered on search. 'One of the Casks I found in one John McKells, Deacon of the Taylours, his house, which is within Six Yards of the Warehouse Door, and he himself was the principal Contriver and Actor in y^e Affair.'

Lurid as the old Dumfries records are, they are as nothing to those of Alloa. Most of the rescues (officially styled 'deforcements') entered in the books of the latter port occurred at Airth, a place which the superior officers were in the habit of visiting in disguise; for, wrote the collector, 'we are sure to get ourselves well beaten if we are seen.' In 1721 the Edinburgh Board ordered the goods seized at Alloa to be sent to Leith, 'to be sold at the roup,' and the collector replied that it would not be safe unless a strong military escort were provided. Later the *Charles* of Elphinstone arrived at Airth from Norway, and the Customs rummagers went on board. The ship's carpenter, one Logan, 'cured them many times,' threw one of them, and kicked him in the face. The officers were afraid to resent this. 'The whole crew,' wrote the collector, 'would have risen, and for aught I know have thrown all the Custom-house officers overboard, for I believe there is not such another Set of people in Scotland. There is neither justice of peace or Constable in all that Country.' A practice much in favour with the turbulent of Airth was to rush on board an incoming vessel during the night and plunder her cargo. Again and again the collector requested that soldiers might be put to guard the vessels that discharged at this lively port, but several years elapsed before this was done.

The letter-books of Ayr contain similar details. In 1733 an attempt was made to break into the Ayr Custom-House, and so disinclined were the magistrates to investigate that the Board referred the matter to the Justiciary. In 1742 a mob went on board a vessel that had brought oatmeal from Norway, and carried off the whole of her cargo. The collector informed the Board that it was unsafe for the Customs men to go abroad at night, and asked for a troop of dragoons, 'that the peace and trade of the place may be protected and preserved.' In 1752 the captain of the revenue sloop found four boats from Donaghadee, laden with horses, hovering on the Ayrshire coast. Suspecting an intention of landing the horses without payment of the Custom then due on animals from Ireland, he brought the little fleet to Ayr, where the collector exacted the duty (seventy-nine horses at one pound eighteen shillings and sixpence each). This was not

effected without much trouble, for the Irishmen attempted a rescue. It was fair-time, and the disaffected of Ayr assisted the riotous sailors, and would have succeeded but for the arrival of a troop of soldiers. (For this timely service the sergeant received half-a-crown, the corporal eighteenpence, and the privates a shilling each.)

Frequent complaints were made by the subordinate officers of ill-treatment at the hands of the rabble of Ayr. In August 1760 one Haldane stated that since December 1759 he had been assaulted four times while in the discharge of his duty, and the collector intimated that such an experience was no more than any vigilant officer might expect. In 1761 the collector wrote: 'Ninety-nine out of every hundred concerned in traffick are Smugglers.'

The accounts of smuggling and deforcements (notably at Troon) recur with startling rapidity. In 1765 the Ayr collector stated that there was great smuggling from the Isle of Man. He had been informed of 'great numbers of Horses going through the Country' with goods, even in the daytime, accompanied by bodies of thirty to a hundred men, all provided with fire-arms. It appears that the favoured landing-place was the coast between Girvan and Troon, whence the smugglers carried their goods through Ayrshire to Glasgow and Edinburgh. He quoted one venture in particular that passed in broad daylight over the ford a little above the Brig of Ayr, and along the Glasgow road. The officers witnessed this, but were afraid to meddle, there being no soldiers available to assist them. He continued that before the Government purchased the Isle of Man home-coming West Indiamen landed vast quantities of rum there, the goods being afterwards run into Scotland; that since the transfer of proprietorship (early in 1765) no less than forty-seven thousand seven hundred and ninety-two gallons of rum had been imported formally at Ayr for exportation and shipped for Ireland (thus paying but a slight duty); and that he was convinced the goods would be landed in the Isle of Man and smuggled back into Scotland.

In 1768 the Board tried to obtain a piece of land at Troon to accommodate certain preventive men and a troop of soldiers. The Troon smugglers (according to the Ayr collector) influenced the proprietress to refuse the land. (During the previous year they had waylaid and attempted to murder one Gordon, a Customs surveyor.) From 1776 to 1780—the period during which smuggling, both in England and Scotland, assumed its most determined and dangerous aspect—the Ayr records are quite remarkable. The district appears to have been in a state of war, so frequent are the entries of runs, skirmishes, and deforcements. The officers were afraid to move unless under military escort, and even when they were sure of such assistance their methods were cautious in the extreme. Early in 1777 three Customs men

and seven dragoons were sent to search a house in Carrick. On their way they met two excisemen and seven dragoons who had been on a similar errand, and had been fired upon and beaten off by the smugglers, who were led by one Davidson and 'the brothers McTaggart.' The smugglers were urged on by a number of women, 'holding bottles of spirits to their heads & encouraging them to the deforcement.' The revenue men returned to Ayr, and secured the assistance of two sergeants and twenty privates, armed with muskets and well mounted. With these they proceeded into Carrick, yet there is no record of arrests. Mr Reid, the Ayr Customs surveyor, reported thus: 'Among the excise officers is Mr Hamilton (a very spirited officer), notwithstanding of his having been wounded yesterday; but Mr Hume the supervisor, frightened out of his wits, would not go.' (It should be mentioned that it is not apparent that Reid himself went.)

During two days of the next month three large cargoes were run successfully on the Ayrshire coast, one by an English vessel. During the following month the *Liberty* of Hastings, commanded by one Henry Hanks of Folkestone, ran part of her cargo in broad day at Troon, and then had to sheer off on account of a gale. The goods were carried away before the Customs men arrived. When the gale subsided Hanks sailed in, and ran the rest of his cargo in full view of the officers. The latter waited till the horses were loaded up, and then made a demonstration; but the smugglers fired at them. 'The Irvine officers,' stated the report, 'declined, as thinking it dangerous, and therefore they went off & said they were going home.' Upon this the Ayr contingent 'judged it prudent to withdraw and return home.' About the same time the Ayr collector reported that five smugglers confined in the tolbooth for having fired on a revenue cutter had effected their escape. He hinted at collusion, and ridiculed the magistrates for having advertised a reward for recapture, stating his opinion that arrest by the civil officers was utterly impossible.

The records of the ports from Ayr to Port Glasgow and Greenock are kept in one series. Port Glasgow was the 'head port,' the collector at Greenock being merely a 'deputy.' In 1749 the seizure was reported of a Manx wherry and thirty-two pounds in coin (the latter being the proceeds of a run). This capture had been made by the Liverpool revenue cutter, which was cruising in Scottish waters. The following correspondence was found on board the wherry:

(1) A smuggling insurance policy, effected at Peel, Isle of Man, 7th August 1749. The goods (rum) had been insured for seventy-three pounds eighteen shillings and elevenpence, the voyage being described as from the Isle of Man to the Heads of Ayr, 'not farther north than the Knocking Stone.' The rate of insurance was 10

per cent. 'We engage that this shall be as firm as any policy made at London, Bristol, or any other place.'

(2) An advice of goods—'Sirs: We have sent you the above without your orders, & have charged you the Lowest ready Money price & Insurance, which we wish you safe,' &c.

(3) A letter, dated 19th August 1749, at Irvine, from one of the smugglers, named Callin, to his partner Kelly. This stated that the vessel arrived at Culzean, after being chased by a cruiser, and that the goods were landed safely; but the writer found some difficulty in getting his money, and had to engage that the next consignment should be a penny a gallon cheaper. The receivers insisted that it should be West Indian rum, New England rum being out of favour. Callin was told that rum could be bought at Antigua and Montserrat for two shillings and sixpence a gallon.

(4) A letter from one Ewing, an Irvine receiver, dated 21st August 1749, ordering more rum, and stating names of consignees. 'Let all the Casks be Strong,' &c.

(5) A letter from Callin to his wife, at Peeltown, 19th August 1749: 'D' Hattie: Yesterday morning at 7 o'clock we landed at Culzean after a Chase of 6 or 7 hours. I am pretty well, though I have been since I left home fatigued, night and day up, but hope now to get my regular rest,' &c.

On 14th November 1749 the Port Glasgow collector transmitted to the Edinburgh Board certain depositions made before William Stewart and John Alexander, Justices of the Peace, from which it appeared that H.M. sloop *Grampus* and the revenue sloop *Scorpion* had chased two wherries amid the Kyles of Bute. The smugglers ran one wherry ashore, having first thrown the goods overboard. The other wherry got rid of her cargo similarly, but was captured. Five smugglers were found on board. Meanwhile a crowd of people followed the chase along shore, brandishing broadswords and threatening the officers; but being fired upon, 'they thought it Proper to Shear off.' On 15th January 1750 (new style), Rennie, Wood, and Mackie, Customs officers, while conveying two seized casks of rum through the streets of Greenock, were attacked by a mob. They took the casks into a house, but the mob pursued them, beat the officers brutally, and carried off the rum. The rioters were headed by a sailor named Brallochan, 'with a Cutlass unsheathed in his hand,' who afterwards boasted openly of his misdeeds, shouting, 'I'll walk the streets of Greenock, and let me see who dare say anything against me.' The collector, in reporting on this, stated: 'The mob are still very Troublesome, and Threaten Desperate Revenge, Such as Cutting the Officers' Throats & Burning their houses.' On the 21st February the officers seized a quantity of tobacco on board a vessel from Virginia, and while they were taking it to

the Custom-house 'the Sailors rose in a great Tumult and Deford'd the Officers within Two Hundred yards of ye Custom-ho' Door, notwithstanding there were 11 officers.' The report continued: 'It is necessary to have a Watch on ye Custom House, for there is no Knowing how far the Smuglers' Resentment will carrie them.' Early in March the collector tried to sell publicly a quantity of seized tea. It was impossible to obtain a bid. 'The Countrie is Chiefly supplied with Smugled Tea.' During the same month information was received that fifteen wherries were loading contraband at the Isle of Man for Scotland, and the collector directed Andrew Crauford, commander of the revenue cruiser, to intercept them. Crauford sailed from the Cumbræes on 29th March, and proceeded to Whiting Bay, in Arran, where he found two wherries and two open boats lying ashore. The smugglers at once began to throw their cargoes overboard, and a number of islanders appeared and assisted in carrying the goods away and destroying the craft to prevent seizure. Crauford and his men landed, and were assailed with volleys of stones, 'thrown both by men and women.' The revenue men fired and wounded two of the ringleaders. In spite of this the islanders rescued all the goods; but the *Amazon* man-of-war, which happened to be in the locality, sent a boat's crew to assist Crauford. The island was then searched, and seizure made of large quantities of brandy, rum, and soft soap.

In May 1750 the collector furnished a list of persons alleged to have taken part in the rescue at Whiting Bay, John Hamilton, Hector M'Allister, James Baan Fullerton, and Angus Macmillan being particularly specified. Macmillan was also accused of Jacobitism, the constable of Arran describing him as an ex-soldier in Lord Loudon's Highland regiment, whence he deserted to the Pretender, returning after Culloden to Arran, 'and has been in James Baan Fullerton's employ ever since.' It appears that many women aided in the rescue, some of them attired as men. A red-haired maiden named Hamilton was described as ringleader. The constable also accused 'Barbara Hendrie, spouse to John McCurrie, Janet McKinnon, spouse to John Fullerton, Eliza Fullerton, spouse to Archibald Macallum,' &c.

The Dunbar records are equally enlivening. They display a deal of 'confidential information' received from various quarters by the Edinburgh Customs Board, and transmitted to the port. On 9th September 1751 the collector was told to look out for the *John and Esther*, which had been seen on 3rd September hovering on the Yorkshire coast with a cargo of contraband. In December he was told to look out for a Swedish vessel which had shipped at Dunkirk two hundred and sixty-four bales of tobacco, and stowed them 'abaft the pump.' In February 1752 word was sent that goods had been carried inland, authorised by forged permits, purporting

o be signed by the Customs, which described the goods as having been seized, condemned, and legally sold to the carriers. In February 1753 tidings arrived that the *Peggy* of Eyemouth was off the Yorkshire coast with contraband, supposed to be for Scotland, and covered by a 'pretended' clearance for Bergen. (This was quite an ancient dodge.) In October news came of a vessel from New York, laden with rum, 'intended to be run in this Firth.' In 1757 the Dunbar Customs surveyor detained the *Elizabeth* of Dundee, laden with tobacco and spirits from Campvere, and carrying a pretended clearance for Bergen. In 1762 the collector was ordered to procure a writ of assistance, search all the vintners' warehouses, and compare their stocks with the Customs books, seizing any wine found in excess. This was on account of information that vast quantities of wine were being smuggled on the east coast of Scotland.

The smuggling became more formidable still during the latter part of the 'seventies and beginning of the 'eighties. For instance, on 3rd September 1779 a letter signed by Adam Smith, author of *The Wealth of Nations*, then a Commissioner of Customs, conveyed tidings that a Flushing cutter was hovering off Dunbar, that many Leith carters had been employed to go to the coast as carriers, and that certain Edinburgh merchants, interested in the venture, had taken up their quarters at the Swan Tavern, kept by one Watts, at Beltonford, near the place selected for the run. The letter continued that the cargo was so large that two nights would be consumed in carrying it inland. During the first night half would be taken; the rest would be hidden for the time in the country houses near. In April the Dunbar collector reported the appearance of two armed smuggling-vessels. He had feared their crews designed an attack on the Custom-House, but they contented themselves with effecting a large run near Belhaven. After they left he searched the neighbourhood, and made extensive seizures, notably in outhouses belonging to the Earl of Haddington and on premises occupied by the turncock of Samuelston. For these services he received a complimentary letter, signed by Adam Smith. Later in the same month he reported a deforcement. Three Customs men fell in with a body of smugglers guarding thirteen cartloads of tea. The officers were knocked out of their saddles and beaten. During July 1780 thirty armed smugglers landed at Eyemouth, broke open the king's warehouse, and carried off fifty-seven casks of spirits. In May 1781 Customs Commissioners Maxwell, Cochrane, and Adam Smith directed the collector as to proceedings in the case of the *Janet and Betty*, found hovering off the coast with a delusive clearance for Faroe for Ostend. (She had run part of her cargo.) The commissioners advised seizure of ship and goods, and that the smugglers

should be pressed for the navy. In November 1783 the Board's secretary sent news of large importations of tea into Copenhagen, to be smuggled to Great Britain, and particulars of the ships employed in the trade, as follows: 'A large ship, Gibson captain—for Scotland. A clinker-built cutter, 250 tons, Ellison captain, 18 six-pounders and 40 men—will take £20,000 worth of tea for Great Britain or Ireland. A cutter-rigged schooner, 12 four-pounders, to clear out for Guernsey, but run in Great Britain. A small ship—same pretended destination.' Later he confirmed the advice, stating that the ships had sailed, and another vessel had arrived at Copenhagen from Scotland. This last carried twenty five-pounders and sixty-eight men, and was commanded by Smith and Dicker—'two adventurers said to be from Leith.' Her freighters were the Ryberg Company of Copenhagen. In July news arrived that several celebrated English smuggler-captains, who commanded ships belonging to Ostend, had been made burghers of that town, they imagining that this would clear them if they were found hovering on the British coasts. A question, worded to the following effect, had been submitted to the Crown lawyers: 'Can a neutral vessel cruise thus? It seldom takes more than an hour to land a cargo, people often appearing suddenly to assist, to the number of 300 or more, with 200 or more carts and wagons.' The lawyers had replied that the smugglers did not cease to be British subjects through securing foreign citizenship, and that their vessels, whether owned by Britons or foreigners, were forfeitable if found 'within the limits.'

The above are but a few random selections from the records, and it should be mentioned that they are taken from the books of but five Scottish ports. Still, they furnish abundant proof that the smallness of the Scottish revenue during the eighteenth century was not wholly due to the poverty of Scotland. Foreign trade appears to have been good, especially in tobacco; indeed, the Virginia trade into Ayr, Greenock, and Port Glasgow was quite important. Much of the tobacco thus legally imported was merely entered for exportation, and it is evident that, especially during the earlier half of the century, most of this was not exported at all, but made up in bond into packages suitable for running, taken to sea with a 'delusive clearance,' and relanded duty-free. (The principal exception to this was the extensive trade with the French farmers-general, chiefly controlled by the merchants of Ayr and Greenock, which appears to have been a perfectly legal traffic.) The foolish system of allowing traders to import and enter tobacco, and keep it in bond in their own warehouses, also led to much fraud, the merchants frequently clearing off their stocks, and then becoming fraudulently insolvent, or bolting to the Highlands with the proceeds, their sureties following suit.

Still, the most picturesque portion of Scottish

contraband dealing was the spirit smuggling. So vast was this that, viewed in connection with the contemporaneous illicit distillation, it furnishes telling information as to the habits of the Scottish lower classes of that day: a hardy,

Custom-hating, liquor-loving race, scornful of English laws and English systems, inveterate riotous, and standing shoulder to shoulder as only Scotsmen can in defence of what they conceived to be their own interests.

A SEA NIGHTMARE.

By W. F. BATTEN.

THOUGH one frequently hears it remarked 'that it is the unexpected that often happens,' still I little thought, when compelled by mental overstrain and a wound that would not heal satisfactorily to obtain leave of absence and go for a short spell to sea, that I should in the course of that trip meet with the most terrible experience possible outside the realm of nightmare, besides only escaping death in a most horrible and loathsome form by, in sailor parlance, 'the skin of my teeth.'

But in order to enable the untravelled reader at home to comprehend how such an almost unique experience was possible, I must commence by briefly describing the little craft that I had chartered for my trip, and those who were my companions in this strange happening. Now, I had been for some time watching the completion and fitting out of the lorch *Flying Arrow* with an eye to making a shooting-trip in her. For this type of small craft is a very handy one; being half fore-and-aft schooner and half junk, it usually possesses the advantages of both.

The *Flying Arrow* was about sixty tons measurement, with fine lines, and carried a good spread of fan-shaped canvas sail on her fore and main masts, besides sporting huge balloon stunsails and a flying jib. Her top sides down to the muntz-metal sheathing on her bottom were of brightly varnished teak, whilst a smart little mizzen-mast was perched on her stern. Altogether she was as strongly built and fast a little craft and as good a sea-boat—answering her helm quickly and lying close to the wind—as one could wish; and these qualities stood her in good stead when the occasion came. Doubtless, however, she had been built with one eye to European charters and another (unless I was much mistaken) on the possibilities of the contraband trade. The latter doubtless accounted for her strong crew of eighteen seamen besides the master and cook, also for the two very workman-like six-pounders on her deck aft.

I had taken my interpreter (who, having been through the campaign against the Maoris as an officer's table-boy, considered himself to be nearly an 'Inglisheman' in consequence) to save me the fatigue of arranging matters. I also took my marine cook, who was as much at home with musket and pike as with his

cooking-chatties; whilst the 'coxun and stroke of my gig (both excellent pilots) had been left to go too.

My interpreter had seen fit to bring four Snider breech-loading carbines with their sword bayonets and some boxes of ammunition, besides a six-shooter for each of my little party, because (he kindly explained) 'he never liked to take no chances.' So I, feeling anything but fit, had left it at that. Indeed, I did not intend worrying about anything lest I should spoil my pleasant 'loaf' at sea.

Now, just before we sailed, there had been a pretty bad typhoon, besides some of the very worst weather experienced for many years down the China seas almost to the shores of Australia. There had, too, been upheavals beneath as well as on the surface of the seas as a result, so it was said, of volcanic action and seismic disturbances.

In consequence the master and part-owner of the *Flying Arrow* predicted, with a broad grin, that 'No. 1 good weather must just now make come,' and the first few days at sea certainly did seem to prove his forecast a correct one. But on, I think, the fifth day out the steady fair wind that we had been up till then carrying with us dropped to light airs, and these again to treacherous puffs, which at times died out altogether with sundry mocking flaps of the shivering canvas overhead; whilst the whole ocean was wrapped in a glass-like calm, its unruffled surface seeming to suggest that all the winds were dead. It was, in fact, 'an Irishman's hurricane'—that is, a sudden calm as unexpected in its arrival as uncertain in its duration—the worst of all luck at sea, but hurricane, fire, or wreck.

The next morning, by a couple of hours after sunrise, the intense heat drove me out of my berth below on to the newly washed-down deck, where the salt sparkle on the planks from the quick evaporation in that oven-like atmosphere was quite perceptible. When, however, half-a-dozen buckets of fresh-drawn sea-water had been poured over me I was enabled to enjoy the luxury of feeling only bearably hot.

It was a typical tropical morning, with a sea of pale azure running on a very gently heaving swell, the glare of the even then scorching sun producing a gauze-like steamy mist above the surface of the sea as it worked to its distant

reaches, so that on the horizon it was hard to say where the ocean ended and the sky commenced. A weak hot air at times floated rather than blew over the stern, but it was far too light to fill the useless sails. Hence the lorch's hull swung to the swell without regard to the rudder, which creaked and groaned an unending complaint. After breakfast, however, the lighter sails of thin duck were just curved outwards by the delicate fanning of a scarcely perceptible draught, so that the *Flying Arrow* regained steerage-way, and I could see once more the welcome ripples round her metallised forefoot. But that night when the moon rose she came up crimson rather than pallid of face, being distorted by a haze of hot vapour till well clear of the damp mist on the horizon. Then she seemed to throw broad beams of pale greenish silver on the still sea, but the night air failed to cool ever so slightly the intense heat of the oppressive night. The moonbeams were reflected in the heavy dew that gathered on the outstanding woodwork and seemed to whiten the new canvas aloft to the semblance of milky clouds; but still there was not the faintest stir in the air, or the slightest sign of any current to shiver the face of the sea. This most unusually intense heat had by then evidently told on the generally unemotional Chinese crew; for of a sudden a most tremendous din broke the deathlike stillness all around me, arousing even the sleepy lookouts, who instantly rushed below and added to it. Then, amidst frantic shouts and vengeful imprecations, a seaman, trussed up like a fowl with bamboos and ropes, was dragged on deck, a large stone taken from the ballast being carried up in ominous proximity to the helpless man. But I thought it was high time for me to take a hand.

'Halloa, Ah Sam!' I shouted to the master; 'what are you going to do with that?'

'Me makee cumshaw he to that pieccy sha'k 'long side' ('I'm going to present him to the shark swimming near us').

'What for, Ah Sam?'

'Cos he blong no-good, he allo same spy—Hoi kwan man, savey?'

'Well, if he is an informer of the Chinese Customs, I am not going to allow you to murder him in cold blood. You should have been more careful in choosing your crew.'

'He makee know too much, my must killer 'im,' blandly announced Ah Sam, as if the man he alluded to were merely a rat.

'Well,' I said, 'if he *has* been trying to discover where you have stowed that "No. one" Patna [opium], tie him up on deck, where he cannot do any harm, or meet with "any accident" either, Ah Sam, savey? You can ship him off to Singapore by-and-by. He won't get back from there very easily, you know.'

So the detected spy was made fast to the iron

stanchions of the open side-port amidships, and the huge shark that had been following us so persistently (to the unconcealed dismay of the crew) was cheated of its prey. Then, as I found it impossible to sleep in my berth below, I had some cushions placed on the overhung of the stern, under the awning that was still stretched across it, hoping to get a spell of sleep in the open air, out of my oven-like berth; for never before in the China seas had I encountered such heat. The next day brought me no relief either; the blazing sun seemed to pour its red-hot rays pitilessly and persistently down on the 'white-hot' deck, the atmosphere being close and sultry to a degree that beggars description. The torpid sea seemed almost oily in its glassy calmness and slimy stagnation; the minute marine insects floating in great patches on its surface suggested that the recent disturbances had extended even to its placid depths. These conditions lasted the whole livelong day, during which the lorch might have been the poet's 'painted ship upon a painted ocean' for any progress we made. Darkness again brought us no relief, seeming, indeed, only to add to our discomfort; so I found that to remain in my berth was out of the question. The crew, who had suffered even more than I from it, were quite played out, and were dispirited by their superstitious fears of 'the unpropitious omens' (though our persistent follower alongside had then left us). The men had lost all appetite for their evening meal, and were lying about the deck forward with carefully bandaged eyes to guard against the risk of 'moon blindness,' as they had furled the awning amidship to get the benefit of any light 'catpaws'—of which, however, there was not the slightest sign. Meanwhile I was restlessly tossing on the pile of cushions my men had built for me on the lorch's overhanging stern, which, like the bows, was higher than the midships, in hope that a capful of air might reach me, for I sweltered in an atmospheric environment to which that of Aden was as Siberia! Sunrise came round again, but not the faintest sign of a breeze came with it, though this state of most unnatural calm had already lasted over five days. The sea, too, seemed to be growing even more turbid and foul. The pitch oozed up from between the scorched deck-planks, whilst as far as my marine-glasses would reach there was not a sail or any sign of life. Sky, air, and sea all seemed so lifeless as to suggest, in my own overwrought nervous state, a condition of universal death!

The night that followed found the prostrated crew of the lorch gasping for air, and groping about like a score of blind men to find a bearably hot plank to sleep on. From my cushion bed at the extreme stern I could see right down the deck of the lorch, which then, like the sea and sky, was bathed in the strong white light of the moon that showed up every object before

me with startling distinctness, being, indeed, almost blindingly dazzling.

The lorchas might have been in dry dock, she lay so still on the turbid waters. Not a sound came to break the stillness, for the unhappy crew had at last, from sheer exhaustion, fallen into a heavy sleep. The face of the detected spy looked drawn and troubled; and though the moonlight showed me that he was no longer tied to the stanchion, still he seemed restless and ill at ease. But a foreboding of impending disaster, that instinctive sensing of danger which man shares with the brute creation, had rendered me hopelessly wakeful, and I lay staring first at one distant object, then at another, whilst I thought how glaringly bright the white sails, awnings, and deck appeared; even to my strained eyes the white cotton garments of the crew, the sheets on my cushions, and the canvas covers of the guns seemed almost painfully so. The guns themselves had been cast loose, loaded, and primed to try them at a mark which the awful heat had prevented being towed away from the ship; whilst, with typical Chinese carelessness, the two six-pounders had not been properly secured again, or even had their charges drawn. I noticed, too, as one does notice trifles at such times, that the gun on the port side was pointing toward the open port where the spy lay. Then my wound began to ache badly, causing me to pray for the merciful oblivion of that sleep which so obstinately refused to come.

I next thought I would try bandaging my eyes; but as I sat up to do so, something that seemed like a groan of agonised horror caught my ear, and instinct prompted me to glance toward the open port where the helpless spy lay. Then, though I and fear had been strangers hitherto, I confess that I did experience an entirely novel sensation at the roots of my hair and a curious feeling as of ice-cold water trickling down my spine at the sight of the awful thing I seemed compelled helplessly to look on at. For over the sleeping spy, whose eyes were starting out of his head with mad horror, there quivered and wriggled a most monstrous sucker-like arm resembling an enormous serpent, which gradually closed on and twined round the wretched creature lying helplessly below it. Yet hardly had I grasped the deadly nature of the horror that had boarded us, when another huge tentacle was swinging to and fro, a wriggling, quivering, slimy arm, that showed up clearly in the strong white moonlight. The watchdog (which was far more to be depended on than the lookouts) then gave an angry bark and pluckily flew at the horrible intruder, which he bit and tore at till crushed to death in its coils. For the moment I could scarce believe this silent horror real, and imagined that I must be in the clutches of some dreadful nightmare. So I shut my eyes; but when I

opened them again it was still there. Then I sprang to my feet and sounded such an ear-piercing call on my whistle that my men roused on the instant and seized their carbines and sword-bayonets, fancying, apparently, that some piratical boarders had dropped on board from the sky.

That shrill screech, however, also roused the sleeping crew, just in the nick of time too, for those enormous tentacles, having secured their prey, had raised the now crushed and motionless bodies in mid-air, whilst other and shorter arm-like feelers came over the rail and were inclining toward those of the crew who had been sleeping near the open port, apparently searching for other victims! Then in a moment the air rang with the cries and yells of the terror-stricken seamen, their faces turning a sickly ashen gray, as they tumbled or threw themselves pell-mell down the ladder to their quarters, their dash below being so sudden that the quivering arms already above their heads failed to secure a single victim. I at the same time realised that there was no chance of inducing such panic-stricken creatures to attack the monster. Ah Sam, indeed, did join me, but with shaking knees and a countenance that was almost green with terror, despite his 'My must makee fight he too.' My own sword and my men's sword-bayonets had fortunately been sharpened before starting, and they, albeit with ghastly faces, readily followed me to attack the 'sea demon,' as they called the monster that appeared to have got our little vessel into its clutches; for these men would have followed me, or any British officer who understood how to handle them, to certain death. I ordered all four to keep together and slash right and left with their sword-bayonets at the horrible wriggling arms nearest us. But as I strode warily in front of them the horror of the awful thing facing me seemed almost to paralyse my limbs; for I could then see that well above the lorchas deck at the open port was a vast bulk, in seeming a huge reddish mass of something gelatinous and slimy, which appeared to raise itself slowly out of the water, whilst as it did so the lorchas took more and more of a list to port, evidently through the weight of the enormous bulk of the horrible thing that clung to its side and bottom, the great length of its tentacles having apparently enabled it to twine round the little vessel's hull. The creature's dreadful head, with its half-devilish, half-corpse-like eye, staring and horn filmed, now loomed above the open port; whilst the bodies of the spy and the plucky watch-dog were apparently being conveyed by the huge tentacles that intertwined them toward the centre of this dreadful object. Then I suddenly recollected that the lorchas was only in ballast, and carried none too much of that; consequently she would be unable to withstand such a sudden weight above the rail on one side

of her deck. It also flashed across my mind that the Giant Octopus had been known to capsize fishing-craft in order to prey on the crew. I saw too that my sword and my four men's sword-bayonets would certainly fail to effect its destruction, even if we should escape the fate of the wretched informer. All this passed through my brain in far less time than it takes to write it down, and for a few moments I felt utterly crushed and hopeless with such an awful fate staring me in the face. Then, as I glanced aft to see if it was any use calling to the terrified master to join us in the attack, my eye fell on the gun whose muzzle I had noticed was pointed toward the open port, and I suddenly grasped the fact that, given enough time to act, the situation was saved! So, telling my men to follow me, I dashed aft at break-neck speed, and seizing several small mat bags of mixed shot (iron balls varying in size from that of a small orange to a walnut), I hastily rammed them home on top of the six-pound round-shot the gun already contained. Then I snatched a lighted Joss candle from the small shrine aft, and opening the six-pounder's vent, applied it to the priming.

A blinding flash was followed by a dense cloud of thick, black smoke, which rose but slowly in the heavy, still night air. Then, on looking toward the open port, we saw that the monster had almost entirely disappeared. The lorch, too, had righted herself, which showed that the pressure on her port side had ceased; whilst all that part of the huge body and great tentacles of the creature which had appeared above deck had been blown to atoms by the heavy discharge. My lads then cheered shrilly, Ah Sam joining, in, as it proved, rather too previous joy. For, whilst my men attacked a powerful tentacle of the nearly destroyed monster which, though its body had been shattered, still swung menacingly over the deck, Ah Sam—doubtless intending to save face before

us—joined in, but was nearly seized by its companion, which, however, proved to be the last of these dangerous and repulsive suckers. The scattered remains of the monster were then floating alongside, though the deck amidships was literally coated with a repulsive, gelatinous, foul-smelling substance, neither flesh, fluid, nor blubber apparently, but something equally revolting to sight, smell, and touch! Now, I was incensed at the cowardly conduct of the lorch's crew in bolting below and remaining there out of harm's way, leaving us, as they supposed, to our fate on deck, and I thought that to set them to clean up this disgustingly foul deposit would enable me to get level with these cravens. So, taking my men with me, I went below, and making the still frightened master lend a hand, we ordered the whole seventeen to get up on deck and set about it. At first the crew seemed to be so mad with terror as to be unable to understand the order, for they continued to light demon candles, or hold their cotton quilts over their heads to keep out the awful sight of those monster tentacles, which they fully expected would follow them to their quarters. However, after some shrewd pricks from sword-bayonet points and many well-laid-on blows from the flat of their blades, the shirkers were got up and compelled to turn to. Curious to relate, almost immediately afterwards a heavy bank of black clouds obscured the moon, and finally spread over the entire surface of the heavens. Then a torrential downpour brought a stiff breeze in its train that caused a sudden change from a state of utterly unbearable heat and dead calm to a chilly atmosphere and a rough sea, so that the lorch was soon reeling off ten knots by the log. The sudden change was none the less welcome through the prospect it held out of immunity in the future from any further molestation by such 'awful denizens of the depths.'

A PYRENEAN VALLEY.

By DR J. H. SALTER.

THE Midi express rushes southward through the land of pines and heath till Dax is left behind, and now away in front cloud-banks hang heavy upon the horizon. Amongst them the eye picks out after a time dimly seen outlines which are not cloud, and we hail the mountains at last. No straight and uniform chain, such as we neatly delineated in 'herring-bone' in the maps of our school days, are these Pyrenees on nearer acquaintance. Here and there the foothills send out a pushful bastion into the plain; behind, peak jostles peak, merely flecked with snow in the hollows and upon high-lying flanks, for the season is full summer. Only as we look far to right

and left and see the long perspective of heights die away in the heat-haze which hangs over the plain of Gascony do we regain the idea of a mountain-range. Here and there the cloud-capped forms draw apart a little where a mountain valley opens to the lowlands. Leaving Pau, where in January the mimosas flower against the wall below the sunny terrace overlooked by the ancient château of Henry of Navarre, the branch-line of rail which takes us to Oloron draws steadily nearer to one of these gateways in the mountain barrier. It is the lower end of the Aspe valley, and a good carriage-road enters it at Oloron to traverse its whole length of thirty-five

miles, rising by easy gradients to cross the divide at the Somport, and thence dip downwards into Spain.

All along the valley the white limestone rocks and the turbulent stream remind one of a Derbyshire dale; but the mountains which hem it in rise to eight thousand feet in place of as many hundreds. Here is Sarrance, once the seat of a pilgrim shrine which was visited by Louis XI., he with the little leaden Virgin in his cap. Anon the valley widens to an oval basin, once the bed of a lake, a flat stretch of rich meads and well-tilled crops, amongst which stand five villages, the chief of the group, Bedous, being the commercial capital of the valley. Again the dale narrows, and the fretful stream forces its way through a gloomy gateway. Here it derives from the Lescun valley tribute which doubles its volume, the sister-stream passing beneath the Pont du Roi, so called because of old the shepherds paid a tax to the king when they crossed it with their flocks upon their way to the mountains. Some miles farther on, in the jaws of the ravine, has been constructed the fort of the Portalet. Ten years of excavating were needed to form a series of galleries in the solid rock, commanding the road by means of loopholes and embrasures. The dark gorge is filled by the noise of the torrent, above which in June the white plumes of the saxifrages wave from the rocks. The fort will accommodate three thousand men, but the progress of modern warfare has robbed it of all importance.

From the nick in the mountain-chain, whose name of Somport (the 'summit gate') so well describes it, many an invader has swooped down on the fair fields of France; for the deep-cut and narrow cleft of the Aspe valley has been a highway of nations and of armies. Hannibal's passage, if indeed this was the route which he followed, was succeeded, a couple of centuries later, by that of Crassus, lieutenant of Cæsar. The Roman road, made at the beginning of the Christian era, was utilised in the days of the dying empire by the barbarian hordes of Alains, Suèves, Vandals, and Visigoths; while later the same route was followed by a part of the Moslem host under Abd-er-Rahman. Urdos, the highest village in the valley, has been burnt or destroyed more than ten times. The old gray-stone villages, with (as at Borce) Gothic inscriptions on the ancient houses, or (as at Etsaut) a tower dating from Moorish times, are a palimpsest of the past. But all up the valley, keeping company with the long white strip of road and with the rushing *gave* (generic name of all these Pyrenean streams), the line of the new railway pushes on, raised high on rocky shelf, through gallery and burrow, to pass the frontier finally by a long summit tunnel, thus shortening the run from Paris to Madrid by some sixty miles. Hence the stir and activity along the road, as in heat and dust stores are transported to the navvies' village which has sprung up at the tunnel's mouth; here the patient strain-

ing of a yoke of oxen, there the more nervous and jerky efforts of a team of ten mules, which, harnessed tandem, are taking up a load of cement. Nine-tenths of the labourers engaged upon the line are Spanish, to which circumstance is due the fact that long before the frontier is reached the wayside inn no longer announces itself as an *auberge* but as a *posada*, and the baker's establishment has become a *panaderia* in place of a *boulangerie*. This part of France bids fair to become Spanish by peaceful occupation.

Yet time was when the valley might have stood as a type of self-centred seclusion, veritably, as a French writer terms it, '*un monde à part*.' In common with the rest of the principality of Béarn it had its palmy days, when Marguerite of Navarre, and later her daughter, Jeanne d'Albret, kept court in the old château at Pau. Here the principles of the Reformation early took root. Protestantism became the established form of religion in Béarn, and numbered nine-tenths of the people amongst its adherents, until Louis XIII. robbed the little mountain land of its liberties and re-established Catholicism. These men of the valleys, never oppressed by the feudal system, formed themselves into small free communities from the earliest times. Every step may be traced—first the self-governing village, then the association of the several villages of the valley to form a commonwealth, and finally the union of a group of mountains and valleys to constitute a little state, such as Béarn or Navarre. The old isolation is passing; emigrant sons return from America, bringing fresh ideas. But it is not so long since the Lescun people opposed the making of the road which now winds up to their village, lying high on its sunny slope, upon the ground that the mule-track which had served their forefathers was sufficient for themselves. Lescun was in fact the type of a self-sufficing community, a *respublica in republica*. A mill, maintained as public property, served for all to grind their corn. The shepherd from the next village who hired pasturage for his flock was sometimes unpleasantly reminded of the fact that he was a foreigner by a boulder sent rolling downhill into the midst of his sheep. Do not the Lescun men still repair yearly to the Col de Peyre St Martin upon a stated day in July to hand over two heifers to representatives of the neighbouring commune upon the Spanish side, as reparation for the fatal results of a quarrel between shepherds of the two nationalities some centuries ago? Strangers were regarded with something more than suspicion; and it is said that an Italian savant, who, after making a survey of the Pic d'Anie, descended upon Lescun, only escaped actual violence by the intervention of the priest. The root-idea in this case was one which goes far back to dim times of paganism, to the effect that evil would follow intrusion into the domains of the spirits which haunt the mountain solitudes, a feeling voiced quite recently by a peasant-woman,

who exclaimed, 'You have been on the peak? Ah, then, we shall have bad weather!' No doubt at one time the Lescun men, as in all these frontier villages, occupied themselves largely with smuggling, and report says that a custom-house officer, who had made himself much disliked by his severity, was made away with in broad daylight one Sunday after the mass, and that inquiry failed to bring to light any trace of his fate. But to-day Lescun is peaceful enough, with the vines trailing over its trellises, and its fields of maize, which ripens here at three thousand feet above the sea; and, needless to say, it has nowadays nothing but a welcome for the stranger.

For these people of the valleys are a simple, kindly, and hospitable folk. All are small landed proprietors, who prize the independence maintained by constant toil. Field-work of the hardest is the lot of man and woman, young and old. Two, and in some cases three, crops are taken yearly from the same piece of ground. The very day that a field is clear of corn, seed is sown for the crop of crimson clover, which will be reaped in November in time for an autumn sowing of wheat or barley. Haricots climb upon the maize-plants, and vines are trained over the cherry-trees; while in every waste corner a gourd runs riot. Nothing is wasted; in autumn the fern is mowed and carried for litter, while the fallen leaves are collected for manure. Haymaking in the low meadows goes on from May to October, for no sooner is a crop carried than the field is irrigated by a system of artificial runlets, and under a Southern sun the grass grows again like magic. On higher slopes, so steep that it is a mystery how the mower maintains his foothold, a single crop is secured. All field-work is, of course, done with the help of oxen; and all crops are carried upon mule-back or upon the shoulders of the proprietor and his family, for the stony tracks by which these patches of cultivation are reached admit not of wheels. It would be ungracious to couple, as is sometimes done, with the name of the Béarnais peasant the epithet *grippe-sou*, or to hint that he pushes frugality to a point where the line which divides it from avarice is so fine a one as to be scarcely appreciable; for to live with a total absence of the comforts which an average English labourer enjoys does not here imply poverty, as the provincial French banks could tell. Poverty such as we know it does not exist; begging, except on the part of a chance vagrant, is unheard of. The Béarnais peasant inherits unchanged the type of mind of his forefathers; slow, canny, suspicious of change, the centuries move him not, or but little. He lives in closest intimacy with his mules and cattle, which are accommodated upon the ground floor of his house. The family lives upon the first floor, with granary and lumber-room above. The large size of many of these old houses is explained by the fact that a married son often

shares the parental tenement. Never is a household wanting in abundance of clean, coarse, homespun linen; and vast is the trousseau prepared for a bride. But the spirit of economy revolts from using the brand new. A new-made wife showed with pride her stock of sheets and coverlets, folded neatly away, and explained that she was going to commence upon the trousseau, still untouched, which had been her grandmother's outfit for life. Curious marriage-customs—tacit refusal of a proposal by the placing of walnuts upon the supper-table, the knocking of the bride for admittance to her future home—are largely a matter of the past. But through all changes the people of the valley continue to speak their old-world dialect, the language of the troubadours and the Albigenses, better preserved here than elsewhere. The railway, when completed, may bring many a change to these quaint villages, and brisk business methods may be introduced into the country shops. At present, while agriculture is the primary occupation with all, the enterprising add one or more subsidiary employments. Thus when we wait upon the local hairdresser he is seldom in evidence, because—as he also deals in wine, buys horses, and runs a conveyance to Oloron—he is frequently absent in pursuit of one or other of these varied avocations.

The cutting and hauling of timber gives employment to some hundreds of labourers, for, though the forests dwindle, the upper slopes are still in places clothed with noble woods of beech and fir. Each trunk as felled is secured by hooks and chains, and thus dragged by oxen down the long timber-track to the valley. In the cool, moist depths of the forest, where the great firs stand draped in gray-bearded lichen, some of the wild life of the district still lingers. The wolf has disappeared completely within the past fifty years, but one or two bears are still killed annually. At the wayside *auberge*, as the chas-seurs gather round the supper-table, the talk is all of bears and of izard, the latter being the chamois of the Pyrenees. 'See you,' says the landlord, relating his latest exploit, 'the bear was as near to me as you are; I could have touched him.' Bear-hunting is in the family, for his father counted up twenty-three occasions upon which he had been in at the death of bruin. Who shall tell of the sunny openings in the woods where we wade waist-deep in asphodel and turk's cap lilies, or of the great game-bird, the capercailzie of our Scotch Highlands, which springs up on whirling wings before us? Then, when the uppermost firs, half-dead, rent by storms and broken down by weight of the winter's snow, are left behind, we enter upon a fresh region, that of the berry-bearing shrubs. Shall we deem it at its best when upon every slope and in every hollow the dwarf rhododendrons are glowing with colour, or in that pleasant season after the early September snow,

when, under the influence of the first frosts, the foliage of the bilberry-shrubs turns to a vivid crimson and the dying leaves of every low-growing herb are tinged with orange and scarlet?

Higher still come the wide green basins of the upper pastures vocal with streams, where from mid-May to mid-September the air is full of the bleating of sheep, the sound of cow-bells, and the herd-boy's light-hearted carol. A ready welcome awaits the wanderer; but let him beware of the shepherd's dogs, and, unless blessed with an impervious cuticle, let him avoid passing a night in the hut of sods and stones, which here replaces the picturesque *châlet* of the Alps. But the time to see the upper pastures at their best is in late spring, before the flocks have come up, when the stern rocky corries still hold a great depth of snow, and when the little tarn, later to mirror the summer sky, is still full of melting masses of ice. The hollows are filled with the noise of falling streams, and the vanishing drifts feed countless ice-cold springs and rills. Then this floor of green level mead, once the bed of a lake, is blue as the sky with the Alpine forget-me-not. Soldanellas lift their fringed bells in bare spots from which the snow has just vanished, and gentians open flowers of a hue surpassing that of sea or sky. Upon the dry slopes myriads of the purple iris will later burst into bloom.

Two eagles drop from some high perch, and, unfolding wide wings, pass with a magnificent swoop overhead. Great vultures, disturbed from their watch-towers, leave the pinnacles upon which they sit in order to keep an eye upon the flocks below. With every upward step there is an enlarging prospect, until suddenly the granite pyramid of the Pic du Midi d'Ossau leaps up grand and near, a giant amongst his compeers. Now come the uppermost ramparts which hem in the valley, fantastic rock-towers, stern and arid crags, in whose sheltered hollows the hardened snow lies, forming miniature glaciers, throughout the summer. Here are the wild rocks of Ansabère, vertical or overhanging, for ever virgin peaks, and hence known to the shepherds of the valley as *les Demoiselles*. Here is the Pic Table des Trois Rois, so called because it was said that upon its platform summit the three kings of Aragon, Béarn, and Navarre could meet to dine each in his own dominions. The frontier-line, in general at a height of about seven thousand feet, runs in some cases along a bleak, wind-swept ridge, and at other times traverses a vast limestone wilderness, a mere chaos, the débris of shattered peaks, the home of the snow-finch and the ptarmigan. Here, far into the summer, the dwarf flowerets of nature's rock-garden enamel their barren surroundings with vivid splashes of colour. The high-lying passes are practicable for mules from mid-May to mid-October.

The crest of the divide once gained, a new world opens before us; a whole province of northern Spain seems to lie at our feet. Napoleon spoke never more wisely than when he said that he who would make of France and Spain one country must first plane down the Pyrenees. For contrast in a dozen forms accentuates the change. Upon the French side are the green pastures and the timbered slopes; upon the Spanish side a succession of arid hill-ranges, of brown, tawny, and purplish waves, scant verdure and but little forest. The spare, long-limbed French sheep here give place to neat, compact merinos, and the many-coloured Spanish goats appear. The shepherd, wrapped in his *manta*, returns our greeting with a curt '*Buenas días*.' Here the citadel-like ramparts of the Castillo overlook the valley, through which meanders the Rio Aragon.

The morning's lunch was partaken of beside one of the cold springs which feed the Gave de Pau; the midday halt is called beside a tiny and remote affluent of the Ebro. So few hours have sufficed for crossing the watershed between the Atlantic and Mediterranean! Here, on the flanks of the peak which bears its name, the infant Aspe takes its rise in snowfields which never melt, and rushes down through a rocky gully to enter France. On the rare days when no mist-wreaths curl round the crags, one has an eagle view, every ridge and peak delineated in clearest outline, white limestone contrasting with purple schists, far to the east the immemorial snows of the Vignemale and Mont Perdu, while to the west may even be seen the shimmer of light upon the restless waters of the Gulf of Gascony. Such scenes, grand and lifeless, hem in our valley, accounting for its long isolation and for many of its present-day characteristics.

RECOMPENSE.

GOD gave a day of healing
To the patient budding flowers,
After the rough wind's bruising,
And the stinging showers.

He bade the sun caress them;
'Blow softly' He charged the breeze;
And the flowers gave fragrant incense
In silent ecstasies.

In a riot of bloom and colour,
Painted by God's own hand,
They danced to the breeze's piping
A faerie saraband.

God gave a day of healing
To the patient trustful flowers;
After the grim grief bruising
These broken hearts of ours.

Shall He not grant us also
A time to grow glad again,
His peace and His benediction,
After the stinging rain?

C. FARMAR.

Chambers's Journal

SEVENTH SERIES

IN A DERVISH CAPITAL: KONIYA (ICONIUM).

By LOUISE PERALTA.

GUNS boom out from the restored *enceinte* of the crumbling citadel of Uch Kala. Though the heavens should fall, the Muslim's abnormal delight in pious celebrations has to be ministered to. The capital of Hadrian's colony of Lycaonia finds itself within the zone of the titanic modern conflict; nevertheless the True Believer must keep the great *Molid* (Feast) of the Lord Hoseyn and his brother Hasan, martyr-grandsons of the Prophet. Hoseyn is the saint *par excellence* of the heretical dogs of Shi'a; yet not even the *Kiswa* (the procession of the Holy Carpet) or the passing of the *mahmal* with the pilgrim *kafila* to Mekka is so beloved or so carefully prepared for by Shi'a and Sunni alike all over north-western Asia as is the 'Hasaneyn.'

Koniya, the ancient Iconium, thrice visited by St Paul, is four hundred and sixty-six miles from the Bosphorus, at Haidar-Pasha. In this city of orthodox Sunnis, on this late afternoon, the streets are like a scene in the land of the Ginn. The narrow lanes of the great Khan-el-Khalily, the bazaar of the Turks, are each one long blaze of colour and still tenacious sunlight. Each little shop is displaying for the festival its costliest and rarest embroideries and brocades. For the Hasaneyn there are brought from dim interiors and placed in the front of the booths trays full of precious stones whose dull, uncut surfaces do not betray their hearts of fire within. In one tiny warehouse, become a hall of audience in miniature, a story-teller relates, with dramatic gesture, an often-told, well-loved tale. Under the shadow of the Laleli Djami, the Tulip Mosque, an Arab barber is cutting hair with a German clipping-machine. Beside the ablution-fountain outside the mosque is the table of the letter-writer, who has many customers, and strews his script with sand with a less dignified leisure than usual in order to overtake business; and, while the water-seller is ringed in by his *clientèle*, a fanatic is gazing at a blank wall until he shall see the name of Allah blazing on it.

Within recesses hung with rich shawls the well-to-do of Koniya, seated on cushions beside little mother-of-pearl coffee-stools on which are almond and rose flavoured drinks, watch the throng, through which a way is being pierced

by a company of Dervishes, swaying devotees, chanting the Kuran. When the crowd has closed behind these, it is again cleft by a mob of the lower class carrying Karakush, the Oriental Punchinello, up to the mud core which is all that remains of the old walls of the Seljuk epoch, tented alongside which are stalwart Turkomans and supple Persians (called the 'Easterns') from Urumiya and Tabriz, Bedawis from the Hedjaz, Syrians, and Armenians. Notwithstanding their twentieth-century kit, these soldiers of Mohammed the Fifth are little changed from the men whom Saladin led against Richard of the Lion Heart. In the bazaars the fez, the symbol of Reform, has been universally worn; but, despite the ostentatious acceptance to-day by occidentalised Turkey of an almost super-modernity, the *Zeitgeist* of the dominions of the inheritor of the sword of Othman is that of seven centuries ago.

In the orientalism which lies below the citadel of Koniya the Western intrusion is vivid. In the suburb of Zilleh the large Greek community have their quarter, called by the Muslims the Harat-el-Rum. We know that, even at the very earliest point at which we can secure the first slight hold of it, mankind was not young. In this old region between the Persian Gulf and the Euxine, throughout some seven thousand years, great civilisations have reached and passed their maturity, and have declined into their consequent doom of decay. There have just elapsed in this portion of western Asia, not for the first time, the inevitable few hundred years period of arrested progress. To the present generation of Asiatic Turks M. de Rozières has applied the Egyptian proverb: '*Les oreilles du jeune homme sont sur son dos; il obéit à qui le frappe.*' The commercial push of the Greek has been the whip that has flicked the Young Turk of the Trans-Euxine. Along with other industries, the carpet-weaving of Koniya was within recent years passing to a great extent into Greek hands when the Asiatic Turk developed a certain degree of 'hustle,' and almost recaptured the trade.

During a visit to one of the carpet factories, in most of which girl-labour, under very satisfactory conditions, is largely employed, one is astounded at the facile exercise of memory of

which the employ  s are capable. Very seldom in these factories can the pattern be followed by the eye of the worker. A design in black and white only is usually hung up, often against so dark a portion of the wall that it remains illegible. A lad of fourteen or fifteen, the foreman of the looms, paces up and down between the rows of weavers, chanting from memory in a sing-song tone the number of stitches and the colours. One of these lads declared that were he permitted to inspect closely for ten minutes one of the priceless carpets of the world, such as that before the *mihrab* in the mosque of I'bn-el-Bena at Bokhara, he could thereafter take its fellow from the loom. The Greek manufacturers were greatly hampered by their ignorance of the ingredients necessary in the mixing of some of the more beautiful and lasting dyes. The secret of the composition of certain of these dyes—notably of the exquisite blue conspicuous in the Koniya carpets—is the possession of three, or at most four, Mus  lman families, and is jealously handed down from father to son, and divulged to no one else.

The Kurd element in Koniya confines itself to the Koch-Hissar neighbourhood, while nomad Yuruks tent upon the Koniya plain. A curious Hamdani colony, who have monopolised the trade of the *araba*, or cart-drivers, are interesting as exemplifying the issues of an unchanging environment. They present clear contours, in contrast to a people belonging to an era of transition who offer only impressionist silhouettes.

Beyond the Hamdani quarter are the remains of the old Greek walls, half-embedded in the soil with which is mingled the dust of Greeks, Romans, and Mongols who here fought and conquered and failed. That long, broken, deserted wall is an appraiser of human things. '*D  bris colossal du pass  , elle nous diminue, et nous   crase, nous et nos existences courtes, et nos souffrances d'une heure, et tout le rien instable que nous sommes.*'

About the volcanic cone of Kara Bourja, overlooking the little village of Sarai Keui, the sun is lingering reluctant in a golden mist of farewell. In a hollow at the foot of the bastion-like range of the Bulgar Dag  , half-hidden by poppies and girdled by 'the river of pearls,' the   vrigli, the modern Heraclea, whose marvellous rock-sculpture proves that between two and three thousand years before the Christian era the empire of the Hittites stretched from the Taurus to the Caucasus, from the Euphrates to the   gean; that their argosies came laden with lapis-lazuli from Upper Egypt, with cedar-wood from Syria; that their *kafilas* carried precious stones from Iran and gold-dust from Media. Put to mean uses in the houses of the villages on the nearer plain, where cactus defies the sky with gray-green scimitars, are 'written stones' which tell that some five hundred years after the era of the priest-kings an independent Assyrian kingdom

arose; that Egypt, under Thothmes the Third, who made war from the Euphrates on the north to Ethiopia on the south, stretched out hands toward the coast of Asia Minor; although, as we learn from one of Cicero's letters, at Pompey's conquest the worship neither of the Hathor-headed bull of Egypt nor of the lion of Assyria had overthrown the cult of the great earth-goddess Ma. The eternal lesson of the East is graven here:

How new life reaps what the old life did sow;
How where its march breaks off its march begins.

On the north of the city, like a sword in the grass, glistens the German steel of the Anatolian railway, along which during these recent months trucks have conveyed westward from Erzeroum, Bayazid, and Van troops belonging to the Fourth Turkish Army Corps, whose headquarters are at Erzingian. To the south-east, under the sinking sun, violet and gold like an outspread sacramental vestment, is seen the fresh-water Lake of Beyshehr, whence comes the water for the irrigation of the Koniya plain. Nearer, deep-tinged by the flame and flush of evening, is the star-ring of the now blossoming apricot-trees of the suburb of Meram, where are German hotels, and caf  s outside which bock and lager are sold, and where the Vali and the wealthier Muslims have their summer villas, separated from the Assyrian monuments over there by only a few miles of space, but by five millenniums of time. And yet? When the shut soul of the Oriental of to-day is opened by but a hair's-breadth, the essence of that soul is found to be of the essence of ages which, being dead, yet speak.

Out of the chaos of flat roofs and domes—jade, golden, ultramarine—immediately beneath the Uch Kala, one after another slim *minars* separate themselves. On the left, dominating the city, is the huge oblong mosque of Ala-ed-din, last of the Seljuk kings, he of 'the clear and delicate mind, where Honour and Duty sentried the gate that nothing might pass disloyal,' who gathered in his *konak* just below the   lite of the intellectual and artistic life of his day. The mosque of Ala-ed-din is not of the usual form of the *gama*, or congregational mosque. Each of its four transepts is spanned by a single lofty arch supported by fluted columns of gray-blue marble. The eastern transept, which forms the *liwan*, since the Friday prayers and sermon take place there, is furnished with a fine *mihrab* adorned with Persian tiles having beautiful designs of almond and tulip, and with a *minber*, or pulpit, of exquisitely carven acacia-wood. From the *mihrab* it is a noble vista throughout the transepts, expressing the best that the genius of the East can give to Islam. In the perfect architectural relation of its detail to the central idea, it is an expression of the unity of the Mohammedan faith. 'Solomon, I have surpassed thee,' said Justinian on entering St Sophia. Ala-ed-din

has almost—not quite—surpassed the Christian emperor.

The hour of evening prayer draws near, and from every street and bazaar on this night of the Hasaneyn pour men of every colour, of all ages, in every kind of attire. One is reminded of the crowd on the Galata Bridge at Constantinople, whose costumes Mark Twain concluded had been designed by a tailor in *delirium tremens*. Through the great south door, decorated with black arabesques, the Faithful enter the mosque. But the Christian—though genially asked to 'Bless the Prophet,' and courteously answering, 'God bless and save him'—does well to-night to stand at a distance, far back in the vast open court which is the heart of life in Koniya, constantly filled with a great market. After a few minutes the human stream has poured out of the mosque again, to return to the festivities of the bazaars, only a few pious lingerers being left before the *kibla*, and some children reciting to the *imam* portions of the Kuran.

Masterpiece of Asiatic art though it be, the mosque of Ala-ed-din cannot, either in beauty or in interest, compare with the *tekyé* of the Mevlevi Dervishes, or with the *turbeh*, the mausoleum of their founder, the mystic poet Jelal ud-din Rumi, which adjoins it. As we pass through the forecourt, with its marble-canopied fountain, doors inlaid with mother-of-pearl lead into the interior of the *tekyé*, which is unequally bisected by immense square pillars. The first section constitutes the mosque proper, a building the adjustment of whose parts is exquisite. The cedar-wood floor of the second portion is polished like that of a ballroom, a platform running round two sides for the accommodation of the musicians, who are accompanied by immense hide drums. On the east of the building is the *turbeh*, a beautiful domed octagon whose walls are covered with intricate arabesques in which are intertraced the names of Allah and the Prophet, and against which are ranged the coffins of the founder of the Order and his successors. At the head of each catafalque is the long linen turban, twisted into a gigantic plume, of him who wore it. Over each are magnificent Oriental shawls.

Across the Euxine, in Constantinople, is the most sacred of all mosques, that of Eyub, the one mosque that no Christian may enter or even approach. Each new Sultan of Turkey must, on his accession, be girt with the sword of the great Othman; and the ceremony of girdling the Commander of the Faithful with the sacred sabre must be performed only by the General of the Mevlevi Dervishes, who goes from Koniya to Stambul for this proud purpose. Since the conquest of Byzantium by Mohammed the Second, two Sultans only have omitted the ceremonial, or have had it performed elsewhere. The reign of each was calamitous and short.

Close to where the sapphirine *minar* of the

turbeh still dazzles as it pierces the purpling sky rise the arrowy minarets of the Azizieh mosque; and, down in the street below, the swiftly speeding day stays to show the delicate intricacies of the lattice-work of the arcaded square of the Medresa, the college which was founded by Ala-ed-din, and which as a seat of learning at one period promised to rival that fount of the wisdom of the East, El Azhar of Cairo. In Koniya, as in Kaysariya and in Sivas, it is the art of the Seljuk Turk which is distinctive; in Brusa that of the Othmanli predominates. The Turk dedicated his artistic energy to Islam; and that which he dedicated has dominated the East from the Ganges to the Golden Horn. Islam, notwithstanding its rigidity, its stationary tendencies, made the Turks a great people. Islam inspired an obscure mid-Asian tribe to establish one of the widest of the world's empires. To a considerable extent the decay of that empire is indisputably attributable to the decay of its faith amongst certain classes.

It is in the bazaars—those unchanging yet ever-changing marts where Koniya's fifty thousand inhabitants do their trafficking, and where the kernel-oil output of the apricot groves is 'cornered' like wheat in the 'Pit' of Chicago or 'paddy' in Rangoon—that stone and lime, costumes and methods of exchange, cry aloud that the Taurus was subject to Byzantium only until, in 1071, in the battle of Melasgerd, the Mongol triumphed over the Eastern Roman, when Iconium became Koniya, the capital of the Sultan of Roum. A little over a hundred years later the Third Crusade was over. The Emperor and the Kings of England and France and Sicily, the Knights of the Temple and the Hospital, Leopold of Austria, the Duke of Burgundy, the Count of Flanders, and the whole chivalry of Europe had failed to achieve the 'Gerusalemme Liberata.' Saladin the Conquest-laden reigned from the mountains of Kurdistan to the Libyan Desert, and the Sultan, in his *konak* at Koniya, called him friend and ally.

But the eye returns to-night to that blue *minar* of the *tekyé* of the Mevlevi Dervishes, whither we saw the devotees betaking themselves through the throng. The orientalised mentality follows, and assists at the *Zikr* (the 'Remembering' or 'Commemoration'). It is its latitudinarianism, seeking not to convert those of other faiths, but to understand what particular aspect of truth each creed represents, which is the characteristic of the pantheistic and idealistic mysticism we call Sufism. In the different Dervish Orders the ritual assumes different forms, but in every case it is designed to divert the mind from earthly things and to achieve 'annihilation in the Divine.' In the Mevlevi sect *Zikr* takes the form of dancing, or, rather, whirling round as nearly as possible on the same spot, while certain formulæ, philosophic rather than religious, are repeated. On this Feast of the Hasaneyn,

within those richly carven doors of the *tekyé* of the mystic Master, the Sufi Path—the *Tariqat*—has been trodden until the Phantasmal—which is 'The Bridge to the Real'—has been reached. 'Everything returns to its Source.' Another stage in the Arc of Ascent, a farther step toward absorption in the Eternal Beauty, has been achieved.

Without, the night clouds are low, and the salt desert of Karaman takes on their shades of gray. For what long ages, across that sea of

sand which separates Koniya of the Seljuks from Ereğli of the Assyrians, has 'the long darkness flowed away with muffled pulses'? Throughout how many centuries, since the Amirate of Karamania was annexed by Mohammed the Conqueror to the Othmanli Empire, has the heavy rhythm of decadence beat across the arid flat? Has *maya*—delusion—lain so long upon this land only that this latest era of the New may mock the eras of the Old and of the Older, which are gone?

FORTUNE COMES TO SUNNYMEDE.

CHAPTER III.—MRS HOBBS ARRANGES FURTHER AFFAIRS AT SUNNYMEDE.

'GRACE!'

'I am really very busy,' said Grace.

'Yes,' said Slater. 'You're always busy when I am about. For five whole days I've been trying to get a word with you, and you've been as hard to reach as the poles.'

'Is it the same word as usual?' asked Grace, relenting a little, but guarding the approaches carefully.

'No. I'm not going to propose to you any more. I want to talk to you seriously and sensibly.'

Grace relented still more, but felt obliged to return the thrust. 'I never dreamt of that,' she said sweetly. 'That was why I avoided you. What is it?'

Slater sat down on the other end of the garden seat. 'Weren't you sorry for me when uncle turned up?' he asked, with unnatural gravity.

'Yes, I was—very.'

'Well, you needn't have been. It's turned out all right.'

Grace closed that *Short History* whose study she had persisted in with noble resolve in face of all temptations, and began to give closer attention to her interviewer. To a casual glance he was still the freckled and light-hearted Slater of old, with the parted and perfumed locks and well-sustained air of boredom; but she felt that there was really a serious note in his talk this time.

'Yes,' he went on. 'At the time it seemed an awful bit of luck; but it was not quite that, after all. The old chap has proved a real sport, and has actually got me to look almost respectfully on the idea of work. I'm to go to Natal with him, and look round a bit; and I've a horrid impression that before he's finished he may achieve the impossible—that is, make me a respectable member of society.'

Grace's eyes glowed. So even this member of the Sunnymede circle was reaping some benefit from Mrs Hobbs's appearance! Slater took instant advantage of her mood.

'Now,' he said solemnly, 'about that one word

I wanted with you. No more proposals, on my honour. I'm going to be wedded to work before long, and a fellow can't do two things at once. But seeing I'm off to Natal, I think you might give me, for old times' sake, or for encouragement, or because of my good resolutions, or for any other reason you please, just one'—

'It seems most unlikely,' interrupted Grace, with decision. 'But I will promise to give the matter my most earnest consideration.'

'Till when? Shall I have the answer to-night?'

'Not to-night. I am going to the theatre with mother and your uncle.'

'Ah!' said Slater. 'That brings up another question. What are you going to do with my uncle? And when?'

Grace could not affect to misunderstand him. Mr Denton had now been at Sunnymede a fortnight, and a person would have been blind indeed who failed to see that a genuine romance had been rapidly developing. The energetic colonial was buying back his lost years with a spirit and decision utterly admirable.

'He will please himself, I suppose,' she said weakly.

'Not he. He'll please your mother. But it's a curious thing, isn't it? You promised once to be a sister to me—that was the first time I proposed—and now you're going to be a sort of step-cousin. Man proposes, woman promises, and uncle disposes. You might remember the new relationship, you know, when you are considering my request. See?'

'I see,' said Grace guardedly; and then Slater, finding further progress unlikely, left the garden to make his way to the pier. When he had gone, Grace went indoors to find Mrs Hobbs, and to take her a cup of tea. She had another pleasant little attention in reserve for her new friend.

'Does your nephew play cricket?' she asked casually.

'You may be sure of that,' said Mrs Hobbs. 'He does everything a healthy boy likes to do. Why do you ask, my dear?'

Grace smiled, but refused to disclose her secret, and presently went away to put her plan into operation. This evening Mrs Hobbs's nephew was to arrive from Haileybury, and she had undertaken to prepare a room for him, and to look after it while he remained; and for Mrs Hobbs's sake she would leave nothing undone that might increase the boy's comfort during his visit. There still remained a few finishing touches, and it was these that she attended to now. One of the last was the placing of a bowl of roses on the table, and the last of all was to leave a folded note beside the bowl. It was a brief but cordial invitation: 'If you get up very early—say at six—you will find me in the garden, and we'll have a game of cricket.—GRACE.'

'There,' she said to herself. 'Perhaps he has never seen a girl play cricket. Wasn't it good that father taught me!'

Later, with Mr Denton and Mrs Lanyon, she spent the evening very happily with *Brewster's Millions*, which was exceedingly well played by 'a London Company;' and during the intervals between the acts she spent some little time in contrasting the present position at Sunnymede with that of the 16th July. Here was Mr Denton of Durban, and here was the little mother, with all the grayness swept from her face and her horizon. The Slater problem, too, had been solved, and its perplexity turned into prospect. If only—and then beyond the drop-curtain she saw that vista of a noisy city street once more, and heard again the unforgotten words, 'May I help you? Where do you want to go?' Ah, well, there were some things concerning which even Mrs Hobbs could only say, 'Wait and see!'

They went home at eleven, to find the Sunnymede household represented only by Hester—cheerful, attentive, and apparently quite interested in their report. But Grace, who was sharing her sister's room at this time, felt sure that something had happened, and when they got upstairs demanded a knowledge of the event.

Whereupon the business manager, to Grace's great astonishment, threw herself into her sister's arms. 'He has spoken!' she murmured, half-crying, half-laughing.

'He has?' said Grace, trying to look wise. 'Do you mean'—

'Yes, George Bertram. He spoke to-night.'

Grace recovered. Indeed, that pause took most of the surprise out of the occasion, for she recalled a score of signs which she had previously failed to read. Her capable and unsentimental sister had actually had an unsuspected romance under her very eyes.

'You silent, sly thing,' she said fondly. 'Tell me all about it at once.'

Hester obeyed. It appeared that George Bertram had taken his opportunity while half the household was engaged with *Brewster's Millions*, and while Mrs Hobbs was welcoming

her nephew. 'He was afraid before,' said the business manager. 'He couldn't see that I had given any signs of liking him. Perhaps I hadn't, though of course I wanted to. But at last he took Mrs Hobbs into his confidence. She had suspected something—and they were ever so friendly, you know—and she encouraged him to speak out. So he spoke.'

'And you said he had been staying here because it was so quiet!' said Grace. 'Oh Hester! Hester! But now, to make up, you must tell me the whole story from the beginning.'

So Hester told, from its first chapter, the story which sisters all the world over are telling each other at this moment, as they have been telling it from the world's beginning. Then there were happy whispers, and subdued laughter, and outlines of glowing plans, until about one o'clock, when sleep began to claim her natural rights in real earnest. It was only when Hester was actually becoming disconnected in her remarks that Grace recollected another matter.

'Oh,' she cried, 'what about the nephew? I wonder if he saw my note. I asked him to play cricket with me in the garden in the morning at six.'

Hester was too sleepy to be surprised, and could not be expected to feel a keen interest in this side-issue. 'Did you?' she asked. 'Why, you haven't even seen him!'

'No, of course. But what does that matter?'

Hester could not reply intelligibly, though the idea had for the moment stirred her sense of the practical. Accordingly the subject was dropped, and they surrendered to the legitimate claims of repose.

In the morning Grace's happy thoughts called her long before the usual time. She heard the servant's alarum ring in a neighbouring room, and the girl go downstairs; then she dressed, and was in the garden considerably earlier than the time she had mentioned. There she prepared the cricket outfit, which was a pathetic and beloved legacy from her father, her face clouding a little as she set the wickets. Naturally she could not avoid thinking of the long turf garden at Richmond where he had spent so much of his dearly bought leisure in drilling her into the favourite game of his youth. She concluded that he would approve this use of his legacy, for he would have used every possible effort to make a lonely schoolboy feel at home in new surroundings. Then she sat down on the garden seat, and once more opened her *Short History*.

The moments of waiting passed slowly, while the strengthening sun made a glorious halo of her hair and tried vainly to detect some fault in her white throat and neck. That was the picture a young man saw when he came to the French door of the drawing-room, and paused before opening it to make sure that it would

open. When he saw that picture he lengthened the pause, as though he found something worthy of study in what he saw. Then he opened the door very quietly, and walked silently down the path to the bower of jasmine. There he had a better view of the seat she had taken in the sunshine.

She did not look up even then, for some sentence in the *Short History* had caught her attention for the moment; so the young man, tall, athletic, and sunburnt, stood and waited, watching her. As he stood some sense of shock seemed to come upon him, and his attitude became strained and intent; for, though he could not see her face clearly, he perceived that there was something familiar in the contour of her features. When he perceived this he scarcely dared to breathe; for he had seen such a face one day in the City, and it had moved beside him for some fifteen delicious minutes through a crowded street. But no, it could not be the same. He would never see that face again. What he saw here was only some chance likeness that stirred the chords of memory.

So he waited a moment longer, and his doubts became transformed into a delirious hope. Then it was necessary to know, urgently necessary to do something; and he was reduced to a very commonplace expedient. He coughed, with a loud, clear 'Hem!'

Grace looked up, and saw him framed in the little arch of jasmine. After the first start, she perceived that her day-dream had come upon her in an unusual form and with important modifications. She was conscious of wonder as to whether it would come in some other form next time; and then she became aware of the fact that certain astonishing developments were taking place. It was speaking, and while the voice was the old voice, the language was new.

'I beg your pardon,' he said gravely, and with distinct tremors. 'Did you—did you write me this note?'

She began to be awake, but she could not answer. She could only gaze. How had he come into possession of that little note?

'Well,' he went on, 'that was why I came down so early. It was awfully good of you to ask me, you know.'

By this time Grace was more than half-awake. 'To ask you?' she murmured, in very great confusion. 'But I didn't. I—I asked Mrs Hobbs's nephew.'

'Quite so. That's me—I mean, that's I—that is'—

It gave her time to recover. They both laughed, and she saw that some curious mistake had certainly occurred.

'But he was to be a *young* nephew,' she cried, 'from Haileybury College.'

'I am really quite young,' said the visitor humbly, 'though possibly I don't look it. And I came from Haileybury yesterday.'

'But—but what do you do there?' she asked helplessly.

'I teach science. Do you mind?'

Then Grace, fully awake at last, saw what had happened. From the first she had taken it for granted that Mrs Hobbs's nephew, coming from a school, must needs be a schoolboy, and of course that dear old lady's manner of speaking of him had encouraged her in her mistake. The realisation was not altogether a comforting one; but he hastened to reassure her. Apparently he was very alert in his sympathetic insight.

'It was extremely good of you to be so kind and friendly,' he said. 'It was—well, it was just what I should have expected you to do if I had really been a schoolboy coming to a strange house where there were no other boys.'

He was just the same! How splendid he was!—how thoughtful! how quick to see! how gloriously protective! how ready! how generous! She could not help smiling as she accepted his protection; and when she smiled she raised those radiant eyes and allowed him to see what they were capable of doing. When he saw, he was so overcome that he was compelled to sit down—beside her. Then they looked at each other, and both of them smiled.

'Are you glad it's me?' he asked, upon an impulse so sudden that he ran far ahead of his grammar.

Of course she was glad; and because she was strong enough to be true to herself, because it was for him that she had been bravely struggling with the *Short History*—for these and other reasons she gave a simple but sufficient answer: 'Yes.'

When Mrs Hobbs knew of all this, or as much of it as they desired to tell her just then, she was at first greatly surprised. This development affected her more than any of the others for which she had been responsible, but she did not express any opinion until she had thought the matter out. Then the first remark she made was characteristically oracular: 'Well, since I've made the bed, I suppose I must lie on it. But it's a good thing it's a feather-bed!'

Then she looked again at the girl whom she had so fully approved already, and recalled the sequence of the events that were opening out so desirably. She thought also of the boy who always sacrificed some of his vacation in order to cheer her loneliness; and then, of course, she found place once again for her favourite maxim: 'Tis love that makes the world a round.'

Whether you are more than you seem, Mrs Hobbs, or only the kindly old lady you wish to appear, we beg you to preach and practise your maxim until the close of your visit. Our world is a shattered sphere to-day, and its voices are shrieking discords of hate and strife.

There are some among us who are ready to despair of the uncompleted Round, and to mourn over the great Purpose so rudely jarred and shaken. Your maxim again offers an old key to the eternal problem, when all other keys

have failed; and you offer it with the serene patience that comes of an unshaken faith. Some day, perhaps, we shall listen, and believe, and be saved.

THE END.

REWARDS OF VALOUR.

By TAFFRAIL.

FROM the very earliest times it has been the custom to reward soldiers who have specially distinguished themselves by their gallantry or prowess in battle. Crowns, torques, and wreaths; gold or silver ornaments to be worn round the neck, forehead, or arm; and neck-chains of some precious metal were all used by the Romans as badges of distinction for personal bravery. In mediæval days esquires were generally knighted on the spot for gallant deeds in battle, and, as we all know, a pair of golden spurs was the outward and visible sign of their knighthood.

The first case of a medal being instituted for the purpose of rewarding individual gallantry in action was in 1643, when Charles the First established a silver badge for soldiers who had specially distinguished themselves in what were known as 'forlorn hopes.' A 'forlorn hope' did not necessarily mean an affair in which the entire body of troops engaged was doomed to almost certain extermination. It referred to that portion of the army which led the attack and was in the forefront of the battle—in other words, to those men who had undergone the greatest risk. There is, unfortunately, no record in existence which tells us how these badges were issued, or to what extent; but no doubt they were looked upon in much the same way as our present Victoria Cross.

From this time onward it was the habit to award special neck-chains, jewels, or medals to officers, soldiers, and sailors who specially distinguished themselves; while in 1665 H.R.H. the Duke of York instituted special medals, chains, and monetary awards for the captain, officers, and crew of any fireship who succeeded in destroying a hostile vessel. Service in a fireship was necessarily hazardous, for a proportion of the crew had to remain on board until she was well ablaze and on her way toward the enemy, and the men ran a grave risk of perishing with their ship. The system of granting special rewards for service of this nature obtained until the nineteenth century; and, so far as can be ascertained, the last fireship medal and chain was given in 1809 to Captain James Wooldridge. His ship, the *Mediator*, led the fireship attack on the French fleet in the Basque Roads, when the boom protecting the harbour was destroyed, and four French sail of the line were driven ashore and burnt.

All the medals and chains mentioned above

were manufactured as required. Their design varied according to circumstances, and it was not until 1845 that what we may call a 'general medal' of uniform type came to be issued for meritorious service. This decoration was awarded to non-commissioned officers and men of the army who 'may have distinguished themselves, or who may have given good, faithful, and efficient service;' from which it will be seen that it was given for long service and good conduct in times of peace as well as for gallantry in action.

Previous to this, in 1837, an Order of Merit had been established as a 'personal award for personal bravery' on the part of native officers and men of the Indian army; but no such distinction had been created for the personnel of the British army or navy.

It is now proposed to deal separately with the various decorations and medals which can be earned by the officers and men of both services for acts of individual gallantry or distinguished service during war. The best-known and most highly coveted honour which it is possible for any member of his Majesty's forces to obtain is, of course, the Victoria Cross. This decoration was instituted in 1856, during the Crimean war, at, it is said, the suggestion of the Prince Consort, and consists of a bronze cross made from captured cannon, with the royal crown and crest in the centre above a scroll bearing the words, 'For Valour.' The definition of acts of gallantry for which the Cross was to be awarded was 'signal acts of valour or devotion to the country in the presence of the enemy.' Clasps, or inscribed bars attached to the ribbon, could be awarded for any subsequent acts of heroism or gallantry; while annual pensions were also granted to recipients below the rank of officers. The first distribution of the Victoria Cross was made in London by Queen Victoria on June 26, 1856, when sixty-one recipients—fourteen officers and men of the navy and forty-seven of the army—received the coveted decoration for services during the Crimean war.

In 1858 it was laid down that the Cross could be granted in cases of 'conspicuous courage and bravery . . . under circumstances of extreme danger, such as the occurrence of a fire on board ship, or the foundering of a vessel at sea, or under any other circumstances in which, through the courage and devotion displayed, life or public

property may be saved.' This, strange as it may seem, meant that the V.C. could be bestowed for services in peace, and not before the enemy; but the only instance in which it was so granted was in 1867, when Private Timothy O'Hea, of the Rifle Brigade, received it for extinguishing a fire in a railway ammunition-van during the Fenian raid in Canada in 1866.

In 1881 the qualification for the Cross was again defined to be 'conspicuous bravery or devotion to the country in the presence of the enemy;' while subsequent royal warrants made all classes of officers and men, and chaplains, of the navy, army, colonial, Indian, and auxiliary forces eligible for the decoration. It was not, however, until King George came to the throne that native officers and men of the Indian army were declared eligible for the Cross; for the Indian Order of Merit, which will be described later, was already in existence for rewarding acts of gallantry in action performed by them.

In August 1902 King Edward ordained that the V.C. should be awarded to the relatives of men who had earned it, but who had been killed in doing their gallant acts. Previous to this the names of deceased winners of the Cross were mentioned in the *Gazette*, while the decorations were hardly ever actually conferred. The order was retrospective, so that relations of those who had been killed so far back as in the Crimean war or Indian Mutiny received the coveted bronze tokens.

One of the very rare instances in which a clasp has been awarded to a V.C. for another example of heroism occurred during the present war. Captain Martin Leake, of the Royal Army Medical Corps, was decorated with the V.C. for a deed performed in 1902 during the Boer war; while in 1914 he was awarded a clasp for another act of great gallantry which would again have made him eligible for the Cross.

The V.C. takes precedence of all other Orders or medals to which a recipient may be entitled, and the ribbon from which it is suspended is blue for the navy and crimson for the army. It seems strange that there should be a difference in the colours for the two services, and that the ribbon should not be more distinctive. The army medals for meritorious service and for long service and good conduct, the Order of the Bath, and many foreign decorations have crimson ribbons; while the Khedive's bronze star for the Egyptian campaigns (1882-89), the Royal Humane Society's medals for saving life, and various others are suspended from blue ribbons. By the casual observer, therefore, the ribbon of the V.C., which is alone worn in undress uniform, may be mistaken for that of an ordinary medal.

The Distinguished Service Order consists of a gold cross, patée convexed, enamelled white, edged gold, having on the obverse, in the centre, within a wreath of laurel enamelled green, the imperial crown in gold upon a ground of red

enamel. On the reverse, within a similar wreath and on a similar red ground, is the imperial and royal cipher. The handsome decoration hangs from a gold bar ornamented with laurel, and the ribbon is crimson with blue borders.

The D.S.O. was instituted in 1886 for the purpose of rewarding 'meritorious or distinguished services in war' on the part of commissioned officers of the navy and army, auxiliary forces, and the Indian and colonial naval and military forces. Recipients are entitled to use the letters 'D.S.O.' after their names, while an officer cannot be nominated to the Order unless he has been 'mentioned in despatches.'

It will be noticed that warrant and subordinate officers of the navy, who do not hold commissions, are not eligible for the award of the D.S.O., and in 1901, to remedy this omission, King Edward instituted a new decoration, called the 'Conspicuous Service Cross.' This was to be awarded to junior naval officers on the same conditions as the D.S.O., and recipients had the right to use the letters 'C.S.C.' after their names.

In October 1914, however, the name of the decoration was altered to that of the 'Distinguished Service Cross,' while its issue was extended to commissioned officers of the navy below the rank of lieutenant-commander 'for meritorious or distinguished services in cases where these services may not be considered sufficient to warrant the appointment of such officers to the Distinguished Service Order.' The letters to be used after the name were, at the same time, altered to 'D.S.C.' The decoration itself consists of a plain silver cross, patée convexed, in the centre of which is the royal and imperial cipher surmounted by a crown. It hangs by a ring from a ribbon of three equal stripes—dark blue, white, dark blue.

The Military Cross, instituted by King George on December 31, 1914, is the army counterpart of the naval D.S.C. It is awarded on much the same conditions as the D.S.C. to officers of the army below the rank of major, and consists of a silver cross having on each arm an imperial crown, and in the centre the cipher 'G.R.I.' The ribbon is white, with a broad purple stripe down the centre; but a recipient is not entitled to use any distinctive letters after his name.

A medal for conspicuous gallantry for petty officers, non-commissioned officers, and men of the navy and Royal Marines was established in 1855. It was first intended for the Crimean war only, but in 1874 its bestowal was authorised for all wars in which the navy might take part. The medal is of silver, and bears the effigy of the reigning sovereign on one face, and on the other the words 'For Conspicuous Gallantry,' a crown, and branches of laurel. It hangs from a straight silver clasp, and has the same ribbon as the D.S.C.—blue, white, blue. Annuities of varying amounts may be awarded to men who have earned it.

The naval Distinguished Service Medal was established in 1914, during the present war, for petty officers, non-commissioned officers, and men of the navy and Royal Marines. It is awarded to men who 'may at any time show themselves to the fore in action, and set an example of bravery and resource under fire without performing acts of such pre-eminent bravery as would render them eligible for the Conspicuous Gallantry Medal.' The D.S.M. is much the same as the C.G.M. in appearance, except that the reverse has the words 'For Distinguished Service,' and the ribbon is dark blue, with two white stripes down the centre.

The army medal 'For Distinguished Conduct in the Field,' commonly known as the 'D.C.M.,' was instituted in 1854 as a mark of the 'sovereign's sense of the distinguished service and gallant conduct in the field of the army then serving in the Crimea.' It superseded the old 'Meritorious Service Medal' for gallantry in action, and has since been awarded in every subsequent campaign. It can only be bestowed, with or without a gratuity, upon non-commissioned officers and men of the army. The front or obverse of the medal bears the effigy of the reigning sovereign, while the reverse has the words 'For Distinguished Conduct in the Field.' The ribbon is crimson, blue, crimson, in stripes of equal width, while the medal hangs from it by an ornamental scroll-clasp. A recipient of the D.C.M. may be granted a bar to be attached to the ribbon for any subsequent act of distinguished conduct in the field.

The Indian Order of Merit was established in 1837 to afford a means of rewarding any conspicuous act of gallantry in the field on the part of native officers or soldiers of the Indian army, irrespective of rank. The Order comprises three classes, and admission to the third class can be obtained by any native officer or man for gallantry in action. Admission to the second class can only be obtained by members of the third; and to the first, by members of the second for further similar acts. Increases of pay or pension, amounting to one-third, two-thirds, or the whole amount, are granted to recipients of the third, second, and first classes of the Order respectively. The badge consists of a star of eight points, having in its centre two crossed swords on a ground of dark-blue enamel. This device is surrounded by a circular fillet bearing the words 'Reward of Valour,' while the whole of the central device is surrounded by a laurel wreath. The first-class badge is worked entirely in gold, that of the second class has a silver star with the central device and laurel wreath in gold, while that of the third class is worked entirely in silver. The stars are suspended from their ribbons by means of gold or silver rings and clasps, and the ribbon, one and a half inches wide, is dark blue with crimson edges.

The Indian Distinguished Service Medal was

also established in 1907 as a reward for native officers and non-commissioned officers of the Indian army. It can be awarded for distinguished services in peace as well as in war, and bears on one face the effigy of the reigning sovereign, and on the other the words 'For Distinguished Service' inside a wreath of laurel. The medal hangs from a crimson ribbon with broad dark-blue edges.

The Royal Red Cross, established by Queen Victoria in 1883, is the first example of a British Military Order for ladies. It has always been the custom to give war medals to nurses for their services in various campaigns; but the Royal Red Cross may be conferred 'upon any ladies, whether subjects or foreign persons, . . . for special exertions in providing for the nursing of sick and wounded soldiers and sailors,' and also upon 'nursing sisters, or other persons engaged in nursing duties, . . . for special devotion and competency which they may have displayed in their nursing duties with the army in the field, or in naval or military hospitals.' The decoration, therefore, may be conferred for services in peace as well as in war. The badge itself is very handsome, and consists of a gold cross, enamelled crimson, edged gold, one and a half inches in diameter. In the centre is the effigy of the sovereign in gold on a gold ground, while the four arms of the cross bear the words 'Faith,' 'Hope,' 'Charity,' and the date '1883,' in gold. It hangs by a gold ring from a dark-blue, red-edged ribbon one inch wide, tied in a bow and worn on the left shoulder.

This completes the tale of British decorations and medals which can be awarded for acts of gallantry or for distinguished services in war. As examples of decorations which can be granted for gallantry in peace, however, we may mention the Albert Medals of the first and second classes for saving life at sea or on land; the Edward Medal, sometimes called the 'Miner's V.C.,' for saving life in mines; the King's Police Medal, given to officers of the constabulary forces and to persons serving in fire brigades for acts of exceptional courage and skill and conspicuous devotion to duty; the medal of the Society for the Protection of Life from Fire, worn on the right breast with a scarlet ribbon; the Board of Trade Medal for gallantry in saving life at sea; and the medal of the Royal National Lifeboat Institution. There are also the bronze and silver medals of the Royal Humane Society, worn with a blue ribbon on the right breast, and given for saving life; and the gold Stanhope Medal, awarded annually by the same society for the bravest deed of the year. Lack of space, however, forbids us to mention these medals in detail.

France has the famous Legion of Honour, the *Médaille Militaire*, and the newly instituted *Croix de Guerre* for rewarding the gallantry of her soldiers and sailors in battle. Russia has the Cross of St George, the equivalent of our

V.C. ; while Japan has the Order of the Golden Kite. Germany has her famous Iron Cross, which has been awarded somewhat profusely and indiscriminately during the present war to

the crews of Zeppelins and submarines ; while her ally Turkey, not to be outdone, has, it is believed, lately instituted an Order of the Iron Crescent to meet her own requirements.

THE ROMANCE OF STAINED GLASS.

By WILLIAM J. STEVENSON.

WHEN, close on a year ago, the German shells crashed down on the Cathedral of Rheims, whatever other damage they may or may not have done, they certainly robbed the world of a masterpiece of ancient art alike unique and irreplaceable. For the chief glory of Rheims Cathedral, one that haunts the memory even more than the soaring lines and mounting spires of its magnificent fabric, was the solemn beauty and vivid, glowing tints of its noble interior, turned by the light streaming through a myriad storied panes to a veritable dream in chiar-scuro and colour. Just so, through those very panes, the light had streamed for close on seven centuries, and the quaint medieval figures of saint and angel had watched serenely the crownings of monarch after monarch of ancient France, had frowned, one might almost think, on the English usurper, and smiled benignly on the heroic Maid whose mission here reached its culmination. Few things, in fact, bring home to us the very soul of the Middle Ages, with all its mystery and longing and romance, more vividly than do these masterpieces of the stained-glass designer's art ; and in this article it may not be uninteresting to trace a little of the history and methods of those old workers whose results our present age can scarcely hope to equal.

The stained-glass window has always been an essentially Christian form of art. Coloured glass, of course, has been known from a very early period. There is in the British Museum a small head of a lion of very fine opaque blue glass which was found at Thebes, and from its inscription dates approximately from the twenty-fourth century before Christ ; and not only the Egyptians but the Greeks and Romans used glass in the manufacture of jewellery and vessels of beautiful shape and hue. But, so far as we can judge, the use of window designs in coloured glass was unknown in classical times. Perhaps the nearest approach to it was in the mosaic pictures with which the Romans decorated their floors and walls, which in the case of the latter were sometimes built up of pieces of glass rather than of vari-coloured stone. At least it is pretty certain that it was from such coloured mosaic pictures that the first idea of the stained-glass window was originally drawn.

The first beginnings of the art arose, however, not in Rome but in Constantinople, where from the earliest days of the Eastern Empire the Byzantine artists were famous for their work in

precious stones, enamels, and coloured glass. It is known that coloured-glass windows existed in the Cathedral—now the Mosque—of St Sophia in the sixth century A.D., and it is even possible that some of the panes still to be seen in the windows of that famous building may date from the time of its building by Justinian, the famous emperor and lawgiver. For glass, one of the most fragile of substances, is also one of the most resistant to the passage of time, which, indeed, in many cases seems to bring it only an added beauty ; as witness the softened tints and lovely iridescent sheen so characteristic of many ancient specimens, not to be imitated in perfection to-day by any processes yet known to us.

From Constantinople the art of working in coloured glass travelled in very early times to Venice, and from that city it was brought to France by a colony of glass-workers who settled at Limoges as early as 979 A.D. Here and in the neighbourhood the process of designing windows in mosaics of coloured glass was developed and perfected, and from here it spread abroad throughout Europe, to Italy, to Germany, and to England.

Probably the oldest stained-glass window still in existence is one in a church at Neuwiller, in Alsace, which represents St Timothy, and which, though dating from the eleventh century, is still in good preservation. Other very ancient examples, which date from the twelfth century, are to be seen in the church of St Denis, near Paris ; but it was not till a hundred years later that the art really reached its zenith, and it is from the thirteenth century that most of the best examples of early stained-glass windows date.

By this time the Italian designers and craftsmen were probably equal to the French ; but, except for an example at Assisi, very little of their work has, unfortunately, come down to us. For the finest specimens of the early school we must turn to France, to the cathedrals of Rheims, Le Mans, Bourges, and (perhaps finest of all) Chartres. Here the genius of the old artist-craftsmen reached its highest point, as no one who has gazed into those 'caverns lit with a myriad jewel-lights' will be at all disposed to deny.

In these islands we are not well off for examples of thirteenth-century stained glass, and such as we do possess—as those at Canterbury and the justly famed Seven Sisters of York

Cathedral—are too fragmentary to exhibit the full effect of the designer's aim. This was totally different from that of a later age, which, with changing ideals, sought to express itself in different forms of art. The Middle Ages were ages of feeling and emotion rather than of reason, and emotion roused through the single medium of colour was the artist's aim. Form to him was quite a secondary thing; and so it is that when, as at Rheims, masterpieces of his art have been shattered, effects so surprisingly good have been achieved by piecing together the fragments without regard at all to the design. The deep, clear, jewel-like colours still remain, and these it is, after all, which constitute the chief beauty of the work.

To the medieval artist the laws of perspective were still in a great measure unknown, and his draftsmanship, though often striking, was always quaint and conventional. The medium, too, was not such as to lend itself readily to accurate drawing. Early stained glass is invariably 'pot metal'; that is, the tints were obtained by fusing the glass in the pot with various metallic oxides. The glass is thus coloured all through, and each tint must be represented by a separate piece separately leaded in. For his tints the artist went straight to nature—to the ruby, the sapphire, the emerald, whose names he gave to the various colours he employed. It was currently reported, in fact, among the vulgar that ground-up dust of sapphires was used to obtain the wonderful sapphire hue that was among his favourite tints.

Such was the stained-glass art of the thirteenth century. With the passing of the next two hundred years a slow but profound change took place, culminating in the Renaissance. Emotion was yielding during these centuries more and more to the growing power of reason, and the change is reflected in the slow changing of the art. The appeal of colour grew less and less powerful; that of perfected draftsmanship and design grew more and more so.

The draftsmanship of the stained-glass window still remained, as it must always remain, conventional, and bound by its own peculiar limitations; but the designer of the period was seeking for a more plastic medium in which to express himself; and this he found in the invention of glass-painting, or, rather, transparent enamelling, which gave his pencil greater freedom, even though it could not hope to equal the masterpieces of colour of the older style. And so stained glass proper yields place more and more to painted glass.

In this process, though the window is still a mosaic—this is indeed an essential characteristic of the art, and the attempts that have sometimes been made to do away with the necessity of 'leading' have been quite mistaken ones—the glass which is used as a base is partly or wholly white. The design is first sketched out on

paper or cardboard, the glass being then cut to the required shapes and sizes, pieced together on a kind of easel, and painted with the required pigments in such a manner as to reproduce the original design. Finally, the colours are 'burnt' into the glass by a process of 'firing,' the exact duration and temperature of which is a matter of great importance to the finished result; and when this is properly done, the results would seem to be absolutely permanent. As in the older process, the pieces of glass are now leaded together into panels, which are cemented into grooves in the stone-work of the windows, and strengthened with copper ties and 'saddle-bars' of iron. A good deal of skill is needed in the proper arrangement of the leads and bars, which should add to, rather than detract from, the peculiar beauty of the design. This aim is not always achieved, however, as in the case of one very old window—otherwise a fine specimen of the art—where the glass forming the eyes is so leaded in as to give the casual spectator the impression that the figures represented are wearing spectacles. With a few minor alterations in technique, the process described is substantially the one now followed.

Though the finest early stained glass is found in France, the later medieval school probably reached its zenith in Italy, where not only was the craftsmanship of the monkish and other glass-painters unexcelled, but artists even as great as Michelangelo did not disdain to lend their genius to the task of designing. Some splendid specimens of the work of this and other famous Italian artists are to be found, though in bad repair and almost defaced by dirt and neglect, in the Cathedral of Florence. But though much fine stained glass is still to be seen in Italy, much more has perished, not only through the effects of war and other disturbances, but also through ignorance of its artistic value on the part of those in authority, and through sheer change of fashion. Not infrequently medieval work of the highest beauty and value has been removed to give place to inferior modern work of no value, and even sometimes, when the accumulated dirt of centuries on the heavily leaded and seldom cleaned panes obstructed the light, to ordinary white glass.

About the middle of the sixteenth century a gradual decline set in in stained-glass painting. Stained glass began to be less and less used, and such designs as were executed became less and less complete, white glass entering largely into their composition. Good work was still done, however, though the general debasement of artistic taste in the eighteenth and early nineteenth centuries is reflected in the glass-work turned out at that time. But in the course of the nineteenth century a revival set in, and of late years much excellent work has been done. Even the old 'pot-metal' process, so long a lost art, has been revived; and, though it does not

seriously compete with the later method, it is still practised to some extent. In modern stained-glass art the Munich school is, on the whole, predominant; but work of varying degrees of excellence is turned out in France, Italy, and Belgium. Of these three schools the French glass-painters are perhaps the best, though they do not generally show much originality, being content to imitate as closely as possible the work of the old masters. A very fine example of the modern Munich school, said to be one of the best stained-glass windows executed during the last two or three hundred years, is to be seen in the Parliament House, Edinburgh.

In this connection it is interesting to recall, too, that Holyrood Abbey once possessed some

of the finest fifteenth-century stained glass ever painted. This was the work of an artist originally from Lubeck, who had attained great eminence in Italy, and who is referred to in a document of the period as 'the master glass-painter Gambassi, who made works in glass of various kinds, and was held to be the best glass-painter in the world.' This artist, as we learn from a letter written to him which is still in existence, was in Edinburgh on the 26th August 1434, and probably for at least a year before and after that date. We hear of him laying down furnaces for baking the glass, and it is recorded that the work he executed in Scotland ranked among the best he ever designed. That it has not been preserved to us is a misfortune no lover of art can help but regret.

AN ACCESSARY AFTER THE FACT.

POOFF! how the sun baked down on the little court-house! The county magistrate looked round at the closed windows, and shrugged his shoulders, as it was obvious to him that none of them were made to open.

The object that caused the magistrate to be sitting rather beyond his time, and much against his inclination, was a small boy of some ten years of age, with flaming red hair, white eyelashes, many freckles on a fair skin, and bright, penetrating, humorous brown eyes. He had been taken up for attempting to pick the pocket of an officer in his Majesty's army. At least, so Police Constable XX. 24 said in his evidence; but the officer, who stood there lazily staring through his eyeglass at the small culprit, seemed to have his doubts about the matter. He argued, for instance, how could a boy with any sense think for a moment that an officer in his Majesty's army in war-time would have anything worth stealing on him? And, by Jove! the boy looked as if he had plenty of sense; and he polished up his eyeglass afresh as he glanced at the little ugly face.

The heat did not seem to affect the culprit, who looked round the stuffy room with a fearless eye; he did not seem to have any qualms as to his not being let off. The magistrate was a kindly old man, who was known to come down with a thunder of disapproval on wife-beaters only, or such like.

'But you say, constable, that you did not find anything on the boy that did not belong to him?'

'No, yer Honour. 'E was standin' just lookin' at the captain, idle like, who seemed to be waitin' for some one, as I 'ad seen 'im there for some minutes. Then, yer Honour, I saw the boy, as plain as possible, snatch the 'andkerchief from the captain's sleeve. The captain was standin' like this.'

Police Constable XX. 24 did a little personal imitation, much to the amusement of the court.

'E was standin' strokin' 'is moustache with 'is right 'and, an' 'is left was swung careless like across 'is 'ip; an' just peepin' out from the left sleeve was a khaki silk 'andkerchief.'

It was then that Police Constable XX. 24 collared the culprit and accused him of stealing the handkerchief, telling him to 'come along quiet;' and had dragged the captain into the affair, much against his will.

The captain had murmured with surprise, 'By Jove! how awfully energetic the local police are, and on this hot day, too! Handkerchief! No, I don't seem to miss it. But if you say I do I suppose I must, as of course you know best, my man.'

Then Police Constable XX. 24 began to feel an inward uncertainty as he marched the two off.

The magistrate dismissed the case with a warning to the boy to avoid the danger of mixing in bad company.

'Thank ye, yer Honour!' and the boy was gone, but not before both the magistrate and the captain had realised that he had glanced from one to the other with an amused look that spoke volumes.

Captain Mowbray stood a few moments on the court-house steps stroking his moustache, deep in thought. He hailed a waiting taxi-cab, and by a mere movement of his eyebrow ushered a small, red-haired boy therein, who had presumably been awaiting some such result.

When they had driven out of the town about a mile the captain addressed his companion, 'I say, my son, it was neatly done, that trick of yours. How did you do it?' The captain turned the light of his eyeglass on the ugly little face.

The boy grinned with fervency into the

single eyeglass. 'Which sleeve is it up now, sir?'

'Couldn't say at all, my son; you've fairly flabbergasted me. But don't do it again, sonny; it doesn't pay, I promise you. You'll be sorry for it some day.'

The brown eyes sought the floor of the cab for a moment, and the captain became engrossed with the passing scenery.

'Sir, you're a real sportsman for not speakin'; an' I didn't want to steal the 'andkerchief; but ye looked so mighty lazy or bored or somethin' that I thought I would like to see what ye would look like when ye weren't bored.'

'Perhaps you're right, sonny, and it would be better to show a little more feeling, and then I shouldn't rouse the spirit of mischief in the breasts of such as you. And as for not speaking, sonny, why should I when speaking only means further trouble without really mending matters? But think better of it, my son. Anyway, I'd be really glad to learn that trick from you. But where did you learn it, by the way?'

'My father learned me a lot of tricks like that; only 'e's in—"Click!"' The boy made a clicking sound with his teeth and lips, and a movement with his right hand as if turning a key in a lock. Then he continued, 'An' 'e's not likely to come out yet, an' mother an' I are mighty glad. A father like that doesn't do much good to one in life! Now, sir, which sleeve is the 'andkerchief up?'

'Neither, my boy; and Captain Mowbray drew the khaki handkerchief from the breast of his tunic.

'When did yer put it there, sir?'

'Directly I felt you put it up my other sleeve.'

The boy gasped a moment, but soon recovered his equanimity. 'Ye felt me put it there?'

Captain Mowbray nodded, and stifled a yawn.

'Who was the beautiful lady, sir, who drove by? 'Course, if she 'adn't an' you 'adn't saluted, I shouldn't 'ave got the 'andkerchief back without the copper seein'.'

Captain Mowbray remembered every single little incident of the afternoon, but the culprit failed to get an answer to his last question.

'Where are you takin' me to, sir?'

'Taking you, my son? Oh, just for a little outing. Thought you might like some lunch.'

'Golly!' ejaculated the culprit, and then he gave a long, low whistle.

'Ever thought of going into the army, my son?'

'Yes, sir. I do play the drum in the Boys' Brigade.'

Captain Mowbray's eyeglass fell with a faint flop against his tunic. He then opened his mouth as if to speak, but thought better of it. 'Ah, well! here we are. Out you pop.'

The culprit popped out accordingly. It was at an old-fashioned inn, where they lunched

sumptuously on things that well pleased the heart of the culprit.

Captain Mowbray lit a cigarette, tilted back his chair, and watched the boy, who was engrossed with the delightful process of eating gooseberry-tart and cream. 'Then I take it from you, sonny, that you have thought of the army?'

'Yes, sir. Got anything goin' that might suit me? Lancers, ain't you?' And he eyed the captain's badges and the ribbons on his breast with a certain amount of awe.

'How old are you, sonny?'

'Eleven goin' on twelve. I'm small for me age, they say; but I guess I ain't wantin' in the upper story.'

'No, I guess not.'

There was a world of meaning in the captain's reply, and he smiled slightly behind a strong brown hand. 'Well, sonny, we want a drummer-boy; the last one went out before I came home on furlough.'

'Do you mean dead, sir?'

'Yes, I'm afraid I do. Do you mind risking it? Don't do it if you think by any chance it will bore you, for to be bored is the very worst evil that can happen to you.'

'Bored! Lor' lummy! it's the very thing I should like, sir; you just gi' me the chance.'

By-and-by 'the culprit' had his chance, and he took it like a plucked un.

'Halt! Who goes there?'

'A friend. And take me to the colonel at once.' So spoke a breathless and dusty soldier.

What had been a family mansion was now a mass of tumbled bricks and charred timbers, all except the kitchens and some lean-to out-houses. These were used for the officers' quarters, and the few men that they had left to them were billeted in the cellars beneath the wreck of what once had been a beautiful French château. They were supposed to be taking a well-earned rest, but had come in contact with several stray scouting companies of the enemy, and had lost a number of good men; and now they were awaiting fresh orders. They thought they would be required to escort some long-delayed transports, but the orders had not come yet.

'Yes; what is it?'

'He's missing, sir!' It was the breathless, dusty soldier who spoke; he was a sergeant, and had come back with his three men from doing scouting duty.

'Who's "he," might I ask?' snapped the colonel.

'Our drummer, sir; Sunny Jim.'

'Want some men and an order to go back to look for him, eh?'

'Yes, sir.'

'Well, off with you. He's the most amusing monkey I've ever come across, and I'd be very sorry if he got into the enemy's hands.'

—Yes, Captain Mowbray, what can I do for you?’

‘Will you order me to go with the party, sir? You know that he is my protégé.’

‘Oh, very well, if you must I suppose you must; but, mind, great care. No lives must be lost, and our position must on no account be given away.’

They went, that small band of men. They hunted about for the better part of the scorching afternoon, and at last they found him in a small copse not far away from the château. He lay there quite still and frightfully wounded, beneath a silver birch-tree, the white bark of which was bespattered with his young blood. Captain Mowbray stooped over him and felt the lad's heart, which was still faintly beating; then he lifted the light body in his strong arms.

As the small band passed the sentry, and he challenged them with the old words of ‘Who goes there?’ as if in answer the eyelids fluttered and lifted themselves off the brown eyes, and they looked straight into Captain Mowbray's lazy gray ones, as he put the little figure gently on the ground out of the sun, in the shelter of a pile of bricks.

‘I kept 'em away, sir, an' I'm goin' out like the other chap did.’

The eyes closed once more, and Captain Mowbray supported the young head on his knee. Then the voice uttered a few unintelligible words, and again was silent; he was evidently going fast. Suddenly he again opened his eyes as the surgeon stooped over him.

‘Hopeless?’ The captain formed the one word with his lips, and the surgeon answered, ‘Quite!’

‘Captain, stoop lower. I—I—want to whisper something. Sir’—

The captain stooped lower, and took one of the little, dirty, blood-stained hands in his. ‘Yes, my son, I can hear. Is it anything that you want?’

The brown eyes opened wider, and a weak laugh came from the poor, drawn lips. ‘Thank ye, sir, for once more callin' me that. What was it—that—the magistrate said ye would—

have been—if—if he had found out—that you had helped—me—out of that scrape?’

‘An accessory after the fact.’

‘Yes—that was it. An' if ye ever told any lies—in court—what would he have said then?’

‘That I had committed perjury.’

The smile still lingered on the lips. Captain Mowbray and the surgeon thought that he was gone, and had not heard the captain's last answer; but they were mistaken, for as the surgeon put out his hand to sign to the other man to put the boy down he suddenly half-raised himself, and the weak voice seemed quite strong again.

‘We're quits now, sir. I told 'em that I had run away miles—an' did not know where I was—an' the more they hurt me an' the more they made me talk the more lies I told. Put me down now, sir; I'm afraid I've dirtied your clothes. I'm a long while goin', sir. I'm sure you're really bored this time. I'—

Captain Mowbray's eyeglass fell with a sudden tinkle against the boy's breast; but he did not notice it. The captain took it carefully up, and polished it with a dirty handkerchief, before fixing it in his eye again.

Again the boy raised himself, and the badly mangled hand went up to the flaming red hair with his last salute, and again he laughed, but this time with almost his natural strength, and fell back against the captain's knee for the last time. For he had gone on his last long journey.

‘Yes, quits, my son! But I'm on the right side this time.’

Then the captain laid the little body gently down, and took from his breast a khaki silk handkerchief, with which he covered the small ugly face.

Yes, quits! And the men who were standing there bareheaded saw that the captain's eyeglass wanted a deal of polishing.

Again the hot sun beat down as they dug the grave of Sunny Jim, and there was not a dry eye there, from the colonel downward, as the solemn words were read over him: ‘Dust to dust!’ And afterwards, when they were relieved, not a man forgot to salute the tiny grave as they went away.

THE WAR-SONGS OF THE GERMANS.

By A. STODART WALKER.

THE many discussions as to the suitability of certain songs to the requirements of our troops on the march have made me have recourse to a small volume published in 1870, *War-Songs of the Germans*, by John Stuart Blackie, and dedicated ‘to my old and esteemed friend’ Thomas Carlyle. The Germany of to-day seems to bear little relationship to the Germany of a hundred years ago. The dominant idea of 1813 was very different from that of to-day. It was

concerned on the political and military side with the question of defence against aggression. The spirit of to-day is not that of defence, but offence; the infliction upon the world of the arrogant claim that the Germans are sent by Providence to dominate the earth; and every form of insolence, tyranny, and piracy is put forward as the necessary means to fulfil what is regarded and advertised as a divine procedure. Despite what the civilised world has told them, the Germans show

little sign of realising that the source of this inspiration seems to spring from something more diabolic than divine. It was not so in 1813. Germany was fighting then a world idea, in much the same way as Great Britain, France, and Russia, backed by the sentiment of many neutral countries, are fighting it to-day.

In 1870 the issue may reasonably be stated to have been that of the Rhine boundary, France maintaining that the Rhine formed their natural geographical limit, while Germany's attitude may be summarised by stating that they considered a range of mountains and not a river to be the natural bounds of a country. The Germans claimed the Rhine as a German river, and would not admit that it was a French boundary line; and out of the opposite claim sprang the war of 1870.

The famous German war-song, '*Die Wacht am Rhein*,' written by Max Schneckenburger to a tune of Carl Wilhelm, is, as Blackie puts it, 'the song of the whole German nation, superseding even the old national hymn of E. M. Arndt, '*Was ist des Deutschen Vaterland?*' with its lofty sentiment and nobly expressed ambition, containing such a verse as the following, which seems to strike strangely on our ears to-day:

This is the German's fatherland,
Where faith is in the plighted hand,
Where truth lives in each eye of blue,
And every heart is staunch and true:
This is the land, the honest land,
The honest German's fatherland.

Schneckenburger's song may be quoted in its entirety, through the medium of Blackie's translation, not merely for the words themselves, but as giving some idea of the stiffness of the task which confronts the Allies when they approach the Rhine. It may be that '*Die Wacht am Rhein*' has become less of a national creed and more of a soldier's boast. It may be that the Germans of to-day are not made of the stuff of 1813 and 1870, and that the determination expressed in this national song may have become anæmic, or the power to carry out the sentiment inefficient to hold back the foe. But it is as well that the British people should know what the sentiment is:

A loud cry swells like thunder's peal,
Like roaring wave, like clashing steel:
The Rhine, the Rhine, the German Rhine!
Who'll come to watch the German Rhine?
Dear fatherland, no fear be thine,
Brave hearts and true shall watch the Rhine.

From heart to heart the quick thrill flies,
And lightning leaps from countless eyes,
Where each true German, sword in hand,
Guards the old border of the land.
Dear fatherland, &c.

And though with Death he make his bed,
No stranger foot thy bank shall tread;
Rich, as in waves thy regal flood,
Is Deutschland in true hero-blood.
Dear fatherland, &c.

He lifts his eye to Heaven's high crown,
Whence his high-hearted sires look down,
And swears an oath to keep thy flood
As German as his true heart's blood.
Dear fatherland, &c.

Till the last drop shall drain our veins,
While in one arm one blade remains,
And while one fuming shot is sped,
No Frankish foot thy bank shall tread.
Dear fatherland, &c.

The oath flies forth, the billows flow,
The forward banners flout the foe!
The Rhine, the Rhine, the German Rhine,
True Germans all, we watch the Rhine!
Dear fatherland, no fear be thine,
We watch, true Germans all, the Rhine!

From the numerous messages sent during the present war by the Kaiser to his troops, from the many professorial and editorial deliverances of German savants and German newspapers, we gather that the German people are sophisticated enough to turn what is a war of aggression on their part into one of defence of their Fatherland; and so, when they sing their national song to-day, they may pump up a national resolve similar to that which found a more rational and natural expression in the war of 1870.

Another song, composed by Niklas Becker in 1840, 'on occasion of the alarm given to Europe and especially to Germany by the bellicose preparations and menaces of Thiers,' also deals with the Rhine boundary, and is occasionally sung by the German troops. It is called '*Sie sollen ihn nicht haben*,' and its opening verse runs:

No! no! we'll keep our river,
Our own, our German Rhine;
These foul-beaked ravens never
Shall seize our glorious Rhine.

More familiar in this country, and generally sung to words by Mrs Hemans, is the '*Am Rhein, am Rhein, da Wachsen unsre Reben*,' commencing (in Blackie's translation):

Come, crown your cups with leaves, your brows
with garlands,
And quaff the glowing wine!
No famous stream that rolls in near or far lands
Gives blessings like the Rhine!

and ending:

God bless thy flood, thou regal-rolling river!
We quaff thy glowing wine,
And, while we quaff, the Gaul shall claim thee
never,
Our own, our German Rhine!

The Liberation War of 1813 is enshrined in German literature in more ways than one. Some of the songs are still sung in the trenches; for example, '*Was ist des Deutschen Vaterland?*' suggestive of the world domination idea which is so prevalent to-day. Perhaps the best of many is the famous '*Was blasen die Trompeten?*' descriptive of the deeds of the great Blücher:

Why blare loud the trumpets!—to horse, ye
hussars!
'Tis the gallant old field-marshal that rides to the
wars!
So cheerily rides he his own good steed,
So brightly his sword flashes time to his speed;
Sound fife, trump, and drum! for the Germans
are come!
Hurrah for right and liberty, the Germans are
come!

Like most German songs, it has a super-
abundance of verses, but they are all of excellent
quality. '*The War Dance of the Katsbach*' is
longer still, and is more in the shape of a story
set to music than a marching-song.

Perhaps the most celebrated of German writers
of battle-songs was Körner, that Körner whose
'song inspired the victorious hussar-charge of the
Görhde, which checkmated Davoust at Hamburg
and opened the whole of Napoleon's left to the
irresistible onset of Marshal Forwards, as Blücher
was called.' Of Körner's songs, Lützow's wild
chase, '*Was Glänzt dort vom Walde?*' is the most
dramatic; in fact, no more spirited movement
can be found in any national battle-song, unless
it be in some of those associated with the Jacobite
rising in Scotland:

What gleams from yon wood, in the bright sunshine?
Hark! nearer and nearer 'tis sounding;
It hurries along, black line upon line,
And the shrill-voiced horns in the wild chase join,
The soul with dark horror confounding:
And if the black troopers' name you'd know,
'Tis Lützow's wild Jäger—a-hunting they go!

How roars in the valley the angry fight!
Hark! how the keen swords are clashing!
High-hearted Ritter are fighting the fight,
The spark of Freedom awakens bright,
And in crimson flames it is flashing:
And if the dark Ritters' name you'd know,
'Tis Lützow's wild Jäger—a-hunting they go!

More familiar is the rare '*Du Schuerdt an
meiner Linken*,' the great sword-song of Körner:

Thou sword so cheerily shining,
What are thy gleams divining?
Look'st like a friend on me,
Triumphs my soul in thee.
Hurrah! hurrah! hurrah!

'I love my brave knight dearly,
Therefore I shine so cheerily,
Borne by a gallant knight,
Triumphs the sword so bright.'
Hurrah! hurrah! hurrah!

These are Blackie's translations of two of the
sixteen verses, and they give some idea of the
spirit of the whole. In conclusion, I am tempted
to quote in full his translation of Körner's
inspired battle-prayer, '*Vater, ich rufe dich*,'
presenting one of the most sublime unions of
the devotional and the war element in poetry
that any literature can boast:

Father, I call on thee!
Clouds from the thunder-voiced cannon enveil me,
Lightnings are flashing, death's thick darts assail me;
Ruler of battles, I call on thee!
Father, O lead thou me!

Father, O lead thou me!
Lead me to victory, or to death lead me;
With joy I accept what thou hast decreed me.
God, as thou wilt, so lead thou me!
God, I acknowledge thee!

God, I acknowledge thee!
Where, in still autumn, the sear leaf is falling,
Where peals the battle its thunder appalling;
Fount of all grace, I acknowledge thee!
Father, O bless thou me!

Father, O bless thou me!
Into thy hand my soul I resign, Lord;
Deal, as thou wilt, with the life that is thine, Lord.
Living or dying, O bless thou me!
Father, I praise thy name!

Father, I praise thy name!
Not for earth's wealth or dominion contend we;
The holiest rights of the freeman defend we.
Victor or vanquished, praise I thee!
God, in thy name I trust!

God, in thy name I trust!
When in loud thunder my death-note is knelling,
When from my veins the red blood is welling,
God, in thy holy name I trust!
Father, I call on thee!

When we read these inspiring words we are at
once confronted with the question, 'Do the
German soldiers of to-day realise the meaning of
these lines—

Not for earth's wealth or dominion contend we;
The holiest rights of the freeman defend we,

when they gaze on Louvain and Termonde, and
think of the ruin of Belgium? The sophist may
argue that, after all, the Germans are merely
obsessed by patriotism, which remains the
noblest, yet, as Lord Rosebery said in 1882, 'the
most prostituted of all words . . . It urges to
heroism, to self-sacrifice, to assassination, and to
incendiarism. It rebuilt Jerusalem and burned
Moscow. It stabbed Marat and put his bones
in the Pantheon. It was the watchword of the
Reign of Terror and the motto of the guillotine.
It raises statues to the people whom it lodges in
dungeons. It patronises almost every crime and
every virtue in history.' *Verb. sap.*

SONNET: I CANNOT LIKEN YOU UNTO A FLOWER.

I CANNOT liken you unto a flower
That grows to beauty just because it must,
When fed on sunshine, summer wind, and shower.
The rose and lily bow their heads to dust
When storm-clouds threaten the sweet summer
skies;
But you I cannot fancy in such case—
You with the brave young brow and steadfast
eyes.

Rather you seem to me like some rare vase
Of finest silver wrought with care and skill,
And gleaming with reflected sunlight clear—
A proof of the brave patience which stood still
And let the artist work, without a tear,
And soften into the most perfect lines
The tracery of Heaven's own designs.

ANTOINETTE DE COURSEY PATTERSON.

Chambers's Journal

SEVENTH SERIES

THE HEART OF THINGS.

By HENRY LEACH.

LONDON, *Yesterday*.

WAS ever retrospect such an ugly thing as now? You will remember that in the days before the war we had a way at the end of every year of making a kind of stocktaking of the life that had been lived in those past twelve months, events that had occurred, achievements accomplished, and even the failures and disasters that had been sustained, for there was generally a balance to the good, and odd losses could be easily borne. We inspected the quality of the personal and general history that had been made, and then passed on to the ensuing year. It is December again, the stocktaking month; but who wishes to look back on 1915? Year of anxiety, suspense, gloom, and horrors it has been, nearly unrelieved by anything good for heart and soul. We have seen the happiness and beauty of life marred as never before since time was started. The capacity of man for inhuman monstrosity has soared to a height that was above the imagination of the ancient Attila. 'My destructive sword!' wrote the chief enemy to the Queen of Greece; and the sorry madman, glorying in the devastation he has wrought on the world and a large part of the human race, may hug this pride without any hindrance into his sadly disordered mind. No one envies him the distinction. This dying year of 1915 has been the year of this pitiable William of the Prussians. Let him have it—the year of suffering, of murder, of destruction. It is his by right, the worst year the world has known. Let him count the crimes, the millions that have been killed and maimed, the more millions of homes that have been cast to sorrow. This is his year! Throw it to the Huns when we have taken from it the pride and glory that belong to us. Let us look forward then.

* * *

It may be recalled as one of the grim coincidences of the times that just when the European struggle began the United States of America was preparing for such a celebration of a centenary of peace between herself and us the like of which had never been known before. It was to have been made a splendid occasion; perhaps in some small measure it was thought it might be an influence upon a restless world.

No. 261.—VOL. V.

[All Rights Reserved.]

But almost at the moment that the first prayers of thanksgiving for this glorious peace of a hundred years were being uttered, the thunder of the guns in Belgium was heard, hell was let loose, and—unfair to the name of war—crimes were committed, with it as an excuse, from the mention of which those chivalrous soldiers who tested the question as to whether America should be under British rule or not would have recoiled with horror. Of all wars of comparatively modern times, this, as was to be expected of it, was the cleanest and most humane. It is, however, as if nothing in the past matters in the least; as though the Old World, with all its achievements, its people, its landmarks in time, has disappeared into transparent ether. No longer does it seem to some minds to matter what happened one or two or three hundred years ago; and there will for ever be a great black mountain between the future and the immediate past, making a definite separation. So one fears the centenary celebrations, happy events as they were until a little more than a year ago, and numerous as they had become, are now as a custom that has lost its meaning. It must pass to the countries that have not been torn asunder. We can give harsh proof of this instant collapse of the system by looking but a little way on to the year that ensues, and pointing to the fact that we are within a few weeks of what would have been the time for the greatest celebration of the kind that the British people ever could have held, and little has yet been heard or thought of it. Few have noticed any suggestion of a particular celebration, when now, but for the din of the guns, the country would have been busy with committees and councils, funds and schemes, for an object to which it would have given a heart full of enthusiasm and gratitude. And there is a pathetic, a most melancholy, comparison to be made. On the 23rd of April of the year that is coming it will be three hundred years since our immortal Shakespeare died. Not poet alone, but, as a prince of words should be, this was the patriot prince as well, a singer for England who sometimes set the thoughts of her soul into phrases that thrilled. With the flaming quality of his work, the extent of his production was an amazing thing. He was only fifty-two years of age when he died (and it is generally

NOVEMBER 27, 1915.

accepted that he passed away on the anniversary of his birth), and it seems that his genius and the fevered strain at which he worked burnt his system out. Just three hundred years from the time when now you read, he himself began suddenly to realise that this was so. A premonition of death came upon him. He sent for a lawyer to make his will. Then real illness came. His old friends Ben Jonson and Michael Drayton came to his bedside, and when the spring was opening out again upon his England he went away. Three dramas, *The Two Noble Kinsmen*, *Henry VIII.*, and *Cardenio* he had been unable to finish himself, and they were handed on to young John Fletcher for completion. The work was well done; but *Cardenio* was lost, and we know nothing of it now. Let it be noted, however, for the sake of the special coincidence which is the burden of these present comments, that it was a drama having for its theme the romantic tale of the lovers in *Don Quixote*. Spain was a land which at that time the great writers felt it were better to ignore. Perhaps they thought less badly of it than we think of Germany now; but they had a certain pity for it, and they despised it. In all the works of Shakespeare there is but one character taken from Spain. Something will be done for the memory of our great Shakespeare when April comes; but England is distracted, and it is difficult now to imagine the more it would have been if the world had been itself.

* * *

Now let us consider the pathos of a strange comparison. A month ago we were thinking in these pages of the odd situation of Spain—of her seeming, but not actual, exclusion from this gigantic turmoil, of her hopes and fears, and of her nervous anxiety, while being largely a friend of the Grand Alliance, to hold herself free and gain something good for herself through it all—a reasonable and proper ambition. Spain remembers her old greatness, and with her own belief in the atavism of nations and a confidence that she still has a strength if she had leaders and means to develop it, she feels she might come again to the front among peoples. Her writers and her intellectuals have been constant lately in declaring that of all countries Spain is the least understood and the most misjudged. It may be so. They believe that she will rise again, that she is rising, and there are discerning men in her country who feel that the time for a quick advance has come. During the struggle of the nations she is making a fine effort toward self-improvement. Her political house is being set in a better order, and there are some signs of a sorely needed clarification in her politics, the politics which have been a worse curse to her than politics have been even to other countries, our own among them. Nowhere in the world have a people lost more through the lunacy of party systems than in Spain. Then

her means of internal communication are being mended, her physical equipment is being better attended to, great education schemes are being handled by her Government, and much is being done in every direction to improve the more material side of things in Spain. But this is not all. Spain has looked upon Europe and seen a sad suspension of activities in the matter of higher life. She has come to realise now that no nation can be great that is not responsive to a call in life that is beyond material things, and—word as it is that has been given a bad odour in recent times—she is devoting herself to culture. Never before in Spain have artists been given so much honour as in these days, and there are signs of a new inspiration among them. The exhibition of the Spanish Royal Academy this year was the best and most successful that has been known. Her writers are paid a new and greater attention. Her musicians are being rescued from a long neglect. It has been thought that Spain had little music in her being. Those who have wandered in the country and listened perhaps to the folk-songs that are sung in Andalusia have known better; but for want of recognition such genius as she has bred has wandered off to Paris and elsewhere, while in the Royal Opera House of Madrid the works of foreign composers have been ceaselessly produced. Now this is being changed. Within the last few weeks, largely through the efforts of the king himself, a new system of management of this national house has been prepared, by which special encouragement is to be given to the works of Spanish composers and dramatists. It is the same in other fields of intellectual labour. Spain is lazier of sculpture than almost any other old country of the world, but monuments are being raised with frequency now. Cities themselves are being improved. One will be sorry to see the old Seville pass away, just as the old Madrid has largely gone; but in many respects it will be the better for the grand changes that are now being entered upon. While the rest of Europe is wrecking, Spain is trying to make and mend. Seeking for some inspiration that would give a great impetus to her cultural movement, she has found the most magnificent of all. By an incidence of divine arrangement does it seem to her that in the coming year, with most of the world save herself probably still at war, there will occur the tercentenary of the great Cervantes, sovereign prince of her own literature. It has been determined by the nation, by the king, the Government, and the people, that this tercentenary shall be celebrated as none was ever celebrated before; and mighty efforts are being made with this great object. Much that is wonderful is to be done. And now for the pathos of comparison and coincidence. It is the most marvellous double in literature that William Shakespeare and Miguel

de Cervantes died on the very same day in the same year, 23rd April 1616.

* * *

Great was Cervantes; but how different was his life and work from that of the towering English genius who passed to Elysium at the same time as the immortal Spaniard! Shakespeare's life was in its way a placid thing; Cervantes' was one of high adventure and quick romance. Hardly is there a more glowing, more colourful character in the whole of literature than this. He suits the Spaniards well, and their remembrances of him now are rich. Some men, it is said, live their romances, and others write them; but Cervantes did both, and better perhaps than any other man. The ups and downs of his life make up a strange medley. One sometimes wonders why Englishmen and Americans who visit Madrid do not pay a special pilgrimage to Toledo, not far from the capital, to see where Cervantes lived and worked, and think about him and what he has done, just as visitors to England seek Stratford-on-Avon at the earliest chance. Cervantes had associations with Madrid. He was concerned also at different times with Seville, Valladolid, Toledo, Cordova, and other places; but at Toledo there is an old house with the typical Spanish courtyard, a combination of the meanest kind of habitation for both man and beast, which is much the same as it was when Cervantes left it. Passing through the old doorway, one comes upon peasants and muleteers lounging with animals about them, and on the sides of the surrounding building there is an old wooden balcony from which a lazy Spanish woman will look wearily upon the occasional stranger who goes that way. By a corner of this balcony is a chamber where Cervantes for a time lived and laboured. He wrote the *Ilustre Fregona* here. It was a cheerful spirit, an accommodating genius, that permitted him to do good work in such surroundings. Thousands of travellers do go to Toledo in the year, and, having crossed the glorious Alcantara Bridge, they enjoy the exploration of a wonder city of the past. Rich are its treasures of the ages; vast are the histories it represents and the memories that it stirs. There is enough for a month and a year of study and thought in rare Toledo. But I have noticed when there that the house of Cervantes is strangely neglected, and the foremost writer in Spanish history is hardly thought of by the visitor who goes there from Madrid. A glance is considered enough; and sometimes, when there is hurry in sightseeing, the guide will suggest that Cervantes may be omitted from the list, and out of it the creator of *Don Quixote* falls. There is a bare, windy plain between Alcazar and Cordova, farther south, Campos de la Mancha it is called, and by its name it speaks at once to readers of *Don Quixote*. Argamasilla de Alba is near to Alcazar, and it is believed

that it was at this place that he began to write his greatest book. He was sent here to collect some rents, for Cervantes was for long only a writer between times, as it were; but the debtors threw him into prison. Then he began his work, and made one of the inhabitants of the place his hero, so they say. All the people of the locality urge that Don Quixote was a reality, and there are even families there who claim to be descended from him. That is the way with them in Spain. In the very prison where he wrote the book an excellent edition of it has been printed.

* * *

Strange were the vicissitudes of the career of this Spanish genius. He was seventeen years older than Shakespeare. Perhaps hardly any other country or time could have given to a writer such odd romance in life. Despite the efforts of some misguided people in Spain to suggest that he had a university training, it is clear that he had nothing of the kind, and that his education was gained from life and the world. But he was a reader, and he had hours and days with the poets and the books of chivalry; and, loving the theatre, the desire to be a dramatist was early born in him. He began to write sonnets, and he wrote them always afterwards. Then Cardinal Acquaviva came to Madrid as a nuncio from Rome, and young Cervantes went back with him, taking a place in his household. When he was in Rome there was a league in formation by Spain, Venice, and the Holy See against the Sultan Selim, war was being prepared for, young Spain was alive with the fervour of it, and Cervantes left Rome to become a soldier. He was in a galley that sailed from Messina in 1571, and on an October Sunday the Turkish fleet was sighted, and soon afterwards engaged with in the famous battle of Lepanto. Ill with fever as he was at the time, he refused to stay below when the fight began, and he received three wounds, two in the breast and one on the left hand. After being in hospital for seven months he went back to the army, and served in three campaigns. All the fighting then being ended for the time being, he set out on a return to Spain, with fine testimonials; but his ship was separated from the rest of the Spanish squadron, and was captured by Moorish pirates. He became a slave in Algiers. Many attempts to escape were failures, heavy punishments followed, and his life was threatened more than once. A hangman's rope was placed round his neck. But after some desperate experiences he was set free by ransom, after being a slave five years. Trial upon trial followed. Having served in the campaign for the conquest of Portugal under the Duke of Alba, he returned to Madrid and tried to settle down to writing. Then he became a naval storekeeper in Seville, and had a small part in the provisioning of the ships for the great Armada. Work under a commission to enforce payment of overdue taxes in Granada

followed; and then, after a long and costly lawsuit, he was wrongfully cast into prison for debt. Afterwards, in Valladolid, a murder of a Spanish noble was committed near his house. Cervantes heard the cries of the dying man, went to his assistance, was found supporting him, and he and his family were then flung into jail on suspicion of having committed the murder. Being found innocent, he was released; and then, with the hurting memories of these and many other hard experiences, he went back to Madrid to spend the ten years of life that remained to him in desperately hard literary work which brought him but a sparse return in money. He was a noble man. He had a fine sympathy and the most magnificent fortitude and patience. How this genius suffered! The quality of his writing we know. Spain may well be proud of Cervantes.

* * *

See, then, what is being done in unconsidered Spain for the celebration of a great tercentenary, while there is little movement in anxious England for a like festival in honour of our Shakespeare. It is being made a national and governmental matter. The king is enthusiastically at the head of it. The full energy of the country is being turned to it. It is to be made the greatest thing of its kind that Spain has ever done. In a sense, in the best sense, it is being made a political affair, the grand object being to bring all of Spanish blood, at home and beyond the seas, to a unity in honour of the illustrious writer. An official manifesto has been issued and widely circulated, saying: 'Miguel de Cervantes wrote a book which was justly termed "The Human Bible," and we feel that the tercentenary of his death should be made a feast of humanity, a banquet of the spirit, to which people of all nationalities should give their assistance.' There has been established a most influential Cervantes Celebration Committee of a national kind. The Prime Minister has taken the chair at its meetings, and a manifesto has been published in the official *Gazette* declaring a general scheme for the celebration. In the Plaza de España in Madrid a fine Cervantes monument is to be erected; invitations are being issued to persons eminent in art and literature in Spain and America to co-operate in the celebrations; a committee has

been appointed, including representatives of the nobility, the army, and the navy, to organise details of the celebrations; in all cities and towns of any consequence Cervantes Tercentenary Committees have been appointed to organise local celebrations, assist in the greater ones, and do their utmost to make the occasion memorable throughout the country; and to the Academia de San Fernando has been delegated the work of organising a Cervantes Exhibition and publishing periodically a journal called the *Cronica del Centenario*, containing all notices of an official character, and any other matter calculated to assist the great object in view. For some time past the local committees at Seville, Valladolid, Burgos, and other centres have been busy. The central committee at Madrid has determined on the publication of a special tercentenary edition of *Don Quixote*, consisting of ten thousand sets in six volumes, each with illustrations by a great Spanish artist and notes by the director of the Biblioteca Nacional. There will be an *edition de luxe* of one hundred and twenty-five copies in four large volumes, and also an edition of a hundred thousand copies for children, consisting of suitable selected passages, with a story of the great writer's life. The six volumes of the main edition are to be published at the rate of one each month, and the first will make its appearance immediately. It has also been determined by the central committee that there shall be a national competition for music set to a hymn of Cervantes, that there shall be more national competitions for Cervantes engravings and sculpture, that there shall be held in April a bibliographic exhibition of Cervantes in the national library, that a large quantity of twenty-five peseta gold pieces with the bust of the king on one side and that of Cervantes on the other shall be coined, that Cervantes postage-stamps shall be issued; that, in short, everything thinkable and reasonable shall be done to make the celebration a great and inspiring event, and one that will do the nation good. That is what is being done in Spain, which, as her great artist Sorolla has lately murmured, is so sadly misunderstood. Spain, say some of her sons, will soon rise from the ashes again like a phoenix. In the meantime the comparison already suggested, the sad contrast, is one that is not happy for contemplation.

TRENCH WARFARE ON THE WESTERN FRONT.—II.

By NIMROD.

AT the head of a communication trench, where it opens into the firing-line, stands a group of men at the mouth of what appears to be a shaft similar to the pit-heads of the collieries. The group is composed of miners who have been specially enlisted for the mining and tunnelling

which now plays a prominent part in warfare on the western front, and the shaft leads down to a mine which is being run out beneath the zone separating the British and German fronts until it is well under the hostile parapet. We halt by the group to gain an insight into the work

proceeding, and to glean from the miners some of the exciting incidents and adventures which have befallen them in the performance of their subterranean duties. They are splashed with mud and clay from head to foot, for the soil of Flanders is liquid a few feet below the ground-level, and one must perforce work often knee-deep in mire and slush. Each man has sandbags wrapped over his boots and round his legs as some protection against the oozy soil, and they form a picturesque group, with the sentries and lookout-men on the parapet, and a machine-gun emplacement which occupies a corner of a traverse hard by the mine-shaft. The majority of the men forming this particular mining company are from Scotland, and they have taken up their dangerous calling on the battlefields of France in common with the rest of the men of the new armies we now have in the field. Finer men could not be found than these brawny lads, and they work with a will and energy that is amazing when one considers the physical conditions. But here mining has an interest peculiar to the circumstances demanding it. The object to be attained is a fascinating one, and every yard through the soil is so much ground overcome and brings one nearer to the hostile line, when the work of many laborious days and nights will be consummated and the mine sprung beneath an unsuspecting enemy. It is that the miner looks forward to with keen anticipation, and when his handiwork has been an unqualified success he feels the reward of his labours has been all that could be desired. There is, too, a spirit of keen rivalry, and he prides himself on his superiority over the German at tunnelling. Here he has undoubted reason to be self-satisfied, for it cannot be said that the Boche displays great ingenuity or science in the preparation of his mines. Only three days ago he demonstrated his inferiority by exploding a couple of mines which had been run out toward the British parapet, and presumably should have been directed underneath it, or at any rate in such a manner as would lead to its object being fulfilled. The calculations of the German miner were, however, so much at fault that both mines exploded harmlessly well out in the zone between the opposing fronts, with no loss to the British either in trench or personnel.

Stacked around the shaft are blocks of wood, neatly cut timbers, and flooring-planks, for use as the tunnel is extended, to shore it up andrevet its sides. Here also are piled heaps of sandbags in which the excavated earth is collected and used for improving trench and parapet. It would be difficult to estimate the number of sandbags used in this war; but they run into many millions. Seated on the firing-step is another miner pumping air down into the mine by means of a small air-pump, the handle of which has been smashed by a splinter from a shell that

burst in the trench whilst he was at work, although he himself escaped without a scratch. It is a warm corner here, for the Boche seems to suspect something unusual, and accordingly pays a great deal of attention. The parapet is constantly being struck by bullets, which resound with a peculiar cracking *thud*, whilst others pass overhead with a never-ending *zip*. It behoves one to keep one's head down when passing along this part of the trench, for the German sniper is unrivalled, and he rarely misses an opportunity. There is a reminder of his sinister presence in the sandbagged line only eighty yards away in the form of a notice which has been stuck up on a bayonet driven into the parapet, and bearing the inscription, 'A Hun Sniper here.'

Let us descend into the mine and view the work going on which is to result in its being sprung at a given time, and further to be taken as the signal for an attack on this portion of the German line. Stakes have been driven stepwise into the side of the shaft, and by these we gain the bottom some twenty-two feet below the ground-level. Leading off therefrom is a dark tunnel four feet square which disappears into the bowels of the earth. The floor of the tunnel is lined with planking, and the sides are cleverly reveted in like manner; whilst stout beams are placed transversely overhead to support the unusually heavy clay soil. We creep in on hands and knees, and crawl along the tunnel in rear of our guide—a Highlander from the Isle of Skye. In the distance, which seems endless, we discern the faint gleam of an electric torch, and then the form of a man appears in a crouching attitude working with pick and shovel, and hacking out the earth to his front. Behind him are others stretched out at intervals, the leading one of whom fills sandbags with the soil excavated, and passes them on, and so to the outside, where they are utilised in building up the parapet. The sandbags from the mines are much in request, for the clay soil rapidly hardens, and they become a first-rate protection along the top of the parapet as bullet-stoppers. As already remarked, mining is a slow and laborious task, and only a few yards can be accomplished within the twenty-four hours. The mine we are in is, however, rapidly approaching completion, and, being placed under an important point in the enemy's line, is destined to play no inconsiderable rôle in the forthcoming operations. By the evening all will be ready, the gallery has been completed, the explosives placed in position, the long fuse attached, and every preparation made for the firing of the mine at the given moment. In common with other mines which have been run out under the German positions, the one in question is destined to be the signal for an attack on the German line; and when the vast column of earth and débris leaps into the skies the assaulting infantry will dash forward at the charge. Great deeds are in the making, and on the morrow the

long-awaited offensive is to open, and from the Swiss frontier to the North-Sea the Allied forces will resume the offensive and form in a general attack on the German trenches at certain selected points.

We pass out of the mine, crawling along the damp and gloomy gallery, and so into the fresh September air. There is an unusual bustle and activity going on in the trenches; and as the day wears on the lines of advance of battalions are carefully marked, and the points on which their flanks will rest are noted along the parapet.

Here a digression will prove of interest, and enable us to gain an idea of the operations which are about to enter upon a definite phase. The Allied armies are about to attempt the breaking of the enemy's line which has confronted them for upwards of a year. The defences comprise a labyrinth of trenches, many of them fortified with concrete emplacements, steel cupolas, and all the devices appertaining to siege warfare rather than that of armies operating in the open field. Here and there at all-important points, such as those commanding road junctions, possible lines of advance, or high ground, powerful redoubts have been constructed, linked together by a complicated system of communication trenches. In rear of the first line is a second and a third, between which the ground has been rendered strong and well-nigh impassable by a maze of barbed-wire entanglements. Once the first line is carried, it is essential to renew the bombardment and sweep away these obstacles before farther progress can be made. It is an extremely difficult task for the gunner, since the Germans now employ iron stakes to secure their wire, and an immense quantity of high explosive is required before any effect is produced, and the obstacle torn up. Moreover, the wire is cunningly concealed in long grass and between trees, and has mounds of earth thrown up in front to hide it from view. Thus it happens that in an attack on the German lines the infantry come across hidden wire which has hitherto escaped detection; hence the losses are heavy and farther progress is barred.

Hitherto the weather has been all that could be desired, but this evening a change has set in, and a drizzling rain supervenes. We will pass to the rear of the British line, a mile or so behind the front trenches, and see what is going on. Here, in an orchard, availing themselves of cover afforded by the spreading branches, is a regiment of Garhwalis from Hindustan, who at the fall of night will move forward to take post in the front line. Down the road comes a company of sappers and miners, also from India, laden with picks and shovels, materials for hasty demolitions, and all the equipment necessary rapidly to consolidate ground won. Following them comes a signal company, whose duty it is to link up the firing-line with headquarters of units

and batteries, and ensure that the means of communication will be effective and constant. Unit follows unit, each moving to its assigned position, some to the foremost trenches, others to those constructed to shelter supports and reserves just in rear. Before midnight all are in position, and then a period of waiting commences until the signal in the shape of the exploded mine shall be given. It is, however, by no means a quiet night. On the contrary, there is continual crash of artillery, the sharp crackle of rifle and machine-gun fire, and the deafening noise made by the German *Minenwerfer* bombs as they burst in our trenches. For three weeks a steady bombardment of the German lines has been going on, to accomplish, first, the cutting and destruction of the wire bristling along the hostile front, and, secondly, the breaching of the parapet, and by a rain of shell to deprive it and the trenches of any semblance to fortified works. All day the guns maintain their fire, and at night salvoes of shrapnel are burst over the enemy's lines, whilst persistent rifle and machine-gun fire is maintained to prevent the Germans from repairing their battered wire and trenches. Despite the harassing conditions under which they labour, and the heavy losses they must sustain, the dawn of day often shows a considerable amount of repair-work accomplished. The persistent and relentless bombardment tells, however, in the end, and on the day before the attack the shell-fire is intensified, and all along the front the German wire obstacles are crumpled up and the parapet heavily breached. That night further efforts are made at repair-work by the tireless foe; but the continual fire of rifles and machine-guns, which never ceases throughout the night, compels him to desist. Over the German trenches a strange silence seems to hang, as though the combined effect of artillery and small arms had forced them to evacuate their front line.

The night passes slowly to the waiting thousands who are massed ready to move forward at the appointed hour. Away on our right the thunder of the guns resembles one continual roar, and an hour before dawn it increases to an extent that compels the reflection as to how men can live under such a scourge and remain sane. It is the French hammering hard at the German line and opening the way for a charge on a front of twenty-five miles.

It is broad daylight at five-thirty, and the Germans are standing to arms until perhaps six o'clock. The minutes creep on until the hour indicates five-forty-five. Suddenly there is a trembling beneath our feet, a distinct shock as of an earthquake, and then a mighty column of earth and sandbags, mingled with woodwork and sundry materials, shoots skyward in an awe-inspiring upheaval. The labours of the miners have not been in vain, and the mine has done its work and left a wide yawning breach in the

German line, an opening sufficient to admit the passage of a regiment. Simultaneously with the eruption the artillery bursts forth with redoubled efforts for the space of ten minutes to complete the discomfiture of the enemy and force him to keep under cover. The infantry cross the parapet and rapidly form up preparatory to the forward move. The clouds of smoke and dust, mingled with the early morning mist, obscure the view and blot out the German trenches. The distance to traverse is, however, slight, and with a rush the leading lines are through the torn entanglements and over the German parapet ere the foe has had time to realise the situation. Through the opening laid bare by the mine the stormers pour, a crater in which they blunder and stumble, then emerge on the far side, clearing the few astonished Germans out at the point of the bayonet. Bombing parties break off to right and left to bomb down either flank, and clear the enemy out of dugouts and shelters wherein he may be lurking. A single bomb thrown into a dugout clears it more effectually than any other weapon; for, although one can do much with the bayonet, the bomb stands unrivalled for its qualities of rapid and wholesale destruction. A fierce hand-to-hand struggle goes on, as parties of Germans are rounded up. A Highlander dashes up the parapet and plunges his bayonet into the breast of a Teuton who wears the Iron Cross, whilst by his side another attempts to lay low the kilted soldier; but in the excitement of the moment he misses at point-blank range, and receives in

his turn a bayonet-thrust full in the chest. So the fight goes on until the ground is won, and then the work of consolidation supervenes; and with the fall of night fresh wire is run out, supplies of ammunition are brought up, and the work of collecting the wounded is proceeded with. Already the Germans have hurried up reinforcements and initiated preparations for the counter-attack with a view to recovering the lost ground. As is their custom, they usher it in with a violent cannonade from their heavy howitzer and the *Minenwerfer*, which throws a bomb weighing one hundred and thirty pounds, and bursts with a truly deafening crash. Our own artillery responds energetically, and between the two an inferno is created. The night passes in a series of efforts to re-establish themselves; but morning dawns and finds the victors still holding on. The cold gray dawn reveals the battlefield dotted here and there with the bodies of the gallant dead. Here lies one still grasping the rope handles of an ammunition-box he was carrying forward to replenish the rounds when he was struck down, whilst another is prostrate half-way up the bank of a ditch out of which he was climbing at the moment of death. Yet another clasps in his right hand one of the flags which was to have marked the farthest point gained by the assaulting column. They are pictures of the grim side of war, but they do not damp the ardour of the troops, which remains, as ever, at a high level; and the amazing spirit animating the British forces will lead to the one final and definite object,

THE PIE IN THE OVEN.

By J. J. BELL.

AS his spouse entered the kitchen, Mr John McNab, seated in his arm-chair, turned a lowering countenance from the bright fire. 'Where the mischief ha'e ye been?' he demanded crossly. 'Are we to ha'e nae supper the nicht?' 'I was jist at the gate,' she mildly replied, 'lookin' to see if I couldna hear Flora comin' up the road—wi' the constable,' she added, taking a loaf from the crock and setting it on a platter. The table in the middle of the floor was already laid, more elaborately than usual, for the evening meal.

'Tits, Susie!' he exclaimed irritably, 'can ye no' ca' him "polisman" an' be done wi' 't?'

'Flora likes us to ca' him "constable." She laid a big knife beside the loaf.

He grunted and proceeded to relight his pipe. 'Weel,' he said between puffs, 'did ye hear the polisman comin' up the road?'

'Na, John; but'—

'In that case he'll no' be within a mile o' the hoose. So we'd best tak' oor supper, you an' me. I ha'ena had a proper meal the day. A body wud think ye was tryin' to starve me!'

'Havers, man!' she said lightly; then seriously, 'We canna tak' oor supper afore Flora an' the constable come.'

'What wey that?'

Mrs McNab stepped over to the hearthrug. Her voice was soothing, persuasive. 'Come, come, John, ye ken fine what's bringin' the constable, dacent lad, here the nicht! Ye needna pretend! An' I wish ye wud gi'e him a chance this time. It's nae great blame to him that he's bashfu' an' backward in comin' forward. It's jist his modesty. So ye'll gi'e him a wee bit encouragement to say his say—eh, John?'

'Encouragement! Guidsave, Susie! ha'e ye nae pride? D'ye think I'm gaun to let the man imagine I'm wantin' to get quit o' Flora, the only bairn we've got left? No' likely!'

'But Flora's willin'.' Mrs McNab stooped to open the door of the oven, and a most appetising odour drifted forth. 'Ay, Flora's willin', an' so am I. An' so are you, John, if ye wud but confess it to yoursel.'

'When did I say I was willin'? But that's no' the p'int in the meantime. I tell ye again,

Susie, if Peter Duff wants Flora he can ask for her like a man.' He paused and sniffed. 'What ha'e ye got in the oven, wife?'

'Oh, jist a pie.'

'A pie!' (Sniff, sniff.) 'That's guid! Is't ready, Susie?'

'Ay, it's ready; but it'll keep till they come.' She shut the door, rose, and went over to the dresser. 'I fancied a pie wud be nice for ye efter you an' the constable had settled everything. Weel, I'll prepare the ither things, so as ye'll no' ha'e to wait langer nor necessary.'

Mr M'Nab sat up. 'But I want ma supper noo,' he declared. 'I'm terrible hungry.'

'I'm sure they'll no' be lang,' she replied pleasantly, and busied herself at the dresser. 'Maybe the constable'll no' be sae bashfu' the nicht, puir lad.'

'Bah! The man hasna the pluck o' a hen!'

'Aw, ye shouldna say that efter him catchin' the burglar at Sir Robert's single-handed, an' the burglar wi' a pistol forbye.'

'I dinna believe it was loaded. A—what kin' o' a pie did ye say it was?'

'Ye'll see when the time comes, John,' she replied, removing the bread to the table. 'What wud oor Flora ha'e done if the brave lad had got shot? Promise ye'll gi'e him a chance. Three times has he come here to ask ye for Flora'—

'An' sat like a stuffed owl till it was time to gang to oor beds!'

'I dinna wonder at him no' sayin' muckle, for ye pit the fear o' death into the man. If ye wud gi'e him a bit hint that ye ken what brings him—that ye ha'e nae serious objections to him wantin' Flora'—

'If he wants Flora he can ask for her like a man! I stick to that!' Mr M'Nab rose abruptly and looked up at the clock. 'Listen, wife! We'll gi'e Flora five meenits mair, an' if she's no' in by then we'll tak' oor supper. I'm famishin'. I'll awa' ootbye an' see if there's ony sign o' her.'

Left to herself, Mrs M'Nab sighed and smiled, murmuring, 'Aweel, I'm no' gaun to thole it ony langer. It's got to be settled the nicht. An', someway, I think it *will* be settled the nicht.' She called through the doorway, 'D'ye hear them comin', John?'

His voice replied, 'I hear *him* richt enough!' Presently the outer door was banged, and he re-entered the kitchen. 'They're footerin' awa' at the gate. I suppose he's feart to come in.' Mr M'Nab strode over to the fire. 'I micht as weel get oot the pie, an' we'll be ready to mak' a start.'

She wheeled upon him. 'Ye'll leave the pie where it is, ma man! I'm no' gaun to be affronted in ma ain hoose.'

'D'ye think I'm gaun to be starved in ma ain hoose? What's wrang wi' ha'ein' oor supper first? An' then I'll hear what Duff has got to

say, supposin' he's got onything to say—eh, Susie? What's wrang wi' that?'

'Na, na, John. Business first, plesure afterwards. That's aye a man's motto, at least when it suits him. But it needna tak' ye lang to feenish the business. Jist a bit kindly encouragement'—

'I'll see masel' damp first!' cried Mr M'Nab, throwing himself into the arm-chair. 'If ye've nae pride, I've still some left. A M'Nab doesna ask a polisman to be sae kind as to tak' his dochter—by gravy, no! If Peter Duff haana the spunk to ask for her, he doesna deserve to get her.' He raised his voice. 'An' he'll *no*' get her. I'll see masel' damp'—

'Wheesht, man, wheesht! I hear them comin'.' She ran across to the oven, opened the door, and peered in. 'It's maybe jist a wee thing ower het,' she remarked. 'I'll leave the door open an inch.' She rose. 'My! but it's a bonny smell; is't no', John? Ay, there they are!'

Flora's voice was heard. 'Hing yer hat on that nail, Peter, an' here's a place for yer walkin'-stick.' (Sounds of a hat and stick falling.) 'Oh dear, but ye're awfu' clumsy! Let them lie. Gang ben'—

Peter's voice replied, 'Aw, thank ye, Flora—thank ye. But I doot it's ower late. I—I'll bid ye guid-nicht, Flora.'

Mrs M'Nab flew to the door and threw it open. 'Come awa' ben, Maister Duff,' she said hospitably. 'We're rale gled to see ye.'

Assisted by a gentle propulsion from the maiden, Peter crossed the threshold. His height was six feet two, and he looked miserable and flustered in proportion. He shook hands feebly with the hostess.

'Kin' o' cauld the nicht, is it no'?' she pleasantly remarked.

'Ay, it's kin' o' cauld, as ye say. It is that.' He moved nervously toward the host. 'Ay, it's kin' o' cauld. Ay.—I hope ye're weel, Maister M'Nab; I hope'—

Mr M'Nab granted a brief handshake. 'Sit doon, sit doon,' he said shortly, and turned to his daughter.—'Ye're late, lassie.'

'Am I?' she answered lightly over her shoulder.—'Peter, tak' a sate.'

'Aw, thank ye,' said the constable tremulously; 'but I'll no' sit doon. It's time I was gettin' doon the road.'

Mrs M'Nab placed a chair, rather a low one, for him. 'Hoots, Maister Duff!' she said kindly, 'ye maun bide an' tak' a bit supper wi' us.'

'Aw, thank ye,' was the reply, delivered with the smile of an expiring martyr; 'but I'd best be gettin' doon the road, so I'll jist bid ye guid'—

Mr M'Nab interposed with considerable impatience. 'Are ye on some spaycial duty the nicht?'

'Na, na; but—but I'd best'—

'Noo, Maister Duff,' said the hostess, 'I'll be

sair offended if ye dinna bide for yer supper. So sit ye doon an' rest ye.'

'Aw, thank ye, thank ye; but'—

Flora intervened. 'If he wants to gang,' she said, with a haughty tilt, 'let him gang.'

'I dinna want to gang, Flora,' stammered the wretched young man; 'but'—

'Siddoon, man!' thundered Mr M'Nab.

The constable went down with a crash, all but toppling from the chair.

'Fayther!' whispered Flora reproachfully.

He turned an astonishingly pleasant countenance upon her. 'Weel, ma lass, I'm sure you an' Maister Duff are ready for yer supper this cauld night.' He transferred the beam to the visitor. 'Ye'll be fair famishin'—eh, Maister Duff?'

Peter started. 'Me? Aw, as sure's death, Maister M'Nab, I couldna eat a bite.' He wilted under the other's sudden scowl.

Flora turned to her mother. 'Is the supper ready? Can I help ye? I'm as hungry as a hawk.'

At that her father grinned once more and rubbed his hands. 'That's richt, Flora! Ye'll fin' the pie in the oven.'

Mrs M'Nab smiled placidly. 'Dinna heed the pie the noo, Flora. Rin awa' an' tak' aff yer things, an' I'll see aboot the supper—*when the time comes.*'

'A' richt, mither,' said Flora agreeably, and, with a glance at Peter, who appeared to be dead to the world, left the kitchen.

As the door closed, 'Mercy!' exclaimed Mrs M'Nab, 'I forgot to tell her something. John, you an' Maister Duff can ha'e a smoke an' a crack till I come back.' She went quickly to the door.

Peter rose in a panic. 'Aw, it's time I was gettin'—'

'Siddoon!' snapped the host so smartly that Peter flopped a second time.—'See here, Susie, I'm famishin'! Let's ha'e oor supper wi'oot ony mair palaver.'

'Patience, patience,' she mildly returned. 'Ye'll get yer supper'—she went out—'when the time comes,' and closed the door.

With a gesture of impotent wrath Mr M'Nab threw himself back in his chair, glowering at the guest, who sat motionless, staring at his feet. In a little while, however, he moved his chair forward, and, bending over the arm, sniffed at the aroma stealing from the oven. Then, as though in order to forget it, he sat up and relighted his pipe.

A groan, doubtless involuntary, came from the constable.

Mr M'Nab leaned toward him and said slowly and distinctly, 'Did ye speak?'

'Eh?' with a violent start.

'I'm sayin', did ye speak?'

'Na—oh, na, na.'

'I thocht ye was maybe tryin' for to say something.' Mr M'Nab emitted several puffs.

'Regardin' that burglar o' yours,' he resumed in a milder voice, 'was his pistol loaded?'

'Burglar? Pistol? Oh, ay; ay, a' the chambers was loaded.'

'Did ye guess they was loaded afore ye tackled him?'

'Ay,' answered Peter absently, 'I suppose I did.'

'An' ye wasna feart?'

'I couldna say.'

'It's a peety,' said Mr M'Nab with deliberation—'it's a great peety I'm no' a burglar.'

'Eh?' said Peter, looking more dazed than ever.

'Oh, naething,' the other replied shortly. He smoked for half-a-minute. 'It's been a fine day,' he remarked, and there was a longish pause. 'I'm sayin', it's been a fine day.'

'A fine day—so it has.' Another pause, in the course of which the constable shuddered.

'If ye're cauld,' said the host, 'draw in' to the fire.'

'Aw, thank ye.' Peter moved his chair a couple of inches. 'I'm no' exactly cauld,' he added, taking out his handkerchief and wiping his brow.

'Dod, ye're sweatin', man!'

'Ay, I'm sweatin', but I'm no' exac'ly warm either.' Peter transferred the handkerchief to his neck. 'It's a sort o' cauld sweat.' He blew his nose, coughed, wiped his brow again, and put away the handkerchief. He then sought to twist his ankles together and gripped the bottom of the chair with both hands, as though he were afraid of being drawn into space. Presently he spoke, with an obvious effort. 'As ye observed, it's been a fine day. If—if it hadna been a fine day I—I was gaun to ask ye, Maister M'Nab—I'm sayin', Maister M'Nab, I was gaun to ask ye a—an important question.' He got out his handkerchief again.

'Noo it's comin'!' said Mr M'Nab under his breath. He sat very erect, laid aside his pipe, pulled down his waistcoat, and assumed an attitude of stern attention. 'Ye was sayin'!'

'I was gaun to—to ask ye'—

'I'm listenin', Maister Duff; I'm listenin'.' The listener hooked his thumbs into his waistcoat armholes and looked perfectly terrifying.

Peter writhed. 'I was gaun to ask ye— Oh, ma gracious goodness!' he sighed.

Mr M'Nab, either from pity or from a certain sense of guilt, removed his gaze to the ceiling. 'Ye was sayin' ye was gaun to ask me. Weel, what was the question aboot, Maister Duff?'

'Aw, it was aboot—it was aboot—that coo o' yours that was badly.'

Mr M'Nab fell back. 'The coo's deid,' he snapped.

'Oh dear me! I'm vexed to hear that, Maister M'Nab; I'm vexed to hear that. But I—I hope the ither beasts is—in guid health.'

'I ha'ena heard them complainin'.'

'That's nice.' Peter mopped his face. 'An' the p-poultry?'

'There's naething wrang wi' the poultry.'

'Oh, that's gratifyin', extremely gratifyin'! An' the p-pigs?'

'They're fine,' said the host, barely restraining himself.

'Oh, that's splendid! It's splendid when the pigs is fine. An' ye're keepin' brawly yersel', I hope?'

But this was too much. 'Ach, man, haud yer tongue an' gi'e yer brain a rest!' said Mr M'Nab rudely.

Peter recoiled and bowed his head in his hands just as Mrs M'Nab came briskly into the kitchen. She passed swiftly to the oven, examined the contents, and shut the door with a dubious wag of the head which did not escape her husband.

'Aweel,' she said resignedly, as she retired, 'if the pie's ruined, I suppose it canna be helped.'

'Susie,' implored Mr M'Nab, 'what's the use o' a' this palaver? Wud it no' be faur better to—'

Ignoring him, she disappeared.

'Susie! Susie! Oh! this is no' to be endured.' He addressed himself to the unhappy guest. 'I'm sayin', this is no' to be endured, Maister Duff.'

'Ay,' groaned Peter, 'it's hellish.'

'What! I thoct ye said ye waana hungry.'

'Hungry?'

'Tits, man! dae ye no' smell the pie?'

'Whatna pie?'

'Whatna pie, ye gowk!' Mr M'Nab leaned over and opened the oven door. 'The pie in the oven—see!'

'Aw,' said the constable stupidly, 'is that a pie?'

'I thoct a polisman,' the host observed with extreme bitterness, 'wud ken a pie when he seen it! Can ye no' smell it?'

'I—I'll try,' said Peter, making to rise.

'Keep yer sate! Can ye no' smell it where ye are?'

'Ay, I think'—sniff—'I smell it.'

'If ye was pittin' less pomade on yer hair'—Mr M'Nab began, and checked himself. 'Weel, wud ye say the pie was burnin'? Na, na, I didna mean *on fire*! Does it *smell* burnin'—or singein'.'

Peter appeared to consider. 'I coukna say which,' he answered at last, and once more employed his handkerchief. 'Aw me!' he murmured in his misery.

Rising abruptly, Mr M'Nab kicked the oven door to. 'I'll stand it nae langer!' he grunted. Delaying only to shake his clenched fists above the unseeing guest, he strode across the floor and flung open the door. 'Susie!' he shouted.

'I hear ye,' replied his wife, without appearing. 'Has anything happened?'

'The pie's burnin'!'

'Aweel, I canna help that. But here's Flora comin'.—Flora, rin an' see what yer fayther's wantin'.'

'Ay, haste ye, Flora,' called Mr M'Nab.

The girl came hurrying into the kitchen. 'What is it, fayther?' Glancing at the collapsed constable, she whispered, 'Has he—has he said anything?'

'Na, an' he never will! But the pie's burnin'. Look shairp!'

Flora sighed and went to the oven. He followed her.

'Tak' it oot noo, like a guid lass,' he said softly, 'an' we'll ha'e oor supper.'

She shook her head and closed the oven, remarking, 'Na, it's no' burnin'—yet.'

'Guidsake! are we to wait till it's brunt?'

'Looks like it,' curtly.

He strode, furious, to the door. 'Susie! Susie!'

Flora halted behind the abject Peter, and whispered, 'For only favour be a man!'

'I—I canna.'

With a gesture of despair she fled, slipping past her angry father in the doorway, who bawled after her, 'Tell yer mither if she doesna gi'e me ma supper instanter I—I'll kill somebody.'

Slamming the door, he returned to his chair and sat down with a grunt. 'What a terrible thing a female can be when she gets a notion in her heid! See here, young man,' he grimly added, 'never you seek to get marrit!'

'Oh, certainly not—certainly not!' gasped Peter.

'What!'

'I meant for to say—aw, I canna say it. But, Maister M'Nab, supposin' I was to ask ye—respectfully ask ye to'—(gulp)—'Guess what I'm thinkin' about the noo.'

It must be confessed that Mr M'Nab was somewhat taken aback. 'Guess what ye're thinkin' about!' He stroked his beard. 'Aweel, I winna say I couldna guess if I was tryin'. But wait a meenit.' Rising, he stole on tiptoe to the door and listened.

Just as he began to appear satisfied, his wife's voice came from the other side, 'Was ye wantin' anything, John?'

'Oh—a—merely to see if the door was properly shut.'

'I see. Ye're terrible speechless in there.'

'We wud need to be,' he growled, as he retired crestfallen and angrier than ever. Resuming his seat, he remarked in a voice loud enough to be heard all over the cottage, 'Na, young man, I ha'e nae desire to guess what ye're thinkin' about the noo.'

'Then,' said Peter, in utter despair, 'Heaven help me!'

'They say that Heaven helps them that helps theirsels.' And in the same instant Mr M'Nab was struck by an idea inspired, indeed, by his own remark. 'By jings!' he exclaimed, and

smote his fist upon his palm. 'Duff,' he commanded in a sharp whisper, 'tak' aff yer buits!' And he proceeded to unlace his own.

'Eh?'

'Tak' aff yer buits an' ask nae questions. Ye've got to help *me*, if ye canna help yersel'. Quick, man! Dae as I bid ye, an' I'll no' forget it.'

'But what's up, Maister M'Nab?'

'Aff wi' yer buits, or leave this hoose for ever. Hurry up!' Mr M'Nab removed one of his own and laid it aside quickly.

Peter's nervous hands dropped to his feet. Fortunately he was wearing shoes.

'Gosh, but I've an appetite!' the other muttered. 'It'll be fun to see Susie's face when I tell her I've *had* ma supper.'

Presently he stood up in his stocking-feet. Grinning, he opened the oven door and laid hands on the pie-dish. 'Piff! but it's het!' he cried, wringing his fingers. He tiptoed to the dresser, and returned with a cloth.—'Hurry up, Duff! Ye should wear carpet slippers.' Removing the pie from the oven, he carried it cautiously to the table. From there he beckoned to the constable, who had at last got rid of his footgear.

Peter came with reluctance. 'Oh, surely,' he said, 'surely ye're no' for eatin' the pie.'

'Wheesht, man! Jist what I'm gaun to dae; an' ye're gaun to eat yer share.'

'Aw, I couldna, Maister M'Nab. I'—

'Ye'll eat yer share, ma lad, or, by heavens, you an' me'll cast oot! I can be a terrible enemy.' Noiselessly he placed a chair in position. 'Gang over to the dresser an' fetch twa plates—big yins. Haste ye! *Sh!* Dinna thump yer feet like that! Dod, but I'm hungry!'

With his large, trembling hands Peter took down a couple of plates. At the same time he disturbed something on the dresser—a large rolling-pin. It reached the floor with a resounding thump.

'Oh, ye great goat!' the host remarked in a savage whisper.

'Oh, ma tae!' groaned Peter, writhing on one leg.

'Haud yer tongue!' After several seconds of dead silence, 'It's a' richt. Come on!' said Mr M'Nab.

Peter limped half-way to the table and stopped short.

The door opened. Mrs M'Nab appeared. 'Oh, is that what ye're efter, ma man?' she exclaimed, rushing to the table and securing the pie.—'An' you a constable!' Turning upon the hapless Peter, she upbraided him until it was apparent that he was too dazed to appreciate her remarks.

'Aw, I think I'd best be gettin' doon the road,' he said weakly, moving toward the door.

'Let him gang,' said Mr M'Nab in tones of disgust indescribable. 'It's a' his fau't.'

'Let him gang,' cried Susie, 'in his stockin'-

soles an' wi' ma guid plates? No likely!—Stop, constable!' Peter halted.—'An' mark ye this, John—she raised the pie above her head—'if ye let him gang, *I'll drap it!*'

Mr M'Nab turned an awful face upon the young man. 'Stir an inch,' he said, 'an' I'll kill ye!'

While Peter stared helplessly from one to the other, Flora came in.

'Oh lassie,' said her mother, 'look at the twa o' them! I caught them stealin' the pie, in their stockin'-soles. An' him—wagging her head at Peter—a constable!' She carried the pie to the oven. Her husband followed.

Flora removed the plates from her lover's grasp and laid them on the dresser. 'Oh Peter, is this a' ye care for me?' she said, and, with a sob, ran out.

'John,' said Mrs M'Nab in a low voice, 'will ye gie the man a chance noo?'

'Never! I'll starve first.'

'Weel, I canna hinder ye.' As she passed to the door she gave Peter a little pat on the arm.

Mr M'Nab threw himself upon his chair and turned his lowering face to the fire.

At the end of a minute the constable gave him a furtive glance, and took a halting step in his direction. In an almost inaudible voice he said, 'Maister M'Nab.'

'Eh?' said the other without moving.

'Maister M'Nab.'

The owner of the name wheeled sharply. 'What the mischief dae ye want?'

'Oh, naething. I jist want—I jist want—Flora.'

He recoiled as the other leapt to his feet.

'Guidsake, man! what wey did ye no' say that at first?' Mr M'Nab dashed to the door, and bawled, 'Here, Flora! Susie! something's happened.'

Ere they arrived he was conveying the pie to the table.

'Flora,' he said over his shoulder, 'tak' him! He's yours!'

'Fayther!' in a shocked tone of voice.

'Weel, weel, you're his. An' the pie, praise Heaven, is mine!'

'Oh John, John!' sighed Mrs M'Nab, her apron to her eyes.

He put his arm round her shoulders and led her to the table. 'Never heed, auld wife,' he said softly. 'Ye got the best o' me; but what's the odds as lang's we're happy?—Come awa', Flora; and you likewise, constable.'

Flora led the blushing Peter to his place.

'I—I think,' he stammered, 'it's time I was gettin' doon the'—

'Siddoon, man!'

Peter flopped, and they all took their seats.

Mr M'Nab, flourishing a knife and fork, shouted gaily, 'Wha says pie?'

His wife held up her hand. 'Wheesht, John! Ask a blessin'.'

THE MONTH: SCIENCE AND ARTS.

LONG-DISTANCE TELEPHONY.

ONE of the most remarkable of recent achievements in telephony has been recorded in the United States. For many months past ceaseless experiments in long-distance etheric telephoning have been in active progress, and these have been crowned with complete success, conversation having been maintained with ease over a distance of two thousand five hundred miles between Arlington, Virginia, and Mare Island, California. In addition, communication was also opened up between New York and Mare Island, *via* Arlington, the messages being sent over the ordinary trunk line to the last-named point, and there transferred automatically to the wireless apparatus. Even a greater feat was that announced by the American Telephone and Telegraph Company, whereby the voice of John Mills, an engineer on the New York staff of the company, speaking into the receiver of the apparatus at Arlington, Virginia, was heard at the Pearl Island naval station, in Hawaii, four thousand nine hundred miles away. The experiment had been carefully planned by cable. At an appointed hour Mr Mills began to count into the transmitter at Arlington. His numbers and a few simple words which followed were caught by another engineer of the company stationed at the receiver in Hawaii, and were returned, with confirmation of the time when they were received, by cable. Bernard Gherhardi, engineer of the company's plant, says that when the conditions abroad are such as to permit of experiment there will be within talking distance the leading capitals of Europe—London, Paris, Berlin, Brussels, Petrograd, and Rome, and probably Rio de Janeiro, in South America. Further equipment at Seattle, as at Arlington, might make it possible to speak to Yokohama, Japan, a distance of four thousand eight hundred and fifty miles. Mr Gherhardi admits the possibility of speaking round the world. This might be accomplished by a series of wire and wireless connections, wire wherever possible, and wireless across the gaps. But for the outbreak of war it is quite probable that Buenos Aires would have been brought into wireless telephonic touch with London before now, while it is certain that conversation would have been opened between Carnarvon and New York. Experiments were in progress, and the results were highly promising; but further developments were abruptly interrupted by the outbreak of hostilities, the Government exercising its prerogative, and taking over all wireless stations. At the same time, however, wireless telephony has made distinct progress in this country, especially in the navy, a perfect system over a limited distance now being in continuous opera-

tion. But wireless telephony suffers from the same disability as etheric telegraphy. If other instruments are in tune with those engaged in the conversation the latter may be overheard, and, if expedient, the transmission of messages may be very effectively disturbed, 'jamming' being far more destructive in talking than in connection with telegraphy. When one remembers, however, that the first radio-telegram was sent across the Channel only a few years ago, and that to-day one is able to talk through space for four thousand nine hundred miles, one is able to gather a striking impression of the tremendous speed with which progress and development in this field have advanced. Moreover, it is as well to remember that it was only in the early part of this year that it became possible to telephone over the wire between New York and San Francisco.

A SIMPLE WATER-STERILISING PROCESS.

Water sterilisation by means of the ultra-violet rays has long since passed from the laboratory stage to practical application, many municipalities upon the Continent having introduced elaborate equipments for purifying domestic water in this manner. At a recent meeting of the Academy of Sciences in Paris a French investigator introduced a new and simplified application of this process, which has aroused considerable interest. Monsieur Billon-Daguerre, the scientist in question, has perfected his system, and it should prove extremely useful in connection with the sterilisation of water for consumption upon the battlefield, although it is equally applicable to any other conditions where pure water is demanded. In this process the water is made to flow in a very thin sheet or film over a surface, and during the passage is exposed to intense ultra-violet radiation, the outstanding feature being that the treatment takes place immediately before the water is drawn off for use. The apparatus may be placed in the ordinary or other tank, and includes a special outlet of T-shape made of pure transparent quartz, provided with a window or slot. A mercury vapour lamp is placed in the pipe so as to occupy this slot; consequently the water in passing to the outlet must first traverse the surface of the lamp, and thus become exposed to the maximum ultra-violet radiation. The process was subjected to exceedingly searching tests. The water to be treated was drawn from the Seine below Paris, and was further contaminated with germs of cholera and diphtheria. Indeed, every effort was made to render the water under test as poisonous as possible. The germ-contaminated water was then drawn off in the usual manner, being induced to flow over the lamp, and upon withdrawal was

found to be absolutely sterile, all contagious germs having been completely destroyed as a result of exposure to the ultra-violet rays. The test was sustained for a prolonged period; but it was discovered that after three thousand hours' continuous operation the water was as germ-proof as the first gallon withdrawn. The process is extremely economical in operation, and the apparatus cheap to install. The output can be varied to meet requirements, the practice being to increase the number of lamps proportionately to the hourly consumption of the water; but two quartz mercury lamps suffice for treating a flow up to two thousand five hundred gallons per hour. When the consumption is below one thousand gallons per hour one lamp suffices. For field installations it is pointed out that it would only be necessary to mount the delivery tank upon the deck of a motor-car, using the engine to drive a small dynamo to feed the lamp or lamps with the necessary current. Seeing that the automobile has been adapted to operate searchlights by the aid of the car's own engine, its application to water sterilisation should prove equally simple.

ELECTRIC LIGHTING FOR THE FARM.

During the past two or three years the employment of electricity upon the farm has undergone considerable development in Great Britain. One great objection to this system of illumination has been the fear that highly skilled labour is essential to its installation and maintenance; but the increasing utilisation of oil-engines as a source of power has dispelled this illusion. Accordingly a British firm conceived the idea of putting on the market a complete electric-lighting installation of simple design, highly efficient, virtually 'fool-proof' and capable of being installed and maintained by a farmer of average intelligence. At the same time the question of initial expense had to be borne in mind. However, an experimental installation was prepared, and was displayed at an exhibition. It aroused instant and widespread attention, the average farmer having long since appreciated the inconveniences and dangers attending antiquated oil-lamp illumination. The result is that the farmer's electric set has come into extensive favour, and is having a promising vogue. The installation comprises everything that is required, including a small petrol-engine, some seventeen lights of various types to meet the decorative scheme of different apartments and buildings, sufficient supply of wiring, fuses, lamps, switch-board, dynamo, and a special type of storage-battery. Moreover, the set is made up in such a manner that nothing else whatever is required, while the task of installing can be carried out by the owner himself without any extraneous aid. The whole equipment is of substantial construction, the parts which ordinarily demand careful handling and supervision being unusually robust.

The battery is of sufficient capacity to supply two-thirds of the lights at the rated candle-power for eight hours continuously, the battery being recharged during the hours when the light is not required.

A DUSTLESS DUSTING-MOP AND DUSTER.

In a recent issue we drew attention in the 'Month' to a new polishing-mop which had been placed upon the market. Owing to its success another mop constructed upon identical principles has been perfected for dusting walls, ceilings, furniture, and similar surfaces. In its general appearance it resembles the floor-polisher, the outstanding features being the unbreakable steel frame, a point in front to penetrate corners, and the spring handle. With this mop it is not a question of merely disturbing the dust at one point to settle somewhere else. The dust is collected by the mop. By its means walls may be cleaned with ease and hygienically, and from the floor-level, so that physical effort is reduced to the minimum. Another valuable acquisition to the home is the dustless duster. This is a chemically treated cloth, of open mesh, which, in use, absorbs the dust with which it comes into contact. The dust cannot be shaken out; it can be removed in one way only—by washing with soap and water. This treatment does not impair the dusting qualities of the duster, as it is instantly ready for use when dry. This duster is ideal for polishing furniture, cleaning glass and even delicate fabrics such as velvets, silks, or plush.

A VACUUM CLOTHES-WASHER.

A handy device which appreciably reduces the fatigue of washing clothes has been introduced into this country from Canada, where it has an extensive vogue. This is the vacuum clothes-washer. It is of simple construction and easy to manipulate. It comprises a metallic bell, the cone of which is fitted with a ball valve attached to a hollow handle. All that it is necessary to do in the laundry operation is to allow the clothes to soak in the usual washtub solution, and then to move the washer up and down in the manner of a stick. In so doing, the vacuum which is formed in the bell forces and sucks the boiling suds through the clothes, the dirty liquid forced to the top of the bell escaping into the handle of the contrivance. The ball assumes its normal position, thereby preventing the dirty suds returning to the tub; while a new vacuum is formed in the bell. The washer does not disintegrate the fabrics, but merely draws the liquid through them, the dirt being sucked away in the process. The washer can be used in connection with any articles from the heaviest blankets to lace curtains, and practically no effort is required in its operation. From tests which have been made it has been found possible to wash a tub

of clothes within three minutes. The contrivance can be applied to any vessel in which laundry operations are carried out, be it washtub or pail. Owing to the fact that the hands do not require to be immersed in the water it is possible to have the latter scalding hot, with the result that the cleansing operation may be completed more satisfactorily. The washer is not only applicable to the 'wet' system of cleansing, but can also be employed for dry-cleaning with equal facility, petrol or benzine being used in this instance instead of water.

THE DEMAND FOR INDUSTRIAL ALCOHOL.

The situation in the motoring industry—indeed in all ramifications of activity in which the high-speed internal combustion figures—is rapidly assuming a serious aspect owing to the increasing difficulties concerning the supply of a suitable liquid fuel at a fair price. Petrol is the ideal fuel for motor-engines, but in this country we are entirely dependent on foreign sources of supply. Many of the centres whence our oil-supplies were derived have either been ravaged by war, rendered inaccessible, shut down, or their output acquired by the Government. The outlook is aggravated by the circumstance that competitive fuels, such as benzol and shale spirit of British production, are no longer available. The first-named, which is a by-product of gasworks and coking-ovens, has been taken over in bulk by the Government to ensure an increased supply of high explosives such as T.N.T., T.N.A., and so on; while the shale spirit has been similarly acquired for national purposes. The result is that this country is now virtually dependent upon America for its supplies; and as the American output is controlled by a trust, there is every indication that the prices will be forced to an abnormal level which otherwise would be impracticable were the competitive fuels available. But the position is not confined to this country. A similar state of affairs exists in France, which has no local oil-beds for exploitation. But our ally is resolved to check the moves of the monopolist. The petroleum trust dreads nothing so much as the extensive production of industrial alcohol, which can be derived from almost any organic substance, and, what is more, can be produced at such a cheap figure as to ensure its supremacy over the petroleum rival. What is required is merely the organisation of the country's facilities to ensure the production of the fuel upon a sufficiently extensive scale to assure all requirements being met. There is every indication that France intends to pursue such a line of action. The first decisive move will be consummated in the year 1917, when the manufacture of industrial alcohol will become a State monopoly. The French nation is loyally supporting the movement, more especially as the human consumption of alcohol is being rendered difficult

by the imposition of heavy duties. In these islands it would be wise to emulate the French example, partially if not entirely, the main consideration being to support home industries and to free them from the American oil octopus. In Britain the extensive manufacture of alcohol fuel has been discouraged, the authorities fearing that it would lead to illicit and clandestine drinking of impure spirit, which undoubtedly would mean widespread physical ruin. Industrial alcohol developments are being held up until an efficient denaturant is evolved, and the discovery of this agent constitutes the crux of the problem. This country is quite capable of producing all the volatile fuel which industry demands. In some quarters it is maintained that the coming of alcohol would render it necessary to carry out alterations in the motor; but this is not an insuperable technical problem. The light motor which we know to-day had to be designed especially to operate upon a volatile fuel; and if to-morrow the import of petrol were rendered impossible by the imposition of a prohibitive duty, the incidental and, as it were, compulsory stimulation of our inventive resources would result in the production of a motor running on alcohol, and every whit as efficient, reliable, durable, and silent as the petrol-engine of to-day.

HUMOGEN—BACTERISED PEAT.

Few developments in the science of agriculture have aroused such extreme attention during late years as those carried out by Professor W. B. Bottomley, of the Botany Chair, King's College, London. It will be recollected that some years ago this scientist perfected a means of bacterial culture for the propagation of legumes upon a more profitable basis, the treatment consisting of the inoculation of the soil to stimulate and to multiply growth. Recently he has made another discovery of equal significance, the features and results of which he has communicated in the course of three interesting papers presented to the Royal Botanical Society under the title of 'Wonders of the Soil.' In this instance he has dealt more particularly with his latest invention—bacterised peat, the new plant-food called 'humogen;' and undoubtedly the most fascinating feature of his lectures was the production of samples of potatoes and other vegetables which had been raised therewith. Not only is the produce larger and healthier than that grown under normal conditions, but the yield is far more prolific. Radishes and tomatoes had been produced in sand watered with a weak solution of the preparation. An acre of land treated with a ton of the peat had produced 41 per cent. more potatoes than similar land treated with eighty tons of manure. One tomato-plant gave sixteen pounds of fruit. In view of the indefatigable efforts which are being made by the Government to encourage the more

widespread raising of vegetables to meet home requirements under the stress of war, the utilisation of this discovery upon an extensive scale would tend to render the culture of such produce more profitable. Professor Bottomley has announced his readiness to assist the country for the period of the war by the presentation of his interests, patents, and rights to manufacture the bacterised peat. The Council of the Royal Botanic Society have formed the nucleus of a national committee in order that Professor Bottomley's great discovery might be made of benefit to the nation as a whole. See *The Spirit of the Soil*, by G. D. Knox (Constable), to which Professor Bottomley has written a preface.

THE CERTAINTY OF OUR WHEAT-SUPPLY.

Despite the fact that Russian wheat cannot be shipped to this country until the Black Sea is rendered accessible, there is no necessity to feel apprehensive concerning the continuity and adequacy of our wheat-supply. Upon the outbreak of war the Canadian Government strongly urged that more and more stretches of the vast Western prairie should be broken and brought under grain cultivation. The farmers responded to the call with striking enthusiasm, and owing to the propitiousness of the season and continuity of favourable weather during the ingathering of the grain, our North American colony has enjoyed a bumper harvest. The grain which is now available is adequate to carry these islands through another year, and yet leave ample to spare. In June of this year, despite the unprecedentedly heavy shipments to Great Britain and Belgium, there were some fifteen million bushels of wheat still remaining in the Canadian elevators, which represented about 25 per cent. more than that available at a similar period of the previous year. There was an appreciable reduction in the coarse grain, but this was explained as being due to the extremely heavy demand which had arisen for oats, the bulk of which exportation had been for military purposes. While the harvest this year is far in excess of that of any previous years, and is throughout of excellent quality, there are ample facilities for storing it against shipment to this country. The railways, partly owing to deficiency in other business, but mainly to meet the national demands, have concentrated their transportation resources upon the rapid removal of the grain from the fields to the distributing ports; and, owing to the completion of two new trans-continental railways a short time before the outbreak of war, the movement of the grain has taken place far more smoothly than hitherto. In other words, the railway accommodation is now superior to, instead of being less than, the demand, with an incidental diminution in congestion at the clearing centres, combined with expeditious movement to all the available ports. Lack of facilities is experienced in only one

direction—the shortage of vessels, owing to the demands of the military and Admiralty.

THE HOMING PIGEON AS A MESSENGER.

From the earliest times recorded in history the homing pigeon's wonderful faculty of 'getting home in a hurry' has been utilised in conveying messages. In the days of the Pharaohs navigators sailing to Egypt released pigeons with messages to let the people know they were coming home. In the seventh century the Arabs maintained a pigeon-post. Pigeons also rendered valuable services to the Dutch at the siege of Leyden in 1574. The siege of Paris, during the Franco-Prussian war, fully established the value of the homing pigeon as a messenger. During the siege seventy-four balloons ascended, carrying pigeons to Tours and other points. It was estimated that eight hundred pigeons were sent from the provinces to Paris during the siege, and that the total number of messages carried by these winged messengers would make a library of five hundred volumes. So successful was the pigeon-post that Bismarck established a pigeon-loft in Berlin for the use of the army. There were also lofts at Cologne, Metz, Strasburg, and Baden. The Emperor gave prizes to encourage the sport of pigeon-racing. Ten years after the war there were no fewer than one hundred and seventy-eight private homing-pigeon societies in Germany, owning a total of fifty-two thousand two hundred and forty pigeons, exclusive of the military flocks. In the French army the breeding and training of the pigeon-messenger service are both under the care of the Engineer Corps. The pigeon-houses are placed facing the north-east, which is opposite the direction from which the worst rains come. The average flock consists of about a hundred birds, each of which receives daily rations of an ounce and a half of peas, beans, and vetches, divided into three meals, with unlimited mortar, salt, sand, and oyster-shells to aid digestion. As soon as they can fly, which is when they are about five weeks old, their training begins, and continues throughout their useful life, which averages about fifteen years. Great care is taken to prevent them from perching on anything when they are taken out for their first flight. Those that do perch on neighbouring roofs are shot without mercy. The command to fly is given by shouting and clapping of hands; and the signal to return is a whistle. As soon as the young pigeons have acquired confidence in their wings they are taken a couple of kilometres from home and released. The distance is increased daily to three hundred kilometres on the thirty-fourth day. After the pigeon is fully trained, so that it can find its way home from any point of the compass from a distance of three hundred kilometres, it is exercised morning and afternoon daily, except when the weather is bad. Despatches are written on strips of paper, or else

they are photographed from manuscript on to films. In the French army two methods of attaching the message to the pigeon are used. In one a goose-quill an inch and a half long is slipped over one of the tail-feathers; then the message is inserted, and held in place by a very small wooden plug. Another method is to attach a tiny aluminium cylinder containing the message to one leg. Sometimes the message is written on a strip of very thin, strong paper, six inches long by three-fourths of an inch wide, which is simply rolled about one leg and held in place by a rubber band. An ordinary homing pigeon can be relied upon to make a flight of two hundred and fifty miles in from five to seven hours. A few can fly from five hundred to six hundred miles. Some of the finest records have been made by American birds. One of these remarkable birds made a flight of two hundred and forty-three miles in two hundred and thirty-seven minutes.

THE NEW ZEALAND TUI.

Mr S. F. Whitcombe of Dunedin, a constant reader of this *Journal* for over forty years, writes to correct a misstatement made by Mr R. W. Reid in his article on 'New Zealand's Tuatara.' The writer said that 'fears exist that the sweetest singer of all New Zealand's birds, the tui, may have been heard for the last time. The Govern-

ment last year despatched officials to search the interior of the larger forests and other solitary places with the object of, if not capturing the tui, making sure that it continues to exist. But up to the present time no tui has been discovered.' As a refutation of this statement Mr Whitcombe says: 'There are, I am thankful to say, thousands of our dear old tuis, or parson birds, still to be found wherever there is bush country. He is called the parson bird because of a tuft of white feathers hanging from his breast, which bear some resemblance to a parson's choker, without the dog-collar attachment. The huia, the bird that has practically vanished, can scarcely be called a singer at all. During mating-time huias have one or two sweet call-notes, and the male bird has at all times a peculiar and long-drawn-out whistle. The tui, on the other hand, besides his own beautiful notes, is a wonderful mimic, and can "take off" all the other bush birds.' The New Zealand Year Book says the tui (*Prosthemadera nova-zealandiae*) affords one of the most beautiful sights in the New Zealand forests, and charms visitors with its silvery notes.

To Correspondents who wish fuller information regarding new inventions mentioned here, addresses will be furnished, when possible, provided a stamped and addressed envelope or post-card be sent to the Editor, 339 High Street, Edinburgh.

Volume V. of the Seventh Series of CHAMBERS'S JOURNAL is now completed, price Nine Shillings.

A Title-page and Index, price One Penny, have been prepared, and may be ordered through any bookseller.

A cloth case for binding the whole of the numbers for 1915 is also ready.

Back numbers to complete sets may be had at all times.

Annual subscription, including postage to any address, either at home or abroad, 9s. 6d.

In the January Part of CHAMBERS'S JOURNAL (published about 22nd December) will appear the first instalments of a New Novel

ENTITLED

THE DAY OF WRATH,

By LOUIS TRACY.

Readers of mature age can hardly fail to remember the sensation caused by Mr Tracy's serial story *The Final War*, which began publication on 1st January 1896. It is no exaggeration to say that millions of people followed that remarkable piece of fiction week by week. Now, twenty years later, after having in the interim produced such works as *Rainbow Island*, *The Pillar of Light*, and *The Terms of Surrender*, Mr Tracy has again written a war story. This time the theme is fact, not fiction; he deals with the tremendous issues of the present war as a skilled novelist. He shows *Kultur* at work in all its vileness, yet maintains the reader's unflagging interest in the adventures of a noteworthy hero and a most delightful heroine. *The Day of Wrath* should appeal to young and old. Its history is that of the hour.

Also a Novelette, entitled *THE BRAVEST OF THEM ALL*, by A. M. Cleland, and other Stories, with the usual popular and instructive articles.

END OF THE FIFTH VOLUME.

CHRISTMAS 1915.

A WOMAN OF BUSINESS.

By J. J. BELL

CHAPTER I.

'MUCH of what you say, my dear Thanet, is undoubtedly true—to a certain extent,' said the lawyer, in his most soothing tones. 'While I can scarcely admit the term "dishonesty," I grant you that the methods of your opponents are, to put it mildly, grossly unfair. Unfortunately you have no remedy. The expert whom I have consulted assures me that there has been no infringement of your patent.'

'But, confound it, sir! the thing is glaring!' cried the little, gray-headed, gray-whiskered man, his usually mild blue eyes ablaze with wrath. 'It—it's immoral!'

'Unmoral, if you will. Believe me, I sympathise with you most heartily. I know as well as you do that this is not the first time'—

'Nor the second, nor the third, nor'—

'I know—I know. You must grin and'—

'Hanged if I do!'

'My dear sir, you have no recourse. Helmer and Co. have the art—a fairly common art nowadays—of imitating another firm's specialities to the very verge of infringement. You invent an article which promises to have a good market, and immediately Helmer & Co. produce an article which in appearance appeals to a non-discriminating public as'—

A

'They produce cheap rubbish, and give it a name and appearance almost similar to mine. That's what they do, Benson! If they turned out honest goods, if they used genuine materials in their manufacture, if they had to pay for highly skilled labour, then I would not whine, for I could fight them on level terms. But their stuff is the cheapest trash; they flood the market with it, gull the public, and kill the sale of my goods—*my* goods, which have provided them with the ideas!'

'Nevertheless, Helmers are doing a perfectly legitimate business.'

'Legitimate! Nowadays, when a man dares not call his trade honest, he assures you it is "perfectly legitimate." The word is the last refuge of the mean and fishy trader. Oh——!' Mr Thanet reddened. 'I beg your pardon, Benson.'

The lawyer waved a plump hand. 'These walls have heard worse from clients less provoked than you,' he remarked kindly. 'But, as I have already said, you have no recourse. I could easily enough get up a case for you, but you would lose; I have not the slightest doubt of that. In your inventions you are by way of being a pioneer, and it seems to be the fate of most pioneers to pay more than they receive.'

The reward comes to the people who develop, not to those who discover.'

'Thanks! Very comforting, I'm sure!' snapped the little man. 'You'll be telling me next that the world's progress is largely sustained on the thefts'—

'Annexations, please.'

'I'll call it cribbing—the wholesale cribbing of the inventor's ideas!'

'It is so. You see, there are so few real inventors, and so many clever imitators. But we can't get on without either.'

Joseph Thanet gave a grunt of exasperation. 'When I look into certain shop-windows, when I see certain advertisements, I feel sick to think of the widespread and barefaced cribbing that goes on at the present day.'

'Yet it all means labour and wages, and food and fire, and clothing and education, and recreation, and—one hopes—some happiness. You can see only the inventor's side, Thanet, which is natural enough.' The lawyer took up a pencil, and began making dots on the blotting-pad. 'The master of ideas,' he continued, 'is the servant of humanity. Helmer & Co. are supplying the great public with more or less useful articles—please let me finish—which but for you would still be non-existent. The Helmer methods may not be admirable, but through them you are serving humanity.'

'Sophistry! sophistry! Since Helmer & Co. started the game my wages bill has gone down 40 per cent.'

'I should not wonder if theirs has gone up 80.'

'And therefore I ought to rejoice?'

'That is hardly to be expected. But you might take the larger view without adding to your sorrows.'

'I don't follow you.' There was a brief pause, and then the little man's passion broke out again. 'I tell you, Benson, people like the Helmers ought to be whipped out of business. If they knew all the harm they have done'—

'Men never know all the harm they have done, nor all the good either. As to the larger view: must you go on regarding Helmer & Co. as your worst enemies?'

'What else are they? You know what they have done to me. You have my last balance-sheet. Have you gone over it yet?'

Mr Benson appeared to be engrossed in the dotted circle he had sketched on his blotting-pad. His lips came together, and remained tight for about thirty seconds. Then he said gravely, 'Yes, I have studied the balance-sheet carefully.'

'Well?'

'I have a suggestion to make to you.'

'Go ahead.' Thanet had paled slightly. 'By the way, am I moving in the direction of—insolvency?'

The lawyer faced his client and friend. 'You cannot stand another two years like last year.'

'H'm! Well, what were you going to suggest?'

'That you instruct me to arrange an interview with the Helmers.'

'What?' Thanet jumped up and fell back into his chair.

'Pray, be calm.'

'Hang it, man! do you think I'm going to offer to sell my business—or what is left of it—to Helmers, the scoundrels?'

'That was not my idea. Amalgamation is what I would propose. Your inventive brain in conjunction with the Helmer business minds would'—

'Never!' With clenched fist Joseph Thanet smote the chair's arm. 'Never! I'll fight to the bitter end. I'll begin now and fight Helmers on their own ground, with their own methods! By God, I will! And I'll cost them something before I go down. Not another word, Benson. I know you mean well, but you have understood me very little in the past if you imagine that I could ever give your suggestion a moment's serious consideration. No, sir! Joseph Thanet may be the victim, but he's not going to be the backbone of a sneak-thief firm like Helmer & Co. I'll go my own way till I'm stopped by bankruptcy, and after that they can hunt about for the brains of another decent man to pick. There! That's my last word, Benson.' He snatched up his hat, and held out his hand. 'Good-bye.'

The lawyer had risen also. 'It's four o'clock,' he said pleasantly, 'and I usually drink a cup of tea at that hour. Stay and join me. I shan't refer to business further except to say that I'm always at your service, Thanet. Now sit down again.'

Thanet grasped the other's hand and made for the door. But there he halted, grinning a grin that distorted his naturally open and kindly countenance. 'Guess where I'm going now?' he said thickly.

Benson's heart misgave him, but he smiled as he replied, 'To see your niece, perhaps. I suppose she is now fairly settled in'—

'Look here, Benson,' the little man interrupted. 'Are you hinting that I would borrow from my niece? Because if you are'—

'My dear Thanet, I had not thought of your asking her for more than I have just offered you—a cup of tea. Doubtless her company will do you more good than mine could. All the same, since you have mentioned the word "borrow," I'll venture to remind you that she wrote you about a year ago, when she came into her fortune, offering you all you cared to ask for.'

'So she did—God bless her!' said Thanet, his face softening. 'I had forgotten I told you at the time.'

'It's a pleasant thing to remember, at all events.'

[Christmas Number.]

'Yes.' But the ugly grin came back. 'However, Benson, as it happens, I'm not going to call on Lydia now. I'm going across town to call on Helmers'—

'What's that?'

'And tell them exactly what I think of them!' He dashed out, banging the door behind him.

'Crazy!' muttered the lawyer, with a gesture of helplessness.

CHAPTER II.

IN the United Kingdom, at this time, there could have been few stores, ironmongers, and fancy goods shops, which did not stock the Helmer products. The detailed list of these products would make wearisome reading. Enough to say that it included vacuum flasks, tin-openers, pocket electric lamps, corkscrews; all more or less novelties in their respective ways. They were made to sell, and they sold. They always looked attractive, even when they were most exasperating. Some of them withstood the uses to which they were intended to be put for quite a long time; others made gentle women sigh and strong men swear. But they were so cheap—so amazingly cheap! People purchased whether they required them or not, and wondered how on earth the manufacturers did it. Which was precisely what the manufacturers themselves must have wondered when they analysed a week's sales, for the margin of profit on many articles was so thin as to be almost invisible. Only an enormous output, combined with indefatigable economising, could have made the Helmer business worth while. And Richard Helmer, the son, had lately begun to ask himself whether it was worth while, after all.

Stephen Helmer, the father, was a big, handsome man, with keen gray eyes and a coldly courteous manner. He spent ten hours of the day at his business, and put work into every minute save the fifteen during which he lunched. Richard had his father's build, but his dead mother's brown eyes, and there was nothing repellent in his bearing. He performed his duties conscientiously rather than eagerly; his life was not wholly absorbed in the business. Between the two men existed a great and abiding affection.

They were together in the private room when Mr Thanet was shown in; but when the storm broke, which happened almost with the closing of the door, Richard at a sign from his father went out.

One of the most painful of human spectacles is that of a sober, earnest man, distracted by a sense of injury and injustice, real or imaginary, his self-control shattered, giving vent to hysterical breathings of threatnings and slaughter; and 1915.]

only pathos is added when his opponent remains apparently unmoved and cynical. Wherefore the greater part of the interview between Joseph Thanet and Stephen Helmer is here suppressed.

'We are engaged in a legitimate business,' said Helmer coolly, when the other paused breathless. 'We supply a public demand. We find ideas where we can, without infringing legal rights. If you think we have infringed yours, you have your remedy. At the same time, you should really not behave as if you had invented electricity itself, or the principle of the corkscrew. Personally I am sorry to hear you are finding trade dull; speaking for my firm, however, I fear we can do nothing to stimulate it for you.'

'Legitimate!' shouted Thanet, beside himself. 'You coward! But—but listen! I'm going into the legitimate business myself—ha! ha! Two can play at the game, Mr Helmer, but only one can win!' He made for the door. 'And I think I shall win! Have you anything to say before I go?'

'I would suggest that you purchase a bromide on your way home, Mr Thanet,' was the polite reply.

The little man looked about to burst. 'I go,' he stammered—'I go to begin a legitimate business! I go'—

'Oh, go to the devil!' said Helmer, angered at last.

Richard Helmer, looking worried, returned to the private room. 'What was the matter with him?' he asked. As citizens of a town of moderate size, his father and Thanet, he was aware, had met before now. 'What brought him here?'

'I'm rather sorry for the man,' said Helmer senior, 'and for myself. He began by losing his head, and I ended by losing my temper. But he was impossible to deal with. Things are going against him, and he lays the blame on us. He was as nearly mad as I ever wish to see a human being.'

Richard sat down at the desk opposite his parent. 'What exactly was his grievance, father?' he asked uneasily.

'Oh, he accuses us of taking advantage of his inventions. I didn't deny it; in fact, I admitted it. These inventors never see their own thefts. You needn't say anything, Dick. I'm aware of your delicate feelings on the point; but you and I are not going to fall foul over a question of ethics—or ideals—are we?'

'We are not going to fall foul over anything. Still, it's rough on Thanet if things are as bad with him as his behaviour suggested.'

'They must be very bad,' said Helmer senior thoughtfully, 'and yet he left me with a threat; declared he would play our own game and break us, or words to that effect, by which I suppose he meant that he was going to undersell.'

'He can't do that. He hasn't got the plant for producing our class of goods.'

'Nor the money to provide the necessary plant. All the same, my boy, there was something behind his talk.' Helmer senior's face was grave. 'I confess I didn't like it. We haven't any reserves to spare for a fight. Things have been cut too fine for that.'

Richard returned no comment, but he appeared so perturbed that his father said sharply, 'What's the matter? You look as if something had hit you.'

The young man forced a smile. 'Something has hit me—an idea. We have got to remember that he is the uncle of Miss Lydia Thanet;' and he added, rather bitterly, 'the Argentine heiress.'

'Ah!' murmured Helmer senior, 'that ought to have occurred to me. Still, they must be practically strangers. Her father and Thanet quarrelled badly many years ago. She was a mere child when her father took her out to the Argentine, and she has never been home until now.' Something like a smile dawned in the keen gray eyes. 'Why, Dick, you must know her a good deal better than her uncle does.'

'A few meetings in Buenos Aires and on the steamer coming home do not necessarily involve a very close acquaintance,' the young man replied, a trifle stiffly. 'Why did he suppress the fact that the few meetings on shipboard had happened daily?'

'You have not seen her since your return?'

'I chanced to meet her in Queen Street yesterday.' A slight pause. 'She was good enough to invite me to call on Sunday afternoon.'

'That was friendly. I think you told me she was a good business woman?'

'In Buenos Aires they said she knew nearly as much about her father's affairs as he did. At any rate, he left his fortune to her without restrictions of any sort. So there is nothing to prevent her handing over a portion of it to her uncle if she feels so inclined.'

'So!' muttered Stephen Helmer. Then, 'I say, Dick, would you like me to climb down, and—er—apologise to Thanet?'

'Good heavens! Are you afraid for the business?'

'For once,' said the elder man slowly, 'I was not thinking of the business. I was thinking of you.'

'Of me!'

Their eyes met. In Helmer senior's was the suspicion of a twinkle. Helmer junior reddened. Then they both laughed, but not unconstrainedly.

'Look here, father,' said Richard, 'it isn't like you to go in for absurd notions. Please understand that.'

'Is it absurd?'

'Absolutely.'

There was a short silence, and then the elder man said in his ordinary brisk voice, 'Well, it

remains to be seen whether Thanet was bluffing or not. Anyway, we'll let him make the opening move.'

CHAPTER III.

ON the following Sunday Richard took tea with Miss Lydia Thanet and her companion, a maiden lady of some fifty summers, whose disqualifications for her position of duenna to a wealthy young woman included an ungovernable sympathy for comparatively poor young men, and an ineradicable mistrust of rich ones. She was an amiable, tender, timid creature. No chaperon was ever more carefully protected by her charge than was Miss Melrose by Lydia Thanet.

Lydia's person was a mingling of northern fairness and southern grace. With her fine, fearless eyes, short straight nose, provocative mouth, and (by way of compensation) dignified chin, she had proved attractive enough to many young men—too attractive to some. Richard was as deeply in love as a young man may be, and as hopelessly as an honest one must be, with a maiden whose worldly possessions have been recently officially valued at a million and a half sterling. Yet Richard had never felt so hopelessly hopeless as on this Sunday afternoon. On the deck of an ocean liner, on a summer sea, no dream of happiness need seem quite vain; but beyond the fair illusive horizon the solid land awaits the dreamer with the coldest of realities and the hardest of facts.

As for Lydia, if she were not actually in love with Richard, she probably liked him better than any man she had yet met. Certainly she had felt glad when she first learned that he belonged to the town wherein she was going to live for the year of her stay in the Old Country; and surely she had given him at least her friendship, for she had by no means grudged him her company on the homeward voyage. One cannot be positive on the point, but one may imagine that her regard for Richard may have had something to do with a somewhat freakish action committed by her a few days before the ship reached port. Her English agent had engaged for her occupation a mansion with a hundred acres of grounds and an army of servants. To his stupefaction, he received a wireless message to the effect that, firstly, Miss Thanet had decided not to reside in the mansion; secondly, that Miss Thanet desired him to secure a villa on the hill above the town, with a secluded garden and a couple of maids. Well, this may or may not have been done to avoid the flaunting of wealth before the eyes of a young man whose fortune, as she had guessed, was mostly in the future. If a girl does not know exactly what is in her own heart—and

[Christmas Number.]

she does not always—then nobody else need hope to find out. But whatever result the action was fated to have so far as Richard was concerned, it created immediate excitement in the town and vicinity. Countless theories were aired, the least fatuous perhaps being that Miss Thanet had suddenly lost all her money. Later it was reported that she was saving up to buy a steam yacht, price two hundred and fifty thousand pounds.

Now, if Richard had been an exceptional young man—that is, a young man who not only always thinks what he says, but always says what he thinks—he would have spent his little hour of that Sunday afternoon very differently. He would have begun by getting rid of Miss Melrose, who, as a matter of fact, would have wept and obeyed with joy had he requested her to retire; and he would then have proceeded to say what he was thinking—to wit: 'Lydia, you lovely, adorable girl, I love you better than all the world. I wish you hadn't so much money, and I wish I hadn't so little. But, oh my dear, if you would only care for me a tenth part of what I care for you, I'd be the happiest man alive.'

Being just an ordinary young man, Richard sat there and drank tea and manufactured futile conversation, feasting his eyes at intervals and starving his heart all the time. At five-thirty he abruptly, yet reluctantly, took his leave, and presently went forth with a smile on his lips and despair in his soul. It had been an eminently unsatisfactory call. Lydia, who had gone with him to the door, returned to the drawing-room, saying something about 'a horrid, hateful changeable climate' in an unmistakably pettish tone of voice, with an accent on 'changeable'; and Miss Melrose went up to her bedroom and sobbed quietly for five-and-twenty minutes by the clock. She usually celebrated with tears the departures of nice, ineligible young men; but hitherto she had never exceeded ten minutes.

On leaving the garden, Richard, preoccupied with his misery, and assuring himself that he would never call again (and thinking she might, at least, have asked him to do so), turned to the right. Had he turned to the left he could hardly have missed seeing the approaching figure of Mr Joseph Thanet.

Mr Joseph Thanet recognised Richard at once, and almost made a false step. 'Now, what was young Helmer doing there?' he said to himself. 'If they are friends, it might be awkward. I'd better be careful.' Astonishing how quickly the simple soul acquires guile when it goes out to look for revenge!

Forty-eight hours had passed since Thanet's scene with Helmer senior, and few of these hours had the little man spent in repose. His passion had not evaporated; it had congealed. A bachelor, and a lonely one as a rule, Thanet had filled the hours with brooding and writing,

1915.]

until his mind was charged with plans, his table littered with calculations and estimates. He was heavy with weariness; even as he rang the bell he yawned. But if all went well, he told himself, he would sleep sound in the coming night.

His niece received him with all cordiality. 'But,' she continued severely, when he was seated, 'why do you neglect me, Uncle Joseph? This is only your second appearance, and I have been here three weeks.'

'I have been very busy, Lydia,' he answered apologetically—'very busy.'

'But you are free for to-night. You'll dine with us.'

'Not to-night, thank you. I'd be dull company. I have several bad nights to make up for.'

'You do look tired, poor man!' She rang the bell, and when he had refused a stimulant, ordered tea despite his protest. 'If you had come a little earlier,' she remarked, 'you would have had Mr Richard Helmer's company. We met him in Buenos Aires—Miss Melrose and I—just before we left. He was out there on some business, I think.' Why did she not refer to the homeward voyage? 'Of course I mentioned your name, and he said he—or was it his father?—had met you once or twice.'

'Yes, we've met,' said Thanet, controlling his voice; 'but I could hardly say I'm acquainted with Mr Helmer—the senior, I mean. The young man I know only by sight. I know very few people; I so seldom go anywhere. My business is my hobby.' He managed to smile, and began to ask questions regarding her life in the Argentine.

'Yes,' she said in reply to one, 'I must go back in a year to look after things; but I shan't settle down altogether. I must see some more of the world.'

'I heard you had bought a yacht, Lydia,' he said.

'Not exactly, Uncle Joseph. I am going to have one built; but I have only got the length of the designer, though I hope to sail in my own boat a year hence. Perhaps you will take a holiday and come with me. I'm sure you need one.' The expression of her eyes became very kindly. 'You know,' she went on, 'I always wondered why you and father didn't get on. I don't want to hear the story—if there is a story; but I'd like you to believe that your only niece, Uncle Joseph, is your friend. She doesn't like to see you looking so tired and worried. Is—there anything she can do for you—anything?'

Sometimes the door is opened ere we dare to knock. Thanet, struggling in the dark, nerving himself to ask, suddenly found himself in the light, his desire being pressed upon him. He was dazzled—overwhelmed.

'Do you mean that, Lydia?' he said faintly, at last.

'Do you?' she cried. 'Oh uncle, can I really do something after all? Is it—money?'

'Yes, my dear, it's money—a lot of money,' he replied.

She clasped her hands; her eyes sparkled. 'Oh Uncle Joseph, how happy you have made me! Quick! tell me what you need.'

'I'm afraid,' he stammered, and stuck fast. He had intended to ask for a loan of ten thousand pounds.

'Afraid!' She laughed softly. 'Do you know, you are so like father that the very thought of doing anything for you is beautiful. And you are my only relation in this country. Come, tell me. Is business not so good? Or are you wanting to extend, and haven't quite enough capital? Or perhaps'—

'To extend,' he interrupted, clutching at the word. He was still dazzled, but with a new and colder light. The more capital he could command the sooner would he confound his enemies and begin to recoup himself and her. And what was ten thousand pounds to Lydia? It was not mere greed that inspired him to raise the figures in his mind to twenty thousand pounds. He was touched; but, yes, he was also dazzled. 'To extend,' he repeated, and was glad of the interruption caused by the arrival of tea.

'Tell me all you care to tell about it,' she said, when she had served him. 'I know a little about business, and I sha'n't interrupt.'

He told her all he cared to tell about it. (How easy she had made it for him!) For the first time in Joseph Thanet's business life the truth did not come naturally to him. Still, the sin was more of omission than commission. He simply left out the Helmer element, which, to be sure, was equivalent to leaving the spirit out of the wine.

He was not far from tears when, an hour later, he bade her good-night. She had given so generously, so joyously. 'Better have plenty, Uncle Joseph,' she had said, smiling up from her fine, bold writing.

The cheque in his pocket-book was for fifty thousand pounds.

A little way up the road he halted. The huge wonder of the thing had smitten him, and literally taken away his breath. He panted. He could have prayed then. But his gaze fell on the town lying there in the shallow valley; it travelled to the eastern end of the town, to where the low enclosing hills sloped into the far-stretched plain, over which the full moon was climbing through the clear, windless sky. Yet the face of the moon was sullied, it seemed. Athwart the great silvery disc a thin trail of smoke drifted upward. Joseph Thanet's gaze rested there awhile, then sank to the tall chimney of the Helmer factories.

The little man grinned, and said, half-aloud,

'By God, there won't be much smoke a year hence!'

Verily, he was dazzled, and now the light was tinged with red.

CHAPTER IV.

INVENTIVE brains and commercial wits are a rare enough combination, and tragedy lurks behind the fact that the possessor of the former recognises not his lack of the latter. Yet while we may easily detect the madness in the methods of Joseph Thanet, we must still admit a method in his madness. By the ruin of the Helmer firm he would secure not only his revenge, but the command of a huge and profitable trade—profitable because, with the Helmers crushed out of business, he would be free to raise prices all round. To plead insanity on his behalf would be absurd, unless we are prepared to regard the world's money monarchs—reigning or dethroned—as merely more or less brilliant monomaniacs.

Thanet derived strength from his very weaknesses. A man cannot estimate the cost of revenge; but his ignorance is his boldness. A man need not be a born fighter to prove himself a stubborn one. The human soul that most meekly endures all manner of wounds and bludgeonings of sorrow and disappointment leaps up in fury at the poisonous prick of injustice. Without Lydia's help, Thanet would still have flung himself and the inadequate, feeble weapons he possessed against the enemy. Now he was magnificently equipped. Never before had he controlled such forces—such golden legions! Fifty thousand pounds! God bless Lydia Thanet!

The old semi-dormant factory awoke into volcanic activity. Furnaces, long cold, roared and glared. Rusted chimneys belched flame and smoke and vapour. Rotting floors were relaid. Ruined window-frames were reglazed. Tottering brickwork was rendered secure. Great galvanised sheds took shape with amazing rapidity and horrid clangour. Trucks of new machinery arrived. Men and women thronged the office with the word 'Employment' over the door.

Thanet's first blow at the Helmers was a shrewd one. He bought up their foreman, their most skilled workers, their most capable agents. A time was coming when the firm would have small use for the services of these people; but the desertions now created confusion and difficulties and expenses more easily to be imagined than described.

Six months later, the Helmers held a council of war.

'He is getting the business,' said Richard, looking up from the weekly abstract of sales.

'That was to be expected,' the other commented, with an attempt at a cheerful tone. 'But
[Christmas Number.]

what is it costing him? Something enormous, I guarantee.'

'This is what it is costing us,' and Richard read figures from the abstract.

'So much as that!' Helmer senior winced. 'Well, my boy, there is nothing for it but to fight on. He can't keep it up. His niece will get tired of sinking money. Now that he has taken to advertising as well as underselling, the end can't be far off. By the way, are you going to dispose of those mining shares of yours?'

'They're sold. We'll have the money on Friday.'

'Hard on you, Dick. Well, I arranged this morning for a bond on the house—one thousand eight hundred pounds. So we'll sink or swim together. If only we had more capital! All the same'—Helmer senior's eyes were fierce—'I want to beat that crazy fool!'

'There are eleven machines idle to-day in No. 2 Factory,' remarked Richard; adding bitterly, 'though that should really be a matter for congratulation. The smaller the output the smaller the loss.'

'But we can't stop! We daren't stop!'

'We'll be forced to stop if the sales continue to dry up as they are doing at present.'

'That's looking a long way ahead. Our customers will come back to us.'

'I wonder!' said Richard. 'You know that Thanet's travellers have instructions to undercut everything on our latest list, and there's hardly an article on the list that shows a profit.'

'Dick!' exclaimed Stephen Helmer, 'surely you're not telling me you want to throw up the sponge?'

'I! Certainly not, father. But what are you going to do if—if Thanet wins?'

'What are you going to do?'

'I don't matter. But you made the business; you've lived in it, and for it, all those years.'

'And I'm ready to go down with it, Dick! Let it go at that. But we're not beaten yet. Sufficient unto the day—— Well, are you and I going to see the thing through together?'

'You don't need to ask that!'

They shook hands, smiling, with renewed courage.

Seven months later, in the same place, they shook hands, gravely, as men who respect each other for having done all that a man can do.

CHAPTER V.

FIFTY thousand pounds is a large sum of money—a very large sum—until it is spent. Then the adjective most applicable is 'insufficient.'

At the end of thirteen feverish months, Joseph Thanet applied it; but with a reservation. The 1915.]

money had been quite enough for his purposes thus far. It had gained him his revenge and an enormous trade; its insufficiency was apparent solely with regard to the future. The money had been sunk; to recover it more money would be required. Not a great deal, he assured himself. Say ten thousand pounds. Having once handled fifty thousand pounds, the uncommercial person is apt to be glib about lesser sums, especially if he happens to possess a rich and generous niece. Thanet did think of asking the bank to advance the amount; but the bank, he felt, would probably have the impudence to request a sight of his last balance-sheet, the exhibition of which would involve him in troublesome and perhaps not very satisfactory explanations. The town was already discussing the affairs of Helmer and Co.

So, on a pleasant day in July, rather early in the afternoon, he called upon his niece. He had not done so for several months, but her pleasant greeting removed any qualms he might have felt as to his reception. Nevertheless, he remained in a painfully excited state. He began by congratulating her on her appearance of brilliant health.

'I have been enjoying short cruises on the yacht,' she informed him. 'When are you going to take that holiday? Soon, I hope, Uncle Joseph; for my time here is nearly over.' She had more than once postponed her departure, for no reason that can be discovered. Richard seemed to have forgotten her. She had not seen him since February. Miss Melrose had heard that he was representing his firm in London, and coming home only for the week-ends. Doubtless the good lady would have wept had she known that he was making a last bid for the firm's existence—doing the work of three representatives; striving to find markets for the few remaining Helmer products that might still be sold at a profit.

Joseph Thanet expressed regret that Lydia's stay in the Old Country could not be indefinitely prolonged, hoped he might yet manage to take a little cruise in her yacht, and plunged bravely, if not boldly, into business.

It was all just as easy as before. She heard him out sympathetically, asked one or two general questions, and then went over to her desk. For the moment he was dumb with relief.

She filled in the date on a cheque, wrote 'Joseph Thanet, Esq.,' and paused.

'Are you sure ten will be enough?' she asked him.

'Quite enough, my dear—quite enough,' he stammered, wriggling in the easy-chair and 'washing' his hands. The experiences of the past year had not improved his nerves, but they had increased his self-importance. At times he was almost childishly bumptious.

'In a month or so,' she said, 'I shall be a long

way off, and perhaps not easily to be found at short notice. When one is building up a great business'—

'But the business is built, Lydia! From to-day it will yield splendid profits. Nothing to prevent it.' He went red in the face. 'I've done what I set out to do a year ago. Yes, I've done it!' He lost his head. It was his first opportunity of proclaiming his victory. 'I've broken the opposition—smashed 'em! Yesterday they had bills dishonoured. To-day I heard of a paltry little cheque payable to a tradesman being returned. They've nothing left. I've got it all—all! Thanks to you, Lydia. Oh, I don't forget that it's thanks to you, my dear. Couldn't have done it otherwise'—

'What is all this, Uncle Joseph?' she interrupted, but so mildly that he did not notice.

'I never could have done it! And yet a year ago—two days before I knew you would help—I stood up to Helmer, and said I would beat him at his own game. Well, I've done it. Helmers are as good as broken.' He stopped short, gaping—aghast.

Lydia had risen, the pen slipping from her hand. She was pale; her fine, fearless eyes hard—merciless. She seemed to tower over him. 'What have you told me?' she demanded. 'What have you dared to tell me?'

He shrank in the chair, speechless, all colour gone. Beads came out on his forehead.

'Answer me! Good Heaven! have you been deliberately working the ruin of—of another firm *with my money*?' She stamped her foot. 'Ah! you do not deny it!' She turned her back upon him, and something in the action suggested an effort at self-restraint as well as anger and disgust.

He found voice. 'Lydia, I have built up a grand business with your money.'

She wheeled upon him. 'It shall come to nothing—do you hear me?—nothing! You shall struggle on with your accursed business till it falls about your ears. I will not raise a finger to save it. You have built it up on deceit—yes, deceit! Do you think I would have given a penny to such an iniquitous scheme? Oh, how could you do it?'

He broke into a torrent of protestations and explanations.

'You should have told me all that before,' she cut him short. 'Now, please, go. We shall not meet again.'

He rose, looking ill and aged. 'You will not listen to my story,' he said, and his manner was no longer utterly undignified, 'so you cannot give me fair judgment, Lydia Thanet. But if it can be done, if making myself a beggar can do it, you shall have your fifty thousand back.'

'God forbid!' she said cruelly. 'It is too filthy now.'

He winced, glanced at her piteously, and passed to the door.

All at once her passion was spent; her heart smote her. The man's humiliation was too severe.

'Uncle Joseph,' she cried, 'I had no right to speak to you as I have done! I forgot myself. Forgive me. I can't talk now. Come and see me to-morrow. I'll write. Please go quickly.'

The door closed. She threw herself on the couch. But her tears were soon shed.

'Something has got to be done,' she said to herself, 'and at once.'

About five o'clock a clerk showed her into the Helmers' private office. She was apparently cool and collected. Stephen Helmer—not the cold, confident man of a year ago—received her with a grave bow.

'Pray be seated, Miss Thanet. I am pleased to see you,' he said politely. 'I believe my son has the honour of your acquaintance. He has been away for some time, but returns to-night. Now what can I do for you?'

'I will come to the point in as few words as possible,' she said, smiling. 'I am going abroad shortly, and I have a notion—a sentimental notion, if you like—of making an investment in an industrial concern of my father's native town. I am tired of lawyers and bankers; I prefer to deal direct with my possible future partner or partners. I have heard that your business is a progressive one, and it occurred to me that you might desire to extend it further. I apologise for approaching you in this fashion—of course, I had expected Mr Helmer junior would have introduced me—but I hope you will pardon the intrusion, and help me, if you can. I could invest any sum between twenty and forty thousand pounds.'

A gleam came into the tired man's eyes—flickered, and went out.

'Miss Thanet,' he said slowly, 'I once heard—from my son, I suppose—that you were called a good business woman in Buenos Aires.'

'Quite true, Mr Helmer,' she said readily. 'That is why I prefer to do my own business.'

'Then, before proceeding further, you would naturally wish to inspect our latest balance-sheet.'

'Oh, I—I don't think that's necessary.'

'I have it here, Miss Thanet. It was made up yesterday—roughly, yet correctly enough for your purpose. Permit me.' He was handing her a double sheet of foolscap.

'No, really, I don't wish to see it,' she exclaimed, and coloured deeply.

He threw the foolscap on his desk. 'Miss Thanet,' he said gently, 'you may be a good business woman, but you are a bad actress. You are afraid to face the balance-sheet of Helmer & Co., and yet you have offered to put money into the business. Well, you have touched me more deeply than I can say, and I am not easily touched. I can guess how you heard of our misfortunes. They will be public

[Christmas Number.]

property in a few days' time. But let us say no more about it.'

'Mr Helmer, for Heaven's sake, take the money—more, if you need it. Don't you understand that I am responsible for your misfortunes? It was money of mine that'—

'Please,' he requested, 'please let the matter rest. It is the fortune of war. I have got past the recriminating stage. After all, it might have been worse. My son and I can pay our debts, and the world is wide; even an elderly person like myself may reckon on its wideness!' He actually smiled. 'And, you know,' he added, 'we would have beaten Mr Thanet—if we could. Well, Dick will be glad to learn of your wonderful sympathy. That will be one pleasant thing to tell him to-night, poor boy.'

Lydia got up. 'Can't I persuade you, Mr Helmer?' she faltered. She felt herself to be a failure—a fool.

'Indeed, you cannot, my dear. There is nothing left here to invest in. But you have done me good.'

He went with her to her car. As he took her hand, she said, 'Would you mind saying nothing to your son?'

His disappointment was plain. 'May I not?' he said wistfully.

'I beg that you won't. And, Mr Helmer—if I'm not too informal in asking another favour—will you and your son dine with us to-morrow night, at seven-thirty? As I told you, I must go abroad soon, and—well, I hope you can come.'

After a moment's hesitation, 'I thank you for Dick and myself. At seven-thirty,' he said, with something of his old chilly courtesy.

On reaching home, Lydia wrote to her uncle. She wrote also to Richard Helmer a short, formal confirmation of the invitation entrusted to his father; but there was a P.S.: 'For a reason which I will explain later, I wish you to delay your arrival until seven-forty-five, and to do so without letting Mr Helmer know why.'

CHAPTER VI.

AT seven-twenty, in strict obedience to his niece's note, Joseph Thanet entered the drawing-room. He was far from confident of his reception, despite the kindly written words, until Lydia, who was alone, pressed his hand warmly, whispering, 'Let us forget the past, Uncle Joseph, and begin again. Shall we?'

'By all means, Lydia,' he replied gratefully. He had not quite forgiven all the hard things she had said the previous afternoon; but periods of self-communion during a restless night had not increased his self-esteem, and a long day in the office had brought him to see the barrenness of his victory. The business could not be carried
1915.]

on without additional capital, and in cold blood he clearly perceived that, beggar himself as he might, he could never repay anything but a miserable fraction of the fifty thousand pounds.

So he sat down and nervously adjusted his shirt-front and cuffs, and spoke fatuously of the weather, upon which subject Lydia encouraged him, until the door was opened, and the maid announced: 'Mr Helmer.' It was certainly a terrible shock to Joseph. Helmer flushed, but gave no other sign of his annoyance, as he came forward to meet his hostess.

'Uncle Joseph,' said Lydia bravely, 'don't you know Mr Helmer? Mr Helmer—Mr Thanet.'

Helmer made an ironical inclination; while Thanet, four yards away, simply stared.

'Won't you shake hands?' said Lydia. 'It would be so much pleasanter for me if you did.'

At this Helmer smiled grimly, bowed to Lydia, and went forward and held out his hand, saying, 'Perhaps I ought to congratulate you, Mr Thanet.'

'Oh dear!' thought Lydia, 'he's going to be haughty and spoil everything!'

'Me?' gasped the little man, shrinking, yet accepting the proffered hand into a limp, momentary clasp. With a sudden stiffening of courage, he looked squarely at his enemy's cold, emotionless face, and in his soul, amid the embers of hate and the ashes of revenge, a little new flame sprang up—admiration. For what manner of man was this who could stand so firm and debonair amid the wreckage of a lifetime's labour and ambition? 'Congratulate me! Good God!' he exploded, 'I'm in practically the same boat as yourself!' And turned away.

'Gentlemen,' said Lydia, with a tremulous smile of relief, 'I congratulate you both.' She touched a bell, and before the silence had become positively oppressive Miss Melrose appeared.

A few minutes later Richard arrived, and his natural disconcertion was cut short by the announcement of dinner. Lydia, if an indifferent actress, was not such a bad stage-manager.

It was not to be expected that the ensuing hour would be without constraints and embarrassments; but, thanks to the unfailing cheerfulness of the hostess, the *sang-froid* of Helmer senior, and the inconsequent chirpings of Miss Melrose, it passed without acute discomfort for any one. Uncle Joseph's and Richard's contributions to the conversation were fitful and small. The old man was feeling ashamed of himself; the young one was in a state of mystification.

Shortly after coffee had been served, a message was brought to Lydia. She immediately gave the signal to Miss Melrose; then, rising, said, 'Mr Helmer—Uncle Joseph—Mr Benson, the

lawyer, has called; so I shall send him in here to smoke a cigar with you. We shall see you all later in the drawing-room.'

Richard, whom she had ignored, remained standing at his place, uncertain; until from the door she gave him a little nod, whereupon he followed the ladies.

Miss Melrose stood at the drawing-room window. She was all of a twitter. There was 'something in the air'—of that she was sure. At long last her favourite, comparatively poor young man had come back, and dear Lydia's eyes were quite changed; they had not shone so happily for months. Miss Melrose wanted to run away to her bedroom—she felt 'such a gooseberry'—but feared it might not 'look nice.' But as she suppressed a sigh and took up her crochet-work from the window-seat, an inspiration came to her. 'What a lovely evening it is, Lydia!' she said, in a not very natural voice. 'Would not Mr Richard like to smoke a cigar in the conservatory or the garden?'

'Would you, Mr Helmer?' said Lydia; and, without waiting for his reply, led the way to the glass door at the far end of the room.

'Will you come with me?' he whispered.

'Yes. I owe you an explanation, and I—I'd like to get it over.'

They passed through the conservatory and into a small garden with high walls. A faint twilight still lingered. The path was just broad enough for two. The air was still, warm, fragrant. A sweet moment to Richard Helmer after bitter days! His soul rose in passionate rebellion, and fell back in despair.

'Won't you smoke?' she said. 'It would help me a little if you did.'

He lit a cigarette.

'In the first place,' she began, 'I want to tell you that just before you came to-night Mr Helmer and my uncle shook hands—not willingly, I admit, yet the action gave me hope. Don't you think, Mr Helmer, that when two men—real men, not snarling curs—have fought their big fight to a finish, there is a good chance of lasting peace?'

'In the present circumstances, which you seem to be familiar with,' he said slowly, 'there is an excellent chance of lasting peace, since one of the combatants has been so thoroughly beaten that his fighting days are over'—

'Don't take it like that,' she softly interrupted him. 'So much that is good may grow out of peace—even friendship, or at least a friendly alliance. Let me go on, please. I have taken some great liberties, Mr Helmer; but I could not stand by and do nothing. You believe that my uncle has won in the struggle; but I have to tell you that his victory, if so it can be called, is an empty one. He has gained a great business, and cannot carry it on. But I'm afraid he could never carry on a great business

successfully, even with money behind him. He is a very clever man, but not a good business man. I found that out in five minutes. I helped him because he was my father's brother. But he did not tell me everything. I don't wittingly help one man to hurt another.' She paused for a brief space.

'At the present moment,' she resumed, 'Lawyer Benson is with your father and my uncle. He is laying before them the main details of a scheme for the alliance of the two businesses in a private limited company, for which sufficient working capital shall be provided. Your father and my uncle are invited to work together, yet separately so far as their especial abilities are concerned. They will be the heads of the company, and there shall be no interference with their plans from any source whatever. If they can see their way to accept this they will be asked to sign a preliminary agreement to-night.' Her voice shook slightly. 'That is all I have to say. But, oh Mr Helmer, do you think there is any hope of their accepting?'

It was, of course, absurd of him, but just then the question of their acceptance seemed of secondary interest, just as did the apparent exclusion of himself from the proposition.

'Why are you doing all this?' he demanded.

'Don't be angry with me.'

'Heaven knows it isn't that. But why are you doing all this for my father?'

'It is as much for my uncle as for your father.' She spoke as though defending her action. 'Did your father care for the business he had built up, the business he had worked for nearly all his years? Did he care much or little?'

'He cared everything; but'—

'So did my father. And that is why I cannot bear to see a man's life-work being taken away and broken up, all for lack of a few miserable pounds sterling.' She drew herself up. 'Besides,' she said, with a small laugh, 'I'm a business woman. I know a good investment when I see it.'

They covered a dozen paces before Richard spoke. 'You have a very beautiful and merciful mind,' he said, 'and no man can value your generosity more than my father; though, I fear, he will not be able to accept it, Miss Thanet. He and I will never forget it.'

'Ah, don't say that he will reject my plans! You will persuade him to accept, won't you?'

The earnestness, the anxiety, in her voice were poignant.

'You overwhelm me,' he said. 'You never spoke to my father until yesterday. What is my father to you that you seek to remove his burden?'

Unconsciously they had halted. To Lydia the moment had arrived—arrived sooner, perhaps, than expected—the moment when all her heart's

[Christmas Number.]

desire and all her future happiness, as she imagined it, depended on one brave sentence from her lips. Her heart cried, 'Speak!' Her maidenhood whispered, 'Be silent!'

Pale she was in the friendly darkness, drooping, and a little faint. As from afar, she heard his voice—yet not his voice as she had known it—'Lydia, Lydia, what is my father to you?'

For an instant she raised her eyes. 'He is yours.'

Miss Melrose sat alone in the drawing-room. The clock struck ten, and she applied a damp handkerchief to her eyes and smiled.

The door was smartly opened, and Lawyer Benson, his countenance radiant, bounced in. 'Mr Richard Helmer, your signature is desired. —Ha! he's not here! Pardon me, Miss Melrose; left my glasses in the other room. Where is Mr Richard Helmer?'

'In the garden with Miss Thanet. I—I don't think they will be long.'

'But he's wanted at once. However, I'll soon find him. Which way. Ha! I see.'

Somehow Miss Melrose was in the conservatory doorway before him.

'You must wait, Mr Benson,' she said desperately.

'But, my dear madam, Miss Thanet's presence is required also. Pray'——

'I know Miss Thanet does not wish to be disturbed. She and Mr Richard are engaged'——

'What's that?'

'In a very private and important conversation,' stammered the poor lady.

'H'm! May I ask, have they been—h'm—engaged for long, Miss Melrose?'

'N-not much more than—forty minutes.'

Which was a very fair guess, and as near the truth as any one need desire.

SUPERFLUOUS.

'Sorry,' said the medical officer, 'but I can't pass you.'

WITH a snatch from 'Tipperary,' and a rhythmic tramp of feet,

One of our new-made regiments comes marching down the street.

I linger on the pavement, and catch my breath and sigh,

My heart is dead within me, and a tear is near my eye,

As I watch the line of soldiers go gaily swinging by.

Oh gallant lads in khaki, keen eyed, and leal and true

To Britain in her hour of need, would God I marched with you!

My friends are all in uniform; it's hard to loaf in tweeds,

And read on every hoarding that 'it's men the country needs.'

They ask me if I'm proud of them, and why I stay away?

And how I'll feel when they return, that looked-for joyous day?

They mock my gaze each walk I take, and I can only say,

Oh gallant lads in khaki, of years I'd give a few,
If the doctor who forbade it let me march as one of you!

I see a field with smoke o'erhung, deep-pitted by our shells;

I see our lads in khaki charge—Ah God! the bayonet tells;

I hear a shout of victory that echoes to the sky;
Not without grievous loss, alas! but what a death to die!

While he who lives can proudly say, 'I've fought for Britain—I.'

Oh gallant lads in khaki, from my soul I envy you,

For he who shares the danger will share the glory too!

Yet, strange, there are young men about both hale and fit to go,

Content to let their neighbours train to meet and beat the foe.

They live their lives as usual, they work and rest and play,

As though no war were raging; you may see them any day,

Dressed in their best and courting girls—meet mates for such as they!

Oh 'gallant' nuts in mufti, arrayed in garments new,

Although I'm not in khaki, thank God I am not you!

C. D. L.

THE BAD HAT.

A NAVAL STORY.

By TAFFRAIL

CHAPTER I.

'ORDINARY Seaman Charles Whitlock!' bawled the master-at-arms peremptorily. 'Shun! Off cap!'

The youngster in question, an undersized, rather weakly looking youth, hurried forward to the defaulter's table. Behind it, gravely surveying the buff-coloured charge sheet, stood his captain, while the commander, the lieutenant in charge of Whitlock's division, and a couple of solemn-faced ship's corporals, one of them busily turning over the leaves of an enormous quarto volume—the Conduct Book—completed the little group on the quarter-deck.

'Ordinary Seaman Charles Whitlock,' continued the master-at-arms, 'did make use of insulting and insubordinate language to Petty Officer Henry Burton when ordered to tidy up his mess for the rounds.'

The culprit, very ill at ease, shifted his feet nervously and fidgeted with the cap in his hand. The sight of his grave-faced commanding officer behind the table rather appalled him, and what could he, an ordinary seaman, say or do with two officers to bear witness against him and a third to act as his judge?

'What's this case?' asked the captain, looking up.

'Petty Officer Henry Burton!' called the master-at-arms.

The individual in question came forward.

'Make your report,' said the commander in an undertone.

'At eight-forty-five yesterday evening, sir,' he began, 'I was going round the mess-deck to see it properly cleared up for the rounds. I noticed that this man's mess was all anyhow, with the supper not even cleared away; so, as he was cook of the mess, I sent for him to tidy it up.' He hesitated.

The 'owner'* nodded.

'Well, sir, when this ordinary seaman comes, I asks him why his mess wasn't cleared up. He says it was cleared up, and when I says it wasn't he turns round and tells me to go to—and mind my own bloomin' business.'

The captain concealed a smile. 'Did he say it quite so politely as that?' he asked.

'Hardly, sir. He used some horrible talk, but I can't rightly remember his exac' words.'

It was an untruth. Burton remembered every word; but he did not wish to increase the gravity of the offence.

'Humph!' grunted the skipper. 'Was his manner disrespectful? Did he seem at all excited?'

'Yessir.'

'Right. What happened then?'

'Well, sir, I didn't wish to be hard on him, so I tells him he'd best be careful or else I'd take him on the quarter-deck before the officer of the watch. He calls me more names then, so I orders him to fall in on the quarter-deck, and goes away to report the case to the master-at-arms. That's all, sir.'

The captain turned to the culprit. 'You hear what Petty Officer Burton says. What have you to say to the charge?'

'I didn't mean no 'arm, sir,' the ordinary seaman stammered.

'You didn't mean it! That's no excuse at all. You've been quite long enough in the service to realise that you have to curb your temper. A petty officer, you must understand, is put in authority over you to uphold discipline. It's your duty to obey him and to treat him with respect. Don't you know that?'

'Petty Officer Burton 'as 'ad a down on me ever since I joined the ship, sir. 'E's always naggin' at me, an' tellin' me to do this an' that as if I wus a dorg!'

'If you had any reason to imagine that you'd been unfairly treated you could always have asked to see me,' observed the captain, seeing through the perennial excuse at once.—'Let me see his previous record.' He turned to the ship's corporal with the Conduct Book.

'H'm!' he remarked, glancing down the well-filled page. 'Not at all good; very bad, in fact. "Absent from his boat," "Absent from his place of duty," "Skulking from divisions," "Asleep on the mess-deck during working hours,"' he read out. 'You're always in trouble by the look of it.' He eyed the culprit critically.

The ordinary seaman could not stand the steady gaze of those steely blue eyes. 'They orl seems to 'ave a down on me, sir,' he mumbled indistinctly, hanging his head and reddening. 'I don't seem to be able to do nothing right no'ow.'

The captain bit his lip. 'How does he do his work, commander?' he asked.

The commander hesitated. He was a kind-

[Christmas Number.]

* The captain of a man-of-war is sometimes known as 'the owner.'

hearted man, and hated to hit a man when he was down; but Whitlock certainly was a perpetual nuisance to him. 'He was not very promising when he joined the ship, sir,' he answered, 'but he's improving. Oh yes, he's certainly improving.'

The captain saw through the little deception at once. 'And you, Travers,' he said, turning to the lieutenant; 'has he given you any trouble?'

'Not lately, sir.'

The skipper nodded, and thought for a minute. 'Look here, my man,' he continued, dropping his voice and speaking more like a father to an erring son, 'how long d'you think this sort of thing can go on? Don't you realise that we're at war, and that we all ought to do our level best for the country? That doesn't mean getting into constant trouble, you know.'

'I does my best, sir,' mumbled the ordinary seaman.

The captain shook his head. 'That's not true,' he pointed out. 'You don't try. You needn't think I like punishing men,' he added, 'and I'm glad to say I have had very few men to deal with since the war started. However, I cannot overlook your case. I have a very good mind to put you in cells;* but I'll give you one more chance. You shall have fourteen days number ten; but if you come up before me again you'll go straight to cells, my lad—understand that!'

'Fourteen days number ten!' echoed the master-at-arms, mildly surprised at the captain's leniency. 'On cap, 'bout turn, double march!'

The little comedy was over, and the group of officers and men dispersed and went their several ways.

The plausible hypocrite Whitlock ambled forward with a broad grin on his face. He had bounced the 'old man' into believing that he was willing to reform.

Reform? Not he! Fourteen days number ten meant nothing to him. He had done so much of this particular brand of punishment that a fortnight more or less made little or no difference. It was merely pouring water on a duck's back. Stoppage of grog, turning out of his hammock half-an-hour before the rest of the men, extra work in his spare time, and musters at odd hours throughout the day did not worry him. They had become a mere matter of routine.

But Whitlock was also a revengeful hypocrite; for, as he slouched forward, he muttered sullenly under his breath. 'If I 'as 'arf a chawnce,' he remarked, *sotto voce*, 'I'll bash that 'ere Burton—Mr bloomin' Petty Officer Burton—blarst him!' He said it very venomously, glanced round to see that nobody was looking, and then, very deliberately, spat on the deck. That was

an offence in itself, but it showed his contempt nevertheless.

Now Burton weighed perhaps twelve stone two, and had a chest like an ox and a fist like a leg of mutton. Whitlock, puny and undersized, turned the scale at about nine stone three, and to 'bash' the burly petty officer would require some doing.

But the ordinary seaman, to do him justice, was no coward. He had pluck of a sort, and at the time he fully meant every word he said.

CHAPTER II.

IT so happened that the opportunity for the 'bashing' of Petty Officer Burton never came; for exactly three days later, at dawn, the *Clytia* found herself in sight of a three-funnelled cruiser, hull down, over the horizon. Her appearance was greeted with no small amount of excitement on the part of the British cruiser's ship's company, for the stranger, though she was fully fifteen miles distant, bore every resemblance to the *Prinz Friedrich*, one of the last German men-of-war operating on the British trade-routes in the South Atlantic, which the *Clytia* and her consorts had been sent to seek out and destroy.

The two ships were fairly evenly matched as regards armament. Both were 'protected cruisers,' built long before the days of Dreadnoughts, and while the German mounted twelve 5.9 and eight 3.4-inch guns, the *Clytia* carried eleven 6-inch and eight 3-inch. In the matter of speed, however, there was some disparity, for the *Prinz Friedrich* was popularly supposed to be capable of 21 knots. The British vessel, on her trials in 1898, had done 20.3, having actually been designed to do 19.5. But now in 1915, at the age of seventeen, she was no longer a chicken, and had reached the stage at which her engineer-commander doubted if he could induce her to do more than 18½ to 19. He had qualms as to whether her engines and boilers were capable of more.

The captain of the *Clytia*, high up on his bridge, looked anxiously at the strange cruiser through his glasses, and before long became quite certain in his mind, though he could not distinguish her ensign, that she was German. Orders had already been transmitted to the engine-room for full speed, and the poor old ship, palpitating like a jelly, was pounding along with dense volumes of smoke pouring from her two funnels. Word had been passed round that an enemy was in sight, and the stokers, feeling they were on their mettle, shovelled coal on to the blazing furnaces for all they were worth. The officers and men in the engine-room, too, had quite made up their minds to get 20 knots or to 'bust things up' in the process, and their efforts were successful. The revolu-

* 'Cells' = solitary confinement on bread and water. 1915.]

tions of the elderly but carefully nursed engines gradually increased—17.6 knots—18.5—19—20—20.1. At 20.1 she remained steady. It was her limit; nothing could drive her faster.

The captain put down his glasses with a smile. 'I think,' he remarked to the lieutenant (N.) at his side, 'that we've gained on her.'

The navigator was doubtful. 'I'm not so sure, sir,' he said, shaking his head.

'Pessimist!' laughed the skipper. 'I know we have! She was hull down when we sighted her, and now I can see her upper deck. Still,' he was forced to admit, 'she may not be going full speed, and we've fully seven miles to gain before we get into range. If only'— He paused.

'If only what, sir?'

'If only this ship were a brand new twenty-five knotter instead of the ancient old bus she is. We're going something over twenty knots now, and that's a miracle; but that fellow over there'—he waved his hand toward the horizon—'can give us a clean pair of heels if he wants to.' He spoke regretfully; for the *Clytia* had not fired a shot in anger since the commencement of the war—had not seen an enemy, in fact—and a 'scrap,' as they would call it, was the one thing in this world that her officers and men were longing for.

The thought which now beset the captain's mind was whether or not his enemy would turn and give battle. Things were so evenly matched that the probabilities were she would; but for the first three hours she still steamed away, with the *Clytia* pounding along after her. During this time the British vessel had managed to close in to within about twelve miles; but by 6.50 A.M. the foreigner had increased speed and was holding her own.

Ten minutes later the commander, bubbling over with suppressed excitement, came up on to the bridge to interview the captain. 'We've cleared for action, sir,' he said. 'Shall I send the men to breakfast now?'

'You'd better,' returned the other. 'But if she does turn, they'll have to come up at once, breakfast or no breakfast.'

The commander laughed. 'I don't think they'll mind that, sir.'

The ship's company were piped to their meal, but it is to be feared that few of them ate very much. Their excitement seemed to do away with all desire for food, for a quarter of an hour afterwards practically every soul in the ship, except the stokers, was smoking on the fore-castle and gazing anxiously at the dim gray shape of the German cruiser on the horizon. Petty Officer Burton was there, and so was Whitlock.

'Strewth!' grumbled the latter, 'e's runnin' away! W'y cawn't e turn round an' give us a show?'

An able seaman close beside him laughed.

'Ark at 'im!' he exclaimed jocularly, eyeing the puny figure of the first speaker. 'Ark at our bloomin' warrior! Bloodthirsty little devil, ain't e?'

Whitlock seemed rather put out. 'If it does come to a scrap, I bets I puts up as good a show as you, Mister bloomin' Nobby Clarke!' he retorted wrathfully. 'We ain't all 'ulkin' great brutes six foot 'igh, thank Gawd! but I reckons we've orl got guts, an' that any one o' us is as good as three o' these bally dagoes. S'welp me I do!'

'Orl right, my little cock-sparrer! Orl right! Don't get yer dander up. I didn't mean nothin' nasty.' He patted him on the shoulder.

'Don't talk so wet then,' Whitlock returned. 'You ain't the only man in this 'ere ship. I reckons——' 'Ullo!' he broke off. 'What's the racket?'

A buzz of excited talk suddenly burst out from the crowd on the fore-castle. The two speakers craned their necks to see what had caused it, and an instant later the ordinary seaman gave vent to a little whimper of delight. 'Strewth!' he murmured happily, 'she's turnin' this way!'

There was no doubt about it. At first the strange cruiser had been showing her stern to the *Clytia*, but now she had turned to starboard until she presented a foreshortened view of her side. She was still circling, for presently she was broadside on, and then, finally, she was heading bows on for the British ship.

The subdued murmur from the men gave way to a deep hum of excitement and a brief outburst of cheering, but an instant later everything was interrupted by the brazen blare of a bugle.

'General quarters!'

In ten seconds the fore-castle was cleared and the men were hurrying to their stations for action. The gun's barefooted crews, stripping off all their superfluous clothing, clustered round their weapons. Little heaps of brass cartridge cases and piles of ominous-looking yellow and black projectiles were placed close to each gun, while down below in the magazines and shell-rooms the supply parties were waiting to whip up more ammunition as it was required. Hoses were spouting all over the decks to lessen the chances of fire. Everything was ready.

'All guns, load!' came an order through the voice-pipes.

The projectiles were rammed home, with their cartridges behind them, and the heavy steel breech-blocks slammed to.

Whitlock, who formed one of the crew of the foremost 6-inch gun on the port side of the upper deck, began to feel anxious. The hostile cruiser was coming nearer and nearer, and it was the first time he had been in action. He felt his knees trembling ever so slightly, for the *Clytia's* 6-inch guns were in open shields on her upper deck, not behind armour. He experienced

[Christmas Number.]

a sickly sensation in the pit of his stomach, and looked round curiously to see how the others were taking it.

His glance fell on Petty Officer Burton, the gunlayer. He had his eye glued to his telescopic sight, and was calmly keeping his weapon trained on the approaching enemy. The petty officer, too, was feeling nervous, but he did not show it. The ordinary seaman noticed his unruffled exterior, gulped twice, and felt better.

CHAPTER III.

AT the time the German turned toward the *Clytia* the two vessels were about twelve miles apart, the enemy being slightly on the port bow of the British cruiser. Both ships were steaming at about twenty knots, and in six minutes the range had decreased to fourteen thousand yards.

The suspense became intolerable as the *Clytia's* range-finder operator in the gun-control position monotonously droned out the distance of the enemy. 'One three five nought nought,' he chanted, without removing his face from the instrument. 'Thirteen thousand'—'One two five nought nought.'

The gunnery lieutenant was becoming impatient. It was a very clear day, and he was keeping his glasses focussed on the *Prinz Friedrich*; and so close did she seem that he could even pick out the details of the flaunting ensigns at her mastheads. The time hung heavily. Would they never arrive within the predetermined range for opening fire?

'Twelve thousand.'

He sighed with relief, passed a muffled order through a voice-pipe, and then stood up with his binoculars to his eyes.

There came a loud roar and a sheet of brilliant orange-coloured flame as one of the fore-castle 6-inch guns went off. The cruiser trembled a little; and then, as a billowing cloud of brown cordite smoke went drifting slowly to leeward on the gentle breeze, the projectile, distinctly visible against the blue sky, could be seen sailing off into space like a meteorite. It soon disappeared, and presently a shimmering white column of spray leapt silently into the air some distance short and to the left of the enemy. It was a miss, but it gave the expert the information he wanted.

He passed another order to the gun. Another roar and a flash, and this time the shell pitched just short of the German, ricocheted over her, and finally plopped harmlessly into the sea beyond.

The enemy did not reply, but presently both ships altered course to the eastward until they were steering on converging courses, with their broadside guns bearing on each other. The

Clytia had found the range, and her weapons opened a slow and deliberate fire.

Now that he had something to do, Whitlock lost all his original fear, and found himself extracting the smoking brass cartridge cases each time his weapon went off as if he had been at the job all his life. Roar after roar broke out; concussion after concussion shook the cruiser; and flash after flash leapt out from her side as her guns spoke.

In the rifts between the semi-transparent clouds of brown cordite haze the ordinary seaman caught an occasional glimpse of the dull gray shape of the *Prinz Friedrich*. The two vessels were closing in fast, and the range was now about ten thousand yards—nearly six miles; but even at this great distance the *Clytia* was finding her target. The hostile cruiser was all but hidden in spouting upheavals of spray as the projectiles drove home, but every now and then he saw the dull red flash and a cloud of gray-yellow smoke as a shell struck the ship herself and detonated.

He had plenty to do in extracting the spent cylinders as his gun fired; but the work was largely automatic, and he had ample time to think. He wondered vaguely to himself whether or not the enemy had opened fire. He could not see any flashes darting from her gray side, and so far the *Clytia* did not seem to have been struck. He had not very long to wait. Suddenly a great plume of spray sprang into the air about two hundred yards short of the ship. It was instantly followed by another, then another, and another. He held his breath, for he knew they were hostile shell falling short; and then, in the midst of the dull booming reports of the British guns, his ears were filled with a terrifying screeching, like a whistling express tearing its way through a railway station, shrill and very penetrating.

He ducked his head instinctively, but a moment later raised it again with a jerk. Of course! He remembered. The projectiles had fallen short, and though they might screech like ten thousand baffled, infuriated demons, they could do him no harm now. He grinned with relief.

The *Clytia's* guns were firing faster now; but with what effect Whitlock could not see. Boom! boom—boom—boom! boom! they went in irregular volleys. The air became full of the acrid, bitter taste of burning cordite as the smoke of the discharges drifted astern.

The ordinary seaman glanced at the enemy again. He saw the spray fountains springing up all round her as before; but in the midst of them were the angry, sparkling flashes of her guns. A breathless pause, and then a great upheaval in the water barely thirty yards off the *Clytia*. Another and another, and all in practically the same spot.

The shells detonated as they struck, and

almost at once Whitlock heard the humming whistle of their sharp-edged fragments as they drove through the air. By the time he heard them, however, they were probably past, for almost simultaneously with their whizzing he heard them clanging against the funnels and superstructure.

But one of them found a billet. There came a loud cry for 'stretcher-parties,' and glancing round instinctively the ordinary seaman saw a figure lying on the deck barely ten feet away. The man's clothes had been badly torn, and a horrible red gash could be seen in his side where a steel sliver had ripped the flesh. The blood, welling from the wound, was slowly dyeing the poor fellow's garments a vivid crimson and mingling with the water on the deck.

Whitlock felt very sick. He longed to run away and hide himself somewhere out of harm's way, but was suddenly brought back to his senses by a none too gentle prod in the back.

'Come on with that ruddy cartridge!' some one shouted angrily. 'What the 'ell are you waitin' for!'

He went back to his work automatically, feeling rather shaken. He gave another glance at the enemy, and saw that she had closed in. She was barely five thousand yards distant, but his heart jumped with relief when he noticed that her third funnel had disappeared. Volumes of black smoke and tongues of vivid red flame shot into the air from between the spot where the funnel had stood and the mainmast. She was on fire then! So much the better! His spirits revived. He felt as if he wanted to cheer.

'Give 'em hell, lads!' he found himself shouting. 'Give 'em hell!'

Suddenly there came an appalling crash from aft. Whitlock glanced round, and, in the midst of a sheet of orange flame and a cloud of grayish smoke, was vouchsafed a fleeting glimpse of one of the 6-inch guns slowly toppling over backward. He noticed fragments of something flying through the air, and then the smoke drifted by in a cloud, and he could see no more. He had no time to wait until it cleared, but in that brief second he had noticed that the *Clytia's* after funnel was pierced through and through like a gigantic nutmeg grater, and that the steel superstructure seemed fantastically mangled and twisted.

He extracted one more cartridge from his gun, but an instant later there was a frightful detonation and a brilliant purple flash quite close at hand. He felt as if he had been picked up in a gigantic hand and flung bodily to the deck. He felt himself slithering along it—then came blackness, utter blackness.

He had been knocked senseless, and how long he lay there he never knew. Presently he came to, to feel a horrible burning pain in his left arm and side. He sat up and looked down at

it, and then laughed stupidly. 'Strewth!' he murmured, very much surprised, 'I've bin wounded!'

The blood was dripping down his side on to his once white trousers. It hurt abominably, but not quite so much as he had expected. Then his glance wandered round the deck. The 6-inch gun—his gun—looked utterly foolish. He almost laughed at it, for the weapon had been stripped of its armoured shield, the sights and other excrescences seemed to have vanished, while the muzzle pointed up into the air at an absurd angle. One or two bodies lay on the deck close beside the wreck.

Then he suddenly experienced a sensation of heat, and looking round saw a pile of cartridges blazing like a bonfire within six feet of him. All round them lay lyddite shells in their canvas bags. 'Gawd!' he muttered, gazing stupidly at the conflagration.

Some of the guns still seemed to be firing; he could hear their dull booming reports; but just then one of the prone figures raised its head with a piteous groan. It was Petty Officer Burton, and he was badly wounded, but Whitlock had no time to attend to him.

His fuddled brain had resumed its control. 'My Gawd!' he muttered again, licking his cracked lips. There was a touch of anxiety in his voice this time. He had every reason to invoke the name of his Creator, for the cordite charges were burning merrily in spite of the water on the decks, and the shells were perilously close to the fire.

If the heat caused them to explode the resulting detonation would fling every living soul in the vicinity into eternity. It would blow a gaping hole in the deck, and might even cause the ship to founder. He did not understand the gravity of the situation at the time; he only thought of saving life; and tottering to his feet, swaying like a drunken man, he cautiously approached the pile of blazing ammunition. The effort hurt him hideously, but he gritted his teeth and persevered; and hardly realising the awful risk he was taking, for the shell might explode at any instant, he reached the fire and seized a burning cartridge in his bare hand. He dropped it at once with a whimper of pain, for the brass cylinder was practically red-hot. It rolled across the deck with the gentle movement of the ship, and lodged in the waterway near the ship's side.

He had intended to throw all the cartridges overboard; but that, since they were too hot to be touched with bare flesh, was obviously impossible. If, however, he could roll them all into the waterway it would do equally well, for there they could burn themselves out without danger. There were perhaps ten of them burning, and one by one he rolled them out of harm's way with his feet. How long it took him he never knew. It seemed an eternity

[Christmas Number.]

before he had removed them all; but at last he had done it, and sat down on the deck, breathless and faint with pain. 'Thank Gawd!' he muttered thankfully.

The guns had ceased firing, and there came the sound of cheering. He, too, tried to cheer; but the effort was too much, and, falling backward to the deck, he sank into utter oblivion.

CHAPTER IV.

THE evening was well advanced when he came to and found himself in one of the cots in the sick-bay. He knew it was the sick-bay, for he had been there before, but now the place was full of a sweet, penetrating odour—chloroform. He tried to look over the edge of his bed, but the movement brought a twinge of pain. Then he remembered, and lay back, blinking his tired eyes.

A couple of officers came to his bedside and looked down at him. One was the captain himself and the other was the staff-surgeon.

'Ha! you've come to, young fellow!' remarked the staff-surgeon cheerily. 'That's good! You got a nasty smack.—We had to cut away a'—he went on, whispering some technical details to the captain; 'but he seems to be pulling through all right.'

'How d'you feel, Whitlock?' asked the skipper with a smile.

'Pretty bad, sir,' mumbled the ordinary seaman. 'Can you tell me, sir'—He hesitated.

'Tell you what?'

'Did we sink her, sir?'

The captain smiled happily. 'Yes, Whitlock, we did,' he answered with a nod.

'Thank Gawd, sir!'

But the captain was talking again. 'You did a very gallant thing, my man,' he was saying; 'a very gallant action!—You must get him fit again as soon as you can, doctor,' he added, turning to the staff-surgeon. 'The fellow's a hero. Mr Parr, who was down in the battery, saw exactly what happened. Whitlock undoubtedly saved Petty Officer Burton's life and the ship from very severe damage, if not from sinking. If those shell had exploded'—He shrugged his shoulders expressively.

The ordinary seaman gasped with surprise. Him a hero! Could it be true? He must have been, for Leading Seaman Charles Whitlock, as he is now—he was an able seaman exactly a week ago—wears a silver medal with a blue, white, blue ribbon.

It is very rare in the navy, and goes by the name of the Conspicuous Gallantry Medal. The recipient sometimes thinks he did not deserve it; but Petty Officer Burton, his best friend, knows that he did.

THE FIERY CROSS.

SET the Fiery Cross ablazing, send it speeding up
and down,
Let all eager eyes upgazing see it sparkle o'er each
town;
See it shine o'er hill and valley, glare o'er each
great city's pain,
Standing o'er each fetid alley, lighting every loath-
some lane.

Let it wake men from their slumbers with its wild
and fitful gleams;
Let it rouse them, pale upleaping, from their
pleasant, peaceful dreams;
Bid them leave their easy couches, and obey the
desperate call
Of the weary submerged numbers, where they
bravely fight—and fall.

As of old that signal flaming swept its message
to the clan,
And the chief's dumb whisper—claiming every
weapon, every man—

ALGIERS.

Ran in silent, lurid warning through the glens all
far and wide,
Till the dawning blush of morning showed an army
by his side.

So may now this sign uplifted, flaming brightly
high and low,
Through dark clouds of custom rifted, like that
fiery emblem go;
Feed and pile the fire with fuel, let it light each
darksome place,
Show the bitter bonds and cruel that have beaten
down our race.

Let it stir men, let it thrill them, with its sparks
of sacred fire,
Let it melt them, let it fill them with a great and
grand desire;
Let it hang bright o'er each city, blazing bravely
day and night,
Till men's hearts are wrung with pity, and deep
wrongs are set to right.

HENRIETTE.

A STORY OF THE FRANCO-PRUSSIAN WAR.

By ANDREW W. ARNOLD,

Author of *The Attack on the Farm*, *Pepita*, *The Colonel's Murillo*,
The Interrupted Wedding, *Père Mumbart*, &c.

'NO,' said Mazin, in a low voice. 'War is all very well for those who like it, *mais ce n'est pas mon métier*. I am very glad, between ourselves, to get out of it. I don't mind going to Germany; I shall get rest and peace there; and when it is over I shall come back and marry Claudine. But this heat,' he continued, with a gasp, 'is awful; I can't breathe.'

The last remark had some sense in it. Eleven of us, all prisoners, had been herded into a carriage at Metz in the early November morning, almost before it was light, and for hours the train had crawled along, shunted time after time to make way for military trains; and now we were all in the dark but for a dim lamp above, without a single window open, because a fat brute of a Prussian would not allow it. This man, who was in the Landsturm, and a clockmaker by trade, was not perhaps a bad man at heart; but he had been torn from his wife and family, and had lost a son, and this made him bitter. And when we started he gave us a long harangue, telling us the Emperor was a fool, and the whole war was due to the Empress and the Jesuits; and instead of sending us to Germany, it would have been far cheaper and better to shoot the whole lot of us. However, as I and Mazin were the only ones who understood a word of his hog-like gutturals, it did not matter what he said. Then this glutton, for our edification, would take out bread, sausages, and cheese every few hours from a newspaper parcel he kept under the seat, and smack his lips in a vulgar way, and roll his eyes in ecstasy as he gorged himself, ere he lighted a great china pipe, which filled the compartment like fog and made it more stifling than ever.

'Luckily for me,' continued Mazin, 'being a chemist, I was kept in the hospitals, though sometimes I had to go out to the front with the ambulances. The Germans were very careful not to shell them;* still, the shells came near enough for me, and I shall never forget it, nor what I saw in those ambulances and in our hospitals. I tell you I have such a dread of pain that I always carry two little packets about with me. If I were to get torn in the stomach

by a piece of a shell, rather than writhe in agony for hours I would swallow this, and in a minute all my sufferings would cease;' and as he spoke he produced one, and also a small phial of water.

'How much would send a fellow to sleep?' I asked, taking it from him, apparently to examine what appeared in the paper as a fine gray powder.

'A mere pinch,' he replied.

'All right,' I answered. 'I'll keep this. You say you have another.'

'But why do you want it?' he asked anxiously, turning a trifle paler; but I told him that was my affair.

Now I, François de Vigny, architect, of Strasbourg, had different ideas from this poor delicate fellow. I was young and strong, I loved adventure, and I liked my duties; and on rejoining my regiment I had very soon been made a brigadier. With this packet in my possession, I saw I might still be able to do something for my country. I glanced at the half-sleeping German in the corner. I knew that he had practically no knowledge of French.

'*Mes amis*,' I said quickly, in a low voice, to a couple of *lignards* and a hussar, whom I thought might like to know of an idea that had flashed into my head when Mazin had spoken of his powder, 'I have had enough of this. I am going to take the "key of the fields" if I get the chance.'

'Yes; but how are we to get hold of the key?' they asked.

'You will see if you wait,' I answered.—'*Herr Officier*'—he was only a private, but he liked to be addressed in that way—I said in a loud voice, 'when we come to the first station, where we can get some beer, may we have some if I give you a double *bock* first?'

His small swine eyes beamed with pleasure, and he willingly agreed.

I had been in the hospital when we were at Metz, my horse having been shot under me and my arm broken as I fell. It was practically all right now, but the doctors had advised me that it was better to keep it in a sling. With the arm hidden by my cloak, buttoned at the throat, it would be an easy matter to drop the powder into the glass.

'*Ein mark* for a double *bock*!' I shouted as I leaned out of the window, as at last we slowed down into a station.

[Christmas Number.]

* German *Kultur* has made great strides since 1870; but Mr Archibald Forbes told me that he had never known the ambulances to be shelled by the Germans. It may have happened in a fog during the siege of Paris, but it was never done intentionally.

This price quickly had the desired effect. Paying no attention to those clamouring from other carriages, the man came straight to me. I had the powder all ready, and dropped it in, and politely handed it to the German, and then bought some more beer for myself and the others.

'It's not bad,' said our guardian, 'but it tastes a trifle musty.'

'Yes, so it does,' I said in German, taking my cue from him, and giving Mazin a nudge, who said he thought so too; but the rest, not knowing what we said, were loud in their praise of it, and also of my generosity; and even the German became quite civil.

I thought the train would never start. Outside nothing was heard but the steady patter on the roof, but at last the train slowly moved on. Gradually the Prussian became quieter, and in a quarter of an hour he was fast asleep.

'I hope you have not given the poor devil too much,' whispered Mazin to me, with some concern on his face.

'Jolly good thing if he has,' muttered the hussar.

'But suppose we don't stop!' said a *lignard*. 'Where shall we be then?'

'You can suppose all manner of idiotic things,' I returned irritably, as I began to feel uneasy myself when I looked on the helpless figure in the farthest corner. On and on we went, the storm outside seeming worse than ever as the rain beat and swished against the window. Then a thrill went through us, for the train gradually began to slow down, and finally came to a standstill.

Gently letting down the window on my side, I looked out; but such was the pitch darkness one could see absolutely nothing.

'Now, *mes enfants*!' I cried, '*je me de file*; you can enjoy yourselves here if you like.'

'No; we are coming!' cried most of the others.

Quite forgetting about my wounded arm, I leaned back, and got hold of the gutter of the carriage; and, with plenty of help, got up on the seats, pulled my legs up and got them outside the window, then I hung for a moment and dropped outside. But almost before I knew what I was about I tripped over a wire connected with the signal, and went rolling down a steep bank till I was stopped by a bush. The first thing I knew was that I had injured my arm again; but I had no time to think of that, for, looking up, I saw against the light one fellow after another dropping out of the carriage; and as each one was successively tripped up by the confounded wire, I thought I should be stifled with laughter as I heard their muttered oaths of surprise as they rolled down the embankment. Indeed, I slipped a little lower myself, for fear of one coming on top of me. Above us the engine kept hissing as we lay in the long damp grass in the soaking rain. It seemed as if the

1915.]

train would never move; but at last a signal clacked, the engine whistled, and like a huge snake the lighted train disappeared into the darkness, and we knew we were free. Voices then came from all directions. Some seemed right at the bottom of the embankment, and one cried out there was a stream there; and, a moment after, another said he was in it. The hussar was very jubilant, for he had had the wit to help himself to the German's paper parcel, and was giving some of the contents to those near him; but he shouted out that he had kept a sausage for me out of gratitude for his release. Nothing at first could exceed our joy. We were as merry as schoolboys. The little stream, knee-deep, was quickly crossed; but then we found ourselves in a wood. I had not noticed it in my first excitement; but now, apart from my arm aching, I found I had sprained my ankle badly. Mazin and I, the hussar, and three others kept pretty close together; but what became of the rest I never knew.

Gradually our spirits became lower. We seemed in an interminable forest; nothing was heard but the moaning and the creaking of the trees above us as they bent before the storm, while the rain descended without pity. I was in such pain that I felt inclined to lie down and take my chance till the morning, when a voice cried out, but with a German accent, 'Why, you are French!' In a moment all was silence. We feared we had come across a Prussian picket; but we were quickly reassured by the man telling us he was a *garde champêtre*. The good fellow's name was Lettner. His delight at our escape was almost as great as our own.

'Come to my cottage. I'll do my best for you,' he said. And, *ma foi*, he did; and his wife, who was worthy of him, did hers. It appeared that the morrow was an anniversary of the worthy couple's wedding-day, and a huge rabbit-pie had been made. This was put in the oven, while we dried our dripping clothes before the blazing fire. Mazin set my arm in splints and bandaged my ankle. What with the warmth, the good fare, the beer, and tobacco our kind host brought out, and our new-won freedom, a merrier, happier evening few of us had ever spent. The extraordinary part of it was that none of us had any idea what part of the world we were in!

I was both surprised and delighted to learn that we were not far from a village named Halsweiler, where my aunt, Madame de Farlier, lived at the old château, and where as a lad I had spent many happy days.

'Now, *mes amis*,' said our host, 'I strongly advise you all to get as much rest as you can, and slip off to-morrow as soon as it's light. A squadron of Uhlans has its headquarters at the château of Mulbach, nearly two leagues off. The *france-tireurs* have been paying their attentions to the railway, and these Germans are always

on the *qui vive*. One never knows when they may turn up. They often call here and have some beer, which I dare not refuse to give them, and if you are found in your uniforms and without arms to defend yourselves, then the *bon Dieu* help you! By way of a *plaisanterie*, they made the last lot of *francs-tireurs* that they caught dig their own graves before they shot them, to save themselves trouble!

We saw the truth of his advice, and determined to get as good a night's rest as we could. It was barely light when Mazin woke me the next morning. All the others had slipped off, and, as it turned out, it was a good thing they did.

I had been sleeping on a sofa, but as soon as I put my foot to the ground I realised I could never get a hundred mètres, far less reach my aunt's abode. I begged Mazin to save himself while he could.

'No, I won't go yet,' he answered. 'Lettzner will send the children out on the road, and at the first approach of these brutes they will warn us. Perhaps, after all, they may not come to-day. But look here,' he continued, 'I have had enough of this war. I have fifty francs. Can you lend me another fifty? I must buy some civilian clothes, and then, I tell you, I shall go to Switzerland. I don't care if I walk all the way. My *fiancée* and her family are there, and so is my mother. The good woman here says she will get me the clothes.'

Of course I willingly gave him money.

A letter to my aunt was soon written, and the lad, who was about twelve, set off. And soon after the keeper's wife went to get some sort of clothes for Mazin.

I was quietly smoking, about ten o'clock, when Mazin, who completely lost his head, rushed in. 'The child says the Uhlans are coming!' he cried. 'Let's get out of this.'

'It's all right,' said Lettzner calmly. 'There is plenty of time; they are coming up the hill. Still, perhaps you might be safer in the woodshed; and, in spite of my sprain, in a very short time I was in the shed, which was close to the road at the side of the cottage.'

'Don't you worry,' said Lettzner as he hid us behind some faggots.

Looking through a chink, I saw him calmly seat himself on a small upturned barrel. The next moment I heard the clatter of the horses, which drew up not five mètres from me.

'Good-morning, *Herr Hauptmann*,' said the keeper, rising. 'We have run short of beer, but I kept a *bock* for you.'

'I have no time for that now,' said the other in a worried voice. 'I have something else to do. It appears that about a dozen French prisoners escaped out of the train last night.'

'You don't mean it!' said Lettzner, in well-assumed surprise. 'Where did it happen?'

'That's what we don't know. They did not find it out till the train got to Strasbourg, and

then they telegraphed up the line. The fellow in charge of them, they say, had a fit.'

'The prisoners must be leagues off by this time,' said Lettzner, and this remark caused me to give Mazin a nudge.

'Of course they must,' replied the captain. 'However, they were in their uniforms, and we will make short work of them if they are caught.'

'Well, you would despise me,' said Lettzner, 'if I pretended to be sorry that they have got off.'

'I dare say you are not,' replied the officer sharply; 'but just remember this, that if you do hear anything about any of them, and you don't tell us, you will be shot and your cottage burnt to the ground.' And, giving the word of command, he trotted off.

The natural jovial expression of the game-keeper had died away when we got back to the cottage. He had a wife and family at stake, and it was enough to depress any man; but soon his wife returned with some clothes, which Mazin quickly donned; and, after vowing eternal gratitude to the couple and thanking me, he set off on his journey to Switzerland, where, I may state, he arrived in safety about a month afterwards.

'Here comes Dr Bachelet with my son in his gig,' said Lettzner, only a few minutes after Mazin had departed; and next moment a tall, thin, very bald-headed man descended. I have known some good men in my time, but I have never met his equal. He had a singularly gentle, sympathetic manner; but his sharp, bright eyes, that seemed to look through one, showed that he would be a very difficult man to deceive. Aunt Elizabeth, good, careful soul, had forgotten nothing, and sent me some old clothes.

The doctor did not attempt to set the arm or even look at the foot, saying that he would see all about that afterwards; in fact, before I could half thank my kind host for all he and his wife had done I was bundled into the vehicle, and by a circuitous route we were hurrying on to the château. 'We will carry through the business,' said my companion with a chuckle. 'I have enough carbolic here for a hospital; and he went on to tell me that he was going to make out that I had smallpox, so that would keep the Germans away from the house.'

Apart from his good heart, I soon found that Bachelet had a fine sense of humour; and he beguiled the way so pleasantly that I was quite surprised when we turned into the drive and I saw the fine château straight in front of us.

'There's madame and *la belle mademoiselle*.'

'Whoever is she?' I asked, as I saw a beautiful tall girl, in a long velvet coat trimmed with brown fur, and a collar of the same material, and a broad-brimmed black felt hat with just one little bright scarlet flower stuck at the side of it, standing by madame on the steps. But before I could get over my surprise or get an answer from the doctor he had pulled up.

[Christmas Number.]

'Ah, my poor dear François!' cried the good old lady, throwing her arm round me as she kissed my cheeks, 'your letter was a surprise; but oh, *ma foi!*' she continued, drawing back a little and looking me up and down. 'Ah, *c'est drôle!* That coat I got from Jacques the cowman; and that is the coachman's hat. But, anyway, I have got you; and here, you see, is Henriette to welcome you.'

I had never thought of what an object I must have looked till then, and, confused and stupid, I gazed at her companion.

'You remember your cousin Henriette?' said my aunt.

'I don't believe he does,' replied her niece. 'It is years since the last time we met at a children's dance on *le "trêve des Confiseurs."*'

'Of course,' I replied, 'I remember. Yes, but'—

'But what?' she asked.

'I remember you as a dark, plump little girl, a regular *rondelette*, with fine eyes certainly, but giving no promise of extraordinary beauty.'

'Look here,' interposed the doctor, 'the sooner you are upstairs the better. We don't want some Uhlans to interrupt us.' So, with his help and old Guillaume's, the major-domo, I was soon in a fine room, where a log-fire was brightly burning. The doctor set the arm and bandaged the ankle. As I sank back in the warm bed it seemed as if I were in Paradise—at any rate, for a time, till a blanket soaked in carbolic was hung up outside. When at last I got over the horrible smell it set me laughing to think of the doctor's ruse.

Surrounded as I was with every luxury, my aunt's solicitude, and above all the presence of such a charming girl as my cousin Henriette, I look back on those days as some of the happiest of my life. Though as regards Henriette, she was really no relative at all, for she was the daughter of Monsieur Farlier's brother, Colonel Farlier, by his first wife. She inherited her mother's money on the death of her father, who had died two years before; and, being independent and not caring much for her step-mother, she had come to live with my aunt.

'You know, François,' said the latter, as she sat beside me that evening after we had been talking of the war, 'there were lots of things I remember now that one thought nothing of at the time. It was but a few months before your dear uncle died that, to my surprise, one summer day he brought in to *déjeuner* two charming young Germans. One was an artist and the other a mere amateur painter—so he said. My husband found them just outside our gates with their easels in front of them. He innocently told them that he could show them a far prettier view than they had chosen, which he did, and they thanked him very much. In the afternoon, as I was coming a short way through the hops, I heard one of them say, "Well, that is
1915.]

the key of the position. Just give me the height of those two hills." They were very much surprised at suddenly seeing me. I asked them to show me their sketches. One of them did, and very bad they were; but the other hastily put his away, saying, with a laugh, they were really too poor to exhibit. I cannot say that I thought much of it at the time. But only two months ago I was told that a captain of the artillery wished to see me. He said that as he came through the village he had heard of the death of my husband, and he wished to say how sorry he was. In his uniform at first I really did not recognise him, till he told me, with a peculiar smile, he was one of the artists we had entertained, adding that the other had been killed near Metz. When I recovered from my surprise, I fear I spoke rather freely of their conduct; but he took it in good part, and said, with a smile, that "all is fair in love and war." I remember, too, a fellow who was about the district last year for some weeks with a hand-organ and a monkey. However, they say he has got his deserts.'

These and many other stories I heard from my aunt, and from others, of the German spying that went on before the war, and dearly we have paid for our simplicity. Under such good care I soon made rapid progress; but both my aunt and the doctor thought it advisable that, though I could soon hobble about, it was imperative, as a smallpox patient, that I should keep upstairs; and it was a good thing I did.

The carriage-drive was a long one, and from the house the entrance to it could be seen; but the drive took, from the elevation of the house, a sharp turn which was hidden by shrubs close to it. I was lying here on a sofa one morning. Henriette had lighted a cigarette for me, and was seated on a stool at my feet, drinking in every word I was telling her of the battle of St Privat, and my aunt was knitting by the fire, when old Guillaume came up breathlessly. '*Prenez-garde, madame, les Uhlans viennent.—Prenez-garde, monsieur, allez-vous coucher tout de suite.*'

'All right,' I said calmly. 'Don't you trouble about me. Get some carbolic and throw it about the hall; let the brutes smell it.'

'Yes; that's a fine idea,' laughed Henriette, springing up. 'I'll see to that while aunt talks to them.'

It is only fair to say that little damage had been done to the various cottages and châteaux in the district. The army that had traversed the district belonged to the kind-hearted Crown Prince, and his orders were very strict as regards pillage. Besides, madame had been fortunate in the first place. A Lieutenant-General Graf von Malstein, an officer with a high position on the staff, had been wounded, and my aunt had nursed him, and he had given her a letter, expressing his gratitude, for her to show to any

who might be billeted in the house, and assuring her if she had any trouble she was to let him know at once. This letter had had a wonderful effect. It did not, of course, prevent the Germans taking what they wanted; but the house received no damage. As for our visitors, on this occasion they had taken up their quarters at the Château de Mulbach, belonging to Baron de Longe-Goubart; but often when it suited them the officers came in to *déjeuner*, attracted perhaps by the beauty of my cousin, though she never came near them if she could help it.

'Good-morning, Captain Schlachgruggè,' said Aunt Elizabeth on the steps below. 'I think it only fair to tell you we have a case of smallpox in the house. Would you like anything brought out?'

The captain consoled with her; but said that as in Germany every one was vaccinated two or three times, smallpox was immaterial to them. And to our chagrin they dismounted; but the smell of carbolic that met them was more than they bargained for, and they only gorged and drank and smoked for an hour, whereas in the ordinary way they would have stayed three or four. In a moment I had recognised the voice of the captain as being the same who had visited the gamekeeper, and I laughed to myself as I thought how near I was to him again.

'It's like,' I said to my cousin, "'the hide-and-seek" we used to play as children.'

'Well, I only hope it won't be played once too often,' said Henriette when I told her this afterwards.

I remember her words, for it nearly came true, and she was the innocent cause; though the danger did not come from the Prussians, but from one of my own countrymen.

The property of my aunt was bounded by that of the Comte de Rontaize, and some belonging to a Baron de Longe-Goubart.

The baron was enormously rich. His father, an Auvernat, was a man with no scruples, who had worked his way up, became a *député*, eventually reaching a great height in the imperial political circles, and was made a baron through the influence of De Morny, the Emperor's half-brother, whose financial methods in conjunction with a lot of cosmopolitan Jews are well known. Among the many shady methods by which the baron amassed his wealth it was even said that he used his high position to take government contractors' tips; but, instead of this being condemned, it was openly winked at by his political supporters, because only too many were tarred with the same brush.

To inherit his large fortune he had but a weakly son, who was a humpback. The young baron, as he was called, had all his father's craftiness, and at this time was about thirty. As a humpback, of course, it was easy for him to get off serving. There was not the slightest doubt, as I was soon able to see for myself, that he

was excessively handsome; his pale, anæmic features were perfectly classical. The only thing against him was his bright, shifty eyes that, with men at any rate, bred distrust at once; but even with men, if he had an object in view, his apparently frank manner would disarm it. As for women, he was so rich, and such a polished liar, such a fine musician, and had such a very perfectly trained tenor voice, that they quickly forgot his deformity, and, in fact, everything else.

Now it was quite impossible for any one to be in the proximity of a girl so beautiful and withal so charming as Henriette without falling in love with her, and I was no exception. I soon began to dwell on the tones of her voice, to watch her every movement, and to think of what she would like and what she would say and do; and so I could not be surprised when I heard of her numerous admirers, and how many offers she had had, and that among the most ardent of her lovers was the baron. The war had sent most of the men away; so, till my arrival, the baron had had the field practically to himself. Whether Henriette guessed my love for her I was not sure; but my aunt soon found it out, and quite favoured it, though she said she would give her niece quite a free hand.

'Of course, you know, François,' she remarked one day, 'Henriette could marry the baron to-morrow if she liked, and there is no denying it would in many respects be a very fine match, even for her, to be the *châteline* of that fine château. He swore to me that he would settle a million francs on her, to be her own for ever. However, she has always put him off till now by saying she would not change her creed; but the last time I saw him he said he would change his; but, as he is so rich, I fancy monsieur his *curé* would have a word to say about that.'

It was Bachelet, who hated him, that had put me on my guard against the baron. On account of the smallpox report he had never been near us; and Bachelet said, 'If you only knew his naturally nervous disposition, the fright he gets into about his health, you might be very sure he would stay away.'

Great, then, was our surprise, after I had been at the château about a month, when we were seated in the *salon* one morning, we saw Baron Longe-Goubart just in front of the window.

'*Oh ciel!*' cried my aunt, 'there's the baron! It's too cold upstairs, François; you go into the *petit salon*. I will keep him out.'

Henriette ran up to her room, and the doors had hardly been closed on me when I heard our visitor in the hall.

'Good-morning, madame!' he said, before she could open her mouth. 'I congratulate you; it was a very clever idea. I was—and so have those German hogs—been completely taken in by your ruse.'

'Whatever do you mean, baron?' she asked, though she could hardly conceal her vexation.

[Christmas Number.]

'Why, the smallpox idea,' he laughed. 'Quite a *beau garçon*, I am told. I shall be quite jealous. You must introduce me to him. I was afraid to come, yet I have been dying all this time to see mademoiselle. See, I have done myself the honour of bringing her these violets. I have also brought her some songs. One cannot get any music from Paris now, but I found some old English ones that had been put away. They are perfectly charming. I think they would suit her voice.—Ah, here you are, mademoiselle. I am delighted to see you as beauteous as ever. Smallpox is contagious. The sun itself, they say, has spots; but, at any rate, you show no signs of any marks.'

The baron had been educated at a Jesuit school in England, and spoke the English language perfectly; so at least said those who, like myself, did not know a word of it.

'But I don't know a word of English,' said my cousin.

'That does not matter. I don't know Italian, but I can sing it.' And then he sat down and sang two of the songs. Prejudiced as I was, I could not deny the beauty of his voice, the sympathetic *timbre*, the whole masterly way they were sung. If he had had to get his livelihood by his voice, without a doubt he could have easily done so. But it was in the florid love songs of Bellini and Donizetti that his real powers came out. He stayed, evidently with the idea of being asked to *déjeuner*; but my aunt, being taken by surprise, for several reasons did not ask him. As he was leaving, Aunt Elizabeth asked him as a patriotic Frenchman to keep to himself the secret he had discovered; and this he promised to do. But he added, 'What I know, of course others know.'

'Yes, indeed,' said Madame Farlier. 'There must be treason about. Is it fair to ask you how you got your information?'

'I have given my word not to do so, and I dare not; but the fact that this interesting patient has been seen in the park walking with mademoiselle in a bitter wind, with his arm in a sling, a fortnight after he was seized by that dreadful malady, first led to my inquiries. A sling,' he continued dryly, 'is not altogether an adjunct of smallpox.—Adieu, mademoiselle. I hope very soon to bring you more violets and fruit. All that I have, you know all too well, is at your disposal.'

Now, to listen to this fellow's honeyed compliments to my beautiful cousin was a horrible experience. I never realised till then how dear she was to me; they aroused, as nothing else could have done, all my dormant jealousy. I determined to be introduced to him at the first opportunity. In his presence I should easily be able to judge by her manner whether Henriette really cared for him; but this I resolved to keep to myself. My aunt was very much upset by the baron's visit. She saw, as I did, that I

1915.]

was to a certain extent in his power, and said so; but the difficulty was to find out what he did know, and what he did not.

'I am certain, François,' she said, 'that no servant in my house or out of it would betray you. Apart from Dr Bachelet and the *garde champêtre*, no one else really knows how you came here, or what you are.'

'I am perfectly safe with those two,' I answered.

'Perhaps,' remarked Henriette, who had been singularly quiet till then, 'the children of the keeper may innocently have babbled about it; besides, all those others who have escaped may have talked when they got a safe distance, and the news has gradually spread. It's a beautiful day, so why should not François and I go and see Letzner after *déjeuner*? We will keep well in the woods all the time.'

My aunt thought well of this, and I naturally was delighted. It was a glorious December day, with a clear sky overhead, the ground as hard as iron, and we set off. The rabbits scurried across our path as though intent on keen business, a robin sang now and again as though from pure *joie de vivre*, and I for my part shared their spirits from the presence of the lovely girl beside me, for the keen air had brought the colour to her cheeks and made her more beautiful than ever. Somehow, however, she was *distracte*; she only spoke on casual subjects, and her usually buoyant spirits had disappeared. I soon noticed this, and in my turn became more quiet, and finally uneasy. A *souçon* of jealousy came over me. 'She is thinking of that cur's sickening love songs,' the demon whispered. 'But if it were so,' I said to myself, 'why should she be going of her own accord to find out if I am really in danger?'

'François,' she said seriously, almost stopping, '*il faut que vous aillez*. Yes,' she repeated quickly, 'you must go.'

I stood still, astounded. To my shame—such is jealousy—the thought flashed through me, 'She wants to get me out of the way; she loves that contemptible humpback.' Thank God, with all her quickness, she could not read my horrid, unjust thoughts.

'It is cruel of you, Henriette, to want to make me leave you!'

'No, it isn't,' she replied with a blush; 'it would be better for you—ay, and for me!' she said excitedly, her rosy cheeks becoming even more scarlet. 'I know the baron; yes, I know him. He's got you completely in his power; and he will use it, I tell you. He will say you are a *franc-tireur*; you will be shot straight away, long before aunt can hear from General Graf von Malstein. If you won't think of yourself, think of me; think of aunt. They will burn her house down for having harboured you. I beg you, I implore you, to go!'

Her words came in a torrent; I was quite

taken aback. I had never seen or dreamt of her like this. In a second I saw from the imploring look of mingled anxiety and love in her eyes that it was for my own sake.

'My darling!' I cried, throwing my arms round her and kissing her, 'I love you too much not to do what you wish, what'—

'You really love me?' she whispered, with a questioning look.

'Of course I do. How could I help it? But, *ma chérie*, we must be guided by circumstances. That fellow won't do anything yet; he, too, will be guided by circumstances.'

'Yes, yes; you are right,' she replied. 'I am happy now,' she continued softly; 'I have got your love. I will do what you advise. *Allons!*' and with light steps we went toward the keeper's cottage.

'Now,' she said, with a merry glance, 'we must be cold and formal. No one must suspect what we are to each other.'

'No; no one must know that,' I answered.

Letzner soon reassured us. 'No; I am certain the children have said nothing. You say the baron knows. Well, I know him, and he is *bien rusé*. There must be something behind that I don't know. There must be a woman in it; but you may rest assured that neither he nor the German hogs will get anything out of me or my family,' and we felt instinctively he would be as good as his word.

We did not hurry back, as we were too happy making wondrous plans for the future, as lovers do; and it was only the sight of the December sun, bright as the bottom of a new copper kettle, just setting over the crest of the purple mountains that made us at last hasten home.

'No one must know but aunt,' said Henriette as we approached the house, 'and I will tell her first,' and so she hurried in; but I soon followed her.

'Well, I am pleased,' said my kind relative as I kissed her when I found them both together; 'but it seems to me, François, your position, and I may say mine also, is now more dangerous than ever. No one, not even old Guillaume, or any of the servants, must know. In such a matter you could not expect women to hold their tongues. They all know and love Mademoiselle Henriette, and your betrothal would be all over the countryside; the baron would know as soon as any one, and then heaven help us! I don't like the idea; but you must do as I say. A letter has just come for you, François, from Geneva,' she continued, giving it to me; 'but it must be from your *fiancée*.'

This letter, as it happened, was from Mazin.

She was perfectly serious.

'My *fiancée!*' I cried. 'I don't quite follow you.'

'Don't you see,' she answered, with a smile, 'if you are engaged you can talk before every one about your *fiancée*.'

'How pleasant for me!' interposed Henriette.

'It will soon be known to the baron,' she continued, 'and it will ease his mind, and he will meet you in quite a different spirit.'

'And make love to Henriette before my face!'

'I cannot help that; Henriette will know how to take care of herself. You must both behave perfectly naturally; perhaps rather more formally than you have done. If you don't agree to this, François, then I think, as your arm is nearly right, you had better go at once.'

Of course, neither I nor Henriette wanted to be parted. We saw, after all, the forethought, and in reality the kindness, of the plan, and for the first time at dinner that night my aunt asked me casually something about my *fiancée*. I made a slight answer, but it was enough to set the ball rolling.

'So monsieur is engaged!' remarked Guillaume, with the familiarity of an old servant, as he placed the *café* and some cigarettes by my bedside the next morning. 'I congratulate you. Mademoiselle must be pretty, indeed, if she can beat our Mademoiselle Henriette; ay, and rich too!'

'Yes; my *fiancée* is indeed very beautiful,' I replied; 'but there is, alas! many a slip between the cup and the lip; but I promise you that you shall come to the wedding, and then you will be able to see for yourself what she is like.'

The plan succeeded beyond all expectation. All the world was deceived; but the restraint we two had to exercise was horrible.

The baron was not long in paying us another visit, anxious to know what progress Henriette had made with the songs. He and I were duly introduced, and I think I succeeded in hiding very successfully the dislike I had for him; so much so that he asked me to go shooting with him. But I naturally easily excused myself on account of my arm; besides, I told him, as he had the Germans quartered on him, it was best for me to keep out of their way. I expressed my admiration for his wonderful voice and the way it was trained, and being *au fond* extremely vain, and seeing he would swallow any amount of flattery, I gave him his fill, and completely put him off the scent; but, alas! only for a time, for he was so often coming to the house with flowers or game. On these occasions he was always accompanied by a half-witted, cunning lad named Kaspar, who carried the game for him.

After her husband's death, Madame Farlier had gladly let some of her woodland property to the baron for shooting. Often when I and Henriette took our walks in the woods, the only opportunity we had of talking to each other freely, we came across this crafty ne'er-do-well; but, engrossed in each other, we never thought of this Kaspar, merely looking upon him as a harmless idiot; and this was our ultimate undoing. Ah, when I think of it I could wring his neck! But, after all, it was my own fault. I was

[Christmas Number.]

perfectly well now; even Bachelet, when he came to see my aunt, who always suffered from rheumatism in the winter, never alluded to my injury. It was my duty, therefore, instead of staying on, to have gone off again to fight for my country.

In the middle of December the Uhlans, who had hitherto patrolled the district, and who were Württembergers and seasoned soldiers, were replaced by some Prussian dragoons, and consequently far rougher; in fact, perfect brutes. The men were half-trained conscripts, and their horsemanship was a sight for gods and men. By their very brutality to the inhabitants they came across they had roused the fury of the countryside. The *franc-tireurs* in revenge derailed a train, and a sergeant and four of their men were ambushed. For that the nearest cottages were burnt, the wretched people who lived in them were turned out in the snow, and the district had to pay an indemnity of ten thousand francs, and seven *francs-tireurs* who were caught soon afterwards were shot. The bulk of this money having to come from the Baron de Longe-Goubart, the Comte de Rontaize, and my aunt, we thus suffered from no fault of our own. It was lucky for us that the Germans, like those who had gone before, probably because of the fine cellar and cuisine, took up their headquarters at the baron's; but that did not prevent them from paying us frequent visits. The captain himself, who was half Austrian, was not such a bad fellow; but his two subalterns were young swaggerers of the *Junker* class.

It was just before Christmas—the cold was intense—on a bright, cold day that I and Henriette were walking in an *allée* of the forest, when we were startled by a sharp report, the shot rustling through the dead leaves quite near us, and a wounded hare limped slowly across the path.

'Poor thing!' cried my companion, when she had recovered her composure. 'Oh, do catch it!' So I ran to do so.

'*Grand ciel!*' shouted a voice in the wood, 'is that you, Mademoiselle Henriette?'

'Yes!' she cried; 'and your shot nearly touched me.'

'I should have been more careful,' he answered, and went on to make the most profound apologies for his carelessness.

'*Wen sie hier ist,*' suddenly said the idiot beside him, with a grin, '*der andere ist nicht weit*' ('If she is here, the other is not far off').

But Love gives wits.

'Do you think,' cried Henriette, blushing indignantly and looking the creature up and down, 'that with these Prussian ruffians about—ay, and some of these poaching *francs-tireurs* are not much better'—

'You are right in that, mademoiselle,' interposed the baron, who suffered sadly at their hands in this respect.

1915.]

'Do you think—though I always carry this,' she continued angrily, producing a small revolver—'that I should dare walk about by myself?'

At that moment I returned with the hare that I had put out of its misery; but the idiot's shaft had gone home. Those fateful words were remembered.

The baron and I shook hands, and talked of the war and casual subjects; but I noticed a constraint, and an uneasy suspicion in his manner; and as we parted I fancied I saw what I might call a look of hatred in his cunning eyes. However, I had not long to wait for his newly aroused jealousy and malice.

Christmas had gone, and I had firmly resolved to leave after my aunt's birthday, which was the 29th December. The frost on that day was suddenly succeeded by bitterly cold showers of sleet and rain that completely thawed the snow.

It had always been the custom of my good aunt on her birthday to have a little gathering for all her farm-hands, and even some from the neighbouring hamlets. On account of the war, and so many men being away, I thought she would have postponed it. But she, with her good heart, said, 'No; the poor things, with all the misery and wretchedness around them, there is all the more reason to give it as usual, just to cheer them up. High and low, rich and poor should at this time draw more closely together in their misfortunes.'

So, though it was a horrible morning, Henriette started for the little village to see to the preparations. A certain uneasiness had clung to both of us ever since our last meeting with the baron. We dreaded, too, meeting that idiot again; so I left her at the end of the park, and old Guillaume accompanied her. But she came back by herself. My aunt and I were sitting quietly before the fire when she burst into the room, flushed and trembling. I rushed forward and threw my arms round her. 'What is it, *ma chérie!*' I cried.

'Well, I met that horrible little humpback,' she answered, 'and he began, of course, with his fulsome compliments; then, though I tried to keep him off, he asked me to marry him. I told him it was impossible. "Ah!" he cried savagely, "you love that Strasbourg lout. I know it, mademoiselle; you cannot deceive me. I saw through that smallpox ruse!"'

'By the help of your half-witted spy,' I replied.

'I will not think so meanly of you that you would allow yourself to be kissed by that fellow, as you have been seen to do, if he really had a *fiancée* elsewhere.'

'By your spy again,' I answered.

He stopped for a moment, stung by my words, and I hurried on; but he was soon beside me. 'You won't have me?' 'No,' I replied; 'I have almost as great a contempt for the man that employs a spy as I have for the creature himself.' 'Very well, mademoiselle, if you

won't marry me—at any rate, you sha'n't marry *votre cher ami*. Yes," he continued, his little, shifty eyes gleaming with hatred, "I know more than you think. I know he is a *franc-tireur*." "You know he has served his country, which you were afraid to do," I replied. "He, and you, and your aunt," he continued, "are in my power, as you will find out;" and, turning on his heel, he left me alone. Listen to me, dear François!' she cried imploringly, throwing her arm round my neck. 'Go upstairs, get your coat, and go while you have yet time.'

I saw she was right, and I should have acted on her advice had I followed my own ideas, but my aunt broke in. 'Have no fear, my child; that cur's bark is worse than his bite. He says François is a *franc-tireur*; that shows how much he knows. That new captain has not seen General Graf von Malstein's letter that I have. I will telegraph to the General; he will intercede, if necessary, with the Crown Prince. Have no fear; remember how Henriette Dodu was saved.* These Germans dare not do anything. No, my children; this is my fête-day. Let us think of something else than that humpback *et ses barbares*. It is getting dark; my guests will soon be here, and we must attend to them.'

I felt I was stupid, yet I had not the moral courage, for fear of being thought a coward, to follow Henriette's sage advice; and I paid for it.

It was about six o'clock; the worthy old people had begun their meal, and all was merry and bright, when we heard a clatter outside. With a cry of alarm, Henriette flew toward me as though to shield me from my foes. The next moment the *oberlieutenant* came into the room, followed by some troopers.

'Ah, my *franc-tireur* friend!' he said confidently, 'we have caught you at last.—Here, seize him!' he cried to the men; but Henriette clung to me.

'Have no fear, *ma chérie*,' I said calmly. 'It is all right; they will find they are mistaken.'

'I am truly sorry for you, mademoiselle,' said the *oberlieutenant*, who had never seen my *fiancée* before, and was evidently taken aback by her beauty. 'For your sake, we will not put him up against the wall to-night; we will give him till nine o'clock to-morrow.'

'Yes; and I am sorry for your sake when your superiors hear of it,' replied Henriette.

In the confusion I had not noticed that my

aunt had gone. Now she returned, with a letter in her hand.

'*Herr Oberlieutenant*,' she said, quite calmly, 'you know of General Graf von Malstein?'

'Of course, madame, by repute,' he answered, with a puzzled look.

'Read that,' she said, giving him the letter.—'Guillaume, go upstairs and get my nephew's uniform.'

The German read the letter, evidently surprised.

'Now listen, *Herr Lieutenant*, and you people too,' she continued, turning to her guests. 'I know who has misled you; it is that contemptible little humpback of a baron, who this very morning proposed to my niece.'

'Did he though!' exclaimed the young officer, with a grin.

'Yes, he did,' continued my aunt. 'She refused him, with all his château and all his money, and he told her she should suffer for it, and he has kept his word. My nephew, as a dragoon, has fought for his country, and he is not, and never has been, a *franc-tireur*. There, you can see for yourself,' she added, as Guillaume arrived with the uniform. 'You dare not shoot him to-morrow. I will telegraph to the General, who is, you know, with his friend General von Blumenthal at present on the Staff of the Crown Prince at Versailles.'

The bluster had gone from the manner of the young *Junker*.

'Well, I will do nothing without my superior's orders; but I have got my prisoner, and I mean to keep him.'

I always had an admiration for my aunt's cleverness, but I never fully realised it till now. 'I know, *Herr Oberlieutenant*, you will find you have been mistaken,' she said, quite changing her manner. 'Send him to his room if you like, place a sentry outside the door, and below his window; and then, as it is my birthday, and I have a few poor people here to commemorate it, I shall feel glad if you will join us, and allow your men to take part in our little festivities.'

Henriette, too, joined her in the proposal.

'Well,' he said, 'I think, madame and mademoiselle, I will; I may as well sleep here, on such a rough night. I will send a corporal and two men to my superior to tell him so. The captain is ill, but he has my subaltern with him. Now I will go up and see the room.' So, with one man in front of me and one behind, we went up.

'Where does that door lead to?' he asked.

'It is my aunt's dressing-room; it's locked on the other side.'

'All right,' he said; and he went round and took the key.

He agreed that I might have my dinner sent up, and, leaving a sentry outside the door, he departed. As in many old houses, one room led into another. It was possible for Henriette to

[Christmas Number.]

* One of the bravest deeds performed in the war, an act which gained her the Legion of Honour, was done by Henriette Dodu, the postmistress near Pithiviers, who took copies of the German telegrams. Thus all their movements were forestalled; they fell into ambushes; their convoys were destroyed. The Prussians guessed the reason, but could not find out who did it, and turned out all those living in the post-offices. Henriette Dodu took up her residence at a neighbouring convent, and again tapped the wires successfully for a time; but she was betrayed by the inmates of the convent, and was condemned to death, and only saved by the intercession of the Prince Frederick Charles.

enter her room on the other side of the house ; in fact, her door on the other side of the landing was opposite to mine, where the sentry was posted. It was about half-past seven when I heard a slight tap at the door of the dressing-room, and a note was inserted underneath ; there was a faint rustle of a dress, and all was still again. The note ran as follows : 'The guard is changed at eight and ten. Open your window at 9.30 as near as possible. I shall come and say to the sentry, "It is my aunt's fête-day. I am sorry for you in the bitter wind and rain ; I have brought you some warm drink." I shall pretend to trip and upset it all. Leave the rest to me. Guillaume is to bring your dinner with everything necessary ; and he is now plying the troopers with drink. The lieutenant is going to dine with us. Don't get jealous, *mon chéri*, if you hear any music. I must go now. Leave everything to me. Adieu, adieu, *mon chéri*, *tout à vous*.—HENRIETTE.'

I saw the scheme of the brave, quick-witted girl, and I had hardly kissed her letter when old Guillaume came in with a tray. He spoke in a fairly loud voice of the awful wind and rain outside ; but all the time he was speaking, he uncoiled a thin rope from under his coat, and pointed significantly to the extra loaf on the table, and gave me a large flask from his pocket. 'Is there anything else you require, monsieur ?' he said, for the benefit of the sentry outside, as he opened the door.

'No, thank you,' I replied. 'Be sure and call me at eight to-morrow. Good-night.'

I had not much appetite. I could only think of my darling Henriette ; admiration for her, and the fear of the risk she was running for me, for a time took from me all desire to eat. But I pulled myself together and ate something, thinking it best to do so while I had the chance.

At eight I heard the guard changed in the house and outside. While they were occupied in this, I gently opened the window, which luckily moved inward. I heard the password 'Weissemburg,' but the wind prevented me from catching the countersign. Suddenly, in the *salon* beneath, I heard the piano ; then I knew what Henriette had meant when she spoke of the music, for soon I heard her beautiful voice soaring in '*Robert toi que j'aime*.' Never had I heard her sing it so divinely, though the tremolo in it showed her real nervousness. I could almost hear the congratulations of the soldier. Then I heard them talking. Evidently she was persuading him to sing, and naturally she succeeded ; and in a fair but rough, and to tell the truth, rather a thick voice he sang a *Volkslied*.

'We always go to bed early, *Herr Oberlieutenant*,' I heard Henriette say, in a purposely loud voice, in the hall, 'as my aunt suffers from gout ; and it is a quarter past nine now. Guillaume will look after you ; you will find cigars
1915.]

and a decanter and some papers in the billiard-room.'

Then the ladies came upstairs, and all was still but for the shuffling of the sentry outside my door. Everything was now ready. I had the rope firmly tied to the leg of the dressing-table. I had got my heavy coat on, the pocket full of provisions, and a brace of loaded pistols that had belonged to Monsieur Farlier, and which I would not have hesitated to use, for my blood was up, and I would have risked everything if either the lieutenant or the sentry had come in. The window was wide open, the night as dark as pitch, while the rain beat into the room on to the parquet.

It must have been half-past nine to the minute when I heard Henriette's silver voice below calling the sentry. Looking out—a perfectly safe thing to do, such was the storm and darkness—I saw the glimmer of a lantern. I knew it was Henriette who held it.

'It is my aunt's fête-day !' she cried, in a purposely loud voice. 'She is so dreadfully sorry for you in the rain ; I have brought you this hot cognac. Oh !' and she gave a little scream, and I saw she had fallen. 'Ah, now it is all upset ; but never mind. I will get you some more. Come round here.'

'Oh, I dare not, *Fräulein*,' replied the man.

'You need not fear the sergeant, for he, I am sorry to say, is so intoxicated he will know nothing about it.' As she spoke she held the lantern above her, so that its gleams fell on her lovely face and the frizzly curls under her hooded cloak. The sight of her beauty was enough. Then followed, what always has done, and always will do, if a woman is only sufficiently pretty. The man was but as wax in her hands. The dolt followed her. In a second I was out of the window and on the ground. I did not forget to cut the rope as high up as I could, for fear of it tripping the sentry as he marched up and down. Tearing across the lawn and flower-beds, I reached some shrubs, and then made a bee-line for Dr Bachelet's house, which I knew was not much more than a league off ; but, short as the distance was, it took me nearly an hour.

I told the good doctor everything. He quickly grasped the situation.

'I had my own doubts,' he said, with a smile, 'about that *fiancée* of yours that we heard of so unexpectedly ; she would indeed be a wonder if she were nobler or more beautiful than *Maiselle Henriette*. But you are too near the *château* here ; those German hogs will be scouring the country to-morrow ; you must get farther away. While you are drying your clothes I will put the horse in myself. My man is in bed. That's well ; for the fewer that know anything the better. Now,' he said, 'I am taking you to a farm up in the mountains due south—three leagues off, and no very great distance from Phalsburg—to a man named Lannoy. He will

do anything for me, and I know he will for you when he hears your story. He hates those Prussians like poison; he has lost one son at Beaumont, and the other has come home crippled for life.'

If I had had some personal claim on him I don't think the worthy farmer—though he knew the terrible risk a man ran by harbouring a fugitive—could have received me better.

'Now you stay here,' said Bachelet. 'I shall have to be up at the baron's to-morrow to see that German captain, who is really ill with pneumonia. I shall learn a good deal there, and then I will go on to see your aunt. If I can't come myself, my young son shall come over to-morrow.'

The following evening the doctor's son brought me a letter that told me everything. Early in the morning, it appeared, while I was still supposed to be a prisoner, my aunt had driven to the station and telegraphed to General von Malstein at Versailles, telling him that her nephew, a dragoon, who had come as a convalescent to her house, was in danger of being shot on account of some outrages by *franco-tireurs* in the district, and begging him to use his influence to save him.

When she returned, she found the *oberlieutenant* perfectly furious; for he had just learnt of my escape.

'You don't mean it!' she said to him, pretending to be greatly surprised. 'Why, he need not have troubled to do that, for I have just telegraphed to Versailles.'

'Himmel, you have!' cried the young *Junker* in alarm; and, leaving a few men, he mounted his horse, and set off to see his captain, Von Hagenbreck. The result of the telegram was that he returned about midday and made the fullest apologies; all his anger being now turned on the baron, who had deceived him. Though he did not think I was in much danger, the doctor advised me to lie concealed where I was till I heard from him. I thought this best too; for I knew if the baron got at the truth of the matter, that I was really an escaped prisoner, a very different complexion would be put on it, and that I should be shot without delay.

However, my spiteful enemy had his own troubles to occupy his cunning mind, for the whole countryside had learned how he had tried to get me arrested, and the reason why he had done so; and, warned by what his spy told him of what was said outside, he was afraid to venture beyond his own house. And he did not find it very pleasant even there by reason of the sneers of the infuriated *Oberlieutenant* von Schwobgruntz and his subaltern.

What bothered me more than anything else was that I was so near to Henriette and yet I could not even see or speak to her. Often I almost thought I would risk anything, if but for a moment to hold her in my arms and kiss her

and thank her; but I knew it would be mere selfishness, and I had given both her and my aunt enough trouble already. About a week after I had been in the cottage, Bachelet turned up, to my surprise, in broad daylight.

'I have such news to tell you,' he cried, 'that, busy as I am, I could not but come over. You have nothing to fear now, for the baron has disappeared; and I doubt if he will be seen again for many a day. Captain von Hagenbreck was so ill yesterday that he begged me to stay the night at the château. The baron had asked Monsieur le Comte de Rontaize to come to dinner, for he wished to give him his account of what had taken place as regards you and Henriette, as the Comte is a man of great influence. Of course the two German officers were there. With his emotional, excitable temperament, Longe-Goubart is far too cunning to take much wine, for he knows he might make a *faux pas* if he did; but it was quite otherwise with the Germans. The *oberlieutenant* was still savage at the way he had been fooled as regards your being a *franco-tireur*, and, with Teutonic coarseness, he made some sneering remark to his host as to how he liked getting his *congé* from *la belle* Mademoiselle Henriette.

'I will tell you,' retorted the baron; 'you make love to a girl in what you call French, and then you will find out.'

'After that I cannot say what followed, as I went upstairs to see my patient; but the sneers and mirth of these young *Junkers*, as they drank more and more heavily, became so gross that the baron, with all his cunning, was obliged to take notice of them, and eventually demanded satisfaction of the *oberlieutenant*. Except for the presence of the Comte de Rontaize, he would undoubtedly have swallowed all that was said; but by asking him to dinner that night he was caught in his own trap. The meeting was arranged for eight this morning, and the old Comte stayed the night at the château to act as second; but the baron was not to be found.'

The doctor's story had taken a great weight off my mind. All I wanted now was to see Henriette, and to my ineffable delight Bachelet arranged that I should meet her at a place half-way between us. Ah, what a meeting that was! Ah, how I caressed that brave, beautiful, and noble girl! but, alas! the interview was all too short. Still, I had seen her, I had thanked her, I had kissed her; and, whatever might happen to me ere I went to fight once more, I felt I had had some satisfaction.

The following day I set off with my host to go to see some relatives not far from Mülhausen, from whom I reckoned I might get information as to what regiment I should join.

We had not got half-way when Lannoy said, 'We shall come to "Le Lapin Noir" very soon. I know the landlord there. He is an old quartermaster; he was in the Crimea; and

[Christmas Number.

we will get something to eat.' Just as we arrived, I saw a horse, that had evidently been hard ridden, being led round to the stable. I jumped out first, leaving Lannoy to put up the trap. I had hardly entered the inn, which is not too light, when I actually saw the humpback before me.

'You little scoundrel!' I cried, rushing at him.

In the tenth of a second he had drawn a pistol and fired. I felt the sting of the bullet; but I closed with him, and, wrenching the now smoking weapon from his hand, stunned him with it. The whole occurrence had not taken a minute. Three or four rough countrymen who had been quietly smoking, taken by surprise, had bolted in all directions, and another had got under the table.

'*Grand ciel!*' cried the landlord, who alone had kept his composure, as he gazed on the baron's ashy face. 'Why, you've killed him!'

'And a good thing too,' I replied. 'You saw that he fired at me first. Here, cut my sleeve off,' for I could feel the warm blood trickling down my arm.

While I was speaking, Lannoy came hurrying in, and was aghast when he learnt what had taken place; but he soon explained to the villagers, who had now crowded into the little inn, the true facts of the case. The *maire* and the *curé* also arrived. Having nothing to fear, I told them I was a brigadier of dragoons, and they could see my number on my boots.

By this time the baron showed signs of consciousness. This was enough for me. The landlord's wife had bandaged my wound, but I still had the bullet in me. No one knew where the village doctor was; he had left some time ago. So I determined to go back and send for Bachelet. By five o'clock I found myself once more in the cottage, and in an hour or two Bachelet had extracted the bullet. From the jogging and jolting of the cart I had lost a great deal of blood, and the pain which the good doctor could not avoid made me sick and dizzy. I was grieved that for a month or so I should have no chance of doing anything for my country. But, at any rate, my proximity to Henriette gave me a secret pleasure; though both I and Bachelet thought it best not to let her know anything for a time. Bachelet, by his care and attention, had, so his patient declared, saved the life of Captain von Hagenbreck. The latter would be invalided back to Germany as soon as he could be moved, and he was deeply grateful for what had been done. Then Bachelet, in the presence of the *oberlieutenant*, told him what had happened to the baron, much to the delight of Lieutenant von Schwobgruntz.

'Who did it? Why did he do it?' asked the latter.

'Well, as I told you, he was wounded; but he 1915.]

is a French soldier, and I don't want you to take him prisoner. If you are really grateful, as you say,' continued Bachelet, 'for what I have done, and will promise me to let him go free—in a word, to wink at it—I will tell you.'

'I know who he is, and I give you my word,' said the *oberlieutenant*. 'And as I shall be in command, I swear I will do nothing; in fact, if I dared, I would thank him. I won't let any one go near the house; so you can remove him there, and tell Madame Farlier I said so.'

'If I had only been going to stay,' said his superior, 'I would have agreed too. I should have been only too glad to have such an easy way of repaying you for all your kindness.'

The very next day, and it was indeed one of the happiest in my life, I found myself in the same room from which I had escaped that stormy night. Ah, what a welcome I got! One would have thought no one had ever been wounded before.

'Monsieur,' said old Guillaume with conviction, 'you spoke of your *fiancée*; but I knew the girl did not exist who was superior to Mademoiselle Henriette;' and as I put a louis in his hand I told him he was right. The *oberlieutenant* was as good as his word, and discreetly never came near the place till the day after peace was signed, when my aunt insisted on his coming to dinner, when Henriette and I had the chance of thanking him.

As for the baron, when peace was declared he went to Paris to give his own version of the rumours that had reached that city; but he never came into Alsace again, and only lived a few years, as his naturally delicate constitution was undermined by dissipation.

As soon as the war was over, not wishing to live under the harsh brutal conditions imposed on the Alsatians, my family emigrated to France; and Aunt Elizabeth did the same, but not till after Henriette and I were married from her house, as she was anxious that the wedding should be from there; and a very grand wedding it was. There were many noble and many rich people present; but none were more honoured than some of the humblest, for neither I nor Henriette forgot what we owed to Letzner, the *garde champêtre*, and the worthy Lannoy. All the world could see for themselves the beauty of the bride, but these good people knew her worth and courage. Of course, in a way, my father and I had to commence the world again. But soon we were as successful in Paris as we had been in Strasbourg, for we had many powerful clients; and, as the country recovered from the ravages of the German vandals, houses had to be restored and new buildings and factories erected. While my family remained in the city, Henriette and I took up our residence near St Cloud, where, as in fairy tales—but in our case it was really true—we have lived happily ever since.

THE UNINVITED GUEST.

By ARTHUR O. COOKE

CHAPTER I.

IT all began, so far at least as I was concerned, with the foolish and ill-considered suggestion of Mrs Vinnicombe's married daughter. Mrs Vinnicombe, excellent soul, possessed a Devonshire tongue and an ample waist, and had for some three years been happy and contented as my housekeeper-cook-parlour-maid, when some spirit of evil put it into her daughter's head to beg her to go and 'end her days'—those were the woman's very words—with herself, her husband, and her six small children, in a four-roomed house in a back street of Exeter. Had Mrs Vinnicombe been sensitive she would have resented the suggestive wording of this offer, for she was a healthy, hearty woman of not more than fifty-five, and the close of her career on earth seemed yet far off. Had she been sensible she would have rejected an invitation which called her from reigning supreme in the kitchen of my comfortable little house to go and occupy an already overcrowded dwelling in the slums of a large town. Indeed, her leaving me is something I still fail to understand. But, then, I am a bachelor, a hater of towns, and something of a recluse by nature; characteristics which, as I am frequently told by female relatives, tend to blunt the understanding.

Of course when once Mrs Vinnicombe had taken the step which at length she did; had asked me, though with many discursive apologies for thus upsetting the calm tenor of my life, and long discourses on my kindly treatment of her, and upon the comfort of her 'place;' when once Mrs Vinnicombe had asked me to 'suit myself' at my convenience, the news was all over the little Dartmoor hamlet like a train of lighted gunpowder, for reticence was never my good housekeeper's strong point. It was therefore necessary to take instant steps to discover a suitable successor. Why such immediate haste, you ask, since Mrs Vinnicombe would not be leaving for at least a month? Innocent—and happy—reader, you do not know that indefatigable woman, Mrs Riddlesby, our vicar's wife! Had I delayed a moment to secure a housekeeper, *vice* Mrs Vinnicombe resigned, Mrs Riddlesby would have had a note on my study table announcing that she had discovered a person 'in every way most suitable' for my needs. This nominee I should have had to accept, with, as the auctioneers say, 'all faults,' or take the consequences of mortally offending Mrs Riddlesby.

A state of hostility with that lady I might perhaps have accepted with an equal mind had it not necessarily involved an embitterment of my relations with her husband. Now the Reverend Rufus Riddlesby, M.A., while an excellent and industrious parish priest, was a yet more industrious student of French history and memoirs, and a great admirer of France and her people generally. Mrs Riddlesby did not share this taste of her husband's; but I did. The vicar and myself exchanged ideas and borrowed one another's books, so that I was most anxious to live peaceably with Mrs Riddlesby so far as in me lay.

I had business in Exeter the day following the reception of Mrs Vinnicombe's ultimatum, and I there caused it to be proclaimed in a widely read local paper that a 'Single Gentleman requires Cook-Housekeeper for small Country Cottage.' That and my other business disposed of, I turned my steps toward afternoon tea with an acquaintance of mine, a Mrs Devine, the wife of one of the leading booksellers in a city where booksellers are many and good. With her husband I had, as a book-buyer of moderate means and few other expenses, pretty frequent dealings, always satisfactory to myself and, I believe, not unprofitable to him; and I was going to ask my hostess a favour, the granting of which, by the way, I had taken the liberty of anticipating. Would she allow the written responses to my appeal to be addressed to her, and also interview, and to some extent weed out, such candidates as might present themselves in person? Yes, being a good-natured woman, it appeared that she would; and she promised to let me know as soon as a sufficient number of applicants should have presented themselves, either by letter or in person. I went home that evening well pleased. Mrs Riddlesby was from home for a few days. By the time of her return I should no doubt be able to announce that I had some one 'in view.'

How very greatly is the power of money overrated. Millionaire manufacturers occasionally prate to interviewers of the wonderful results of judicious—and costly—advertising. Little they know how much may be obtained at little cost. Let them pose as a single gentleman, advertise for a cook-housekeeper, and see what happens. This was my first experience of the powers of advertisement. Mrs Vinnicombe had been requisitioned for me by the all-active Mrs Riddlesby,

[Christmas Number.]

while her predecessor had been an old servant in my family.

Three days later I heard from Mrs Devine. She was a woman with a powerful sense of humour, and, moreover, a most charming letter-writer; but, as I read, I gathered that her nerves were slightly jarred. She had already received, she told me, two hundred and seventeen written applications, and had also interviewed sixty-three personal callers. She added that her parlour-maid had given notice, having found the work of answering the street-door bell more arduous than she had been led to expect when taking the place. The kitchen chimney had been on fire, owing to the cook having burnt all the envelopes at one fell swoop. The letters had taken my correspondent two entire evenings to read and sort; and on the second evening her husband, usually the most domesticated of men, had remarked that as she seemed too busy to talk to him he would step round to the club for half-an-hour. He had done so, returning at twelve-thirty A.M., bringing with him an indifferent temper in place of the sum of one pound twelve shillings and sixpence lost at auction bridge, a game with which he was but imperfectly acquainted. Would I, Mrs Devine concluded, take some steps to arrest the still-flowing tide of replies, and also come to Exeter and make my choice from the very large selection offered me.

I obeyed both these requests without delay; despatching a second advertisement stating, with a disregard of strict truth perhaps excusable, that the vacant position was now filled; and calling on Mrs Devine the following afternoon. To the maid who opened the door I expressed my regrets for the excessive labour she had lately had on my behalf, at the same time slipping into her hand an apology of another kind, which quickly dispelled a scowl doubtless due to overfatigue. To Mrs Devine I made sympathetic inquiries as to the cook and the kitchen chimney, protesting my responsibility for any legal expenses entailed should the accident have been observed by a vigilant policeman. To Devine himself, who chanced to come in for tea, I hinted discreetly at new branches of French literature to be explored, and even at researches planned in other directions. And then I plunged into the mass of letters and notes which my hostess had placed on a side-table for review.

'Now that the kitchen is at peace and clean again, and Ann was looking so much brighter when she brought in tea—perhaps she will stay on, after all—it's really rather fun, you know,' said Mrs Devine, as we seated ourselves; 'there's such an infinite variety of these poor things, and some of them are so absurdly unsuitable. There is a girl of fourteen, whose mother wants to get her a first place; and there's a widow of sixty-nine. Here is a woman who can neither read nor

1915.]

write—her son writes the letter; and this lady can apparently do both, for she offers to read aloud to you in the evenings when the household work is done; you'd like that, wouldn't you! Here is a poor creature who would have to bring her imbecile son with her; but she says that he would not interfere with you, as he is quite happy sitting in the sun in summer or beside the fire in winter. Another woman wants to bring twin-children of eighteen months old; but she takes that fully into consideration, offering to come for eight pounds a year! Then here is'—

But I stopped her; horror on horror seemed accumulating on my head. 'My dear lady, it is terrible! Are they all like that? And even if they aren't, how can I ever choose? I had better return, like the prodigal son, and throw myself into the arms of Mrs Riddlesby.'

'No, no; don't give up like that. Some of the letters sound quite suitable, and many persons called, too, who were very nice. Oh, by the way, there was a Frenchwoman. How would you like her?'

'A Frenchwoman!' I exclaimed, clutching mentally at anything outstanding and tangible in these waste waters of uncertainty. 'What a curious thing! And, really, a French house-keeper would be rather nice; she would probably cook divinely. But had she references, and did she seem—er—respectable—and middle-aged?' for my thoughts flew toward Mrs Riddlesby.

'Yes, she had references, and looked quite thoroughly respectable, and was certainly—oh—over fifty. She has been helping at the Mount Hotel for the last three months, and came there with a testimonial from a London restaurant. See, here is her name—Antoinette Bachmann; and she wants to get into a quiet country place.'

'She will find the moor quiet enough; I doubt if she will come. I suppose she speaks English, though really I would just as soon that she did not.'

'Yes; she spoke English very fairly. But here is another rather likely person, Mrs'—

'No, thank you. To talk of or consider any more of this regiment would make me giddy. Who could have dreamed that one two-line advertisement would have such terrible results. I am going now, this moment, to see Madame—is she Madame?—Antoinette Bachmann. A thousand thanks for what you have done for me, and ten thousand apologies for all the havoc I have brought into your peaceful home. Good-bye.'

Ten minutes later, in the manager's room of the Mount Hotel, Antoinette Bachmann was shown in to me; coming straight from the kitchen, wearing an apron, and with sleeves rolled up, but serene and composed. She was a tall, finely built woman, with dark eyes, arched

eyebrows, dark glossy hair, and a large, firm, yet mobile mouth.

'Yes, monsieur, I wish to find myself a quiet place in the country. No; loneliness will make nothing to me. But monsieur will permit that I should ask him where he lives?'

I told her, adding that the nearest place larger than a hamlet was Princetown.

'There is a convict prison there, as possibly you know,' I said; 'but we are two miles away, and the convicts will not interfere with you.'

'Assuredly they will not interfere with me, monsieur,' she answered, in her full deep tones, adding, 'Poor men!'

The hotel manager spoke of her in high terms, and much regretted her wish to leave; she was a first-rate cook, and he had contemplated promoting her to a higher place than that which she now occupied as an assistant in the kitchen. She had come to him with a six-months' reference from a well-known London restaurant, and she also produced a testimonial from a former French employer—the *curé* of a village near to Épinal, her native district being Lorraine. She was a childless widow, having lost her husband, a German *douanier* at one of the Vosges frontier passes, twelve years back.

I think the *curé* settled it. I had once dined with one, a rubicund old gentleman, at a small village near to Nancy, and I still had happy recollections of that meal. Before I left the hotel Antoinette Bachmann had agreed to come to me in a month's time.

So Toinette came to the little house, where the hall-sitting-room looked out, across the young and rippling Dart, upon the boulder-strewn and fern-clad hill beyond; while from the library—my only other living-room—one looked up the small valley to the moor and its great tors.

Toinette came, and within half-an-hour of her coming she had taken sole control of house and occupant alike. She cooked my meals—and with what matchless cookery! she swept and dusted without fuss or noise; she kept my clothes in perfect order; she did everything. I was incomparably content.

Less satisfied, perhaps, was Trimble, my gardener, from whom the new queen of the kitchen made what he chose to consider in the light of unreasonable demands in the matter of vegetables; asking for many ingredients for salads of which he had so far ignored the very name, and insisting on their being planted forthwith if not already in cultivation. Trimble groaned under the extra exertion involved, grumbled loudly, and rebelled—fruitlessly. To his hints of leaving a place where the most 'outlandishest' things were asked for, I turned a deaf ear. Trimble had a good place, and knew it; moreover, I knew that he knew it, and I merely walked away from all complaints. I

dined each day as I had never dined before in England, and not invariably in France; and if Trimble exerted himself more than was altogether pleasant to his feelings to aid in the preparations of my dinners, I admit the question of his sufferings left me cold. I have been told I am a selfish man.

I had told Toinette, as she had at once requested me to call her—'It was so did ever Monsieur le Curé'—that she might have the assistance of a charwoman from the village for rough work when she required it; but she had at once declined this aid.

'A thousand thanks, monsieur; but a little house so charming and convenient as this requires but the work of one woman. Matters arrange themselves without difficulty. Besides, I do not greatly like your women of the chair—*drôle* of a name; they make more work than they do not perform. Is it not so, monsieur?'

I cannot say that I was an expert in the habits of what Toinette called 'women of the chair' as regards work; but I did know that all those who had assisted Mrs Vinnicombe and her predecessor had possessed active tongues and most penetrating voices, together with a fine gift for narrative, of which scraps—not always wholly suited for the ears of a single gentleman—had reached me at frequent intervals during the hours of their visits. If Toinette preferred to dispense with the services of these ladies, so much the better.

My bedroom window was almost directly over the kitchen door. Mine was a small room; but I liked it, for it caught the morning sun. While shaving on fine mornings in early summer—have I yet mentioned that it was in spring that Toinette came to me?—and on sundry other occasions, I could not always avoid overhearing her conversations with Trimble, with the man who brought milk from a neighbouring farm, and with others who came to the house.

I overheard little, but that little gave me the impression that Toinette was a clever woman. With me she invariably spoke French, at my request. Her English had a noticeable foreign accent, and was, moreover, somewhat halting and broken. Yet she always seemed to have sufficient at command to make Trimble understand what she needed from the garden, and to give perfectly clear and comprehensible orders to the tradespeople who called. And there, these needful orders given, all her conversational powers seemed to end. She would listen with a smile, but with seemingly little comprehension, to any gossip of the neighbourhood; and often quite a simple question failed to draw an answer from her lips. There would be a shake of the head, accompanied by, 'Ah—no understand.' I came to the conclusion that she wished to keep the village people at a distance, and I thought no worse of her for that.

[Christmas Number.]

CHAPTER II.

ALTHOUGH my new factotum performed to a miracle of perfection all the work I have enumerated, and I dare say much more of which a mere man knows nothing, yet she never seemed flurried, and had often hours of leisure on her hands. What walking I did—a good deal—was nearly always done in the morning. I had adopted, with Toinette's arrival, the French system of meals; an early roll and cup of chocolate, sometimes before I dressed; luncheon at noon; and dinner between six and seven o'clock. This gave me a long afternoon for books or desk.

When Toinette had been with me about a month, I chanced to speak with some annoyance of a simple errand which I had forgotten in the morning, and which would necessitate my going to Princetown that same afternoon.

As Toinette served my lunch she said, 'Monsieur permits that I should go to Princetown and get what he needs? Monsieur is perhaps tired, and upon so fine an afternoon I should enjoy the promenade.'

'Certainly go, if you don't mind,' I said; and she looked so genuinely pleased that it occurred to me to add, 'there is really nothing to prevent you from taking a stroll for an hour or two almost any afternoon, Toinette, if that pleases you. Nobody comes between two o'clock and four; and if they do come it does not matter.'

So it came about that Toinette was often out for an hour or more on several afternoons a week. Once, when I knew that she had been to Princetown, I inquired on her return if she had seen any convicts; meaning, of course, those who are marched out in gangs to perform open-air labour at a greater or less distance from the prison.

'Yes, monsieur,' was the answer, in a calm tone; 'I saw convicts.'

I looked up from a book, expecting her to add some comments on that far from pleasing sight, only to find that she had left the room.

One afternoon I had asked her to take a message to a man who occupied a cottage a short distance off the high-road between my house and Princetown. In describing to her the position of the man's house, I said, 'It is a little way down the last lane on the right as you go from here to Princetown, Toinette; the fifth turn from here, I think.'

'Pardon, monsieur, it is the fourth,' was her reply. 'Monsieur may have observed that there are but four turnings on the right, though there are five on the left.'

Often as I had walked the road I did not know that simple fact; but Toinette did, for she carried the message to the right house without difficulty; and indeed I verified her statement for myself a few days later. Clearly she was a woman who observed small things.

1915.]

Spring passed, and summer; autumn came, and I was still content. Mrs Riddlesby was not; but my comfort was such that I had made up my mind to defy, if needful, even Mrs Riddlesby. She had of course questioned me as to Toinette's religion. Looking her squarely in the face, I had replied I did not know what my new house-keeper's beliefs might be. I had not asked. The vicar's wife had pursed up her lips, and expressed the hope that my new *treasure*—word underlined viciously—would prove satisfactory. I had replied serenely that I felt quite sure she would. But I felt also that the vicar's wife was on the watch.

Autumn had come; November took its usual place among the months, and with November came November fogs. We had enjoyed an exceptionally fine summer and early autumn, and I was looking forward to the winter with some foreboding. What if Toinette should find our Dartmoor fogs too much for her? But Toinette accepted them philosophically; I could even have said with apparent interest, as though they were some not wholly unwelcome phenomenon, the coming of which she awaited with curiosity.

'A Dartmoor fog!' I said to her one evening when a peculiarly perfect specimen had come down suddenly upon the moor, blotting from sight the slope of hill across the stream; blotting out every object at a few yards' distance from the door. 'What do you think of it, Toinette?'

Toinette shrugged her shoulders. 'The sun will shine again in time, no doubt, monsieur,' said she. 'There are even those to whom the fog may be the welcome one. Is it not thus that prisoners may escape?'

'They often try to escape during fog, no doubt,' I said; 'but they rarely succeed. Nearly always they are caught in a few days; generally in a few hours.'

Toinette's face changed suddenly, as though with pain.

'Poor men!' she said, almost below her breath, and left the room. Apparently she had a sympathetic heart.

During that fog no sound of rifle-shots, no tolling of the prison-bell, proclaimed that any convict had attempted his escape. A second and a third fog came, and still without alarm. It seemed as if the jail's inhabitants had realised at length the hopelessness of such attempts.

And then, one afternoon about the end of January, a fog came down upon us, as a Dartmoor fog so often does, within the twinkling of an eye. The morning had been pleasant, even mild, after long days of heavy rain. Kept busy at my desk before and after luncheon, I had strolled out on the moor at three o'clock. By four I was returning, still a mile from home, and feeling my way along a moorland path with some difficulty through the thick wall of vapour. Then through the darkness came the dull and muffled sound of a report. Another and another.

Some few minutes later there boomed out the warning of the prison-bell. Some one had struck for liberty at last.

I could have wished that the fugitive had chosen another occasion for his flight. The path I was upon led up directly to the moor where rocks and other hiding-places might be found. It was an extremely likely direction to be taken by the runaway—and also by his pursuers. I kept my ears open for the sound of footsteps, and my hands ready to be held up if challenged.

But I met no one till I struck the valley of the river, a few hundred yards above my house, and was descending by the stream. Then, from the bank above me, came a sudden call.

'Halt! Hands up, or we fire!'

I promptly obeyed, at the same time shouting my name. There was the sound of several persons scrambling down the slope, and three warders quickly surrounded me, coming up at the double. Two of the three were armed.

A glance at my face and dress was of course enough for them.

'Sorry, sir,' said one of them civilly; adding with polite diplomacy, 'a good thing you are not a nervous gentleman. One of our lot has got away, but we shall have him before long. He came this way; we saw him not ten minutes back. Are you quite sure he has not passed you, going upstream?'

'Not on this side the river certainly,' I said, and added a description of my course for the last quarter of an hour.

'Then we'll try back with you,' remarked the leading warder; and the four of us moved off in the direction of my house.

Five minutes later we had struck the narrow path which led up from the river to my garden gate. As we mounted it, and the house came into view, a broad oblong patch of befogged light showed me that the front-door was standing open.

'We'll just look round the garden,' said one of the warders.

'And the house as well,' added his leader; and he nodded toward the open door.

He kept at my elbow, while the two other warders turned off down the garden path. But they rejoined us hastily on hearing the loud exclamation which we uttered as we reached the porch. For, in the hall beyond, a dozen table-knives were scattered on the floor; there were dark stains on the black and white tiles which Toinette took such pride in keeping spotless.

The door leading to the library was closed; that to the kitchen stood wide open, and a sound of moaning reached us from within. Two steps gave us a view of the interior. Toinette, white-faced, with half-closed eyes, half-sat, half-lay on a box-ottoman which stood against the wall. Her right hand held a blood-stained handkerchief to her left wrist.

'Ah, monsieur!' she cried out feebly upon seeing me. Then her eyes closed, and her head fell back as she fainted.

'Some brandy, sir—a stimulant of any kind,' the warder said. 'I understand first aid; it's loss of blood—that's all.'

I ran to the hall cupboard for brandy, meeting the two remaining warders as they dashed in from outside.

In a few minutes Toinette opened her eyes and looked at us; then round the room. 'Ah, shut the door, monsieur, I pray of you!' she gasped. 'He went out, but he yet may come again.'

'Who was it—who went out?' the head-warder asked gently.

'Ah, a man most terrible—in clothes of the prison.'

The warder was swiftly and capably binding up the deep cut in Toinette's wrist with strips of linen taken from a handkerchief which he had snatched up from an airing-rail before the fire. He continued this work steadily and gently, only saying over his shoulder to his two companions, 'Out again—sharp! Fire three shots in the air, and whistle to call up more men. Search the garden; the man cannot be far off. When the rest join you, send a man to me.'

Soon Toinette was sufficiently revived to tell her tale, brokenly but intelligibly. She was setting the table ready for dinner, and was passing from the kitchen to the hall with a knife-tray, when it occurred to her to open the front-door and see if the fog was still thick; she was, she said, beginning to be anxious about me. The moment she opened the door, a man clothed in the well-known dress with the broad arrows had dashed in from the porch, and had snatched at one of my overcoats which chanced to be upon its peg. Toinette had interposed; the convict snatched a bread-knife from the tray she carried in her hand, and slashed her wrist. Then, but without the overcoat, he disappeared into the gathering night outside. All had happened not two minutes before our arrival. Toinette had endeavoured to stanch the copious flow of blood; then, feeling faintness coming on, had dragged herself into the kitchen and had sunk upon the ottoman.

Soon she became almost herself again, and forthwith she was only anxious, like the devoted housekeeper she was, about my inconvenience, and the upset house and meal.

'See, then, the tablecloth, monsieur, so soiled with blood!' she cried, pointing with one hand to the hall, where the snowy tablecloth did indeed bear marks of the attack. 'But there are others here.' And, rising unsteadily to her feet, she lifted the lid of the ottoman, displaying piles of linen neatly arranged.

With some difficulty, the warder and I persuaded her to concern herself no further with

[Christmas Number.]

my dinner, but to sit and rest. In a quarter of an hour another official put in an appearance, and was despatched for the local doctor to examine Toinette's wrist.

Meanwhile, she was rapidly recovering herself, and I said to the warder, 'What about searching the house?'

'Well, yes, sir, please,' he said; 'not that I expect to find him here—not for a moment. He went out through the door again, she says; he was hardly likely to return that way. The back-door, too, is locked and bolted, I see. But still, we'll just go through the place.'

We did so, searching my small home thoroughly, upstairs and down. All was in order, and no trace of an intruder could be seen.

Nor was he found that night, nor yet the following day, in spite of the confidence expressed by the officials of the prison as to his ultimate recapture. By daylight the next morning warders were in and around my garden, carefully examining the ground for footprints. But to a great extent their search for these was vain. The path from the gate to the porch was paved with granite slabs in 'crazy' pattern, and displayed no prints. The road outside the gate was stony; in the night there had been heavy rain, which left but little soil. The garden paths and beds only showed footprints of the warders who had searched the place.

But the officials were still confident. Somewhere the man was hiding, probably upon the moor; few villagers, even supposing them disposed that way, would run the risk of heavy punishment by holding him concealed. He might be taken any day or hour. The moor was searched and guarded; the police of all the neighbouring towns, especially the ports, were notified, and were upon the watch.

Another night and morning passed. The moor had now been searched from end to end, and the whole district was placarded with a full description of the runaway; but without success. Police and warders still professed their full conviction that the man's capture was merely a matter of time; but capture did not come.

Local interest in the escape began to slacken. We still talked about it daily, but we now found time to talk of other things as well.

Toinette's wound healed quickly. I had forced her to yield to my engaging a woman from the village to assist her for a day or two; but she accepted this help with the greatest reluctance, barely allowing the charwoman to do more than touch the outskirts of the work, so to speak, and assuring me each evening that it would be needless to engage her for the following day. And after the third day, she came no more.

That was a Monday; the escape had taken place the previous Friday. On Monday afternoon, throughout the night, and till midday on Tuesday, from a leaden sky there came a heavy
1915.]

fall of snow. Early on Tuesday afternoon sharp frost set in. It was at once a question if the convict would be found alive. If he were, as most thought likely, still in hiding on the moor, he would be snowed up, frozen, starved. Meanwhile all further search was hopeless on that snow-clad waste. Weeks, months hence, a shepherd or ranger would perhaps come upon a body, wedged in some cranny of the tors, or laid bare by a melting drift.

Something else fell besides the snow. That frosty Tuesday night a thunderbolt descended on my unsuspecting and devoted head.

CHAPTER III.

IT was a little before midnight, and I was still reading by the fire in the library. An hour or so had passed since I had heard a certain stair creak as my housekeeper went up to bed. I was just on the point of closing my book for the night, when, much to my surprise, I heard it creak again. Had Toinette merely forgotten something, or was she ill and coming downstairs for assistance? I was about to spring up, when the door opened softly, and from the darkness of the hall Toinette, still fully dressed, came in. She closed the door, and then crossed swiftly to my side.

My face doubtless expressed the astonishment I felt at such an unusual proceeding on her part; for she held up a warning finger, with an air in which entreaty mingled with command.

'Monsieur,' she said in a low tone, 'I beg you, do not speak; who knows who may be listening to us from outside. Monsieur,' Toinette went on, still in a tone hardly above a whisper, 'I come to throw myself upon the goodness of your heart. Listen, monsieur, for there is much to say.'

I must confess that Toinette's words and manner alarmed me greatly. I could not help thinking of Mrs Riddlesby's pursed-up lips, and fancied I could hear her say, 'I told you so.'

But I motioned to Toinette to sit down. She did so, drawing a chair beside me, and continued speaking in a low soft voice.

'Monsieur, I ask your pardon a thousand times, for I have compromised you.'

Again I thought of Mrs Riddlesby, and felt that in this at least she would heartily agree with Toinette. But my housekeeper's next words soon drove Mrs Riddlesby from my mind.

'Monsieur, I lied to you. That escaped one, that convict, did not go out again into the fog, as I said to you and to the guardians. He was still in the house when they searched it with you; he is in the house now.'

I involuntarily looked toward the door, half-unconsciously expecting to see a figure in the

well-known hideous dress appear in confirmation of her words.

But she went on. 'He was in the kitchen, monsieur, and is there at this moment—in the box-ottoman.'

I stifled an exclamation, and managed to lower my voice to match that of my companion. 'You have hidden him, Toinette! But, good heavens, why, when he had attacked you so brutally? What object had you in doing such a thing?'

'He did not attack me, monsieur; that which was done I did myself.'

'You did it yourself! You cut your wrist yourself! I do not understand. Do you know what you are saying?'

'Perfectly, monsieur. But to make you understand all will take time. Let me tell you that which is most important in two words. That convict in the kitchen is my son.'

'Your son!'

'Yes, monsieur; that poor hunted one is my son—Pierre. Monsieur will understand why I have lied—to save my son.'

My head whirled! Five minutes before I had been a placid and contented individual of moderate means, with quiet tastes, no family worries, and cared for materially by a most excellent housekeeper. And now a convulsion had shaken my well-ordered world. For four days my hitherto respectable house had harboured an escaped convict, and I was probably liable to pains and penalties, as to the exact extent of which I was a little hazy, but imagined much. And by my side, at a few minutes before midnight, sat a calm, pale woman prepared to unfold to me the circumstances under which such unexpected toils had meshed me round.

'You had better tell me the whole story,' I said; 'then perhaps I may have some notion of what you mean.'

'That is the best, monsieur,' said Toinette, as calmly as though she proposed to initiate me into the secrets of one of her excellent *plats*. 'I will tell you the whole tale; a dreadful tale for me, monsieur, believe me. I told monsieur that I was a Frenchwoman, that I had married a German from the frontier, and that I was a widow. All that is the truth. But I told monsieur also that I had no children; there I lied, monsieur, for I have one son. I lied because it seemed to me better to tell one great lie at once and quickly, rather than to tell many little ones; to invent—invent always—if one asked me kindly questions of that son. How could I answer where he was or what he did?'

'But I will tell monsieur of him now. Of my dead husband—no, I will not speak. He was all fair outside; blue eyes, fair hair, oh! a fine man. And clever, but clever! But inside, when I came to know him well—ah-h-h-h! It is enough for me to tell you that I was not sorry when he died, monsieur.'

'He died not soon enough; he had already used his evil skill upon my son. The boy was fourteen, and his father had already made him his companion with his wicked friends. After his father's death, these kept their hold upon him; they have ruined his life.'

'It was they who told him of fine occasions in England; told him he should see the world. There are two years since they got for him a situation in an English house of affairs in London. Then, after a few months, they found for him another one; he was made secretary—clerk—I do not know—of some great Englishman. They got him placed there for their own bad ends.'

'For they were spies, monsieur, and they were making of my son a spy. He stole what they instructed him to steal; papers or plans, I do not know exactly what. But there were also bank-notes in the packet he stole, and he was caught and tried. Those wicked, clever heads that worked behind him, they escaped; they were not seen—oh no! But my poor Pierre was sent into your English jail for seven years.'

'When was all this?' I interrupted for the first time.

'Just eighteen months ago, monsieur; shortly before I came from France.'

'I see. You came to England to be near him, and to help him to escape,' I said. 'But how on earth have you managed to do it? How did you know where he was?'

'I listened and observed, and asked a question now and then, monsieur. And presently I came to know that after a time he would be taken to Dartmoor, and I heard that Dartmoor prisoners sometimes got away in fogs. And it was so I came to Exeter in order to be near.'

'And then you answered my advertisement. Supposing that I had lived nowhere near Princetown, what should you have done?'

'I should have found some excuse, monsieur, not to have come. But you lived here, and it was that which I desired most of all.'

'But how have you got into communication with your son? Surely you were not allowed to write and tell him where you were?'

'No, monsieur; I have never written. I should not, perhaps, have been permitted; that I do not know. In any case, it was far safer not to write. He did not know that I was here until I came.'

'You have seen him before last Friday?'

'But yes, monsieur. You kindly permitted me the afternoon promenade. Always I went to Princetown, past the prison, looking ever for the convicts working in the fields. At last one day I saw my son, and he saw me. That was a great thing gained; he knew that I was near to help.'

'But you could not speak to him! How did he find out where you lived? Was it by chance that he came here the other night?'

[Christmas Number.]

'Oh no, monsieur. I thought much of the means to let him know my dwelling-place. When that was done, there would be nothing but to wait. At last I found the way. You perhaps observed, monsieur, that all last summer many prisoners worked at building something by a little wood just opposite the prison gate. My son worked there. I knew that he was quick, and would be always on the watch for anything I wished that he should know.'

'One night, when you were sleeping, I rose, dressed, and went to write a message on the wall beside the prison gate. Or no, monsieur, I did not write it, but drew such a simple matter as some little child in passing by might make. Firstly, a line some inches long and wavering. That meant the road. At one end was a large thick dot; that was for the prison. On either side the line were other lines; these were the turnings off the road—four on one side, five on the other.'

I thought of the occasion when Toinette had corrected me on a matter of local topography, and I admired her wit and resource.

'Finally, on our turning, monsieur—the fifth to the right after leaving the prison—I placed a quite small dot to represent the little house so charming of monsieur.'

'Then in my walks I tried to catch his eye as he worked near the road. In two days I had done so, and I glanced then quickly toward the prison gate. My son, he is not dull—too clever perhaps—he understood. Nothing remained but to await the fog. That is the tale, monsieur.'

'Not all,' I said. 'Why wound yourself? And—good heavens—you yourself opened the box-ottoman, under the warder's very eyes, to get a tablecloth! Why run so great a risk?'

'Monsieur, I thought it best. My son—the convict—got away that afternoon and came here, whistling outside a tune that I had taught him when he was a child. I opened the front-door, brought him in, hid him in the ottoman. It was the place I always meant to hide him, and it was prepared.'

'But you came quickly, monsieur, and those men with you. I heard your voices as you came up from the river, and I had not time to calm myself—to be prepared. I knew that I was pale. And suddenly I thought that if I was found wounded, bleeding, some would aid me. Englishmen think first of women always; others would go quick to catch the man. That was what happened, monsieur, was it not?'

'Then you deliberately cut yourself with the knife?'

'Precisely, monsieur; and then flung myself on the ottoman, where I should be permitted to remain that I might recover.'

'But why open it?'

'Monsieur, I grew too frightened, and I think it was the fright that made me bold. It was of the chief guardian that I was most frightened; 1915.]

he of the keen eyes. I thought that if I myself drew his attention to the hiding-place—showed him the linen—he would less suspect.'

'But was your son merely hidden by the linen?'

'By the shelf also upon which the linen lies, monsieur. Monsieur may not know that there is a shelf—or tray, you call it—which lifts out. There was not anything below that tray, monsieur, except my son; there had been nothing there for many weeks. Always when there was fog I was awaiting him.'

'And he is there now?' I said.

'Yes, monsieur; he is there now. All day, since Friday, he lies there. Each night, when monsieur sleeps, I descend to release my son, and he then takes a little hour of exercise and food. Of monsieur's food, I own; but I will pay,' added Toinette; and this touch of scrupulous honesty was, in such circumstances, half-comic, half-pathetic.

'But, Toinette, this is a terrible affair. What do you propose to do now?'

'Ah monsieur, I have now done all I can. How to get him away I know not. Therefore I have confided myself to monsieur.'

So I saw; and I heartily wished that she had continued to arrange her son's affairs unknown to me.

'My clear duty, Toinette,' I said gravely, 'is at once to summon warders from the prison, and to give your son into their keeping. If I do not, I render myself liable to severe punishment, for to conceal or aid an escaped convict is a serious offence. That crime you also have already committed. Do you understand all this?'

'Perfectly, monsieur. Are not the penalties all printed so that one may read? Monsieur will then call the guardians. My son will return to his prison and to more severe punishment. I also—I shall go to prison, as monsieur has said.'

I do not for one moment deny that the delivery to justice of the escaped convict and the denouncement of his accomplice, his mother—but that matter was a detail which would have little bearing to a legal eye—was the course to which public duty, good citizenship, the maintenance of law and order, and a host of other high-titled virtues, called me; but, as has been already mentioned, I am something of a recluse. A recluse is always more or less an egotist; and I found myself viewing the probable results of any such righteous course of action from a standpoint which, I fear, I cannot call other than personal and selfish.

What would be my feelings when I saw Toinette and her son marched off in ignominy? For the son, as centre of the whole detestable business, I indeed cared but little; though I was inclined to believe Toinette when she represented him as being the tool of riper villains,

and more sinned against than sinning. But for 'Toinette herself I had a very real regard. She had done her duty to me ten times over; she had nursed me capably and tenderly through a week's sharp attack of influenza in the early winter. How could I blame her for acting as she had done for her imprisoned son?

Then, too, supposing that I steeled my heart against 'Toinette, there yet remained to be answered a question which, if selfish, was, I still think, not unnatural. Where, to employ a vulgar but expressive phrase, should I 'come in'?

Not, I could clearly foresee, in a position likely to prove agreeable to a person of retiring tastes. It was possible, perhaps even probable, that by forthwith denouncing the fugitive I should clear myself in the eyes of the authorities from all complicity in the affair; should satisfy them of my total ignorance of the man's presence in my house during the last four days. Such an establishment of my innocence was doubtless an important matter; but there were other considerations which appealed to me almost as strongly.

I saw myself dragged, infinitely reluctant, into prominence as one of the leading figures in a sensational affair; I saw with clearness how there was about to shine on me the blinding limelight of the public press. There was no war on hand just then, no *cause célèbre*, no reason why the readers of that press should pass us by. Pierre, 'Toinette, and myself, would be the victims in a triple sacrifice, and I shuddered at the details which presented themselves to my imagination. I could almost read the newspaper headlines: 'Escaped Convict Recaptured. — Sensational Discovery. — Author Tells a Strange Story.'

Even that would not be all. I could well hear the chatter in the village for long days to come; the sneers at my belief in the virtues of my French housekeeper. I thought of the Devines and other acquaintances, and of what they would say; especially did I think of Mrs Riddlesby, and of what *she* would say.

And, as I thought, virtue and public duty grew each moment lighter in the balance of my mind. After all, the custody of criminals was really a matter for their duly appointed guardians, toward the support of whom I paid, punctually and unmurmuringly, rates and taxes. If such allowed their charges to escape, why should my life be embittered through rendering amateur aid? I had my own affairs and occupations to consider; nor were these wholly selfish. The volume on a certain aspect and period of French literary history, with which I was just now busy, promised to be one of real value; not, however, if its author's mind was to be harassed at this juncture with such disagreeable matters as prison-warders, magistrates, witness-boxes, reporters, and badly reproduced photographs.

After all, I had a public, select if small, whose welfare it was my evident duty to consider and to guard.

No, a thousand times no, I would not wittingly step into any such position of ridicule as would most plainly be my lot did I but raise a finger to deliver up this son. Fate had played me a cruel trick by bringing into the peace of my existence, first 'Toinette, and then her convict son. There, however, they were, and I felt justified in restoring tranquillity and innocence to my dwelling with the least possible discomfort to myself. I must help the son to get out of the country, and he must go in such a manner as should be known to him, to 'Toinette, and to me alone. But how?

The embers rustled in the grate. The clock upon the mantelpiece struck one in its soft, silvery tones. I looked up, and my eyes met those of 'Toinette gazing steadily at me.

'Monsieur has decided?' she asked quietly.

'Well, 'Toinette,' I said, 'I understand your feelings, and why you have acted as you have done; and, understanding that, I cannot bring myself to denounce your son. But I do not see how you are going to get him away from here. He will run a terrible risk of being taken when he gets outside this house.'

'Yes, monsieur; and I do not see what I can do further. So it is to monsieur I confide myself.'

Now that I had yielded so far, it was obviously to my own interests that the *corpus delicti* should disappear from the neighbourhood with all possible speed. But I had hardly bargained for the active rôle of escape agent.

'Is he still dressed in prison clothes?' I asked.

'Ah no, monsieur! those terrible clothes. No; I have dressed him—otherwise.'

'And the prison clothes; where are they?'

'Burnt, monsieur. I tore them up and burnt them, little by little. The boots, too—everything is quite destroyed. There is no sign.'

That, at any rate, was a step to the good.

'How is he dressed, then? In things of mine?'

'In monsieur's clothes! But no, assuredly,' replied 'Toinette, with the air of one resenting the imputation of a liberty; 'no, monsieur. Pierre is small and slender. I have dressed him as a girl.'

'As a girl!' I exclaimed. 'But where did you get the clothes?'

'I bought them in London and Exeter, monsieur; clothes, shoes, and coiffure—everything.'

What methodical, patient foresight the woman had shown!

'If your son is awake, I think I had better see him.'

'As monsieur wills.'

'Toinette opened the library door without a
[Christmas Number.]

sound, crossed the dark hall to the equally dark kitchen, and again without a sound returned.

I nearly bowed; for at her side there stood the figure of a girl—a girl who was almost charming; pale-faced and thin, but still charming, with fair curling hair low on the forehead, curved lips, and large blue eyes. Only the hands betrayed her; small, they still bore tokens of that manual labour which had helped their owner to escape. The figure wore a coat and skirt of dark-gray tweed.

The girl—I mean Pierre—stood quietly before me, quite unembarrassed, which was more than I was.

'You must remain where you have been for the last four days,' I said, 'until I can think of some suitable plan. I will not give you up; I promise that for your mother's sake. Of yourself I know nothing.'

'I understand, and I thank you a thousand times, sir.' The voice was soft and low, well suited to conceal the speaker's sex.

'We will leave monsieur now,' said 'Toinette. Both figures disappeared into the darkness, and presently I heard the stair creak, telling me that 'Toinette was once more upstairs.

The clock had struck another hour, and another still, before I followed her. For I sat on thinking out a method of extricating young Bachmann—and incidentally myself—from his difficulties. Before I went to bed I had decided on a plan; risky, indeed, but perhaps as good as could be looked for from so unskilled a plotter as myself.

CHAPTER IV.

'TOINETTE served my *petit déjeuner* the following morning with an unmoved countenance. I could almost have imagined that the night just passed had been a dream. Unfortunately I knew it for a most unpleasant reality; and I said to 'Toinette, in the tone of one giving a casual order, 'Nothing will take place to-day, 'Toinette. To-morrow evening it is possible that something may occur.'

'*Merçi, monsieur*; I now leave all to your goodness,' was the reply.

And nothing happened that day, so far as 'Toinette and her son were concerned. But I wrote a letter to a discreet friend whom I knew to be at that moment in London, and in the letter I enclosed a slip of paper bearing two or three brief lines. Then I got through the hours of the day as best I might.

The following morning likewise passed without event. But in the afternoon observant people might have seen that I was restless, as if in expectation of something about to happen. The 'something' duly materialised about two o'clock in the arrival of a telegraph messenger from the Princetown post-office. 'Toinette took

1915.]

in the message, and brought it to me in the library, while the boy waited for an answer in the porch.

'This is very annoying, 'Toinette,' I said, following her out to the hall, and speaking in such tones that the boy waiting in the porch might hear; 'I must go to London to-night. A friend is leaving unexpectedly to-morrow for South Africa—ordered there by his doctor—and he wants to see me first.'

'Monsieur will then take the train from Princetown,' said 'Toinette, who had required but little coaching to enable her to play her part.

'No, I shall not; I cannot stand slow trains, and waiting, and changes, in this weather. I shall take the evening express from Tavistock, and I must have a carriage to take me there. —Can you,' I went on to the boy, 'take me a message to the hotel?'

He could and would. I wrote the order for a carriage and pair, and went back to the house. 'Toinette helped me to pack my bag; then brought in tea.

It was already dusk when the rumble of wheels and the tramp of a pair of horses announced the carriage at the garden gate. The driver came up the path to ask if there was any luggage to be carried down. He found me in the hall, engaged in giving 'Toinette orders as to my return.

'While I am there I may perhaps stay a day or two,' I said; 'I will send you a card or telegram.'

'I shall make that little change in the furniture of monsieur's bedroom while he is away,' said 'Toinette.

'No, 'Toinette,' I replied, 'you will not; that chest of drawers is much too heavy for you to move alone. Nor must Trimble help you; he is far too clumsy in a house.'

'Toinette's face assumed to perfection the appearance of genuine disappointment. 'Of course, if monsieur forbids,' she said; 'but it would have been a convenient time.'

I looked at my watch. 'There is at least ten minutes to spare.—Look here, my man, could you just give me a hand in changing the position of a piece of furniture upstairs? My house-keeper will stand by the horses.'

The driver came readily upstairs, and in two minutes we had changed the position of a chest of drawers in my bedroom, moving it from one side of the fireplace to the other. That done, I descended the stairs in front of the driver, went on before him down the garden path, and, entering the carriage, shut the door myself. By the time he had reached the gate I was leaning from the window, saying a last word to 'Toinette. Then I spread a large travelling-rug over myself, and also over another occupant of the carriage, who was crouched upon the floor between the seats.

So far my plan had worked smoothly; everything looked perfectly natural. I had arranged the receipt of a sudden call to London; for I had decided that I should only know peace of mind when I had seen Pierre out of England, or at least out of the district. He had been smuggled into the carriage by his mother during the brief absence of the driver upstairs, arranged by a simple pretext. I had now got him clear of the house.

But not clear of the neighbourhood. My driver had seen a locally well-known middle-aged gentleman get into the carriage; it was obvious that he must not see him descend at Tavistock accompanied by a young and not unattractive lady! But I had a remedy for this difficulty, or hoped I had.

'Listen,' I said, leaning down toward the face of the lad—for he was scarcely more—who crouched upon the carriage floor; 'so far we have done well, but the dangerous time is still to come. You cannot leave the carriage with me at the station; you must slip out before we reach the town. There is a steep part of the road into Tavistock which the horses will take at a walking pace; it will be dark by then, and also there are trees which give deep shade. You'll have to get out there.'

An hour and more we journeyed on. I did not speak further to my companion. For one thing, it would be dangerous, for the driver might have overheard. And I had another reason for silence; I did not feel in a position to play the part of mentor—was I not condoning the offence?

The lights of Tavistock shone out before us; presently the horses slackened to a walk. 'Now,' I whispered, 'slip out quietly, and then keep just behind the carriage till we have gone on some little way. Do not lose time; but do not seem hurried or you may attract attention; the first turn to the left, and then the second to the right, will bring you to the station. I shall be there, but do not look at me. I shall perhaps glance at you as if from curiosity. Your mother has given you money. Take a third-class single ticket to Exeter; do not get into an empty carriage; choose one where there are several people—take a "ladies only" if you can. Get out at Exeter, and walk up and down the platform till I speak to you.'

He listened with attention, and said, 'Yes, monsieur.'

I cautiously turned the handle of the door on the near side of the carriage and swung it open. Pierre glided softly out, and I passed to him a small handbag of his mother's.

Five minutes later I was at the station; tipped my driver, not forgetting his exertions with the chest of drawers, and then stood by the fire in the entrance-hall, waiting until the issue of tickets should begin. When the wooden window rattled up I took a first-class return for

London, and at once walked out upon the platform.

Another five minutes went by; the signal fell for the express. I began to quake inwardly. Had I underestimated the distance, when telling my charge not to hurry? Had he by some misfortune missed his way? Or—dire possibility!—had he been recognised and arrested?

No! I heard a sound of light, quick footsteps in the booking-hall, and turned to see a ladylike figure at the ticket-window. A moment later Pierre was on the platform. The slim, veiled figure in the gray tailor-made costume walked on composedly, swept the small crowd of waiting passengers with one swift glance, and then took its stand in the shadow of one of the pillars supporting the roof. Certainly Pierre played his part well.

Two minutes later the express came in. I saw Pierre scan the line of lighted windows till he saw one with the papered notice 'Ladies only.' Then he hastened towards it up the train.

During the hour's ride to Exeter I sat on thorns. I had not dared to accost Pierre on the Tavistock platform, or to enter a carriage with him. The stationmaster knew me as a fairly frequent traveller, and I had town acquaintances who might have possibly been there. Yet I was alarmed at the danger of his being drawn against his will into some conversation in the train. This would be still more probable during the long run from Exeter to London, and I had determined that from that point we should travel in company.

At Exeter I sprang from my compartment; then watched Pierre descend from his as I had ordered him. I hurried across to the booking-office, purchased his ticket for London, and returned at a leisurely pace toward my carriage till I passed him on the way. 'Why, Mademoiselle Levasseur,' I said, raising my hat and feigning a start of pleased surprise, 'what good wind blows you here?'

Again Pierre played up splendidly, smiling a welcome from behind his veil, taking my outstretched hand, and beginning to recount a remarkably glib story of a visit to friends in Exeter. I led him to the carriage I had left, taking care to pay him all the little attentions obviously due to so charming a lady.

But, the train once started, our conversation became difficult to keep up, and I was relieved to see that he had provided himself with a magazine during my absence at the booking-office. Dinner in the restaurant-car was announced; and, reflecting that he had better eat there than with some chance table companion in a London hotel, I suggested the meal.

I have seldom enjoyed one less. It was necessary that Pierre should raise his veil and unglove his hands, and I fancied—I dare say quite mistakenly—that neighbouring diners and

[Christmas Number.

the passing waiters eyed him curiously. But the ordeal was over at last, and we returned to our compartment. There the fellow once again showed his grasp of the situation and of the necessities which it entailed. He closed his book, yawned, remarked in a drowsy voice that railway journeys always made him sleepy, and sank into what appeared to be slumber until Waterloo was reached, only opening his eyes in a sleepy manner at each stopping-place.

From Waterloo we drove to a west-end hotel where I had never stayed. There I took Pierre to the office and registered him as Mademoiselle Levasseur, who was very tired and would go to bed at once. While in the taxi I had cautioned him to breakfast in his own room, and to be ready when I called for him at an early hour the next morning. From the hotel I drove on to my club.

Soon after half-past eight the following morning I was running up the steps of the hotel. My heart was growing lighter every moment; Pierre was now practically clear of all danger of pursuit or recognition. Still, for the sake of greater safety, I would go with him as far as Dover—see him clear of England's shores.

Pierre was awaiting me; a correct and well-dressed figure, seated on a low divan in the long narrow hall. My eyes fell on him at once. The next moment my hair almost rose on end. For, by his side, upon the same divan, there sat the very last person whom I wished to see at such a time and place—Mrs Riddlesby!

I suppose the fact that the light from the door was behind me, and my face thus in shadow, saved the situation to some extent; for I am certain that my countenance expressed a portion of the horror and alarm I felt. With an effort, of which I hardly thought myself capable, I pulled myself together and went forward. It was too late to ignore Pierre; I was already walking quickly toward him with a smile upon my lips. As to ignoring Mrs Riddlesby, pretending not to see her, any one who knew her would realise how utterly such a plan was out of the question.

'Well, mademoiselle,' I said, shaking hands with Pierre, 'are you quite ready? Have you slept all right?' Then I turned and offered my hand to the vicar's wife.—'Who would have thought of seeing you here?'

'Not you, apparently,' said the lady in cool level tones, allowing me to take her hand, but by no means returning the warmth of my pressure. Then she looked at 'mademoiselle'; looked back again at me. There was obviously but one thing to be done.

'Let me present Mademoiselle Levasseur,' I said. 'I came up rather unexpectedly last night, and had the good fortune to meet mademoiselle at Exeter. She has been paying a visit in Devonshire, and is returning to her friends in France, whom I know well.'

1915.]

'Oh, indeed,' was the reply, following a stiff bow to the new acquaintance.

Things could not remain here.

'I did not know you were in London,' I went on; though I had known she was from home.

'I, too, arrived last night—from Oxfordshire. Now I am going to Charing Cross on my way to Sittingbourne for a few days. I am just waiting till it is time to take a cab.'

If you have to be bold you cannot well be too bold. Besides, I knew that Mrs Riddlesby well loved a small economy.

'There is no need for two taxis,' I said; 'we shall be delighted to take you in ours.'

A shade, a mere hair's-breadth, of relaxation crept over the lady's stern features. I signalled to the hall-porter, and in a few minutes we were bowling down the street.

I saw that I must readjust my plans. To meet at Exeter an attractive and youthful lady of foreign birth, travel with her to London, establish her at a hotel for the night, and call to take her to her train the following morning, was already much for Mrs Riddlesby to stand. To leave Charing Cross with the lady in the direction of France, and that under the very eyes of the vicar's wife, would never do. Mrs Riddlesby was quite capable of waiting all day at Waterloo to see if I came back! No, Mademoiselle Levasseur must now go to Dover by herself.

Naturally, I declined Mrs Riddlesby's proffered share of the cab-fare. I saw to the labelling of her luggage, and I ascertained the position of her train, which left a few minutes after the departure of the boat express. She thawed visibly at these attentions. But this was a doubtful benefit; for she plied my companion with small talk, in which the note of interrogation was for ever cropping up. She came with us to the carriage, and she stood to see the interesting traveller off; thus burdening my already heavy-laden conscience with a host of otherwise needless untruths in the shape of polite compliments to Monsieur and Madame Levasseur, with jocular messages to '*le beau petit Victor*,' brother of mademoiselle. Women like Mrs Riddlesby have much to answer for.

But the train glided out at last, and I was free.

That is my story, or at least there is but little more to tell. Within a week 'Toinette' had news of the safe arrival of the fugitive in Paris. A little later came the blow I had anticipated from the first. 'Toinette' now told me that she must return to France; she must be with her son. And in the days of early spring she went.

It will be natural if my readers ask me how I dare to tell this tale. Have I no fear of tardy punishment for Pierre, for 'Toinette,' for myself?

Fear I have none. 'Toinette! Well, who would punish her—a mother crossing the much-dreaded 'silver streak' to save her son? Nor for myself. For I am living far from England now. 'Toinette had spoilt me; spoilt me for plain English cooking, spoilt me for the excellent but long-tongued English housekeeper whom Mrs Riddlesby soon found. I had long thought of, had sometimes half planned, a residence abroad; and twelve months after 'Toinette left me I put that plan into action.

And least of all I fear the consequences for the fugitive—for Pierre. He paid his lapse in full not three months since, fighting for France,

going down beside his captain in a furious charge.

And Mrs Riddlesby died recently, much occupied until the last, as I have heard from a late visitor, an English friend, with matters such as German spies. On this subject she seemed to have some special lights, always asserting that there was something about a spy, and especially a German spy, which she felt sure she could detect at a glance. She little knew, poor lady, that she once sat quite contentedly beside one in a taxi-cab, conversing pleasantly the while he slipped from the law's hands.

MINCHMOOR AND YARROW.

We were laughing Romany rovers
With a clanging gipsy lyre;
We hailed the broad sun gleaming
With the rapture of desire;
We flung our morning greeting forth,
Melodious and rare,
As hand in hand we tramped along
By ghostly gray Traquair.

The white road stretched before us,
The green hill hung above;
The woodland flowers in shady bowers
Were whispering tales of love;
While we—great-hearted pilgrims,
Hill-gipsies with a rhyme—
In God's own wide cathedral
Went roaming for a shrine.

The hill-road swung before us
Like a ribbon o'er the heath,
The silver river rippled low
Traquair's gray walls beneath,
And, like a lone grim sentinel,
Lee-Pen sank in repose;
While to the blush of noon-day
The heights of Minchmoor rose.

I glanced at you, my rover,
My bright-eyed gipsy maid;
I read the riddle in your eyes
Within the hazel glade.
Your merry laugh like music pealed
Among the purple heather,
As hand in hand we climbed the crest
Of fair Minchmoor together.

The curlew and the plover there
In concert loud were singing,
As lightly o'er the heather bells
Our eager feet went springing.
We heard the call of nature,
We breathed the breath of God,
We drank the wine of Heaven
On the winding green hill-road.

The pensive song of Yarrow
Came stealing on the breeze,
It murmured o'er the Dowie Dens
And sobbed among the trees;
It echoed round the proud profile
Of Newark's stately tower,
And died in sorrow far beyond
The fairy-haunted bower.

The white road stretched before us,
The green hill hung above,
And Yarrow's murmuring waters sang
The old sweet song of love;
While we—great-hearted pilgrims,
Hill-gipsies with a rhyme—
By lore-enchanted Newark
Laid our tribute on the shrine.

I glanced at you, my rover,
My laughing gipsy maid;
I read the riddle in your eyes
Within the hazel glade.
Your Romany face reflected then
The sunset and the heather,
As hand in hand we tramped along
The great white road together.

JAMES HOPE BROWN.

THE BROKEN BLADE.

By ELINOR KENT.

EVERY one in Rarawa knew Jinks—Old Jinks, with his one leg, his bald head, and his rusty suit of 'Bannockburn.' There were people who remembered a time when his head had been covered with thick brown curls; when, too, his saddle-stirrups held the usual complement of square-toed brown boots; but there never had been a time when Jinks had not worn the 'Bannockburn.'

'I shouldn't feel at home in anything else,' he had said once, when his *fiancée* had attempted to coerce him into buying a new outfit. 'I've had good times in my old brown—some of the best. I like the feel of them, and it never struck me they might be a bit past their prime. Are you ashamed of them, Lulu, and of me?'

And Lulu had been obliged to admit that, though they were shabby, there was 'class to them,' 'and a sort of cut kind-of.' She did not know, and he did not tell her, that this suit had been the favourite of his first year after leaving college. In it he had spent hours of glorious freedom, tramping his father's moors in Scotland. The mere feel of the rough texture had power to bring it all back to him—the scent of the sun-warmed heather, the click of cocking hammers, and the whirr of startled birds; almost to summon to his side his sweetheart of long ago—Sheila Bethune. What a glad, mad time it had been, ending all too soon and very suddenly. He had gone the pace a bit, as a matter of course, for it was the way of all young manhood in his world. Yet his family had viewed the matter with a severity that he felt to be inconsistent with all their ideas as previously expressed. Even at that time he had felt their displeasure overdone, their severity a trifle laboured. But all that was beside the point. The issue had landed him in New Zealand, one of the scattered army of 'remittance men,' while Sheila was the wife of his elder brother, according to the robust will of the two old county families. Well, there were guns and pheasants enough in Rarawa, and sweethearts too. Lulu was the sweetest girl that ever wiped a tumbler or stood behind a bar.

Yet after all he had not married Lulu. That had all ended when the remittances did. On the whole, it would be more correct to say that Lulu had not married Jinks.

Since that time he had pursued many and various callings. There had been winters when he toiled over the blackened hillface, sowing grass-seed on the soil that lay palpitant under its covering of charred logs and feathery ash, awaiting the coming of the seed. Long summers he

1915.]

had sweltered in Stringleman's iron shed, shearing beside the professionals. At odd times he dug post-holes, or carried battens on Lorimer's fence-line. Then for the whole of one spring and summer he had lain in hospital, emerging with one leg missing at the end of that weary time. His career as a bush-chopper had ended at the moment that saw a mighty rata-tree crashing to an untimely rest in a miscalculated bed, and pinning Jinks's lower limbs in its fall. During what he termed his 'cork age' he had served his fellow-creatures in less sprightly fashion on the box-seat of the mail-coach that made its weekly trip up the coast, or piloting sheep and cattle between fattening paddock and slaughter pen.

He counted his 'jobs' as milestones on the way of life, and arrived by this means at some estimate of his own age. And the tale of it all landed him here in Rarawa, in the summer of 1914-15—a man in the middle forties, lean and wiry as to frame, with eyes unquenchably youthful in their wistful, humorous gleaming. His occupation was that of packer, attached to the service of M'Kinley, general storekeeper, his mission in life to deliver goods to all such residents of Rarawa as lived on trails, accessible only to his string of pack horses. He rode now, behind these beasts, fathoms deep in a passionate contemplation of his life and times.

'This is the war of wars,' he muttered; 'and every man who can hold a gun and shoot at a mark is worth more to-day than ever before in the history of the world. The prime of life is before me, and I am prisoned here, lifeless as any of these dead trees on the hillside, and as useless. A broken blade! A broken blade!'

His weary beasts, a broken-winded, broken-spirited crew, strung themselves out for the crossing of the log bridge that spanned the river and led to their paddock at the back of M'Kinley's store. Their packs of incoming provisions bulged and swayed at every motion, and made of them a company of goblin monsters, weird and misshapen, in the half-light of that summer evening.

Jinks's soliloquising ended in the hubbub of welcome from dogs and men on the store veranda.

That night he was silent and glum, he alone of the men who were gathered round the log fire in the government whāre. It was a toil-worn, hard-bitten group for the most part. There were two strangers from up the coast, bound for a muster of wild cattle on the ranges back of

the Mohakatina River. M'Kinley's wagoner and a couple of road labourers made up the party. A mail had arrived during Jinks's absence on his three-day journey. He settled into the depths of his easy chair—a thing of sacks slung across pine-battens—and relapsed behind the *Weekly Budget*. The surge of argument and discussion broke over and around him, yet failed to rouse him from his oblivion. There was a 'Home' or English paper as well—the one recurrent link between him and his early environment.

He read detailed accounts of battle and scrimmage, records of gallant deeds. There were many familiar names on these pages, and as he read he was carried back in memory to incidents in the lives of those who bore them. It was news to know that 'Flaxy' Allerton, his one-time fag, was now a colonel in the Guards, even though he lay in hospital with a shattered limb or so. And Percival—dear, cheery, old Percival, the chum of his youth—Jinks learned for the first time that he had married a famous actress, and left her now a widow with four sons, while he slept in a casual grave in France. The bushman laid the sheet across his knees, drew hard upon his stubby pipe, and thought.

'Percival is dead, and he was strong and clever. But that is not all. There are thousands more like him snuffed out. All the boys I used to know will be there—in the trenches and behind the guns, in the air or on the sea. And the women will be nursing them, cooking and sewing for them, looking after the soldiers' wives, cheering and helping every one who needs their care.' He was able to picture it all, because not only were the printed stories graphic; but also they evoked a host of recollections of that other older world. He was able to construct a dream-life that he knew was real to thousands and thousands of English men and women at that period. It was the easier to do this because the externals were stripped away, all those artificialities that for so long had muffled and enwrapped the national heart. Only the simple, the essential, and the never-changing facts of existence counted now; and, as he conjured it all up before him, his discontent ceased merely to chafe his spirit. It became an acute pain, an evil that worked within him, and roused him almost to madness. The voices about him continued in argument and declamation, only he was no longer indifferent. From the buzzing of bees, which they had hitherto resembled, they now became like a swarm of harrying insects, stinging and poisonous.

'Kitchener's got 'is 'ands full if 'e's goin' to lick that mess o' raw stuff inter shape before spring,' one of the strangers remarked. 'Lot o' pap-fed infants, that's what them 'ere bank-clerks an' baby-lawyers will look like when they're stood up beside Tommy Atkins.'

But the wagoner swore mightily an oath of utterest dissent. 'There's some of those same

baby-clerks that'll lead the Tommies to a lively tune. It's all in the spirit, I say; an' twenty years of clerking it on an office stool ain't agoin' to change the nature of a bull-pup.'

'All the same,' Bellamy, one of the roadmen, put in, 'there's a somethin' wantin' in them English chaps, like as if they were cut to a pattern, an' fitted out for just sitch an' sitch a case. What I'm waitin' for is to show 'em how the Colonials can give the world a shove around every once in a while, 'stead o' waitin' for it to catch up to 'em. There's a kind o' horse-sense to our chaps that's been missin' or snowed under in all the Home fellers I've struck. You'd say I suppose that our boys have got 'initiative.'

He offered the last word tentatively, as if expecting it to be trampled upon; but meeting with no disclaimer, he turned to Jinks. 'Hey now, you been out here long enough to know something about us blokes, an' I don't suppose you quite forgot what sort o' chaps you met back Home there before you dropped your swaddling clothes. Which team are you backin' for the big event?'

Jinks arose suddenly from his chair, and turned to his tormentors a countenance distorted with dumb wrath and anguish. 'You're a nasty offensive lot of talk-slingers,' he enunciated slowly. 'You make me sick. Sick! It's all words, words, and blanky blatherskite, when the world wants men and deeds.' There poured from him a torrent of eloquence, mingled with abuse, while his hearers sat before him puzzled, uncomprehending, yet vaguely ashamed.

'Sounds like a bloomin' recruit officer,' one murmured restively.

Jinks caught the words, and was dammed at full tide. There came into his eyes a cloud of painful realisation. His hands went uncertainly to his forehead, and crying sharply, 'A broken blade! a broken blade!' he stumbled across the earthen floor and took shelter in the bunk-room.

There was silence round the fire for some minutes. Ridley the wagoner threw on more logs, and under cover of the hiss and crackle of the flames, Bellamy whispered, 'Looks like old Jinks's troubles is goin' to his head.'

'Troubles!' snorted another of the group. 'E ain't got no troubles. Never was a livelier cuss than that bloke. You ain't never seen 'im outside on the bust, or you wouldn't say that of 'im. If you suggest it's 'is sins catching up on 'im, why, I'm willin' to follow you there; but troubles it ain't, I'll swear. Never was a jollier sinner than Old Jinks. You can take your oath on that.'

'The reason don't matter so much,' Ridley threw in peaceably. 'It's the fact that counts. And the fact is, Jinks is gettin' to be a mighty queer sort of cuss. Time was when 'e used to have us all goin' of an evenin' with 'is stories

[Christmas Number.]

and 'is jokes. There's not a man can tell a better tale than Jinks, nor tell it more humorous. Something must a happened to 'im, an' something darn serious, to make 'im mope an' mumble the way 'e does nowadays. That's what I say. Folks that saw 'im after 'e lost 'is leg tell 'ow 'e took it all a-laughin', even when 'is body was wrung, an' the water drippin' out of 'is eyes. It was always the same; 'e'd up an' 'and 'em out a fresh joke, or show 'em some bit of a trick that would make even the fine town doctor 'old 'is sides.'

'Well, that may be,' conceded Bellamy; 'but I don't like the tone of 'im now. Any one might think we were a blessed lot of shirkers, 'stead of hard-workin' married men with families to support, an' none of us missin' when the 'at goes round for the Belgians neither.'

And on that the meeting broke up.

That was the first of many such lapses for the exiled Englishman. He went about in a trance-like state, tending his sorry steeds, and fitting them for their daily journeying; but, though he abated nothing of his wonted vigour, his heart was not in the job. He, like the rest of that small community, turned over a large share of his weekly wage to the various war-time funds that had been set afloat. Yet he was not satisfied with his part. While the rest of the world was up and doing he and his comrades were inactive; that was what galled him. It was well enough to give money. What he wanted to offer was personal service. Even the women could make or mend for the destitute or for the wounded, and at some personal sacrifice of time and energy; while he, for want of some profitable occupation, spent long idle hours over the whāre fire.

Jinks had one treasure. In an old leather trunk, squeezed into the narrow space beneath his bunk, folded with clumsy care and sprinkled with crumbled camphor, was disposed a dressing-gown. It was thick and soft, and roped about with a tasselled silken cord, the front bedecked with sensible big buttons such as the most impatient fingers might manipulate with ease. This garment filled one side of the trunk completely, so that the rest of Jinks's wardrobe had to be compressed into the second compartment. There were a couple of white shirts with frayed collars and cuffs, half-a-dozen soiled ties, and some virgin socks. Jinks had been too long a wanderer to harbour relics of a sentimental nature; but he told himself that the dressing-gown was the sort of thing that might be wanted at any time. Yet he never had worn it, and no one even suspected that the shabby trunk contained such a garment. It had come one Christmas, more than fifteen years ago; for at that time he was still in receipt of occasional gifts from his own people. However gratifying it may have been to know himself kindly recollected, the character of these offerings

1915.]

was certainly perplexing to a man of his habits, and in his particular circumstances. 'You give us so little to go upon,' his family had complained. 'Could you not describe your cottage to us? We might then be able to help you with your appointments, and send you suitable ornaments, linen, rugs, or pictures.'

Jinks gazed round the rude iron shack with its earthen floor, its cobwebbed walls and ceiling, dwelt for a space on the crude slab table with its litter of greasy tin plates and chipped crockery. He realised the futility of attempting to convey to them any impression of the reality of his interior. Even the thought of such an endeavour made him smile wryly.

So there had been a time when Jinks's bunk was draped heedlessly with a portière of beautiful old tapestry, picked up by his eldest sister during a trip abroad, and voted 'just the thing for dear Anthony.' At another time the men who forgathered round his humble board had spilt soup and set their pannikins upon a tablecloth, a thing of sheer linen marvelously embroidered. It was the storekeeper's wife who had rescued it from a state of drab dishevelment bordering on decay. It took many wash-days and the frosts of a whole winter to restore it to a state of seemliness, and before that time its owner had 'humped his bluey' into another province, leaving it in the hands that had laboured so zealously for its redemption.

It had, of course, been a present from Sheila—this beloved dressing-gown. At the close of a day of Christmas shopping with her sisters-in-law they had been minded to buy some trifles for 'Anthony, poor fellow,' and Sheila had begged to be allowed to fill a corner in the parcel. She had never understood just how or why her boy-lover had been jerked out of her life. There had been talk of wild doings—drinking-bouts, gambling, and all such indiscretions of newly emancipated youth—and then he had been shipped off. She was hazy as to the geographical position of New Zealand, but she had enough imagination to picture the conditions of his place of exile, and to comprehend that embroidered waistcoats were not an integral part of a bushman's wardrobe, nor his table likely to be designed for the display of priceless pieces of old china. So she had aimed at something comfortable, personal, and generous, and hit upon the quilted dressing-gown, with the result that it was the girls, after all, who had to take the corners of the parcel. Jinks had suffered a whirl of bitter-sweet distresses on receiving this substantial token, and it had been with him ever since. It was the only thing he clung to as he walked down the pathway of the years.

One evening, when his mood was of the blackest, Jinks opened the trunk and took out his treasure. He unfolded it lovingly, and held it at length before him, pinching the soft warm

folds of it 'twixt finger and calloused thumb. Finally he drew it about him with a lingering sigh. 'You can't lie rotting there while there are brave men needing you,' he apostrophised the luxurious garment. 'I can't go, but you can; so it's off to the front for you.' And next day he carried the parcel, jealously shielded from stray glances, and watched it disappear in the big packing-case which was to contain Rarawa's contribution to the Red Cross Fund. He felt better than he had done for many weeks, although it had been almost like parting with his remaining leg to see it go. At last he had been able to sacrifice something, and for the time being he was happy.

Then came the news of fresh disasters, and dragged his soaring spirit back to earth broken and disabled. He fumed in a frenzy of impotence, and his mates, utterly uncomprehending his state of mind, drew away from him. There was no longer any desire to give him a place in the circle about the fire in the Government whāre, where he had been so long an honoured guest. He was subject at times to outbreaks of violent objurgation; but for the most part he sat in gloom or walked apart. The account of his changed state was bruited abroad, and settlers on the more remote trails received him with an air that was at once placatory and defensive. There was no doubt that he was 'barmy.' He did the maddest things. In one hut he was discovered examining a pile of woollen garments that had been dried inside the spacious fireplace of one of these huts. When the housewife entered he flushed guiltily, and cast aside the baby's petticoat that he had been muttering over. Then, too, he became studious of all such magazines and fashion journals as came in his way. More than that, he became acquisitive.

Mrs Sturrock, up in the Waihola Valley, declared that she'd caught him in the act of rifling her mending cupboard. 'I'll swear that he got away with somethink too,' she maintained; 'but for the life of me I can't find anythink missin', less'n it was Dan's weskit (but I think the pups ate that), or a set of rusty knittin'-needles.'

If M'Kinley had been a talker, and his words had chanced to come cheek by jowl with those of Mrs Sturrock, light might have been thrown on this matter. As it was, Hepsy Sturrock was a home-keeping woman, and the storekeeper chose to humour his employé's vagaries, and to keep silent about them. When Jinks composedly asked for all the gray wool in the shop he made up the package without comment, and for him the incident closed when the coins rang in the till.

Jinks, from being the most popular man in Rarawa, was now become the most forsaken. He seemed even to prefer it thus. He had removed himself with his depleted wardrobe into a deserted shack at the back of the store, and

whether it was the allurements of its wooden floor, or verily in appreciation of peace and solitude, he seldom left the shelter of the cramped abode. Except when he set forth behind his horses, or on his return from each trip, he was seldom seen. As the weeks and months went by he became more and more a recluse. More than one of his old companions speculated as to what went on behind the sack-screened window of Jinks's whāre.

It was young Bill Dollamore who rent this veil of mystery, and reconstructed this sorry situation. He had been Jinks's protégé ever since his earliest years, had learned from the genial Englishman all that he knew of life and the world outside Rarawa, and had imbibed from him the notions that led to his entering himself for training on one of his Majesty's ships. And now Bill (otherwise and most commonly known as Podgy) had reappeared in his native place with the roll of a Jack Tar like a brand upon him to mark him from his kindred of the valley. He appeared one day accoutred in clothes new and irksome, with the pressure of unaccustomed leather about his feet, and a mind crammed to the brim with joyous expectation of a crowded glorious fortnight under the wing of his tremendous hero. What a tale then was this of Jinks's obsession! 'Jinks barmy?' he scoffed, incredulous and vastly scornful. 'You chaps want to get your heads read. It's about time I came back, I think. You'll be sending him off to Porirua next—I don't think.' But for all his gallant partisanship, he had to admit to himself that things looked mighty queer.

It was ever Podgy's way to go straight to the heart of a difficulty. Next day he gave the matter his earnest consideration. On a log in the shelter of the bush he sat and pondered. After a while he tugged at his boots, hated concession to the conventions of longshoremen, and slung them heedlessly about his neck. He was able to think more clearly after that, and when at length he rose to go in search of his horse there was the gleam of decision in his blue eyes. So absorbed was he in his own reflections that he remained unconscious of the abhorred footgear dangling incriminatingly at his neck.

That evening, in pursuance of his plan, he paid a surreptitious visit to Jinks's whāre, and made several minute alterations to the sack curtain that veiled the square of dusty window-pane. Next, satisfied that not even Jinks's searching eye could detect the artfully contrived peephole, he took cover under a corner of the hut. As he lay prone under the low flooring amongst a litter of old bones and empty sardine-tins, he thought, 'It seems pretty low down to be spying on the old boy like this; but it's for his own good.' A moment later he hugged himself at the good-luck hidden in the fact that Jinks had

[Christmas Number.

never kept his dogs near his dwelling-place, and that he need not fear detection from that quarter.

He was at the point of desperation when he heard Jinks's footsteps crossing the soft grass of the whāre paddock, and with renewed patience he settled lower in his uncomfortable lair. He heard Jinks's foot on the sill, and the closing of the door as he stepped within. Sundry thuds and scrapings told him that Jinks had served himself with the contents of the camp-oven that had sizzled all day over the banked-up fire. Then after a period of silence he heard the rattle and splash that told of soapsuds in conjunction with dirty dishes. It was not yet dark, so Podgy continued to lie prone amongst the tins.

A sound, a sort of droning murmur, impressed itself upon his consciousness. It sounded as though some one—and he knew that some one must be Jinks—was counting just above his head, but not by the use of any numerals that Podgy knew. It was low and solemn, almost like telling off beads on a rosary. This went on for a long time. It was now quite dark, and the boy thought it safe to worm his way out into the open. He stretched once or twice, and felt his numbed limbs before he applied his eyes to the peephole he had improvised. It was as he had arranged it, and through the opening he was able to see Jinks seated at the table, and lit by the glow of a smoky oil-lamp. His back was bent toilsomely over some object that he held in his hands. It took Podgy some time to make out what this object was. At first he thought the man was whittling at a boat, only the motion was too regular, and he could ascribe no reason for the low monotonous chant.

Suddenly something rolled from his knees and skimmed toward the pile of ashes in the fireplace. Jinks leapt to save it, and Podgy had an amazing vision of flashing knitting-needles, and something that looked like the cowl of a chimney done in gray wool.

Jinks recaptured the ball, and resumed his seat on the kerosene case by the table. It was evident that something untoward had occurred. His eyes were glued unalterably upon the piece of work, his tongue within his cheek worked convulsively. Podgy Dollamore had not experience to warn him that the drama of the dropped stitch was being enacted before his eyes.

A horse clattered over the bridge, and a man whistled shrilly. Jinks before the watcher's eyes made a hurried dart toward the pile of dishes on the bench by the door, and hid the knitting under a wash-bowl.

When Podgy knocked at the whāre door half-an-hour later, there was a minute of silence, a slight chink as of disturbed crockery, and then he was admitted. Nothing in the interior of the 1915.]

place was different, save that the table had been hastily littered with newspapers. Any one might have thought that Jinks had been enjoying an idle evening with pipe and paper. And there was no doubt that Podgy's old friend was pleased to see him. He asked eager questions concerning Podgy's life on the training ship, and on hearing of his adventures afloat and in foreign ports he was minded to refer to some episodes of his own varied career. Finally, he set about preparing one of the suppers that he and the boy had been wont to enjoy. During its preparation the guest roved about the room, as though no apprehensive eyes were upon him. It was when Jinks was hunting for the can-opener that he found an opportunity to displace the wash-bowl.

'Why, Jinks,' he exclaimed, 'what's this? You been knittin' for the troops I'll bet. I wish we had you on the *Eurydice*. We chaps aboard were wondering if we couldn't do something like that in our spare time, only there was no one to show us how it was done. And where in thunder did you pick up that stunt?'

He had kept on with his rigmarole until the look of alarm had faded from Jinks's eyes, and been replaced by a look of gratitude that was almost childlike. 'Oh, there was an old dame at home, our nurse when we were kids, and she taught us to keep us out of mischief on wet days. I thought I'd like to do something for the troops, and there isn't much a chap like me can do. Bit of a broken blade, you know, I am. I used to fret about it sometimes,' he confided with simplicity, 'got a bit grouchy in fact, until I thought of doing this. But I didn't dare let the other fellows know. They would not have understood.'

'But where did you get the tools and the stuff?' the boy cried; 'and how did you know the different shapes?'

'M'Kinley had the wool.' Here Jinks hesitated a moment before taking his plunge, and then came up boldly with the confession, 'I stole the needles from Hepsy Sturrock up at Waiholā. They were rusty, and she had plenty more. But the shaping was a harder matter, and I would have been stuck if it hadn't been for the journals I found lying around. They were full of information, and any one that knew their stitches as well as I knew mine could not go far wrong. And then sometimes I'd get a hint from looking over a kiddy's petticoat, or a coat perhaps. It was slow work at first; but now I can sail along as easy and natural as you like, if it's anything plain, until I drop a stitch; and then'— Jinks found it quite impossible to convey the direfulness of such a catastrophe.

Before the evening was over, Podgy had been shown the collection of garments—socks, scarfs, and the more ambitious flights represented in the Balaclavas. Had Podgy known it, the work was excellently done, and not a matron in Rarawa

need have disdained to claim it as her own handiwork. As it was, he was profoundly stirred; and Jinks, so far from being furtive, was a proud and happy man. He voiced a thought a little wistfully before they parted.

'I've often thought,' he said with simplicity, 'if only the other fellows had been different, had seemed more interested, we might have had a sort of club. It could be very jolly all gathered around the fire knitting and arguing and cussing each other in the jolly old way, and yet all the time feeling we were doing our own little bit. We shouldn't have felt so much cut-off from the boys over there that are sweating and suffering

and dying. I suppose it sounds funny to you?' he queried with a touch of anxiety.

'I think it would be just splendid!' Podgy asserted. 'I'm coming like a streak, and I mean to teach the fellows on the *Eurydice* when I go back. They'll be no end keen.'

'It's been a kind of a dream with me, sitting here alone at night. But I knew I'd never dare to speak of it. They're such holy terrors for a joke, I felt sure they would only laugh. I knew it could never be anything but a dream.'

But as Podgy tramped off across the grass he privately resolved that this particular dream should speedily come true.

FAREWELL.

HERE once you stood and swore eternal faith,
Where the broad chestnut fans in summer stir;
Now autumn winds wail roughly overhead,
Among the woods of fir.

For tranquil summer long has borne afar
Those silences that broke in softest sounds;
With other dreams they've passed to far-off lands
Beyond earth's narrow bounds.

Long night I watched the moon grow overhead
From curving scimitar to gold-red ball,
As through the cloudless skies she calmly sailed
Triumphant over all.

Slowly she moved across the starlit sky,
From the horizon landlocked to the sea;
Then vanished in that void, strange as the heart,
As great a mystery.

Now all the quiet months have run their course,
And through dark brooding skies a slim, wan moon,
Like some fair craven girl a-face with fate,
Creeps as if half in swoon.

The river, that has sung its placid song,
Races, in threatening wrath, as white as curd;
From shadows dark as those which veil my heart
Its warning voice is heard.

But little now I fear approaching storms
As I discount the joys that once were mine,
And dream of days when a remembered word
Stirred my heart's blood like wine.

The oleander's reddening flame fulfils
The promise summer gave before she fled;
But for the heart no resurrection comes,
Once numbered with the dead.

No resurrection follows faith and love
In this world lost, they know no further
grace;
And all the riches that can fall to me
Within my soul find place.

Unto our past I give this one last hour,
Where once waved slow the broad green chestnut
fans,
And I with you dreamed life at length secure
From all that bars and bans.

Now to win peace that hovers o'er love's grave,
I live with sorrow, drink her cup of myrrh,
And bury all my frustrate hopes and fears
Among the woods of fir.

BEATRICE ALLHUSEN.
